

# So What Do We Do With This Stuff Now?

Innovative Uses of EMAP Data and  
Approaches

Kevin Summers  
ORD

A stylized silhouette of a mountain range in shades of teal, located at the bottom right of the slide.

# Session Organization

- ◆ Atypical Applications
  - Habitat Evaluation and Restoration Potential (Lisa Smith)
  - Basic Chemical Relationships (Spence Peterson)
  - Nutrient Modeling (Richard Moore)
- ◆ Applications Outside US
  - Mexico's Gulf of Mexico (Geraldo Gold)
- ◆ Uses of Data to Conduct Different Assessments
  - Accountability Panel (OAR, OW, OPPTS, ORD)

# Other Innovative Uses

- ◆ Invasive Species
  - ◆ Biogeography
  - ◆ Natural Disasters
  - ◆ Ecosystem Classification
  - ◆ Scale Evaluations
  - ◆ Adaptations to Different Environments
  - ◆ Habitat Mapping/Estimation
- 
- A decorative graphic at the bottom right of the slide, consisting of a silhouette of a mountain range in various shades of teal and blue.

# Invasive Species

# How Invaded are We? Extent and Patterns of Nonindigenous Benthic Macrofauna on the US West Coast

Henry Lee, II, Walt Nelson, Steven Ferraro, Faith Cole  
Pacific Coastal Ecology Branch, Western Ecology Division  
National Health and Environmental Effects Research Laboratory  
U.S. EPA

# U.S. EPA - National Coastal Assessment (NCA)

## 1999-2000 Sampling Effort

Multiyear, Probability Based  
Sample Design  
Summer Index Period Sampling

1999

Washington: 50 stations

Oregon: 80 stations  
(includes side channels of Columbia)

