Document Revision Record

The Document Revision Record contains information for approved and implemented changes to the entire Data Products Catalog (DPC). The table lists the date that the revised DPC was created and a short description of the revision.

Revision Date	Release Number	Description of Revision
08/1994	R1V1	TRMM Pre-launch Version
01/1997	R2V1	TRMM Launch Version
07/1998	R3V1	TRMM Launch Version including HDF organization
03/2000	R3V2	Updated for product parameter and/or format changes. Supports all launches.
10/2002	R3V3	Updated format to comply with standards.
07/2003	R4V1	Updated the following sections: SSF, CRS, FSW, SFC, SRBAVG, and INSTR.
08/2003	R4V2	Updated the SSF section.
10/2003	R4V3	Updated the CRS section.
11/2003	R4V4	Updated the FSW and SFC sections.
03/2004	R4V5	Updated the BDS, CRS, ES-4, ES-8, ES-9, and SRBAVG sections.
04/2004	R4V6	Updated the FSW section.
08/2004	R4V7	Updated the SSF section.
09/2004	R4V8	Updated the FSW, SFC, and SSF sections.
04/2005	R4V9	Updated the FSW section.
06/2005	R4V10	Updated the SRBAVG section.
07/2005	R4V11	Updated the CRS section.
11/2005	R4V12	Updated the BDS section.
02/2006	R4V13	Updated the GEO and GGEO sections.
03/2006	R4V14	Updated the MOA section.
05/2007	R4V15	Updated the AVG, SYN, ZAVG, CRS, and FSW sections.
02/2008	R4V16	Updated the SSF-Ed2 and CRS sections.
02/2008	R4V17	Updated the SRBAVG section.
06/2008	R4V18	Added the new SYNI and TSI Data Product Catalog sections and changed section numbering of TISA GGEO and SARB MOA that was affected by this addition.
08/2008	R4V19	Updated the AVG, ZAVG, and SYN sections.
10/2008	R4V20	Added the new VIIRS and ISCCP-D2like-Day/Nit Data Product Catalog sections and changed section numbering of SURFMAP, GEO, APD, GAP, MWH, OPD, SYN, AVG, ZAVG, and SRBAVG sections to accommodate the insertion of the VIIRS and ISCCP-D2like-Day/Nit sections. Also added the ISCCP-D2like-GEO Data Product Catalog section.
10/2008	R5V1	The DFD chart has been modified to add the ISCCP-D2like products.
11/2008	R5V2	Updated "Product Version" category in AVG, SYN, and ZAVG sections.

Revision Date	Release Number	Description of Revision
02/2009	R5V3	Updated “Product Version” category in SSF-Ed2 section and added “NPP” to applicable areas in the INSTR section.

Preface

The Clouds and the Earth's Radiant Energy System (CERES) Data Management System supports the data processing needs of the CERES Science Team research to increase understanding of the Earth's climate and radiant environment. The CERES Data Management Team works with the CERES Science Team to develop the software necessary to support the science algorithms. This software, being developed to operate at the Langley Distributed Active Archive Center (DAAC), produces an extensive set of science data products.

The Data Management System consists of 12 subsystems; each subsystem represents one or more stand-alone executable programs. Each subsystem executes when all of its required input data sets are available and produces one or more primary science products.

This Data Products Catalog is intended to give an overview of the primary, internal, and ancillary data products which are used or produced by the Data Management System. All CERES products are permanently stored by the Langley TRMM and Terra Information System (LATIS) DAAC. Primary data products are those that become available for distribution to the scientific community upon verification by the CERES Science Team. Internal and ancillary data products are available to the CERES Data Management System for use in producing the primary products. Additional details are given in the Collection Guide for each primary data product.

Acknowledgment is given to Joanne Saunders of Science Systems and Applications, Inc., for her support in preparing this document.

TABLE OF CONTENTS

<u>Section</u>	<u>Page</u>
Document Revision Record	ii
Preface.....	iv
1.0 Introduction.....	1
2.0 Primary Archival Data Products	7
2.1 Bidirectional Scans (BDS)	9
2.2 ERBE-like Instantaneous TOA Estimates (ES-8)	15
2.3 ERBE-like Monthly Regional Averages (ES-9)	21
2.4 ERBE-like Monthly Regional Averages (ES-4)	26
2.5 Single Scanner Footprint TOA/Surface Fluxes and Clouds (SSF)	35
2.6 Clouds and Radiative Swath (CRS)	50
2.7 Monthly Gridded Radiative Fluxes and Clouds (FSW).....	60
2.8 Monthly Gridded TOA/Surface Fluxes and Clouds (SFC).....	86
2.9 Monthly Gridded Cloud Averages (ISCCP-D2like-Day/Nit).....	96
2.10 Synoptic Radiative Fluxes and Clouds (SYN).....	116
2.11 Monthly Regional Radiative Fluxes and Clouds (AVG)	130
2.12 Monthly Zonal and Global Radiative Fluxes and Clouds (ZAVG)	151
2.13 Monthly TOA/Surface Averages (SRBAVG).....	172
2.14 Monthly Cloud Averages (ISCCP-D2like-GEO).....	187
3.0 Internal Data Products.....	193
3.1 Instrument Production Data Set (INSTR)	195
3.2 Instrument Earth Scans (IES)	207
3.3 ERBE-like Regional Data (EID-6).....	213
3.4 Clear Reflectance History (CRH)	217
3.5 Synoptic Radiative Fluxes and Clouds Intermediate (SYNI)	219
3.6 TSI Product	227
3.7 Gridded GEO Narrowband Radiances (GGEO)	232
3.8 Meteorological, Ozone, and Aerosol Data (MOA)	237
4.0 Ancillary Data Products.....	241
4.1 VIRS Cloud Imager Data (VIRS CID)	243
4.2 MODIS Cloud Imager Data (MODIS CID)	248

TABLE OF CONTENTS

<u>Section</u>	<u>Page</u>
4.3 VIIRS Cloud Imager Data (VIIRS CID).....	255
4.4 Surface Map (SURFMAP)	263
4.5 Geostationary Narrowband Radiances (GEO)	265
4.6 Aerosol Data (APD)	267
4.7 Gridded Analysis Product (GAP).....	269
4.8 Microwave Humidity (MWH)	273
4.9 Ozone Profile Data (OPD)	275
References.....	277
Appendix A - Acronyms, Abbreviations and Unit Definitions	A-1
Appendix B - CERES Metadata	B-1

1.0 Introduction

The Clouds and the Earth's Radiant Energy System (CERES) is a key component of the Earth Observing System (EOS) program. The CERES instrument provides radiometric measurements of the Earth's atmosphere from three broadband channels: a shortwave channel (0.3 - 5 μm), a total channel (0.3 - 200 μm), and an infrared window channel (8 - 12 μm). The CERES instruments are improved models of the Earth Radiation Budget Experiment (ERBE) scanner instruments, which operated from 1984 through 1990 on the National Aeronautics and Space Administration's (NASA) Earth Radiation Budget Satellite (ERBS) and on the National Oceanic and Atmospheric Administration's (NOAA) operational weather satellites NOAA-9 and NOAA-10. The strategy of flying instruments on Sun-synchronous, polar orbiting satellites, such as NOAA-9 and NOAA-10, simultaneously with instruments on satellites that have precessing orbits in lower inclinations, such as ERBS, was successfully developed in ERBE to reduce time sampling errors. CERES continues that strategy by flying instruments on the polar orbiting EOS platforms simultaneously with an instrument on the Tropical Rainfall Measuring Mission (TRMM) spacecraft, which has an orbital inclination of 35 degrees. In addition, to reduce the uncertainty in data interpretation and to improve the consistency between the cloud parameters and the radiation fields, CERES includes cloud imager data and other atmospheric parameters. The TRMM satellite carries one CERES instrument while the EOS satellites carry two CERES instruments, one operating in a fixed azimuth plane scanning mode (FAPS) for continuous Earth sampling and the other operating in a rotating azimuth plane scan mode (RAPS) for improved angular sampling.

A high-level view of the CERES Data Management System (DMS) is illustrated by the CERES Top Level Data Flow Diagram shown in [Figure 1-1](#). Circles in the diagram represent algorithm processes called subsystems. Subsystems are a logical collection of algorithms which together convert input data products into output data products. Boxes represent primary (archival), internal, or ancillary data products. Boxes with arrows entering a circle are input data sources for the subsystem, while boxes with arrows exiting the circles are output data products.

The CERES DMS produces science data products for use by the CERES Science Team, the Data Management Team, and for archival at the Langley Distributed Active Archive Center (DAAC). This document describes the data products that are shown in [Figure 1-1](#). Various conditions control the production rate of each product. For example, some are produced for each instrument, some are produced for both instruments on a given satellite, and some are produced for the entire CERES mission. [Figure 1-1](#) lists each of these scenarios and assigns a one-letter key to identify them. The CERES products are written using one of three types of data structures: Hierarchical Data Format (HDF), binary format, or Hierarchical Data Format-Earth Observing System (HDF-EOS) format, which are described in [Figure 1-1](#) with corresponding one-letter keys. All data products distributed to external users are archived in HDF or HDF-EOS. The binary files are used within the CERES DMS and are not distributed.

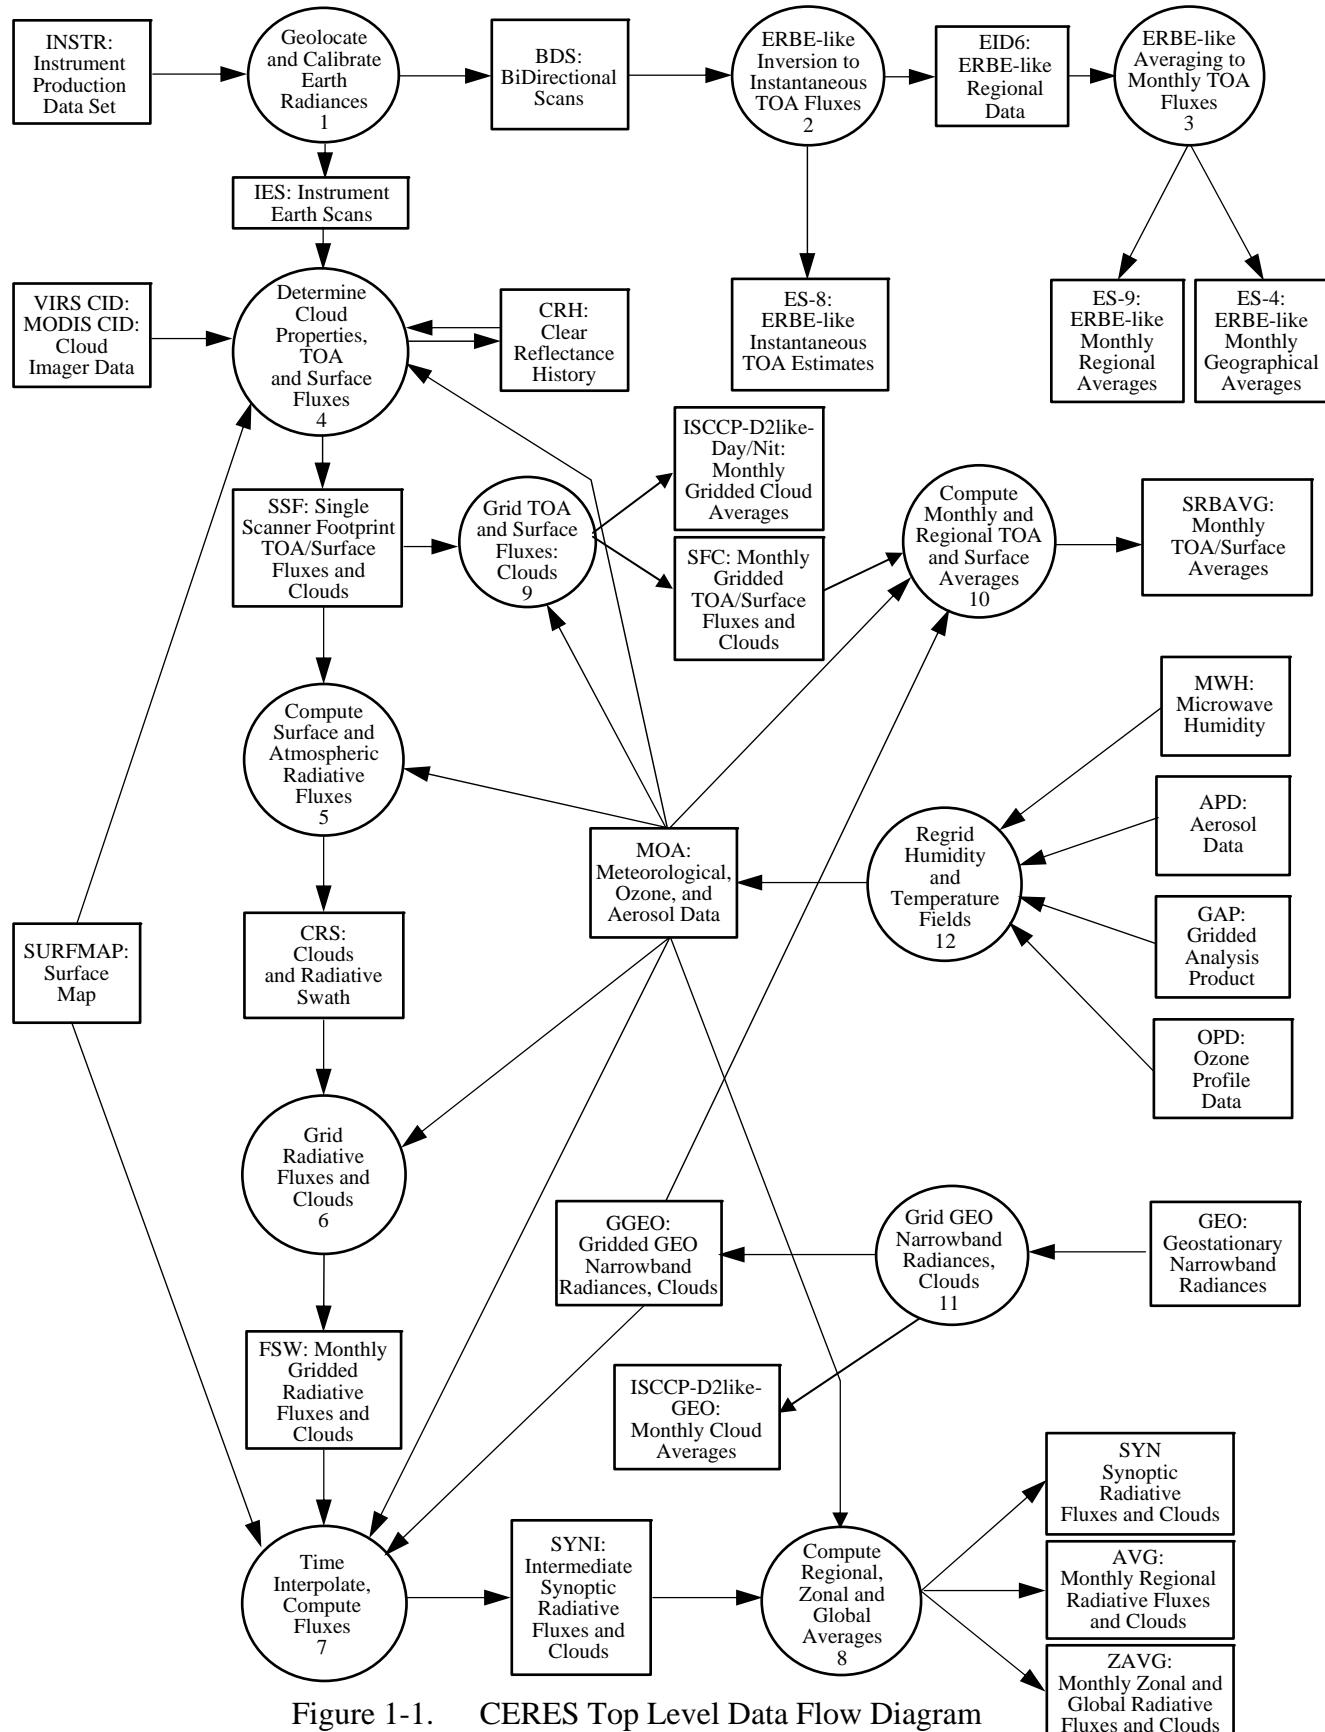

Figure 1-1. CERES Top Level Data Flow Diagram

Modified Date: October 2008

Table 1.0-1. Scenario Key

Key	Scenario (Production Rate)
A	One per each instrument operating in fixed and/or rotating azimuth scan mode
B	One per each satellite (regardless of the number of instruments)
C	One per each instrument plus all instruments combined
D	One per mission (regardless of the number of instruments and satellites)
E	One per TRMM satellite (VIRS imager data)
F	One per EOS satellite (MODIS imager data)

Table 1.0-2. File Format Key

Format Key	Description
B	File written using binary file structure
E	File written using HDF-EOS structures
H	File written using HDF structures

There are three categories of products as listed in the summary [Table 1.0-3](#) through [Table 1.0-5](#).

