This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the July 2008 supplement.

SUMMARY OF CHANGES

Sections 1050.0, 1050.1 and 1050.2

These new sections provide a comprehensive discussion of the Federal Reserve's program on the consolidated supervision of bank holding companies (BHCs). Section 1050.0, "Consolidated Supervision of Bank Holding Companies and the Combined U.S. Operations of Foreign Banking Organizations," provides a summary of the Federal Reserve's Consolidated Supervision Program. The primary objective of this supervisory guidance is to specify principal areas of focus for consolidated supervision activities. This should provide for more consistent Federal Reserve supervisory practices and assessments across organizations with similar activities and risks. Specific expectations are outlined for Federal Reserve staff for understanding and assessing a number of areas, including primary governance functions and risk controls, material business lines, nonbank operations, financial condition, and other key activities and risks at banking organizations.

This guidance highlights the supervisory attention that should be paid to risk-management systems and internal controls used by BHCs and FBOs. In addition, the guidance reiterates the importance of coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators.

The Federal Reserve's enhanced approach to consolidated supervision emphasizes several elements intended to make the financial system more resilient. These include a focus on corporate governance, capital adequacy, funding and liquidity management, and the supervision of material nonbank subsidiaries. Section 1050.1 details the program for the "Consolidated Supervision of Large Complex BHCs," and section 1050.2 provides the program for the "Consolidated Supervision of Regional Banking Organizations." The latter sections address the unique aspects of supervising the combined U.S. operations of foreign banking organizations (FBOs). See SR-08-9/CA-08-12 and its attachments.

Section 2090.4

This section, "Control and Ownership (Policy Statements on Equity Investments in Banks and BHCs)," has been revised to include the Board's September 22, 2008, policy statement on this subject. The 2008 Policy Statement provides additional guidance on the Board's position regarding minority equity investments in banks and BHCs that generally do not constitute "control" for purposes of the Bank Holding Company Act, and supplements the Board's 1982 "Policy Statement on Nonvoting Equity Investments by BHCs." The 2008 Policy Statement provides the Board's views on some of the specific approaches to avoid control with respect to (1) director representation; (2) total voting and nonvoting equity investments in a banking organization; (3) consultations with management by a minority investor; and (4) other indicia of control—business relationships and covenants. The policy statement discusses some of the most significant factors and principles the Board will consider in determining whether investments in a banking organization are noncontrolling for the purposes of the BHC Act. See the Board's September 22, 2008, press release.

Section 2124.07

This new section, "Compliance Risk-Management Programs and Oversight at Large Banking Organizations with Complex Compliance Profiles," sets forth the Board's guidance and expectations on the management and oversight of compliance risk for larger, more complex banking organizations. The guidance focuses on (1) organizations that should implement a firmwide approach to compliance risk management and oversight, (2) independence of compliance staff, (3) compliance monitoring and testing, and (4) the responsibilities of boards of directors and senior management regarding compliance risk management and oversight.

A firmwide approach to compliance risk management and oversight is *generally* expected of banking organizations having \$50 billion or more in total consolidated assets and multiple legal entities. These organizations are expected to have a corporate compliance function that plays a key role in overseeing and supporting

the implementation of the compliance risk-management program—one that appropriately controls compliance risks that transcend business lines, legal entities, and jurisdictions of operation. The guidance also discusses an alternative approach for such large organizations that may be less complex and engage in a very limited range of business activities. The expectations of compliance programs of FBOs, including those with large, complex U.S. operations, also are discussed. (See SR-08-8/CA-08-11.)

Section 2124.5

This new section, "Identity Theft Red Flags Program and Address Discrepancies," discusses the November 9, 2007, adoption of interagency rules, "Identity Theft Red Flags and Address Discrepancies Under the Fair and Accurate Credit Transactions Act of 2003," (the FACT Act) and guidelines issued by the federal financial institution regulatory agencies and the Federal Trade Commission (FTC). The rules and guidelines (appendix A) implement sections 114 and 315 of the FACT Act. (See 72 *Fed. Reg.* 63718-63775, November 9, 2007.) Under the FACT Act, BHCs and their nonbank subsidiaries are subject to the FTC's regulations.¹ These regulations require financial institutions or creditors that offer or maintain one or more "covered accounts" to develop and implement a written Identity Theft Prevention Program (Program). A Program is to be designed to detect, prevent, and mitigate identity theft in connection with the opening of a covered account or any existing covered account. The Program must be tailored to the entity's size, complexity, and the nature and scope of its operations and activities.

The rules and guidelines address the (1) duties of users of credit reports regarding address discrepancies; (2) duties regarding the

detection, prevention, and mitigation of identity theft (implementation of a Program); and (3) duties of (credit and debit) card issuers to validate notifications of changes of address under certain circumstances. The sections have been revised to incorporate the rule's provisions that focus on an institution's safety and soundness (in particular, item 2 above). To obtain information on items 1 and 3 above, examiners may reference the Federal Reserve's *Consumer Compliance Handbook*. The joint final rules and guidelines were effective on January 1, 2008. The mandatory compliance date for the rules was November 1, 2008. See SR-08-7/CA-08-10 and its interagency attachments. Safety and soundness-focused inspection objectives and inspection procedures are provided.

Section 4090.0

This section, "Country Risk," has been revised to update the definitions of "country risk" and "transfer risk" to coincide with their definitions in SR-08-12, "Revisions to the Guide to the Interagency Country Exposure Review Committee (ICERC) Process." The new guidance discusses the November 2008 changes to the ICERC country rating process, whose main feature is the rating of countries only when in default. Default occurs when a country is not complying with its external debt-service obligations or is unable to service the existing loan according to its terms (that is, the failure to pay principal and interest fully and on time), arrearages, forced restructuring, or rollovers. The Federal Reserve and the other banking agencies also have eliminated the rating categories of Other Transfer Risk Problems, Weak, Moderately Strong, and Strong. See SR-08-12 and its attachments.

1. The FACT Act authorized the Board to write rules for state member banks (section 222 of the Board's Regulation V (12 C.F.R. 222)), but not BHCs. Nonetheless, the Board retains its supervisory and enforcement authority over BHCs, pursuant to section 1818 of the Federal Deposit Insurance Act. The Board's and FTC's Red Flags Rules are substantially the same. See 16 C.F.R. 681 for the FTC's Red Flags Rules.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the January 2008 supplement.

SUMMARY OF CHANGES

Section 1040.0

The section on “Bank Holding Company Inspection Authority” discusses the authority of the Federal Reserve to conduct bank holding company (BHC) inspections under section 5 of the BHC Act. This authority includes the review of *all* books and records of the organization by Federal Reserve supervisory staff.

Section 2060.05

The section on the “Policy Statement on the Internal Audit Function and Its Outsourcing (Management and Information Systems)” is revised to include a provision of the FDIC’s November 28, 2005, rule amendment (effective December 28, 2005) for part 363 of its regulations (12 C.F.R. 363). For insured institutions having total assets of more than \$3 billion, the audit committee must have independent members with (1) banking or related financial management expertise, (2) access to legal counsel, and (3) not include any large customers of the institution.

Section 2128.06

This section, “Valuation of Retained Interests and Risk Management of Securitization Activities (Risk Management and Internal Controls),” was revised to replace, as appropriate, the references to the Financial Accounting Standards Board’s FAS 125 with either FAS 140 or FAS 157. FAS 140, “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,” was issued in September 2000. FAS 157, “Fair Value Measurements,” was issued in September 2006 (effective November 15, 2007).

Section 3905.0

The section on “Permissible Activities for FHCs (Section 4(k) of the BHC Act)” was revised to include brief discussions of several 2007 and 2008 Board orders for FHCs’ nonbank activities, those that complement certain financial activities. The Board determined, on September 7, 2007, that disease management and mail-order pharmacy activities complement the financial activity of underwriting and selling health insurance (see 2007 FRB C133).

The section also discusses the Board’s approval of notices by FHCs to provide energy management services under energy management agreements and energy tolling. The Board determined, on December 4, 2007, that an FHC’s provision of energy management services is complementary to the financial activities of engaging as principal in limited physical commodity derivatives and the providing of financial and investment advisory services for derivative transactions. (See 2008 FRB C20.) The Board also determined, on March 27, 2008, that an FHC’s providing of energy tolling is complementary to the financial activity of engaging in commodity derivatives activities (see 2008 FRB 60).

Section 3906.0

This new section, “Disease Management and Mail-Order Pharmacy Activities (Section 4(k) of the BHC Act),” discusses, in more detail, the September 7, 2007, Board order, which concludes that disease management and mail-order pharmacy activities complement the financial activity of underwriting and selling health insurance (see 2007 FRB C133).

Section 3920.0

The section on “Limited Physical Commodity Trading Activities (Section 4(k) of the BHC Act)” was revised to discuss, in more detail, the Board’s March 27, 2008, consideration, and approval by order, of an FHC’s limited trading in certain physical commodities that are not approved by the Commodities Futures and Trading Commission (CFTC) for trading in the U.S. or on non-U.S. futures exchanges. To trade in

such commodities, the FHC must be able to demonstrate that the derivative contracts on the commodity satisfy the specified standards that are stated in the order. The section also discusses the Board's approval of the same FHC's request to make and take delivery in nickel, a metal that is traded on the London Metal Exchange—a CFTC-comparable regulatory entity.

Included also is an FHC's Board-approved request to permit the refining, blending, or altering of Board-approved commodities by a third party. The same Board order includes the Board's approval of the FHC's request to engage in limited physically settled energy tolling by entering into tolling agreements with power plant owners. The Board determined that the activity is complementary to the financial activity of engaging, as principal, in commodity derivatives transactions. The FHC nonbank activity had *not* been previously approved by the Board. (See 2008 FRB C60.)

For another Board order, this section discusses the Board's December 4, 2007, approval by order of an FHC's request to engage in providing Energy Management Services (EMS) to owners of power generation facilities. The EMS are to be provided under energy management agreements as a complement to the financial activities of engaging as principal in commodity derivatives and providing financial and investment advisory services for derivative transactions. (See 2008 FRB C20.)

Section 4070.5

This section on “Nondisclosure of Supervisory Ratings” has been revised to include the Federal Reserve's statement and clarification of its expectations regarding confidentiality provisions that are contained in agreements between a banking organization and its counterparties (for example, mutual funds, hedge funds, and other trading counterparties) or other third parties. See subsection 4070.5.3. (See also SR-07-19 and SR-97-17.)

Section 4080.0

This section on “Federal Reserve System BHC Surveillance Program” was revised to reflect

the Federal Reserve's adoption of an econometric framework, which is referred to as the Supervision and Regulation Statistical Assessment of Bank Risk model, or SR-SABR. This model replaced the former SEER (the System to Estimate Examination Ratings) surveillance model. The SR-SABR model assigns a two-component surveillance rating to each subsidiary bank of the BHC. The first component is the current composite CAMELS rating assigned to the bank. The second component is a letter (A, B, C, D, or F) that reflects the model's assessment of the relative strength or weakness of the bank compared with other institutions within the same CAMELS rating category. (See SR-06-2.)

Section 5000.0

This section on “BHC Inspection Program (General)” has been revised to incorporate new supervisory guidance on the written communication of inspection findings. (See SR-08-01.) To improve the consistency and clarity of written communications, Federal Reserve staff is to use the prescribed standardized terminology and definitions, to differentiate among (1) Matters Requiring Immediate Attention (MRIA), (2) Matters Requiring Attention (MRA), and (3) Observations. See subsection 5000.0.9.3.

Section 5010.4

This section on “Procedures for Inspection Report Preparation (Core Page 1—Examiner's Comments; Matters Requiring Special Board Attention)” incorporates and references the guidance in SR-08-01, which may involve this inspection report page or section (continuous flow reporting). To improve the consistency and clarity of written communications, Federal Reserve staff is to use the prescribed standardized terminology and definitions, to differentiate among any (1) MRIA, (2) MRA, and (3) Observations. As a general rule, examiners should expect fewer MRIA or MRA among stronger organizations.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the July 2007 supplement.

SUMMARY OF CHANGES

Sections 2020.0

The section on “Intercompany Transactions” discusses generally section 23A and 23B of the Federal Reserve Act. The section is revised to incorporate the provisions of Regulation W, which facilitates compliance with those statutes. The regulation applies to transactions between insured depository institutions and their affiliates. The Board approved the regulation on November 27, 2002 (effective April 1, 2003). (See SR-03-2.)

Section 3905.0

This section, “Permissible Activities for FHCs” (Section 4(k) of the BHC Act), has been revised to include a brief discussion and reference to an October 12, 2007, Board order authorizing an FHC to engage in the acquisition, management, and operation, in the United Kingdom, of certain defined benefit pension plans established by unaffiliated third parties in stand-alone transactions. This is the only Board order that has been issued, after consultation with the Secretary of the Treasury, which authorized an FHC to engage in activities deemed to be “financial in nature.” See the next summary for 3912.0.

Section 3912.0

This new section, “To Acquire, Manage, and Operate Defined Pension Benefit Plans in the UK Permissible Activities for FHCs (Section

4(k) of the BHC Act),” includes the previously mentioned October 12, 2007, Board order, which was issued after consultation with the Secretary of the Treasury. The order authorized a financial holding company (FHC) to engage in these activities that are deemed to be “financial in nature,” which are to be established and maintained by unaffiliated third parties in stand-alone transactions and which are permissible for an FHC. The activity is to be conducted by or through a nonbank subsidiary of the FHC to engage in under section 4 of the Bank Holding Company Act. The nonbank subsidiary of the FHC that directly acquires a third-party UK pension plan would assume the responsibilities of the plan’s sponsor under applicable UK law. The order also determined that when a depository institution is secondarily liable for a financial obligation of an affiliate, even if the depository institution’s liability is created by statute or regulatory action, the institution has issued a guarantee on behalf of an affiliate for purposes of section 23A of the Federal Reserve Act and the Board’s Regulation W.

Section 4060.3

The section on Consolidated Capital (Examiners Guidelines for Assessing the Capital Adequacy of BHCs) was revised to include an exception to the Board’s risk-based capital guidelines for capital held against Regulation T margin loans. The first exception was approved by the Board on June 15, 2007. The Board approved the exception, initially, under the reservation-of-authority provision of the guidelines (12 C.F.R. 225, appendix A, III.A). The exception permits a BHC, upon receiving specific Board approval, to apply a 10 percent risk weight to its Regulation T margin loans. To qualify for the capital treatment, Regulation T margin loans must comply with certain specified conditions. Several BHCs subsequently have received approval for this exception.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the January 2007 supplement.

SUMMARY OF CHANGES

Section 2010.2

The “Supervision of Subsidiaries” section has been revised to include a new subsection, “Oversight of Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices.” It sets forth the December 6, 2006, interagency supervisory guidance, which was issued jointly by the Federal Reserve and the other federal bank regulatory agencies. The guidance, effective December 12, 2006, is applicable to state member banks and also broadly applicable to bank holding companies and their nonbank subsidiaries. For the purposes of the section, references to banks, institutions, or banking organizations is confined to these entities for which the Federal Reserve System has supervisory authority.

The guidance was developed to reinforce sound risk-management practices for institutions with high and increasing concentrations of commercial real estate loans on their balance sheets. As part of a bank holding company inspection, the examiner should make an assessment of the parent company’s supervision and control over its subsidiaries, which includes administering, monitoring, and assuring adherence to its lending policies and practices for controlling “concentration risk.” An institution’s strong risk-management practices and its maintenance of appropriate levels of capital are important elements of a sound commercial real estate (CRE) lending program, particularly when an institution has a concentration in CRE or a CRE lending strategy leading to a concentration.

The guidance applies to concentrations in CRE loans sensitive to the cyclical nature of CRE markets. For purposes of this guidance, CRE loans include loans where repayment is dependent on the rental income or the sale or refinancing of the real estate held as collateral. The guidance does not apply to loans secured by owner-occupied properties and loans where real estate is taken as a secondary source of repayment or through an abundance of caution.

The guidance notes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary depending on the portfolio risk characteristics and the quality of risk-management processes. The guidance, therefore, does not establish a CRE concentration limit that applies to all institutions. Rather, the guidance encourages institutions to perform ongoing risk assessments to identify and monitor CRE concentrations.

The guidance provides numerical indicators as supervisory monitoring criteria to identify institutions that may have CRE concentrations that warrant greater supervisory scrutiny. The monitoring criteria should serve as a starting point for a dialogue between the supervisory staff and an institution’s management about the level and nature of the institution’s CRE concentration risk. (See SR-07-1 and its attachments.)

Section 2050.0

The “Extensions of Credit to BHC Officials” section was revised as the result of the Financial Services Relief Act of 2006 (Relief Act) and the Board’s approval of the December 6, 2006, interim rule amendment and the May 25, 2007, final rule (without change) amendment to Regulation O, which were effective on December 11, 2006, and June 1, 2007, respectively. The Relief Act eliminated certain statutory reporting and disclosure requirements pertaining to insider lending by federally insured financial institutions. Sections 215.9 and 215.10 and subpart B of Regulation O were deleted as a result of the rule’s changes. (See 71 *Fed. Reg.* 71,472, December 11, 2006, and 72 *Fed. Reg.* 30,470, June 1, 2007.)

Section 2065.3

This “Maintenance of an Appropriate Allowance for Loan and Lease Losses” section has been fully revised to incorporate the December 13, 2006, Interagency Policy Statement on the Allowance for Loan and Lease Losses (ALLL). (See SR-06-17.) The guidance updates the 1993 Interagency Guidance on the ALLL (SR-93-70). The revised policy statement emphasizes that each banking organization (including bank hold-

ing companies and their subsidiaries) is responsible for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses. Each banking organization should ensure that the adequate controls are in place to consistently determine the appropriate balance of the ALLL in accordance with (1) GAAP, (2) its stated policies and procedures, and (3) management's best judgment and relevant supervisory guidance. The policy emphasizes also that a banking organization should provide reasonable support and documentation of its ALLL estimates, including adjustments to the allowance for qualitative or environmental factors and unallocated portions of the allowance.

Section 2128.09

This new section, "Elevated-Risk Complex Structured Financing Activities," sets forth the January 11, 2007, Interagency Statement on Sound Practices Concerning Elevated-Risk Complex Structured Finance Activities. This statement sets forth supervisory guidance that addresses risk-management principles that should assist institutions to identify, evaluate, and manage the heightened legal and reputational risks that may arise from their involvement in complex structured financing transactions (CSFTs). The guidance is focused on those CSFTs that may present heightened levels of legal or reputational risk to the institution and are defined as "elevated-risk

CSFTs." Such transactions are typically conducted by a limited number of large financial institutions. (See SR-07-5 and 72 *Fed. Reg.* 1,372, January 11, 2007.)

Sections 4060.3

The "Consolidated Capital (Examiners' Guidelines for Assessing the Capital Adequacy of BHCs)" section was revised to include an interim interagency decision on the impact of the Financial Accounting Standards Board's issuance of its September 2006 Statement of Financial Accounting Standards No. 158 (FAS 158), "Employers Accounting for Defined Benefit Pension and Other Postretirement Plans." The decision was announced in a December 14, 2006, press release that was issued by the Federal Reserve Board and the other federal banking and thrift regulatory agencies (the agencies). FAS 158 provides that a banking organization that sponsors a single-employer defined benefit postretirement plan, such as a pension plan or health care plan, must recognize the overfunded or underfunded status of each such plan as an asset or a liability on its balance sheet with corresponding adjustments recognized as accumulated other comprehensive income (AOCI). The agencies issued an interim decision, which conveyed that banks and bank holding companies should exclude from regulatory capital any amounts recorded in AOCI that have resulted from their adoption and application of FAS 158.

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the July 2006 supplement.

SUMMARY OF CHANGES

Section 2050.0

The “Extensions of Credit to BHC Officials” section has been revised to incorporate a May 22, 2006, Board staff interpretation of Regulation O pertaining to the use of bank-owned or bank-issued credit cards by bank insiders for the bank’s business purposes. The interpretation also is concerned with the extension of credit provisions and the market-terms requirement of Regulation O when a bank insider uses the bank-owned or bank-issued credit card to acquire goods and services for personal purposes. The inspection procedures have been revised to include provisions of this interpretation.

Section 2126.0

The “Nontrading Activities of Banking Organizations” section involving risk management and internal controls has been deleted. This section was based on SR-95-17, which was superseded by SR-98-12 (section 2126.1).

Section 2128.03

The “Credit-Supported and Asset-Backed Commercial Paper” section has been revised to incorporate the August 4, 2005, Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper (ABCP) Liquidity Facilities and the Resulting Risk-Based Capital Treatment. The guidance clarifies the application of the asset-quality test for determining the eligibility or ineligibility of an ABCP liquidity facility and the resulting risk-based capital treatment of such a facility for banking organizations. The guidance also re-emphasizes that the primary function of an eligible ABCP liquidity facility should be to provide *liquidity*—not credit enhancement.

An eligible liquidity facility must have an asset-quality test that precludes funding against

assets that are 90 days or more past due, in default, or below investment grade, because the institution providing the ABCP liquidity facility should not be exposed to the credit risk associated with such assets. The interagency statement indicates that an ABCP liquidity facility will meet the asset-quality test if, at all times throughout the transaction, (1) the liquidity provider has access to certain types of acceptable credit enhancements that support the liquidity facility and (2) the notional amount of such credit enhancements exceeds the amount of underlying assets that are 90 days or more past due, defaulted, or below investment grade for which the liquidity provider may be obligated to fund under the facility. (See SR-05-13.)

Section 2231.0

The “Real Estate Appraisals and Evaluations” section has been revised to incorporate the June 22, 2006, interagency statement, The 2006 Revisions to Uniform Standards of Professional Appraisal Practice (USPAP), issued by the federal banking agencies. Under the appraisal regulations, institutions must ensure that their appraisals supporting federally related transactions adhere to USPAP. The interagency statement provides an overview of the USPAP revisions and the ramifications of these revisions to regulated institutions. The 2006 USPAP, effective July 1, 2006, incorporates certain prominent revisions made by the Appraisal Standards Board. These revisions include a new Scope of Work Rule as well as the deletion of the Departure Rule and some of its associated terminology. (See SR-06-9.)

Section 3070.3

This new section, “Nontraditional Mortgages—Associated Risks” pertaining to section 4(c)(8) of the BHC Act, has been developed based on the September 29, 2006, Interagency Guidance on Nontraditional Mortgage Product Risks. (See SR-06-15.) The guidance addresses both the risk-management and consumer disclosure practices that institutions (Federal Reserve System-supervised state member banks and their subsidiaries, and bank holding companies and their nonbank subsidiaries) should

employ to effectively manage the risks associated with closed-end residential mortgage loan products that allow borrowers to defer payment of principal and, sometimes, interest. The section includes safety-and-soundness-oriented inspection objectives and inspection procedures to be used when conducting inspections of bank holding companies and their nonbank subsidiaries that are engaged in this type of lending.

Section 3600.7

The section “Acting as a Certification Authority for Digital Signatures (Permissible Activities by Board Order)” has been amended to include a summary of a recent Board order in which the Board approved a notice for a foreign bank to act, under sections 4(c)(8) and 4(j) of the BHC Act, as a certification authority (CA) in connection with financial and nonfinancial transactions and to engage in related data processing activities. The foreign bank planned to engage in the CA activities by entering into an agreement with a newly organized, wholly owned indirect subsidiary of the bank. (See 2006 FRB C150.) The proposed CA nonbanking activities are slightly different, but are consistent with the CA nonbanking activities previously approved by the Board. (See 2000 FRB 56.)

Section 3920.0

The “Limited Physical-Commodity-Trading Activities” section, pertaining to section 4(k) of the BHC Act, has been revised to include additional Board orders for financial holding companies engaging in limited physical-commodity-trading activities, including energy-related commodities such as natural gas, crude oil, electricity, and emissions allowances. (See 2006 FRB C54, 2006 FRB C57, and 2006 FRB C113.)

Section 4060.3

This section, “Examiners’ Guidelines for Assessing the Capital Adequacy of BHCs,” pertains to consolidated capital and has been revised to include discussions of the May 14, 2003, and August 15, 2006, Board interpretations that were issued in response to separate inquiries received from the same bank. To lessen the risk-based capital treatment for certain indemnified

securities-lending arrangements, the bank sought the Board’s permission to apply a loan equivalent methodology to the arrangements using its internal value-at-risk (VaR) model, subject to the certain specified conditions. The May 14, 2003, interpretation concerned an inquiry regarding the risk-based capital treatment of certain European agency securities-lending arrangements that the bank had acquired. For these transactions (the cash-collateral transactions), the bank, acting as agent for its clients, lends its clients’ securities and then receives cash collateral in return. The bank then reinvests the cash collateral in a reverse-repurchase agreement and receives securities collateral in return. The August 15, 2006, interpretation was issued regarding the bank’s risk-based capital treatment of certain other securities-lending transactions. For these transactions, the bank, acting as agent for clients, lends its clients’ securities and receives liquid securities collateral in return (the securities-collateral transactions).

For both types of transactions, the Board, using its reservation of authority, determined that under its current risk-based capital guidelines the capital charge for these specific types of securities-lending arrangements would exceed the amount of economic risk posed to the bank, which would result in capital charges that would be significantly out of proportion to the risk. The Board separately approved these exceptions to its risk-based capital guidelines. The bank is to compute its regulatory capital for these transactions using its internal VaR model by assigning the risk weight of the counterparty to the exposure amount of all such transactions with the counterparty. The bank will calculate the exposure amount as the sum of its current unsecured exposure on its portfolio of transactions with the counterparty, plus an add-on amount for potential future exposure.

Section 4060.8

A new section titled “Consolidated Risk-Based Capital—Direct-Credit Substitutes Extended to ABCP Programs” consists of March 2005 interagency guidance that is based on the Board’s adoption of the November 29, 2001, amended risk-based capital standards. The standards established a new capital framework for banking organizations that are engaged in securitization activities. The interagency guidance clarifies how banking organizations are to use internal ratings that they assign to asset pools purchased by their ABCP programs in order to appropriately risk weight any direct-credit substitutes

(for example, guarantees) that are extended to such programs.

The guidance provides an analytical framework for assessing the broad risk characteristics of direct-credit substitutes that a banking organi-

zation provides to an ABCP program it sponsors. Specific information is provided within the guidance on evaluating direct-credit substitutes issued in the form of program-wide credit enhancements. (See SR-05-6.)

Bank Holding Company Supervision Manual

Supplement 30—July 2006

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the January 2006 supplement.

SUMMARY OF CHANGES

Section 2060.05

This revised section, “Policy Statement on the Internal Audit Function and Its Outsourcing (Management Information Systems),” incorporates the FDIC’s November 28, 2005, amendment (effective December 28, 2005) to part 363 of its regulations (12 C.F.R. 363). The amendment raised the asset-size threshold from \$500 million to \$1 billion for internal control assessments by management and the institution’s external auditors. For institutions between \$500 million and \$1 billion in assets, only a majority, rather than all, of the members of the audit committee—who must be outside directors—must be independent of management.

Section 2060.1

The section “Audit (Management Information Systems)” has been revised to incorporate the February 9, 2006, Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters. The advisory informs financial institutions that it is unsafe and unsound to enter into external audit contracts (that is, engagement letters) for the performance of auditing or attestation services when the contracts (1) indemnify the external auditor against all claims made by third parties, (2) hold harmless or release the external auditor from liability for claims or potential claims that might be asserted by the client financial institution (other than claims for punitive damages), or (3) limit the remedies available to the client financial institution (other than punitive damages). Such limits on external auditors’ liability weaken the auditor’s independence and performance, thus reducing the supervisory agency’s ability to rely on the auditor’s work. The inspection objectives and inspection procedures incorporate certain key provisions of the advisory.

The section also provides examples of unsafe and unsound limitation-of-liability provisions, and it discusses frequently asked questions and answers that were posed to the Securities and Exchange Commission (Office of the Chief Accountant). The answers confirm that an accountant (auditor) is *not* independent when an accountant and a client enter into an agreement of indemnity, directly or through an affiliate, that seeks to assure the accountant immunity from liability for the accountant’s own negligent acts, whether they are acts of omission or commission. (See SR-06-4.)

Section 2090.2

The section “Control and Ownership (BHC Formations)” has been revised to incorporate the Board’s February 22, 2006, revisions of its Small BHC Policy Statement—Policy Statement on Assessment of Financial and Managerial Factors (12 C.F.R. 225, appendix C). The revised rule increases the applicable consolidated asset-size threshold to less than \$500 million from less than \$150 million and also included other criteria for determining whether a BHC may qualify for the policy statement, including an exemption from the capital guidelines. For BHCs that are under the qualifying asset-size threshold, the revised rule also (1) modified certain qualitative criteria for determining when a BHC would *not* qualify for the policy statement or the exemption from the capital guidelines and (2) clarified the treatment under the policy statement of subordinated debt associated with trust preferred securities. The inspection objectives and inspection procedures have been revised to incorporate key provisions of this policy statement.

Section 2090.7

“Control and Ownership (Nonbank Banks)” has been revised to include a March 21, 2006, Board staff legal opinion. The opinion confirms that a direct conversion from a state-chartered bank to a national bank and its merger with a newly formed limited-purpose trust company that would not be a bank for purposes of the BHC Act, would not, by itself, cause a parent company to

lose its grandfather rights maintained under section 4(f) of the BHC Act.

Section 3072.0

This new section, “Activities Related to Extending Credit,” provides a list of sections in the manual that discuss permissible nonbanking activities related to extending credit, provided for in section 225.28(b)(2) of Regulation Y. Each listed section includes a description of the activity and any supervisory guidance or requirements that should be considered. Several of the sections include inspection objectives and inspection procedures.

Section 3072.8

This new section, “Real Estate Settlement Services,” discusses those activities that are related to extending credit, as found in Regulation Y, section 225.28(b)(2). Included is a February 9, 2006, Board staff legal opinion on the permissibility of providing services to customers that are seeking to make exchanges of real property through a “section 1031 exchange subsidiary,” pursuant to section 1031 of the U.S. Internal Revenue Code. Section 1031 provides a U.S. taxpayer with a deferred gain when the taxpayer exchanges his or her property for another property of “like kind.” A BHC planned to acquire a subsidiary that would act as a qualified intermediary in forward section 1031 exchange transactions.

Board staff concluded that this section 1031 exchange subsidiary’s proposed activities would be permissible real estate settlement services under section 225.28(b)(2)(viii) of Regulation Y. (See 12 C.F.R. 225.28 (b)(2)(viii).) Also, the activities would be considered permissible Regulation Y trust company functions (12 C.F.R. 225.28(b)(5)) and financial advisory services, including tax-planning and tax-preparation services (12 C.F.R. 225.28(b)(6)).

Section 3610.1

This new section, “Financing Customers’ Commodity Purchase and Forward Sales,” consists of a May 15, 2006, Board staff legal interpretation that responded to a request from a BHC. The BHC sought confirmation that certain pro-

posed “commodity purchase and forward sale” (CPFS) transactions are a form of lending activity permissible for BHCs under section 225.28(b)(1) of the Board’s Regulation Y. The BHC inquired whether it would be permissible under the BHC Act and the Board’s Regulation Y for the BHC to engage in proposed CPFS transactions in a manner that provided for the financing of its customers’ commodity inventories. Board legal staff noted that the Board previously found a three-party commodity financing arrangement (similar to the proposed three-party CPFS transactions) to be within the scope of permissible lending activities for BHCs under Regulation Y. (See 1973 FRB 698.) Based on the BHC’s representations and the information it provided, the cited Board precedents, and the limitations included within the Board staff’s response (interpretation), Board legal staff opined that the proposed CPFS transactions are within the scope of permissible lending activities for BHCs under section 225.28(b)(1) of Regulation Y.

Section 3610.2

This new section, “Certain Volumetric-Production-Payment Transactions Involving Physical Commodities,” consists of a May 15, 2006, Board staff legal opinion that responded to a request from a foreign bank (a foreign bank that qualifies as a financial holding company under section 4(k) of the BHC Act and also under section 4(c)(9) of the BHC Act) that sought confirmation that certain volumetric-production-payment (VPP) transactions involving physical commodities would be permissible extensions of credit for a bank holding company under section 225.28(b)(1) of the Board’s Regulation Y (12 C.F.R. 225.28(b)(1)).

The Board had approved a previous proposal by the BHC to engage in physical commodity trading as an activity that is complementary to the BHC’s commodity derivatives activities (See 2004 FRB 215, section 3920.0, and section 3905.0.) In response to the current request, Board staff noted that the Board had previously concluded that ownership of commodities in connection with a financing transaction does not prevent the transaction from being treated as a form of credit extension permissible for a BHC—as long as the economics of the transaction are substantially the same as those of a loan. (See 1973 FRB 698.) Based on the information provided by the BHC, Board legal staff opined that the described VPP transactions are a form of permissible lending activity for BHCs

under section 225.28(b)(1) of Regulation Y when entered into and for the purpose of providing financing to a third-party customer. The opinion also stated that any commodities that the BHC receives pursuant to a VPP transaction, and that are not sold immediately to third parties, *would be* subject to a limit of 5 percent of tier 1 capital on the value of commodities that the BHC may hold under its physical commodity trading authority.

Section 4060.3

“Consolidated Capital (Examiners’ Guidelines for Assessing Capital Adequacy of BHCs)” was revised to incorporate the Board’s February 22, 2006, revision of Regulation Y (12 C.F.R. 225). The rule’s appendix A was revised to raise the asset threshold to which the risk-based capital guidelines apply on a consolidated basis. The asset threshold was raised for BHCs having consolidated assets of \$500 million or more from \$150 million or more. The risk-based capital guidelines also apply to any bank holding company with consolidated assets of less than \$500 million if the holding company (1) is engaged in significant nonbanking activities either directly or through a nonbank subsidiary; (2) conducts significant off-balance-sheet activities (including securitization and asset management or administration), either directly or through a nonbank subsidiary; or (3) has a material amount of debt or equity securities outstanding (other than trust preferred securities) that are registered with the Securities and Exchange Commission (SEC). BHCs with consolidated assets of less than \$500 million would generally be exempt from the calculation and analysis of risk-based capital ratios on a consolidated holding company basis, subject to certain terms and conditions.

This section also was revised for the Board’s February 6, 2006, revision (effective February 22, 2006) to the market risk measure in Regulation Y (12 C.F.R. 225, appendix E), which reduced the capital requirements for certain cash collateralized securities borrowing transactions of BHCs that have adopted the market risk rule. This action aligns the capital requirements for

those transactions with the risk involved. It provides a capital treatment for U.S. banking organizations that is more in line with the capital treatment to which their domestic and foreign competitors are subject. (See 71 *Fed. Reg.* 8,937, February 22, 2006.)