California: 80 stations

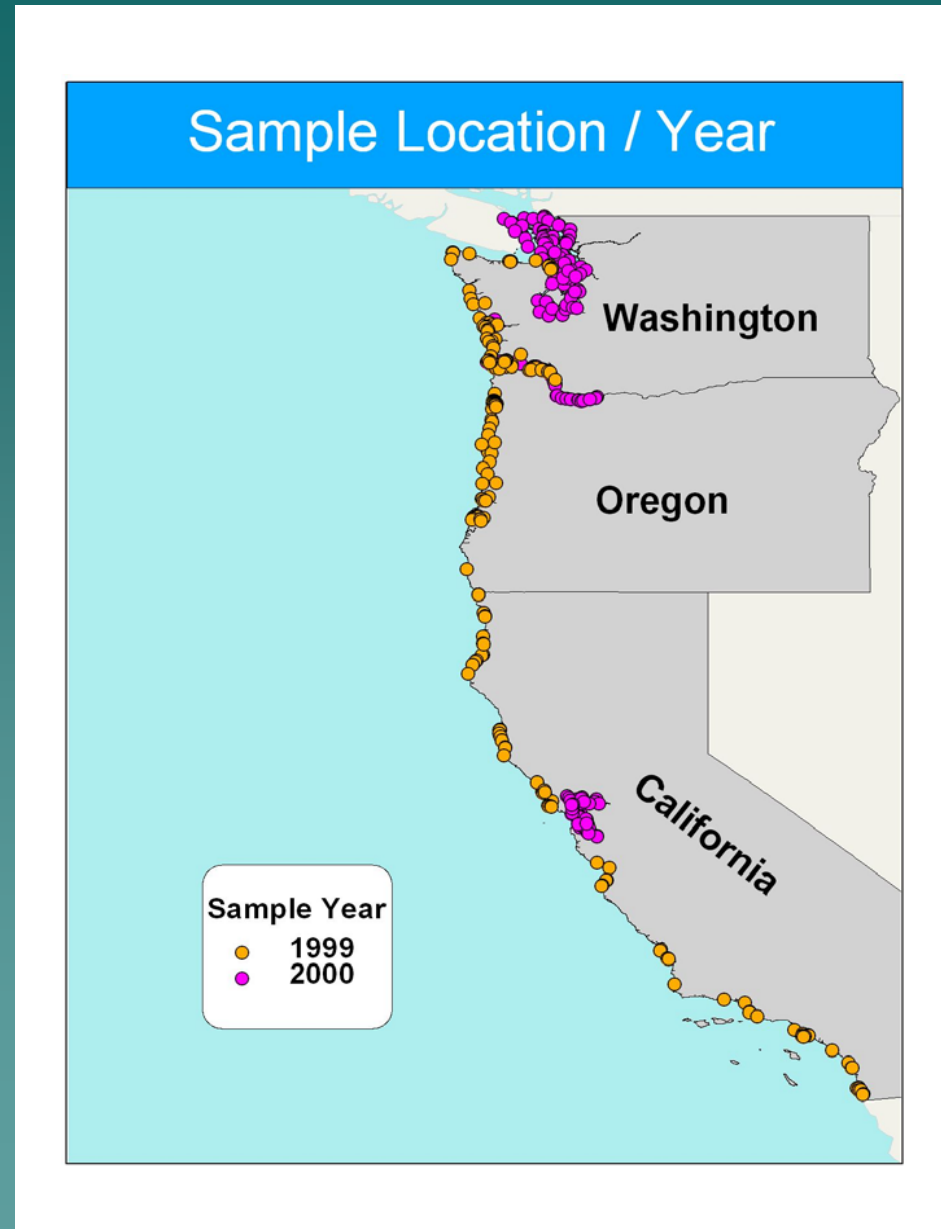

2000

Puget Sound: 71 stations

Columbia River: 50 stations

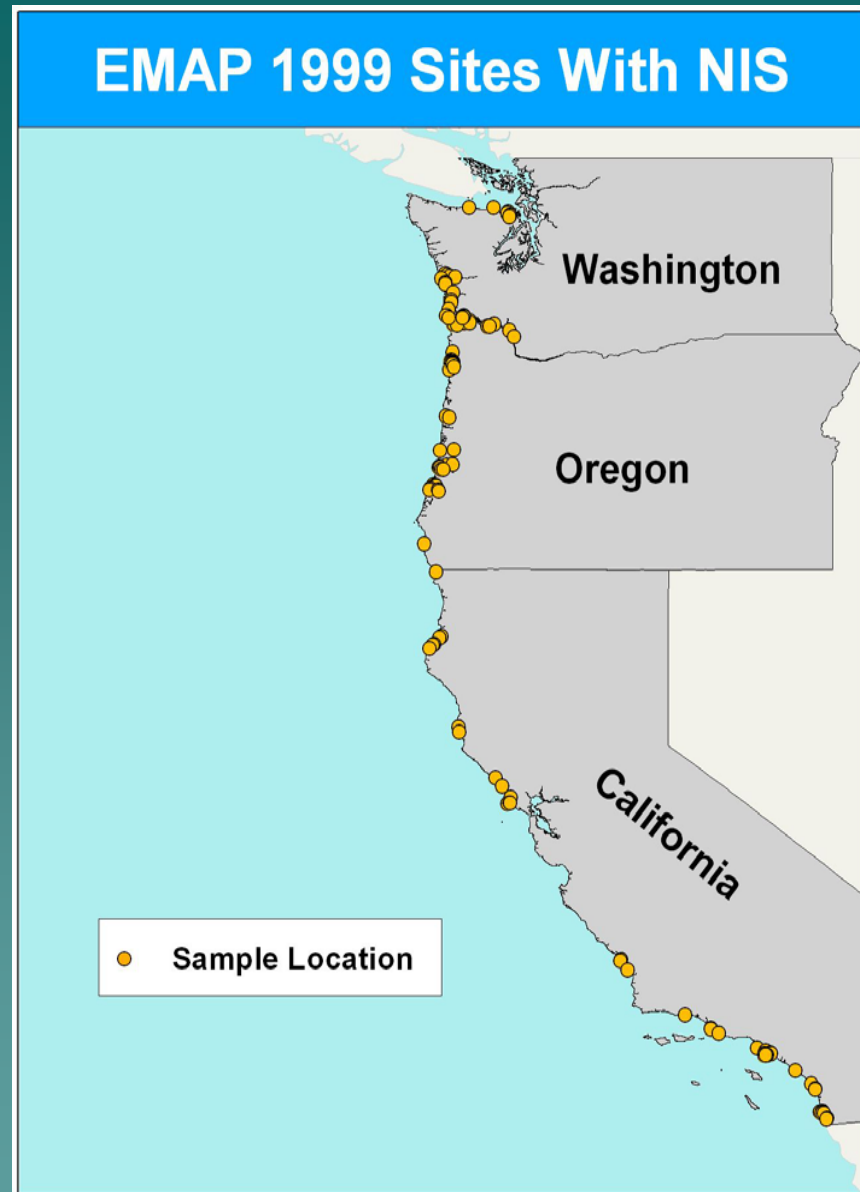

San Francisco Bay: 50 stations

Total: 381 stations

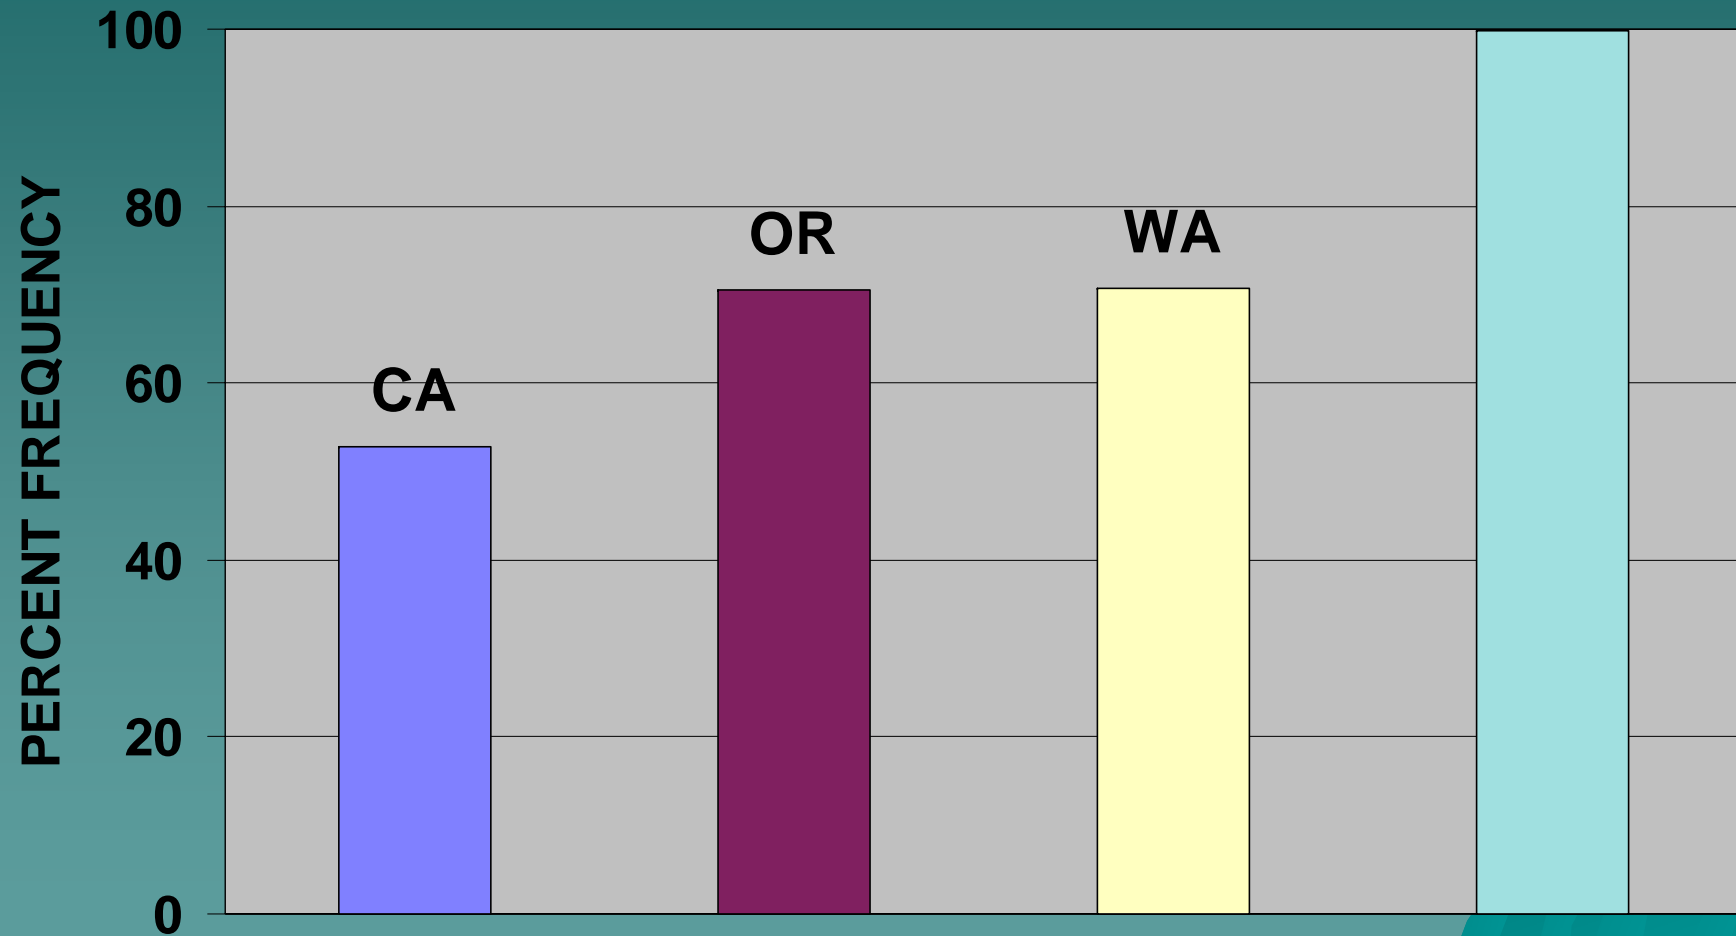

## Summary of 1999 Sampling

- Nonindigenous species (NIS) collected at 123 out of 187 stations, 66%.
- 429 native taxa collected
- 57 NIS taxa collected