[Table 1.0-3:](#) Primary Products: Output products which are permanently stored by the Langley TRMM and Terra Information System (LATIS) DAAC, are formatted in HDF or HDF-EOS format, and are available for distribution to the scientific community.

[Table 1.0-4:](#) Internal Products: CERES Level 0 input data and output products which are produced and used by the Data Management System, are stored by the LATIS DAAC, and are not available for distribution.

[Table 1.0-5:](#) Ancillary Products: Input products which contain non-CERES data needed to interpret the CERES measurements and are not available for distribution.

Each summary table lists the number of the subsystem which produces or uses the product, the CERES and EOSDIS product identification codes, a descriptive product name, the temporal production frequency, the size of one instance of the product, the total size of a full month of one instance of the product, a scenario key as described in [Table 1.0-1](#), and a format key as described in [Table 1.0-2](#). The total data volume for a given product can be derived from the monthly size and the scenario.

The following sections of the catalog describe products from each of the three categories listed above. Each product description consists of a summary narrative followed by a listing of the parameters in the product. [Appendix A](#) provides a list of Acronyms and Unit Definitions; [Appendix B](#) describes the metadata that are written to all CERES products.

Table 1.0-5. Ancillary Products Summary

Sub Sys	Product Code		Name	Frequency	Size, MB	Monthly Size, MB	Key	
	CERES	EOSDIS					Scenario	Format
4	CID_VIRS	CERX05	VIRS Cloud Imager Data	1/Hour	57.4	42706	E	H
4	CID_MODIS	CERX04	MODIS Cloud Imager Data	1/5mins	338.1	3018378	F	H
4	SURFMAP	CERX07	Surface Map	Variable	28.8	162	D	B
1	GEO	CERX09	Geostationary Narrowband Radiances	8/Day/ Satellite	7.7	7600	D	B
2	APD	CERX10	Aerosol Data	1/Month	.4	.4	D	B
2	GAP	CERX12	Gridded Analysis Product	4-8/Day	103.6	128495	D	B
2	MWH	CERX13	Microwave Humidity	1/Day	2.1	65	D	B
2	OPD	CERX11	Ozone Profile Data	1/Day	2.4	74	D	B

Introduction Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

Introduction Revision Record

SCCR Approval Date	Release/ Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	• Updated format to comply with standards.	All

2.0 Primary Archival Data Products

This section describes the CERES primary output data products that are permanently stored by the Langley TRMM and Terra Information System (LATIS) DAAC and are available for distribution to the scientific community. Each subsection contains a brief overview of the purpose and content of the data product followed by one or more tables which list every parameter contained in the product. The following data attributes are described in the overview sections:

- Level - The EOS data products are defined in terms of "levels"¹
- Frequency - How often the product is received or produced
- Configuration Code - Unique identifier that defines the software and input file versions used to produce the products
- Time Interval Covered -
 - File - Time period covered within this file
 - Record - Time period covered within one record of this file
- Portion of Globe Covered -
 - File - Portion of the globe covered within this file
 - Record - Portion of the globe covered within a record of this file
- Portion of Atmosphere Covered -
 - File - Portion of the atmosphere covered within this file (Surface, Top-of-the-Atmosphere (TOA), etc.)

Additional tables may contain the following attributes for each parameter:

- Description - A textual description of the parameter
- Parameter Number - Arbitrary number assigned to the parameter
- Units - Units of the parameter value
- Range - Range of values for the parameter
- Elements/Record - Elements per record for this parameter (array definition)
- Bits/Element - Number of bits used to describe this parameter
- Elem Num - Element Number, a numbering of each element in the file/record

Total file sizes are also provided. The bolded entries within the file are names for the group of parameters which follow.

¹**Level 0:** raw instrument data at full sensor resolution.

Level 1A: raw instrument data at full sensor resolution, time-referenced, and annotated with ancillary information (including radiometric calibration coefficients and geolocation parameters such as platform ephemeris) computed and appended but not applied to the Level 0 data.

Level 1B: Level 1A data processed to sensor units and geolocated.

Level 2: derived geophysical variables at the same resolution and location as the Level 1 source data.

Level 3: geophysical variables mapped on uniform space-time grids, usually with some completeness and consistency.

Level 4: model output or results from analyses of lower level data, e.g., variables derived from multiple measurements.

Primary Archival Data Products Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

Primary Archival Data Products Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	• Updated format to comply with standards.	All

2.1 Bidirectional Scans (BDS)

The BiDirectional Scans (BDS) product contains 24 hours of instantaneous Level-1b CERES data for a single scanner instrument. The BDS contains instantaneous radiance measurements recorded every 0.01-second for views of space, internal calibration, solar calibration and Earth. It contains all elevation scan modes which include the normal Earth scan and the short Earth scan modes and both the fixed and rotating azimuth plane scan modes.

The BDS product includes:

- Filtered broadband radiances for the total, shortwave, and window channels for each 0.01 second measurement
- Geolocation and viewing geometry for every Earth-viewing measurement
- Instrument status, engineering temperatures and voltages for each 6.6 second scan
- Sun geometry, satellite position and velocity for each scan
- All raw engineering and status data from the instrument

A more detailed listing of the data parameters for this product can be found in the BDS Collection Guide: http://asd-www.larc.nasa.gov/ceres/collect_guide/list.html (Reference 3).

Level: 1B

Frequency: 1/Day

Portion of Atmosphere Covered: Satellite Altitude

Time Interval Covered:

File: 24 Hours

Record: Single 6.6-Second Scans

Portion of Globe Covered:

File: Satellite Altitude

Record: N/A

Product Version:

TRMM: Edition1-CV, Edition3 ++ see NOTE

Terra: Edition1, Edition1-CV, Edition2, Edition3 ++ see NOTE

Aqua: Edition1, Edition1-CV, Edition2, Edition3 ++ see NOTE

NOTE: The Slow Mode and Drift Corrected Counts SDSs are only available on Edition1 BDS products with a configuration code of 027025 or greater and Edition2 BDS products with a configuration code of 028028 or greater. Solar and Lunar Azimuth and Elevation Angle SDSs are only available on Edition1-CV BDS products and Edition2 BDS products with a configuration code of 031033 or higher and Edition3. In addition, the Satellite-Celestial Vdata parameters for Solar and Lunar Beta and Eta Angles along with Earth-Moon Distance, Moon Colatitude at start of record and Moon Longitude at start of record are only available for Edition1-CV BDS products, Edition2 BDS products with a configuration code of 031033 or higher and Edition3 BDS products.

Bidirection Scans (BDS) Definition

[Table 2.1-1](#) summarizes the contents and estimated product size of each data structure type contained within an BDS file. Each BDS product contains three metadata structures, 35 SDS structures, and eight VData structures.

Table 2.1-1. BDS HDF Structure Summary

Name	Description Table	Records	Number of Fields	Nominal Size (Bytes)
CERES Baseline Header Metadata	Table B-1	1	36	~25907
CERES_metadata Vdata	Table B-2	1	14	~1024

BDS Vdata Summary	Table 2.1-4	1 .. 13091	185	32,230,162
Total Size (Bytes):				1,281,824,789
Total Size (MBytes, including ~0.2% HDF overhead; 1MByte = 1024²Bytes):				1,224.89

BDS Metadata

The BDS product includes three data structures. These include the CERES Baseline Header Metadata and the CERES_metadata Vdata parameters, which are listed in [Appendix B](#). The BDS-specific metadata parameters are listed in [Table 2.1-2](#).

Table 2.1-2. BDS Product-Specific Metadata

Item	Parameter Name	Units	Range	Data Type
1	ScanMode	N/A	XtrkOnly, RapsOnly, FapsOnly, Raps/Faps, Xtrk/Raps, Xtrk/Faps, Xtrk/Raps/Faps	s(14)

BDS Scientific Data Sets

Every Scientific Data Set (SDS) in the BDS file represents a time ordered collection of data where each row in the SDS corresponds to a packet of data, and each column corresponds to a single sample within a packet. Most of the SDSs have 660 samples per packet of a single parameter arranged as shown in [Figure 2.1-1](#).

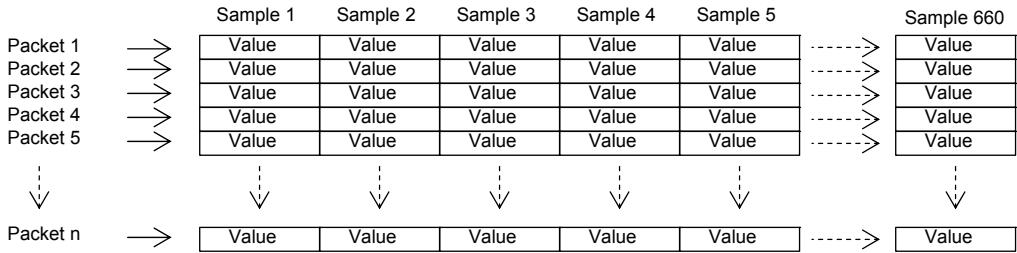

Figure 2.1-1. BDS SDS Schematic

[Table 2.1-3](#) summarizes the contents of each SDS structure contained within the BDS file (listed in alphabetical order by their SDS structure name). All SDS parameters have an HDF Rank = 2 and the maximum number of SDS elements corresponds to the number of rows by the number of columns. Data types are referenced by their HDF classification (e.g. Char8, Float32, Float64, Int8, UInt8, Int16, UInt16, Int32, UInt32, Int64, UInt64).

Table 2.1-3. BDS SDS Summary

SDS Name	Maximum SDS Elements	Data Type	Range	Units	Maximum Size (Bytes)
Raw Instrument Status Data	13091x185	uint16	Reference 3	N/A	4,843,670

BDS Vdata

The BDS contains eight Vdatas which are collections of records containing one or more fields. Each of the eight Vdatas contains n (1..10391) records of packet level data, and there is a one-to-one correspondence of the Vdatas record numbers to the BDS SDSs row numbers. [Table 2.1-4](#) summarizes each of the BDS Vdatas. Reference 3 provides detailed descriptions of the parameters.

Table 2.1-4. BDS Vdata Summary

Vdata Name	Number of Fields	Maximum Records	Number Bytes per Record	Maximum Size (Bytes)
Satellite-Celestial Data	18	13091	160	2,094,560

Vdata Total Size (Bytes)				32,230,162
Vdata Total Size (MBytes, plus a small HDF overhead percentage)				30.80

BDS Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

BDS Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> • Updated format to comply with standards. 	All
1/16/04	R4V1	497	<ul style="list-style-type: none"> • Updated to add newly added SDSs. Also reordered the tables to match the order on the BDS. • Updated format to comply with standards. 	All
11/18/05	R4V2	599	<ul style="list-style-type: none"> • Updated to add newly added SDSs containing Solar and Lunar Azimuth and Elevation Angles along with updated Satellite-Celestial Vdata to add Solar and Lunar Beta and Eta Angles, Earth-Moon Distance, Colatitude of Moon at start of record and Longitude of Moon at start of record, per Reqt.# 1-5. • Updated format to comply with standards. • The EOSDIS Product Code line was removed from the document. (6/17/2008) 	All All Sec. 2.1

2.2 ERBE-like Instantaneous TOA Estimates (ES-8)

The ERBE-like Instantaneous TOA Estimates (ES-8) product contains 24 hours of instantaneous Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. The ES-8 contains filtered radiances recorded every 0.01-second for the total (TOT), shortwave (SW), and window (WN) channels and the unfiltered SW, longwave (LW), and WN radiances. The SW and LW radiances at spacecraft altitude are converted to Top-of-the-Atmosphere (TOA) fluxes with a scene identification algorithm and Angular Distribution Models (ADMs) which are "like" those used for the Earth Radiation Budget Experiment (ERBE). The TOA fluxes, scene identification, and angular geometry are included on the ES-8. Complete listings of metadata and science parameters are listed in [Tables 2.2-1](#) through [2.2-4](#).

A detailed listing of the data parameters for this product can be found in the ES-8 Collection Guide: http://asd-www.larc.nasa.gov/ceres/collect_guide/list.html (Reference 3).

Level: 2

NOTE: The Spectral Response Functions Vdata is only available on ES-8 products with a configuration code greater than 021018.

ES-8 Metadata

[Table 2.2-1](#) gives an overview of the ES-8 product. The metadata structures contain information which need only be recorded once per daily product. The CERES Baseline Header Metadata and the CERES_metadata Vdata are listed in [Appendix B](#). As explained in [Appendix B](#), the CERES Baseline Header Metadata includes either the bounding rectangle or GRing attributes. The spatial boundaries of the ES-8 are defined with the bounding rectangle. The ES-8 also contains Product Specific Metadata, which are shown in [Table 2.2-2](#).

ES-8 Vdata Structures

The ES-8 contains 20 record-level parameters and one product-level parameter written by HDF-EOS as HDF Vdata structures. The record-level structures may be thought of as one-dimensional arrays dimensioned according to the number of 6.6-second records contained in the data-day; the maximum number of these records is 13,092 (since the time length of a record may vary, the maximum number of records on the ES-8 can be 13,092). The product-level parameter, Spectral Response Functions, structure contains six arrays, two arrays each for the shortwave, total, and window channels.