This section has also been revised to include a January 23, 2006, Board staff legal interpretation. The interpretation conveys the Board’s determination that qualifying mandatory convertible preferred securities (that convert to non-cumulative perpetual preferred securities) qualify for inclusion in the tier 1 capital of internationally active BHCs (and other BHCs) in excess of the 15 percent limit applicable to the restricted core capital elements of internationally active BHCs, if all other terms and conditions of the securities meet the Board’s requirements.

Section 4060.4

“Consolidated Capital (Leverage Measure)” was revised to incorporate revisions to Regulation Y for the tier 1 leverage measure. (See 12 C.F.R. 225, appendix D.) The changes were included in the Board’s February 22, 2006, revision to the Small Bank Holding Company Policy Statement (12 C.F.R. 225, appendix C). The tier 1 leverage measure’s asset threshold was raised for those BHCs having consolidated assets of \$500 million or more from \$150 million or more. The tier 1 leverage guidelines also apply to any BHC that has consolidated assets of less than \$500 million if the BHC (1) is engaged in *significant* nonbanking activities, either directly or indirectly through a nonbank subsidiary (*a new provision*); (2) conducts significant off-balance-sheet activities (including securitization and asset management or administration); or (3) has a material amount of debt securities outstanding (other than trust preferred securities) that are registered with the SEC. (*Previously, the rule referred only to debt outstanding held by the general public; SEC-registered equity securities were not included.*) The Federal Reserve may apply the tier 1 leverage guidelines at its discretion to any BHC, regardless of asset size, if such action is warranted for supervisory purposes.

Bank Holding Company Supervision Manual

Supplement 29—January 2006

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by the Division of Banking Supervision and Regulation since the publication of the July 2005 supplement.

SUMMARY OF CHANGES

Section 2010.11

“Supervision of Subsidiaries—Private-Banking Functions and Activities” has been revised to incorporate the USA Patriot Act’s new and enhanced statutory requirements, which are designed to prevent, detect, and prosecute money laundering and terrorism. For banking organizations, the act’s provisions are implemented through regulations issued by the U.S. Department of the Treasury (31 C.F.R. 103). Section 326 of the Patriot Act (codified in the Bank Secrecy Act [BSA] at 31 U.S.C. 5318(l)) requires financial institutions to have customer identification programs that collect and maintain certain records and documentation on customers. Institutions also should develop and use identity verification procedures to ensure the identity of their customers. SR-04-13 describes the BSA examination procedures for customer identification programs; examiners should follow these procedures when evaluating an institution’s compliance with the regulation. (See also SR-03-17 and SR-01-29.) Relevant interagency interpretive guidance, in a question-and-answer format, addresses the customer identification rules. (See SR-05-9.) This section also has been revised to include general and specific references to the relevant supervisory guidance in the Federal Financial Institutions Examination Council’s *Bank Secrecy Act/Anti-Money Laundering Examination Manual*, which was issued in June 2005. (See SR-05-12 and its attachments.)

Section 2124.01

“Risk-Focused Supervision Framework for Large Complex Banking Organizations” reaffirms the definition of the responsible Reserve Bank (RRB) and specifies the RRB’s responsibilities for conducting inter-District inspection and supervision activities for a banking organization. The section highlights and clarifies the role of the RRB

with respect to inter-District coordination of banking supervision. (See SR-05-27/CA-05-11.)

Section 2124.4

“Interagency Guidelines Establishing Standards for Information Security” has been revised to conform it to the December 21, 2004, interagency rules that implement section 216 of the Fair and Accurate Credit Transactions Act of 2003. (See 12 C.F.R. 225, appendix F.) To address the risks associated with identity theft, the information security standards generally require each financial institution to develop, implement, and maintain, as part of its existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports. The amendments to the information security standards were effective July 1, 2005.

The section has also been revised to incorporate the Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice (the guidance). The federal banking agencies jointly issued the guidance on March 23, 2005 (effective March 29, 2005). The guidance, which interprets section 501(b) of the Gramm-Leach-Bliley Act, amended the information security standards. (See 12 C.F.R. 225, appendix F, supplement A.) The guidance describes the response programs, including customer notification procedures, that certain banking organizations should develop and implement to address unauthorized access to or the use of customer information that could result in substantial harm or inconvenience to a customer. (See SR-05-23/CA-05-10.)

Section 2231.0

“Real Estate Appraisals and Evaluations” has been revised to include a summary of the interagency responses to questions on both the agencies’ appraisal regulations and the October 2003 interagency statement titled Independent Appraisal and Evaluation Functions. The agencies’ March 22, 2005, interpretive responses address common questions on the requirements of the appraisal regulations and the October 2003 interagency statement. (See SR-05-5 and its attachment.) The section also has been updated

to include a summary of the September 8, 2005, interagency interpretive responses to frequently asked questions; the agencies jointly issued the responses to help regulated institutions comply with the agencies' appraisal regulation and real estate lending requirements when financing residential construction in a tract development. (See SR-05-14 and its attachment.)

Section 3005.0

“Section 2(c)(2)(F) of the BHC Act—Credit Card Bank Exemption from the Definition of a Bank” has been revised to add a table of laws, regulations, interpretations, and orders concerning the credit card bank exemption found in section 2(c)(2)(F) of the BHC Act.

Section 3071.0

“Section 4(c)(8) of the BHC Act (Mortgage Banking—Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans)” is a new section that has been added to incorporate the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans, which was issued by the Federal Reserve and the other federal bank and thrift supervisory agencies. The advisory provides guidance on the appropriate accounting and reporting for both derivative loan commitments (commitments to originate mortgage loans that will be held for resale) and forward loan-sales commitments (commitments to sell mortgage loans). When accounting and reporting for derivative loan commitments, institutions (and bank holding companies) are expected to use generally accepted accounting principles. Institutions (and bank holding companies) also must correctly report derivative loan commitments in accordance with their federal bank and thrift supervisory agency's forms and instructions. (See SR-05-10.) An inspection objective and inspection procedures were also

developed to incorporate the interagency guidance.

Section 3111.0

“Section 4(c)(8) of the BHC Act—Acquisition of Savings Associations” has been revised to indicate that bank holding companies acquiring savings associations under this statutory provision must conform the acquired associations' nonbanking activities to those that are permissible under section 4 of the BHC Act. (See also section 225.28(b)(4)(ii) of Regulation Y.) The revised section discusses a more recent Board order and lists other Board orders that have authorized the acquisition of savings associations.

Section 5000.0

“BHC Inspection Program—General” has been revised to briefly discuss the reconfirmation of the Federal Reserve's policy on the coordination of inspection and supervisory activities among the Reserve Banks. When banking organizations operate in more than one District, it is important that (1) inspection and supervisory staff assess and weigh all relevant and significant supervisory findings when evaluating the consolidated banking organization and (2) a consistent and coordinated supervisory message is communicated to the banking organization. To achieve this objective, the System follows the principle that there is one RRB for each fully consolidated banking organization (i.e., each top-tier consolidated banking organization). Section 5000.0.6 defines the RRB for a banking organization, highlights the role of the RRB in inter-District coordination of banking supervision, and briefly discusses the roles and duties of the RRBs in conducting multi-District inspection and supervision activities. The classification of out-of-District nonbank subsidiary assets is also discussed. See also section 5000.0.7. (See SR-05-27/CA-05-11.)

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by

the Division of Banking Supervision and Regulation since the publication of the December 2004 supplement.

LIST OF CHANGES

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
2010.2	2010.2	The section “Supervision of Subsidiaries—Loan Administration and Lending Standards” has been revised to include the May 16, 2005, interagency Credit Risk Management Guidance for Home Equity Lending. The federal supervisory agencies issued the guidance to promote greater focus on sound risk-management practices at banking organizations (that is, at credit-extending bank and nonbank subsidiaries of bank holding companies) with home equity lending programs, including open-end home equity lines of credit and closed-end home equity loans. The agencies are concerned that some banking organizations’ credit-risk management practices for home equity lending have not kept pace with the product’s rapid growth and the easing of underwriting standards. The guidance highlights the sound risk-management practices that a banking organization should follow to align the growth with the risk within its home equity portfolio. The guidance should be considered in the context of existing regulations and supervisory guidelines. (See SR-05-11 and its attachment.) The inspection objectives and procedures have been revised to incorporate this interagency guidance.
2124.01	2124.01	The section “Risk-Focused Supervision Framework for Large Complex Banking Organizations” has been revised to incorporate the risk-management rating definitions, as they are discussed in SR-99-15, SR-97-24, and SR-95-51. SR-04-18 (and its attachment) made revisions to the rating definitions for risk management. A banking organization’s risk-management assessment is deemed to be strong, acceptable, or weak. The central point of contact or designated examiner(s) should use the revised risk-management assessment definitions to develop a risk matrix, which should be used primarily for planning supervisory activities. The risk matrix does not have the fine gradations involved in rating a risk-management system on a function-by-function or activity basis, an approach that would be used in conducting and completing a bank holding company inspection.
2129.05	2129.05	The “Risk and Capital Management—Secondary-Market Credit Activities” section has been revised to incorporate the new bank holding company RFI/C(D) rating system. Other previously issued risk-management-oriented SR-letters are also referenced. In addition, the Board’s July 17, 2004, approval of revisions to the

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		risk-based capital rule (effective September 30, 2004) provides for a limited exclusion from risk-weighted assets for an asset-backed commercial paper (ABCP) program. A banking organization's ABCP program may be excluded from risk-weighted assets (1) when the banking organization is the program's sponsor and (2) when it must consolidate under generally accepted accounting principles (GAAP) its ABCP program that is defined as a variable interest entity. (See section 2128.03.)
3005.0		A new section, "Credit Card Bank Exemption from the Definition of a Bank," discusses the February 18, 2005, Board staff interpretation involving the credit card bank exemption under section 2(c)(2)(F) of the BHC Act. This statutory provision sets forth the criteria that an institution must meet to qualify for the so-called credit card bank exemption. The Board staff's interpretation concluded that no BHC application to the Board would be required for a proposed acquisition of a credit card bank if the company (1) met the statutory criteria and (2) complied with the representations and commitments it made, including those that were required by the Board. Board staff also concluded that a related stock redemption did not require a filing with the Board.
3040.0	3040.0	The "Section 4(c)(4) of the BHC Act—Interests in Nonbanking Organizations" section has been revised to include a qualifying foreign banking organization's (FBO's) November 24, 2004, request for a Board staff determination, which is based on section 4(c)(4) of the BHC Act and on the availability of a fiduciary exemption that is found in the Board's Regulation K, section 211.23(f)(4) (12 C.F.R. 211.23(f)(4)) and in Regulation Y, section 225.22(d)(3) (12 C.F.R. 225.22(d)(3)). Two of the FBO's asset-management subsidiaries proposed to serve as trustee for foreign-based investment trusts that would invest in U.S. real estate. As part of this asset-management activity, the two subsidiaries would each take title to U.S. real estate on behalf of the investment trusts and exclusively for the account of each trust for the benefit of the investors in the trusts. The foreign jurisdiction's law requires the two subsidiaries to obtain a banking license in order to serve as trustee for the investment trusts, and the two subsidiaries are subject to supervision and regulation by the bank supervisory authority in the foreign jurisdiction. Under the arrangement, the two subsidiaries are subject to fiduciary duties that closely resemble those of a trustee in the United States. Under the law of the foreign jurisdiction, the investment trusts would not be legal entities separate from the two subsidiaries. In addition, the FBO committed that neither it nor its subsidiaries or employee benefit plans would own any beneficial interests in the investment trusts. (See <i>Federal Reserve Regulatory Service</i> 4-305.2)
3250.0	3250.0	The "4(c)(8)—Agency Transactional Services (Futures Commission Merchants and Futures Brokerage)" section has been revised to amend the inspection-scope guidance to emphasize the need for

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		examiners to apply a functional-regulatory approach, consistent with section 111 of the Gramm-Leach-Bliley Act, to conduct a BHC inspection of a futures commission merchant subsidiary. (See section 1040.0 and 12 U.S.C. 1844(c).) The section also references the new bank holding company RFI/C(D) rating system.
3905.0, 3920.0	3905.0, 3920.0	The section “Permissible Activities for FHCs—Section 4(k) of the BHC Act” and the section “Limited Physical-Commodity-Trading Activities—Section 4(k) of the BHC Act” have been revised to discuss or reference additional Board orders (see 2004 FRB 215 and 2004 FRB 511) that authorized engaging in limited amounts and types of commodity-trading activities that complement the financial activity of engaging regularly as principal in BHC-permissible commodity derivatives based on a particular commodity. A financial holding company must submit, through the filing of a notice under section 4 of the BHC Act, a written request to the Federal Reserve Board in order to engage in a complementary activity.
4060.3	4060.3	The section “Consolidated Capital—Examiners’ Guidelines for Assessing the Capital Adequacy of BHCs” incorporates the Board’s February 28, 2005, revision of its risk-based capital rule that allows the continued limited inclusion of trust preferred securities in the tier 1 capital of bank holding companies. Until March 31, 2009, the aggregate amount of qualifying cumulative perpetual preferred stock (including related surplus) and qualifying trust preferred securities that a banking organization may include in tier 1 capital is limited to 25 percent of the sum of the following <i>core capital elements</i> : qualifying common stockholders’ equity, qualifying noncumulative and cumulative perpetual preferred stock (including related surplus), qualifying minority interests in the equity accounts of consolidated subsidiaries, and qualifying trust preferred securities. The rule limits restricted core capital elements to 25 percent of the sum of the core capital elements (this limit includes the restricted core capital elements) net of goodwill and any associated deferred tax liability. The <i>restricted core capital elements</i> are defined in the rule as qualifying cumulative perpetual preferred stock (including related surplus), minority interest relating to qualifying cumulative perpetual preferred stock directly issued by a consolidated U.S. depository institution or foreign bank subsidiary, minority interest related to qualifying common stockholders’ equity or perpetual preferred stock issued by a consolidated subsidiary that is neither a U.S. depository institution nor a foreign bank, and qualifying trust preferred securities. Internationally active BHCs, defined as those having consolidated assets of \$250 billion or more or having on-balance-sheet foreign exposure of \$10 billion or more, will be subject to a 15 percent limit, effective March 31, 2009. However, internationally active BHCs may include qualifying mandatory convertible preferred

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		<p>securities up to the generally applicable 25 percent limit. Amounts of restricted core capital elements that are in excess of these limits generally may be included in tier 2 capital.</p> <p>The revised rule also addresses supervisory concerns, competitive equity considerations, and the qualifying terms for trust preferred securities included in tier 1 capital. The rule strengthens the definition of regulatory capital by incorporating long-standing Board policies regarding the acceptable terms of capital instruments included in banking organizations' tier 1 or tier 2 capital. (See the Board's March 1, 2005, press release. The final rule was published in the <i>Federal Register</i> on March 10, 2005.)</p>
4060.4	4060.4	<p>The "Consolidated Capital—Leverage Measure" section has been revised to incorporate the changes made to allow and accommodate in the tier 1 leverage measures (12 C.F.R. 225, appendix D) the continued limited inclusion of trust preferred securities in the tier 1 capital of bank holding companies. The previous definition of tier 1 capital was deleted. For the purposes of the leverage measure, the definition of tier 1 capital relies on the tier 1 capital definition that is found in the risk-based capital rule (12 C.F.R. 225, appendix A).</p>
4070.0	4070.0	<p>The "Bank Holding Company Rating System" section has been totally revised. The section now includes the bank holding company RFI/C(D) rating system. Approved by the Board on December 1, 2004 (effective January 1, 2005), the rating system is described in the attachment to SR-04-18. Each inspected BHC is assigned a "C" composite rating, which is based on an evaluation and rating of the BHC's managerial and financial condition and an assessment of future potential risk to its subsidiary depository institution(s). The other main components of the rating system are Risk management (R); Financial condition (F); and potential Impact (I) of the parent company and nondepository subsidiaries (collectively nondepository entities) on the subsidiary depository institution(s). Several component ratings have subcomponent ratings. The composite, component, and subcomponent ratings are assigned to BHCs on the basis of a numeric scale. A 1 is the highest rating; a 5 is the lowest. All of the BHC's numeric ratings, including the composite, component, and subcomponent ratings, should be presented in the inspection report in accordance with Federal Reserve supervisory practices.</p>
4070.1	4070.1	<p>The section "Rating the Adequacy of Risk-Management Processes and Internal Controls of Bank Holding Companies," which was derived from SR-95-51, has been amended for the risk-management rating classifications and definitions described in the attachment to SR-04-18. The attachment outlines the Board-approved RFI/C(D) bank holding company rating system, which was effective January 1, 2005.</p>

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
4070.5	4070.0.9	A new section, “Nondisclosure of Supervisory Ratings,” describes the Federal Reserve’s long-standing policy of disclosing to the board of directors and senior management the confidential composite numeric rating and the alphabetic component ratings assigned under various supervisory rating systems. (See SR-88-37 and SR-96-26.) The section now references the bank holding company RFI/C(D) rating system (see section 4070.0 and SR-04-18 and its attachment), which replaced the BOPEC rating system for BHCs. Also, the section includes the February 28, 2005, Interagency Advisory on the Confidentiality of the Supervisory Rating and Other Nonpublic Supervisory Information. The advisory reminds banking organizations of the statutory prohibitions on the disclosure of supervisory ratings and other confidential supervisory information to insurers or other nonrelated third parties without the permission of the appropriate federal banking agency. (See SR-05-4.)
1000.0, 2124.0, 2124.04, 2128.05, 4010.2, 4070.3, 4080.0, 5000.0, 5010.1, 5010.4, 5010.6	1000.0, 2124.0, 2124.04, 2128.05, 4010.2, 4070.3, 4080.0, 5000.0, 5010.1, 5010.4, 5010.6	These sections have been revised to incorporate the Board’s adoption of the bank holding company RFI/C(D) rating system. (See SR-04-18 and its attachment.)

Bank Holding Company Supervision Manual

Supplement 27—December 2004

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by

the Division of Banking Supervision and Regulation since the publication of the June 2004 supplement.

LIST OF CHANGES

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
2010.13		<p>The new section “Establishing Accounts for Foreign Governments, Embassies, and Political Figures” conveys the June 15, 2004, interagency advisory “Guidance on Accepting Accounts from Foreign Governments, Foreign Embassies, and Foreign Political Figures.” The advisory was issued by the federal banking and thrift agencies (the agencies) and the U.S. Department of the Treasury’s Financial Crimes Enforcement Network (FinCEN). The advisory responds to inquiries the agencies and FinCEN received on whether financial institutions should do business and establish account relationships with those foreign customers cited in the advisory. Banking organizations are advised that the decision to accept or reject such foreign-account relationships is theirs alone to make.</p> <p>Financial institutions, including a bank holding company’s bank and thrift subsidiaries, should be aware that there are varying degrees of risk associated with these accounts, depending on the customer and the nature of the services provided. Institutions should take appropriate steps to manage these risks, consistent with sound practices and applicable anti-money-laundering laws and regulations. The advisory is primarily directed to financial institutions located in the United States. The boards of directors of bank holding companies, however, should consider whether the advisory should be applied to their other U.S. subsidiaries’ financial and other services. (See SR-04-10.)</p>
2128.03	2128.03	<p>The section “Credit-Supported and Asset-Backed Commercial Paper” has been revised to incorporate the Board’s July 17, 2004, approval (effective September 30, 2004) of a revision to the risk-based capital requirements for state member banks and bank holding companies (collectively banking organizations) that sponsor asset-backed commercial paper (ABCP) programs. For more details, see the summary for section 4060.3. The inspection objectives and inspection procedures were also revised to incorporate the revised rule for ABCP programs.</p>
3140.0	3140.0	<p>The section “Leasing Personal or Real Property” has been revised to incorporate a Board staff legal opinion that was requested by a foreign banking organization (FBO) that is treated as a bank holding company (BHC). The FBO, as a BHC, engages in leasing activities that the Board has authorized in Regulation Y, section 225.28(b)(3) (12 C.F.R. 225.28(b)(3)). The FBO asked if a BHC</p>

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		<p>may provide, as an incidental nonbank activity, fleet-management services to some nonleased vehicles in accordance with its Regulation Y—authorized leasing activities. In a December 19, 2003, opinion, Board staff stated that the provision of fleet-management services to some nonleased vehicles is an activity incidental to the BHC’s authorized leasing activities, provided the BHC’s leasing subsidiary limits its fleet-management services involving vehicles not subject to a Regulation Y permissible lease to no more than 15 percent of the fleet-management revenues, and to 5 percent of the total leasing revenues of the leasing subsidiary. (See the December 19, 2003, Board staff opinion and Regulation Y, 12 C.F.R. 225.28(b)(3), footnote 5.)</p>
3500.0	3500.0	<p>Section 106 of the Bank Holding Company Act Amendments of 1970 generally prohibits a bank from conditioning the availability or price of one product or service (the “tying product,” or the “desired product”) on a requirement that a customer obtain another product or service (the “tied product”) from the bank or an affiliate of the bank. Section 106 also prohibits a bank from conditioning the availability or price of one product on a requirement that a customer (1) provide another product to the bank or an affiliate of the bank or (2) not obtain another product from a competitor of the bank or from a competitor of an affiliate of the bank. Section 106 contains several exceptions to its general prohibitions, and it authorizes the Board to grant, by regulation or order, additional exceptions from the prohibitions when the Board determines an exception “will not be contrary to the purposes” of the statute.</p> <p>The section “Tie-In Considerations of the BHC Act” has been revised to include a Board interpretation and a Board staff interpretation of section 106 on tying arrangements, which were issued on August 18, 2003, and February 2, 2004. These two interpretations state that bank customers that receive securities-based credit can be required to hold their pledged securities as collateral at an account of a bank holding company’s or bank’s broker-dealer affiliate.</p>
4060.3	4060.3	<p>The section “Examiners’ Guidelines for Assessing the Capital Adequacy of BHCs” has been updated to include the revisions to the Board’s risk-based capital requirements for asset-backed commercial paper (ABCP) programs sponsored by state member banks and bank holding companies (collectively, banking organizations). The Board approved the rule changes on July 17, 2004 (effective September 30, 2004). See appendix A of Regulation Y (12 C.F.R. 225, appendix A).</p> <p>In January 2003, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 46, “Consolidation of Variable Interest Entities” (FIN 46). FIN 46 required, for the first time, the consolidation of variable interest entities (VIEs) onto the balance sheets of companies deemed to be the primary beneficiaries of those entities. In December 2003, FASB revised FIN 46 as</p>

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		<p>FIN 46-R. (The interpretation (FIN 46 or FIN 46-R) was effective for reporting periods that ended as early as December 15, 2003. However, there are various effective dates, which are determined on the basis of the nature, size, and type of business entity). FIN 46-R requires the consolidation of many ABCP programs onto the balance sheets of banking organizations.</p> <p>Under the Board's revised risk-based capital rule, a banking organization that qualifies as a primary beneficiary and must consolidate an ABCP program that is defined as a variable interest entity under generally accepted accounting principles (FIN 46-R) may exclude the consolidated ABCP program's assets from its risk-weighted assets, provided that it is the sponsor of the ABCP program. Such banking organizations must also hold risk-based capital against eligible ABCP liquidity facilities that have an original maturity of one year or less that provide liquidity support to its ABCP by applying a new 10 percent credit-conversion factor to such facilities. Eligible ABCP liquidity facilities with an original maturity exceeding one year remain subject to the rule's current 50 percent credit-conversion factor. Ineligible liquidity facilities are treated as direct-credit substitutes or recourse obligations, which are subject to a 100 percent credit-conversion factor. When calculating the banking organization's tier 1 and total capital, any associated minority interests must also be excluded from tier 1 capital. The inspection procedures were also revised to incorporate the revised risk-based capital requirements for bank holding companies.</p>
5010.10	5010.10	<p>This section discusses the inspection reporting of consolidated classified and special-mention assets and other transfer-risk problems. It has been revised to include the revised Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts (the uniform agreement) that was jointly issued by the federal banking and thrift agencies (the agencies) on June 15, 2004. The revised uniform agreement amends the 1938 classification of securities agreement (the 1938 accord), which was revised on July 15, 1949, and May 7, 1979. The uniform agreement sets forth the definitions of the classification categories and the specific examination procedures and information for classifying bank assets, including securities. The June 2004 revision did not change the classification of loans in the uniform agreement. The revised uniform agreement addresses, among other items, the treatment of rating differences, multiple security ratings, and split or partially rated securities. It also eliminates the automatic classification for sub-investment-grade debt securities. (See SR-04-9.) The uniform agreement's classification categories also apply to the classification of assets held by the subsidiaries of banks and bank holding companies.</p>

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by

the Division of Banking Supervision and Regulation since the publication of the December 2003 supplement.

LIST OF CHANGES

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
2065.4	2065.4	This section on ALLL methodologies and documentation has been revised to include a reference to the March 1, 2004, interagency Update on Accounting for Loan and Lease Losses. The interagency update discusses recent developments in accounting, current sources of generally accepted accounting principles, and supervisory guidance that applies to the ALLL. Other SR-letters associated with the supervisory guidance for the allowance are referenced in the interagency update. (See SR-04-5.)
2090.1	2090.1	The Control and Ownership (Change in Control) section has been revised to emphasize the importance of understanding the requirements for filing a notice under the Change in Bank Control Act. The complexity of an ownership position sometimes does not lend itself to easy interpretation of the requirements to file a notice. When it is unclear whether a notice is required, the potential filer (or filers) or the affected state member bank or BHC is encouraged to contact staff at a Federal Reserve Bank or the Board for guidance. Prior notice is required by any person (acting directly or indirectly) that seeks to acquire control of a state member bank or BHC. A <i>person</i> may include an individual, a group of individuals acting in concert, or certain entities (for example, corporations, partnerships, or trusts) that own shares of banking organizations but that do not qualify as BHCs. A person acquires <i>control</i> of a banking organization whenever the person acquires ownership, control, or the power to vote 25 percent or more of any class of voting securities of the institution. See section 225.41 of Regulation Y (12 C.F.R. 225.41), which sets forth the specific types of transactions that require prior notice under the Change in Bank Control Act. Section 225.41 outlines certain other <i>rebuttable</i> presumptions of control that may require the filing of a notice, including (under certain circumstances) a proposed acquisition that would result in a person owning or controlling the power to vote 10 percent or more of any class of voting securities. (See SR-03-19.)
2110.0	2110.0	This section on formal corrective actions has been revised to briefly discuss the joint rules adopted by the Board and the other federal bank and thrift regulatory agencies (effective October 1, 2003) for the removal, suspension, and debarment of accountants from performing audit services. (See the Board's August 8, 2003,

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		<p>press release.) Section 36 of the Federal Deposit Insurance Act, as implemented by 12 C.F.R. 363, requires each federally insured depository institution with total assets of \$500 million or more to obtain an annual audit of its financial statements prepared by an independent public accountant, as well as an attestation on management's assertions concerning internal controls. The joint rules established the practices and procedures under which each agency can, for good cause, remove, suspend, or bar an accountant or accounting firm from performing audit and attestation services for federally insured depository institutions that have total assets of \$500 million or more.</p>
2124.01	2124.01	<p>The Board's Division of Banking Supervision and Regulation and its Division of Consumer and Community Affairs have developed an enhanced framework for the supervision of consumer compliance risk. The section on the risk-focused supervisory framework for large, complex banking organizations (LCBOs) has been revised to incorporate this guidance. For LCBOs and large banking organizations (LBOs) that are subject to the Federal Reserve System's continuous supervision program, safety-and-soundness examiners are to incorporate the consumer compliance risk assessment into the overall risk assessment and planned supervisory activities for LCBOs and LBOs. When performing the consumer compliance risk assessment, consumer compliance examiners are to rely on the work conducted by the dedicated supervisory team, the primary bank regulator, or both. In addition, the consumer compliance examiner is to discuss any identified areas of significant consumer compliance risk with the Federal Reserve's central point of contact (CPC) assigned to the organization. In coordination with the CPC and the supervisory team, the consumer compliance examiner is to evaluate how consumer compliance risk affects the reputational, legal, and operational risk profiles of the LCBO or LBO. For other BHCs that have multiple federally insured depository institution subsidiaries or nonbank subsidiaries, surveillance and other information will be used as the basis for assessing consumer compliance risk. Consumer compliance risk will not be assessed in shell holding companies. (See SR-03-22.)</p>
2178.0		<p>This new section discusses the January 5, 2004, Interagency Policy on Banks/Thriffs Providing Financial Support to Funds Advised by the Banking Organization or Its Affiliates. The policy alerts banking organizations, including their boards of directors and senior management, to the safety-and-soundness implications of and the legal impediments to a bank providing financial support to investment funds advised by the bank, its subsidiaries, or affiliates (that is, an affiliated investment fund).</p> <p>The interagency policy emphasizes three core principles: A bank should not (1) inappropriately place its resources and reputation at risk for the benefit of an affiliated investment fund's investors and creditors; (2) violate the limits and requirements in</p>

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		<p>Federal Reserve Act sections 23A and 23B and in Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or (3) create an expectation that the bank will support the advised fund (or funds).</p> <p>In addition, bank-affiliated investment advisers are encouraged to establish alternative sources of financial support to avoid seeking support from affiliated banks. A bank's investment advisory services can pose material risks to the bank's liquidity, earnings, capital, and reputation and can harm investors, if the risks are not effectively controlled. Bank management is expected to notify and consult with its appropriate federal banking agency before (or immediately after, in the event of an emergency) providing material financial support to an affiliated investment fund. (See SR-04-1.) Inspection objectives and inspection procedures have been developed to address the supervisory concerns set forth in the policy. The objectives and procedures focus on a BHC's oversight responsibilities for its bank and nonbank subsidiaries that advise investment funds.</p>
2231.0	2231.0	<p>The Real Estate Appraisals and Evaluations section has been updated to add the October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions as appendix B. A banking institution's board of directors is responsible for reviewing and adopting policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program (the program) for all of its lending functions. Concerns about the independence of appraisals and evaluations arise from the risk that improperly prepared appraisals may undermine the integrity of credit-underwriting processes.</p> <p>An institution's lending functions should not have undue influence that might compromise the program's independence. Institutions may not use an appraisal prepared by an individual who was selected or engaged by a borrower. Likewise, institutions may not use <i>readdressed appraisals</i>—appraisal reports that are altered by the appraiser to replace any references to the original client with the institution's name. Altering an appraisal report in a manner that conceals the original client or intended users of the appraisal is misleading and violates the agencies' appraisal regulations and the Uniform Standards of Professional Appraisal Practice (USPAP). (See SR-03-18.)</p>
3160.0, 3160.2	3160.0, 3160.2	<p>Revisions to these nonbanking sections concern subsidiaries with EDP servicing company activities and electronic benefit transfer, stored-value-card, and electronic data interchange service activities. The changes incorporate the current revenue limit of 49 percent (previously 30 percent) that the Board approved on November 26, 2003 (effective January 8, 2004). An EDP servicing company may provide services to others (outside third parties) if</p>

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		the total annual revenues derived from activities involving data processing, data storage, and data transmission services (that are not financial, banking, or economic related) do not exceed the revised limit. BHCs may request permission to administer the 49 percent revenue test on a business-line or multiple-entity basis. See section 225.28(b)(14) of Regulation Y (12 C.F.R. 225.28(b)(14)).

Bank Holding Company Supervision Manual

Supplement 25—December 2003

This supplement reflects decisions of the Board of Governors, new and revised statutory and regulatory provisions, and new and revised supervisory guidance and instructions issued by

the Division of Banking Supervision and Regulation since the publication of the June 2003 supplement.