  - Annelids 40% (23 taxa)
  - Arthropods 37% (21 taxa)
  - Molluscs 14% (8 taxa)
  - Other 9% (5 taxa)

# PERCENT FREQUENCY OF OCCURRENCE OF NONINDIGNEOUS SPECIES

SF

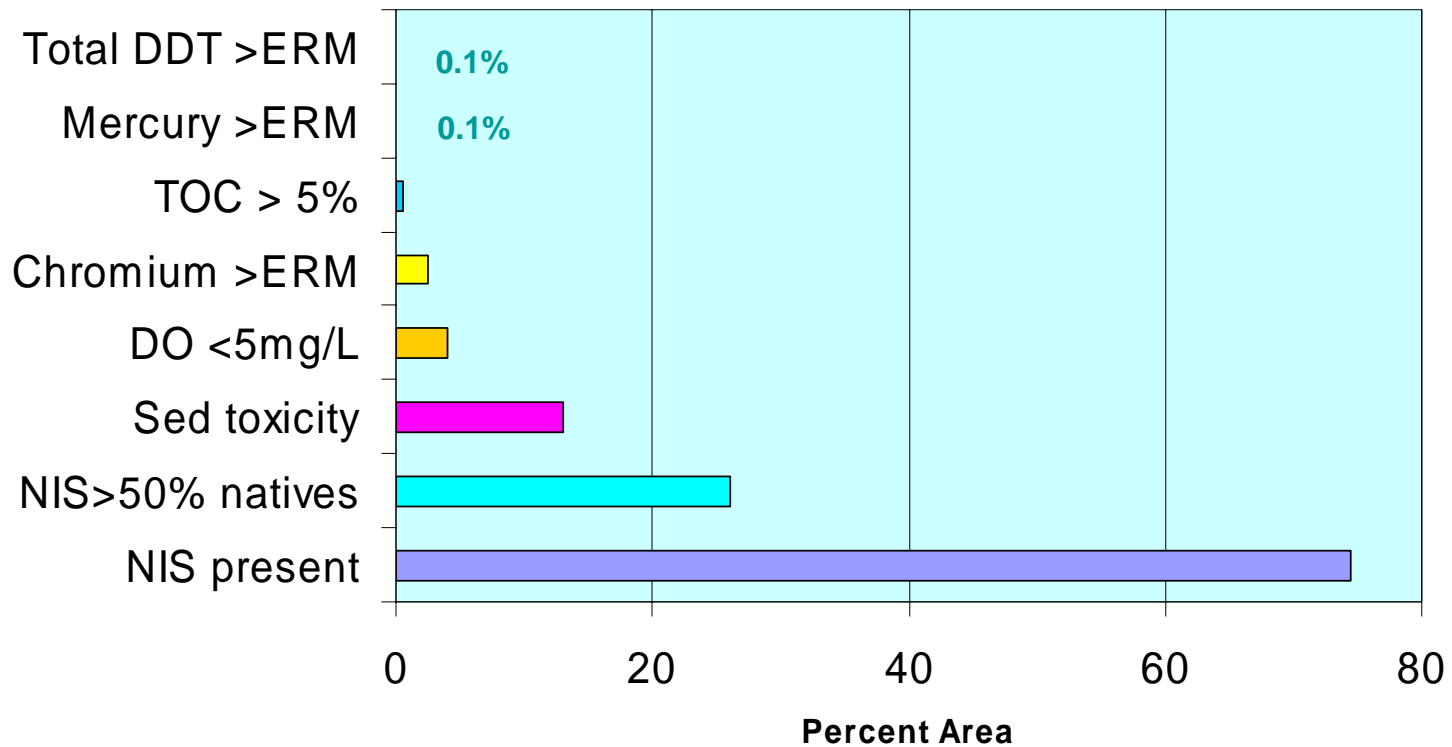

# NCA - West

## Comparison of Magnitude of Stressor Impacts

Area Impacted by Stressors  
West Coast Small Estuaries 1999

# Biogeography

The analysis and explanation of observed patterns in the distribution of organisms