The parameters detailed in [Table 2.2-3](#) are:

- a) Time of Observation (Julian date and time)
- b) Earth-Sun distance
- c) Satellite position and velocity
- d) Satellite nadir position
- e) Sun position
- f) Spectral Response Functions

[Table 2.2-3.](#) ES-8 Vdata Summary

Parameter Name (Vdata Name)	Units	Range	Maximum Number of Vdata Elements	Data Type	Maximum Vdata Size (KB)
Time of Observation	day	2440000 .. 2480000	13092	64 bit real	102.27

Total Vdata Size (KB)					1125.08
Total Vdata Size (MB)					1.117

- a. NOTE: The Spectral Response Functions Vdata is only available on ES-8 products with a configuration code greater than 021018.

ES-8 Scientific Data Sets

The ES-8 contains 20 SDSs which are 2-dimensional arrays of time ordered records where the first dimension corresponds to the number of 6.6-second data records contained in the data-day; the maximum is 13,092 (since the time length of a record may vary, the maximum number of records on the ES-8 can be 13,092). For the measurement-level data, other than flag words, the second dimension corresponds to the number of measurements or footprints contained on a 6.6-second data record (660). There are 22 measurement-level, 32-bit flag words that contain a flag value in each of the right-most 30 bits (22 words x 30 bits/word = 660 bits). For these measurement-level flag words, the second dimension is 22. [Table 2.2-4](#) summarizes the content and size of each SDS contained within the ES-8 file.

The SDSs detailed in [Table 2.2-4](#) are:

- a) Instrument Field-of-View (colatitude and longitude)
- b) Radiometric data (total, shortwave, and window channels)
- c) Satellite and Sun geometry (viewing zenith, solar zenith, and relative azimuth)
- d) Unfiltered radiances (shortwave, longwave, and window)
- e) TOA fluxes (shortwave and longwave)
- f) ERBE scene identification

(1) clear ocean	(5) clear coastal	(9) mostly cloudy ocean

ES-8 Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

ES-8 Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> • Updated document to reflect new formats and to comply with standards. 	All
04/26/02	R3V2	341	<ul style="list-style-type: none"> • Updated LW Flux range from [0 .. 500] to [50 .. 450]. • Added the ES-8 Spectral Response Functions Vdata Summary table. • Moved Vdata parameter list from front page to ES-8 Vdata Structures section. • Moved SDS data listing from front page to ES-8 Scientific Data Sets section. • Updated format to comply with standards. 	Table 2.2-4 Table 2.2-3 Vdata SDS All
02/23/04	R4V1	503	<ul style="list-style-type: none"> • Updated product versions for Aqua Edition1 to include Edition2. • Supplied footnote for availability of Spectral Response Functions Vdata. • Updated format to comply with standards. • The EOSDIS Product Code line was removed from the document. (6/17/2008) 	Section 2.2 Table 2.2-3 All Sec. 2.2

2.3 ERBE-like Monthly Regional Averages (ES-9)

The ERBE-like Monthly Regional Averages (ES-9) product contains a month of space and time averaged Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. The ES-9 is also produced for combinations of scanner instruments. All instantaneous shortwave and longwave fluxes at the Top-of-the-Atmosphere (TOA) from the CERES ES-8 product for a month are sorted by 2.5-degree spatial regions, by day number, and by the local hour of observation. The mean of the instantaneous fluxes for a given region-day-hour bin is determined and recorded on the ES-9 along with other flux statistics and scene information. For each region, the daily average flux is estimated from an algorithm that uses the available hourly data, scene identification data, and diurnal models. This algorithm is "like" the algorithm used for the Earth Radiation Budget Experiment (ERBE). The ES-9 also contains hourly average fluxes for the month and an overall monthly average for each region. These average fluxes are given for both clear-sky and total-sky scenes.

The ES-9 archival data product is created as an HDF file with six Vgroups and contains data for each 2.5-degree region observed during a month. There are 10,368 regions in the ERBE-Like data; therefore, there is a maximum of 10,368 records in the ES-9 data set. A summary of the contents of this data product can be found in [Table 2.3-1](#). The ES-9 product size shown in this table assumes that all 2.5-degree regions and all hourboxes contain data. Since the hourboxes are sparsely populated, sizing estimates per platform are 95 MB (TRMM), 260 MB (Terra), and 260 MB (Aqua). The sizing estimate for the ES-9 in the "Archival Products Summary" table is for Aqua. A more detailed listing of the data parameters for this product can be found in the ES-9 Collection Guide: http://asd-www.larc.nasa.gov/ceres/collect_guide/list.html (Reference 3).

Table 2.3-2. ES-9 Product Specific Metadata

Item	Parameter Name	Records	Units	Range	Data Type
1	ES9BinaryProductionDate	1	N/A	N/A	ASCII string

ES-9 Scientific Data Sets

The ES-9 contains science parameters written as HDF Scientific Data Sets (SDSs) which are 1- or 2-dimensional arrays of spatially ordered records that are organized by Vgroups. An overview of each of these Vgroups is given in [Table 2.3-3](#). Detailed definitions of each parameter on the ES-9 may be found in the ES-9 Collection Guide (Reference 3).

Table 2.3-3. ES-9 Vgroup Summary

Vgroup Number	Vgroup Name	Description	Number of Records	Maximum SDS Size (MB)
1	Regional Summary Data	See Table 2.3-4	$10368^a \times 10^a$	0.396
2	Monthly (Day) Averages	See Table 2.3-5	$10368^a \times 28^b$	1.107
3	Monthly (Hour) Averages	See Table 2.3-5	$10368^a \times 28^b$	1.107
4	Daily Averages	See Table 2.3-5	$10368^a \times 31 \times 28^b$	34.330
5	Monthly Hourly Averages	See Table 2.3-5	$10368^a \times 24 \times 34^b$	32.273
6	Hourbox Data	See Table 2.3-5	$(10368 \times 744)^c \times 34^b$	1029.902
Total SDS size (MB)				1,099.115

- a. The first dimension of the SDS will equal the number of 2.5-degree regions contained on the ES-9.
- b. This dimension represents the number of SDS parameters contained in the Vgroup.
- c. The first dimension of this SDS is equal to the sum of the number of hourboxes per region over all the regions actually contained on this ES-9, or it is equal to the sum of all "Number of hourboxes" from the Regional Summary Data Vgroup. 10,368 is the maximum number of 2.5-degree regions, and 744 is the maximum number of hourboxes per region, so the maximum size of the first dimension for this SDS is $10,368 \times 744 = 7,713,792$.

Table 2.3-4 lists the SDSs contained in the Regional Summary Data Vgroup.

Longwave flux	Colatitude

ES-9 Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

ES-9 Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.	All
2/23/04	R4V1	503	<ul style="list-style-type: none">• Updated product versions for Aqua Edition1 to include Edition2.• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	All All Sec. 2.3

2.4 ERBE-like Monthly Regional Averages (ES-4)

The ERBE-like Monthly Geographical Averages (ES-4) product contains a month of space and time averaged Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. The ES-4 is also produced for combinations of scanner instruments. For each observed 2.5-degree spatial region, the daily average, the hourly average over the month, and the overall monthly average of shortwave and longwave fluxes at the Top-of-the-Atmosphere (TOA) from the CERES ES-9 product are spatially nested up from 2.5-degree regions to 5- and 10-degree regions, to 2.5-, 5-, and 10-degree zonal averages, and to global monthly averages. For each nested area, the albedo and net flux are given. For each region, the daily average flux is estimated from an algorithm that uses the available hourly data, scene identification data, and diurnal models. This algorithm is "like" the algorithm used for the Earth Radiation Budget Experiment (ERBE).

The ES-4 archival data product is created as an HDF file which contains nine HDF Vgroups corresponding to regional, nested regional, zonal, and global averages (see [Table 2.4-3](#)). There are 10,368 2.5-degree regions for the ERBE-like data; therefore, there is a maximum of 10,368 records in the 2.5-degree regional data set. The second set of data is the 2.5-degree nested to 5-degree regional data, which constitutes a maximum of 2,592 records. The third set of data is the 5-degree nested to 10-degree regional data, which constitutes up to 648 records. The fourth, fifth, and sixth sets of data are the 2.5-, 5-, and 10-degree zonally averaged data which constitute 72, 36, and 18 records, respectively. The seventh, eighth, and ninth sets of data are the 2.5-, 5-, and 10-degree globally averaged data which constitutes 1 record each. A summary of the contents of this data product can be found in [Table 2.4-1](#).

A more detailed listing of the data parameters for this product can be found in the ES-4 Collection Guide: http://asd-www.larc.nasa.gov/ceres/collect_guide/list.html (Reference 3).

ES-4 Metadata

The content of the ES-4 product is summarized in [Table 2.4-1](#). The metadata structures contain information which need only be recorded once per monthly product. The CERES Baseline Header Metadata and the CERES_metadata Vdata are listed in [Appendix B](#). The ES-4 Product-specific Metadata are shown in [Table 2.4-2](#).

Table 2.4-1. ES-4 Product Summary

ES-4 Scientific Data Sets

The ES-4 contains science parameters written as HDF Scientific Data Sets (SDSs) which are 2- or 3-dimensional arrays of time ordered records. The ES-4 Collection Guide (Reference 3) gives a detailed description of the parameters contained on the ES-4 product.

Table 2.4-4 lists the SDSs contained in the 2.5-degree Regional Vgroup.

ES-4 Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

ES-4 Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.	All
2/23/04	R4V1	503	<ul style="list-style-type: none">• Updated product versions for Aqua Edition1 to include Edition2.• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	All Sec. 2.4

2.5 Single Scanner Footprint TOA/Surface Fluxes and Clouds (SSF)

The Single Scanner Footprint TOA/Surface Fluxes and Clouds (SSF) product contains one hour of instantaneous Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. The SSF combines instantaneous CERES data with scene information from a higher-resolution imager such as Visible/Infrared Scanner (VIIRS) on TRMM or Moderate-Resolution Imaging Spectroradiometer (MODIS) on Terra and Aqua. Scene identification and cloud properties are defined at the higher imager resolution and these data are averaged over the larger CERES footprint. For each CERES footprint, the SSF contains the number of cloud layers and for each layer the cloud amount, height, temperature, pressure, optical depth, emissivity, ice and liquid water path, and water particle size. The SSF also contains the CERES filtered radiances for the total, shortwave (SW), and window (WN) channels and the unfiltered SW, longwave (LW), and WN radiances. The SW, LW, and WN radiances at spacecraft altitude are converted to Top-of-the-Atmosphere (TOA) fluxes based on the imager defined scene. These TOA fluxes are used to estimate surface fluxes.

Only footprints with imager coverage are included on the SSF which is much less than the full set of footprints on the CERES ES-8 product. The number of possible footprints on an SSF depends on the elevation scan mode, azimuth scan mode, and height of the satellite. Since elevation and azimuth scan modes are programmable, the range on the number of footprints in an SSF product has been set to the largest possible range, namely 0 .. 360000 as shown in [Table 2.5-2](#). A smaller number of footprints is used in SSF sizing estimates, namely the estimated maximum number of TRMM full Earth-view footprints per hour given a normal elevation scan and an along-track azimuth scan. Accounting for the need for imager coverage, the actual number of footprints is expected to be even smaller. This reduction of footprints due to lack of imager coverage is very evident when CERES is operating in a cross-track azimuth scan mode. A complete listing of parameters for this data product can be found in [Tables 2.5-3](#) to [Table 2.5-15](#).

A more detailed listing of the data parameters for this product can be found in the SSF Collection Guide: http://asd-www.larc.nasa.gov/ceres/collect_guide/list.html (Reference 3).

SSF Metadata

SSF metadata includes the CERES Baseline Header Metadata and CERES_metadata Vdata, which are listed in [Appendix B](#). The SSF product-specific metadata parameters are listed in [Table 2.5-1](#) and the SSF_Header parameters are listed in [Table 2.5-2](#). For TRMM SSF products, the SSF ID (SSF-H1) will be set to 117 and will contain 131 SDS parameters (SSF-1 through SSF-131). For Terra and Aqua SSF products, the SSF ID will be set to 1117 and these products will contain an additional 29 MODIS aerosol SDS parameters (SSF-132 through SSF-160).

SSF Scientific Data Sets

The SSF contains Scientific Data Sets (SDS) which are parameter collections of along-track ordered footprints where the first dimension corresponds to the number of footprints; the last dimension corresponds to the number of parameters; and the middle dimension, if rank 3, corresponds to the number of elements in each parameter array. This ordering is used by the C programming language and most HDF viewers. In Fortran, the dimensions are reversed such that the number of footprints becomes the last dimension and the first dimension is the number of parameters in the SDS. The SDSs are divided into tables which map to Vgroups of the same name. [Table 2.5-3](#) to [Table 2.5-15](#) summarize the contents of each Vgroup and SDS contained within the SSF file. The MODIS land and ocean aerosol data (SDS parameters, SSF-132 through SSF-160) described in [Table 2.5-14](#) and [Table 2.5-15](#) are available only on Terra and Aqua SSF products.

(Note: the dimension n in the following tables is the number of footprints processed: Assuming n = 245475 for sizing)

Table 2.5-3. Time and Position

Item	SDS Name (Parameter Name)	Units	Range	Dimensions	Data Type	Maximum Hourly Size (MB)

SSF Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

SSF Revision Record

SCCR Approval Date	Release/ Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> • Updated document to reflect new formats and to comply with standards. 	All
6/21/02	R3V2	367	<ul style="list-style-type: none"> • Changed range of SSF ID in SSF_Header. • Added 2 tables for data available on Terra and Aqua products. • Added explanation about differences between TRMM products and the Terra and Aqua products. • Modified cover page to add information for all CERES satellites. • Added Revision Record page. • Updated format to comply with standards. 	SSF Metadata Tables 2.5-14 & 2.5-15 SSF Scientific Data Sets Cover page SSF Revision Record All
5/21/03	R3V3	438	<ul style="list-style-type: none"> • Changed range of PSF-wtd MOD04 effective optical depths (SSF-136 to SSF-138; SSF-150 to SSF-159) from 0.0 .. 3.0 to 0.0 .. 5.0 based on changes to v003 MOD04 inputs starting with data date 01.Apr.2002. • Added Beta1 data set for Aqua satellite. • Updated format to comply with standards 	Tables 2.5-14 & 2.5-15 Cover page All

2.6 Clouds and Radiative Swath (CRS)

The Clouds and Radiative Swath (CRS) product contains one hour of instantaneous Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. The CRS contains all of the CERES SSF product data. For each CERES FOV on the SSF, the CRS also contains vertical flux profiles evaluated at five levels in the atmosphere: the surface, 500 hPa, 200 hPa, 70 hPa, and the TOA. After an initial pass through the radiative transfer model, the input parameters to the model are adjusted and a constrained pass through the model is made for both clear sky and total sky. If the FOV is overcast, clear sky fluxes are still calculated.

For the longwave, shortwave, and window channels, the CRS contains the upward and downward constrained vertical flux profiles for clear sky and total sky conditions evaluated at the five levels, along with pristine (no aerosols or clouds) and aerosol-free total sky fluxes evaluated at the surface and the TOA.

The initial flux profiles are not contained on the CRS unless constrained values are unavailable; however, the adjustments between the constrained and initial profiles for the following are included for clear sky, total sky, pristine, and aerosol-free total sky conditions:

- Longwave, shortwave, and window channel upward at the surface and the TOA.
- Longwave, shortwave, and window channel downward at the surface.

