

# **The Impact of Monopsony on the Practice of Medicine: Defining the Market**

Statement of the American Medical Association  
Presented by: Stephen Foreman, PhD, JD, MPA  
Director, Pennsylvania Medical Society Health  
Services Research Institute

# We Need to Protect the Competitive Process

- ◆ This is best for patients
- ◆ It is best for physicians
- ◆ Best for other institutions as well
  - Employers
  - Even health insurers
- ◆ It is best for all of us
- ◆ Unfortunately, the process is threatened

# Most Physicians Are Price Takers; Insurers are Price Makers

- ◆ Medicare – RBRVS
- ◆ Medicaid – fee schedules
- ◆ Commercial carriers
  - Impose fee schedules
  - Take it or leave it propositions

# Overview of remarks

- ◆ Some key facts
- ◆ Monopsonies do not operate in the public interest
- ◆ The buying power index
  - Market share and market definition
  - Elasticities of supply and external demand
  - Physician switching costs
  - Physician payment discrimination

# Competition, Power & Medicine

- ◆ What are the best interests of the patient?
- ◆ Access, availability & quality matter.
- ◆ “Price makers” dictate access, availability & quality in a way we may not like.
- ◆ Will there be declining supply just when demand peaks?

# Some Facts and a Question

- ◆ Large, health insurers dominate
- ◆ Premiums rise and provider payment stagnates
- ◆ A natural response: “Actors Act”
  - Uninsured rolls expand
  - Employers develop buying coalitions
  - Hospitals react
  - Physician “exit”
- ◆ What is the enforcement role?

# Large Insurers & Public Interest

- ◆ Price making is **not** welfare enhancing
  - Physician fee reductions don't necessarily mean that patients, consumers and employers benefit
- ◆ The benefits are not being passed on
- ◆ There is no evidence that economies of scale
- ◆ Market power may be misused in downstream markets

# Monopsonies Create Problems

- ◆ A long run issue of reduced supply
- ◆ Long run quality effects are substantial
- ◆ And distribution matters
  - Who do we want to reward, insurance companies or our doctor?

# Buying Power Index

- ◆ Dominant health insurer market shares
- ◆ Physicians' ability to switch
- ◆ Non-dominant insurers' ability to respond

# Mathematically:

- ◆  $BPI = S / (e + ?(1-S))$
- ◆ *Health Insurer Share (S)*
- ◆ *Elasticity of supply – physician switching (e)*
- ◆ *Elasticity of fringe demand – other firms responses (?)*

# Market Share Requires Us To Define the Market

- ◆ Considered from the seller / physician's viewpoint
- ◆ Not the health insurer's downstream market – although “interacts”
- ◆ Patients' willingness to travel / to switch doctors is important

# For Physicians, The Geographic Market is Generally Local

- ◆ Counties -- even neighborhoods
- ◆ Specialty matters
  - Specialists may have a broader geographic market
- ◆ A buyer may have regional power but lack it in a county or neighborhood & vice versa
- ◆ Hospital based physicians – markets may tie to hospital service areas

# The Product Market

- ◆ Case by case analysis
- ◆ Ties to physician specialties

# What Large Shares Mean

- ◆ Maximum ability to price discriminate
- ◆ Switching may be impossible

# Physician Switching & Costs

- ◆ Physicians supply highly skilled labor
- ◆ Extremely perishable commodity
- ◆ Their ability to switch is limited
- ◆ Opportunity costs and lost volume seller issues need to be considered
- ◆ Switching costs are extremely high
- ◆ Switching costs can be non-linear

# “Other” Health Insurer Buyers Ability to Expand is Often Limited

- ◆ Evaluate on a case by case basis
- ◆ “Other” buyers’ credibility may be low
- ◆ Input cost structures are important
  - Monopsonists demand and get lowest input costs
- ◆ Expansion requires capital –
  - Fringe buyers may not be able to get it

# Generally

- ◆ Share matters - a lot!
- ◆ It is difficult for physicians to switch
- ◆ Other health insurers may not exist or may not be able to expand

# Conclusion

- ◆ Structure matters
- ◆ Large dominant sophisticated health insurer buyers are price makers
- ◆ Many small fragmented physicians and physician groups
- ◆ Evidence that physicians are responding by departing the market
