

**Domestic Distribution of U.S. Coal by Origin State,
Consumer, Destination and Method of Transportation, 2007**

December 2008

2007 Changes in Coal Distribution Table Format and Data Sources

The changes in the coal distribution data sources made in 2006 are carried over to the 2007 tables. As in 2006, EIA used data from the EIA-3 survey to distribute synfuel to the electric generation sector on a state level, aggregated with all of the other coal (such as bituminous, subbituminous, and lignite coal) sent to electric generating plants.

EIA supplemented the EIA-3 data with previously collected information to determine the mode of transportation from the synfuel plant to the electric generating consumer, which was not reported on the EIA-3A survey form. Although not contained in the EIA-6A master file, this information has been documented in an ancillary spreadsheet in the EIA electronic library.

The coal production, purchase and distribution volumes collected on the EIA-6A, Coal Distribution Report – Annual, include anthracite and bituminous refuse or waste coal. These volumes are especially significant in Pennsylvania and West Virginia, resulting in total distribution volumes that exceed production volumes from traditional surface and underground mine sources.

Coal exports reported on the EIA-6A Coal Distribution Report – Annual, may differ from the volumes reported in the EIA Quarterly Coal Report (QCR). Volumes reported in the QCR are obtained from the Bureau of the Census, U.S. Department of Commerce, "Monthly Report EM 545." It is expected that differences would arise in the results of the surveys due to differences in survey frame populations, survey errors, assumptions, definitions, etc. For example, in 2007 the Coal Distribution Report shows exports as 55,378 thousand short tons while the QCR shows exports of 59,163 thousand short tons.

In the survey data, there were residual coal volumes that had an origin state but not a destination state. These residual volumes resulted from sales to brokers, classified as consumer type "Not a Consumer" (NC). These volumes were all assigned to the Electric Generation sector (EG) with an assumed transportation mode. The destinations were determined from a review and comparison with electric utility fuel receipt data from other EIA surveys. The results of the allocation are shown in the table below.

EIA made additional adjustments in order to improve the balance between the EIA-6A survey data and volumes reported on the FERC-423 and EIA-423 reports. These adjustments are shown in the table below:

Origin	Destination	Volume	Mode
WY	IL	(12,000,000)	RR

PAB	PA	(2,000,000)	RR
PAB	FL	2,000,000	RR

Note: Negative numbers in the above table indicate that the reported EIA-6A data were reduced on the particular origin to destination pair while the non-negative numbers indicate an adjustment increase in volume distributed.

A final adjustment in the coal distribution process was a distribution of volumes that had an origin state but no destination state but were reported to have been distributed to the electric generation sector. It was assumed that the destination state was the same as the origin state. Coal in this category consisted primarily of approximately 702,000 short tons that originated in Wyoming and was assumed to have a destination of Wyoming.

Key to Consumer Type Codes

The table below provides a translation of the Consumer Type Codes found in the 2007 Coal Distribution Database.

Consumer Type	Type of Consumer
AG	Agriculture, Mining and Construction
CP	Coke Plant
EG	Electric Generation
EX	Export Coal
MF	Manufacturing (Except Coke Plants)
NC	Not a Consumer
RC	Residential/Commercial
TF	Railroad/Vessel/Ship Fuel

It is also noted that Destination State code of "X Export" indicates movements to foreign destinations.

¹ Includes distribution to the transportation sector.

* Quantity is less than 500 short tons.

Note: Coal synfuel is included in individual state distributions for all sectors. Total may not equal sum of components because of independent rounding. Data for consumer categories of electric generation, residential and commercial, transportation fuel and unknown are for coal distributed to those sectors. Data for coke plants and industrial plants excluding coke are for coal receipts at those plants.