The adjustments to the model input parameters between the initial and the constrained passes are also contained on the CRS. The adjustable parameters include:

- Surface albedo and skin temperature.
- Total column precipitable water and upper tropospheric relative humidity.
- Aerosol optical depth.
- Cloud optical depth, fractional area, and effective temperature.

Level: 2

Frequency: 1/Hour

Portion of Atmosphere Covered: Surface to the TOA

Time Interval Covered:

File: 1 Hour

Record: 1/100-Second

Portion of Globe Covered:

File: Satellite Swath

Record: 1 CERES FOV

Product Version:

TRMM: Edition2B, Edition2C

Terra: Edition2A, Edition2B, Edition2F

Aqua: Edition2A, Edition2B, Edition2C

CRS Metadata

The types of CRS metadata are summarized in [Table 2.6-1](#) and contain information which need only be recorded once per hour. The CERES metadata are listed in [Appendix B](#). [Table B-1](#) lists the CERES Baseline Header Metadata and [Table B-2](#) lists the parameters in the CERES_metadata Vdata Table. Note that the CERES_metadata Vdata is a subset of the CERES Baseline Header Metadata. The CRS product-specific metadata parameters are listed in [Table 2.6-1](#) and the CRS_Header_Vdata parameters are listed in [Table 2.6-2](#).

CRS Scientific Data Sets

For the TRMM satellite, the CRS contains 206 Scientific Data Sets (SDS). For the Terra and Aqua satellites, the CRS contains 250 SDSs. The first 131 SDSs (160 SDSs for Terra and Aqua) are also contained on the SSF. (For a list of these SDSs, see [Table 2.5-3](#) through [Table 2.5-15](#).) The remaining SDSs are generated by the CERES Surface and Atmospheric Radiation Budget (SARB) production software and are unique to the CRS product.

These SDSs are parameter collections of along-track ordered FOVs where the first dimension corresponds to the number of FOVs, and the last dimension corresponds to the number of parameters. The middle dimension, if rank 3, corresponds to the number of elements in each parameter array. This ordering is used by the C programming language and most HDF viewers. In Fortran, the dimensions are reversed such that the number of FOVs becomes the last dimension and the first dimension is the number of parameters in the SDS.

The SDSs are divided into tables which map to Vgroups of the same name. [Table 2.6-3](#) through [Table 2.6-16](#) summarize the contents of each Vgroup and SDS contained within the CRS file. Product sizing information for the maximum number of possible FOVs is given in [Table 2.6-17](#). (Note: the dimension n in the following tables is the number of FOVs processed: Assuming n = 245475 for sizing). Maximum SDS hourly sizes for the different dimensions are given in [Table 2.6-18](#).

Table 2.6-3. Surface Radiative Properties

SARB SDS	TRMM CRS SDS Number ^a	Terra and Aqua CRS SDS Number ^b	SDS Name	Units	Range	Dim	Data Type
1	TRMM-132	Terra-161	Photosynthetically active radiation over surface	W m ⁻²	0 .. 780	n	32 bit real

a. The first 131 TRMM CRS SDSs are listed in the corresponding TRMM SSF DPC pages. TRMM SSF and CRS granules contain fewer SDSs than Terra and Aqua SSF and CRS granules.

b. The first 160 Terra and Aqua CRS SDSs are listed in the corresponding SSF DPC pages.

Table 2.6-17. Sizing Information^a

SATELLITE	HOURLY SSF SDS TOTAL SIZE (MAXIMUM)	HOURLY CRS-ONLY SDS SIZE (MAXIMUM)	HOURLY CRS TOTAL SDS SIZE (MAXIMUM)	DAILY CRS TOTAL SIZE (MAXIMUM)
TRMM SATELLITE	260.27 MB	132.97 MB	391.42	9.15 GB
TERRA AND AQUA SATELLITES	283.73MB	147.02 MB	430.75	10.10 GB

a. Sizing data in this table are based solely on binary versions of the products, and do not account for HDF compression.

Table 2.6-18. Maximum Hourly SDS Sizes

Dimension	Maximum Hourly Size (MB)
n	0.94
n x 2	1.87
n x 5	4.68
n x 7	6.55

CRS Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

CRS Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> Updated format to comply with standards. 	All
12/20/02	R3V2	408	<ul style="list-style-type: none"> Added text to indicate a different number of SDSs for the different satellites. Updated table to include sizing information for the different satellites. Updated summary information to include the Product Version section and eliminated the references to the CERES Configuration Codes. Corrected references to the height used as the TOA by SARB to 0.1 hPa. Updated format to comply with standards. 	2.6 Table 2.6-16 2.6 2.6 All
12/20/02	R3V3	408	<ul style="list-style-type: none"> Replaced references to the 0.1 hPa height with the term TOA and defined pristine skies as containing no clouds or aerosols. Removed column containing individual SDS hourly size information from VGroup tables and added Table 2.6-17. Replaced single Item Number column in VGroup Tables with three columns to distinguish the Item Number between satellites. Updated format to comply with standards. 	2.6 Tables 2.6-3 through 2.6-17 Tables 2.6-3 through 2.6-16 All
7/30/03	R3V4	458	<ul style="list-style-type: none"> Updated introduction to discuss the aerosol-free total sky additions to the CRS. Added new table to contain the aerosol-free total sky information. Updated sizing table to reflect the additional data. Updated format to comply with standards. 	2.6 Table 2.6-16 Table 2.6-17 All
1/16/04	R3V5	498	<ul style="list-style-type: none"> The revisions to the document are the updating of Table 2.6-15 to reflect the renaming of the SDS Sigma table version number SDS to FuLiou model error code, and the updating of that SDS's range. 	Table 2.6-15

2.7 Monthly Gridded Radiative Fluxes and Clouds (FSW)

The Monthly Gridded Single Satellite Fluxes and Clouds (FSW) archival data product contains hourly single satellite flux and cloud parameters averaged over 1.0-degree regions. Input to the FSW Subsystem is the Clouds and Radiative Swath (CRS) archival data product. Each FSW covers a single month swath from a single CERES instrument mounted on one satellite. The product is written in HDF and contains metadata as well as gridded science data. The HDF product for TRMM consists of eight files, each containing data for ten 1.0-degree equal-angle zones. The HDF product for Terra and Aqua consists of 60 files, each containing data for three 1.0-degree equal-angle zones. Each record contains spatially averaged data for an individual region.

The major categories of data output on the FSW are as follows:

- Region data
- Imager Radiances Statistics
- Angular model scene classes
- Radiative fluxes for both Clear-sky and Total-sky at TOA
- Atmospheric flux profiles for Pristine-sky, Clear-sky and Total-sky
- Flux Adjustments for Pristine-sky, Clear-sky and Total-sky
- Surface Emissivity
- Overlap data for eleven cloud conditions
- Cloud category properties for four cloud layers
- Adjustment parameters for four cloud layers
- Adjustment parameters for clear-skies

A complete listing of parameters for this data product can be found in [Tables 2.7-4](#) through [Table 2.7-27](#).

Level: 3

Frequency: 1/Month

Portion of Atmosphere Covered: TOA, Surface, and Atmospheric Pressure Levels

Time Interval Covered:

File: Month

Record: Hour

Portion of Globe Covered:

File: Gridded Satellite Swath

Record: 1.0-Deg Equal-angle Regions

Product Version:

TRMM:

Terra: Edition2C

Aqua: Beta1, Edition2A, Edition2B

FSW Metadata

The types of FSW metadata are summarized in [Table 2.7-1](#) and contain information which need only be recorded once per product. The CERES metadata are listed in [Appendix B](#). The FSW product-specific metadata parameters are listed in [Table 2.7-2](#).

Table 2.7-1. FSW Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata Vdata	Table B-2	1	14
FSW Product Specific Metadata	Table 2.7-2	1	2

Table 2.7-2. FSW Product-specific Metadata

Item	Parameter Name	Description	Data Type	Units	Range
1	ZoneBeginning	Beginning zone number	I4	N/A	1 .. 180
2	ZoneEnding	Ending zone number	I4	N/A	1 .. 180

All of the FSW science data are organized into the Vdata structures summarized in [Table 2.7-3](#). The TRMM FSW product parameter lists are summarized in [Table 2.7-4](#) through [Table 2.7-13](#) and [Table 2.7-18](#) through [Table 2.7-24](#) including the SDS number, the SDS name, the data type, the units, the range, and the number of elements within each field. The Terra and Aqua FSW product parameter lists are summarized in [Table 2.7-4](#) through [Table 2.7-9](#) and [Table 2.7-14](#) through [Table 2.7-27](#) including the SDS number, the DS name, the data type, the units, the range, and the number of elements within each field. Terra and Aqua FSW products contain additional MODIS aerosol SDSs which are summarized in [Table 2.7-25](#) through [Table 2.7-27](#). The profile flux SDS names are defined differently between TRMM and Terra FSW products, therefore the profile flux SDSs are summarized in separate tables for TRMM and Terra products. The number of records per Vdata is defined as n where n varies for each file. Sizing estimates are based on anticipated Terra sampling.

FSW Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

FSW Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> • Updated format to comply with standards. 	All
02/07/03	R3V2	424	<ul style="list-style-type: none"> • Updated parameters in Regional Identification Data, Regional Imager Data. • Updated Angular model scene category. • Updated vdata sizes. • Added MODIS aerosols for land and Ocean. • Updated format to comply with standards. 	Tables 2.11-5, 2.11-7 Table 2.7-8 Table 2.7-3 Tables 2.7-21, 2.7-22 All
10/23/03	R3V3	476	<ul style="list-style-type: none"> • Added cloudy skies with no Aerosols. • Updated flux profile parameters. • Added Snow/Ice Percentage from Imager History parameter to Angular Model Scene type. • Updated format to comply with standards. 	Tables 2.7.3, 2.7-23 Tables 2.7-11 - 2.7-13 Table 2.7.8 All
10/23/03 01/28/04	R3V4	476 499	<ul style="list-style-type: none"> • Added two new columns to include SDS index numbers for TRMM & Terra. • Julian Time SDS data type is set to 64-bit. Added a note. • Added new tables for TRMM profile flux SDSs, since these names are defined differently for TRMM and Terra. • Updated units and range values. • Updated format to comply with standards. 	All Table 2.7.4 Tables 2.7.10 - 2.7.13 Tables 2.7.19 - 2.7.23 & 2.7.25 - 2.7.26 All
06/04/04	R4V1	530	<ul style="list-style-type: none"> • Deleted Snow/Ice Percentage from Imager History parameter to Angular Model Scene type. • Updated SDS Indices. • Deleted Terra SDS Index columns where ever SDS Indices are the same for TRMM, Terra and Aqua. Updated Column Titles. 	Table 2.7.8 Tables 2.7.9, 2.7.14 - 2.7.27 Tables 2.7.9, 2.7.8, 2.7.18 - 2.7.24

FSW Revision Record

06/04/04 Cont'd.	R4V1	530	<ul style="list-style-type: none"> • Updated Terra SDS Indices. • Added product name in front of SDS index in the first column of the table. • Updated format to comply with standards. 	Tables 2.7.15 - 2.7.17, 2.7.25 - 2.7.27 Tables 2.7.4 - 2.7.27 All
02/07/05	R4V2	575	<ul style="list-style-type: none"> • Added Total-Sky and Clear-sky Satellite Emulated Window Channel parameters. • Added Aerosol Constituency Ratio Parameter. • Updated parameter names. • Updated sds sizes. • Updated format to comply with standards. 	Table 2.7.28 Table 2.7.29 Tables 2.7.14, 2.7.20 - 2.7.23 Table 2.7-3 All
02/07/06	R4V3	575	<ul style="list-style-type: none"> • Added Edition2A and Edition2B to the Product Version category Aqua. • The EOSDIS Product Code line was removed from the document. (6/17/2008) 	Sec. 2.7 Sec. 2.7

2.8 Monthly Gridded TOA/Surface Fluxes and Clouds (SFC)

The Monthly Gridded TOA/Surface Fluxes and Clouds (SFC) archival data product contains hourly single satellite flux and cloud parameters averaged over regions in a 1.0-degree nested grid. The data are processed and written in local time. Input to the SFC Subsystem is the Single Scanner Footprint TOA/Surface Fluxes and Clouds (SSF) archival data product. Each SFC covers a single month swath from a single CERES instrument mounted on one satellite. The product is written in HDF and contains metadata as well as gridded science data. For TRMM, data will be organized onto eight SFC HDF files, each containing data for ten 1.0-degree equal-angle zones. For Terra and Aqua, data will be organized onto 36 SFC HDF files, each containing data for five 1.0-degree equal-angle zones. Each record contains spatially averaged data for an individual region. The science data are Vdata with multiple records. Each record contains spatially averaged data for an individual region.

The major categories of data output on the SFC are as follows:

- Region data
- Imager Radiances Statistics
- Angular model scene classes
- Total-sky radiative fluxes at TOA and Surface
- Clear-sky radiative fluxes at TOA and Surface
- Surface Emissivity
- Cloud category properties for four cloud layers

A complete listing of metadata and science parameters for this data product can be found in [Tables 2.8-1](#) through [Table 2.8-17](#).

Level: 3

Frequency: 1/Month

Portion of Atmosphere Covered: TOA and Surface

Time Interval Covered:

File: Month

Record: Hour

Portion of Globe Covered:

File: Gridded Satellite Swath

Record: 1.0-Deg Equal-angle Region

Product Version:

TRMM:

Terra: Edition2B

Aqua: Edition1A

SFC Metadata

The CERES Baseline Header Metadata and the CERES_metadata Vdata are listed in [Appendix B](#). The SFC product-specific metadata parameters are listed in [Table 2.8-2](#).

Table 2.8-1. SFC Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata Vdata	Table B-2	1	14
SFC Product Specific Metadata	Table 2.8-2	1	2

Table 2.8-2. SFC Product-specific Metadata

Item	Parameter Name	Description	DataType	Units	Range
1	ZoneBeginning	Beginning zone number	I4	N/A	1 .. 180
2	ZoneEnding	Ending zone number	I4	N/A	1 .. 180

SFC Science Data

All of the SFC science data are organized into various Vdata Structures, summarized in [Table 2.8-3](#). The TRMM SFC product parameter lists are summarized in [Table 2.8-4](#) through [Table 2.8-15](#) including the SDS number, the SDS name, the data type, the units, the range, and the number of Elements within each field. Terra and Aqua SFC science data contain an additional 10 MODIS aerosol SDS parameters, summarized in [Table 2.8-16](#) through [Table 2.8-17](#). The number of records per Vdata is defined as n where n varies for each file. Sizing estimates are based on TERRA sampling.

