The 2006 Raymond Park Ranger Robotics Team had a productive and fun season. The team won the Team Spirit Award this year at the Regional Competition at Purdue University in West Lafayette, Indiana. The Team consisted of Raymond Park Middle School students, Warren Central High School student mentors, Raymond Park Technology Education teacher Bill Hougham and Technical Advisor Doug Traster who volunteers from the community. The team requires teamwork and spirit which are at the core of any winning group. Pictured above with their robot mascot are Raymond Park students Angel Dick, Antoine Watkins and Taylor Day. These three students were part of the Presentation Team that created an idea for a Robot which would be capable of an innovative solution to a problem or need within our society. The Raymond Park idea was to create a miniature Robot equipped with Lasers that is capable of doing surgery on the body from the inside out. Below is the picture of the entire robotics team.