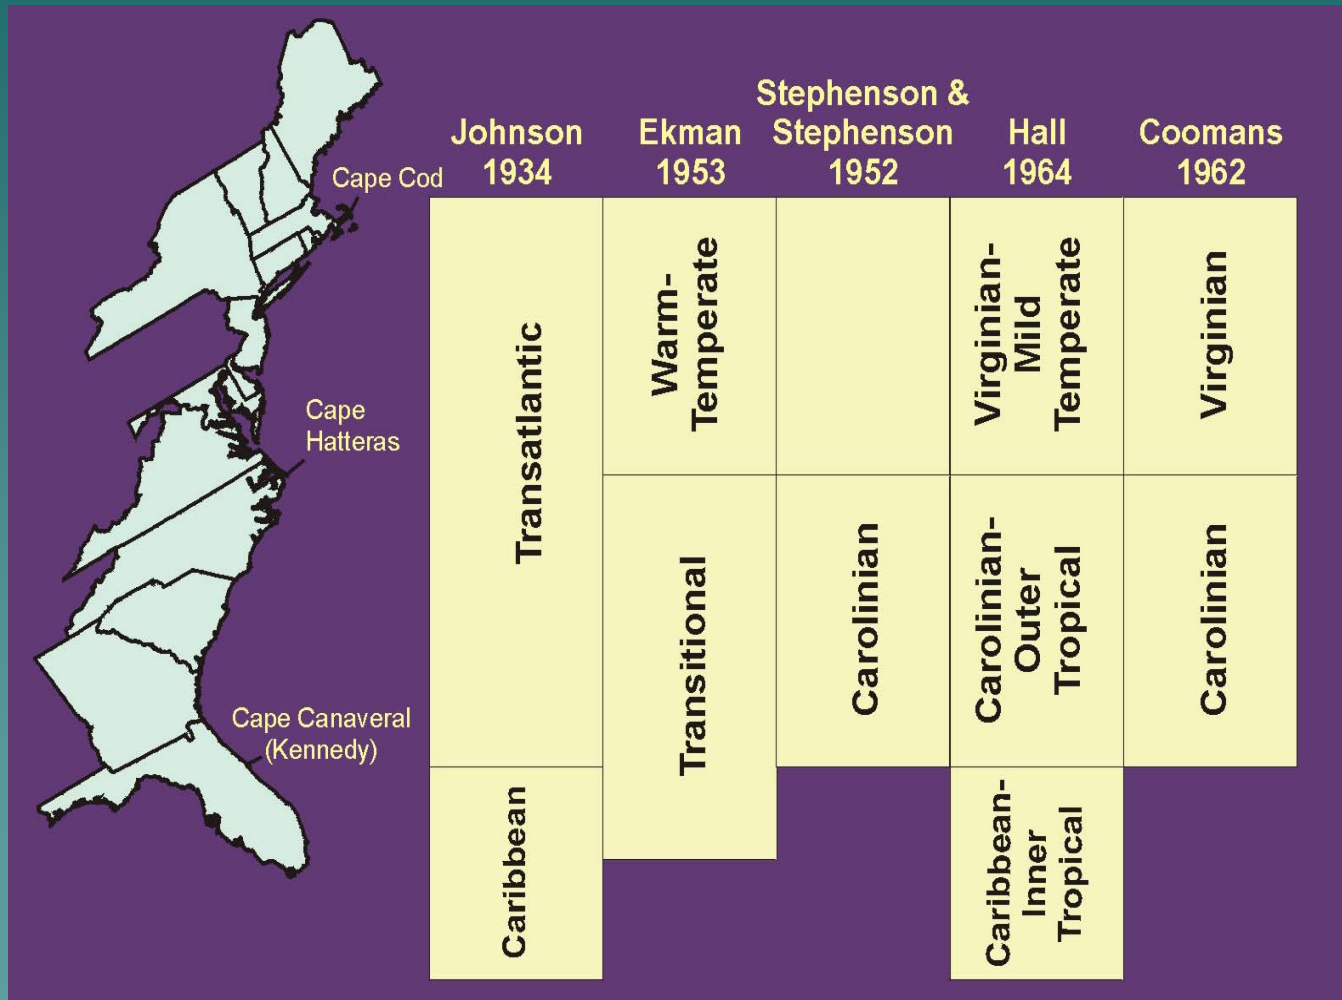

# Biogeography of Benthic Macroinvertebrates in Estuaries Along the Gulf of Mexico and Western Atlantic Coasts

Virginia D. Engle and J. Kevin Summers  
U.S. Environmental Protection Agency  
Gulf Breeze, Florida