SFC Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

SFC Revision Record

SCCR Approval Date	Release/ Version Number	SCCR Number	Description of Revision	Section(s) Affected
5/29/02	R3V2	365	<ul style="list-style-type: none"> • Updated parameters in Regional Identification Data, Regional Imager Data. • Updated format to comply with standards. 	Tables 2.11-5 & 2.11-7 All
02/03/03	R3V3	388	<ul style="list-style-type: none"> • Updated vdata sizes. • Added MODIS aerosols for land and Ocean. • Updated format to comply with standards. 	Table 2.11-3 Tables 2.11-16 & 2.11-17 All
02/03/03	R3V4 R4V1	388	<ul style="list-style-type: none"> • Changed range of MOD04 effective optical depths from 0.0 .. 3.0 to 0.0 .. 5.0 based on changes to v003 MOD04 inputs starting with data date 01.Apr.2002. • Changed units of 10 ,11 in Layer Cloud category from mm to mm. • The revision and version numbers were changed at this time. • Updated format to comply with standards. 	Tables 2.11-16 & 2.11-17 Tables 2.11-12, 2.11-13, 2.11-14, 2.11-15 All All

2.9 Monthly Gridded Cloud Averages (ISCCP-D2like-Day/Nit)

The Monthly Gridded Cloud Averages (ISCCP-D2like-Day/Nit) archival data product contains 3-hourly (GMT based) monthly and monthly 1° gridded regional mean cloud properties as a function of 18 cloud types, similar to the [ISCCP D2](#) product, where the cloud properties are stratified by pressure, optical depth, and phase. There is a dataset for Terra-MODIS and Aqua-MODIS as well as a day and nighttime dataset. The retrievals and therefore the quality are different for each dataset. For the MODIS-based ISCCP-D2like products the cloud amounts for 42 cloud types, similar to the [ISCCP D1](#) product, are also available. Input to the Subsystem is the Single Scanner Footprint TOA/Surface Fluxes and Clouds (SSF) archival data product. Each ISCCP-D2like covers a single month swath from a single CERES instrument mounted on one satellite. The science data are Science Data Sets (SDSs) with multiple records. Each record contains spatially averaged data for an individual region. All Edition ISCCP-D2like HDF files from Terra/Aqua, GEO composite and merged products, will have the same structure and read program and will be different from this current Beta1 version.

The major categories of data output on the ISCCP-D2like-Day and ISCCP-D2like-Nit HDF files are as follows:

- D2like-Day/Nit 18 Cloud Types for monthly-3 hourly/monthly
- D1like-Day/Nit 42 Cloud Type Fractions

A complete listing of metadata and gridded science parameters for this data product can be found in [Table 2.9-1](#) through [Table 2.9-26](#).

Level: 3

Frequency: 1/Month

Portion of Atmosphere Covered: Surface and TOA

Time Interval Covered:

File: 1 Month

Record: 1 Month

Portion of Globe Covered:

File: Entire Global

Record: 1-Deg Regions

Product Version:

TRMM: N/A

Terra: Beta1

Aqua: Beta1

ISCCP-D2like-Day/Nit Metadata

The ISCCP-D2like-Day/Nit metadata are summarized in [Table 2.9-1](#). These metadata contain information that need only be recorded once per product. The CERES metadata are listed in [Appendix B](#). [Table B-1](#) lists the CERES Baseline Header Metadata and [Table B-2](#) lists the CERES_metadata Vdata.

Table 2.9-1. ISCCP-D2like-Day/Nit Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata Science Data	Table B-2	1	14

All of the ISCCP-D2like science data are organized into the HDF Grid data type and are contained in one ISCCP-D2like HDF file, which are shown in [Table 2.9-2](#) to [Table 2.9-5](#). Each table contains a list of the parameters, including SDS index, SDS Name, data type, units, range, and number of elements within each field.

[Table 2.9-2](#) through [Table 2.9-5](#) contain the Vgroup listings following the HDF file structure.

[Table 2.9-6](#) through [Table 2.9-7](#) contain the SDS index numbers as a function of cloud property and are organized by the 18 D2 cloud types.

[Table 2.9-8](#) through [Table 2.9-9](#) contain the SDS index numbers as a function of cloud property and are organized by the 42 D1 cloud types.

Table 2.9-6. Table of ISCCP-D2like 18 cloud types of the Monthly 3-Hourly Averages

SDS Index of each V Group number										Monthly 3-Hourly			
1	2	3	4	5	6	7	8	9	SDS Name	Data Type	Units	Range	
00	18	36	54	72	90	108	126	144	Total Number Of Observations	32-Bit Float	N/A	N/A	
01	19	37	55	73	91	109	127	145	Total Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0	
02	20	38	56	74	92	110	128	146	Liquid Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0	
03	21	39	57	75	93	111	129	147	Liquid Effective Pressure	32-Bit Float	hPa	0 .. 1100	
04	22	40	58	76	94	112	130	148	Liquid Effective Temperature	32-Bit Float	K	100 .. 350	
05	23	41	59	77	95	113	131	149	Liquid Optical Depth -	32-Bit Float	N/A	0 .. 400	
06	24	42	60	78	96	114	132	150	Liquid Log Optical Depth	32-Bit Float	N/A	-6 .. 6	
07	25	43	61	79	97	115	133	151	Liquid Water Path	32-bit Float	g m^{-2}	0 .. 10000	
08	26	44	62	80	98	116	134	152	Liquid Water Particle Radius	32-bit Float	μm	0 .. 40	
09	27	45	63	81	99	117	135	153	Liquid Infrared Emissivity	32-bit Float	N/A	0 .. 1	
10	28	46	64	82	100	118	136	154	Ice Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0	
11	29	47	65	83	101	119	137	155	Ice Effective Pressure	32-Bit Float	hPa	0 .. 1100	
12	30	48	66	84	102	120	138	156	Ice Effective Temperature	32-Bit Float	K	100 .. 350	
13	31	49	67	85	103	121	139	157	Ice Linear Optical Depth	32-Bit Float	N/A	0 .. 400	
14	32	50	68	86	104	122	140	158	Ice Log Optical Depth	32-Bit Float	N/A	-6 .. 6	
15	33	51	69	87	105	123	141	159	Ice Water Path	32-Bit Float	g m^{-2}	0 .. 10000	
16	34	52	70	88	106	124	142	160	Ice Water Particle Diameter	32-Bit Float	μm	0 .. 300	
17	35	53	71	89	107	125	143	161	Ice Infrared Emissivity	32-Bit Float	N/A	0 .. 1	

Each monthly 3-hourly SDS index has 8*180*360 elements. See [Table 2.9-4](#) for the list of D2 Vgroup numbers. The 18 cloud types are the combination of the 9 Vgroups x cloud phase. See [Table 2.14-7](#) for a complete list of the 8 GMT-based monthly 3-hourly time indices (from ISCCP-D2like-GEO). See [Table 2.14-8](#) for the definition of the 180*360 regions (from ISCCP-D2like-GEO).

Red = Liquid Cloud Phase

Blue = Ice Cloud Phase

Table 2.9-7. Table of D2 like 18 cloud types of the Monthly Averages

SDS Index of each V Group number									Monthly			
1	2	3	4	5	6	7	8	9	SDS Name	Data Type	Units	Range
183	201	219	237	255	273	291	309	327	Total Number Of Observations	32-Bit Float	N/A	N/A
184	202	220	238	256	274	292	310	328	Total Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0
185	203	221	239	257	275	293	311	329	Liquid Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0

190	208	226	244	262	280	298	316	334	Liquid Water Path	32-bit Float	g m ⁻²	0 .. 10000
191	209	227	245	263	281	299	317	335	Liquid Water Particle Radius	32-bit Float	μm	0 .. 40
192	210	228	246	264	282	300	318	336	Liquid Infrared Emissivity	32-bit Float	N/A	0 .. 1
193	211	229	247	265	283	301	319	337	Ice Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0
194	212	230	248	266	284	302	320	338	Ice Effective Pressure	32-Bit Float	hPa	0 .. 1100
195	213	231	249	267	285	303	321	339	Ice Effective Temperature	32-Bit Float	K	100 .. 350
196	214	232	250	268	286	304	322	340	Ice Linear Optical Depth	32-Bit Float	N/A	0 .. 400
197	215	233	251	269	287	305	323	341	Ice Log Optical Depth	32-Bit Float	N/A	-6 .. 6
198	216	234	252	270	288	306	324	342	Ice Water Path	32-Bit Float	g m ⁻²	0 .. 10000
199	217	235	253	271	289	307	325	343	Ice Water Particle Diameter	32-Bit Float	μm	0 .. 300
200	218	236	254	272	290	308	326	344	Ice Infrared Emissivity	32-Bit Float	N/A	0 .. 1

Each monthly SDS index has 1*180*360 elements. See [Table 2.9-4](#) for the list of D2 Vgroup numbers. The 18 cloud types are the combination of the 9 Vgroups x cloud phase. See [Table 2.14-7](#) for a complete list of the 8 GMT-based monthly time indices (from ISCCP-D2like-GEO). See [Table 2.14-8](#) for a complete list of the 180*360 regions (from ISCCP-D2like-GEO).

Red = Liquid Cloud Phase

Blue = Ice Cloud Phase

Table 2.9-8. Table of ISCCP-D1like 42 cloud types of the Monthly 3-Hourly Averages

SDS Index of each V Group number							Monthly 3-Hourly			
1	2	3	4	5	6	7	SDS Name	Data Type	Units	Range
162	165	168	171	174	177	180	Total Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0
163	166	169	172	175	178	181	Liquid Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0
164	167	170	162	176	179	182	Ice Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0

Each monthly 3-hourly SDS index has $8*6*180*360$ elements. See [Table 2.9-5](#) for the list of D1 Vgroup numbers. The 42 cloud types are the combination of the 7 Vgroups x 6 optical depth indices. See [Table 2.9-10](#) for a complete list of optical depth indices. See [Table 2.14-7](#) for a complete list of the 8 GMT-based monthly 3-hourly time indices (from ISCCP-D2like-GEO). See [Table 2.14-8](#) for a complete list of the 180*360 regions (from ISCCP-D2like-GEO).

Table 2.9-9. Table of ISCCP-D1like 42 cloud types of the Monthly Averages

SDS Index of each V Group number							Monthly 3-Hourly			
1	2	3	4	5	6	7	SDS Name	Data Type	Units	Range
345	348	351	354	357	360	363	Total Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0
346	349	352	355	358	361	364	Liquid Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0
347	350	353	356	359	362	365	Ice Cloud Fraction	32-Bit Float	Percent	0.0 .. 100.0

Each monthly 3-hourly SDS index has $8*6*180*360$ elements. See [Table 2.9-5](#) for the list of D1 Vgroup numbers. The 42 cloud types are the combination of the 7 Vgroups x 6 optical depth indices. See [Table 2.9-10](#) for a complete list of optical depth indices. See [Table 2.14-7](#) for a complete list of the 8-GMT-based monthly time indices (from ISCCP-D2like-GEO). See [Table 2.14-8](#) for a complete list of the 180*360 regions (from ISCCP-D2like-GEO).

Table 2.9-10. List of the 6 optical depth indices used in Table 2.9-8 and Table 2.9-9

Optical depth index	Optical depth increment
1	0.02 – 1.27
2	1.27 - 3.55
3	3.55 – 9.38
4	9.38 – 22.63
5	22.63 – 60.36
6	60.36 – 378.65

Table 2.9-11. ISCCP-D2like Cloud Types - Cumulus (Low, Thin) Category

ISCCP-D2like-Day/Nit Revision Record

The product Revision Record contains information pertaining to approved document changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The document authors are listed on the cover.

ISCCP-D2like-Day/Nit Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
04-03-2008	R5V1	672	• Initial version.	All

2.10 Synoptic Radiative Fluxes and Clouds (SYN)

The Synoptic Radiative Fluxes and Clouds (SYN) product contains a day of space and time averaged Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. The 1-degree regional flux at the hour of observation from the CERES FSW product and concurrent diurnal data from geostationary satellites are used to estimate the regional flux at 3-hour GMT based intervals. Also at 3-hour intervals are estimates of the adjusted (tuned) fluxes at the five atmospheric levels as defined by the CERES CRS product for both clear-sky and total-sky scenes, estimates of the average cloud parameters in four cloud height categories, and averaged cloud parameters.

The SYN contains the following apriori and observed input:

- Regional data
- Cloud category properties for four (low, lower middle, upper middle and high) cloud layers
- Observed CERES TOA clear-sky and all-sky fluxes
- MODIS based spectral aerosol optical depths

The SYN contains the following constrained (tuned) vertical flux profiles for both clear-sky and total-sky conditions evaluated at the TOA, 70mb, 200mb, 500mb, and surface:

- Longwave, Shortwave, and Window channels upward and downward.

The constrained (tuned) and initial (untuned) profiles for the following are included for pristine (clear-sky no-aerosol), clear-sky, total-sky-no-aerosol, and total-sky conditions:

- Longwave upward at the surface and TOA.
- Longwave downward at the surface.
- Shortwave upward at the surface and TOA.
- Shortwave downward at the surface.
- Window channel upward at the surface and TOA.
- Window channel downward at the surface.

The adjustments to the radiative transfer model input parameters between the initial and the constrained (adjusted) passes are also contained on the SYN. These parameters include:

- Surface albedo and skin temperature
- Total column precipitable water, upper tropospheric relative humidity, and column ozone
- Aerosol optical depth
- Cloud optical depth, fractional area, and effective temperature

The SYN contains the direct and diffuse shortwave surface fluxes for total-sky, clear-sky, pristine and actinic conditions. The SYN also contains surface UVA and UVB downwelling and direct diffuse ratios for total-sky, clear-sky, pristine, and total-sky-no-aerosol conditions.

Level: 3

Frequency: Every 3 Hours

Portion of Atmosphere Covered: Surface, Internal and TOA

Time Interval Covered:

File: 3 Hours

Record: 3 Hours

Portion of Globe Covered:

File: Entire Global

Record: 1 CERES region

Product Version:

TRMM: N/A

Terra: Beta5, Beta6, Edition2C, Edition2F

Aqua: Beta6, Edition2B, Edition2C

SYN Metadata

The types of SYN metadata are summarized in [Table 2.10-1](#) and contain information which need only be recorded once per hour. The CERES metadata are listed in [Appendix B](#). The SYN product-specific metadata parameters are listed in [Table 2.10-1](#) and the CRS_Header_Vdata parameters are listed in [Table 2.10-2](#).

Table 2.10-1. SYN Metadata Summary

24	Pristine-Sky SW MultiStream Correction	See Table 2.10-22

SYN Scientific Data Sets

The SYN contains 223 Scientific Data Sets (SDS) which are parameter collections of one-degree regional data where the first dimension corresponds to the number of global regions, the last dimension corresponds to the number of parameters; and the middle dimension, if rank 3, corresponds to the number of elements in each parameter array. This ordering is used by the C programming language and most HDF viewers. In FORTRAN, the dimensions are reversed such that the number of regions becomes the last dimension and the first dimension is the number of parameters in the SDS. The SDSs are divided into tables which map to Vgroups of the same name. [Tables 2.10-4](#) to [Table 2.10-24](#) summarize the contents of each Vgroup and SDS contained within the SYN file. Product sizing information for the number of CERES regions, 64800, is given in [Table 2.10-25](#). Under the Dimensions column in the following tables the 8 refers to the 8 3-hourly GMT time increment in the daily file. Although the 3-hourly mean is an average of hourly computations only the mean is given (no standard deviation).

