

## *Concepts for Comment Purposes Only – Not for Implementation*

### **Number of Marketing Applications for a Combination Product**

---

**Purpose.** The Office of Combination Products (OCP) is working to clarify the number of marketing applications necessary for a combination product, particularly the issue of whether a single or multiple marketing applications should be submitted for a combination product. OCP is very interested in receiving suggestions and comments from a wide variety of stakeholders on how this issue should be clarified. In order to stimulate stakeholder input, this concept paper describes possible approaches to address this issue. This document is being made available for comment purposes only. It does not represent FDA policy or guidance, and it does not create any obligation on FDA or any other person or entity.

OCP welcomes comments from interested stakeholders on (1) the general directions outlined in this paper or other directions stakeholders may wish to suggest, (2) the mechanism(s) needed for implementation of any policy regarding this topic (e.g., rulemaking, guidance), and (3) any other issue(s) that stakeholders believe should be addressed in future policies on this topic.

In the interim, FDA encourages applicants who are uncertain as to whether a single or multiple marketing applications should be submitted for a particular combination product to contact OCP.

**General Principles.** A combination product is assigned to an Agency center that will have primary jurisdiction for its premarket review and regulation. The assignment of a “lead center” is based upon a determination of the “primary mode of action” (PMOA) of the combination product, but a combination product’s PMOA does not automatically determine the type of marketing application that will be used for the product’s approval, clearance, or licensure. Depending upon the type of combination product, approval, clearance or licensure could be obtained through submission of a single marketing application, or through separate marketing applications for the individual constituent parts of the combination product.

As further explained below, for most combination products, a single marketing application is sufficient for the combination product’s approval, clearance or licensure. In some cases, however, a sponsor may choose to submit two marketing applications for a combination product when one application would suffice. For example, a sponsor may choose to submit two applications in order to receive some benefit that accrues only from marketing authorization under a particular type of application (e.g., new drug product exclusivity, orphan drug benefits, or proprietary data protection when two firms are involved).

In other cases, FDA may determine that two marketing applications are necessary. For example, when one of the individual constituent parts of a combination product is already approved for another use, and where the labeling of the already approved product will need to be changed to reflect its new intended use in the combination product, FDA may determine that two applications are necessary if the labeling of the already approved product

46 is subject to legal requirements different from those that will apply to the combination  
47 product.  
48

### 50 **When might one marketing application be appropriate?**

51  
52 For most combination products, a single marketing application should be sufficient to ensure  
53 product safety and effectiveness as well as to ensure consistent and appropriate postmarket  
54 regulation. Under such an approach, this would be accomplished by applying, as  
55 appropriate, the regulations, standards, and mechanisms that are already available and  
56 applicable under the marketing application being used, along with those that accrue directly  
57 to the constituent parts. Review of the marketing application would address the combination  
58 product as a whole and its constituent parts.  
59

60 In certain circumstances, it could be that a single marketing application is the only feasible  
61 option, such as:  
62

- 63 • For combination products that are chemically, physically, or otherwise combined into  
64 one single entity (21 CFR 3.2(e)(1)). Drugs and devices are generally approved or  
65 cleared only as finished products, not as components for further manufacture.<sup>1</sup>
- 66 • For most co-packaged combination products (21 CFR 3.2(e)(2)), particularly those  
67 with constituent parts that could not be provided separately. Examples might include  
68 those co-packaged combination products where one of the components is not  
69 sufficiently finished to support a separate approval/clearance, or where the indication  
70 exists only in the co-packaged configuration.
- 71 • For combination products for which separate applications would create a regulatory  
72 inconsistency.  
73

74 OCP is interested particularly in stakeholder perspectives on these examples and whether  
75 there are other examples where one application would be the only possible feasible option.  
76  
77

### 78 **When might two marketing applications be necessary for a combination product?**

79  
80 Generally, the *necessity (from a regulatory perspective)* for two marketing applications has  
81 been infrequent historically.  
82

83 However, there are some circumstances in which two marketing applications could be  
84 necessary for a combination product in order to ensure safety or effectiveness or consistent or  
85 appropriate postmarket regulation because regulatory provisions may be necessary that are

---

<sup>1</sup> Unlike the Food, Drug, and Cosmetic Act, the Public Health Service Act provides for the licensing of intermediate products used in the manufacture of specifically identified biological products. Consequently, a biologic-device or drug-biologic combination product with two components that are physically or chemically combined during their manufacture, could have a second marketing application (i.e., a “BLA for further manufacture”) for the biological component if the combination product as a whole is being regulated under the device or drug provisions of the Act. In some cases, FDA may determine such an approach is necessary in order to ensure appropriate premarket review and regulation of the biological product component.