LIST OF CHANGES

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
2060.5	2060.05	This section has been revised to incorporate the May 5, 2003, Statement on Application of Recent Corporate Governance Initiatives to Nonpublic Banking Organizations issued by the Federal Reserve, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision. The statement announced that the agencies do not expect to take actions to apply corporate-governance and other requirements of the Sarbanes-Oxley Act to nonpublic banking organizations that are not otherwise subject to them. The agencies, however, encouraged nonpublic banking organizations to periodically review their policies and procedures relating to corporate governance, auditing, and other requirements of the Sarbanes-Oxley Act. Although the act does not require small, nonpublic banking organizations to strictly adhere to its provisions, the agencies expect these banking organizations to ensure that their policies and procedures are consistent with applicable law, regulations, and supervisory guidance and that they remain appropriate for the organizations' size, operations, and resources. (See SR-03-08.)
2110.0	2110.0	This revised section on formal corrective actions discusses the existing restrictions on, and requirements for, severance payments made to institution-affiliated parties (so-called golden parachute payments). The restrictions originated from the Crime Control Act of 1990, which added section 18(k) to the Federal Deposit Insurance Act (12 U.S.C. 1828(k)). The FDIC's regulations on golden parachute payments (or any agreement to make any payment), found in 12 C.F.R. 359, are discussed in this section. The 30-day prior-notice requirement for appointing any new directors or senior executive officers of state member banks and bank holding companies is also discussed. (See section 32 of the FDI Act (12 U.S.C. 1831i) and subpart H of Regulation Y (12 C.F.R. 225.71).) This notice requirement also applies to any change in the responsibilities of any current senior executive officer that proposes to assume a different position. (See SR-03-06.)
3120.0	3120.0	The trust services section is revised to discuss the oversight responsibilities of the board of directors and senior management for operating the fiduciary activities of their financial holding company (FHC) or bank holding company (BHC) in a safe and sound manner. This oversight at the consolidated level is impor-

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		tant because the risks associated with financial activities as well as fiduciary activities can cut across legal entities and business lines. Relying on the examination findings of the appropriate trust activities regulator, the examiner is to review and assess the internal policies, reports, and procedures and the effectiveness of the BHC's or FHC's consolidated risk-management process for trust activities. The revision includes a discussion of the available reported supervisory information and analytical support tools that an examiner can use to evaluate the trust services of the holding company and its subsidiaries. (See SR-00-13.)
3000.0.2 3260.0	3000.0.2 3260.0	Appendix 1 of subsection 3000.0.2 (the detailed list of Board-approved nonbanking activities in section 225.28(b) of Regulation Y) and section 3260.0 have been revised to include the Board's June 27, 2003, approval of a Regulation Y amendment (effective August 4, 2003) to permit BHCs to (1) take and make delivery of title to commodities underlying commodity derivative contracts on an instantaneous, pass-through basis and (2) enter into certain commodity derivative contracts that do not require cash settlement or specifically provide for assignment, termination, or offset before delivery.
3600.30	3600.30	The nonbanking activities section on real estate title abstracting has been revised to include an October 7, 2002, staff opinion on BHC-conducted title abstracting activities for U.S.-registered aircraft. The title abstracting services are limited to (1) performing a title search of aircraft records and (2) reporting factual information on the ownership history of the relevant aircraft and the existence of liens and encumbrances affecting title to the aircraft. Staff opined that the described title abstracting activities for U.S.-registered aircraft would be within the scope of title abstracting activities for real estate previously determined to be permissible under section 4(c)(8) of the BHC Act on June 30, 1995. (See 1995 FRB 806.)
3920.0		This new section discusses the Board's October 2, 2003, approval of an FHC's notice under section 4(k) of the BHC Act to engage in physical commodity trading activities on a limited basis as an activity that is complementary to the financial activity of engaging regularly as principal in commodity derivative activities. (The effective date of the Board's order is also October 2, 2003.)
3950.0		This new section provides inspection guidance on insurance sales activities and consumer protection in sales of insurance as the guidance pertains to FHCs, BHCs, or state member banks. Examiner guidance is provided on (1) conducting risk assessments of BHC or state member bank insurance and annuity sales activities in accordance with the Federal Reserve's risk-focused supervisory approach and (2) examining a state member bank's compliance with the new Consumer Protection in Sales of Insurance (CPSI) regulation contained in subpart H of the Board's Regulation H (12 C.F.R. 208.81–86). The CPSI regulation (effective October 1,

<i>New Section Number</i>	<i>Previous Section Number</i>	<i>Description of the Change</i>
		<p>2001) <i>applies only</i> to insured depository institutions. It implements section 305 of the Gramm-Leach-Bliley Act (the GLB Act) (12 U.S.C. 1831x). The guidance provides a comprehensive review of these insurance and annuity sales activities as they pertain to a BHC or bank and discusses the Federal Reserve’s responsibility for enforcing a depository institution’s compliance with the CPSI regulation. Consistent with the GLB Act, the guidance incorporates applicable restrictions on examining a functionally regulated subsidiary. The CPSI regulation’s supervisory guidance is provided for the BHC examiner’s, the board of directors’, and senior management’s information. The information is made available in this manual to BHC directors and management so they can fulfill their respective responsibilities in overseeing the operations of the BHC and its insured depository institution subsidiaries.</p> <p>The CPSI regulation requires certain disclosures in connection with the retail sale or solicitation of insurance products and annuities by a bank, any other person at bank offices where retail deposits are accepted from the public, or any person “acting on behalf of the bank.” Appendix A summarizes the banking agencies’ joint statement in which they responded to a request to clarify whether the disclosure requirements apply to renewals of pre-existing insurance policies sold before October 1, 2001. Appendix B is a glossary of terms associated with insurance and annuity sales activities. Inspection objectives, inspection procedures, and an internal control questionnaire are also provided.</p>
4020.4	4020.4	<p>This revised section on bank liquidity incorporates the July 25, 2003, Interagency Advisory on the Use of the Federal Reserve’s Primary Credit Program in Effective Liquidity Management. The interagency advisory provides guidance on the appropriate use of primary credit in effective liquidity management. The board of directors and senior management of BHCs and state member banks are advised to consider the Federal Reserve’s primary credit program as part of their contingency funding plans and to provide for adequate diversified potential sources of funds to satisfy liquidity needs, which includes planning for certain significant liquidity events. (See SR-03-15.)</p>

The *Bank Holding Company Supervision Manual* has been prepared by Federal Reserve supervision personnel to provide guidance to examiners as they conduct on-site inspections of bank holding companies (BHCs) and their non-bank subsidiaries. The manual is a compilation of formalized procedures and Board supervisory policies that supervision and inspection personnel should follow. The manual includes new concepts and keeps pace with the ever-changing industry. An integral part of the Federal Reserve's overall program to supervise banking organizations operating under a holding company structure, the manual enhances the staff's ability to implement the Board's inspection and monitoring efforts.

The manual is designed to provide guidance to examination and supervision personnel. *It should not be considered a legal reference.* Questions concerning the applicability of and compliance with federal laws and regulations should be referred to appropriate legal counsel.

The Federal Reserve System conducts risk assessments and a full-scope inspection program for BHCs. At a minimum, full-scope inspections should include sufficient procedures to reach an informed judgment on the assigned ratings for the factors included in the bank holding company RFI/C(D) rating system. The procedures of a full-scope inspection focus in part on assessing the types and extent of risks to which a BHC and its subsidiaries are exposed. Some of these types of risks include credit, market, liquidity, operational, legal, and reputational risks. Inspections also focus on evaluating the organization's policies and procedures for identifying, managing, and controlling such risk exposures and on determining whether the management and directors are actively involved in the oversight of the organization's risk-management program. To determine whether the organization's policies and procedures for risk management are fully effective and being followed, inspections or reviews also generally include transaction and compliance testing

The inspection process commences with a preliminary risk assessment. The risk assessment highlights the strengths and weaknesses of the holding company and is the basis for determining the procedures to be conducted during an inspection. Risk assessments identify the organization's principal business activities and the types and quantities of risks associated with the activities (including those conducted off-balance-sheet). The quality of management and the control of risks are factored into the initial

risk profile of the holding company. Sources of information for the risk assessment include prior bank and BHC inspection reports and workpapers, surveillance program reports, and regulatory reports. In addition, other relevant supervisory materials derived from within the Federal Reserve System or other federal and state banking supervisors, as well as from other responsible regulatory agencies (for example, the Securities and Exchange Commission and state insurance authorities) are used. Other sources for the risk assessment may include the banking organization's publicly available reports, such as annual and other periodic reports and informational releases; strategic plans and budgets; internal management reports; information packages for the board of directors; correspondence; the board of directors executive and audit committee minutes; internal audit workpapers and reports; and stock-analysis reports. The activities, transactions, and identified areas having the most significant risks, inadequate risk-management processes, or rudimentary internal controls will represent the banking organization's highest risks. The risk-assessment process culminates in a formalized and structured supervisory strategy, which examination staff will follow when conducting an inspection.

The banking organization's highest risks are expected to undergo the most rigorous scrutiny, analysis, and transaction testing by examiners and supervisors. Transaction testing is a reliable and essential inspection technique for assessing the banking organization's condition and verifying its adherence to internal policies, procedures, and controls. Transaction testing alone, however, is not sufficient for ensuring safe and sound operations in a highly dynamic banking environment. The changing nature of financial instruments and markets allows institutions to rapidly reposition their portfolio risk exposures. To ensure that banking organizations have systems in place to identify, measure, monitor, and control their changing risk exposures, inspections further focus on evaluating the banking organization's risk-management processes. These risk-management evaluations determine the extent to which the banking organization's management processes can be relied on.

The full-scope inspection may be conducted at a point in time or through a series of targeted or limited-scope reviews conducted on an ongoing or continuous basis for the largest and most

complex banking organizations. Irrespective of the duration of the inspection, planned supervisory activities should be coordinated well in advance with other responsible bank, thrift, and functional regulators in order to avoid duplication of effort and to minimize burden on the banking organization. Supervisory findings of inspections should be communicated to the banking organization's management or boards of directors, as well as to the banking organization's other bank supervisors and functional regulators, when relevant.

An inspection also measures the financial strength of a BHC or financial holding company (FHC) and focuses on financial indices of both the consolidated entity and its component parts. In addition to the analysis of risk, the other principal indices appraised are quality of assets, earnings, capital adequacy, cash flow and liquidity, and the competency of management. An inspection or supervisory program should also assess the banking organization's program for transactions between insured subsidiaries and affiliates. The basic objective of this assessment is to determine the impact or consequences of transactions between the parent holding company or its nonbanking subsidiaries and the insured subsidiaries. Of particular importance is whether intercompany transactions result in a diversion of income (or income opportunity)

away from a federally insured subsidiary to a holding company affiliate.

The competency of BHC management in overseeing the banking organization's business activities, risk management, and financial condition is also evaluated. The FHC and BHC inspection process provides a vehicle for a comprehensive assessment of the effectiveness of management, resulting in a more open and informed dialogue between management and representatives of the Federal Reserve.

In summary, the inspection process is intended to increase the flow of information to the Federal Reserve System concerning the soundness of FHCs and BHCs. This information will permit the Federal Reserve to encourage sound banking practices and to take appropriate supervisory action when warranted.

This manual is updated periodically to reflect current supervisory policy and procedures and changing practices within the industry. The manual is also available on the Board's public web site at www.federalreserve.gov/boarddocs/supmanual/. We solicit the input and contribution of all supervisory staff and others in refining and modifying its contents. Please address all correspondence to the Director of Banking Supervision and Regulation, Board of Governors of the Federal Reserve System, Washington, DC 20551.

General Table of Contents

Bank Holding Company Supervision Manual

1010.0

This general table of contents lists the major section heads for each part of the manual:

1000	Foreword, Contents, Preface, Use of the Manual
2000	Supervisory Policy and Issues
3000	Nonbanking Activities
4000	Financial Analysis
5000	BHC Inspection Program
6000	Alphabetical Subject Index

A detailed table of contents, which lists the subheads within each major section, precedes parts 2000 through 5000.

1020.0.1 INTRODUCTION

This manual is designed to aid personnel of the Federal Reserve System in supervising bank holding companies. As such, it will review in considerable detail current policies and procedures for supervising the financial affairs of these banking organizations and will also discuss statutes, regulations, interpretations and orders that pertain to bank holding company supervision. Before proceeding, however, it is desirable to step back and view bank holding companies and their supervision in a broader perspective. This preface is designed to provide that perspective.

While the holding company form of organization exists in many industries, it is particularly prevalent in the regulated industries—telephone, electric and gas utility, railroad, savings and loan, and banking. Regulated industries have learned that a holding company structure allows certain entities to avoid some of the constraints of regulation. For example, regulation often limits the geographic area that a regulated firm can serve. By forming a holding company, many regulated organizations can serve a broader area, thereby potentially benefiting from economies of scale and risk reduction through geographic diversification.

A second purpose for the use of a holding company structure by regulated firms is to expand into other product markets, often ones that are not subject to regulation.

A third purpose for the use of a holding company structure is to increase the organization's financial flexibility, thereby avoiding some of the financing constraints imposed by regulation. These constraints can include limitations on leverage, the types of assets that the firm can acquire and the types of liabilities that it can issue. Another possible financial advantage of the holding company is to obtain tax benefits.

Bank holding companies were created for essentially the same reasons that holding companies were created in other industries; to expand geographically, to move into other product markets, and to obtain greater financial flexibility and tax benefits. The primary use of the bank holding company device prior to the late 1960's was to expand banking operations geographically. The holding company form was needed because many States either prohibited or sharply curtailed branching within the State. Moreover, banks generally did not have the authority to branch beyond the geographic limits of the State in which the bank was chartered. By employing

the holding company form of organization, several banking organizations had succeeded by the 1950's in expanding over an entire region of the country, operating banks in several States.

During the 1960's many banks, especially the largest ones, desired to expand into new lines of activity. In most cases, these new activities were financial in nature and were closely related to traditional banking operations. While some banks were successful in obtaining supervisory approval to enter certain of these new activities, the courts subsequently voided many of these approvals. Unable to enter these activities as a bank, many of these organizations converted into the holding company form and entered these activities through the holding company.

In recent years banking organizations also have used the holding company device to increase their financial flexibility. For example, in order to avoid the reserve requirements and interest rate ceilings applicable to deposits of their bank subsidiaries, many banking organizations have utilized the parent company as a vehicle to fund the organization. Moreover, the holding company structure has allowed organizations to attain higher leverage levels than otherwise might have been permitted.

Historically, the Bank Holding Company Act sought to provide for the separation of banking from commerce. In order to avoid any detrimental effects on the public interest, the activities of bank holding companies have been limited by law and regulation and transactions with banking subsidiaries are virtually prohibited. This basic rationale is the cornerstone for regulating the financial affairs of bank holding companies.

1020.0.2 POSSIBLE CONSEQUENCES OF HOLDING COMPANY FORMATION

There are two primary ways that a holding company can have an adverse effect on the financial condition of a regulated subsidiary. The first is for the holding company (or its unregulated-regulated subsidiaries) to take excessive risks and fail. This failure could have a "ripple effect" on the regulated firm, impairing its access to financial markets. The classic case is the Insull empire in the electric utility industry, which involved the pyramiding of numerous highly leveraged holding companies. The col-

lapse of this pyramid during the Depression of the 1930's severely impacted the regulated electric utility operating companies and impaired their ability to service the public.

A second major way that a holding company can have a harmful effect on the financial condition of a regulated subsidiary is through adverse intercompany transactions and excessive dividends. Adverse intercompany transactions typically involve either the purchase and sale of goods and services or financial transactions that are on nonmarket terms. Concern over the use of the holding company device to transfer financial resources from the regulated firm has been particularly prevalent. In this case, there has been a conflict of views between the government, and the firms which want to diversify in order to increase their return on investment.

In the mid 1970's, concern over holding companies forcing regulated firms into adverse transactions surfaced in the banking industry. In this instance, the objective was not to divert resources from the bank to more profitable areas, but rather to use bank resources to save a non-bank affiliate from failure.

1020.0.3 REGULATORY RESPONSE TO THE HOLDING COMPANY

Historically, public policymakers have recognized that holding companies can have both positive and negative effects on regulated subsidiaries. The fact that policymakers have permitted holding companies to exist in all of the major regulated industries indicates that the effects, on balance, have not been decidedly negative. However, there have been enough problems over the years that holding companies in most regulated industries are subject to at least some form of regulation. This regulation varies substantially from one regulated industry to another.

Until the mid-1970's, Congressional concerns with bank holding companies were primarily oriented to competition, concentration of financial resources and the proper range of banking activities. However, there was also some limited recognition of the possible impact of holding companies on the financial condition of banks. The earliest evidence was the Banking Act of 1935, in which Congress gave the Federal Reserve Board authority to issue permits to holding companies to vote the stock of their banks. In acting on permit applications, the Board was required

to consider the holding company's financial condition, the character of its management, and the effect of granting the permit on the bank. Congress also gave the Federal Reserve the right to inspect bank holding companies.

About two decades later, Congress passed the Bank Holding Company Act of 1956. This legislation required the Federal Reserve, in passing on proposed bank acquisitions by holding companies, to consider the competitive, financial and managerial implications of the proposal. More recently, the Bank Holding Company Act Amendments of 1970 required the Federal Reserve to make a similar determination in applications by holding companies to acquire nonbanking companies. The amendments also brought one-bank holding companies into the Federal Reserve's jurisdiction.

Subsequently, Congress and the public became seriously concerned over the possible adverse impact of holding companies on the financial condition of subsidiary banks. These adverse developments led to two results; additional legislation and stepped-up holding company supervision. The major Congressional action was to give the Federal Reserve much needed cease and desist powers over bank holding companies. This authority now supplements certain statutes, such as dividend restrictions and limitations on bank transactions with affiliates, that tend to protect banks in a holding company organization.

In the mid-1970's, the Federal Reserve stepped up its supervision and monitoring of bank holding companies in a variety of ways. First, the Federal Reserve increased the scope and frequency of holding company inspections, and later introduced a bank holding company rating system designed to focus attention on those organizations having the most serious problems. Second, the Federal Reserve began to monitor transactions between bank subsidiaries and the rest of the holding company organization through quarterly intercompany transactions reports. Third, the Federal Reserve implemented a computer-based surveillance program designed to identify emerging financial problems. Finally, the Federal Reserve began to employ its new holding company cease and desist powers in an effort to curtail unsafe and unsound practices.

The period prior to 1980 marked a gradual decline in the ratio of equity capital to total assets within the United States Commercial banking system, particularly for the nation's largest banking organizations. In an effort to reverse that trend, the Federal Reserve System and the Comptroller adopted guidelines for

national and state member banks and bank holding companies in December 1981. The guidelines established minimum capital levels and capital zones. The guidelines provided state member banks and bank holding companies with targets or objectives to be reached over time. As a result, many of the banks and bank holding companies improved their capital positions. However, other developments, including deregulation of interest rates on bank liabilities, weakening of loan portfolios (asset quality) of some banking institutions occasioned by economic shocks in certain industries or geographical areas, and increased competition in the financial services areas, combined to place additional pressures on the profitability of banking institutions and accentuate the potential demands on the capital positions of those institutions.

The Federal Reserve System continued to stress the importance of the capital guidelines in setting standards of capital adequacy. The Board thus amended its guidelines in June 1983, to set explicit minimum capital levels for multinational organizations.

In November 1983, congressional concern over existing conditions, prompted the enactment of the International Lending Supervision Act of 1983 ("ILSA"). The Act directed that the federal banking agencies cause banking institutions to establish minimum capital levels for banking organizations. In December 1983, the Board, therefore, published the guidelines as Appendix A to the totally revised Regulation Y (12 C.F.R. section 225). Then in April 1985, the Board adopted new capital adequacy guidelines to increase the required minimum primary and total capital levels for the larger regional and multinational bank holding companies and state member banks. This action, when considered in conjunction with the capital maintenance regulations of the Comptroller of the Currency and the Federal Deposit Insurance Corporation, established uniform minimum capital levels for all federally supervised bank holding companies, regardless of size, type of charter, primary supervisor or membership in the Federal Reserve System.

The strengthening of supervision over banks and bank holding companies is an equally imposing supervisory concern. The Federal Reserve System adopted a number of supervisory policies in 1985 that directly affected the supervision of bank holding companies, such as the increased frequency and scope of inspections and the communicating of the results of inspections (refer to Manual section 5000). In addition, the scope of the inspection was expanded to provide for a comprehensive analysis of man-

agement's ability to direct and control the organization utilizing the basic assumption that the bank holding company is responsible for the direction and vitality of the organization. Overseeing the supervision of banking organizations entails evaluating management's policies and procedures, wherever they are established within the corporate structure, as part of the examination/inspection process. Such policy areas include the consolidated planning process, risk management, funding, liquidity, lending, management information systems, loan review, and audit and internal controls.

The Board, concerned with strengthening the supervision over member banks and bank holding companies, adopted a policy statement regarding cash dividends not fully covered by earnings on November 14, 1985. The policy statement addressed the situation when cash dividends are not fully covered by earnings, which represents a return of a portion of an organization's capital (refer to Manual section 2020.0 for a discussion regarding the policy statement).

The Board adopted a policy statement on April 24, 1987, also related to the strengthening of the supervision over subsidiary banks of bank holding companies. The Board reaffirmed its long-standing policy that a bank holding company should act as a source of financial and managerial strength to its subsidiary financial institutions. The policy statement provides that a bank holding company should not withhold financial support from a subsidiary bank in a weakened or failing condition when the holding company is in a position to provide the support. The Board emphasized that a bank holding company's failure to provide assistance to a troubled or failing subsidiary bank under these circumstances would generally be viewed as an unsafe and unsound banking practice or a violation of the Boards Regulation Y (refer to section 225.4 (a)(1)) or both.

Congress limited the expansion of nonbank banks with the passage of the Competitive Equality Banking Act of 1987. The legislation redefined the definition of "bank" in the Bank Holding Company Act so that an FDIC-insured institution is a bank. Existing nonbank banks were grandfathered but certain limitations were imposed on their operations.

In an effort to further strengthen the capital position in banks and bank holding companies, the Board of Governors of the Federal Reserve System, on January 19, 1989, issued final guidelines to implement risk-based capital require-

ments for state member banks and bank holding companies. The guidelines are based on the framework adopted July 11, 1988, by the Basle Committee on Banking Regulations and Supervisory Practices, which includes supervisory authorities from 12 major industrial countries. The guidelines are designed to achieve certain important goals:

- Establishment of a uniform capital framework, applicable to all federally supervised banking organizations (the guidelines were also adopted by the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation);
- Encouragement of international banking organizations to strengthen their capital positions; and,
- Reduction of a source of competitive inequality arising from differences in supervisory requirements among nations.

The guidelines establish a systematic analytical framework that: (1) makes regulatory capital requirements more sensitive to differences in risk profiles among banking organizations; (2) factors off-balance sheet exposures into explicit account in assessing capital adequacy, minimizes disincentives to holding liquid, low-risk assets; and achieves greater consistency in the evaluation of the capital adequacy of major banking organizations throughout the world.

The risk-based capital guidelines include both a definition of capital and a framework for calculating weighted risk assets by assigning assets and off-balance sheet items to broad risk categories. An institution's risk-based capital is calculated by dividing its qualifying total capital (the numerator of the ratio) by its weighted risk assets (the denominator).

The guidelines provide for phasing in of risk-based capital standards through the end of 1992, at which time the standards become fully effective. At that time, banking organizations will be required to have capital equivalent to 8 percent of assets, weighted by risk.

Banking organizations must have at least 4 percent Tier 1 capital, which consists of core capital elements, including common stockholder's equity, retained earnings, and noncumulative and limited amounts of cumulative perpetual preferred stock, to weighted risk assets. The other half of required capital (Tier 2), can include, among other supplementary capital elements,

the non-Tier 1 portion of cumulative perpetual preferred stock, limited-life preferred stock and subordinated debt, and loan loss reserves up to certain limits.

The risk weights assigned to assets and credit equivalent amounts of off-balance sheet items are based primarily on credit risk. Other types of exposure, such as interest rate, liquidity, and funding risk, as well as asset quality problems, are not factored into the risk-based measure. Such risks will be taken into account in determining a final assessment of an organization's, capital adequacy, however.

Congress addressed the recent thrift crisis with the passage of thrift legislation, the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), which was signed into law on August 9, 1989. The legislation brought forth a number of important developments affecting bank holding companies. The legislation addressed:

1. acquisition of thrifts, in addition to failing ones;
2. conversion of thrifts to banks;
3. merger of thrifts with banks; and the
4. enhancement of enforcement authority.

The Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) was signed into law on December 19, 1992. It was enacted to require the least-cost resolution of insured depository institutions, to improve supervision and examinations, to provide additional resources to the Bank Insurance Fund, and for other purposes. It required the federal banking agencies and their holding companies to prescribe standards for credit underwriting, loan documentation, as well as numerous other standards that are intended to preserve the safety and soundness of banking organizations.

FIDICIA further amended the International Banking Act of 1978. The Federal Reserve's authority over foreign bank operations (including representative offices in the U.S.) was significantly increased.

FIDICIA required the federal banking agencies to adopt standards for undercapitalized financial institutions. The Board, on September 18, 1992, issued Prompt Corrective Action Measures for state member banks.

During 1992, the Federal Reserve issued guidance on such issues as the monitoring and controlling of risk from asset concentrations, the disclosure, accounting, and reporting of past due (nonaccrual) loans, and the need for consistent methods in determining the amount of the allowance for loan and lease losses.

With the FIRREA and FIDICIA legislation, Congress re-emphasized the need for continued strengthening of the supervision over financial institutions. The strengthening of supervision over banks and bank holding companies will

continue to be a primary objective of the Federal Reserve. As it is now, it will be continuously emphasized during the examination/inspection of member banks and bank holding companies during the 1990's and beyond.

The Manual is presented in “sections” which have been grouped together into “parts” that have in common a central theme pertaining to BHC supervision. For example, Part II is composed of sections which discuss topics of special interest for supervisory review. Part III is composed of sections which discuss the various exemptive provisions to the nonbank prohibitions of the BHC Act. Part IV presents sections on the preparation of a financial analysis while Part V discusses the methods used to prepare the inspection report forms.

In preparing to conduct an inspection and complete the inspection report forms, the examiner should review the information requirements presented in Part V which include a “section” for each page within the inspection report. Many of these sections contain cross-references to other sections within Parts II–IV of the Manual that present in greater detail the issues to be considered during the inspection process. The examiner assigned to complete a particular inspection report page should review the sections cross-referenced in Part V.

Given that the overall objective of the Manual is to standardize and formalize inspection objectives and procedures that provide guidance to the examiner and enhance the supervisory process, the content of the sections within Parts II–IV are grouped into broad categories. They are:

1030.0.1 INSPECTION OBJECTIVES; INSPECTION PROCEDURES; LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Not all of the categories are presented in each section. Where a particular topic is exclusively financially related and does not involve legal considerations, the subsection on “Laws, Regulations, . . .” may be omitted.

These procedures were designed for a full-scope, comprehensive inspection. It is recog-

nized that in some instances the procedures may not apply in their entirety to all bank holding companies.

Examiners may exercise a measure of discretion depending upon the characteristics of the organization under inspection.

References to the “Examiner’s Comments” inspection report page throughout this Manual are synonymous with Core Page 1 of the inspection report—“Examiner’s Comments and Matters Requiring Special Board Attention”—as discussed in Part V of the Manual.

Part V of the Manual concerns the inspection program and report forms.

1030.0.2 NUMBERING SYSTEM

The Manual is arranged using a numerical coding system based on the Manual’s parts, sections and subsections. Parts are differentiated using “thousands” notations, sections using “digits” notations, and subsections using “tenths” placed after a decimal point as follows:

Part II—Topics for Supervisory Review	2000.0
Section 6—Management Information System	60.0
Subsection 1—Audit	.1
	2060.1

1030.0.3 ABBREVIATION

The Bank Holding Company Act of 1956, as amended, is abbreviated as “the Act” throughout the Manual.

1030.0.4 AMENDMENTS TO THE MANUAL

Amendments will be published periodically as needed.

Bank Holding Company Examination and Inspection Authority

Section 1040.0

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section has been revised to discuss further the authority for the Federal Reserve to conduct BHC inspections under section 5 of the Bank Holding Company Act of 1956.

1040.0.1 BHC INSPECTIONS

The Gramm-Leach-Bliley Act (GLB Act) amended section 5(c) of the Bank Holding Company Act (BHC Act) pertaining to BHC reports and examinations (or inspections, in the case of BHCs). The GLB Act provides specific supervisory guidance to the Board of Governors of the Federal Reserve System (and the Federal Reserve Banks via delegated authority) with respect to the breadth of BHC inspections. It also emphasized the focus and scope of BHC inspections and the inspections of BHC subsidiaries. An inspection is to be conducted to—

1. inform the board of the nature of the operations and financial condition of each BHC and its subsidiaries, including—
 - a. the financial and operational risks within the holding company system that may pose a threat to the safety and soundness of any depository institution (DI) subsidiary of such bank holding company, and
 - b. the systems for monitoring and controlling such financial and operational risks; and
2. monitor compliance by any entity with the provisions of the BHC Act or any other federal law that the Board has specific jurisdiction to enforce against the entity, and to monitor compliance with any provisions of federal law governing transactions and relationships between any DI subsidiary of a BHC and its affiliates.

1040.0.1.1 Authority for Bank Holding Company Inspections

Section 5 of the BHC Act of 1956 authorizes the Board to require reports and to conduct inspections of bank holding companies and their affiliates.¹ Subject to the limitations discussed below, Section 5 authorizes the Board to examine each

bank holding company and nonbank subsidiary thereof. Within those limitations, the Federal Reserve System's supervisory staff (includes BHC inspection and examination staff) may review *all* books and records of a banking organization that is subject to Federal Reserve Supervision.²

1040.0.2 FOCUS AND SCOPE OF BHC INSPECTIONS

The focus and scope of an inspection is to be limited, to the fullest extent possible, to the BHC and any subsidiary of the BHC that could have a materially adverse effect on the safety and soundness of any DI subsidiary of the holding company due to (1) the size, condition, or activities of the subsidiary, or (2) the nature or size of the transactions between the subsidiary and any DI subsidiary of the BHC.

The Board is to use, to the fullest extent possible, the bank examination reports of DIs prepared by the appropriate federal or state DI supervisory authority. The Board also is to use, to the fullest extent possible, the examination reports for non-DIs prepared by the following:

1. the Securities and Exchange Commission (SEC) for any registered broker or dealer
2. the SEC or any state for any investment adviser registered under the Investment Company Act of 1940
3. any state insurance regulatory authority for any licensed insurance company
4. any federal or state authority for any other subsidiary that the Board finds to be comprehensively supervised

1040.0.3 EXAMINATIONS OF FUNCTIONALLY REGULATED SUBSIDIARIES

The Board's ability to examine a functionally regulated subsidiary (FRS) is limited. The Board can examine an FRS only if the Board—

1. has reasonable cause to believe that the subsidiary is engaged in activities that pose a material risk to an affiliated DI;

² Supervisory staff includes individuals that are on and/or off site.

¹ See 12 U.S.C. 1844.

2. has reasonably determined, after reviewing relevant reports, that an examination of the subsidiary is necessary to be adequately informed of the systems for monitoring and controlling the operational and financial risks posed to any DI; or
3. has reasonable cause to believe, based on reports and other available information, that a subsidiary is not in compliance with the BHC Act or any other federal law that the Board has specific jurisdiction to enforce against such subsidiary. This includes provisions relating to transactions with an affiliated DI, when the Board cannot make its determination by examining the affiliated DI or the BHC.

The continuing growth in the size and complexity of many banking organizations exposes these firms to a wide array of potential risks, while at the same time making it more challenging for a single supervisor to have a complete view of firmwide risks and controls. In response to these trends, and to better fulfill both its responsibilities as consolidated supervisor and its other central bank objectives, the Federal Reserve continues to refine and enhance its programs for the consolidated supervision of bank holding companies (BHCs) and the combined U.S. operations of foreign banking organizations (FBOs).

The Federal Reserve has set forth its consolidated supervision program for bank holding companies and the combined U.S. Operations of Foreign Banking Organizations in SR-08-9/CA-08-12 and its attachments. (See sections 1050.1 for the consolidated supervision of large complex banking organizations and see 1050.2 for the consolidated supervision of regional banking organizations.) The primary objectives of this supervisory guidance are to specify principal areas of focus for consolidated supervision activities and thereby provide for consistent Federal Reserve supervisory practices and assessments across organizations with similar activities and risks. Consistent with these objectives, the SR letter and its attached guidance detail specific expectations for Federal Reserve staff for understanding and assessing primary governance functions and risk controls, material business lines, nonbank operations, financial condition, and other key activities and risks at banking organizations; address unique aspects of supervising the combined U.S. operations of FBOs; and highlight the supervisory attention that should be paid to risk-management systems and internal controls used by BHCs and FBOs that provide core clearing and settlement services (core clearing and settlement organizations) or that have a significant presence in critical or key financial markets.¹ The guidance also reiterates the importance of coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators.

The Federal Reserve's enhanced approach to consolidated supervision emphasizes several elements that should help make the financial system more resilient. These include focus on

corporate governance, capital adequacy, funding and liquidity management, and the supervision of material nonbank subsidiaries,² as well as other aspects of the Federal Reserve's consolidated supervision activities designed to further the objectives of fostering financial stability and deterring or managing financial crises. In addition, the Federal Reserve continues to work, both independently and in conjunction with other domestic and foreign bank supervisors and functional regulators, on a number of other initiatives to strengthen supervisory approaches and reinforce expectations for sound practices in response to recent lessons learned.

1050.0.1 SUPERVISION AND REGULATION FRAMEWORK FOR COMPANIES THAT CONTROL A BANK AND THE SUBSIDIARIES OF SUCH COMPANIES

The Bank Holding Company Act (BHC Act), originally enacted in 1956, provides a federal framework for the supervision and regulation of all domestic and foreign companies that control a bank and the subsidiaries of such companies. Among the principal purposes of the BHC Act is to protect the safety and soundness of corporately controlled banks. Financial trouble in one part of an organization can spread rapidly to other parts of the organization; moreover, large BHCs increasingly operate and manage their businesses on an integrated basis across corporate boundaries. Risks that cross legal entities or that are managed on a consolidated basis cannot be monitored properly through supervision directed at any one of the legal entity subsidiaries within the overall organization.

The BHC Act provides for all BHCs, including financial holding companies formed under the Gramm-Leach-Bliley Act (GLBA), to be supervised on a consolidated basis by the Federal Reserve. Consolidated supervision of a BHC encompasses the parent company and its subsidiaries, and allows the Federal Reserve to understand the organization's structure, activities, resources, and risks, as well as to address financial, managerial, operational, or other defi-

2. The term "nonbank subsidiaries" as used in SR-08-9/CA-08-12 and its attachments does not include savings associations.

1. See Attachment C to SR-08-9/CA-08-12 or this section's appendix for the definitions of "core clearing and settlement organizations," "critical financial markets," and "key financial markets."

ciencies before they pose a danger to the BHC's subsidiary depository institutions.

To carry out these responsibilities, the BHC Act grants the Federal Reserve broad authority to inspect and obtain reports from a BHC and its subsidiaries concerning, among other things, the company's financial condition, systems for monitoring and controlling financial and operational risks, and compliance with the BHC Act and other federal law (including consumer protection laws) that the Board has specific jurisdiction to enforce. In addition, federal law authorizes the Federal Reserve to take action against a BHC or nonbank subsidiary to prevent these entities from engaging in unsafe or unsound practices or to address violations of law that occur in connection with their own business operations even if those operations are not directly connected to the BHC's subsidiary depository institutions. Using its authority, the Federal Reserve also has established consolidated capital standards for BHCs, helping to ensure that a BHC maintains adequate capital to support its groupwide activities, does not become excessively leveraged, and is able to serve as a source of strength for its depository institution subsidiaries.

The Federal Reserve's consolidated supervision program has served as the benchmark for many of the current and evolving international standards for the consolidated supervision of financial groups. Key concepts that have been part of the Federal Reserve's approach to consolidated supervision for many years are reflected in the Basel Committee on Banking Supervision's *Minimum Standards for Internationally Active Banks* (1992), capital accords (1988 and 2006), and *Core Principles for Effective Banking Supervision* (1997 and 2006), and are now used by the International Monetary Fund and the World Bank in connection with their assessments of countries' bank supervisory regimes.

In addition to its role as consolidated supervisor of BHCs, the Federal Reserve also is responsible for the overall supervision of the U.S. operations of foreign banks that have a banking presence in the United States. This role was established by the International Banking Act of 1978, which introduced a policy of national treatment³ promoting competitive equality between FBOs operating in the United States

3. "National treatment" refers to a policy that generally gives foreign banks operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations.

and domestic banking organizations. The Foreign Bank Supervision Enhancement Act of 1991 established uniform federal standards for entry, expansion, and supervision of FBOs in the United States and increased the Federal Reserve's supervisory responsibility and authority over the U.S. operations of FBOs. This act also introduced the requirement that the Federal Reserve approve the establishment of all U.S. banking offices of foreign banks and, in that regard, take into account whether the foreign bank is subject to comprehensive, consolidated supervision by its home-country supervisor.