Table 2.10-4. Time and Position

SDS Index	SDS Name	Units	Range	Dimensions	DataType
SYN-0	Region number	N/A	1 .. 64800	8	32-bit integer

SYN Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

SYN Revision Record

SCCR Approval Date	Release/ Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> • Updated format to comply with standards. 	All
N/A	R3V2	639	<ul style="list-style-type: none"> • Updated to change all tables and added the SDS Index tables. • The EOSDIS Product Code line was removed from the document. (6/17/2008) 	All Sec. 2.9
			<ul style="list-style-type: none"> • Updated to add three parameters and changed the SDS Index tables. • Section numbering was changed due to insertion of the ISCCP D2-like DPC. (09/23/2008) 	Tables 2.9-22, 2.9-23, 2.9-24 All
11/12/08	R5V1	689	<ul style="list-style-type: none"> • Updated “Product Version” category. • Removed Beta3 from “Product Version” category. (11/17/2008) • Corrected the Terra and Aqua product versions. (12/08/2008) • Corrected the Terra and Aqua product versions. (12/16/2008) 	Sec. 2.10 Sec. 2.10 Sec. 2.10 Sec. 2.10

2.11 Monthly Regional Radiative Fluxes and Clouds (AVG)

The monthly Regional Radiative and Clouds (AVG) product contains monthly and monthly hourly (3-hour) averages of the Synoptic Radiative Fluxes and Clouds (SYN) product. This product is the CERES equivalent of the monthly regional averages in the ERBE ES-4 product of the CERES untuned and tuned radiative transfer modeled fluxes. This product is written in HDF_EOS and contains meta data as well as gridded science data.

The AVG contains the following apriori and observed input:

- Regional data
- Cloud category properties for four (low, lower middle, upper middle and high) cloud layers
- Observed CERES TOA clear-sky and all-sky fluxes
- MODIS based spectral aerosol optical depths

The AVG contains the following constrained (tuned) vertical flux profiles for both clear-sky and total-sky conditions evaluated at the TOA, 70mb, 200mb, 500mb, and surface:

- Longwave, Shortwave, and Window channels upward and downward.

The constrained (tuned) and initial (untuned) profiles for the following are included for pristine (clear-sky no-aerosol), clear-sky, total-sky-no-aerosol, and total-sky conditions:

- Longwave upward at the surface and TOA.
- Longwave downward at the surface.
- Shortwave upward at the surface and TOA.
- Shortwave downward at the surface.
- Window channel upward at the surface and TOA.
- Window channel downward at the surface.

The adjustments to the radiative transfer model input parameters between the initial and the constrained (adjusted) passes are also contained on the AVG. These parameters include:

- Surface albedo and skin temperature
- Total column precipitable water, upper tropospheric relative humidity, and column ozone
- Aerosol optical depth
- Cloud optical depth, fractional area, and effective temperature

The AVG contains the direct and diffuse shortwave surface fluxes for total-sky, clear-sky, pristine and actinic conditions. The AVG also contains surface UVA and UVB downwelling and direct diffuse ratios for total-sky, clear-sky, pristine, and total-sky-no-aerosol conditions.

A complete listing of metadata and science parameters for this data product can be found in [Table 2.11-1](#) and [Table 2.11-2](#).

Level: 3

Frequency: 1/Month

Portion of Atmosphere Covered: Surface to TOA

Time Interval Covered:

File: 1 Month

Record: 1 Month

Portion of Globe Covered:

File: Entire Global

Record: 1.0-Deg Regions

Product Version:

TRMM: N/A

Terra: Beta5, Beta6, Edition2C, Edition2F

Aqua: Beta6, Edition2B, Edition2C

AVG Metadata

The types of AVG metadata are summarized in [Table 2.11-1](#) and contain information which need only be recorded once per product. The CERES metadata are listed in [Appendix B](#).

AVG Science Data

All of the AVG science data are organized into the HDF-EOS Grid data type, which is shown in [Table 2.11-4\(a\) & \(b\)](#) below. This table contains a list of the parameters within each grid, including the field number, the field name, the data type, the units, the range, and the number of elements within each field. The 18 under the Dimensions column in the following tables the 18 refers to 9 = 8 monthly hourly (3-hour GMT based) + 1 monthly regional x 2 mean and standard deviation.

AVG Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

AVG Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> Updated format to comply with standards. 	All
11/15/06	R3V2	639	<ul style="list-style-type: none"> Updated to change all tables and added SDS Index tables. The EOSDIS Product Code line was removed from the document. (6/17/2008) 	All Sec. 2.10
02/08/08	R3V3	667	<ul style="list-style-type: none"> Updated to add three parameteres. Changed all of the SDS Index tables. Section numbering was changed due to insertion of the ISCCP D2-like DPC. (09/23/2008) 	Table 2.10-22(a) Tables 2.10-4(b) to 2.10-24(b) All
11/12/08	R5V1	689	<ul style="list-style-type: none"> Updated “Product Version” category. Removed Beta3 from “Product Version” category. (11/17/2008) Corrected the Terra and Aqua product versions. (12/08/2008) Corrected the Terra and Aqua product versions. (12/16/2008) 	Sec. 2.11 Sec. 2.11 Sec. 2.11 Sec. 2.11

2.12 Monthly Zonal and Global Radiative Fluxes and Clouds (ZAVG)

The Monthly Zonal and Global Radiative Fluxes and Clouds (ZAVG) product are the zonal and global averages of the monthly Regional Radiative and Clouds (AVG) product. This product is the CERES equivalent of the zonal and global averages in the ERBE ES-4 product of the CERES untuned and tuned radiative transfer modeled fluxes. This product is written in HDF_EOS and contains meta data as well as gridded science data.

The ZAVG contains the following apriori and observed input:

- Zonal/Global data
- Cloud category properties for four (low, lower middle, upper middle and high) cloud layers
- Observed CERES TOA clear-sky and all-sky fluxes
- MODIS based spectral aerosol optical depths

The ZAVG contains the following constrained (tuned) vertical flux profiles for both clear-sky and total-sky conditions evaluated at the TOA, 70mb, 200mb, 500mb, and surface:

- Longwave, Shortwave, and Window channels upward and downward.

The constrained (tuned) and initial (untuned) profiles for the following are included for pristine (clear-sky no-aerosol), clear-sky, total-sky-no-aerosol, and total-sky conditions:

- Longwave upward at the surface and TOA.
- Longwave downward at the surface.
- Shortwave upward at the surface and TOA.
- Shortwave downward at the surface.
- Window channel upward at the surface and TOA.
- Window channel downward at the surface.

The adjustments to the radiative transfer model input parameters between the initial and the constrained (adjusted) passes are also contained on the ZAVG. These parameters include:

- Surface albedo and skin temperature
- Total column precipitable water, upper tropospheric relative humidity, and column ozone
- Aerosol optical depth
- Cloud optical depth, fractional area, and effective temperature

The ZAVG contains the direct and diffuse shortwave surface fluxes for total-sky, clear-sky, pristine and actinic conditions. The ZAVG also contains surface UVA and UVB downwelling and direct diffuse ratios for total-sky, clear-sky, pristine, and total-sky-no-aerosol conditions.

A complete listing of metadata and science parameters for this data product can be found in [Table 2.12-1](#) and [Table 2.12-3](#).

Level: 3

Frequency: Monthly

Portion of Atmosphere Covered: Surface to TOA

Time Interval Covered:

File: 1 Month

Record: 1 Month

Portion of Globe Covered:

File: Entire Global

Record: Zonal or Global

Product Version:

TRMM: N/A

Terra: Beta5, Beta6, Edition2C, Edition2F

Aqua: Beta6, Edition2B, Edition2C

ZAVG Metadata

The types of ZAVG metadata are summarized in [Table 2.12-1](#) and contain information which need only be recorded once per product. The CERES metadata are listed in [Appendix B](#).

Table 2.12-1. ZAVG Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata science data	Table B-2	1	14

ZAVG Science Data

All of the ZAVG science data are organized into the HDF-EOS Grid data type, which is shown in [Table 2.11-3](#) below. This table contains a list of the parameters within each grid, including the field number, the field name, the data type, the units, the range, and the number of elements within each field.

[Table 2.11-2](#) List of the Vgroups for different Gridded Categories.

ZAVG Science Data

All of the ZAVG science data are organized into the HDF-EOS Grid data type, which is shown in [Table 2.12-4](#) below. This table contains a list of the parameters within each grid, including the field number, the field name, the data type, the units, the range, and the number of elements within each field. The 18 under the Dimensions column in the following tables the 18 refers to 9 = 8 monthly hourly (3-hour GMT based) + 1 monthly regional x 2 mean and standard deviation.

Table 2.12-5(a). Observed TOA Fluxes

ZAVG Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

ZAVG Revision Record

SCCR Approval Date	Release/ Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none"> • Updated format to comply with standards. 	All
11/15/06	R3V2	639	<ul style="list-style-type: none"> • Updated to change all tables and added SDS Index tables. • The EOSDIS Product Code line was removed from the document. (6/17/2008) 	All Sec. 2.11
02/08/08	R3V3	667	<ul style="list-style-type: none"> • Updated to add three parameters. • Changed SDS Index tables. • Section numbering was changed due to insertion of the ISCCP D2-like DPC. (09/23/2008) 	Table 2.11-21(a) Tables 2.11-5(b) to 2.11-23(b) All
11/12/08	R5V1	689	<ul style="list-style-type: none"> • Updated “Product Version” category. • Removed Beta3 from “Product Version” category. 2.13 Monthly TOA/Surface Averages (SRBAVG)

The SRBAVG product contains monthly and monthly hourly regional, zonal, and global averages of the TOA and surface LW and SW fluxes and the observed cloud conditions for each 1-degree equal-angle region. This product differs from the AVG product in three ways. First, the surface fluxes have been calculated from the TOA fluxes using parameterizations provided by the science team, instead of using the models provided by the SARB Subsystem. Secondly, no flux fields are calculated at levels between TOA and the surface. Lastly, the regional TOA fluxes are calculated using two methods.

SRBAVG is an archival product produced by Subsystem 10. There is one produced for each spacecraft and one for each combination of spacecraft. This product is written in HDF and contains metadata as well as gridded science data.

SRBAVG is composed of the following structures contained in three separate files (SRBAVG1, SRBAVG2, SRBAVG3):

On a Regional, Zonal, and Global Basis:

- Regional parameters (SRBAVG1)
- Total-sky radiative fluxes at TOA and surface (SRBAVG1)
- Clear-sky radiative fluxes at TOA and surface (SRBAVG1)
- Surface data (SRBAVG1)
- CERES and GEO Layer-averaged cloud properties (SRBAVG2)
- CERES Layer-averaged cloud properties (SRBAVG3)

A complete listing of metadata and gridded science parameters for this data product can be found in [Tables 2.13-1](#) through [Table 2.13-21\(a\) & \(b\)](#).

Level: 3

Frequency: 1/Month

SRBAVG Metadata

The types of SRBAVG metadata are summarized in [Table 2.13-1](#) and contain information which need only be recorded once per product. The CERES metadata are listed in [Appendix B](#).

[Table B-1](#) lists the CERES Baseline Header Metadata and [Table B-2](#) lists the CERES_metadata Vdata.

Table 2.13-1. SRBAVG Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata Science Data	Table B-2	1	14

All of the SRBAVG science data are organized into the HDF Grid data type and are contained in three files: SRBAVG1, SRBAVG2 and SRBAVG3, which are shown in [Tables 2.13-5](#) through [Table 2.13-21\(a\) & \(b\)](#) below. Each table contains a list of the parameters within each grid, including the field number, the field name, the data type, the units, the range, and the number of elements within each field.

SRBAVG Scientific Data Sets

SRBAVG Revision Record

The product Revision Record contains information pertaining to approved document changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The document authors are listed on the cover.

SRBAVG Revision Record

SCCR Approval Date	Release/ Version Number	SCCR Number	Description of Revision	Section(s) Affected
6/17/02	R3V2	368	<ul style="list-style-type: none"> • Changed column clouds to layer clouds and deleted the angular model scene types. • Added SRBAVG3. • Added SRBAVG3 and the Vgroup names. • Added region number, colatitude and longitude. • Changed ERBE-like to non-GEO. • Changed the net flux range. • Changed the net flux range and the ERBE-like to non-GEO. • Added another Vgroup name for cloud. • Changed the number of elements monthly hourly of the total cloud area fraction from 24 to 72. • Updated format to comply with standards. 	2.12 2.12-2 & 3 2.12-5 2.12-6 2.12-7 2.12-8, 9, 12, 13 2.12-10 & 11 2.12-20 2.12-21 All

2.14 Monthly Cloud Averages (ISCCP-D2like-GEO)

The Monthly Cloud Averages (ISCCP-D2like-GEO) archival data product contains 3-hourly (GMT based) monthly and monthly 1° gridded regional daytime mean cloud properties as a function of 18 cloud types, similar to the [ISCCP D2](#) product, where the cloud properties are stratified by pressure, optical depth, and phase. The GEO ISCCP-D2like is a 5-satellite, daytime 3-hourly GMT, 8km nominal resolution, geostationary-only cloud product limited to 60°N to 60°S. The GEO ISCCP-D2like is a daytime-only product, where the cloud retrievals incorporate only a visible and IR channel common to all geostationary satellites for spatial consistency. The geostationary calibration is normalized to Terra-MODIS. The GEO cloud properties are from the same source as the SRBAVG product, however they are not temporally interpolated. Input to the Subsystem is the Gridded GEO Narrowband Radiances (GGEO) archival data product. Each GEO ISCCP-D2like covers a single month. The science data are Scientific Data Sets (SDSs) with multiple records. Each record contains spatially averaged data for an individual region. All Edition ISCCP-D2like HDF files from Terra/Aqua, GEO composite and merged products, will have the same structure and read program and will be differ from this current Beta1 version.

The major categories of data output on the ISCCP-D2like-GEO HDF file is as follows:

- Regional Identification Parameters
- D2like-GEO 18 Cloud Types for monthly-3-hourly/monthly

A complete listing of metadata and gridded science parameters for this data product can be found in [Table 2.14-1](#) through [Table 2.14-5](#).

Level: 3

ISCCP-D2like-GEO Metadata

The ISCCP-D2like-GEO metadata are summarized in [Table 2.14-1](#). These metadata contain information which need only be recorded once per product. The CERES metadata are listed in [Appendix B](#). [Table B-1](#) lists the CERES Baseline Header Metadata and [Table B-2](#) lists the CERES_metadata Vdata.

Table 2.14-1. ISCCP-D2like Metadata Summary

HDF Name	Description Table	Records	Number of Fields
CERES Baseline Header Metadata	Table B-1	1	36
CERES_metadata Science Data	Table B-2	1	14

All of the science data are organized into the HDF Grid data type and are contained in one ISCCP-D2like-GEO HDF file, which are shown in [Table 2.14-2](#) to [Table 2.14-5](#). Each table contains a list of the parameters, including SDS index, SDS Name, data type, units, range, and number of elements within each field.

All SDS names with a suffix of -MH refer to monthly 3-hourly and a suffix of -M to monthly mean.

Table 2.14-2. Temporal Vgroups

Vgroup Number	Vgroup Name	Monthly 3-Hourly Averages/ Monthly Averages
1	Monthly 3-Hourly Averages	See Table 2.14-3
2	Monthly Averages	See Table 2.14-3

Table 2.14-3. Vgroup Types

Vgroup Number	Vgroup Name	Monthly 3-Hourly Averages/ Monthly Averages

ISCCP-D2like-GEO Revision Record

The product Revision Record contains information pertaining to approved document changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The document authors are listed on the cover.

