WORK REQUIRED (including location, type, size, quantity, drawings, specification, etc.) Perform a static proof load test of the two spreader bars used for counterweighting the hoop load introduction plates for the Cryogenic Pressure Box. Each spreader bar shall be load tested at a load of 2,000 lbs. The 2,000 lbs. shall be divided into two loads of 1,000 lbs. each. The load shall be attached to the spreader bar as shown on the attached sketch. A contractor-provided spreader shall be used to lift the spreader assembly with the weights. The load test shall be performed in accordance with the requirements of LHB 1740.2 for slings/spreader bars. Per LHB 1740.2, the Proof Load test has a test factor of 1.25. With the proof load of 2,000 lbs., the spreader bar assemblies shall be rated for 1,600 lbs. The load test shall also use all of the shackles intended to be used for normal operations. The shackles will be installed on the spreader bar assemblies by the facility technicians prior to the proof load test.