The Federal Reserve's consolidated supervision activities closely complement its other central bank responsibilities, including the objectives of fostering financial stability and deterring or managing financial crises. The information, expertise, and powers that the Federal Reserve derives from its supervisory authority enhance its ability to help prevent financial crises and to manage such crises (in consultation and conjunction with the Treasury Department and other U.S. and foreign authorities) should they occur. Similarly, the supervisory responsibilities of the Federal Reserve benefit from its responsibilities for financial stability. For example, knowledge gained about financial market developments through interactions with primary dealers in government securities and capital market expertise derived from nonsupervisory activities improve the Federal Reserve's ability to understand and evaluate the activities of banking organizations and otherwise enhance its contributions to supervisory and regulatory policy initiatives.

Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and relevant primary supervisors and functional regulators.⁴ These relationships respect the individual statutory authorities

4. The term "primary supervisor" as used in this document refers to the primary federal banking or thrift supervisor (for example, the Office of the Comptroller of the Currency for a nationally chartered bank) of a depository institution subsidiary of a BHC, or of a U.S. banking office of an FBO. For state-chartered depository institutions or banking offices, this term also includes the relevant bank supervisory authority of the institution's chartering/licensing state. Where a BHC has multiple depository institution subsidiaries or an FBO has multiple U.S. banking offices, there may also be multiple primary banking supervisors, depending on how the subsidiaries are chartered/licensed. The term "functional regulator" as used in this document refers to the appropriate federal (examples include the U.S. Securities and Exchange Commission and the U.S. Commodity Futures Trading Commission) or state regulator for a functionally regulated nondepository subsidiary or affiliate of a BHC or FBO. (See SR-00-13, "Framework for Financial Holding Company Supervision.") For U.S. operations of FBOs, the U.S. supervisor of a U.S. banking office is referred to as a domestic primary supervisor.

and responsibilities of the respective supervisors and regulators and provide for appropriate information flows and coordination so that individual responsibilities can be carried out effectively, while limiting the potential for duplication or undue burden. Information sharing among domestic and foreign supervisors, consistent with applicable law and the jurisdiction of each supervisor, is essential to ensure that a banking organization's global activities are supervised on a consolidated basis.

These concepts underlie the provisions of the GLBA governing the interaction between the Federal Reserve, as consolidated supervisor, and the other primary supervisors or functional regulators that may be involved in supervising one or more subsidiaries of a BHC.⁵ Under these provisions, the Federal Reserve, in conducting its consolidated supervisory responsibilities, relies to the fullest extent possible on (1) the reports that a BHC or subsidiary has provided to another federal or state supervisor or to an appropriate self-regulatory organization, (2) information that is otherwise required to be reported publicly, and (3) externally audited financial statements. In addition, the Federal Reserve relies to the fullest extent possible on the reports of examination of a depository institution made by its appropriate federal or state bank supervisor, of a broker-dealer or investment adviser made by or on behalf of the SEC or relevant state regulatory authority, or of a licensed insurance company made by or on behalf of its appropriate state regulatory authority. In developing its overall assessment of a BHC or the combined U.S. operations of an FBO, the Federal Reserve also relies to the fullest extent possible on the information gathered and assessments developed by these other supervisors and regulators.

Similarly, the Federal Reserve seeks to assist relevant primary supervisors and functional regulators in performing their supervisory responsibilities with respect to regulated subsidiaries by sharing pertinent information that relates to these regulated subsidiaries consistent with each agency's supervisory responsibilities and applicable law. Examples include shared information relating to the financial condition, risk-management policies, and operations of a banking organization that may have a material impact on regulated subsidiaries, as well as information concerning transactions or relationships between regulated subsidiaries and their affiliates.

1050.0.2 KEY OBJECTIVES FOR, AND APPROACHES TO, CONSOLIDATED SUPERVISION

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis and of the combined U.S. operations of an FBO. These assessments are reflected in the RFI (Risk-Management, Financial Condition, and Impact) rating assigned to a BHC⁶ and the combined U.S. operations rating assigned to an FBO with multiple U.S. operations.⁷ The Federal Reserve utilizes three principal processes to understand, supervise, and assess BHCs and FBOs: continuous monitoring activities,⁸ discovery reviews,⁹ and testing.¹⁰

6. The RFI rating system for BHCs is discussed in SR-04-18, "Bank Holding Company Rating System" and section 4070.0. RFI ratings are assigned at least annually for BHCs with \$1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC's assigned ratings and encompasses the results of the entire supervisory cycle (as described in SR-99-15, "Risk-Focused Supervision of Large Complex Banking Organizations" and section 2124.04).

7. SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations," discusses the U.S. combined operations rating for an FBO and other aspects of the FBO Supervision Program. The Federal Reserve's rating and assessment, as well as a summary of condition analysis describing the strengths and weaknesses of the FBO's combined U.S. operations, are provided to the head office of each FBO. This information is also shared with the FBO's home-country supervisor so that it may assess the impact of U.S. operations on the parent banking organization in its role as consolidated supervisor of the banking organization's global operations.

8. "Continuous monitoring activities" are nonexamination/inspection supervisory activities primarily designed to develop and maintain an understanding of the organization, its risk profile, and associated policies and practices. These activities also provide information that is used to assess inherent risks and internal control processes. Such activities include meetings with banking organization management; analysis of management information systems (MIS) and other internal and external information; review of internal and external audit findings; and other efforts to coordinate with, and utilize the work of, other relevant supervisors and functional regulators (including analysis of reports filed with, or prepared by, these supervisors or regulators, or appropriate self-regulatory organizations, as well as related surveillance results).

9. A "discovery review" is an examination/inspection activity designed to improve the understanding of a particular business activity or control process—for example, to address a knowledge gap identified during the risk assessment or other supervisory process.

10. "Testing" is an examination/inspection activity to assess whether a control process is appropriately designed and achieving its objectives or to validate a management assertion about an organization's operations. Activities may include the review and validation of internal MIS, such as business records related to an internal control process; audit findings and processes; or a sample of transactions that have been

5. See SR-00-13.

The Federal Reserve's supervisory objectives are the same for all BHCs and FBOs. However, the type and amount of information and the scope and extent of Federal Reserve supervisory and examination¹¹ work that are necessary to understand, supervise, and develop an assessment of an individual BHC or the U.S. operations of an individual FBO vary. Federal Reserve supervisory activities are tailored for each organization based on a variety of factors, including the organization's legal entity and regulatory structure;¹² the risks posed by the organization's specific activities and systems; and the potential effect of weaknesses in control functions on the organization, its subsidiary depository institutions, or key financial markets. For example, additional supervisory activities, including transaction testing in appropriate circumstances, may be conducted when there are information gaps relating to material risks or activities, indications of weaknesses in risk-management systems or internal controls, or indications of violations of consumer protection or other laws, or when a consolidated organization or subsidiary depository institution is in less-than-satisfactory condition.

1050.0.2.1 Key Supervisory Objectives

In fulfilling its responsibilities for supervising a BHC on a consolidated basis and the combined U.S. operations of an FBO, the Federal Reserve is guided by the following key supervisory objectives.

1050.0.2.1.1 Understanding the Bank Holding Company on a Consolidated Basis and the Combined U.S. Operations of an FBO

Supervisory Objective: The Federal Reserve develops a comprehensive understanding of each

BHC and the combined U.S. operations of each FBO. Key elements in developing this understanding include

- corporate strategy and significant activities;
- business line, legal entity, and regulatory structure, including interrelationships and dependencies across multiple legal entities;
- corporate governance, risk management, and internal controls for managing risks; and
- for certain organizations, presence in critical or key financial market activities.

1050.0.2.1.2 Assessing the Bank Holding Company on a Consolidated Basis and the Combined U.S. Operations of an FBO

Supervisory Objective: The Federal Reserve supervises each BHC on a consolidated basis and assigns an RFI rating through an evaluation and assessment of the following areas

- key corporate governance, risk management, and control functions (including, where applicable, such functions as they relate to core clearing and settlement activities and activities where the organization has a significant presence in critical or key financial markets);
- the adequacy of the financial condition of the consolidated organization; and
- the potential negative impact of nonbank entities on subsidiary depository institutions.

The Federal Reserve also supervises and assesses the combined U.S. operations of each FBO and assigns a U.S. combined operations rating based on analysis of these same elements.

1050.0.2.1.3 Interagency Coordination

Supervisory Objective: As noted earlier, effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and relevant domestic and foreign supervisors and functional regulators. To achieve this objective, while limiting the potential for duplication or undue burden, the nature and scope of Federal Reserve work is tailored to the organization's legal entity and regulatory structure as well as the risks associated with the organization's activities. In this regard, the Federal Reserve

- relies to the fullest extent possible on assessments and information developed by other relevant domestic and foreign supervisors and functional regulators;

entered into by a banking organization.

11. While by definition "examination" activities are applicable to the supervision of banks and other depository institutions, as well as U.S. banking offices of FBOs, and "inspection" activities are applicable to the supervision of BHCs and nonbank subsidiaries and affiliates, the term "examination" is generally used throughout this guidance to refer to both examination and inspection activities.

12. An organization's "regulatory structure" refers to the various legal entities within the organization that are subject to oversight by different domestic and foreign supervisors or functional regulators.

- focuses supervisory attention on material risks from activities that are not supervised by another supervisor or regulator or that cut across legal entities; and
- participates in the sharing of information among domestic and foreign supervisors and functional regulators, consistent with applicable law, to provide for the comprehensive, consolidated supervision of each banking organization's global activities.

Since coordination with, and reliance on, the work of other relevant primary supervisors and functional regulators is so central to the Federal Reserve's conduct of consolidated supervision, direction for achieving these objectives is closely integrated into the attached guidance for understanding and assessing consolidated BHCs and the combined U.S. operations of FBOs.

1050.0.2.2 Risk-Focused Approach to Consolidated Supervision

The Federal Reserve uses a risk-focused approach to supervision of banking organizations in general and to each organization individually. In this regard, the Federal Reserve focuses supervisory activities on identifying the areas of greatest risks to a banking organization and assessing the ability of the organization's management to identify, measure, monitor, and control these risks. In addition, the Federal Reserve typically is more actively and comprehensively engaged in the supervision of the largest and most complex BHCs and FBOs, as well as those with the most dynamic risk profiles. By paying particular attention to these organizations, the Federal Reserve aims to minimize significant adverse effects on the public (including consumers), the financial markets, and the financial systems in the United States and abroad, as well as on taxpayers, who provide the ultimate resources behind the federal safety net.

The Federal Reserve also focuses special supervisory attention on the risk-management systems and internal controls used by core clearing and settlement organizations or organizations that have a significant presence in key financial markets. In light of the potential for problems in these areas to transmit an adverse impact across the banking and financial system, these activities pose special legal, reputational, and other risks to the banking organization and its depository institution subsidiaries. The Federal Reserve has unique expertise and perspective in these areas based on its broader central bank responsibilities and functions.

Unlike banks, nonbank subsidiaries of a banking organization may not accept FDIC-insured deposits and do not have routine access to the Federal Reserve's discount window and payment system. As a result, certain laws and supervisory policies that apply to banks (e.g., the prompt-corrective-action framework¹³) do not apply to nonbank subsidiaries, and the manner in which the Federal Reserve supervises the nonbank subsidiaries of a banking organization reflects these differences. The Federal Reserve's supervision of nonbank subsidiaries under the BHC Act is primarily directed toward, and focused on, ensuring that the nonbank subsidiary does not present material financial, legal, or reputational risks to affiliated depository institutions or to the BHC's or FBO's ability to support these depository institutions. The Federal Reserve also may interact with nonbank entities, such as primary dealers in government securities, in connection with its other central bank functions and responsibilities, including conducting monetary policy, fostering financial stability, and deterring or managing financial crises.

As part of the supervisory process, the Federal Reserve reviews the systems and controls used by BHCs and the U.S. operations of FBOs to monitor and ensure that the organization, including its nonbank subsidiaries, complies with applicable laws and regulations, including those related to consumer protection. The Federal Reserve develops and maintains an understanding and assessment of consumer compliance risk at nonbank subsidiaries of a BHC or FBO primarily through continuous monitoring activities, relying to the fullest extent possible on work performed by the relevant functional regulator, if any. While the Federal Reserve routinely conducts examinations of the compliance function at the BHC, including its systems for monitoring and ensuring compliance with consumer and other applicable laws, the Federal Reserve currently does not routinely conduct examinations for the purpose of determining compliance with specific consumer laws enforced primarily by other supervisors regarding nonbank subsidiaries of BHCs and FBOs. When consumer compliance-related deficiencies are noted as part of the ongoing supervision of a BHC or FBO, however, consumer compliance examiners may conduct onsite examinations

13. For more information on the prompt-corrective-action framework for banks, see section 4133.1 of the Federal Reserve's *Commercial Bank Examination Manual*, or see 12 C.F.R. 208, Subpart D.

(including transaction testing, if appropriate) of nonbank subsidiaries to resolve significant issues that have the potential for widespread violations or harm to consumers.¹⁴

The Federal Reserve also seeks to reinforce market discipline by encouraging public disclosures that balance quantitative and qualitative information with clear discussions about risk-management processes and that reflect evolving disclosure practices for peer organizations.

1050.0.2.3 Supervisory Portfolios

An important aspect of the Federal Reserve's consolidated supervision programs for BHCs and the combined U.S. operations of FBOs is the assessment and evaluation of practices across groups of organizations with similar characteristics and risk profiles. This "portfolio approach" to consolidated supervision facilitates greater consistency of supervisory practices and assessments across comparable organizations and enhances the Federal Reserve's ability to identify outlier organizations among established peer groups. The supervisory portfolios that the Federal Reserve currently uses in structuring its supervisory programs for BHCs and the U.S. operations of FBOs are as follows:

BHC Portfolios:

- large complex banking organizations (LCBO BHCs)
- regional bank holding companies (regional BHCs)
- community bank holding companies (community BHCs)

FBO Portfolios:

- large complex foreign banking organizations (LCBO FBOs)
- multi-office foreign banking organizations (multi-office FBOs)
- single-office foreign banking organizations (single-office FBOs)

In 1999, the Federal Reserve formally established its supervision program for both domestic and foreign LCBOs (see SR-99-15 and section

2124.04). LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structures, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.

Banking organizations that are not designated as LCBOs belong to the portfolios of regional or community BHCs, or multi-office or single-office FBOs. While there is considerable variety among organizations across these portfolios, the simpler regulatory structure of most non-LCBO organizations increases the likelihood that a single primary supervisor has a substantially complete view of, and ability to address, significant areas of firmwide (or combined U.S. operations for FBOs) activities, risks, risk management, and controls.

1050.0.3 SUPERVISORY GUIDANCE

The guidance attached to SR-08-9/CA-08-12 (e.g., sections 1050.1 and 1050.2) describes how Federal Reserve staff will develop an understanding and assessment of a BHC or the U.S. operations of an FBO through continuous monitoring activities, discovery reviews, and testing activities, as well as through interaction with, and reliance to the fullest extent possible on, other relevant primary supervisors and functional regulators. Because the Federal Reserve's supervisory activities are tailored in the manner described above, separate guidance documents are provided for four different supervisory portfolios to promote appropriate and consistent supervision of organizations that broadly share similar characteristics and risk profiles. The documents' guidance addresses

- consolidated supervision of LCBO BHCs (Attachment A.1) (See section 1050.1);
- consolidated supervision of regional BHCs (Attachment A.2) (See section 1050.2);
- supervision of the combined U.S. operations of LCBO FBOs (Attachment B.1); and
- supervision of the combined U.S. operations of multi-office FBOs (Attachment B.2).

As a supplement to these four guidance documents, definitions of key terms for consolidated supervision are provided in Attachment C to

14. See SR-03-22/CA-03-15, "Framework for Assessing Consumer Compliance Risk at Bank Holding Companies," and section 2124.01.6.1.2.

SR-08-9/CA-08-12 (See appendix, section 1050.0.4).

Consolidated supervision of community BHCs follows the procedures contained in SR-02-1 and section 5000.0.4.3, “Revisions to Bank Holding Company Supervision Procedures for Organizations with Total Consolidated Assets of \$5 Billion or Less,” while supervision of single-office FBOs follows the procedures contained in SR-00-14.

1050.0.3.1 Overview of Significant Federal Reserve Supervisory Activities

The Federal Reserve will maintain for each BHC and the combined U.S. operations of each FBO

- an understanding of key elements of the banking organization’s strategy, primary revenue sources, risk drivers, business lines, legal entity structure, governance and internal control framework, and presence in key financial markets; and
- an assessment of (1) the effectiveness of risk-management systems and controls over the primary risks inherent in the organization’s activities, (2) the organization’s financial condition, and (3) the potential negative impact of nonbank operations on affiliated depository institutions.

This understanding and assessment will encompass both prudential and consumer compliance supervision and reflect judgments developed by Federal Reserve staff drawing from all available sources, including the work of other relevant primary supervisors and functional regulators and the organization’s internal control functions. Primary areas of focus will include

1. key corporate governance functions, including internal audit;
2. risk management and internal control functions for primary risks of the consolidated organization (or combined U.S. operations for FBOs), and supporting MIS;
3. where applicable, core clearing and settlement activities and related risk management and internal controls of firms that are large-value payment system operators and market utilities;
4. for LCBOs, activities in critical or key financial markets in which the organization plays a significant role, as well as related risk management and internal controls;

5. where applicable, areas of emerging interest with potential financial market consequences;
6. consolidated financial strength (in the case of FBOs, the financial strength of combined U.S. operations);
7. risk management and financial condition of significant nonbank subsidiaries; and
8. parent company and nonbank funding and liquidity (in the case of FBOs, funding and liquidity of U.S. operations).

By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—will typically require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The guidance in the attachments to SR-08-9/CA-08-12 outlines when the Federal Reserve will conduct (i.e., participate in or lead) testing activities in order to determine whether a control process is appropriately designed and achieving its objectives or to otherwise validate management assertions. Testing activities are an important element of the Federal Reserve’s consolidated supervision program for BHCs and the combined U.S. operations of FBOs. They supplement ongoing continuous monitoring activities and periodic discovery reviews necessary to maintain an understanding and assessment for each of these key functions.

The guidance in the SR letter’s attachments also discusses in greater detail control processes for several areas subject to testing on at least a three-year cycle, supplemented by a reassessment on at least an annual basis to identify whether changes in inherent risk or control structures, or potential concerns regarding controls, merit interim targeted testing activities. These areas are

- internal audit infrastructure;
- parent company and nonbank funding and liquidity (in the case of FBOs, funding and liquidity of U.S. operations);
- where applicable, core clearance and settlement activities; and,
- where applicable, activities in critical finan-

cial markets in which the organization plays a significant role.¹⁵

There may also be instances when additional supervisory activities are necessary to improve the understanding and/or to assess the adequacy of key corporate governance functions or risk management or internal control functions for primary risks due to significant changes, potential concerns, or the absence of recent testing.

All cycle times set forth in the guidance for testing represent maximum periods between testing activities. Shorter cycle times should be utilized whenever significant changes occur in, or material concern exists regarding, a key governance, risk-management, or internal control function.

In conducting the activities described in the guidance, the Federal Reserve will rely to the fullest extent possible on the information and assessments of relevant primary supervisors and functional regulators, and will work with such supervisors and regulators to align each agency's assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of consolidated BHC or combined U.S. FBO operations, as applicable. In addition, because of the specific statutory limitations that apply with respect to functionally regulated subsidiaries of a BHC or FBO, the Federal Reserve will continue to adhere to the procedures and limits described in SR-00-13 (see sections 3900.0 and 1040.0) in conducting any examination of, or requesting a specialized report from, a functionally regulated subsidiary of a BHC or FBO.¹⁶ Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve

about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.

1050.0.3.2 Application of Supervisory Guidance

As a general matter, the supervisory expectations and processes of the guidance documents that are attached to SR-08-9/CA-08-12 are intended for use in supervising BHCs and the combined U.S. operations of FBOs in circumstances where both the banking organization and its subsidiary depository institutions are in at least satisfactory condition and there are no indications of material weakness in the organization's risk management or internal controls. Additional Federal Reserve supervisory activities may be necessary or appropriate if the banking organization is facing, or is expected to face, material financial, managerial, operational, legal, or reputational difficulties, or is the subject of an investigation or formal or informal enforcement action.

Section IV of each of the documents attached to SR-08-9/CA-08-12 (see sections 1050.1.4 and section 1050.2.4) provides additional guidance on the steps the Federal Reserve will take to coordinate with other supervisors in certain special situations. This guidance does not limit any authority that the Federal Reserve may have under applicable law and regulations, including the authority to obtain reports or conduct examinations or inspections. Moreover, because this guidance relates to supervisory practices, it does not address or limit the circumstances under which the Federal Reserve may take formal or informal enforcement action against a banking organization or other person.

This supervisory guidance is not intended to comprehensively describe all elements of an effective supervision program for BHCs or U.S. operations of FBOs. Rather, the guidance supplements, and should be used in conjunction with, existing Federal Reserve guidance, including among others the *Bank Holding Company Supervision Manual*; the *Examination Manual for U.S. Branches and Agencies of Foreign Banking Organizations*; SR-04-18; SR-03-22/CA-03-15; SR-00-14; and SR-00-13.

15. For these activities, the three-year testing cycle focuses on adherence with expectations of the *Interagency Paper on Sound Practices to Strengthen the Resiliency of the U.S. Financial System* (see SR-03-9), including the geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

16. For these purposes, a "specialized report" means a report that the functionally regulated subsidiary is not required to prepare for another federal or state regulatory authority or an appropriate self-regulatory organization. Consistent with the GLBA, if the Federal Reserve seeks to obtain a specialized report from a functionally regulated subsidiary, the Federal Reserve will first request that the subsidiary's appropriate regulatory authority or self-regulatory organization obtain the report and make it available to the Federal Reserve.

1050.0.4 APPENDIX—DEFINITIONS OF KEY TERMS FOR CONSOLIDATED SUPERVISION

1050.0.4.1 Supervisory Objectives

Assessing: To go beyond developing an *understanding* by making supervisory judgments regarding the degree of inherent risks or evaluating whether risk-management and internal control practices are functioning as intended, and whether they are adequate relative to the risk taken. It is often necessary for bank supervisors or *functional regulators* to conduct *testing* activities as a means to arrive at an assessment.

Understanding: To gain comprehensive insight into the nature of a business activity, its related risks, and the design of risk-management and compensating controls. Understanding also involves comprehending the significance of such activities, risks, and controls for the institution's safety and soundness. *Continuous monitoring* or *discovery reviews* are often utilized to develop an understanding of a banking organization's operations and the related inherent risk and controls.

1050.0.4.2 Supervisory Activities

Active participation: When the Federal Reserve has input into determining the objectives, final conclusions, and related communications to institution management for an *examination* led by another *relevant primary supervisor* or *functional regulator*.

Continuous monitoring: Non-examination/inspection supervisory activities primarily designed to develop and maintain an *understanding* of the organization, its risk profile, and associated policies and practices. These activities also provide information that is used to *assess* inherent risks and internal control processes. Such activities include meetings with banking organization management; analysis of management information systems (MIS) and other internal and external information; review of internal and external audit findings; and other efforts to coordinate with, and utilize the work of, other relevant supervisors and *functional regulators*, including analysis of reports filed with, or prepared by, these supervisors or regulators, or appropriate self-regulatory organizations, as well as related surveillance results.

Discovery review: An *examination/inspection* supervisory activity designed to improve the *understanding* of a particular business activity or control process—for example, to address a knowledge gap identified during the risk assessment or other supervisory process. If questions regarding the adequacy of practices or sufficiency of information are raised during this review, it will likely be necessary to conduct further and more in-depth *examination* activity (e.g., *testing*).

Examination/inspection: Examination activities are applicable to the supervision of banks and other depository institutions, as well as *U.S. banking offices* of FBOs, and inspection activities are applicable to the supervision of BHCs and nonbank subsidiaries and affiliates. Examination and inspection activities are generally described as examinations throughout this guidance.

Testing: An *examination/inspection* supervisory activity designed to go beyond a *discovery review*, as it will result in an *assessment* of whether a control process is appropriately designed and achieving its objectives, or validation of a management assertion about an organization's operations. Such activities may include the review and validation of internal MIS, such as business records related to an internal control process; audit findings and processes; or a sample of transactions that have been entered into by a banking organization.

1050.0.4.3 Foreign Banking Organization Supervision

Booked in: Recorded on the books and records of the legal entity in question. For supervisory purposes, the U.S. operations of FBOs include activities that are booked in or *traded through* U.S. operations.

Comprehensive, consolidated supervision: An FBO is supervised or regulated in such a manner that its home-country supervisor receives sufficient information on the worldwide operations of the FBO (including the relationship of the bank to any affiliate) to assess the FBO's overall financial condition and compliance with law and regulation. The Foreign Bank Supervision Enhancement Act of 1991 introduced the requirement that the Federal Reserve approve

the establishment of all *U.S. banking offices* of FBOs, and in that connection, take into account whether the FBO is subject to comprehensive, consolidated supervision by its home-country supervisor.

Multi-office foreign banking organizations: All FBOs except for (1) those that are designated as being part of the portfolio of LCBOs and (2) FBOs whose U.S. operations consist solely of a single *U.S. banking office*.

National treatment: As established by the International Banking Act of 1978 (IBA), a policy that requires nondiscrimination between domestic and foreign firms or treatment of foreign entities that is no less favorable than that accorded to domestic enterprises in like circumstances. This policy generally gives foreign banks operating in the United States the same powers as U.S. banking organizations and subjects them to the same restrictions and obligations.

Net due to / from positions: Net due to and from positions refer to the flow of funds between a U.S. branch or agency and its parent FBO (including other affiliated depository institutions). For example, a U.S. branch is in a net due from position with its parent FBO if the parent owes funds to the branch once all transactions between the branch and the parent are netted.

Qualifying foreign banking organizations (QFBOs): FBOs that are entitled to certain exemptions from the nonbanking activities restrictions of the Bank Holding Company Act, including for certain limited commercial and industrial activities in the United States. The Federal Reserve does not *examine* or supervise these commercial/industrial activities. The Federal Reserve monitors the extensions of credit by *U.S. banking offices* of foreign banks to U.S. companies held directly under this authority to ensure that such loans are made on market terms.

Traded through: Transacted or arranged by the personnel of the institution in question (in an agent role), but booked at a different related legal entity. For supervisory purposes, the U.S. operations of FBOs include activities that are *booked in* or traded through U.S. operations.

U.S. banking offices: U.S. depository institution

subsidiaries of FBOs and branches/agencies of FBOs.

U.S. nonbank affiliates of U.S. banking offices: U.S. BHC parent companies and their nonbank subsidiaries, as well as other U.S. nonbank affiliates and representative offices held directly by the FBO.

1050.0.4.4 Other Terms

Banking Organization National Desktop (BOND): A Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the *consolidated supervision* of individual BHCs and FBOs, and in developing comparative analyses of institutions with similar business lines and risk characteristics.

College of supervisors: A multilateral group of supervisors that discusses issues related to specific internationally active banking organizations. The Federal Reserve participates in colleges of supervisors as both a home-country supervisor of internationally active U.S. BHCs and as a host-country supervisor of the U.S. operations of FBOs.

Consolidated supervision (also known as “umbrella” or “groupwide” supervision): Supervision of a BHC on a groupwide basis, including its nonbanking subsidiaries, providing important protection to its subsidiary banks and to the federal safety net beyond that afforded by supervision of a bank individually. Consolidated supervision allows the Federal Reserve to *understand* the financial and managerial strength and risks within the consolidated organization as a whole, providing the ability to address significant management, operational, capital, or other deficiencies within the overall organization before they pose a threat to subsidiary banks.

Core clearing and settlement organizations: As defined in the “Interagency Paper on Sound Practices to Strengthen the Resilience of the U. S. Financial System” (SR-03-9), two groups of organizations that provide clearing and settlement services for *critical financial markets* or act as large-value payment system operators, and present the potential for *systemic risk* should they be unable to perform. The first group consists of market utilities (government-sponsored services or industry-owned organizations), whose

primary purpose is to clear and settle transactions for *critical markets* or transfer large-value wholesale payments. The second group consists of those private-sector firms that provide clearing and settlement services that are integral to a *critical market* (i.e., their aggregate market share is significant enough to present the potential for *systemic risk* in the event of their sudden failure to carry out those activities because there are no viable immediate substitutes).

Critical financial markets: As defined in the “Interagency Paper on Sound Practices to Strengthen the Resilience of the U. S. Financial System,” the markets for federal funds, foreign exchange, and commercial paper; U.S. government and agency securities; and corporate debt and equity securities.

Domestic BHC: A BHC incorporated in the United States that is not controlled by an FBO.

Double leverage: Situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

Financial instability: When external events or market behavior in the financial system are substantial enough to significantly distort or impair national or global financial markets or to create significant risks for real aggregate economic performance. Banking organizations with a considerable presence in activities that are potentially vulnerable to such externalities—or that are capable of contributing to financial instability if not adequately managed—require supervisors to develop an *understanding* of these activities and their risk profile.

Functional regulator: With respect to domestic authorities, the appropriate federal (examples include the U.S. Securities and Exchange Commission and the U.S. Commodity Futures Trading Commission) or state regulator for a functionally regulated nondepository subsidiary or affiliate of a BHC or FBO.

Key corporate governance functions: Primary firmwide governance mechanisms relied upon by the board of directors and senior management. This includes the board and its committees, senior management and its executive committees, internal audit, and other functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining the consolidated organization as well as a firm’s business resiliency and crisis management capabilities.

Key financial markets: Includes *critical financial markets* as well as (1) broader U.S. capital market activity, including underwriting, securitization, derivatives, and trading; (2) retail financial services; and (3) international financial markets.

Key models and processes: Those where evaluation of the model/process will influence the Federal Reserve’s *assessment* of the activity or control area that is supported by the model/process.

Large complex banking organizations (LCBOs): LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their *regulatory structure*, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one *key financial market*.

Material portfolios or business lines: Portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as mortgage lending or leveraged lending) that are primary drivers of risk or revenue for the BHC, or that otherwise materially contribute to *understanding* inherent risk or *assessing* related controls for a broader corporate function (such as consolidated credit-risk management). When identifying these areas during the development of the institutional overview and risk assessment, as well as during other supervisory processes, consideration is given to all associated risk elements, including legal and compliance risks.

Net debit cap: The maximum dollar amount of uncollateralized daylight overdrafts that an institution may incur in its Federal Reserve account.

Nonmaterial business lines: Business lines that are not primary drivers of risk or revenue for the BHC, and are not principal contributing factors to either *understanding* risk inherent in a broader corporate function or to *assessing* related controls.

Nontraditional BHCs: BHCs in which most or all of the organization’s significant nondepository subsidiaries are regulated by a *functional*

regulator, and subsidiary depository institution(s) are small in relation to nondepository subsidiaries.

Other relevant primary supervisors: Primary bank or thrift supervisors of BHC subsidiaries, including host-country supervisors (or home-country supervisors for FBOs), whose understanding and assessments are key to effective firmwide *consolidated supervision*.

Primary firmwide risk management and control functions: Mechanisms relied upon by the board of directors and senior management for identifying, measuring, monitoring, and controlling primary risks to the consolidated organization. This includes risk management and control functions for primary credit, legal and compliance, liquidity, market, operational, and reputational risks for the consolidated organization.

Primary supervisor: The primary federal banking or thrift supervisor (for example, the Office of the Comptroller of the Currency for a nationally chartered bank) of a depository institution subsidiary of a BHC, or of a *U.S. banking office* of an FBO. For state-chartered depository institutions or banking offices, this term also includes the relevant bank supervisory authority of the institution's chartering/licensing state. Where a BHC has multiple depository institution subsidiaries, or an FBO has multiple *U.S. banking offices*, there may also be multiple primary banking supervisors, depending on how the subsidiaries are chartered/licensed. For U.S. opera-

tions of FBOs, the U.S. supervisor of a *U.S. banking office* is referred to as a domestic primary supervisor.

Regional bank holding companies: BHCs with \$10 billion or more in consolidated assets (including *nontraditional BHCs*) that are not designated as *LCBOs*.

Regulatory structure: The various legal entities within the organization that are subject to oversight by different domestic and foreign *primary supervisors* or *functional regulators*.

Significant nonbank activities and risks: Where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution affiliate.

Specialized report from a functionally regulated subsidiary: As discussed in the GLBA, a report that the functionally regulated subsidiary is not required to prepare by another federal or state regulatory authority or an appropriate self-regulatory organization.

Systemic risk: The risk that the failure of one participant to meet its required obligations in a transfer system or financial market will cause other participants to be unable to meet their obligations when due, causing significant liquidity or credit problems or threatening the stability of national or global financial markets.

Guidance for the Consolidated Supervision of Domestic Bank Holding Companies That Are Large Complex Banking Organizations Section 1050.1

1050.1.1 ACTIVITIES OF THE FEDERAL RESERVE AND OTHER SUPERVISORS AND REGULATORS, AND FUNCTIONAL REGULATION

In 1999, the Federal Reserve established its supervisory program for large complex banking organizations (LCBOs).¹ LCBOs are characterized by the scope and complexity of their domestic and international operations; their participation in large volume payment and settlement systems; the extent of their custody operations and fiduciary activities; and the complexity of their regulatory structure, both domestically and in foreign jurisdictions. To be designated as an LCBO, a banking organization must meet specified criteria to be considered a significant participant in at least one key financial market.²

As outlined in the following sections, a range of continuous monitoring activities is utilized, along with discovery reviews and testing activities (examination/inspection activities),³ to develop and maintain an understanding and assessment of each domestic bank holding company (BHC) that is an LCBO.⁴ These organizations are collectively referred to as large complex BHCs.

1050.1.1.1 Federal Reserve Activities and Those Activities of Other Supervisors and Regulators

The nature and scope of independent Federal Reserve supervisory work required to develop and maintain an understanding and assessment of a large complex BHC depends largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. By their nature, understanding and assessing some areas—such as the risk manage-

ment and financial condition of significant non-bank subsidiaries that are not functionally regulated—typically will require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk-management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The following sections provide further detail on how the Federal Reserve will develop, working in coordination with other relevant primary supervisors and functional regulators, an understanding and assessment of a large complex BHC. In conducting the activities described throughout this document, the Federal Reserve will, to the fullest extent possible

- rely on the information and assessments of relevant primary supervisors and functional regulators, including the information and assessments reflected in the reports of examination of such supervisors and regulators;
- focus its supervisory activities on the bank holding company, as well as on those of its nonbank subsidiaries that could have a direct or indirect materially adverse effect on the safety and soundness of a depository institution subsidiary of the BHC due to the size, condition, or activities of the nonbank subsidiary, or the nature or size of its transactions with the depository institution; and
- use publicly reported information (including externally audited financial statements), as well as reports that a large complex BHC or a subsidiary prepares for other primary supervisors, functional regulators, or self-regulatory organizations.