ISCCP-D2like-GEO Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
05-28-2008	R5V1	672	• Initial version.	All

3.0 Internal Data Products

This section describes the internal CERES data products which are stored at the Langley DAAC. Each subsection contains a brief overview of the purpose and content of the data product followed by one or more tables which list every parameter contained in the product. The following data attributes are described in the overview sections:

- Level - The EOS data products are defined in terms of "levels"¹
- Frequency - How often the product is received or produced
- Configuration Code - Unique identifier that defines the software and input file versions used to produce the products
- Time Interval Covered -
 - File - Time period covered within this file
 - Record - Time period covered within one record of this file
- Portion of Globe Covered -
 - File - Portion of the globe covered within this file
 - Record - Portion of the globe covered within a record of this file
- Portion of Atmosphere Covered -
 - File - Portion of the atmosphere covered within this file (Surface, Top-of-the-Atmosphere (TOA), etc.)

Additional tables may contain the following attributes for each parameter:

- Description - A textual description of the parameter
- Parameter Number - Arbitrary number assigned to the parameter
- Units - Units of the parameter value
- Range - Range of values for the parameter
- Elements/Record - Elements per record for this parameter (array definition)
- Bits/Element - Number of bits used to describe this parameter
- Elem Num - Element Number, a numbering of each element in the file/record

Total file sizes are also provided. The bolded entries within the file are names for the group of parameters which follow.

¹**Level 0:** raw instrument data at full sensor resolution.

Level 1A: raw instrument data at full sensor resolution, time-referenced, and annotated with ancillary information (including radiometric calibration coefficients and geolocation parameters such as platform ephemeris) computed and appended but not applied to the Level 0 data.

Level 1B: Level 1A data processed to sensor units and geolocated.

Level 2: derived geophysical variables at the same resolution and location as the Level 1 source data.

Level 3: geophysical variables mapped on uniform space-time grids, usually with some completeness and consistency.

Level 4: model output or results from analyses of lower level data, e.g., variables derived from multiple measurements.

Internal Data Products Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

Internal Data Products Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	• Updated format to comply with standards.	All

3.1 Instrument Production Data Set (INSTR)

The Instrument Production Data Set (INSTR) is the Level 0 raw data from the CERES Scanner. It is structured into packets by the onboard software as programmed by the instrument developer, TRW. The packets are formatted according to Consultative Committee for Space Data Systems (CCSDS) standards. Although the CERES output is the same on each satellite, the packets contain ancillary information which are unique to a particular spacecraft. There are six basic pieces of information contained in a normal CERES data packet (e.g., science output format):

1. Packet Header - Same CCSDS format for all instruments.
2. Time (secondary header) - format specified by platform's selected CCSDS option
3. Radiometric Detector Outputs.
4. Instrument Elevation and Azimuth Position Data.
5. Instrument Analog Engineering Data (e.g., Temperatures and Voltages).
6. Instrument Digital Engineering Data.

There are five types of packets currently defined for the CERES instrument - Science, Diagnostic Memory, Diagnostic Processor, Diagnostic Gimbal, and Diagnostic Fixed Pattern. Each of these packet types corresponds to a particular operation of the CERES instrument.

For processing purposes, packets are grouped into Level 0 files which typically represent data collected from the CERES instrument over a 24-hour period. The TRMM Level 0 file format is illustrated in [Figure 3.1-1](#) and the Terra Level 0 file format is illustrated in [Figure 3.1-2](#).

[Table 3.1-1](#) and [Table 3.1-2](#) lists the parameters and sizes for TRMM Level 0 files. [Table 3.1-3](#) and [Table 3.1-4](#) lists the parameters and sizes for Terra Level 0 files. [Table 3.1-5](#) and [Table 3.1-6](#) lists the parameters and sizes for Aqua and NPP Level 0 files.

INSTR Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

INSTR Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.	All
N/A	R3V2	N/A	<ul style="list-style-type: none">• Updated to add Aqua Level-0 File Format.• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	3.1 All Sec. 3.1
N/A	R5V1	N/A	<ul style="list-style-type: none">• Added new satellite (NPP) format, which matches Aqua formats.	Sec. 3.1, Fig. 3.1-3, Table 3.1-5, & Table 3.1-6

3.2 Instrument Earth Scans (IES)

The IES data product contains one hour of data from a single CERES scanner. The data records are ordered in time with a separate index that sorts the records by an along-track angle relating each footprint position to the spacecraft's suborbital point at the start of the hour. The spatial ordering of records using this index will ease the comparison of CERES data with cloud imager data in Subsystem 4. The footprint record is the basic data structure for this data product. This record contains the following kinds of information:

- 1) Time of Observation
- 2) Geolocation data (at both the Top-of-Atmosphere (TOA) and the Earth's surface)
- 3) Filtered radiances (at satellite altitude), with associated quality measures
- 4) Spacecraft orbital data
- 5) Footprint viewing geometric data

The IES data product contain only Earth-viewing measurements. For the Tropical Rainfall Measuring Mission (TRMM) mission, there are approximately 225 Earth-viewing footprints (records) that are stored on an IES from each 3.3-second half-scan. The IES product size is derived by using the number of 3.3-second half-scans per hour (approximately 1091) times the number of Earth-viewing measurements per half-scan (approximately 225 for TRMM and 195 for Terra). This yields approximately 245475 and 212745 measurements per TRMM and Terra IES data products, respectively. The product size used within this catalog is determined using the TRMM numbers. The summary of HDF structures is shown in [Table 3.2-1](#). The metadata are listed in [Appendix B](#), [Table 3.2-2](#), and [Table 3.2-3](#). The complete listing of science parameters for this data product can be found in [Tables 3.2-4](#) and [3.2-5](#).

Total Size (Bytes):				35,375,529
Total Size (MBytes, including ~0.2% HDF overhead; 1MByte = 1024²Bytes):				33.8

IES Metadata

The IES product includes three metadata structures. These include the CERES Baseline Header Metadata and the CERES_metadata Vdata Metadata, which are listed in [Appendix B](#). The IES-specific metadata parameters are listed in [Table 3.2-2](#). An IES Header Vdata is also included as part of the IES metadata and the parameters are listed in [Table 3.2-3](#).

IES Vdata

The IES product contains three Vdata structures: the IES Header Vdata ([Table 3.2-3](#)), the Along-track Sort Index Vdata ([Table 3.2-4](#)), and the IES Data Record ([Table 3.2-5](#)). These data structures are listed below, where each list contains the field number, the field or parameter name, the data type, the units, and the range. The fields are listed in the order they are written to an IES. Data types are referenced by their HDF classification (e.g. Char8, Float32, Float64, Int8, UInt8, Int16, UInt16, Int32, UInt32, Int64, UInt64).

Table 3.2-3. IES Header Vdata

Field No.	Field Name	Data Type	Units	Range

IES Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

IES Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	All Sec. 3.2

3.3 ERBE-like Regional Data (EID-6)

The ERBE-like Regional Data (EID-6) product is generated daily by the ERBE-like Inversion Subsystem (2.0). It contains data for each 2.5° region observed during a day; there are 10,368 possible regions. The EID-6 is a CERES Internal Data Product used to pass 2.5° regional statistics calculated in Subsystem 2.0 to Subsystem 3.0. The EID-6 contains the following data as determined on a regional basis.

- 2.5° one-dimensional region number
- Whole and fractional Julian date
- Average of shortwave and longwave TOA flux estimates
- Number of individual shortwave and longwave TOA flux estimates
- Standard deviation for shortwave and longwave TOA flux estimates
- Minimum and maximum individual estimates of shortwave and longwave radiant fluxes at the TOA
- Geographic scene type
- Cloud fraction (fraction of measurements associated with clear, partly-cloudy, mostly-cloudy, and overcast sky)
- Albedo fraction (fraction of shortwave measurements associated with clear, partly-cloudy, mostly-cloudy, and overcast sky)
- Satellite and Sun geometry [cosine of the solar zenith angle (shortwave estimates), spacecraft zenith angles (all estimates), relative azimuth angles (shortwave estimates)]
- Standard deviation for clear-sky albedos
- Average for longwave, clear sky TOA flux estimates
- Standard deviation for longwave, clear-sky TOA flux estimates
- Number of individual longwave, clear-sky TOA flux estimates

A complete listing of parameters for this data product can be found in [Table 3.3-1](#).

EID6 Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

EID6 Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	All Sec. 3.3

3.4 Clear Reflectance History (CRH)

The Clear Reflectance/Temperature History (CRH) data are organized on a global equal-area grid that is approximately 1/6-degree by 1/6-degree (2160 x 1080=2,332,800 grid boxes). The data coverage is 24 hours and is produced every day. The CRH data product has visible albedo information.

The parameters are derived from cloud imager measurements by Subsystems 4.1 - 4.3. The CRH product is the same structure for both Moderate Resolution Imaging Spectrometer (MODIS) values and Visible Infrared Scanner (VIIRS) values, and are differentiated by their file names. The CRH product is archived because the product is needed for reprocessing. A complete listing of parameters for these data products can be found in [Table 3.4-1](#).

3.5 Synoptic Radiative Fluxes and Clouds Intermediate (SYNI)

The Synoptic Radiative Fluxes and Clouds Intermediate (SYNI) product contains a month of space and time averaged Clouds and the Earth's Radiant Energy System (CERES) data for a single scanner instrument. Flux data from the TSIB product, along with MOA data, are used to calculate radiate flux profiles, cloud conditions, and aerosol optical depths using the same models as the Instantaneous SARB subsystem. There are data for every hour of the month for each 1-degree region. These data are organized into 180 zonal files, each of which contains nested regions depending on the colatitude.

The SYNI contains the following apriori and observed input:

- Regional data
- Cloud category properties for four (low, lower middle, upper middle and high) cloud layers
- Observed CERES TOA clear-sky and all-sky fluxes
- MODIS based spectral aerosol optical depths

The SYNI contains the following constrained (tuned) vertical flux profiles for both clear-sky and total-sky conditions evaluated at the TOA, 70mb, 200mb, 500mb, and surface:

- Longwave, Shortwave, and Window channels upward and downward.

The constrained (tuned) and initial (untuned) profiles for the following are included for pristine (clear-sky no-aerosol), clear-sky, total-sky-no-aerosol, and total-sky conditions:

- Longwave upward at the surface and TOA.
- Longwave downward at the surface.
- Shortwave upward at the surface and TOA.
- Shortwave downward at the surface.
- Window channel upward at the surface and TOA.
- Window channel downward at the surface.

The adjustments to the radiative transfer model input parameters between the initial and the constrained (adjusted) passes are also contained on the SYNI. These parameters include:

- Surface albedo and skin temperature
- Total column precipitable water, upper tropospheric relative humidity, and column ozone
- Aerosol optical depth
- Cloud optical depth, fractional area, and effective temperature

The SYNI contains the direct and diffuse shortwave surface fluxes for total-sky, clear-sky, pristine and actinic conditions. The SYNI also contains surface UVA and UVB downwelling and direct diffuse ratios for total-sky, clear-sky, pristine, and total-sky-no-aerosol conditions.

SYNI Data Fields

The SYNI contains 162 data fields which are parameter collections of one-degree regional data where multiple dimensions refer to pressure levels, cloud conditions, or bandwidths. Product sizing information is given in [Table 3.5-1](#).

Table 3.5-1. Product Sizing Information

Name	Units	Range	Dim	Data Type
Photosynthetically active radiation over surface	W m^{-2}	0 .. 780	1	32 bit-real

3.6 TSI Product

The TSI Zonal Data product is generated monthly by the TISA subsystem (7.1). It contains data for every hour of the month for each 1-degree region; there are 180 zonal files each contains nested regions depending on the colatitude. The TSI data are the CERES Internal Data Product used to provide hourly TOA fluxes and cloud informations to Subsystem 8.1. The TSI contains the following data as determined on a regional basis.

- Julian time and region location with sun geometry, view zenith angles and relative azimuth angles.
- Radiative fluxes for both Clear-sky and Total-sky at TOA fluxes and land and ocean aerosol optical depths.
- The TOA flux data flags.
- Cloud category properties for four cloud layers.
- Surface Emissivities and Skin Temperature.
- Overlap data for eleven cloud conditions.

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R4V1	N/A	• New Data Products Catalog section. (6/24/2008)	All

3.7 Gridded GEO Narrowband Radiances (GGEO)

The GGEO product is a single file containing metadata, a header record, and multiple data records. The metadata are the CERES Baseline Header Metadata listed in [Table B-1](#) of [Appendix B](#). The header record contains the year/month data date, the actual data starting and ending dates, and the first and the last zones found on the file.

Each data record, called an hourbox, contains data particular to a single grid region and hour. The number of hourboxes on the file is determined by the number of data hours per day, the maximum number of days per month (plus one day for overlap hours), and the number of regions in the nested grid for the zones contained on the file (8 hours per day x 32 days per month x 38520 regions on globe = 9861120 hourboxes maximum). Hourboxes for which there are no International Satellite Cloud Climatology Project (ISCCP) data are filled with default values.

A listing of the parameters contained within each data record can be found in [Table 3.7-1](#). Following is a brief explanation of the parameters.

- The Satellite Number identifies the satellite which collected the hourbox radiance data.
- The Time parameter gives the Greenwich mean time (GMT) time for the “key” pixel in the hourbox (the pixel which lies closest to the region centroid).
- The three angle measurements are derived from the centroid of the region at the time indicated in the Time parameter.
- The visible and infrared radiance statistics give the mean, variance, and number for the pixels within the hourbox.
- The clear sky visible and infrared radiance statistics give mean for the pixels within the hourbox.
- The cloud parameter statistics give mean for the pixels within the hourbox.

3.8 Meteorological, Ozone, and Aerosol Data (MOA)

The CERES archival product Meteorological, Ozone, and Aerosol Data (MOA) is produced by the CERES Regrid MOA Subsystem. Each MOA file contains meteorological, ozone, and aerosol data for one hour, and is used by several of the CERES subsystems. Data on the MOA file are derived from several data sources external to the CERES system, such as the European Centre for Medium Range Weather Forecasting (ECMWF), Data Assimilation Office (DAO), NOAA, and various other meteorological satellites. These data have various horizontal and temporal resolutions. The Regrid MOA Subsystem interpolates the aerosol and ozone data horizontally to conform with the horizontal resolution of the meteorological data. An index number is assigned to each of the possible meteorological horizontal grids. The number of global regions, records and file sizes also change accordingly. Profile data are interpolated vertically to conform with CERES requirements. The MOA file also contains column precipitable water data measured by the Special Sensor Microwave/Imager (SSM/I) on their native grid (0.5×0.5). For certain primary meteorological data sources, the MOA file also contains the input skin temperature data on their native grid. All data are temporally interpolated to provide data to the CERES processing system on either every hour or every six hours, depending on the primary meteorological data source.

The MOA contains the pressure, geopotential height, skin temperature, and u-vector and v-vector wind speed at the surface; vertical profiles of temperature and humidity for 58 atmospheric levels; vertical profiles for 18 atmospheric levels below the tropopause of u-vector and v-vector wind speed data; the tropopause height; air mass index; column precipitable water based on humidity profiles column precipitable water based on microwave measurements; column averaged relative humidity; vertical profile of ozone mixing ratios for 58 atmospheric levels; column ozone; aerosol optical depth.