86 not available under the particular marketing application being submitted for the product. In  
87 such cases, one proposal might be that an additional marketing application is necessary in  
88 order to apply these provisions. Below are some examples intended to illustrate when two  
89 applications might be necessary:  
90

- 91 • For combination products where the constituents are separate and complex products (e.g.,  
92 drugs and implantable delivery pumps, device in combination with a new molecular  
93 entity).
- 94 • For constituent parts with uses beyond the combination product; e.g., a single dose drug  
95 and a reusable delivery device that is used for delivery of other drugs.
- 96 • When a “BLA for Further Manufacture” (see footnote 1) is appropriate to ensure the  
97 identity, safety, purity and potency of certain biological products (e.g., cell and gene  
98 therapy, therapeutic proteins, monoclonal antibodies, blood products) when the  
99 combination product as a whole is being regulated under the device or drug provisions.
- 100 • To effect labeling revisions for a constituent part that is already approved for uses that do  
101 not include the proposed combination product indication. For example, when a  
102 previously PMA-approved drug delivery device is later approved to deliver an additional  
103 drug, the labeling of both the additional drug and the device are typically changed in  
104 order to reflect their use in combination.
- 105 • To apply mechanisms necessary to ensure appropriate regulation, or unique regulatory  
106 requirements that are not available under a single marketing application, e.g., gene  
107 therapy products.
- 108 • To maintain regulatory consistency. For example, for a device co-packaged with a drug  
109 covered by new drug product exclusivity, a separate NDA or ANDA may be necessary  
110 for the drug constituent part.

111  
112 OCP is interested particularly in stakeholder perspectives on these examples and whether  
113 there are other examples where two applications would be the preferred regulatory approach.  
114

115  
116  
**117 When might FDA accept two marketing applications when a single marketing**  
**118 application would be sufficient?**  
119

120 Just as certain regulatory mechanisms are available only under a specific type of marketing  
121 application, certain benefits, such as new drug product exclusivity or orphan drug benefits,  
122 are associated only with specific types of marketing applications. Sponsors may wish to  
123 derive specific benefits that accrue under different statutory/regulatory provisions and may  
124 sometimes wish to submit two marketing applications when one would otherwise suffice in  
125 order to accomplish marketing authorization. In addition, there have been situations  
126 historically in which separate companies are involved in the manufacture of finished products  
127 used in combination, such as for a drug/biological product and its delivery system, or for a  
128 drug/biological product used with a diagnostic device. In these situations, the sponsors have  
129 often preferred two applications.  
130

131 OCP is interested in stakeholder perspectives on appropriate FDA responses when sponsors  
132 desire to have multiple applications, when one would generally suffice for product  
133 authorization purposes.

134

135 Some possible approaches may be to accept two applications when (1) the constituent parts  
136 of the combination product are provided in finished form and are separable from the other  
137 constituent parts of the combination product and (2) multiple applications would support  
138 independent regulatory approval for use in the combination product and would not create  
139 regulatory inconsistency.

140

141

142

143 **Flow Chart:**

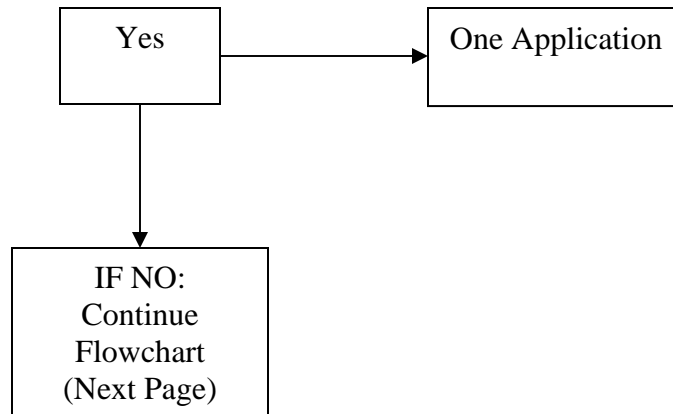

144

145 A flow chart follows that displays a hypothetical flow diagram for a process for determining  
146 whether one or multiple marketing applications would be necessary. OCP is especially  
147 interested in: (a) stakeholder thoughts on this diagram and (b) whether such a vehicle is  
148 helpful to stakeholders.

149

**Flowchart: Possible Approaches to Determining the Number of Marketing Applications  
for a Combination Product<sup>2</sup>**