1050.1.1.2—Functionally Regulated Subsidiaries

As discussed below, in certain situations, the Federal Reserve may find it necessary to conduct an examination of a functionally regulated nonbank subsidiary in order to fulfill the Federal Reserve's responsibilities as supervisor of the consolidated organization. In any such case, the Federal Reserve will continue to adhere to the procedural and other requirements governing

1. See SR-99-15, "Risk-Focused Supervision of Large Complex Banking Organizations," or section 2124.04.

2. See section 1050.0.4, Appendix, for the definitions of terms commonly used in this section and sections 1050.1 and 1050.2.

3. The term "examination" is generally used throughout this guidance to refer to both commercial bank examination and BHC inspection activities.

4. The term "domestic BHC" refers to a BHC incorporated in the United States that is not controlled by a foreign banking organization (FBO). Attachment B.1. to SR-08-9/CA-08-12 addresses—in the context of supervising the combined U.S. operations of FBOs—how the Federal Reserve will develop and maintain an understanding and assessment of a BHC that is, or is controlled by, an FBO that is itself an LCBO.

examinations of, or requests for a specialized report from, a functionally regulated subsidiary as discussed in SR-00-13 and sections 1040.0 and 3900.0. Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.⁵

1050.1.2 UNDERSTANDING THE ORGANIZATION

For each large complex BHC, the Federal Reserve will develop an understanding of the legal, operating, and corporate governance structure of the organization and its primary strategies, business lines, and risk-management and internal control functions.⁶ This understanding will inform the development of a risk assessment and supervisory plan for the BHC. Typically, the informa-

5. The Federal Reserve also may examine a functionally regulated subsidiary of a large complex BHC if, after reviewing relevant reports and other information, it has reasonable cause to believe that the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution, or that the subsidiary is not in compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the subsidiary (and the Federal Reserve cannot determine compliance by examining the BHC or its affiliated depository institutions).

Similarly, before requiring a specialized report from a functionally regulated subsidiary, the Federal Reserve first will request that the subsidiary's appropriate functional regulator obtain the report and make it available to the Federal Reserve. In the event that the report is not obtained or made available as requested, the Federal Reserve may, consistent with the Bank Holding Company Act, obtain the report directly from the functionally regulated subsidiary if the report is necessary to allow the Federal Reserve to adequately assess (1) a material risk to the BHC or any of its depository institution subsidiaries, (2) the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a threat to the safety and soundness of a depository institution subsidiary, or (3) compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the BHC or a subsidiary.

6. This understanding is formally documented during development of the institutional overview, which coincides with creation of the annual risk assessment. SR-99-15 and SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions" (see section 2124.01), describe processes for developing an institutional overview, risk assessment, and supervisory plan. Each of these products is kept current to reflect significant changes in an organization's risks or activities.

tion necessary to gain this understanding may be obtained from the organization's management, public reports, regulatory reports, surveillance screens, third-party sources (e.g., credit rating agency and market analyst reports), and other relevant primary supervisors or functional regulators. Key elements that should be identified and understood include the following:

- *Corporate strategy.* Primary business strategies; institutional risk tolerance; key changes in strategic direction or risk profile; significant new business activities, areas of growth and emerging areas with potential to become primary drivers of risk or revenue; and plans for expansion through mergers or acquisitions.
- *Significant activities.* Key revenue and risk drivers; primary business lines; product mix; budget and internal capital allocations; market share for revenue and customers served; key external trends, including competitive pressures; and areas that are vulnerable to volatility in revenue, earnings, capital, or liquidity.
- *Structure.* Business line and legal entity structure; domestic and foreign regulatory responsibilities for legal entities and business lines; key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates; material business lines operated across multiple legal entities for accounting or risk-management purposes; and the activities and risk profiles of Edge and agreement corporation subsidiaries.
- *Corporate governance, risk management, and internal controls for primary risks.* Board of directors (board) and executive-level committees; senior management and management committees; key risk-management and internal control functions, and associated management information systems (MIS), relied upon by the board, senior management, and senior risk managers and committees; and consistency of public disclosures with how the board and senior management assess and manage risks.
- *Presence in critical or key financial markets.*⁷ Core clearing and settlement activities; business lines with a significant presence in critical or key national or global financial markets; and related risk-management and disclosure practices.

To ensure the quality and consistency of consolidated supervision across the large complex BHC portfolio, it also is necessary to understand

7. See sections 1050.1.3.1.6 and 1050.1.3.1.7 for definitions of "critical financial markets" and "key financial markets."

how these key elements compare with industry trends and with evolving practices of well-managed organizations with similar characteristics.

1050.1.3 ASSESSING THE LARGE COMPLEX BHC ON A CONSOLIDATED BASIS

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis. This assessment is reflected in the RFI (Risk Management, Financial Condition, and Impact) rating assigned to a BHC.⁸

1050.1.3.1 Risk Management

1050.1.3.1.1 Key Corporate Governance Functions

Objectives: One of the primary areas of focus for consolidated supervision of large complex BHCs is the adequacy of governance provided by the board and senior management. The culture, expectations, and incentives established by the highest levels of corporate leadership set the tone for the entire organization and are essential determinants of whether a banking organization is capable of maintaining fully effective risk-management and internal control processes.

The board and its committees should have an ongoing understanding of key inherent risks, associated trends, primary control functions, and senior management capabilities. Primary expectations for the board and its committees include

1. selecting competent senior managers, ensuring that they have the proper incentives to operate the organization in a safe and sound manner, and regularly evaluating senior managers' performance;
2. establishing, communicating, and monitoring (for example, by reviewing comprehensive MIS reports produced by senior management) institutional risk tolerances and a corporate culture that emphasizes the importance of compliance with the law and ethical business practices;
3. approving significant strategies and policies;

4. demonstrating leadership, expertise, and effectiveness;
5. ensuring the organization has an effective and independent internal audit function;
6. ensuring the organization has appropriate policies governing the segregation of duties and avoiding conflicts of interest; and
7. ensuring that public disclosures
 - are consistent with how the board and senior management assess and manage the risks of the organization,
 - balance quantitative and qualitative information with clear discussions about risk-management processes, and
 - reflect evolving disclosure practices for peer organizations.

A large complex BHC's senior management and its committees should be able to clearly communicate risk tolerances and measures, control risks, hire and retain competent staff, and respond to changes in the organization's risk profile and the external environment. Members of senior management are expected to have qualifications and experience commensurate with the size and complexity of the organization. Primary expectations for senior management include

1. establishing effective oversight and an appropriate risk culture;
2. appropriately delegating authority and overseeing the establishment and implementation of effective policies for the proper segregation of duties and for the avoidance or management of conflicts of interest;
3. establishing and implementing an effective risk-management framework capable of identifying and controlling both current and emerging risks, and effective independent control functions that ensure risk taking is consistent with the organization's established risk appetite;
4. establishing and implementing incentives for personnel that are consistent with institutional risk tolerances, compliance with the law, and ethical business practices;
5. promoting a continuous dialogue between and across business areas and risk-management functions to help align the organization's established risk appetite and risk controls;
6. ensuring that the board and its committees are provided with timely, accurate, and comprehensive MIS reports that are adaptive to

8. The RFI rating system for BHCs is discussed in SR-04-18, "Bank Holding Company Rating System" (see section 4070.0). RFI ratings are assigned for BHCs that are complex or that have \$1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC's assigned ratings and encompasses the results of the entire supervisory cycle (as described in SR-99-15 and section 2124.04).

changing circumstances regarding risks and controls; and

7. ensuring timely resolution of audit, compliance, and regulatory issues.

An effective internal audit function plays an essential role by providing an independent and objective evaluation of all key governance, risk-management, and internal control processes. As the complexity of financial products and supporting technology has grown, in combination with greater reliance on third-party service providers, the importance of internal audit's role in identifying risks and testing internal controls has increased.

In addition, the extent to which supervisors can rely on or utilize the work of internal audit is an essential determinant of the risk-focused supervisory program that is tailored to the activities and risks of each large complex BHC.

Supervisory Activities: For each large complex BHC, the Federal Reserve will understand and assess the adequacy of oversight provided by the board and senior management, as well as the adequacy of internal audit and associated MIS. The Federal Reserve also will understand and assess other key corporate governance functions (e.g., corporate finance and treasury functions), whose effectiveness is essential to sustaining consolidated holding company operations, as well as the organization's business resiliency and crisis management capabilities.

- *Board, senior management, and other key corporate governance functions.* Continuous monitoring activities—which draw from all available sources, including internal control functions, the work of other relevant primary supervisors and functional regulators, regulatory reports, and related surveillance results—will be used to understand and assess the effectiveness of board and senior management resources and oversight.

The results of continuous monitoring activities, as documented in the institutional overview, risk assessment, and other supervisory products, may identify certain corporate governance functions that will require more intensive supervisory focus due to (1) significant changes in corporate strategy, activities, organizational structure, oversight mechanisms, or key personnel; (2) potential concerns regarding the adequacy of a specific governance function; or (3) the absence of sufficiently

recent examination activities for a key function by the Federal Reserve or another primary supervisor or functional regulator.

- *Internal audit.* Continuous monitoring and examination activities will be used to understand and assess key elements of internal audit governance for the organization on a consolidated basis, including (1) the adequacy and independence of the audit committee; (2) the independence, professional competence, and quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk-assessment process; and (4) the adequacy of audit programs and workpaper standards. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding the adequacy of key elements of internal audit. In addition to this periodic audit infrastructure review, testing activities for specific control functions or business lines should include an assessment of internal audit's recent work in these areas to the extent possible as a means of validating internal audit's findings.
- *Additional supervisory activities.* If continuous monitoring activities identify a key corporate governance function or element of internal audit requiring more intensive supervisory focus due to significant changes, potential concerns, or the absence of sufficiently recent examination activities, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) in developing discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve will participate as actively as appropriate in those activities.⁹

If the area of concern is not within the oversight of another primary supervisor or functional regulator, or if the supervisor or regulator does not conduct or coordinate the examination activities in a reasonable period

9. Active participation by the Federal Reserve in an examination led by another primary supervisor or functional regulator includes having input into determining the examination objectives, final conclusions, and related communications to the organization's management. In the event that a material aspect of the Federal Reserve's input is not reflected in the examination's objectives, conclusions, or related communications with the organization, the Federal Reserve will review the situation to determine whether additional steps are appropriate to address any remaining concerns.

of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

- *Additional required audit testing activities.* In all instances, the Federal Reserve will conduct testing activities as part of its audit infrastructure review (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that the internal audit program is appropriately designed and achieving its objectives.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.2 Risk Management and Internal Control Functions for Primary Risks to the Consolidated Organization

Objectives: Underlying the risk-focused approach to consolidated supervision of large complex BHCs is the premise that it is each organization's responsibility to develop an appropriate control structure for identifying, measuring, monitoring, and controlling key risks as measured against supervisory standards and expectations, applicable laws and regulations, and evolving practices of well-managed organizations.

The Federal Reserve will understand and assess risk-management and control functions for primary risks to the consolidated organization (primary firmwide risk-management and control functions), and associated MIS, for each large complex BHC. This will include risk-management and control functions for primary credit, legal and compliance,¹⁰ liquidity, market, operational, and reputational risks for the consolidated organization. The Federal Reserve also will understand and assess other risk-management and control functions that, based on the specific characteristics and activities of the individual BHC, relate to primary risks to the organization as a whole.

10. Federal Reserve processes for understanding and assessing legal and compliance risk management apply to the domestic and international operations of large complex BHCs and, as described in SR-03-22/CA-03-15, "Framework for Assessing Consumer Compliance Risk at Bank Holding Companies," (see section 2124.01) encompass consumer compliance risk inherent in the organization's business activities.

For example, for large complex BHCs with particularly dynamic corporate strategies, the Federal Reserve will understand and assess the adequacy of the control mechanisms relevant to such strategies, including strategic planning, merger integration, new business approval, and processes for ensuring that risk management and controls keep pace with areas of growing inherent risk. Furthermore, large complex BHCs operating across a range of financial intermediary activities are more likely to face potential conflicts of interest due to their greater likelihood of acting as agents for both issuers and investors. For these holding companies, it is necessary to assess the adequacy of processes for identifying and avoiding or managing conflicts of interest.

In all instances, the adequacy of each primary firmwide risk management or control mechanism depends on the appropriateness of the following:

1. control infrastructure and governance, including degree of oversight by the board and senior management;
2. development, maintenance, and communication of appropriate policies, procedures, and internal controls;
3. risk identification and measurement systems and processes, and associated MIS, that are adaptive to changing circumstances and capable of providing timely, accurate, and comprehensive information to senior management and the board;
4. monitoring and testing the effectiveness of controls;
5. processes for identifying, reporting, and escalating issues and emerging risks;
6. ability to implement corrective actions in a timely manner;
7. appropriate authority and independence of staff to carry out responsibilities; and
8. integration of risk-management and control objectives within management goals and the organization's compensation structure.

Most large complex BHCs have evolved toward comprehensive, consolidated risk management to measure and assess the range of their exposures and the way these exposures interrelate. Nonetheless, a variety of control structures are in place across this portfolio, and in some instances there is not a firmwide mechanism in place to oversee and manage a key control function across the organization's business lines and

legal entities.

In all instances, the Federal Reserve will focus on individual control structures in place for primary business lines or legal entities as needed to reach an understanding and assessment of the consolidated organization. When applicable, the Federal Reserve also will assess whether a decentralized approach to a key control function is sufficient by evaluating the effectiveness of such an approach in controlling primary risks to the consolidated organization.¹¹

Supervisory Activities: The Federal Reserve will use continuous monitoring activities to understand and assess each primary firmwide risk-management or control function. This process begins with the overarching design and architecture of each primary firmwide risk-management or control function, and drills down, as appropriate, through analysis of risk management and controls for material portfolio areas and business lines (described in section 1050.1.3.1.3 below). Activities will verify the sufficiency of fundamental aspects of internal controls in relation to the holding company's current risk profile and in comparison with supervisory expectations and evolving sound practices and assess the capability of these primary functions (whether centralized or decentralized) to remain effective in the face of growth, changing strategic direction, significant market developments, and other internal or external factors.

The results of continuous monitoring activities, as documented in the institutional overview, risk assessment, and other supervisory products, may identify certain primary firmwide risk-management or control functions that require more intensive supervisory focus due to (1) sig-

nificant changes in inherent risk, control processes, or key personnel; (2) potential concerns regarding the adequacy of controls; or (3) the absence of sufficiently recent examination activities for a primary firmwide risk-management or control function by the Federal Reserve or another relevant primary supervisor or functional regulator.

In these instances, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to develop discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the primary firmwide risk-management or control function is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant supervisors and regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.3 Risk Management of Material Portfolios and Business Lines

Objectives: For each large complex BHC, there are selected portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as mortgage lending or leveraged lending) that are primary drivers of risk or revenue, or that otherwise materially contribute to understanding inherent risk or assessing controls for a broader corporate function (such as consolidated credit-risk management).

During the development of the institutional overview and risk assessment, as well as during other supervisory processes, the Federal Reserve will analyze external factors and internal trends in the BHC's strategic initiatives—as evidenced by budget and internal capital allocations and other factors—to identify significant activities and areas vulnerable to volatility in revenue, earnings, capital, or liquidity that represent material risks of the organization. This determination of material portfolios and business lines considers all associated risk elements, including legal and compliance risks. For example, when evalu-

11. As outlined in SR-08-8/CA-08-11, "Compliance Risk-Management Programs and Oversight at Large Banking Organizations with Complex Compliance Profiles" (see section 2124.07), while the Federal Reserve does not prescribe a particular organizational structure for primary firmwide risk-management and control functions, establishment of a firmwide function that is dedicated to managing and overseeing compliance risk, and that promotes a strong compliance culture, is particularly important for large banking organizations with complex compliance profiles, due to the unique challenges associated with compliance risk management for these organizations. In addition to the oversight provided by the board and various executive and management committees, a key component of firmwide compliance oversight for these organizations is a corporate compliance function that has day-to-day responsibility for overseeing and supporting the implementation of the organization's firmwide compliance risk-management program, and that plays a key role in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.

ating whether retail activities such as mortgage or credit card lending are material to a banking organization, the extent of inherent consumer compliance and reputational risks, as well as credit and market risks, should be considered.

Supervisory Activities: Because an understanding of material risks and activities is needed to assess the primary firmwide risk-management and control functions (as discussed in preceding section 1050.1.3.1.2), the Federal Reserve will maintain an understanding of inherent risk and assess the adequacy of risk-management and internal controls for material portfolios and business lines. To form this understanding and assessment, the Federal Reserve will rely primarily on continuous monitoring activities, supplemented as appropriate by examination activities.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessments of a primary supervisor or functional regulator where the BHC's legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators as necessary to maintain an understanding and assessment of related firmwide risk-management and control functions.

Many activities of large complex BHCs span legal entities that are subject to oversight by multiple supervisors or regulators or that are outside the oversight of other supervisors or regulators. If this is the case, or if the primary supervisor or functional regulator does not conduct or coordinate the necessary continuous monitoring or examination activities in a reasonable period of time, the Federal Reserve will initiate and lead these activities in coordination with other relevant primary supervisors and functional regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.4 Risk Management of Nonmaterial Business Lines

Objectives: For nonmaterial business lines identified during the development of the institutional overview and risk assessment, as well as during other supervisory processes, the Federal Reserve's

focus will be on identifying and understanding those business lines that are increasing in importance and have the potential to become material.

Supervisory Activities: When a primary supervisor or functional regulator has a sufficient view of nonmaterial business lines, the Federal Reserve will, to the fullest extent possible, use information developed by that supervisor or regulator to monitor areas of increasing importance with the potential to become material. The Federal Reserve also will maintain an ability to access internal MIS for these businesses to facilitate a more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

For nonmaterial business lines that are not subject to oversight by a single primary supervisor or functional regulator, the Federal Reserve will engage in continuous monitoring activities to identify meaningful trends in risks and risk-management practices, initiate discovery reviews (in coordination with relevant primary supervisors or functional regulators as appropriate and in accordance with section 1050.1.1.2 above if relevant) to increase understanding of selected business lines that have the potential to become material, and maintain an understanding of associated MIS to facilitate more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

1050.1.3.1.5 Core Clearing and Settlement Activities (Where Applicable)

Objectives: The Federal Reserve will understand and assess the adequacy of risk-management and internal controls—including credit risk-management practices—related to core clearing and settlement organizations.¹² In light

12. Core clearing and settlement organizations, as defined in the *Interagency Paper on Sound Practices to Strengthen the Resilience of the U.S. Financial System* (interagency sound practices paper, see SR-03-9), consist of two groups of organizations that provide clearing and settlement services for critical financial markets or act as large-value payment system operators, and that present the potential for systemic risk should they be unable to perform. These organizations are (1) market utilities (government-sponsored services or industry-owned organizations) whose primary purpose is to clear and settle transactions for critical markets (see section 1050.1.3.1.6) or transfer large-value wholesale payments, and (2) private-sector firms that provide clearing and settlement services that are integral to a critical market (i.e., their aggregate market share is significant enough to present the potential for systemic risk in the event of their sudden failure to carry out

of the potential for problems in these areas to transmit an adverse impact across the banking and financial system, and given the Federal Reserve's unique expertise and perspective with respect to these activities, the Federal Reserve focuses special supervisory attention on the risk-management and internal control practices and the public disclosures made by an organization with respect to these activities.

Supervisory Activities: Continuous monitoring and examination activities will be used to maintain an understanding of inherent risk and assess risk-management and internal controls, including related credit risk-management practices. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent risk for core clearing and settlement activities stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to design testing activities focused on understanding and assessing areas of change and/or concern, as well as ensure that risk-management and control functions are appropriately designed and achieving their intended objectives. In situations where another primary supervisor or functional regulator leads the discovery review or testing activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the area of change and/or concern is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

In all instances, the Federal Reserve will conduct testing activities (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or

participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that these control mechanisms are appropriately designed and achieving their objectives. In addition to assessing the adequacy of risk-management and internal controls, testing activities will focus on assessing the contribution of the organization to the resilience or fragility of the clearance and settlement system as a whole, and on the organization's adherence to the expectations of the interagency sound practices paper. Key expectations include geographic diversity and resiliency of data centers and operations, testing of recovery and resumption arrangements, and identification of downstream implications of failure of a major counterparty or clearing organization.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.6 Significant Presence in Critical Financial Markets (Where Applicable)

Objectives: The Federal Reserve will understand and assess the adequacy of risk management and controls for LCBO business lines with a significant presence in critical financial markets.

"Critical financial markets" are defined in the interagency sound practices paper as the markets for federal funds, foreign exchange, and commercial paper; U.S. government and agency securities; and corporate debt and equity securities. A business line may have a significant presence in a critical financial market even though the business line accounts for a relatively small portion of the organization's total consolidated assets or revenues. These business lines are subject to special supervisory focus by the Federal Reserve in light of their potential to transmit a collective adverse impact across multiple firms and financial markets and the resulting significant reputational and other risks they pose to the organization.

Supervisory Activities: Continuous monitoring and examination activities will be used to understand inherent risk and assess risk-management and internal controls for business lines with a significant presence in a critical financial market. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant

those activities because there are no viable immediate substitutes).

change in inherent risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified in these business lines, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to design testing activities focused on understanding and assessing areas of change and/or concern, as well as ensure that risk-management and control functions are appropriately designed and achieving their intended objectives. In situations where another primary supervisor or functional regulator leads the testing activities, the Federal Reserve will participate as actively as appropriate in those activities.

If the area of change and/or concern is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the testing activities and will coordinate these activities with other relevant primary supervisors and functional regulators to the extent possible.

In all instances, the Federal Reserve will conduct testing activities (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating as actively as appropriate in activities led by other relevant supervisors or regulators) on at least a three-year cycle. These activities will focus on the organization's adherence to the expectations set forth in the interagency sound practices paper, including geographic diversity and resiliency of data centers and operations, and testing of recovery and resumption arrangements.

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.1.7 Risk Management of Activities in Key Financial Markets

Objectives: To be designated as an LCBO by the Federal Reserve, a banking organization must meet specified criteria as a significant participant in at least one key financial

market.¹³ For each key financial market activity where the large complex BHC is a significant participant, the Federal Reserve will maintain an understanding of inherent risk, assess the adequacy of related risk-management and internal controls (including the sufficiency of business continuity planning), and understand the organization's potential impact on the overall functioning of the market.

Supervisory Activities: Continuous monitoring and examination activities will be used to understand inherent risk for key financial market activities and assess related risk-management and internal controls.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessments of a primary supervisor or functional regulator where the BHC's legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators as necessary to maintain an understanding and assessment of risk-management and control functions for key financial market activities.

For activities that span legal entities subject to oversight by multiple supervisors or regulators, or that are outside the oversight of other supervisors or regulators, the Federal Reserve will develop and conduct—in coordination with other relevant primary supervisors and functional regulators to the extent possible and in accordance with the provisions described above in section 1050.1.1.2 if relevant—testing and discovery review activities as necessary to complement continuous monitoring work.

1050.1.3.1.8 Issues and Developments in Areas of Emerging Interest with Potential Financial Market Consequences

Objectives: The Federal Reserve will use information obtained in the course of supervising LCBOs, as well as information and analysis

13. "Key financial markets" include the critical financial markets defined in section 1050.1.3.1.6 above as well as (1) broader U.S. capital market activity, including underwriting, securitization, derivatives, and trading; (2) retail financial services; and (3) international financial markets. Each LCBO meets at least one of these key market thresholds.

obtained through relationships with other domestic and foreign supervisors and regulators or other sources, to

1. identify potential vulnerabilities across the portfolio of LCBOs and their nonbank peers—such as the operational infrastructure that underpins the credit derivatives market—that have the potential to affect banking organizations generally, financial stability, systemic risk, or domestic or global financial markets;
2. identify areas of supervisory focus—such as counterparty credit risk-management practices—to further the Federal Reserve’s understanding of markets, their linkages with banking organizations, and potential implications for financial stability;
3. understand the activities of nonbank counterparties of LCBOs and the implications of such activities on the risks, risk management, and internal controls of banking organizations; and
4. enhance the Federal Reserve’s ability to act effectively during periods of financial stress by combining timely and reliable information on conditions in the banking system and capital markets that is obtained through its supervisory activities with information obtained through the Federal Reserve’s monetary policy and payments activities.

Supervisory Activities: During each supervisory planning cycle, and more frequently as required, continuous monitoring opportunities will be identified that utilize information gained through LCBO supervision to further the Federal Reserve’s understanding of risks and activities that could adversely affect LCBOs or the stability of domestic or global financial markets. Activities will include meetings with chief risk officers, chief financial officers, and other LCBO senior management, as well as collaboration with other domestic and foreign supervisors and regulators and foreign central banks.

These activities also will be used to review areas of specific supervisory interest; answer ad hoc information requests related to areas of emerging interest or concern; help in understanding the contribution of the entity to the resilience or fragility of key markets as a whole; and provide insights into interdependencies across firms, markets, and the real economy. During periods of financial stress, this information will be combined with knowledge

obtained from other Federal Reserve functions, such as monetary policy and payments activities, to help mitigate the likelihood or consequences of a financial crisis and to help develop sound policy responses to market developments. Periodic examination activities also may be used to review a specific activity or risk-management practice across a group of peer organizations to obtain a more complete understanding of industry practice.¹⁴

These activities will be designed and conducted in coordination with other relevant primary supervisors and functional regulators to the fullest extent possible and in accordance with the provisions described above in section 1050.1.1.2, where relevant. Coordination opportunities, however, may be limited in special circumstances, such as when addressing urgent matters with potentially adverse financial market consequences, due to the inherent time constraints when information must be gathered quickly.

1050.1.3.2 Financial Condition

Objectives: The Federal Reserve’s evaluation of a large complex BHC’s consolidated financial condition focuses on the ability of the organization’s resources to support the level of risk associated with its activities. Assessments are developed for each “CAEL” subcomponent—Capital Adequacy (C), Asset Quality (A), Earnings (E), and Liquidity (L).¹⁵

In developing this evaluation, the Federal Reserve’s primary focus is on developing an understanding and assessment of

1. the sufficiency of the BHC’s consolidated capital to support the level of risk associated with the organization’s activities and provide a sufficient cushion to absorb unanticipated losses;
2. the capability of liquidity levels and funds-management practices to allow reliable access to sufficient funds to meet present and future liquidity needs; and
3. other aspects of financial strength that need to be assessed on a consolidated basis across the organization’s various legal entities, or that relate to the financial soundness of the parent company and significant nonbank sub-

14. In order to minimize burden while obtaining information necessary to understand market developments, these activities will focus on those organizations that are most active in the area of interest or concern.

15. See SR-04-18 and section 4070.0.2.3.1 for more information about the CAEL subcomponents.

subsidiaries, as discussed in section 1050.1.3.3 below.

In assessing consolidated regulatory capital, the Federal Reserve looks to ensure that the BHC demonstrates the effectiveness of its framework for complying with relevant capital adequacy guidelines and meeting supervisory expectations, and focuses on analyzing key models and processes¹⁶ that influence this assessment. This assessment utilizes results from examinations led by the Federal Reserve or other primary supervisors or functional regulators, as well as information gained from the BHC's internal control functions and from market-based assessments.

Capital planning activities for large complex BHCs should be forward looking and provide for a sufficient range of stress scenarios commensurate with the organization's activities. Many LCBOs require more rigorous and structured internal processes for assessing capital adequacy beyond regulatory capital measures, as these measures often do not adequately capture the full spectrum of risk-taking activities for these organizations.¹⁷ For these organizations, the Federal Reserve focuses on whether internal processes for assessing capital adequacy ensure that all risks are properly identified, reliably quantified (where possible) across the entire organization, and supported by adequate capital.

When assessing the adequacy of a BHC's liquidity levels and funds management practices, areas of focus include¹⁸

1. the extent to which the treasury function is aligned with risk-management processes, and whether incentives are in place for business lines to compile and provide information on expected liquidity needs and contingency funding plans so that the treasury function is able to develop a firmwide perspective and incorporate business-line information into assessments of actual and contingent liquidity risk;
2. whether funds management practices provide sufficient funding flexibility to respond

to unanticipated, evolving, and potentially correlated market conditions for the organization and/or across financial markets; and

3. the sufficiency of liquidity planning tools, such as stress testing, scenario analysis, and contingency planning efforts, including (1) whether liquidity buffers—comprised of unencumbered liquid assets as well as access to stable funding sources—adequately reflect the possibility and duration of severe liquidity shocks; (2) the reasonableness of assumptions about the stability of secured funding in circumstances in which the liquidity of markets for the underlying collateral becomes impaired; and (3) whether these efforts adequately reflect the potential for the organization to be called on in stressed environments to provide contingent liquidity support to off-balance-sheet entities or bring additional assets on the balance sheet (even if not legally or contractually obligated to do so).

Beyond capital adequacy and liquidity, the nature of independent Federal Reserve supervisory work required to evaluate a large complex BHC's consolidated financial condition depends largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. For example, more independent Federal Reserve work typically will be required to assess consolidated asset quality or earnings for large complex BHCs with significant nonbank activities that are not functionally regulated. However, where all material holding company assets are concentrated in a single depository institution subsidiary, a minimal level of incremental Federal Reserve efforts typically will be required to assess consolidated asset quality and earnings.

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to assess a large complex BHC's financial strength. Such activities will include periodic meetings with BHC management (such as the chief financial officer); review of regulatory reports, surveillance screens, and internal MIS; and analysis of market indicators, including external debt ratings, subordinated debt spreads, and credit default swap spreads. Testing and discovery activities will be used as necessary to assist in the understanding and assessment of areas of concern.

16. "Key models and processes" are those where evaluation of the model/process will influence the Federal Reserve's assessment of the activity or control area that is supported by the model/process.

17. See SR-99-18, "Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles" (see section 4060.7).

18. Assessing liquidity levels and funding practices for a consolidated BHC also incorporates elements presented in section 1050.1.3.3.2, "Parent company and nonbank funding and liquidity."

Testing and discovery activities also will be used to understand and assess the sufficiency of the BHC's consolidated capital and liquidity positions to support the level of risk associated with its activities, including (1) regulatory capital calculation methodologies¹⁹ and internal assessments of capital adequacy and (2) funds management and liquidity planning tools and practices. The Federal Reserve will work with other relevant primary supervisors and functional regulators to participate as actively as appropriate in or, if necessary, to coordinate activities designed to analyze key capital and liquidity models or processes of a depository institution or functionally regulated subsidiary that are of such significance that they will influence the Federal Reserve's assessment of these areas. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.3 Impact

1050.1.3.3.1 Risk Management and Financial Condition of Significant Nonbank Subsidiaries

Objectives: Most large complex BHCs engage in activities and manage control functions on a firmwide basis, spanning depository institution and nonbank legal entities. These BHCs often have considerable intra-group exposures and servicing arrangements across affiliates, presenting increased potential risks for depository institution subsidiaries and a higher likelihood of aggregate risk concentrations across the organization's legal entities. Common interactions between a large complex BHC's depository institution subsidiaries and their nonbank affiliates (including the parent company) include assets originating in, or being marketed by, a nonbank affiliate that are booked in the deposi-

tory institution; a depository institution providing funding for nonbank affiliates; and risk-management or internal control functions being shared between depository and nonbank operations.

Due to these interrelationships, financial, legal, compliance, or reputational troubles in one part of a BHC can spread rapidly to other parts of the organization. Even absent these interactions, the parent or nonbank subsidiaries of an organization may present financial, legal, compliance, or reputational risk to the consolidated entity, and thus directly or indirectly to its depository institution subsidiaries. As the federal banking agency charged with supervising the organization on a consolidated basis, the Federal Reserve is responsible for understanding and assessing the risks that the parent bank holding company and its nonbank subsidiaries may pose to the BHC itself or its depository institution subsidiaries.

The primary objectives of Federal Reserve supervision of the nonbank subsidiaries of a bank holding company are to

1. identify significant nonbank activities and risks—where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution subsidiary—by developing an understanding of the size and nature of primary activities and key trends, and the extent to which business lines, risks, or control functions are shared with or may impact a depository institution affiliate;
2. evaluate the financial condition and the adequacy of risk-management practices of the parent and significant nonbank subsidiaries, including the ability of nonbank subsidiaries to repay advances provided by the parent, using benchmarks and analysis appropriate for those businesses;
3. evaluate the degree to which nonbank entity risks may present a threat to the safety and soundness of subsidiary depository institutions, including through transmission of legal, compliance, or reputational risks;
4. identify and assess any intercompany relationships, dependencies, or exposures—or aggregate firmwide concentrations—with the potential to threaten the condition of a depository institution affiliate; and
5. evaluate the effectiveness of the policies, procedures, and systems that the holding company and its nonbank subsidiaries use to ensure compliance with applicable laws and

19. Assessments of the adequacy of regulatory capital for large complex BHCs that have received Federal Reserve supervisory approval to use internal estimates of risk in their regulatory capital calculations should include, among other things, regular verification that these organizations continue to meet on an ongoing basis all applicable requirements associated with internal estimates. See, for example, the capital adequacy guidelines for market risk at BHCs (Regulation Y: 12 C.F.R. 225, Appendix E) and the new advanced capital adequacy framework for BHCs (Regulation Y: 12 C.F.R. 225, Appendix G).

regulations, including consumer protection laws.²⁰

Supervisory Activities: For all significant nonbank subsidiaries and activities of the parent BHC, the Federal Reserve will use continuous monitoring activities and discovery reviews to

1. maintain an understanding of the holding company's business line and legal entity structure, including key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates, utilizing regulatory structure reports, internal MIS, and other information sources;
2. understand and assess the exposure to, and tolerance for, legal, compliance, and reputational risks, as well as the extent to which potential conflicts of interest are identified and avoided or managed;
3. understand the scope of intercompany transactions and aggregate concentrations, and assess the adequacy of risk-management processes, accounting policies, and operating procedures to measure and manage related risks;
4. identify and assess key interrelationships and dependencies between subsidiary depository institutions and nonbank affiliates, such as the extent to which a depository institution subsidiary is reliant on services provided by the parent company or other nonbank affiliates and the reasonableness of associated management fees;
5. identify those nonbank subsidiaries whose activities present material financial, legal, compliance, or reputational risk to the consolidated entity and/or a depository institution subsidiary;
6. identify significant businesses operated across multiple legal entities for accounting, risk management, or other purposes, as well as activities that functionally operate as separate business units for legal or other reasons;
7. identify intercompany transactions subject to Regulation W—utilizing information submitted on quarterly regulatory reporting form FR Y-8 (“The Bank Holding Company Report of Insured Depository Institutions’ Section 23A Transactions with Affiliates”), internal MIS, and other information sources—and determine (in conjunction with the primary

supervisor) whether compliance issues are present; and

8. understand and assess the sufficiency, reliability, and timeliness of associated MIS relied upon by the board, senior management, and senior risk managers and committees to monitor key nonbank activities and risks.