# Historical Marine Provinces

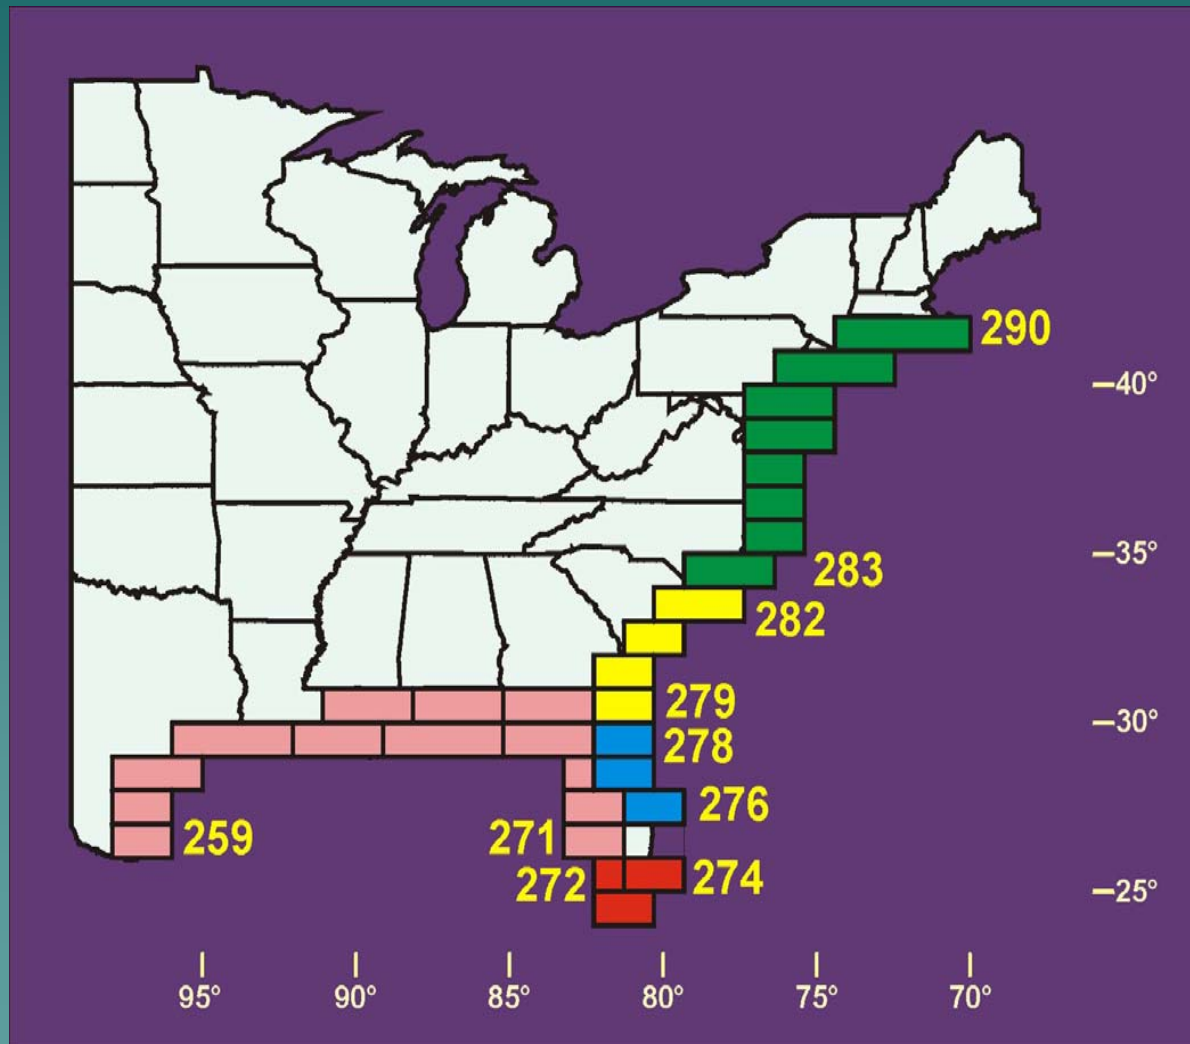

# EMAP-E Data

- ◆ 1100 species from 870 undegraded stations
  - Virginian Province 1990-1993
  - Carolinian Province 1994-1997
  - West Indian Province 1995
  - Louisianian Province 1991-1994

# Dendrogram for the Atlantic and Gulf Coasts

# Clusters from Dendrogram

# Conclusion

- ◆ Gulf of Mexico, south Florida, and Virginian clusters represent biogeographical provinces
- ◆ South Carolina, Georgia, and northern Atlantic Florida are transitional
- ◆ **Biogeographical boundaries for estuarine species are not the same as for marine species**

