

Energy Balanced and Filled (EBAF) Parameter List

The EBAF product provides monthly mean top-of-atmosphere (TOA) radiative fluxes constrained such that the 5-year average global net TOA flux is consistent with our best estimate of heat storage in the Earth-atmosphere system ($\sim 0.9 \text{ Wm}^{-2}$). CERES EBAF is primarily intended for studies that use Earth Radiation Budget (ERB) data for climate model evaluation, estimating the Earth's annual global mean energy budget, and in studies that infer meridional heat transports. The CERES EBAF dataset is a single file in netCDF format. It consists of monthly 1° regional, zonal, and global averages of TOA longwave (LW), shortwave (SW), and net (NET) fluxes under clear and all-sky conditions. It is derived from the *Terra* SRBAVG-GEO Edition2D_rev1 and SSF Edition2B_rev1 data products.

EBAF is an archival product produced from SRBAVG as a one-time process. There is a single file for the *Terra* record from March 2000 to October 2005. This product is written in netCDF and follows the Climate and Forecast (CF) dataset conventions set forth by the modeling community.

EBAF dataset contains monthly and climatological means on a regional, zonal, and global basis:

- Total-sky radiative fluxes at TOA (constrained so that the net flux equals the ocean heat storage term)
- Clear-sky radiative fluxes at TOA (constrained and filled for non-observed regions)

A complete listing of metadata and gridded science parameters for this data product can be found in Tables 4-9.

Level: 4

Frequency: 1 File

Portion of Atmosphere Covered: TOA

Time Interval Covered:

File: All Months and Climatology

Record: 68 Months

Portion of Globe Covered:

File: Zonal, Global, Regional

Record: 1-Deg Regions

Product Version:

Terra: Edition1A

EBAF Data Sets

Table 1. Monthly Gridded Categories EBAF Tables 3-5.

Number	Name	Description	No. of Records
1	1.0 Degree Regional	See Table 4	360x180x68
2	1.0 Degree Zonal	See Table 5	180x68
3	Global	See Table 6	68

Table 2. Climatology Gridded Categories EBAF Tables 6-8.

Number	Name	Description	Number of Records
4	1.0 Degree Regional	See Table 7	360x180x12
5	1.0 Degree Zonal	See Table 8	180x12
6	Global	See Table 9	12

Table 3. List of Parameters used to Define Dimensions of Other Parameters

Parameter Name	Data Type	Units	Range	No. of Records
Longitude	32-Bit Float	Degrees-East	-179.5 .. 179.5	360
Latitude	32-Bit Float	Degrees-North	-89.5 .. 89.5	180
Time	32-Bit Integer	Days Since 2000-3-1 00:00:0.0	$\Delta T = 0000-01-00$ 00:00:0.0	68
Climatology Time	32-Bit Integer	Days Since 2000-3-1 00:00:0.0	$\Delta T = 0000-01-00$ 00:00:0.0	12
Climatology Bounds	32-Bit Integer			12x2

Table 4. List of the Monthly Data Sets contained in the 1.0 Degree Regional Parameters

Monthly Data Sets contained in the 1.0 Degree Regional Parameters

Parameter Name	Data Type	Units	Range	No. of Records
SW All-Sky TOA Up	32-Bit Float	W m ⁻²	0 .. 800	360x180x68
LW All-Sky TOA Up	32-Bit Float	W m ⁻²	0 .. 400	360x180x68
Net All-Sky TOA (Down=Positive)	32-Bit Float	W m ⁻²	-400 .. 400	360x180x68
SW Clear-Sky TOA Up	32-Bit Float	W m ⁻²	0 .. 800	360x180x68
LW Clear-Sky TOA Up	32-Bit Float	W m ⁻²	0 .. 400	360x180x68
Net Clear-Sky TOA (Down=Positive)	32-Bit Float	W m ⁻²	-400 .. 400	360x180x68
SW Cloud Radiative Effect	32-Bit Float	W m ⁻²	-400 .. 400	360x180x68