Periodic testing may be used to supplement continuous monitoring and discovery reviews to (1) ensure that key risk-management and internal control practices conform to internal policies and/or are designed to ensure compliance with the law and (2) understand and assess operations presenting a moderate or greater likelihood of significant negative impact to a subsidiary depository institution or the consolidated organization. Areas of potential negative impact include financial or operational risks that pose a potential threat to the safety and soundness of a depository institution subsidiary, or to the holding company's ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. Testing will focus on controls for identifying, monitoring, and controlling such risks. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.3.3.2 Parent Company and Nonbank Funding and Liquidity

Objectives: One of the Federal Reserve's primary responsibilities as consolidated supervisor is to help ensure that the parent company and its nonbank subsidiaries do not have an adverse impact on the organization's depository institution subsidiaries. To meet this objective, the Federal Reserve will assess the extent to which funding and liquidity policies and practices of the parent company or nonbank subsidiaries may undermine the BHC's ability to act as a source of strength to the organization's depository institution subsidiaries.

Areas of focus will include an assessment of

1. the ability of the parent company and nonbank subsidiaries to maintain sufficient liquidity, cash flow, and capital strength to service their debt obligations and cover fixed charges;
2. the likelihood that parent company or nonbank funding strategies could undermine pub-

²⁰ The Federal Reserve's supervisory objectives and activities related to the effectiveness of consumer compliance policies, procedures, and systems at nonbank subsidiaries of a BHC currently are under review, and additional or modified guidance on this topic may be issued in the future.

- lic confidence in the liquidity or stability of subsidiary depository institutions;
3. policies and practices that are aimed at ensuring the stability of parent company funding and liquidity, as evidenced by the utilization of long-term or permanent financing to support capital investments in subsidiaries and other long-term assets, and the degree of dependence on short-term funding mechanisms such as commercial paper;
 4. the extent of “double leverage”²¹ and the organization’s capital-management policies, including the distribution and transferability of capital across jurisdictions and legal entities;
 5. the parent company’s ability to provide financial and managerial support to its depository institution subsidiaries during periods of financial stress or adversity, including the sufficiency of related stress testing, scenario analysis, and contingency planning efforts; and
 6. intraday liquidity management policies and practices, and compliance with the “Federal Reserve Policy on Payments System Risk,”²² including expectations for depository institutions with a self-assessed net debit cap (the maximum dollar amount of uncollateralized daylight overdrafts that the institution may incur in its Federal Reserve account).

The Federal Reserve also will remain apprised of the funding profile and market access of material depository institution subsidiaries, as in most instances these entities represent the consolidated BHC’s primary and most active vehicles for external funding and liquidity management. The primary supervisor retains responsibility for assessing liquidity risk-management practices with respect to the depository institution subsidiary.

Supervisory Activities: The Federal Reserve will use continuous monitoring activities—including monitoring market conditions and indicators where available—and discovery reviews to understand and assess parent company and non-bank subsidiary funding and liquidity policies and practices, as well as any potential negative impact these policies and practices might have on a subsidiary depository institution or the consolidated organization. On at least an annual

21. “Double leverage” refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

22. This policy statement is available on the Board’s public website at www.federalreserve.gov/paymentsystems/psr.

basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent funding or liquidity risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will design and conduct testing activities focused on understanding and assessing the areas of change and/or concern in order to ensure that funding and liquidity risk-management and control functions are appropriately designed and achieving their intended objectives.

In all instances the Federal Reserve will undertake testing activities on at least a three-year cycle, assessing the individual elements of risk management for parent company and nonbank funding and liquidity: board and senior management oversight; policies, procedures, and limits; risk-monitoring and management information systems; and related internal controls.

For large complex BHCs with a depository institution that has a self-assessed net debit cap, the Federal Reserve will conduct an annual review of the self-assessment file to ensure that the institution has appropriately applied the payment system risk guidelines. The Federal Reserve will either lead this review and coordinate its activities with other relevant primary supervisors or participate as actively as appropriate in the related work of such supervisors. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.1.1.2.

1050.1.4 INTERAGENCY COORDINATION

1050.1.4.1 Coordination and Information Sharing Among Domestic Primary Bank Supervisors and Functional Regulators

Objective: Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other relevant domestic primary bank supervisors and functional regulators.²³ To achieve this objective, the Federal Reserve has worked over the years to enhance

23. Section 1050.1.4.2 discusses cross-border cooperation and information sharing among foreign supervisors.

interagency coordination through the development and use of information-sharing protocols and mechanisms. These protocols and mechanisms respect the individual statutory authorities and responsibilities of the respective supervisors and regulators, provide for appropriate information flows and coordination to limit unnecessary duplication or burden, comply with restrictions governing access to information, and ensure that the confidentiality of information is maintained. For example, the Federal Reserve and the U.S. Securities and Exchange Commission entered into a memorandum of understanding (MOU) in July 2008 that, among other things, provides for the parties to share specific types of information concerning entities under the parties' respective supervision as well as information on other areas of mutual regulatory or supervisory interest.

As discussed in section 1050.1.3, in understanding and assessing the activities and risks of the organization as a whole, the Federal Reserve will rely to the fullest extent possible on the examination and other supervisory work conducted by the domestic primary bank supervisors and functional regulators of a BHC's subsidiaries. In addition, the Federal Reserve will seek to coordinate its supervisory activities with relevant supervisors and regulators and will work to align each agency's assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of the consolidated BHC's operations as applicable.

Supervisory Activities. The Federal Reserve will continue to work with the relevant primary supervisors and functional regulators of a large complex BHC's subsidiaries to ensure that the necessary information flows and coordination mechanisms exist to permit the effective supervision of the BHC on a consolidated basis. The Federal Reserve will continue to share information, including confidential supervisory information, obtained or developed through its consolidated supervisory activities with other relevant primary supervisors or functional regulators when appropriate and permitted by applicable laws and regulations.²⁴

24. Among the federal laws that may limit the sharing of information among supervisors are the Right to Financial Privacy Act (12 U.S.C. 3401 et seq.) and the Trade Secrets Act (18 U.S.C. 1905). The Federal Reserve has established procedures to authorize the sharing of confidential supervisory information, and Federal Reserve staff must ensure that appropriate approvals are obtained prior to releasing such information. See Subpart C of the Board's Rules Regarding the Availability of Information (12 C.F.R. 261.20 et seq.).

The Federal Reserve also will continue to use a variety of formal and informal channels to facilitate interagency information sharing and coordination consistent with the principles outlined above, including

- supervisory protocols, agreements, and MOUs with primary supervisors and functional regulators that allow the coordination of supervisory activities and that permit the ongoing exchange of information, including confidential information on a confidential basis;
- bilateral exchanges of letters to facilitate information sharing on a situation-specific basis;
- periodic and as-needed contacts with primary supervisors and functional regulators to discuss and coordinate matters of common interest, including the planning and conduct of examinations and continuous monitoring activities;
- the use of information technology platforms, such as the Banking Organization National Desktop (BOND),²⁵ to provide secure automated access to examination/inspection reports and other supervisory information prepared by the Federal Reserve and other relevant supervisors and regulators; and
- participation in a variety of interagency forums that facilitate the discussion of broad industry issues and supervisory strategies, including the Federal Financial Institutions Examination Council, the President's Working Group on Financial Markets, and the Federal Reserve-sponsored cross-sector meetings of financial supervisors and regulators.

1050.1.4.1.1 Coordination of Examination Activities at a Supervised BHC Subsidiary

As discussed in section 1050.1.3, the Federal Reserve will seek to work cooperatively with the relevant primary supervisor or functional regulator to address information gaps or indications of weakness or risk identified in a supervised BHC subsidiary that are material to the Federal Reserve's understanding or assessment of the consolidated organization's risks, activi-

25. BOND is a Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the consolidated supervision of individual BHCs and FBOs, and in developing comparative analyses of organizations with similar business lines and risk characteristics.

ties, or key corporate governance, risk-management, or control functions. Prior to conducting discovery reviews or testing activities at a depository institution (other than where the Federal Reserve is the primary federal supervisor) or functionally regulated subsidiary of a BHC, the Federal Reserve will

- review available information sources as part of its continuous monitoring activities, including examination reports and the BHC's internal MIS, to determine whether such information addresses the Federal Reserve's information needs or supervisory concerns; and
- if needed, seek to gain a better understanding of the primary supervisor's or functional regulator's basis for its supervisory activities and assessment of the subsidiary. This may include a request to review related examination work.

If, following these activities, the Federal Reserve's information needs or supervisory concerns remain, the Federal Reserve will work cooperatively with the relevant primary supervisor or functional regulator in the manner discussed in section 1050.1.3 above.²⁶

1050.1.4.2 Cooperation and Information Sharing With Host-Country Foreign Supervisors

Objectives: Many large complex BHCs have considerable international banking and other operations that are licensed and supervised by foreign host-country authorities. As home-country supervisor for domestic BHCs, the Federal Reserve is responsible for the comprehensive, consolidated supervision of these global organizations, while each host country is responsible for supervision of the legal entities (including foreign subsidiaries of U.S. BHCs) in its jurisdiction.

Information sharing among domestic and foreign supervisors, consistent with applicable laws, is essential to ensure that a large complex BHC's global activities are supervised on a consolidated basis. Cross-border information sharing is

often facilitated by an MOU that establishes a framework for bilateral relationships and includes provisions for cooperation during the licensing process, in the supervision of ongoing activities, and in the handling of problem institutions. The Federal Reserve has established bilateral and multilateral information-sharing MOUs and other arrangements with numerous host-country foreign supervisors. The Federal Reserve also monitors changes in foreign bank regulatory and supervisory systems and seeks to understand how these systems affect supervised banking organizations. In addition to its longstanding cooperative relationships with home- and host-country foreign supervisors, the Federal Reserve expects to increasingly lead and participate in "colleges of supervisors" and other multilateral groups of supervisors that discuss issues related to specific internationally active banking organizations.

The Federal Reserve also is a member of the Basel Committee on Banking Supervision, which is a forum for supervisors from member countries to discuss important supervisory issues, foster consistent supervision of organizations with similar business and risk profiles, promote the sharing of leading supervisory practices, and formulate guidance to enhance and refine banking supervision globally.

The Federal Reserve's processes for understanding and assessing firmwide legal and compliance risk management, as described earlier, encompass both domestic and international operations. Most areas of supervisory focus for management of legal and compliance risks are applicable to both domestic and international entities, and include proper oversight of licensed operations, compliance with supervisory and regulatory requirements, and the sufficiency of associated MIS.

There are, however, areas of focus for the Federal Reserve that are unique to a holding company's international operations. For example, some host-country legal and regulatory structures and supervisory approaches are fundamentally different from those in the United States. As a result, the banking organization often must devote additional resources to maintain expertise in local regulatory requirements. In some instances, privacy concerns have led to limits on the information a BHC's foreign office may share with its parent company, thereby limiting the parent company's ability to exercise consolidated risk management on a global basis.

Additionally, while considerable progress has been made to strengthen supervisory cross-border cooperation and information sharing, the Federal Reserve and other U.S. supervisors have,

²⁶ As outlined in section 1050.1.3, certain Federal Reserve examination activities are to be conducted on a minimum three-year cycle to verify, through testing, the sufficiency of key control processes. These activities are to be conducted regardless of whether or not there is an information gap or indication of weakness or risk.

at times, faced challenges in accessing information on a bank's or BHC's foreign operations or in carrying out examinations of cross-border or foreign activities. These circumstances are to be taken into account when developing a supervisory strategy for a large complex BHC with cross-border or foreign operations.

Supervisory Activities: Continuous monitoring will be used to understand and assess each large complex BHC's international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls. For a large complex BHC with significant international operations or risks, an assessment of cross-border and foreign operations will be incorporated into the evaluation of key corporate governance functions and primary firmwide risk-management and internal control functions, including legal and regulatory risk management.

Continuous monitoring activities will include review of materials prepared by host-country supervisors, including examination reports and assessments, and ongoing communication with relevant foreign and domestic supervisors regarding trends and assessments of cross-border and foreign operations. These continuous monitoring activities may be supplemented, as appropriate, by examination activities to understand and assess the large complex BHC's international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls.

When assessing the sufficiency of a large complex BHC's management of its international operations, consideration is given to the extent that foreign laws restrict the transmission of information to the BHC's head office. Impediments to sharing information imposed by a host country may constrain the BHC's ability to effectively oversee its international operations and globally manage its risks, and the materiality of such impediments should be a determinant of whether the organization should be conducting operations in that host country.

In addition, any limits placed on the Federal Reserve's ability to access information on host-country operations, or to engage in onsite activities at the organization's operations in the host country, should be considered when assessing whether the organization's activities in that jurisdiction are appropriate.

1050.1.4.3 Indications of Weakness or Risk Related to Subsidiary Depository Institutions

Objectives: For areas beyond those specifically addressed in section 1050.1.3, there may be circumstances where the Federal Reserve has indications of material weakness or risk in a depository institution subsidiary of a BHC that is supervised by another primary supervisor, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of that supervisor. Because a primary objective of consolidated supervision is to protect the BHC's depository institution subsidiaries, the Federal Reserve will follow up with the appropriate primary supervisor in these circumstances to help ensure that, to the extent that a material weakness or risk exists, it is addressed appropriately.

Supervisory Activities: The Federal Reserve will take the following steps if it has indications of material weakness or risk in a depository institution subsidiary (other than where the Federal Reserve is the primary federal supervisor) in an area beyond those specifically addressed in section 1050.1.3, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of the depository institution's primary supervisor.

- The Federal Reserve will first review available information sources, discuss the areas of concern with the primary supervisor, and seek to review the supervisor's related work.
- If concerns remain following these activities, the Federal Reserve will request that the primary supervisor conduct a discovery review or testing activity at the depository institution to address the area of concern.
- In the event the primary supervisor does not undertake activities to address the concern in a reasonable period of time, the Federal Reserve will design and lead an examination of the depository institution to address the matter in consultation with the primary supervisor. A senior Federal Reserve official will communicate this decision in writing to a senior official of the primary supervisor.

1050.1.4.4 Condition or Management of BHC Subsidiary is Less-than-Satisfactory

Objectives: As noted above, a primary responsibility of the Federal Reserve as consolidated BHC supervisor is to ensure that a holding company's activities, policies, and practices do not undermine its ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. In situations where the condition or management of a supervised or functionally regulated BHC subsidiary is determined to be less-than-satisfactory, the Federal Reserve's focus as consolidated supervisor is on complementing the efforts of the primary supervisor or functional regulator. In doing so, the Federal Reserve will seek to ensure that the parent company provides appropriate support to the subsidiary and does not take actions that may further weaken the parent company's depository institution subsidiaries or its ability to act as a source of strength for such subsidiaries.

Beyond the specific activities noted below, these circumstances also may require the Federal Reserve to enhance the activities addressed in section 1050.1.3 for understanding and assessing key corporate governance functions or primary firmwide risk-management and internal controls. In addition, the Federal Reserve will adjust its supervisory activities as necessary when the consolidated BHC is in weakened condition or when there are questions regarding the capabilities of the holding company's management.

Supervisory Activities:

- *Depository institution subsidiary.* In instances when a depository institution subsidiary's condition or management is rated less than satisfactory, or when the depository institution subsidiary otherwise faces financial stress or material risks, the Federal Reserve's primary supervisory objectives as consolidated supervisor are to ensure that the parent company (1) provides appropriate support to the depository institution and (2) does not take action that could harm the depository institution. The Federal Reserve will work closely with the primary supervisor to understand whether the BHC or a nonbank affiliate has contributed to the depository institution's weakened condition, to understand the impact of the depository institution on the BHC's condition, and

to determine if the holding company is providing appropriate support to the depository institution. The Federal Reserve will coordinate its activities with those of the primary supervisor to the extent appropriate.

- *Nonbank subsidiary.* When any nonbank subsidiary faces financial stress or material risks, the Federal Reserve will seek to ensure that its condition and activities do not jeopardize the safety and soundness of the BHC or its depository institution subsidiaries, as discussed above in sections 1050.1.3.3.1, "Risk Management and Financial Condition of Significant Nonbank Subsidiaries" and 1050.1.3.3.2, "Parent Company and Nonbank Funding and Liquidity." The Federal Reserve also will take appropriate steps to ensure that any actions taken by the parent company to assist a nonbank subsidiary do not impair the BHC's continuing ability to serve as a source of strength to its depository institution subsidiaries. The Federal Reserve will coordinate its activities with those of any relevant functional regulator to the extent appropriate.

1050.1.4.5 Edge and Agreement Corporations

Objectives: Many large complex BHCs control an Edge or agreement corporation subsidiary. The Federal Reserve serves as the primary supervisor of each Edge and agreement corporation subsidiary in addition to its role as consolidated BHC supervisor.²⁷ When the Edge or agreement corporation is held by a U.S. bank, the primary supervisor often relies on information provided by the Federal Reserve in developing its own understanding and assessment of the parent bank.

During each calendar year, the Federal Reserve performs an examination of each Edge and agreement corporation, assesses the Bank Secrecy Act/Anti-Money Laundering (BSA/AML) compliance program, and assigns a CAMEO rating. In addition, the Federal Reserve periodically conducts assessments of Edge and agreement corporations to determine whether a consumer compliance examination is warranted, in which case a compliance

27. The Federal Reserve is solely responsible for approving, and supervising the activities of, U.S. Edge and agreement corporations. As discussed in SR-90-21, "Rating System For International Examinations," one of the Federal Reserve's supervisory responsibilities is the assignment of a CAMEO rating (Capital, Asset Quality, Management, Earnings, and Operations and Internal Controls) to each Edge and agreement corporation.

examination is conducted and a consumer compliance rating is assigned.

The Federal Reserve will coordinate the conduct of its activities as Edge and agreement corporation supervisor with its activities as consolidated supervisor. To this end, the extent and scope of Federal Reserve supervisory work related to an Edge or agreement corporation will be tailored to the entity's activities, risk profile, and other attributes. A number of specific elements will be considered when developing a supervisory approach, including

1. structure and attributes, including whether the Edge or agreement corporation is a banking or investment organization;
2. the size, nature, and location of its primary activities, as well as key financial and other trends;
3. the business lines and risks, and associated trends, of the Edge or agreement corporation's primary activities on a standalone basis, as well as their significance to the risk profile of the parent bank (if applicable) and BHC;
4. the extent to which risk-management and internal control functions are unique to the Edge or agreement corporation, or are shared with a parent bank, another affiliate, or the consolidated BHC;
5. any potential Regulation K limitations or other U.S. compliance issues, and the adequacy of processes to ensure ongoing compliance; and
6. the adequacy of processes for ensuring compliance with all applicable laws and regulations imposed by host-country supervisors for the Edge or agreement corporation's international operations.

Supervisory Activities: The Federal Reserve will maintain an understanding and perform an annual examination of each Edge and agreement corporation. While the examination scope will be risk focused to reflect the organization's scale, activities, and risk profile, in all cases the Federal Reserve will assess the adequacy of processes to ensure compliance with BSA/AML requirements and other applicable U.S. laws and regulations and with applicable foreign laws and regulations.

In developing its supervisory strategy, the Federal Reserve will identify those elements that are unique to the Edge or agreement corporation and those that are shared with the parent bank or BHC and will coordinate fulfillment of the Federal Reserve's responsibilities as Edge and agreement corporation supervisor with execution of its consolidated supervision role. This strategy will reflect the extent to which reliance can be placed on (1) the Federal Reserve's understanding and assessments of key corporate governance, risk-management, and control functions, as well as material portfolios and business lines, of the consolidated BHC; (2) assessments developed by the primary supervisor (when applicable) for business lines, risk management, control functions, or financial factors that are common to the Edge or agreement corporation and its parent bank; and (3) findings developed by host-country supervisors for activities under their jurisdiction.

In addition, where the primary supervisor of an Edge or agreement corporation's parent bank relies on the Federal Reserve's understanding and assessment in order to develop its CAMELS rating,²⁸ the Federal Reserve will work to fulfill that supervisor's information needs.

28. The U.S. banking agencies assign CAMELS (Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, and Sensitivity to Market Risk) ratings to U.S. banking organizations as part of the ongoing supervision of these organizations. See SR-96-38, "Uniform Financial Institutions Rating System," (see section A.5020.1 of the *Commercial Bank Examination Manual*.) and SR-97-4, "Interagency Guidance on Common Questions About the Application of the Revised CAMELS Rating System."

Guidance for the Consolidated Supervision of Regional Bank Holding Companies

Section 1050.2

1050.2.1 ACTIVITIES OF THE FEDERAL RESERVE AND OTHER SUPERVISORS AND REGULATORS, AND FUNCTIONAL REGULATION

The objectives of the Federal Reserve’s consolidated supervision program for the portfolio of regional bank holding companies (“regional BHCs,” defined as non-LCBO BHCs with \$10 billion or more in total consolidated assets, including nontraditional organizations¹) are the same as those applicable to other portfolios. The manner in which the Federal Reserve achieves these objectives, however, is tailored to the characteristics and risk profiles of regional bank holding companies.²

As outlined in the following sections, a range of continuous monitoring activities is utilized, along with discovery reviews and testing activities (examination activities),³ to develop and maintain an understanding and assessment of each regional BHC. For organizations within this portfolio, continuous monitoring activities typically take the form of meetings with BHC management, analysis of internal management information system (MIS) reports and regulatory reports, review of surveillance screens, and discussions and coordination with other relevant primary supervisors and functional regulators and review of their work. The scale and frequency of monitoring activities will differ by organization. For many regional BHCs that are in sound condition, monitoring activities typically are performed on a periodic or quarterly basis, supplemented by more frequent or intensive activities as necessary, and, in most instances, Federal Reserve staff do not maintain a day-to-day onsite presence at the organization.

1050.2.1.1 Federal Reserve Activities and Those Activities of Other Supervisors and Regulators

The nature and scope of independent Federal Reserve supervisory work required to develop and maintain an understanding and assessment of a regional BHC depend largely on the extent to which other relevant primary supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. Many regional BHCs conduct the majority of their business operations through a single bank subsidiary, increasing the likelihood that a single primary supervisor has a complete view of, and ability to address, major aspects of the organization’s business activities and related risks, risk management, and controls. In these instances, the Federal Reserve typically will be able to use the information and assessments developed by this primary supervisor to develop its understanding and assessment of significant aspects of the consolidated organization. Similarly, for regional BHCs with limited nonbank activities, the Federal Reserve typically will need to conduct less work to understand and assess the risk-management systems and financial condition of nonbank subsidiaries than the level of monitoring and examination work required for organizations with more-extensive or complex nonbank activities.

By their nature, understanding and assessing some areas—such as the risk management and financial condition of significant nonbank subsidiaries that are not functionally regulated—typically will require more independent Federal Reserve supervisory work. Other areas—such as primary firmwide risk-management and control functions—typically will require a greater degree of coordination with other relevant primary supervisors or functional regulators, who will likely have information or assessments upon which the Federal Reserve can draw.

The following sections provide further detail on how the Federal Reserve will develop, working in coordination with other relevant primary supervisors and functional regulators, an understanding and assessment of a regional BHC. In conducting the activities described throughout this document, the Federal Reserve will, to the fullest extent possible

1. Nontraditional BHCs, as defined in SR-04-18, “Bank Holding Company Rating System,” (see section 4070.0) are bank holding companies where most or all of the organization’s significant nondepository subsidiaries are regulated by a functional regulator, and subsidiary depository institution(s) are small in relation to nondepository subsidiaries.

2. See section 1050.0.4, appendix, for definitions of terms commonly used in this section.

3. While by definition “examination” activities are applicable to the supervision of banks and other depository institutions, as well as U.S. banking offices of FBOs, and “inspection” activities are applicable to the supervision of BHCs and nonbank subsidiaries and affiliates, the term “examination” is generally used throughout this section to refer to both examination and inspection activities.

- rely on the information and assessments of relevant primary supervisors and functional regulators, including the information and assessments reflected in the reports of examination of such supervisors and regulators;
- focus its supervisory activities on the bank holding company, as well as on those of its nonbank subsidiaries that could have a direct or indirect materially adverse effect on the safety and soundness of a depository institution subsidiary of the BHC due to the size, condition, or activities of the nonbank subsidiary, or the nature or size of its transactions with the depository institution; and
- use publicly reported information (including externally audited financial statements) as well as reports that a large complex BHC or a subsidiary prepares for other primary supervisors, functional regulators, or self-regulatory organizations.

1050.2.1.2 Functionally Regulated Subsidiaries

As discussed below, in certain situations, the Federal Reserve may find it necessary to conduct an examination of a functionally regulated nonbank subsidiary in order to fulfill the Federal Reserve's responsibilities as supervisor of the consolidated organization. In any such case, the Federal Reserve will continue to adhere to the procedural and other requirements governing examinations of, or requests for a specialized report from, a functionally regulated subsidiary as discussed in SR-00-13 and sections 1040.0 and 3900.0. Under these provisions, for example, the Federal Reserve may conduct an examination of a functionally regulated subsidiary if, after reviewing relevant reports, it reasonably determines that the examination is necessary to adequately inform the Federal Reserve about the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a direct or indirect threat to the safety and soundness of a depository institution subsidiary.⁴

4. The Federal Reserve also may examine a functionally regulated subsidiary of a regional BHC if, after reviewing relevant reports and other information, it has reasonable cause to believe that the subsidiary is engaged in an activity that poses a material risk to an affiliated depository institution, or that the subsidiary is not in compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the subsidiary (and the Federal Reserve can-

1050.2.2 UNDERSTANDING THE ORGANIZATION

For each regional BHC, the Federal Reserve will develop an understanding of the legal, operating, and corporate governance structure of the organization and its primary strategies, business lines, and risk-management and internal control functions.⁵ This understanding will inform the development of a risk-assessment and supervisory plan for the BHC. The extent of information necessary to gain this understanding is tailored to the scope and complexity of the regional BHC's operations, and typically may be obtained from the organization's management, public reports, regulatory reports, surveillance screens, third-party sources (e.g., credit-rating agency and market analyst reports), and other relevant primary supervisors or functional regulators.

Key elements that should be identified and understood include the following:

- *Corporate strategy.* Primary business strategies; institutional risk tolerance; key changes in strategic direction or risk profile; significant new business activities; areas of growth and emerging areas with potential to become primary drivers of risk or revenue; and plans for expansion through mergers or acquisitions.
- *Significant activities.* Key revenue and risk drivers; primary business lines; product mix; budget and internal capital allocations (as applicable); market share for revenue and customers served; key external trends, including competitive pressures; and areas that are vul-

not determine compliance by examining the BHC or its affiliated depository institutions).

Similarly, before requiring a specialized report from a functionally regulated subsidiary, the Federal Reserve first will request that the subsidiary's appropriate functional regulator obtain the report and make it available to the Federal Reserve. In the event that the report is not obtained or made available as requested, the Federal Reserve may, consistent with the Bank Holding Company Act, obtain the report directly from the functionally regulated subsidiary if the report is necessary to allow the Federal Reserve to adequately assess (1) a material risk to the BHC or any of its depository institution subsidiaries, (2) the systems used to monitor and control financial and operational risks within the consolidated organization that may pose a threat to the safety and soundness of a depository institution subsidiary, or (3) compliance with any federal law that the Federal Reserve Board has specific jurisdiction to enforce against the BHC or a subsidiary.

5. This understanding is formally documented during development of the institutional overview, which coincides with creation of the annual risk assessment. SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions," (see section 2124.01) describes processes for developing an institutional overview, risk assessment, and supervisory plan. Each of these products is kept current to reflect significant changes in an organization's risks or activities.

nerable to volatility in revenue, earnings, capital, or liquidity.

- *Structure.* Business line and legal entity structure; domestic and foreign regulatory responsibilities for legal entities and business lines; key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates; material business lines operated across multiple legal entities for accounting or risk-management purposes; and the activities and risk profile of Edge and agreement corporation subsidiaries.
- *Corporate governance, risk management, and internal controls for primary risks.* Board of directors (board) and executive-level committees; senior management and management committees; key risk-management and internal control functions and associated MIS relied upon by the board, senior management, and senior risk managers and committees; and consistency of public disclosures with how the board and senior management assess and manage risks.

To ensure the quality and consistency of consolidated supervision across the regional BHC portfolio, it also is necessary to understand how these key elements compare with industry trends and with evolving practices of well-managed organizations with similar characteristics.

1050.2.3 ASSESSING THE REGIONAL BHC ON A CONSOLIDATED BASIS

The Federal Reserve uses a systematic approach to develop an assessment of a BHC on a consolidated basis. This assessment is reflected in the RFI (Risk Management, Financial Condition, and Impact) rating assigned to a BHC.⁶

1050.2.3.1 Risk Management

1050.2.3.1.1 Key Corporate Governance Functions

Objectives: One of the primary areas of focus for consolidated supervision of regional BHCs is the adequacy of governance provided by the

board and senior management. The culture, expectations, and incentives established by the highest levels of corporate leadership set the tone for the entire organization and are essential determinants of whether a banking organization is capable of maintaining fully effective risk-management and internal control processes.

The board and its committees should have an ongoing understanding of key inherent risks, associated trends, primary control functions, and senior management capabilities. Primary expectations for the board and its committees include

1. selecting competent senior managers, ensuring that they have the proper incentives to operate the organization in a safe and sound manner, and regularly evaluating senior managers' performance;
2. establishing, communicating, and monitoring (for example, by reviewing comprehensive MIS reports produced by senior management) institutional risk tolerances and a corporate culture that emphasizes the importance of compliance with the law and ethical business practices;
3. approving significant strategies and policies;
4. demonstrating leadership, expertise, and effectiveness;
5. ensuring the organization has an effective and independent internal audit function;
6. ensuring the organization has appropriate policies governing the segregation of duties and avoiding conflicts of interest; and
7. for publicly held organizations, ensuring that public disclosures
 - are consistent with how the board and senior management assess and manage the risks of the organization,
 - balance quantitative and qualitative information with clear discussions about risk-management processes, and
 - reflect evolving disclosure practices for peer organizations.

A regional BHC's senior management and its committees should be able to clearly communicate risk tolerances and measures, control risks, hire and retain competent staff, and respond to changes in the organization's risk profile and the external environment. Members of senior management are expected to have qualifications and experience commensurate with the size and complexity of the organization. Primary expectations for senior management include

6. The RFI rating system for BHCs is discussed in SR-04-18 and section 4070.0. RFI ratings are assigned at least annually for BHCs that are complex or that have \$1 billion or more in consolidated assets, and are communicated via a comprehensive summary supervisory report that supports the BHC's assigned ratings and encompasses the results of the entire supervisory cycle (as described in SR-99-15, "Risk-Focused Supervision of Large Complex Banking Organizations," and section 2124.04.)

1. establishing effective oversight and an appropriate risk culture;
2. appropriately delegating authority and overseeing the establishment and implementation of effective policies for the proper segregation of duties and for the avoidance or management of conflicts of interest;
3. establishing and implementing an effective risk-management framework capable of identifying and controlling both current and emerging risks, and effective independent control functions that ensure risk taking is consistent with the organization's established risk appetite;
4. establishing and implementing incentives for personnel that are consistent with institutional risk tolerances, compliance with the law, and ethical business practices;
5. promoting a continuous dialogue between and across business areas and risk-management functions to help align the organization's established risk appetite and risk controls;
6. ensuring that the board and its committees are provided with timely, accurate, and comprehensive MIS reports that are adaptive to changing circumstances regarding risks and controls; and
7. ensuring timely resolution of audit, compliance, and regulatory issues.

An effective internal audit function plays an essential role by providing an independent and objective evaluation of all key governance, risk-management, and internal control processes. As the complexity of financial products and supporting technology has grown, in combination with greater reliance on third-party service providers, the importance of internal audit's role in identifying risks and testing internal controls has increased.

In addition, the extent to which supervisors can rely on or utilize the work of internal audit is an essential determinant of the risk-focused supervisory program that is tailored to the activities and risks of individual regional BHCs.

Supervisory Activities: For each regional BHC, the Federal Reserve will understand and assess the adequacy of oversight provided by the board and senior management, as well as the adequacy of internal audit and associated MIS. The Federal Reserve also will understand and assess other key corporate governance functions (e.g., corporate finance and treasury functions), whose

effectiveness is essential to sustaining consolidated holding company operations, as well as the organization's business resiliency and crisis management capabilities.⁷

- *Board, senior management, and other key corporate governance functions.* Continuous monitoring activities—which draw from all available sources on an as-needed basis, including internal control functions, the work of other relevant primary supervisors and functional regulators, regulatory reports, and related surveillance results—will be used to understand and assess the effectiveness of board and senior management resources and oversight.⁸

The results of continuous monitoring activities, as documented in supervisory products that reflect the Federal Reserve's overview and risk assessment of the organization, may identify certain corporate governance functions that will require more intensive supervisory focus due to (1) significant changes in corporate strategy, activities, organizational structure, oversight mechanisms, or key personnel; (2) potential concerns regarding the adequacy of a specific governance function; or (3) the absence of sufficiently recent examination activities for a key function by the Federal Reserve or another primary supervisor or functional regulator.

- *Internal audit.* Continuous monitoring activities will be used to understand and assess key elements of internal audit governance for the organization on a consolidated basis, including (1) the adequacy (and, where applicable, independence⁹) of the audit committee; (2) the independence, professional competence, and the quality of the internal audit function; (3) the quality and scope of the audit methodology, audit plan, and risk-assessment process; and (4) the adequacy of audit programs and

7. As discussed further in section 1050.2.4.6, because of the special structure of nontraditional BHCs and the relatively small size of their depository institution subsidiaries, much of the information necessary to develop the assessments of the risk-management (as described in this section 1050.2.3.1) and financial condition elements (as described in section 1050.2.3.2) typically may be obtained or drawn from the work of the relevant functional regulator.