# Biogeographic Provinces On The Pacific Coast

## Columbian

Strait of Juan de Fuca, WA  
to Cape Mendocino, CA

## Transition or Montereyan

Cape Mendocino, CA  
to Point Conception, CA

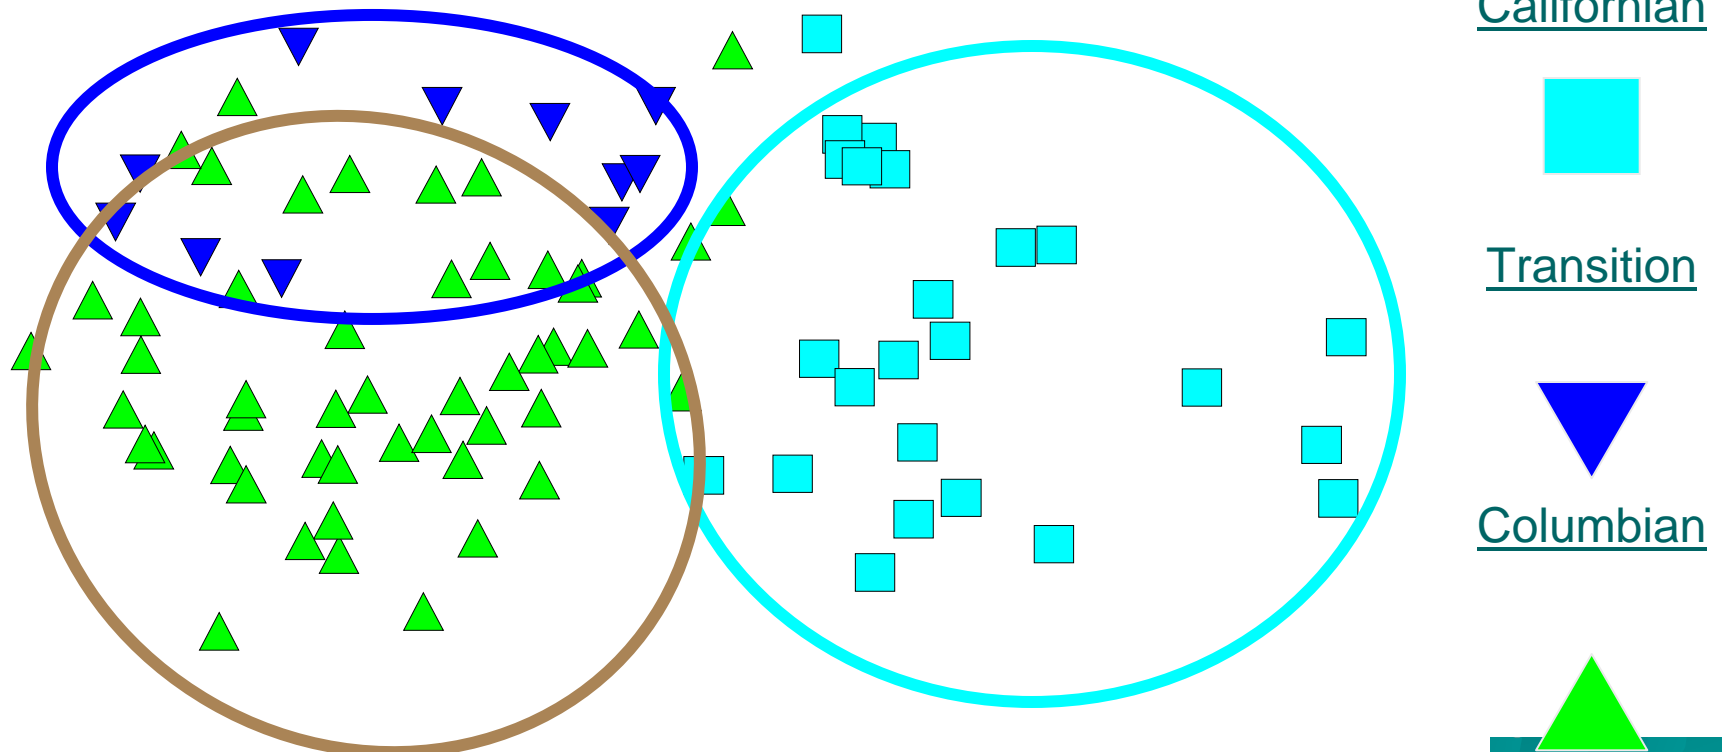

## Californian

# Hurricane Katrina Post-Storm Ecological Assessment

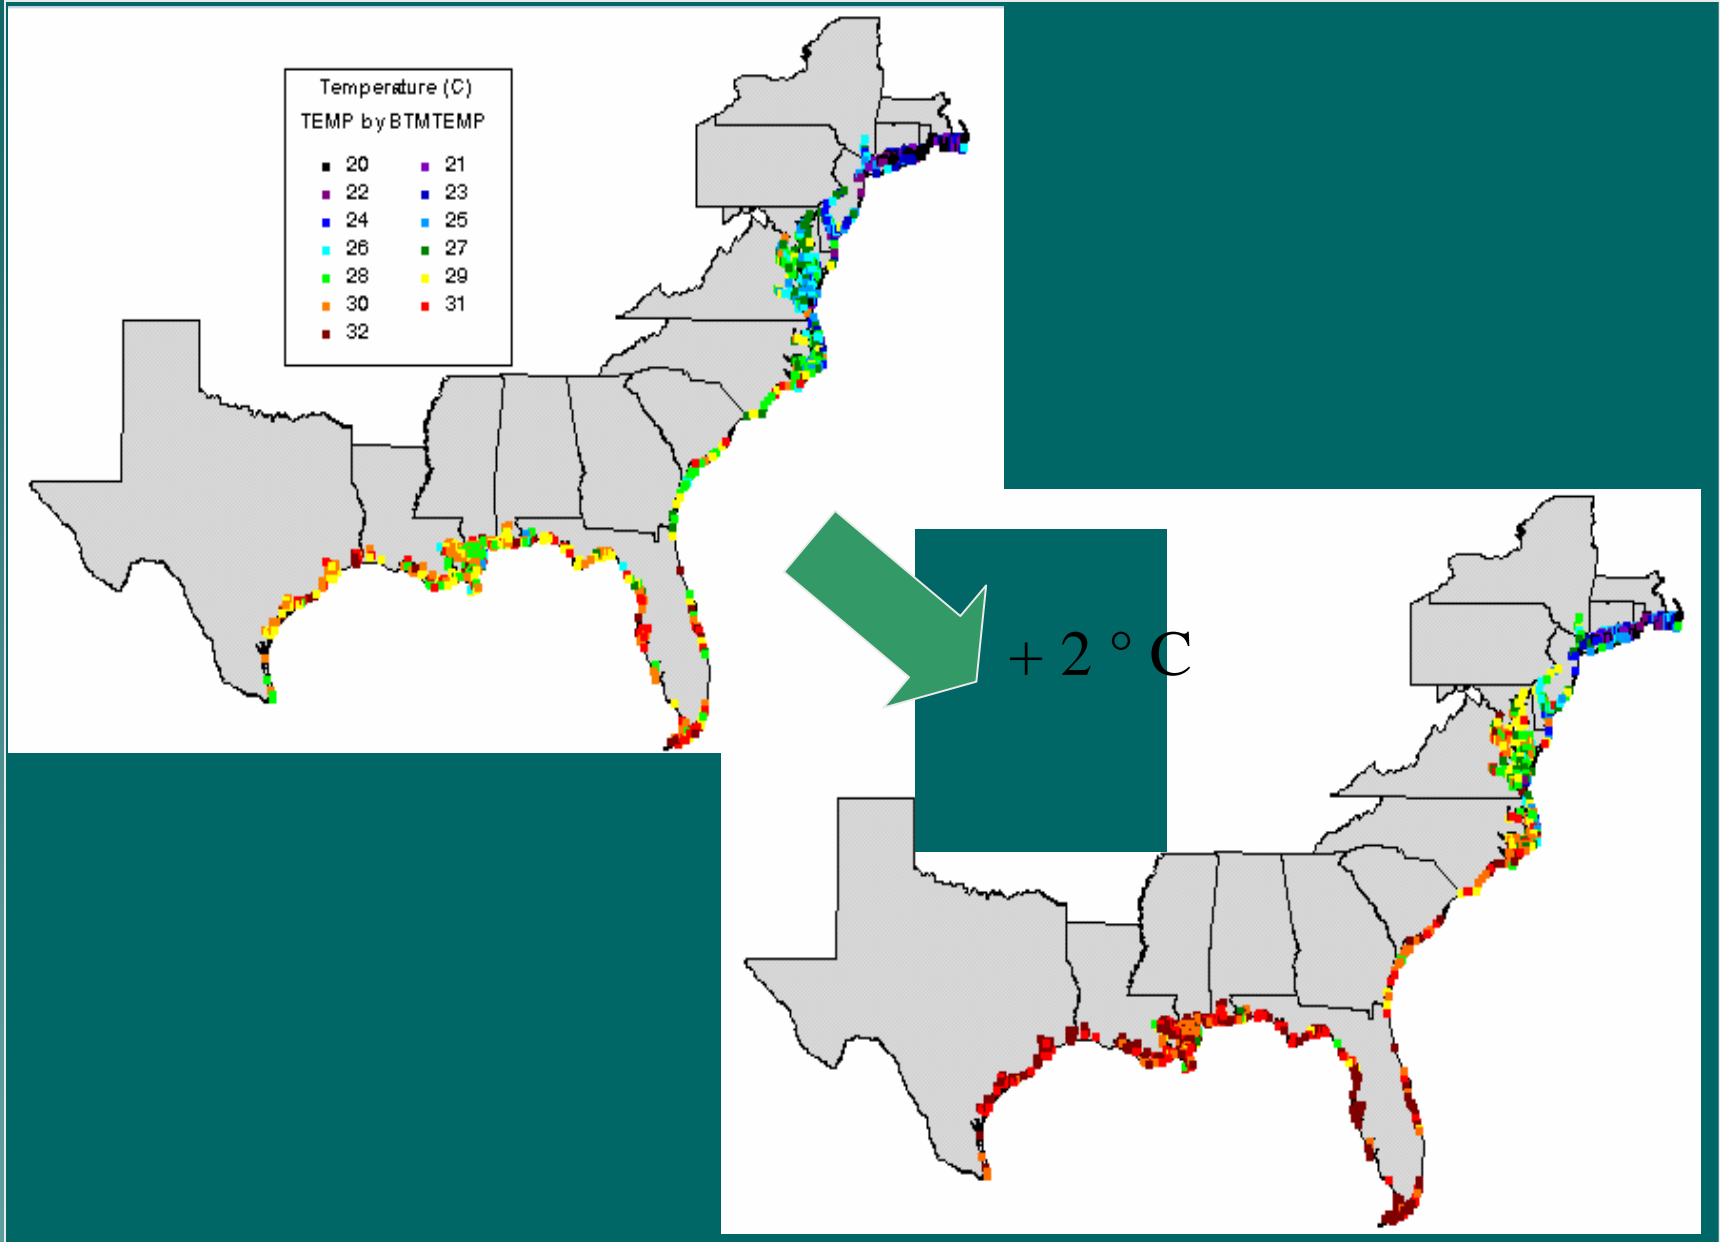

# Lake Borgne – Mississippi Sound Water Quality

# LESSONS LEARNED:

- ◆ Having strategies, policies, guidances, and sampling plans already in place helps to clarify needed activities, resources, in an expedient manner.
- ◆ Collaboration among federal, state, and local agencies is inevitable; establish relationships, processes, and functions prior to disasters; and then implement them (particularly for sampling, data sharing, cleanup responsibilities, etc.).
- ◆ Clear points of contact for specific tasks and regular, transparent communication among all staff would help the organization assist the effort more effectively.
- ◆ **Pre-existing baseline assessments of environment and environmental performance of technologies (likely to be called upon in times of disasters) results in a more expedient response.**