A complete listing of parameters for this data product can be found in [Table 3.8-1](#) and [Table 3.8-2](#). The sizes of the MOA files and of the parameters they contain are given in [Table 3.8-3](#).

4.0 Ancillary Data Products

This section describes the ancillary non-CERES data products which are stored at the Langley DAAC. Each subsection contains a brief overview of the purpose and content of the data product followed by one or more tables which list every parameter contained in the product. The following data attributes are described in the overview sections:

- Level - The EOS data products are defined in terms of "levels"¹
- Type - Data type (Primary, Internal, or Ancillary)
- Frequency - How often the product is received or produced
- Time Interval Covered -
 - File - Time period covered within this file
 - Record - Time period covered within one record of this file
- Portion of Globe Covered -
 - File - Portion of the globe covered within this file
 - Record - Portion of the globe covered within a record of this file
- Portion of Atmosphere Covered -
 - File - Portion of the atmosphere covered within this file (Surface, Top-of-the-Atmosphere (TOA), etc.)

Additional tables may contain the following attributes for each parameter:

- Description - A textual description of the parameter
- Parameter Number - Arbitrary number assigned to the parameter
- Units - Units of the parameter value
- Range - Range of values for the parameter
- Elements/Record - Elements per record for this parameter (array definition)
- Bits/Element - Number of bits used to describe this parameter
- Elem Num - Element Number, a numbering of each element in the file/record

Total file sizes are also provided. The bolded entries within the file are names for the group of parameters which follow.

Level 1A: raw instrument data at full sensor resolution, time-referenced, and annotated with ancillary information (including radiometric calibration coefficients and geolocation parameters such as platform ephemeris) computed and appended but not applied to the Level 0 data.

Level 1B: Level 1A data processed to sensor units and geolocated.

Level 2: derived geophysical variables at the same resolution and location as the Level 1 source data.

Level 3: geophysical variables mapped on uniform space-time grids, usually with some completeness and consistency.

Level 4: model output or results from analyses of lower level data, e.g., variables derived from multiple measurements.

Ancillary Data Products Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

4.1 VIRS Cloud Imager Data (VIRS CID)

The VIRS Cloud Imager Data (CID_VIRS) are Level-1B data from the five VIRS channels on the TRMM spacecraft. The data coverage is one orbit; however, the orbit files will be processed on an hourly basis. The sizes listed in the following data description reflect the estimated number of scan line records in 1 hour (11,817). The product is written in Hierarchical Data Format (HDF). It contains Vdata and Scientific Data Sets (SDS), which hold data for all of the scan line records. The VIRS HDF Structure Summary [Table 4.1-1](#) lists the type of HDF structure along with the name of the structure. A complete listing of parameters for this data product can be found in [Tables 4.1-2](#) and [4.1-3](#). The VIRS Level-1B product is described in more detail in the Level 1 File Specifications - Volume 3 (Reference [5](#)). The five VIRS channels are

Channels	Micron	Resolution
Channel 1	0.63	2-km
Channel 2	1.60	2-km
Channel 3	3.75	2-km
Channel 4	10.80	2-km
Channel 5	12.00	2-km

VIRS CID Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

VIRS CID Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	All Sec. 4.1

4.2 MODIS Cloud Imager Data (MODIS CID)

MODIS Cloud Imager Data (CID_MODIS) from the EOS spacecraft is a Level-1B data set with nineteen of the MODIS channels. CID_MODIS consists of two or more data sets. The first is the Level-1B data set, which contains the calibrated radiances; and the second is the companion Geolocation data set. The sizes listed in the following data description reflect the estimated number of scan line records (200) in 5 minutes of data. The files are written in Hierarchical Data Format (HDF) and are composed of Scientific Data Sets (SDS) and Vdatas.

The MODIS Level-1B HDF Structure Summary, [Table 4.2-1](#), lists the types and names of HDF structures contained in the Level-1B product along with the names of the structures. A complete listing of parameters for the Level 1B data product can be found in [Tables 4.2-2](#) through [4.2-3](#). The MODIS Geolocation HDF Structure Summary, [Table 4.2-4](#), lists the names and types of HDF structures contained in the geolocation product. A complete listing of the parameters for the MODIS Geolocation product can be found in [Tables 4.2-4](#) and [4.2-5](#). For more information on the MODIS Project, see Reference [6](#).

It is assumed that only Earth-viewing radiances and uncertainties and any information needed to interpret these values from the Level-1B product will be sent to the LaRC DAAC. The channels currently requested by the CERES Science Team are

Channels	Micron	Resolution (km)	Channels	Micron	Resolution (km)
Channel 1	0.645	0.25 & 1	Channel 26	1.38	1

MODIS CID Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

MODIS CID Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)	All Sec. 4.2

4.3 VIIRS Cloud Imager Data (VIIRS CID)

VIIRS Cloud Imager Data (CID_VIIRS) from the NPP spacecraft is a Level-1B data set with sixteen of the VIIRS channels. CID_VIIRS contains the calibrated radiances and geolocation data. The sizes listed in the following data description reflect the estimated number of scan line records (1536) for moderate resolution in about 5 minutes of data. The file is written in Hierarchical Data Format (HDF) and is composed of Scientific Data Sets (SDS).

The VIIRS Level-1B HDF Structure Summary, [Table 4.3-1](#), lists the types and names of HDF structures contained in the Level-1B product along with the names of the structures. A complete listing of parameters for the Level 1B data product can be found in [Table 4.3-2](#) through [Table 4.3-4](#).

It is assumed that only Earth-viewing radiances and uncertainties and any information needed to interpret these values from the Level-1B product will be sent to the LaRC ASDC. The channels currently requested by the CERES Science Team are

Channels	Micron	Resolution (km)	Channels	Micron	Resolution (km)
I1	0.64	0.375 & 0.750	M8	1.24	0.750

VIIRS CID Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

VIIRS CID Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R5V1	N/A	<ul style="list-style-type: none">• New CERES-NPP Data Products Catalog section.	All
N/A	R5V2	N/A	<ul style="list-style-type: none">• 3 more SDSs from M5 (0.672 micro meter), M10 (1.61 micro meter) and M12 (3.7 micro meter) were added with the same sub-sampling scheme as the other sub-setted Moderate bands.• Created the dimensions in Table 4.3-4.	Table 4.3-3 Table 4.3-4

4.4 Surface Map (SURFMAP)

The Surface Map (SURFMAP) product is a composite of various products each containing a different surface condition. The individual products each contain a single parameter arranged on a global 1/6-degree by 1/6-degree equal-angle grid ($2160 \times 1080 = 2,332,800$ cells).

The SURFMAP products are updated at different frequencies, depending on the type of data. See [Table 4.4-1](#) for a list of the individual products and their update frequency, units, and sizes. The last entry in the table is a static ASCII file of surface directional models and other relevant surface information.

4.5 Geostationary Narrowband Radiances (GEO)

Currently, CERES will use geostationary satellite data collected by the International Satellite Cloud Climatology Project (ISCCP).

The ISCCP B1 dataset consists of a narrowband infrared channel radiance (near 10.8 micrometer) and a narrowband visible channel radiance (near 0.68 micrometer). The radiances are sampled at about 10-km resolution every 3 hours. These data are in the form of eight- or ten-bit counts that can be converted to radiances using either nominal, normalized, or updated calibration formulae.

There are five sets of B1 data currently available (including two sets of METEOSAT). Others may be added in the future as other satellites are launched. The five sets currently available are

- 1) Geostationary Meteorological Satellite (GMS) in GMS format
- 2) Meteorological Satellite (METEOSAT) in METEOSAT format (2 satellites)
- 3) Geostationary Operational Environmental Satellite (GOES-East) in Canadian format
- 4) Geostationary Operational Environmental Satellite (GOES-West) in McIDAS format

These data will be provided by EOSDIS which will acquire them from NOAA, the designated archive center for ISCCP B1 data. The data volume is as follows:

- 1) GMS: 4.8 MB per Hour
- 2) METEOSAT: 4.8 MB per Hour
- 3) GOES-East: 8.7 MB per Hour
- 4) GOES-West: 11.0 MB per Hour

4.6 Aerosol Data (APD)

The ancillary data product, Aerosol Product Data (APD), is input to the CERES Regrid Meteorological, Ozone, and Aerosol Data Subsystem. The APD is the source of backup climatological total column aerosol optical depth data, and is made up of one data file for each month. The first record of each file is based on global three-hourly data provided by Dr. Rachel Pinker that are monthly averaged over two years. These averages are on a 2.5° equal-area grid.

The second record of each file is based on monthly data provided by Dr. Larry Stowe that are also averaged over two years. These averages are on a 1.0° equal-angle grid for the area between 70S and 70N. The Regrid Meteorological, Ozone, and Aerosol Data Subsystem interpolates these data horizontally to conform with the MOA horizontal grid, and then stores the value from one source on the MOA product.

4.7 Gridded Analysis Product (GAP)

The external ancillary data product, Gridded Analysis Product (GAP), is input to the CERES Regrid Meteorological, Ozone, and Aerosol Data Subsystem. The GAP is made up of multiple files that contain vertical profiles of temperature, specific humidity, and wind speed profiles as a function of pressure, along with surface temperature and pressure. These data are primarily obtained from the European Centre for Medium Range Weather Forecasts (ECMWF) on a 0.5° latitude x 0.5° longitude grid. ECMWF's analysis data are available every six hours, while their forecast data are available every three hours. A secondary data set is also available from the Data Assimilation Office (DAO) on either a 2.0° latitude x 2.5° longitude grid (GEOS-2), or on a 1.0° latitude x 1.0° longitude grid (GEOS-3), depending on the data date desired. DAO/GEOS-2 data are available for the TRMM timeframe, while DAO/GEOS-3 data are available beginning with the TERRA launch. DAO's diagnostic products are available every three hours, while their prognostic products are available every six hours. The Regrid Meteorological, Ozone, and Aerosol Data Subsystem interpolates these data temporally and vertically to conform with CERES processing requirements. The ECMWF Input Products are shown in [Table 4.7-1](#). The DAO Input Products are shown in [Tables 4.7-2](#) and [4.7-3](#).

TOTAL SIZE	692 MB		

Note: A combination of ECMWF and DAO/GEOS-3 files sizes are used in the Ancillary Products Summary [Table 1.0-5](#).

GAP Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

GAP Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)• Section numbering was changed due to insertion of the VIIRS DPC. (9/17/2008)	All Sec. 4.7 All

4.8 Microwave Humidity (MWH)

The external ancillary data product, Microwave Humidity (MWH), is input to the CERES Regrid Meteorological, Ozone, and Aerosol Data Subsystem. The MWH is the source of the column precipitable water as measured by the Spectral Sensor Microwave/Imager (SSM/I) microwave instrument. These data have a 0.5° latitude x 0.5° longitude horizontal resolution. The column precipitable water data are stored on the MOA files in their original resolution to conform with CERES processing requirements. MWH file size is shown in [Table 4.8-1](#).

Level: 3	Portion of Globe Covered

MWH Revision Record

The product Revision Record contains information pertaining to approved section changes. The table lists the date the Software Configuration Change Request (SCCR) was approved, the Release and Version Number, the SCCR number, a short description of the revision, and the revised sections. The authors are listed on the document cover.

MWH Revision Record

SCCR Approval Date	Release/Version Number	SCCR Number	Description of Revision	Section(s) Affected
N/A	R3V1	N/A	<ul style="list-style-type: none">• Updated format to comply with standards.• The EOSDIS Product Code line was removed from the document. (6/17/2008)• Section numbering was changed due to insertion of the VIIRS DPC. (9/17/2008)	All Sec. 4.8 All

4.9 Ozone Profile Data (OPD)

The external ancillary data product, Ozone Profile Data (OPD), is input to the CERES Regrid Meteorological, Ozone, and Aerosol Data Subsystem. The OPD is the source of total column ozone data. Daily files for NCEP/Stratospheric Monitoring-Group Ozone Blended Analysis (SMOBA) data are the primary input data source. These data have a 2.5° latitude x 2.5° longitude equal-angle horizontal resolution on 24 vertical profile levels and total column values. As a backup source, daily data from Earth Probe-Total Ozone Mapping Spectrometer (EP-TOMS) may be used. These data have a 1.25° latitude x 1.25° longitude equal-angle horizontal resolution of *only* total column values. The Regrid Meteorological, Ozone, and Aerosol Data Subsystem interpolates these data temporally, horizontally and vertically to conform with CERES processing requirements. OPD file sizes are shown in [Table 4.9-1](#).

Unit Definitions

Units	Definition
AU	Astronomical Unit, Astronomical Units
cm	centimeter, centimeters
count	count, counts
day	day, Julian date
deg	degree, degrees
deg sec ⁻¹	degrees per second
DU	Dobson Unit
fraction	fraction 0..1
g kg ⁻¹	grams per kilogram
g m ⁻²	grams per square meter
hhmmss	hour, minute, second
hour	hour, hours
hPa	hectoPascals
in-oz	inch-ounces
K	Kelvin
km	kilometer, kilometers
km sec ⁻¹	kilometers per second
m	meter, meters
mA	milliamp, millamps
micron	micrometer, micrometers, micron
msec	millisecond, milliseconds
mW cm ⁻² sr ⁻¹ µm ⁻¹	milliWatts per square centimeter per steradian per micron
m sec ⁻¹	meters per second
N/A	not applicable, none, unitless, dimensionless
percent	percent, percentage 0..100
rad	radian, radians
sec	second, seconds
volt	volt, volts
W h m ⁻²	Watt hours per square meter
W ² m ⁻⁴	square Watts per meter to the 4th
W m ⁻²	Watts per square meter
W m ⁻² sr ⁻¹	Watts per square meter per steradian
W m ⁻² sr ⁻¹ µm ⁻¹	Watts per square meter per steradian per micron
C	degrees centigrade
µm	micrometer, micrometers, micron, microns

Appendix B

CERES Metadata

This section describes the metadata that are written to all CERES HDF products. [Table B-1](#) describes the CERES Baseline Header Metadata that are written on both HDF and binary direct access output science data products. The parameters are written in HDF structures for CERES HDF output products and are written as 80-byte records for binary direct access output products. Some parameters may be written in multiple records. [Table B-2](#) describes the CERES_metadata Vdata parameters which are a subset of the CERES Baseline Header Metadata and are also written to all CERES HDF output products.

[Table B-1](#) lists the item number, parameter name, units, range or allowable values, the data type, and the maximum number of elements. Note that there are two choices for parameters 24-27 and two choices for parameters 28-31. The choices depend on whether the product is described by a bounding rectangle or by a GRing. Abbreviations used in the Data Type field are defined as:

s = string	date = yyyy-mm-dd
F = float	time = hh:mm:ss.xxxxxxxZ
I = integer	datetime = yyyy-mm-ddThh:mm:ss.xxxxxxxZ

Table B-1. CERES Baseline Header Metadata

Item	Parameter Name	Units	Range	Data Type	No. of Elements
1	ShortName	N/A	N/A	s(8)	1