8. As noted in section 1050.2.1 above, the scale and frequency of monitoring activities will differ by organization. For many regional BHCs in sound condition, these activities are typically performed on a periodic or quarterly basis and supplemented as necessary.

9. As outlined in section 2060.05 and SR-02-20, "The Sarbanes-Oxley Act of 2002," section 301 of the Sarbanes-Oxley Act requires that each public company (including banks and bank holding companies that are public companies) have an audit committee composed entirely of independent directors. (See 15 U.S.C. 78j-1.)

workpaper standards. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there have been significant changes in the internal audit infrastructure or whether there are potential concerns regarding the adequacy of key elements of internal audit. In addition to this periodic audit infrastructure review, testing activities for specific control functions or business lines should include an assessment of internal audit's recent work in these areas to the extent possible as a means of validating internal audit's findings.

- *Additional supervisory activities.* If continuous monitoring activities identify a key corporate governance function or element of internal audit requiring more intensive supervisory focus due to significant changes, potential concerns, or the absence of sufficiently recent examination activities, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) in developing discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve may conduct portions of the examination, or otherwise participate as necessary (e.g., in determining the examination objectives and scope), to ensure that the review provides sufficient information on the specific area of concern to form a comprehensive and timely understanding and assessment.

If the area of concern is not within the oversight of another primary supervisor or functional regulator, or if the supervisor or regulator does not conduct or coordinate the examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant primary supervisors and functional regulators to the extent possible.

- *Additional required audit testing activities.* In all instances, the Federal Reserve will conduct testing activities as part of its audit infrastructure review (either by leading the activities and coordinating with other relevant primary supervisors or functional regulators, or participating in activities led by other relevant supervisors or regulators) on at least a three-year cycle to ensure that the internal audit program is appropriately designed and achieving its objectives.¹⁰

10. For nontraditional BHCs, the Federal Reserve will routinely conduct testing activities on at least a three-year cycle in instances where the BHC's relevant functional regu-

In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.1.2 Risk-Management and Internal Control Functions for Primary Risks to the Consolidated Organization

Objectives: Underlying the risk-focused approach to consolidated supervision of regional BHCs is the premise that it is each organization's responsibility to develop an appropriate control structure for identifying, measuring, monitoring, and controlling key risks as measured against supervisory standards and expectations, applicable laws and regulations, and evolving practices of well-managed organizations.

The Federal Reserve will understand and assess risk-management and control functions for primary risks to the consolidated organization (primary firmwide risk-management and control functions), and associated MIS, for each regional BHC. This will include risk-management and control functions for primary credit, legal and compliance,¹¹ liquidity, market, operational, and reputational risks for the consolidated organization. The Federal Reserve also will understand and assess other risk-management and control functions that, based on the specific characteristics and activities of the individual BHC, relate to primary risks to the organization as a whole.

For example, for regional BHCs with particularly dynamic corporate strategies, the Federal Reserve will understand and assess the adequacy of the control mechanisms relevant to such strategies, including strategic planning, merger integration, new business approval, and processes for ensuring that risk management and controls keep pace with areas of growing inherent risk.

In all instances, the adequacy of each primary firmwide risk-management or control mechanism depends on the appropriateness of the following:

lator has not developed—or, because of the organization's legal, operating, and regulatory structure, is not able to develop—a comprehensive understanding and assessment of the internal audit infrastructure.

11. Federal Reserve processes for understanding and assessing legal and compliance risk management encompass consumer compliance risk inherent in the organization's business activities.

1. control infrastructure and governance, including degree of oversight by the board and senior management;
2. development, maintenance, and communication of appropriate policies, procedures, and internal controls;
3. risk identification and measurement systems and processes, and associated MIS, that are adaptive to changing circumstances and capable of providing timely, accurate, and comprehensive information to senior management and the board;
4. monitoring and testing the effectiveness of controls;
5. processes for identifying, reporting, and escalating issues and emerging risks;
6. ability to implement corrective actions in a timely manner;
7. appropriate authority and independence of staff to carry out responsibilities; and
8. integration of risk-management and control objectives within management goals and the organization's compensation structure.

Organizations in the regional BHC portfolio use a variety of control structures to monitor, manage, and control firmwide risks. A number of larger organizations have implemented firmwide risk-management functions to measure and assess the range of their exposures across business lines and legal entities and the way these exposures interrelate. However, many organizations within the portfolio effectively control risks using a decentralized approach that relies on individual control structures for the organization's primary business lines or legal entities. In all instances, the Federal Reserve will assess whether the approach to a key control function used by a particular organization is effective in controlling primary risks to the consolidated organization.¹²

12. As outlined in SR-08-8/CA-08-11, "Compliance Risk-Management Programs and Oversight at Large Banking Organizations with Complex Compliance Profiles," (see section 2124.07), while the Federal Reserve does not prescribe a particular organizational structure for primary firmwide risk-management and control functions, establishment of a firmwide function that is dedicated to managing and overseeing compliance risk, and that promotes a strong compliance culture, is particularly important for large banking organizations with complex compliance profiles, due to the unique challenges associated with compliance risk management for these organizations. In addition to the oversight provided by the board and various executive and management committees, a key component of firmwide compliance oversight for these organizations is a corporate compliance function that has day-to-day responsibility for overseeing and supporting the

Supervisory Activities: The Federal Reserve will use continuous monitoring activities to understand and assess each primary firmwide risk-management and control function. This process begins with the overarching design and architecture of each primary firmwide risk-management or control function, and drills down, as appropriate, through analysis of risk management and controls for material portfolio areas and business lines (described in section 1050.2.3.1.3 below). Activities will verify the sufficiency of fundamental aspects of internal controls in relation to the holding company's current risk profile and in comparison with supervisory expectations and evolving sound practices, and assess the capability of these primary functions (whether centralized or decentralized) to remain effective in the face of growth, changing strategic direction, significant market developments, and other internal or external factors.

The results of continuous monitoring activities, as documented in supervisory products that reflect the Federal Reserve's overview and risk assessment of the organization, may identify certain primary firmwide risk-management or control functions that require more intensive supervisory focus due to (1) significant changes in inherent risk, control processes, or key personnel; (2) potential concerns regarding the adequacy of controls; or (3) the absence of sufficiently recent examination activities for a primary firmwide risk-management or control function by the Federal Reserve or another relevant primary supervisor or functional regulator.

In these instances, the Federal Reserve will work with other relevant primary supervisors or functional regulators (where applicable) to develop discovery reviews or testing activities focusing on the area of concern. In situations where another primary supervisor or functional regulator leads the examination activities, the Federal Reserve may conduct portions of the examination, or otherwise participate as necessary (e.g., in determining the examination objectives and scope), to ensure that the review provides sufficient information on the specific area of concern to form a comprehensive and timely understanding and assessment.

If the primary firmwide risk-management or control function is not within the oversight of another primary supervisor or functional regulator, or if the primary supervisor or functional regulator does not conduct or coordinate the

implementation of the organization's firmwide compliance risk-management program and that plays a key role in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.

examination activities in a reasonable period of time, the Federal Reserve will lead the necessary examination activities in coordination with other relevant supervisors and regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.1.3 Risk Management of Material Portfolios and Business Lines

Objectives: For each regional BHC, there are selected portfolio risk areas (such as retail or wholesale credit risk) or individual business lines (such as residential mortgage or commercial real estate lending) that are primary drivers of risk or revenue, or that otherwise materially contribute to either understanding inherent risk within the consolidated organization or assessing controls for a broader corporate function (such as consolidated credit-risk management).

During the development of supervisory products that reflect the Federal Reserve's overview and risk assessment of the organization, the Federal Reserve will analyze external factors and internal trends in the BHC's strategic initiatives—as evidenced by budget and (where applicable) internal capital allocations and other factors—to identify significant activities and areas vulnerable to volatility in revenue, earnings, capital, or liquidity that represent material risks or activities of the organization. This determination of material portfolios and business lines considers all associated risk elements, including legal and compliance risks. For example, when evaluating whether retail activities such as mortgage or automobile lending are material to a banking organization, the extent of inherent consumer compliance and reputational risks, as well as interest rate and credit risks, should be considered.

Supervisory Activities: Because an understanding of material risks and activities is needed to assess the primary firmwide risk-management and control functions (as discussed in preceding section 1050.2.3.1.2), the Federal Reserve will maintain an understanding of inherent risk and assess the adequacy of risk-management and internal controls for material portfolios and business lines. To form this understanding and assessment, the Federal Reserve will rely primarily on continuous monitoring activities, supplemented, as appropriate, by examination activities.

To the fullest extent possible, the Federal Reserve will draw its understanding and assessment of these risks and risk-management practices from the information and assessment of the primary supervisor or functional regulator where the BHC's legal and operating structure provides the supervisor or regulator a sufficient view of these areas. In these instances, the Federal Reserve will undertake continuous monitoring and participate in activities led by primary supervisors and functional regulators, as necessary, to maintain an understanding and assessment of related firmwide risk-management and control functions.

A regional BHC's activities may span legal entities that are subject to oversight by multiple supervisors or regulators or that are outside the oversight of other supervisors or regulators. If this is the case, or if the primary supervisor or functional regulator does not conduct or coordinate the necessary continuous monitoring or examination activities in a reasonable period of time, the Federal Reserve will initiate and lead these activities in coordination with other relevant primary supervisors and functional regulators to the extent possible. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its supervisory and testing activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.1.4 Risk Management of Nonmaterial Business Lines

Objectives: For nonmaterial business lines identified during the development of supervisory products that reflect the Federal Reserve's overview and risk assessment of the organization, the Federal Reserve's focus will be on identifying and understanding those business lines that are increasing in importance and have the potential to become material.

Supervisory Activities: When a primary supervisor or functional regulator has a sufficient view of nonmaterial business lines, the Federal Reserve will, to the fullest extent possible, use information developed by that supervisor or regulator to monitor areas of increasing importance with the potential to become material. The Federal Reserve also will maintain an ability to access internal MIS for these businesses to facilitate a more in-depth analysis of a business line, if appropriate.

ate, to understand its growing importance to the organization.

For nonmaterial business lines that are not subject to oversight by a single primary supervisor or functional regulator, the Federal Reserve will engage in continuous monitoring activities to identify meaningful trends in risks and risk-management practices, and will maintain an understanding of associated MIS to facilitate more in-depth analysis of a business line, if appropriate, to understand its growing importance to the organization.

1050.2.3.2 Financial Condition

Objectives: The Federal Reserve’s evaluation of a regional BHC’s consolidated financial condition focuses on the ability of the organization’s resources to support the level of risk associated with its activities. Assessments are developed for each “CAEL” subcomponent: Capital Adequacy (C), Asset Quality (A), Earnings (E), and Liquidity (L).¹³

In developing this evaluation, the Federal Reserve’s primary focus is on developing an understanding and assessment of

1. the sufficiency of the BHC’s consolidated capital to support the level of risk associated with the organization’s activities and provide a sufficient cushion to absorb unanticipated losses;
2. the capability of liquidity levels and funds-management practices to allow reliable access to sufficient funds to meet present and future liquidity needs; and
3. other aspects of financial strength that need to be assessed on a consolidated basis across the organization’s various legal entities, or that relate to the financial soundness of the parent company and significant nonbank subsidiaries, as discussed in section 1050.2.3.3 below.

In assessing consolidated regulatory capital, the Federal Reserve looks to ensure that the BHC demonstrates the effectiveness of its framework for complying with relevant capital adequacy guidelines and meeting supervisory expectations, and focuses on analyzing key mod-

els and processes¹⁴ that influence this assessment. This assessment utilizes results from examinations led by the Federal Reserve or other primary supervisors or functional regulators, as well as information gained from the BHC’s internal control functions and from market-based assessments, where available.

When assessing the adequacy of a BHC’s liquidity levels and funds-management practices, areas of focus include¹⁵

1. the extent to which the treasury function is aligned with risk-management processes, and whether incentives are in place for business lines to compile and provide information on expected liquidity needs and contingency funding plans so that the treasury function is able to develop a firmwide perspective and incorporate business line information into assessments of actual and contingent liquidity risk;
2. whether funds-management practices provide sufficient funding flexibility to respond to unanticipated, evolving, and potentially correlated market conditions for the organization and/or across financial markets; and
3. the sufficiency of liquidity planning tools, such as stress testing, scenario analysis, and contingency planning efforts, including (1) whether liquidity buffers—comprised of unencumbered liquid assets as well as access to stable funding sources—adequately reflect the possibility and duration of severe liquidity shocks; (2) the reasonableness of assumptions about the stability of secured funding in circumstances in which the liquidity of markets for the underlying collateral becomes impaired; and (3) whether these efforts adequately reflect the potential for the organization to be called on in stressed environments to provide contingent liquidity support to off-balance-sheet entities or bring additional assets on the balance sheet (even if not legally or contractually obligated to do so).

Beyond capital adequacy and liquidity, the nature of independent Federal Reserve supervisory work required to evaluate a regional BHC’s consolidated financial condition depends largely on the extent to which other relevant primary

13. See SR-04-18 and section 4070.0 for more information about the CAEL subcomponents.

14. “Key models and processes” are those where evaluation of the model/process will influence the Federal Reserve’s assessment of the activity or control area that is supported by the model/process.

15. Assessing liquidity levels and funding practices for a consolidated BHC also incorporates elements presented in section 1050.2.3.3.2 below on “Parent Company and Non-bank Funding and Liquidity.”

supervisors or functional regulators have information or assessments upon which the Federal Reserve can draw. For example, more independent Federal Reserve work typically will be required to assess consolidated asset quality or earnings for regional BHCs with significant nonbank activities that are not functionally regulated. However, where all material holding company assets are concentrated in a single depository institution subsidiary, a minimal level of incremental Federal Reserve efforts typically will be required to assess consolidated asset quality and earnings.

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to assess a regional BHC's financial strength. Such activities will include periodic meetings with BHC management (such as the chief financial officer); review of regulatory reports, surveillance screens, and internal MIS; and analysis of market indicators (where available), including external debt ratings, subordinated debt spreads, and credit default swap spreads. Testing and discovery activities will be used as necessary to assist in the understanding and assessment of areas of concern.

Testing and discovery activities also will be used to understand and assess the sufficiency of the BHC's consolidated capital and liquidity positions to support the level of risk associated with its activities, including (1) regulatory capital calculation methodologies¹⁶ and, where applicable, internal assessments of capital adequacy¹⁷ and (2) funds-management and liquidity planning tools and practices. The Federal Reserve will work with other relevant primary supervisors and functional regulators to participate in or, if necessary, to coordinate activities designed

to analyze key capital and liquidity models or processes of a depository institution or functionally regulated subsidiary that are of such significance that they will influence the Federal Reserve's assessment of these areas. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.3 Impact

1050.2.3.3.1 Risk Management and Financial Condition of Significant Nonbank Subsidiaries

Objectives: Many regional BHCs engage in activities and manage control functions on a firmwide basis, spanning depository institution and nonbank legal entities. In some instances, these BHCs have intra-group exposures and servicing arrangements across affiliates, presenting increased potential risks for depository institution subsidiaries and a higher likelihood of aggregate risk concentrations across the organization's legal entities. Common interactions between a regional BHC's depository institution subsidiaries and their nonbank affiliates (including the parent company) include assets originating in, or being marketed by, a nonbank affiliate that are booked in the depository institution; a depository institution providing funding for nonbank affiliates; and risk-management or internal control functions being shared between depository and nonbank operations.

Due to these interrelationships, financial, legal, compliance, or reputational troubles in one part of a BHC can spread rapidly to other parts of the organization. Even absent these interactions, the parent or nonbank subsidiaries of an organization may present financial, legal, compliance, or reputational risk to the consolidated entity, and thus directly or indirectly to its depository institution subsidiaries. As the federal banking agency charged with supervising the organization on a consolidated basis, the Federal Reserve is responsible for understanding and assessing the risks that the parent bank holding company and its nonbank subsidiaries may pose to the BHC itself or its depository institution subsidiaries.

The primary objectives of Federal Reserve supervision of the nonbank subsidiaries of a bank holding company are to

16. Assessments of the adequacy of regulatory capital for BHCs that have received Federal Reserve supervisory approval to use internal estimates of risk in their regulatory capital calculations should include, among other things, regular verification that these organizations continue to meet on an ongoing basis all applicable requirements associated with internal estimates. See, for example, the capital adequacy guidelines for market risk at BHCs (Regulation Y: 12 C.F.R. 225, Appendix E) and the new advanced capital adequacy framework for BHCs (Regulation Y: 12 C.F.R. 225, Appendix G).

17. Capital planning activities for all BHCs should be forward looking and provide for a sufficient range of stress scenarios commensurate with the organization's activities. For those regional BHCs that utilize more-rigorous and structured internal processes for assessing capital adequacy beyond regulatory capital measures, the Federal Reserve focuses on whether such internal processes ensure that all risks are properly identified, reliably quantified (where possible) across the entire organization, and supported by adequate capital. See SR-99-18, "Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles," and section 4060.7.

1. identify significant nonbank activities and risks—where the parent company or nonbank subsidiaries engage in risk-taking activities or hold exposures that are material to the risk management or financial condition of the consolidated organization or a depository institution subsidiary—by developing an understanding of the size and nature of primary activities and key trends, and the extent to which business lines, risks, or control functions are shared with or may impact a depository institution affiliate;
 2. evaluate the financial condition and the adequacy of risk-management practices of the parent and significant nonbank subsidiaries, including the ability of nonbank subsidiaries to repay advances provided by the parent, using benchmarks and analysis appropriate for those businesses;
 3. evaluate the degree to which nonbank entity risks may present a threat to the safety and soundness of subsidiary depository institutions, including through transmission of legal, compliance, or reputational risks;
 4. identify and assess any intercompany relationships, dependencies, or exposures—with the potential to threaten the condition of a depository institution affiliate; and
 5. evaluate the effectiveness of the policies, procedures, and systems that the holding company and its nonbank subsidiaries use to ensure compliance with applicable laws and regulations, including consumer protection laws.¹⁸
3. understand the scope of intercompany transactions and aggregate concentrations, and assess the adequacy of risk-management processes, accounting policies, and operating procedures to measure and manage related risks;
 4. identify and assess key interrelationships and dependencies between subsidiary depository institutions and nonbank affiliates, such as the extent to which a depository institution subsidiary is reliant on services provided by the parent company or other nonbank affiliates and the reasonableness of associated management fees;
 5. identify those nonbank subsidiaries whose activities present material financial, legal, compliance, or reputational risk to the consolidated entity and/or a depository institution subsidiary;
 6. identify significant businesses operated across multiple legal entities for accounting, risk management, or other purposes, as well as activities that functionally operate as separate business units for legal or other reasons;
 7. identify intercompany transactions subject to Regulation W—utilizing information submitted on quarterly regulatory reporting form FR Y-8 (“The Bank Holding Company Report of Insured Depository Institutions’ Section 23A Transactions with Affiliates”), internal MIS, and other information sources—and determine (in conjunction with the primary supervisor) whether compliance issues are present; and
 8. understand and assess the sufficiency, reliability, and timeliness of associated MIS relied upon by the board, senior management, and senior risk managers and committees to monitor key activities and risks.

Supervisory Activities: For all significant nonbank subsidiaries and activities of the parent BHC, the Federal Reserve will use continuous monitoring activities and discovery reviews to

1. maintain an understanding of the holding company’s business line and legal entity structure, including key interrelationships and dependencies between depository institution subsidiaries and nonbank affiliates, utilizing regulatory structure reports, internal MIS, and other information sources;
2. understand and assess the exposure to, and tolerance for, legal, compliance, and reputa-

Periodic testing may be used to supplement continuous monitoring and discovery reviews to (1) ensure that key risk-management and internal control practices conform to internal policies and/or are designed to ensure compliance with the law and (2) understand and assess operations presenting a moderate or greater likelihood of significant negative impact to a subsidiary depository institution or the consolidated organization. Areas of potential negative impact include financial or operational risks that pose a potential threat to the safety and soundness of a depository institution subsidiary, or to the holding company’s ability to serve as a source of financial and managerial strength to its depository

18. The Federal Reserve’s supervisory objectives and activities related to the effectiveness of consumer compliance policies, procedures, and systems at nonbank subsidiaries of a BHC currently are under review, and additional or modified guidance on this topic may be issued in the future.

tory institution subsidiaries. Testing will focus on controls for identifying, monitoring, and controlling such risks. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.3.3.2 Parent Company and Nonbank Funding and Liquidity

Objectives: One of the Federal Reserve’s primary responsibilities as consolidated supervisor is to help ensure that the parent company and its nonbank subsidiaries do not have an adverse impact on the organization’s depository institution subsidiaries. To meet this objective, the Federal Reserve will assess the extent to which funding and liquidity policies and practices of the parent company or nonbank subsidiaries may undermine the BHC’s ability to act as a source of strength to the organization’s depository institution subsidiaries.

Areas of focus will include an assessment of

1. the ability of the parent company and nonbank subsidiaries to maintain sufficient liquidity, cash flow, and capital strength to service their debt obligations and cover fixed charges;
2. the likelihood that parent company or nonbank funding strategies could undermine public confidence in the liquidity or stability of subsidiary depository institutions;
3. policies and practices that are aimed at ensuring the stability of parent company funding and liquidity, as evidenced by the utilization of long-term or permanent financing to support capital investments in subsidiaries and other long-term assets, and the degree of dependence on short-term funding mechanisms such as commercial paper;
4. the extent of “double leverage”¹⁹ and the organization’s capital management policies, including the distribution and transferability of capital across jurisdictions and legal entities; and
5. the parent company’s ability to provide financial and managerial support to its depository institution subsidiaries during periods of financial stress or adversity, including the sufficiency of related stress testing, scenario analysis, and contingency planning efforts.

The Federal Reserve also will remain apprised

of the funding profile—including intraday liquidity management policies and practices, and compliance with the “Federal Reserve Policy on Payments System Risk”²⁰—and market access of material depository institution subsidiaries, as in most instances these entities represent the consolidated BHC’s primary and most active vehicles for external funding and liquidity management. The primary supervisor retains responsibility for assessing liquidity risk-management practices with respect to the depository institution subsidiary.

Supervisory Activities: The Federal Reserve will use continuous monitoring activities—including monitoring market conditions and indicators where available—and discovery reviews to understand and assess parent company and nonbank subsidiary funding and liquidity policies and practices, as well as any potential negative impact these policies and practices might have on a subsidiary depository institution or the consolidated organization. On at least an annual basis, the results of these supervisory activities will be reviewed to determine whether there is (1) a significant change in inherent funding or liquidity risk stemming from changing strategies or activities; (2) a significant change in organizational structure, oversight mechanisms, key personnel, or other key elements of related risk-management or internal controls; or (3) any potential concern regarding the adequacy of related risk-management or internal controls.

If significant changes or potential concerns are identified, the Federal Reserve will design and conduct testing activities focused on understanding and assessing the areas of change and/or concern in order to ensure that funding and liquidity risk-management and control functions are appropriately designed and achieving their intended objectives.

For regional BHCs where parent company or nonbank subsidiary third-party debt obligations are deemed to be material in relation to equity or may otherwise have a potentially negative impact on the BHC’s ability to serve as a source of strength for its depository institution subsidiaries, the Federal Reserve will undertake testing activities on at least a three-year cycle, assessing the individual elements of risk management for parent company and nonbank funding and

19. “Double leverage” refers to situations in which debt is issued by the parent company and the proceeds are invested in subsidiaries as equity.

20. This policy statement is available on the Board’s public website at www.federalreserve.gov/paymentsystems/psr.

liquidity; board and senior management oversight; policies, procedures, and limits; risk monitoring and management information systems; and related internal controls. In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

1050.2.4 INTERAGENCY COORDINATION

1050.2.4.1 Coordination and Information Sharing Among Domestic Primary Bank Supervisors and Functional Regulators

Objectives: Effective consolidated supervision requires strong, cooperative relationships between the Federal Reserve and other relevant domestic primary bank supervisors and functional regulators.²¹ To achieve this objective, the Federal Reserve has worked over the years to enhance interagency coordination through the development and use of information-sharing protocols and mechanisms. These protocols and mechanisms respect the individual statutory authorities and responsibilities of the respective supervisors and regulators, provide for appropriate information flows and coordination to limit unnecessary duplication or burden, comply with restrictions governing access to information, and ensure that the confidentiality of information is maintained.

As discussed in section 1050.2.3, in understanding and assessing the activities and risks of the organization as a whole, the Federal Reserve will rely to the fullest extent possible on the examination and other supervisory work conducted by the domestic primary bank supervisors and functional regulators of a BHC's subsidiaries. In addition, the Federal Reserve will seek to coordinate its supervisory activities with relevant supervisors and regulators, and will work to align each agency's assessment of key corporate governance functions, risk-management and internal control functions for primary risks, financial condition, and other areas of the consolidated BHC's operations as applicable.

Supervisory Activities: The Federal Reserve will continue to work with the relevant primary supervisors and functional regulators of a regional

BHC's subsidiaries to ensure that the necessary information flows and coordination mechanisms exist to permit the effective supervision of the BHC on a consolidated basis. The Federal Reserve will continue to share information, including confidential supervisory information, obtained or developed through its consolidated supervisory activities with other relevant primary supervisors or functional regulators when appropriate and permitted by applicable laws and regulations.²²

The Federal Reserve also will continue to use a variety of formal and informal channels to facilitate interagency information sharing and coordination consistent with the principles outlined above, including

- supervisory protocols, agreements, and memoranda of understanding (MOUs) with primary supervisors and functional regulators that allow the coordination of supervisory activities and that permit the ongoing exchange of information, including confidential information on a confidential basis;
- bilateral exchanges of letters to facilitate information sharing on a situation-specific basis;
- periodic and as-needed contacts with primary supervisors and functional regulators to discuss and coordinate matters of common interest, including the planning and conduct of examinations and continuous monitoring activities;
- the use of information technology platforms, such as the Banking Organization National Desktop (BOND),²³ to provide secure automated access to examination/inspection reports and other supervisory information prepared by the Federal Reserve and other relevant supervisors and regulators; and
- participation in a variety of interagency forums that facilitate the discussion of broad industry issues and supervisory strategies, including the Federal Financial Institutions Examination Council, the President's Working Group on Financial Markets, and the Federal Reserve-

22. Among the federal laws that may limit the sharing of information among supervisors are the Right to Financial Privacy Act (12 U.S.C. 3401 *et seq.*) and the Trade Secrets Act (18 U.S.C. 1905). The Federal Reserve has established procedures to authorize the sharing of confidential supervisory information, and Federal Reserve staff must ensure that appropriate approvals are obtained prior to releasing such information. See Subpart C of the Board's Rules Regarding the Availability of Information (12 C.F.R. 261.20 *et seq.*).

23. BOND is a Federal Reserve information technology platform providing secure interagency access to documents, supervisory and financial data, and other information utilized in the consolidated supervision of individual BHCs and FBOs, and in developing comparative analyses of organizations with similar business lines and risk characteristics.

21. Section 1050.2.4.2 discusses cooperation and information sharing among foreign supervisors.

sponsored cross-sector meetings of financial supervisors and regulators.

1050.2.4.1.1 Coordination of Examination Activities at a Supervised BHC Subsidiary

As discussed in section III, the Federal Reserve will seek to work cooperatively with the relevant primary supervisor or functional regulator to address information gaps or indications of weakness or risk identified in a supervised BHC subsidiary that are material to the Federal Reserve's understanding or assessment of the consolidated organization's risks, activities, or key corporate governance, risk-management, or control functions. Prior to conducting discovery reviews or testing activities at a depository institution (other than where the Federal Reserve is the primary federal supervisor) or functionally regulated subsidiary of a BHC, the Federal Reserve will

- review available information sources as part of its continuous monitoring activities, including examination reports and the BHC's internal MIS, to determine whether such information addresses the Federal Reserve's information needs or supervisory concerns; and
- if needed, seek to gain a better understanding of the primary supervisor's or functional regulator's basis for its supervisory activities and assessment of the subsidiary. This may include a request to review related examination work.

If, following these activities, the Federal Reserve's information needs or supervisory concerns remain, the Federal Reserve will work cooperatively with the relevant primary supervisor or functional regulator in the manner discussed in section 1050.2.3.²⁴

1050.2.4.2 Cooperation and Information Sharing With Host-Country Foreign Supervisors

Objectives: A number of regional BHCs have international banking and other operations that are licensed and supervised by foreign host-

country authorities. As home-country supervisor for domestic BHCs, the Federal Reserve is responsible for the comprehensive, consolidated supervision of these organizations, while each host country is responsible for supervision of the legal entities (including foreign subsidiaries of U.S. BHCs) in its jurisdiction.

Information sharing among domestic and foreign supervisors, consistent with applicable laws, is essential to ensure that a regional BHC's global activities are supervised on a consolidated basis. Cross-border information sharing is often facilitated by an MOU that establishes a framework for bilateral relationships and includes provisions for cooperation during the licensing process, in the supervision of ongoing activities, and in the handling of problem institutions. The Federal Reserve has established bilateral and multilateral information-sharing MOUs and other arrangements with numerous host-country foreign supervisors. The Federal Reserve also monitors changes in foreign bank regulatory and supervisory systems and seeks to understand how these systems affect supervised banking organizations. In addition to its longstanding cooperative relationships with home- and host-country foreign supervisors, the Federal Reserve expects to increasingly lead and participate in "colleges of supervisors" and other multilateral groups of supervisors that discuss issues related to specific, internationally active banking organizations.

The Federal Reserve also is a member of the Basel Committee on Banking Supervision, which is a forum for supervisors from member countries to discuss important supervisory issues, foster consistent supervision of organizations with similar business and risk profiles, promote the sharing of leading supervisory practices, and formulate guidance to enhance and refine banking supervision globally.

The Federal Reserve's processes for understanding and assessing firmwide legal and compliance risk management, as described earlier, encompass both domestic and international operations. Most areas of supervisory focus for management of legal and compliance risks are applicable to both domestic and international entities, and include proper oversight of licensed operations, compliance with supervisory and regulatory requirements, and the sufficiency of associated MIS.

There are, however, areas of focus for the Federal Reserve that are unique to a holding company's international operations. For exam-

24. As outlined in section 1050.2.3, certain Federal Reserve examination activities are to be conducted on a minimum three-year cycle to verify, through testing, the sufficiency of key control processes. These activities are to be conducted regardless of whether or not there is an information gap or indication of weakness or risk.

ple, some host-country legal and regulatory structures and supervisory approaches are fundamentally different from those in the United States. As a result, the banking organization often must devote additional resources to maintain expertise in local regulatory requirements. In some instances, privacy concerns have led to limits on the information a BHC's foreign office may share with its parent company, thereby limiting the parent company's ability to exercise consolidated risk management on a global basis.

Additionally, while considerable progress has been made to strengthen supervisory cross-border cooperation and information sharing, the Federal Reserve and other U.S. supervisors have at times faced challenges in accessing information on a bank's or BHC's foreign operations or in carrying out examinations of cross-border or foreign activities. These circumstances are to be taken into account when developing a supervisory strategy for a regional BHC with cross-border or foreign operations.

Supervisory Activities: For regional BHCs with international operations, continuous monitoring will be used to understand and assess each BHC's international strategy, trends, operations, and legal entity structure, as well as related governance, risk-management, and internal controls. For a regional BHC with significant international operations or risks, an assessment of cross-border and foreign operations will be incorporated into the evaluation of key corporate governance functions and primary firmwide risk-management and internal control functions, including legal and regulatory risk management.

Continuous monitoring activities will include review of materials prepared by host-country supervisors, including examination reports and assessments, and ongoing communication with relevant foreign and domestic supervisors regarding trends and assessments of cross-border and foreign operations.

When assessing the sufficiency of a regional BHC's management of its international operations, consideration is given to the extent that foreign laws restrict the transmission of information to the BHC's head office. Impediments to sharing information imposed by a host country may constrain the BHC's ability to effectively oversee its international operations and globally manage its risks, and the materiality of such impediments should be a determinant of

whether the organization should be conducting operations in that host country.

In addition, any limits placed on the Federal Reserve's ability to access information on host-country operations, or to engage in onsite activities at the organization's operations in the host country, should be considered when assessing whether the organization's activities in that jurisdiction are appropriate.

1050.2.4.3 Indications of Weakness or Risk Related to Subsidiary Depository Institutions

Objectives: For areas beyond those specifically addressed in section 1050.2.3, there may be circumstances where the Federal Reserve has indications of material weakness or risk in a depository institution subsidiary of a BHC that is supervised by another primary supervisor, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of that supervisor. Because a primary objective of consolidated supervision is to protect the BHC's depository institution subsidiaries, the Federal Reserve will follow up with the appropriate primary supervisor in these circumstances to help ensure that, to the extent that a material weakness or risk exists, it is addressed appropriately.

Supervisory Activities: The Federal Reserve will take the following steps if it has indications of material weakness or risk in a depository institution subsidiary (other than where the Federal Reserve is the primary federal supervisor) in an area beyond those specifically addressed in section 1050.2.3, and it is not clear that the weakness or risk is adequately reflected in the assessment or supervisory activities of the depository institution's primary supervisor.

- The Federal Reserve will first review available information sources, discuss the areas of concern with the primary supervisor, and seek to review the supervisor's related work.
- If concerns remain following these activities, the Federal Reserve will request that the primary supervisor conduct a discovery review or testing activity at the depository institution to address the area of concern.
- In the event the primary supervisor does not undertake activities to address the concern in a reasonable period of time, the Federal Reserve will design and lead an examination of the depository institution to address the matter in consultation with the primary supervisor. A

senior Federal Reserve official will communicate this decision in writing to a senior official of the primary supervisor.

1050.2.4.4 Condition or Management of BHC Subsidiary is Less than Satisfactory

Objectives: As noted above, a primary responsibility of the Federal Reserve as consolidated BHC supervisor is to ensure that a holding company's activities, policies, and practices do not undermine its ability to serve as a source of financial and managerial strength to its depository institution subsidiaries. In situations where the condition or management of a supervised or functionally regulated BHC subsidiary is determined to be less than satisfactory, the Federal Reserve's focus as consolidated supervisor is on complementing the efforts of the primary supervisor or functional regulator. In doing so, the Federal Reserve will seek to ensure that the parent company provides appropriate support to the subsidiary and does not take actions that may further weaken the parent company's depository institution subsidiaries or its ability to act as a source of strength for such subsidiaries.