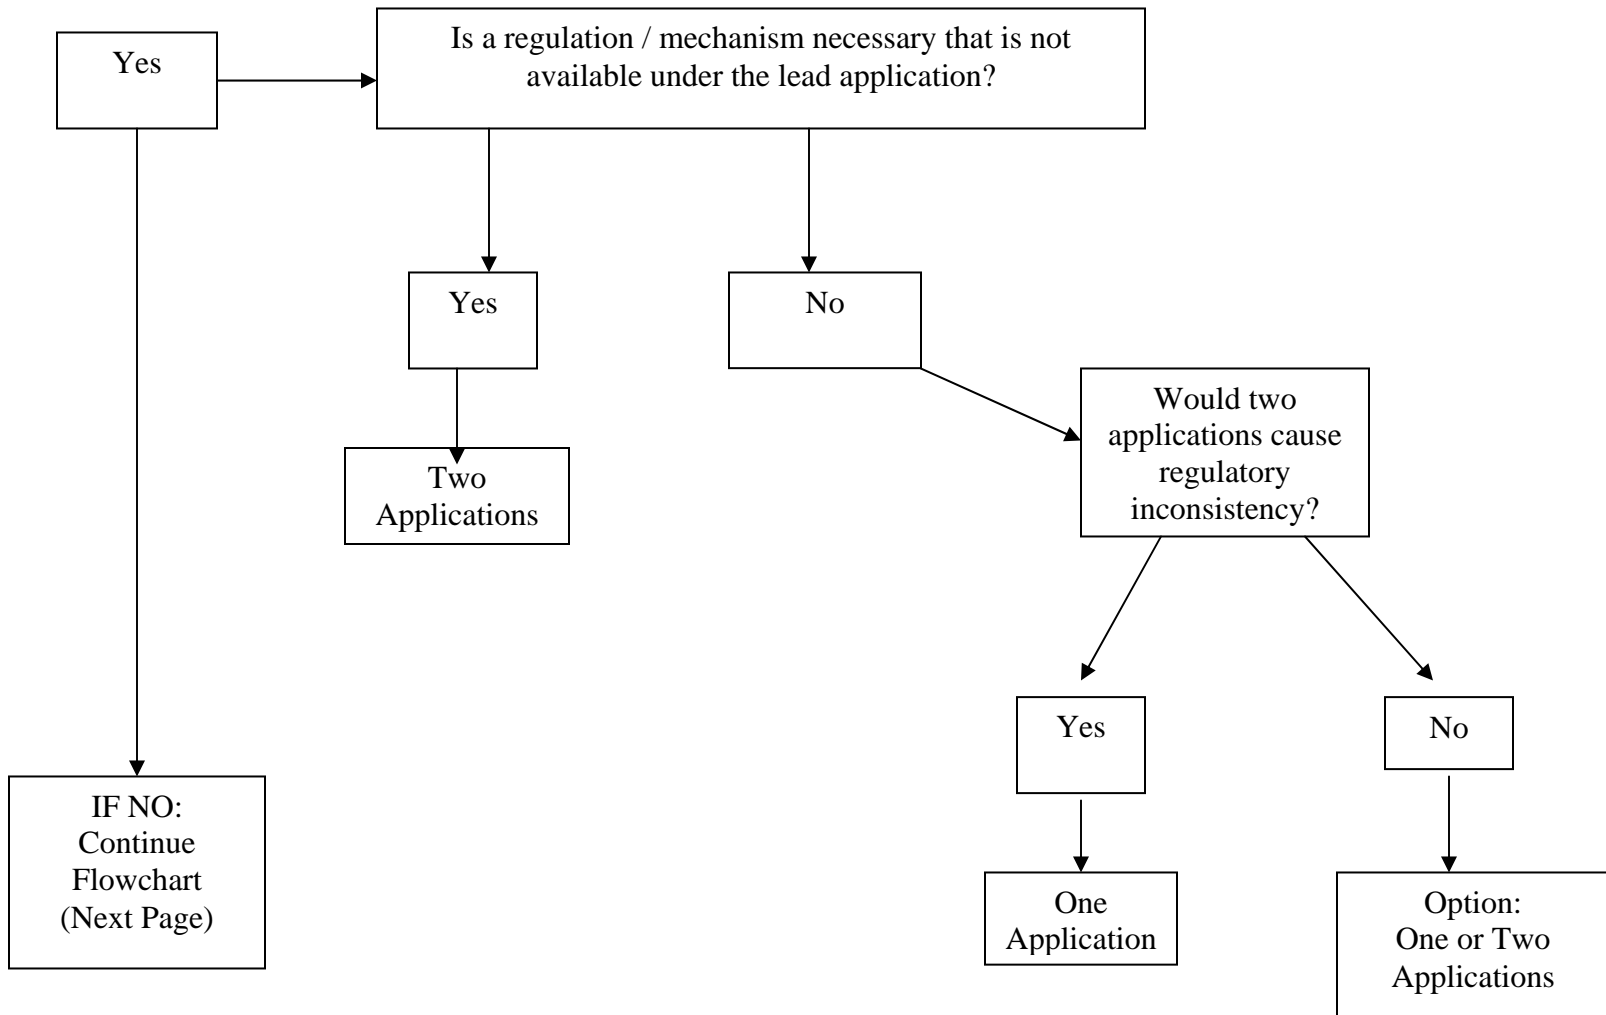

**Is the combination product chemically, physically, or otherwise combined and provided as a single entity as defined under 21 CFR 3.2(e)(1)?**

---

<sup>2</sup> For combination products with a biological product constituent part where the combination product as a whole is being regulated under the device or drug provisions of the Act, a separate BLA for further manufacture may be necessary or desirable.

**Are the constituent parts of the combination product provided separately as defined under 21 CFR 3.2(e)(3) or (4)?**

**Is the combination product provided as a co-package as defined under 21 CFR 3.2(e)(2)?**