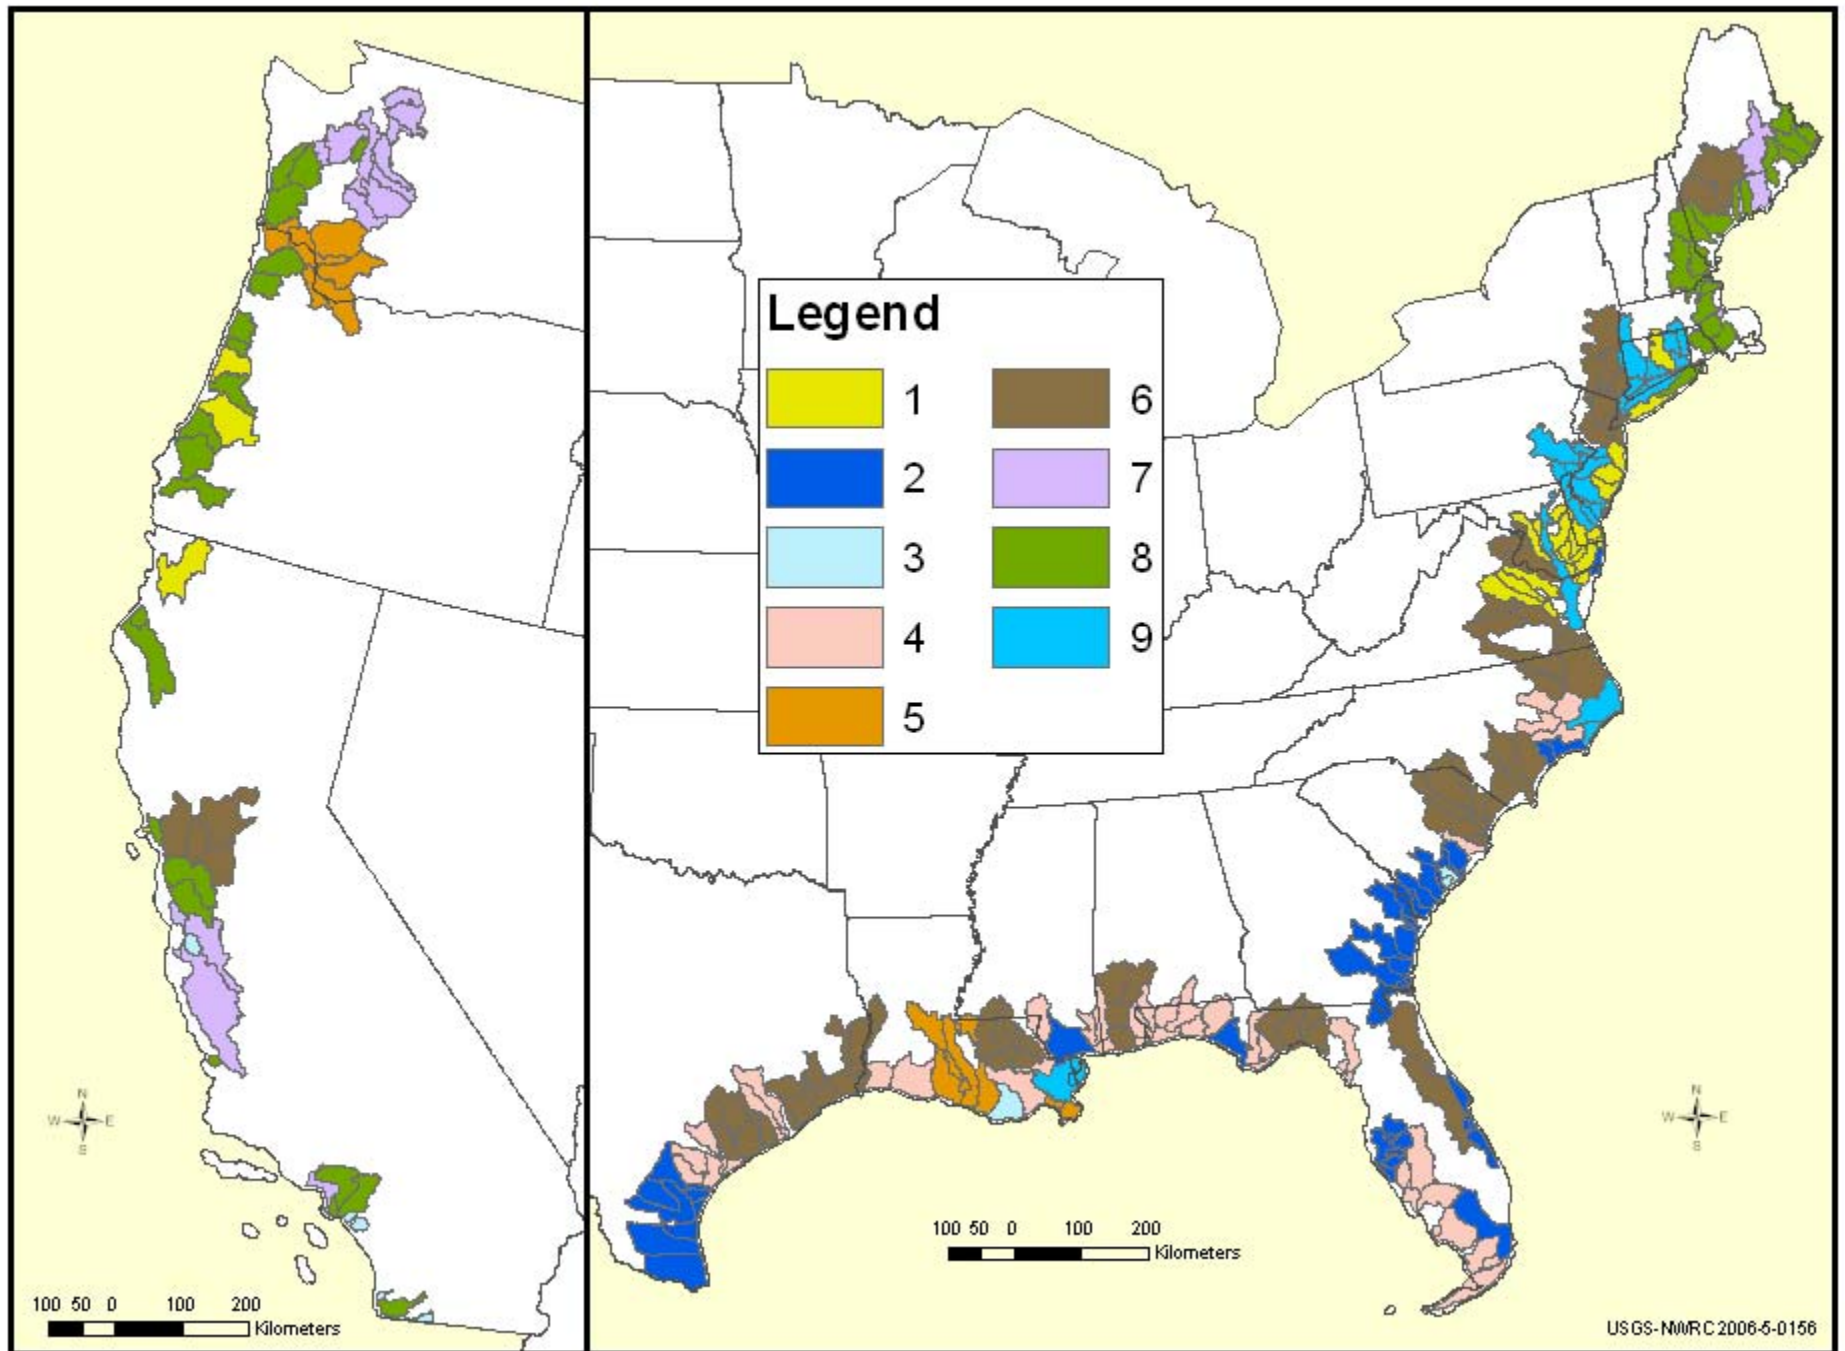

# Estuarine Classification

- ◆ Engle, V.D., J.C. Kurtz, L.M. Smith, C. Chancy, and P. Bourgeois. In Press. A Classification of U.S. Estuaries Based on Physical and Hydrologic Attributes. Environmental Monitoring and Assessment

# Classification

- ◆ Using EMAP data developed a classification systems based on six factors that created 9 estuarine classes
  - Example: Moderate Area, Low Volume, Moderate Flow, Moderate Depth, Moderate Salinity (Class #1)
  - Large Area, Highest Volume, Highest Flows, Deepest Depths, High Salinity (Class #9)

# Classification of Pacific Northwest Estuaries: Landscape, Wetlands, & Vulnerability to Nutrients

Delineation and analysis of 89 PNW estuarine watersheds (NLCD) and wetland patterns (NWI)

Seven PNW estuaries analyzed for nutrient sources and within-estuarine distribution of benthic resources

Probabilistic and aerial surveys of SAV & other benthic resources

Delineation of segments dominated by oceanic vs. riverine nutrients

Overlay nutrient sources on benthic resources to evaluate vulnerability to riverine-derived nutrients by estuary class

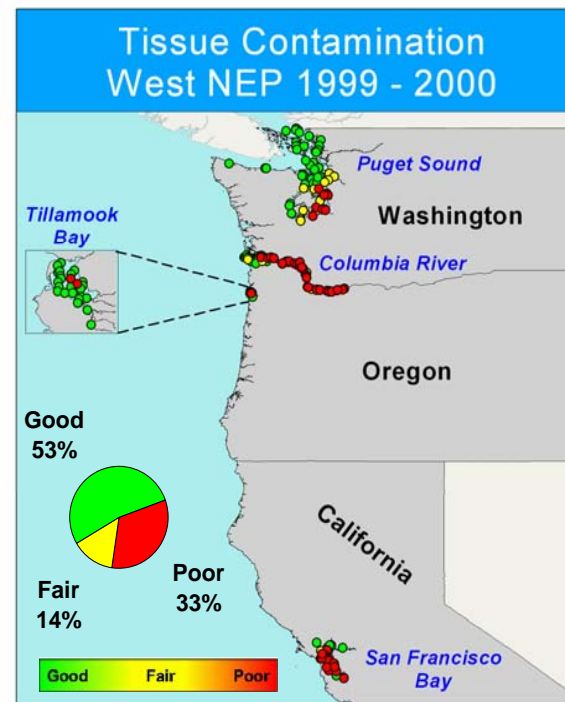

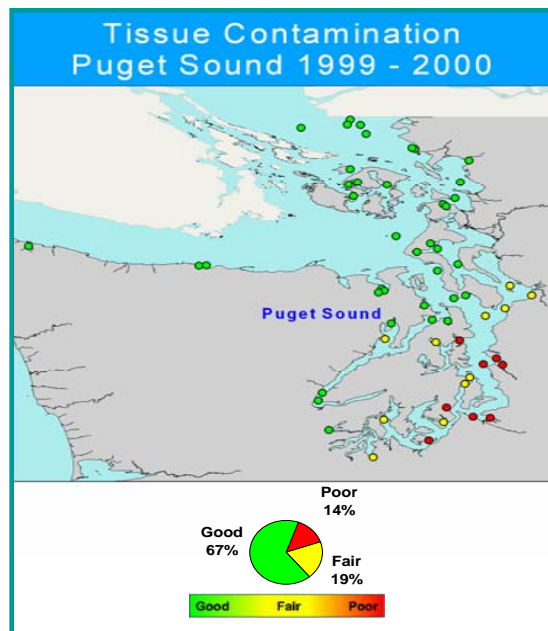

Henry Lee II, Cheryl A. Brown, Bruce L. Boese, and David R. Young. 2006. ORD/WED/PCEB