Beyond the specific activities noted below, these circumstances also may require the Federal Reserve to enhance the activities addressed in section 1050.2.3 for understanding and assessing key corporate governance functions, or primary firmwide risk-management and internal controls. In addition, the Federal Reserve will adjust its supervisory activities as necessary when the consolidated BHC is in weakened condition or when there are questions regarding the capabilities of the holding company's management.

Supervisory Activities:

- *Depository institution subsidiary.* In instances when a depository institution subsidiary's condition or management is rated less than satisfactory, or when the depository institution subsidiary otherwise faces financial stress or material risks, the Federal Reserve's primary supervisory objectives as consolidated supervisor are to ensure that the parent company (1) provides appropriate support to the depository institution and (2) does not take action that could harm the depository institution. The Federal Reserve will work closely with the primary supervisor to understand whether the BHC or a nonbank affiliate has contributed to the depository institution's weakened condition, to understand the impact of the deposi-

tory institution on the BHC's condition, and to determine if the holding company is providing appropriate support to the depository institution. The Federal Reserve will coordinate its activities with those of the primary supervisor to the extent appropriate.

- *Nonbank subsidiary.* When any nonbank subsidiary faces financial stress or material risks, the Federal Reserve will seek to ensure that its condition and activities do not jeopardize the safety and soundness of the BHC or its depository institution subsidiaries, as discussed above in sections 1050.2.3.3.1, "Risk Management and Financial Condition of Significant Nonbank Subsidiaries" and 1050.2.3.3.2, "Parent Company and Nonbank Funding and Liquidity." The Federal Reserve also will take appropriate steps to ensure that any actions taken by the parent company to assist a nonbank subsidiary do not impair the BHC's continuing ability to serve as a source of strength to its depository institution subsidiaries. The Federal Reserve will coordinate its activities with those of any relevant functional regulator to the extent appropriate.

1050.2.4.5 Edge and Agreement Corporations

Objectives: Some regional BHCs control an Edge or agreement corporation subsidiary. The Federal Reserve serves as the primary supervisor of each Edge and agreement corporation subsidiary in addition to its role as consolidated BHC supervisor.²⁵ When the Edge or agreement corporation is held by a U.S. bank, the primary supervisor often relies on information provided by the Federal Reserve in developing its own understanding and assessment of the parent bank.

During each calendar year, the Federal Reserve performs an examination of each Edge and agreement corporation, assesses the Bank Secrecy Act/Anti-Money-Laundering (BSA/AML) compliance program, and assigns a CAMEO rating. In addition, the Federal Reserve periodically conducts assessments of Edge and agreement

25. The Federal Reserve is solely responsible for approving, and supervising the activities of, U.S. Edge and agreement corporations. As discussed in SR-90-21, "Rating System For International Examinations," one of the Federal Reserve's supervisory responsibilities is the assignment of a CAMEO rating (Capital, Asset Quality, Management, Earnings, and Operations and Internal Controls) to each Edge and agreement corporation.

corporations to determine whether a consumer compliance examination is warranted, in which case a compliance examination is conducted and a consumer compliance rating is assigned.

The Federal Reserve will coordinate the conduct of its activities as Edge and agreement corporation supervisor with its activities as consolidated supervisor. To this end, the extent and scope of Federal Reserve supervisory work related to an Edge or agreement corporation will be tailored to the entity's activities, risk profile, and other attributes. A number of specific elements will be considered when developing a supervisory approach, including

1. structure and attributes, including whether the Edge or agreement corporation is a banking or investment organization;
2. the size, nature, and location of its primary activities, as well as key financial and other trends;
3. the business lines and risks, and associated trends, of the Edge or agreement corporation's primary activities on a standalone basis, as well as their significance to the risk profile of the parent bank (if applicable) and BHC;
4. the extent to which risk-management and internal control functions are unique to the Edge or agreement corporation, or are shared with a parent bank, another affiliate, or the consolidated BHC;
5. any potential Regulation K limitations or other U.S. compliance issues, and the adequacy of processes to ensure ongoing compliance; and
6. the adequacy of processes for ensuring compliance with all applicable laws and regulations imposed by host-country supervisors for the Edge or agreement corporation's international operations.

Supervisory Activities: The Federal Reserve will maintain an understanding and perform an annual examination for each Edge and agreement corporation. While the examination scope will be risk focused to reflect the organization's scale, activities, and risk profile, in all cases the Federal Reserve will assess the adequacy of processes to ensure compliance with BSA/AML requirements and other applicable U.S. laws and regulations, and with applicable foreign laws and regulations.

In developing its supervisory strategy, the Federal Reserve will identify those elements that are unique to the Edge or agreement corpo-

ration and those that are shared with the parent bank or BHC, and will coordinate fulfillment of the Federal Reserve's responsibilities as Edge and agreement corporation supervisor with execution of its consolidated supervision role. This strategy will reflect the extent to which reliance can be placed on (1) the Federal Reserve's understanding and assessments of key corporate governance, risk-management, and control functions, as well as material portfolios and business lines, of the consolidated BHC; (2) assessments developed by the primary supervisor (when applicable) for business lines, risk management, control functions, or financial factors that are common to the Edge or agreement corporation and its parent bank; and (3) findings developed by host-country supervisors for activities under their jurisdiction.

In addition, where the primary supervisor of an Edge or agreement corporation's parent bank relies on the Federal Reserve's understanding and assessment in order to develop its CAMELS rating,²⁶ the Federal Reserve will work to fulfill that supervisor's information needs.

1050.2.4.6 Nontraditional Bank Holding Companies

Objectives: A small number of regional BHCs are considered to be nontraditional bank holding companies because most or all of their significant nondepository subsidiaries are regulated by a functional regulator, and subsidiary depository institutions are small in relation to the nondepository entities. As with all BHCs, the level of analysis conducted and resources needed to supervise and assess nontraditional BHCs should be commensurate with the level of risk posed by the organization's depository institution subsidiaries to the federal safety net and the level of risk posed by the parent or its nonbank subsidiaries to the BHC's subsidiary depository institutions.

Due to the unique structure of nontraditional BHCs, it is likely that a single functional regulator will have a complete view of, and ability to address, significant aspects of the organization's

26. The U.S. banking agencies assign CAMELS (Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, and Sensitivity to Market Risk) ratings to U.S. banking organizations as part of their ongoing supervision of these organizations. See SR-96-38, "Uniform Financial Institutions Rating System," (see A.5020.1 of the *Commercial Bank Examination Manual* and sections 4020.9, 4070.0.4, and 4080.0) Also see SR-97-4, "Interagency Guidance on Common Questions About the Application of the Revised CAMELS Rating System."

firmwide activities, risks, risk management, and controls. Therefore, assessments and information developed by the primary functional regulator typically will be the main tool utilized by the Federal Reserve in developing and assigning the “R” and “F” components of the consolidated RFI rating. More independent Federal Reserve work typically will be required to understand and assess the impact of the nondepository entities on the subsidiary depository institutions in order to assign the “I” rating.

Supervisory Activities: The Federal Reserve will primarily utilize continuous monitoring activities to maintain its assessments of risk management and financial condition for nontraditional BHCs, relying on the assessments and information developed by the primary functional regulator to the fullest extent possible.

In addition to continuous monitoring, discovery reviews and periodic testing will be used to maintain an understanding and assessment of the potential negative impact of nonbank entities on subsidiary depository institutions as discussed above in sections 1050.2.3.3.1 and 1050.2.3.3.2 on, respectively, “Risk Management and Financial Condition of Significant Nonbank Subsidiaries” and “Parent Company and Nonbank Funding and Liquidity.” In all cases involving a functionally regulated subsidiary, the Federal Reserve will conduct its activities in accordance with the provisions described above in section 1050.2.1.2.

Discussed within these subsections are topics associated with regard to the overall bank holding company organization. Included is general information, inspection objectives and procedures, and in some instances references to laws, interpretations, and Board orders. The primary topics addressed are the supervision of subsidiaries, grandfather rights, commitments, extensions of credit to BHC officials, man-

agement information systems, taxes, funding, control and ownership, reporting by foreign and domestic banking organizations, formal corrective actions, sharing of criminal referral information, investment transactions, recognition and control of risk, purchase and sale of U.S. Government guaranteed loans, and venture capital.

The relative merit of the degree of supervision is dependent upon a number of factors, and must be analyzed in light of efficiency and operating performance. The degree and nature of control over subsidiary organizations in a holding company system usually falls between two extremes: a tightly controlled, centralized network similar to a branch system, or a loosely controlled, decentralized system with each subsidiary operating autonomously. A bank holding company might originate as a “shell” corporation organized by investors interested in purchasing a bank, or by a bank interested in reorganizing into a holding company structure in order to expand through acquisition of nonbank concerns or other banks. The management and directorate of such a holding company are often the same as that of the bank. As the holding company expands through acquisitions, the parent may continue to exercise control through the staff of the lead bank, or may form a separate staff to overview the operations of all subsidiaries. The relative merit of the degree of supervision is dependent upon a number of factors, and must be analyzed in light of efficiency and operating performance.

The level at which policies are established and supervised, the frequency of contact between the parent and subsidiaries, and the extent to which officers and directors of the parent serve also as officers and directors of the subsidiary organizations are indicative of the level of control exercised by the parent. A centralized bank holding company is characterized by the placement of directors and officers of the parent company (or those of the lead bank) in each of its subsidiaries, with frequent group meetings held between the officers of the lead bank or holding company and those of the subsidiary organizations. While this is an efficient method of operation, this type of organization builds in the potential for conflicts of interest for those individuals who serve in dual capacities. Corporate policies should recognize this potential and provide guidance for resolution. The overriding principle should be that *no* member of the bank holding company organization should be disadvantaged by a transaction with another affiliate. Management of the investment portfolio, budgets, tax planning, personnel, correspondent relationships, loans and loan participations, and liability management are usually controlled by the parent or lead bank in a centralized system.

A decentralized system is one in which the banks act independently of the parent company,

with infrequent contacts with affiliates, placement of parent or lead bank directors and officers in less than a majority of the banks within the system and infrequent reporting by subsidiaries concerning investments and operating performance. The bank holding company might act only in a minor advisory capacity. In such a decentralized system each subsidiary operates as a relatively autonomous unit, with authority and responsibility for certain actions delegated by the parent to the board and/or chief executive officer of each subsidiary.

It is the responsibility of the directors and management of the parent company to establish and supervise the policies of subsidiaries, either directly or through delegation of authority. The importance of written policies in a delegated, decentralized organization cannot be over-emphasized, and the selection of qualified officers to carry out policies is equally important. If written policies have not been developed by the holding company, the examiner should recommend that major policies be written and communicated to subsidiaries. Policies should ensure that subsidiaries are not managed for cross purposes and should avoid concentrations of risks on a consolidated basis.

2010.0.1 POLICY STATEMENT ON THE RESPONSIBILITY OF BANK HOLDING COMPANIES TO ACT AS SOURCES OF STRENGTH TO THEIR SUBSIDIARY BANKS

The Board is concerned about situations where a bank has been threatened with failure notwithstanding the availability of resources to its parent bank holding company. In order to assure that the Board’s policy that bank holding companies serve as sources of financial strength to subsidiary banks is understood by bank holding companies, the Board has issued a general policy statement reaffirming and articulating these principles, and confirming that the policy applies to failing bank situations. This long-standing policy has been recognized by the Supreme Court in its decision in *Board of Governors v. First Lincolnwood Corp.*, 439 U.S. 234 (1978), and has been incorporated explicitly in the Board’s Regulation Y, 12 C.F.R. 225.4(a)(1).

A fundamental and long-standing principle

underlying the Federal Reserve's supervision and regulation of bank holding companies is that bank holding companies should serve as sources of financial and managerial strength to their subsidiary banks. It is the policy of the Board that in serving as a source of strength to its subsidiary banks, a bank holding company should stand ready to use available resources to provide adequate capital funds to its subsidiary banks during periods of financial stress or adversity and should maintain the financial flexibility and capital-raising capacity to obtain additional resources for assisting its subsidiary banks in a manner consistent with the provisions of this policy statement.

Since the enactment of the Bank Holding Company Act in 1956, the Board has formally stated on numerous occasions that a bank holding company should act as a source of financial and managerial strength to its subsidiary banks. As the Supreme Court recognized, in the 1978 *First Lincolnwood* decision, Congress has expressly endorsed the Board's long-standing view that holding companies must serve as a "source of strength to subsidiary financial institutions."¹ In addition to frequent pronouncements over the years and the 1978 Supreme Court decision, this principle has been incorporated explicitly in Regulation Y since 1983. In particular, Section 225.4(a)(1) of Regulation Y provides that:

"A bank holding company shall serve as a source of financial and managerial strength to its subsidiary banks and shall not conduct its operations in an unsafe or unsound manner."

The important public policy interest in the support provided by a bank holding company to its subsidiary banks is based upon the fact that in acquiring a commercial bank, a bank holding company derives certain benefits at the corporate level that result, in part, from the ownership of an institution that can issue federally-insured deposits and has access to Federal Reserve credit. The existence of the federal "safety net" reflects important governmental concerns regarding the critical fiduciary responsibilities of depository institutions as custodians of depositors' funds and their strategic role within our economy as operators of the payments system and impartial providers of credit. Thus, in seeking the advantages flowing from the ownership

of a commercial bank, bank holding companies have an obligation to serve as a source of strength and support to their subsidiary banks.

An important determinant of a bank's financial strength is the adequacy of its capital base. Capital provides a buffer for individual banking organizations to absorb losses in times of financial strain, promotes the safety of depositors' funds, helps to maintain confidence in the banking system, and supports the reasonable expansion of banking organizations as an essential element of a strong and growing economy. A strong capital cushion also limits the exposure of the federal deposit insurance fund to losses experienced by banking institutions. For these reasons, the Board has long considered adequate capital to be critical to the soundness of individual banking organizations and to the safety and stability of the banking and financial system.

Accordingly, it is the Board's policy that a bank holding company should not withhold financial support from a subsidiary bank in a weakened or failing condition when the holding company is in a position to provide the support. A bank holding company's failure to assist a troubled or failing subsidiary bank under these circumstances would generally be viewed as an unsafe and unsound banking practice or a violation of Regulation Y or both.

Where necessary, the Board is prepared to take supervisory action to require such assistance. Finally, the Board recognizes that there may be unusual and limited circumstances where flexible application of the principles set forth in this policy statement might be necessary, and the Board may from time to time identify situations that may justify exceptions to the policy.

This statement is not meant to establish new principles of supervision and regulation; rather, as already noted, it builds on public policy considerations as reflected in banking laws and regulations and long-standing Federal Reserve supervisory policies and practices. A bank holding company's failure to meet its obligation to serve as a source of strength to its subsidiary bank(s), including an unwillingness to provide appropriate assistance to a troubled or failing bank, will generally be considered an unsafe and unsound banking practice or a violation of Regulation Y, or both, particularly if appropriate resources are on hand or are available to the bank holding company on a reasonable basis. Consequently, such a failure will generally result in the issuance of a cease and desist order or other enforcement action as authorized under banking law and as deemed appropriate under the circumstances.

1. *Board of Governors v. First Lincolnwood Corp.*, 439 U.S. 234, 252 (1978), citing S. Rep. No. 95-323, 95th Cong., 1st Sess. 11 (1977).

2010.0.2 BOARD ORDER REQUESTING A WAIVER FROM THE BOARD'S SOURCE OF STRENGTH POLICY

On December 23, 1991, the Board approved an application of a BHC to eventually acquire 100 percent of the outstanding stock of another BHC under a 5 year option. Initially, the BHC would acquire approximately 26 percent of the acquiree's total capital by purchasing a 15-year subordinated capital note agreement. It would then have the option to acquire all of the remaining stock within 5 years. The acquiring BHC requested that the Board waive any requirement of the Board that it serve as a source of financial strength to the subsidiary bank (the Board's "Source of Strength" policy) of the BHC acquired until such time that the option is exercised to acquire the actual ownership of all the shares. The Board considered the request and determined that it would not be appropriate to waive the responsibility to serve as a source of financial strength to the bank in this case. The Board noted that the option agreement and the capital note agreement together provide a mechanism for the acquiring BHC to exert control over the future ownership of the acquired BHC and many of the most important management decisions. Refer to 1992 FRB 159 and the F.R.R.S. at 4-271.3.

2010.0.3 INSPECTION OBJECTIVES

1. To determine whether the board of directors of the parent company is cognizant of and performing its duties and responsibilities.
2. To determine the adequacy of written policies and compliance with such policies by the parent and its subsidiaries.
3. To determine whether the board is properly informed as to the financial conditions, trends and policies of its subsidiaries.
4. To determine the level of supervision over subsidiaries and whether the supervision as structured has a beneficial or detrimental effect upon the subsidiaries.

2010.0.4 INSPECTION PROCEDURES

1. Determine if the holding company maintains its own staff, or whether the holding company management and directorate are the same as those of a subsidiary.
2. Determine whether the board of directors of the parent company reviews the audit reports, regulatory examination reports, and board minutes of its subsidiaries.
3. Determine the extent to which subsidiaries rely upon the parent for investment and lending guidance.
4. Determine which specific functions and decisions are performed only at the parent company level.
5. Determine the extent to which representatives of the parent company serve as officers and/or directors of subsidiaries.
6. Review minutes of the board and executive committees of the parent to determine whether the parent company reviews loan delinquency reports, comparative balance sheets and comparative income statements of the subsidiaries.
7. Review the extent of influence and control over both bank and nonbank subsidiaries.
8. Determine the degree of influence by the parent company over:
 - a. Appointment of officers;
 - b. Salary administration;
 - c. Budget and tax planning;
 - d. Capital expenditures;
 - e. Dividend policy;
 - f. Investment portfolio management;
 - g. Loan portfolio management;
 - h. Asset/liability and interest rate/risk management.
9. Determine the degree to which management of the subsidiary companies interfaces with management of the parent company to discuss policies.

The responsibility for the performance of the organization rests with the board of directors of the parent company. Parent company management should have policies in place to prevent funding practices that put at risk the welfare of the subsidiary banks or the consolidated organization.

The parent's supervision and control of subsidiary funding activities and the funding between itself and its subsidiaries should be thus evaluated. The parent should be expected to maintain policies for itself and its subsidiaries that provide guidance and controls for funding practices. The presence and wording of funding policies and the degree to which the policies are followed by the subsidiaries, and the effectiveness of the policies in reducing risk to the entire organization should also be assessed.

The importance of the parent's involvement in funding decisions and the need for monitoring and control at the parent level needs to be emphasized. As a minimum, the parent's funding policies should address the following areas:

1. *Capitalization*—The holding company's policy on capital levels should address capital for the bank subsidiaries, the nonbank subsidiaries, and the consolidated organization. The policy for bank and consolidated capital should be consistent with the Board's Capital Adequacy Guidelines and should address the asset quality of the entity in question. The policy for nonbank capital should include maintaining the capital level at industry standards and should also address the asset quality of the subsidiary, the holding company's capital for each entity should address what measures would be taken in the event capital falls below a targeted level.

Capital should also be addressed at the parent company level by specifying the degree of *double leverage* that the parent is willing to accept. The parent's capital policy should provide some measure of assessing each individual subsidiary's capital adequacy in the context of the double leverage within the organization.

The capital policies should include the method for calculating dividends from each entity. The amount of dividends from subsidiaries to the parent is affected by the parent's philosophy on the distribution of capital throughout the organization. Some companies tend to keep minimum capital levels in their subsidiary banks by transferring the excess capital to the parent in the form of dividends. The parent then invests these funds for its own benefit, and downstreams the funds as needed. Other companies

calculate dividends based strictly on the parent's cash needs and thus keep any excess capital at the bank level.

2. *Asset/Liability Management*—The holding company's policies in the area of *asset/liability management should include interest rate sensitivity matching, maturity matching, and the use of interest rate futures and forwards*. These topics should be addressed for each entity as well as the organization as a whole. It is the parent's responsibility to see that each entity is operating consistently with the corporate goals.

The *interest rate sensitivity policies* should be designed to reduce the organization's vulnerability to interest rate movements. Policies concerning the asset/liability rate sensitivity match should not be limited to the subsidiary lead bank. The rate charged on parent company debt and the rate received by the parent on its advances to subsidiaries should also be addressed to monitor the parent's ability to service its debt in the face of changing interest rates. The policy should specify what degree of mismatching is considered acceptable. The interest rate sensitivity matching of the organization should be monitored on a frequent basis through the timely preparation of a matching schedule.

Maturity matching policies should be designed to provide adequate liquidity to the organization. These policies should not be limited to the subsidiary lead bank, since a parent company serving as a funding vehicle for nonbank subsidiaries can have substantial exposure through its advances to these subsidiaries. The holding company's policies should include some measure of the liquidity of the assets in the nonbank subsidiary (determined partially by the quality of these assets), for comparison against the parent's source of funding. The policies should quantify the maximum degree of exposure in the organization that is considered acceptable to management. The reporting in this area should clearly indicate the current exposure and thus the potential for liquidity problems.

The holding company's *policies addressing interest rate futures and forwards* should be consistent with the Board's policy in this area. Involvement in this activity should be geared towards hedging against interest rate movements rather than speculating that interest rates will either increase or decrease. The policy

should specify what use of futures and forwards is considered appropriate.

3. *Funding of Nonbank Subsidiaries*—The parent company should have policies addressing how nonbank subsidiaries fund their activities. If the subsidiaries obtain their own funding, market discipline may be a factor in controlling the activities of the subsidiaries. However, the parent cannot rely solely on market discipline due to the risks from interdependence. The parent company is still responsible under the centralized accountability approach to approve and supervise the subsidiaries' funding policies.

If the subsidiaries obtain funds from the parent, the risk from interdependence is increased. The subsidiary is less able to stand alone since it is reliant on the parent for funding. If the parent capitalizes the nonbank subsidiary through borrowed funds, bank capital is put at risk due to the increased exposure of the organization. If the borrowing results in *double-leverage*, the risk is increased since less "hard" capital is available for support. The parent's policy on advances to nonbank subsidiaries should address this additional risk by specifying the level of borrowings that is considered acceptable relative to nonbank capital and consolidated capital. The terms of the borrowings should also be specified, and should be consis-

tent with the company's asset/liability management policies. The policy should include contingency measures to be used in the event of liquidity problems.

2010.1.1 INSPECTION OBJECTIVES

1. To determine if the parent's funding policies adequately address funding risks to the organization.
2. To determine if the implementation of the parent's policies is effective in controlling funding risks to the organization.
3. To determine if the parent is adequately informed of actual funding practices and decisions.

2010.1.2 INSPECTION PROCEDURES

1. Review the funding policies at the parent and the subsidiary levels.
2. Determine how effectively the policies are implemented throughout the organization.
3. Discuss with management the funding practices of each subsidiary and any interorganizational funding.

Supervision of Subsidiaries (Loan Administration and Lending Standards) Section 2010.2

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2007, this section has been revised to incorporate the December 6, 2006, interagency supervisory guidance, Concentrations in Commercial Real Estate Lending, Sound Risk-Management Practices. The guidance was issued jointly by the Federal Reserve and the other federal bank regulatory agencies. The guidance, effective December 12, 2006, is applicable to state member banks and also broadly applicable to bank holding companies and their nonbank subsidiaries.

The examiner should make a qualitative assessment of the parent's supervision and control of subsidiary lending activities. The System's ability to evaluate the effectiveness of a company's supervision and control of subsidiary lending activities can be strengthened not only by evaluating the parent's role in light of efficiency and operating performance, but also by evaluating the *quality* of control and supervision.

In order to assess quality, there must be a standard measure against which a company's policies can be evaluated. Establishing the minimum areas that a company's loan-administration policies should address will create a standard that will aid in evaluating the quality of the company's control and its supervision of that activity.

Current inspection procedures include the testing of subsidiaries' compliance with a parent company's policies. This section summarizes the parent's responsibilities with regard to supervising subsidiary lending. It defines the internal and external factors that should be considered in the formulation of loan policies and a strategic plan. It also outlines the minimum elements that the lending policies should include.

Internal and external factors that a banking organization should consider when formulating its loan policies and strategic plan are—

1. the size and financial condition of the credit-extending subsidiaries,
2. the expertise and size of the lending staff,
3. the need to avoid undue concentrations of risk,
4. compliance with all respective laws and regulations, and
5. market conditions.

Following are the components that generally

form the basis for a sound loan policy:

1. *Geographic limits.* The trade area should be clearly defined and loan officers should be fully aware of specific geographic limitations for lending purposes. Such a policy avoids approval of loans to customers outside the trade area in opposition to primary objectives. The primary trade area should be distinguished from any secondary trade area so that emphasis may be properly placed.
2. *Distribution of loans by category.* Limitations based on aggregate percentages of total loans in commercial, real estate, consumer, and other categories are common. Such policies are beneficial; however, they should contain provisions for deviations that are approved by the directorate or a committee. This allows credit to be distributed in relation to the market conditions of the trade area. During times of heavy loan demand in one category, an inflexible loan-distribution policy would cause that category to be slighted in favor of another. Deviations from loan distributions by category may be beneficial but are appropriate only until the risk of further increasing the loan concentration outweighs the benefits to be derived from expanding the portfolio to satisfy credit demand. See component 11, "Concentrations of credit," below.
3. *Types of loans.* The lending policy should state the types of loans that will be made and the maximum amount for each type of loan. The policy should also set forth guidelines to follow in making specific loans. Decisions about the types of loans to be granted should be based on the expertise of the lending officers, the deposit structure, and anticipated creditworthy demands of the trade area. Sophisticated credits or loans secured by collateral that require more than normal supervision should be avoided unless or until there are the necessary personnel to properly administer them. Information systems and internal controls should be in place to identify, monitor, and control the types of credit that have resulted in abnormal loss. The amount of real estate and other types of term loans should be considered in relation to the amount of stable funds.

4. *Maximum maturities.* The loan policy should call for underwriting standards that ensure realistic repayment plans. Loan maturities should be set by taking into consideration the anticipated source of repayment, the purpose of the loan, the type of property, and the useful life of the collateral. For term loans, the lending policy should state the maximum time within which loans may be amortized. Specific procedures should be developed for situations requiring balloon payments and/or modification of the original terms of the loan. If a clean-up period¹ is required, that period should be explicitly stated.
5. *Loan pricing.* Rates on various loan types must be sufficient to cover the cost of funds loaned and the servicing of the loan, including overhead and possible losses, while providing an acceptable margin of profit over the long run. These costs must be known and taken into consideration before rates are established. Periodic reviews should be conducted to determine whether adjustments are necessary to reflect changes in costs or competitive factors. Specific guidelines for other factors, such as compensating balances and commitment fees, are also germane to loan pricing.
6. *Loan amount to appraised value.* The policy should outline where the responsibility for appraisals rests and should define formal, standard appraisal procedures, including procedures for possible reappraisals in case of renewal or extension. Acceptable types of appraisals and limits on the dollar amount and the type of property that personnel are authorized to appraise should be outlined. Circumstances requiring appraisals by qualified independent appraisers should be described. The maximum ratio of the loan amount to appraised value,² the method of valuation, and differences for various types of property should be detailed. The policy should contain a schedule listing the downpayment requirements for financing consumer goods and business equipment.
7. *Loan amount to market value of pledged securities.* In addition to the legal restrictions imposed by Federal Reserve Regula-

tion U, the lending policy should set forth margin requirements for all types of securities acceptable as collateral. Margin requirements should be related to the marketability of the security (for example, closely held, over-the-counter, actively traded). The policy should assign responsibility and set a frequency for the periodic pricing of the collateral.

8. *Financial information.* Extension of credit on a safe and sound basis depends on complete and accurate information regarding the borrower's credit standing. One possible exception is when the loan is predicated on readily marketable collateral, the disposition of which was originally designated as the source of repayment for the advance. Current and complete financial information is necessary, including secondary sources of repayment, not only at the inception of the loan, but also throughout the term of the advance. The lending policy should define the financial-statement requirements for businesses and individuals at various borrowing levels and should include requirements for audited, nonaudited, fiscal, interim, operating, cash-flow, and other statements.³ It should include external credit checks required at various intervals. The requirements for financial information should be defined in such a way that any credit-data exception would be a clear violation of the lending policy.
9. *Limits and guidelines for loan participations.* Section 2020.2 provides significant information regarding intercompany loan participations between holding company affiliates. The lending policy should place limits on the amount of loans purchased from any one source and also place an aggregate limit on such loans. The policy

3. On March 30, 1993, federal bank regulators set forth an expanded interagency policy to encourage small-business lending. Under the policy, banks and thrifts that are well or adequately capitalized and that are rated CAMELS 1 or 2 may make small-business and agricultural loans, the aggregate value of which cannot exceed 20 percent of their total capital. To qualify for the exemption, each loan may not exceed the lesser of \$900,000 or 3 percent of the institution's total capital. Further, the loans selected for this exemption by the institution may not be delinquent as of the selection date and may not be made to an insider. The loans must be separately listed or have an accounting segregation from other loans in the portfolio. They "will be evaluated solely on the basis of performance and will be exempt from examiner criticism of documentation." The institution's records must include an evaluation of its ability to collect the loan in determining the adequacy of its allowance for loan and lease losses. If a loan becomes more than 60 days past due, it may be reviewed and classified by an examiner based on its credit quality, not the level of loan documentation.

1. A "clean-up period" is when a borrower is asked to repay the entire balance of a credit line and to refrain from further borrowing for a specified period of time.

2. This is often referred to as the loan-to-value ratio.

should set forth credit standards for any loan purchased as well as require that complete documentation be maintained by the purchasing entities. The policy should define the extent of contingent liability, holdback and reserve requirements, and the manner in which the loan will be handled and serviced.

10. *Loans to insiders.* Lending policies should address loans to insiders. Such policies should incorporate applicable regulatory

limitations (for example, Federal Reserve Regulation O) and should also address situations in which it would be prudent to exercise certain restrictions even though not explicitly required to do so by regulation (for example, loans by nonbank subsidiaries to insiders).

11. *Concentrations of credit.* Credit concentrations may be defined as loans collateralized by a common security; loans to one borrower or related group of borrowers; loans dependent upon a particular agricultural commodity; aggregate loans to major employers, their employees, and their major suppliers; loans within industry groups; out-of-territory loans; aggregate amount of paper purchased from any one source; or those loans that often have been included in other homogeneous risk groupings. Credit concentrations, by their nature, are dependent on common key factors, and when weaknesses develop, they have an adverse impact on each individual loan making up the concentration.

In identifying asset concentrations, commercial real estate loans and residential real estate loans can be viewed separately when their performance is not subject to similar economic or financial risks. In the same vein, commercial real estate development loans need not necessarily be grouped with residential real estate development loans, especially when the residential developer has firm, reliable purchase contracts for the sale of the homes upon completion. Even within the commercial development and construction sector, distinctions for concentration purposes may be made, when appropriate, between those loans that have firm take-out commitments and those that do not. Groups or classes of real estate loans should, of course, be combined and viewed as concentrations when they do share significant common characteristics and are similarly affected by adverse economic, financial, or business developments.

Banking organizations should establish and adhere to policies that control “concentration risk.” The lending policy should address the risk involved in various concentrations and indicate those that should be avoided or limited. However, before concentrations can be limited or reviewed, accounting systems must be in place to allow for the retrieval of information necessary to determine and monitor concentrations. The lending policy should provide for

frequent monitoring and reporting of all concentrations.

Banking organizations with asset concentrations are expected to put in place effective internal policies, systems, and controls to monitor and manage this risk. Concentrations that involve excessive or undue risks require close scrutiny and should be reduced over a reasonable period of time. When there is a need to reduce asset concentrations, banking organizations are normally expected to develop a plan that is realistic, prudent, and achievable in view of the particular circumstances and market conditions. In situations where concentration levels have built up over an extended period, it may take time—in some cases several years—to achieve a more balanced and diversified portfolio. What is critical is that adequate systems and controls are in place for reducing undue or excessive concentrations in accordance with a prudent plan, along with strong credit policies and loan-administration standards to control the risks associated with new loans, and adequate capital to protect the institution while its portfolio is being restructured.

Institutions that have in place effective internal controls to manage and reduce concentrations over a reasonable period of time *need not* automatically refuse credit to sound borrowers simply because of the borrower’s industry or geographic location. This principle applies to prudent loan renewals and rollovers, as well as to new extensions of credit that are underwritten in a sound manner.

The purpose of a lending organization’s policies should be to improve the overall quality of its portfolio. The replacement of unsound loans with sound loans can enhance the quality of a portfolio, even when concentration levels are not reduced.

12. *Refinancing or renewal of loans.* Refinancings or renewals should be structured in a manner that is consistent with sound banking, supervisory, and accounting practices, and in a manner that protects the banking organization and improves its prospects for collecting or recovering on the asset.
13. *Loan origination and loan approvals.* The policy should establish loan-origination and loan-approval procedures, both generally and by size and type of loan. The loan limitations for all lending officers should be

set accordingly. Lending limits should also be set for group authority, allowing a combination of officers or a committee to approve larger loans. Reporting procedures and the frequency of committee meetings should also be defined. The loan policy should further establish identification, review, and approval procedures for exception loans, including real estate and other loans with loan-to-value percentages in excess of supervisory limits.⁴

14. *Loan-administration procedures for loans secured by real estate.* The loan policy should establish loan-administration procedures covering documentation, disbursement, collateral administration and inspection, escrow administration, collection, loan payoffs, and loan review. Documentation procedures would specify, among other things, the types and frequency of financial statements and the requirements for verifying information provided by the borrower. They would also cover the type and frequency of collateral evaluations (appraisals and other estimates of value). In addition, loan-administration policies should address procedures for servicing and participation agreements and other loan-administration procedures such as those for claims processing (for example, seeking recovery on defaulted loans that are partially or fully guaranteed by a government entity or insurance program).
15. *Collection and foreclosure and the reporting and disclosure of delinquent obligations and charge-offs.* The lending policy should define delinquent obligations, provide guidelines on when loans are to be placed on nonaccrual or to be restructured, dictate appropriate procedures for reporting to senior management and to the directorate past-due credits, and provide appropriate guidance on the extent of disclosure of such credits. The policy should establish and require a follow-up collection procedure that is systematic and progressively stronger and should set forth guidelines (where applicable) for close surveillance by a loan work-out division. It should also address extensions and other forms of forbearance,

the acceptance of deeds in lieu of foreclosure, and the timing of foreclosure. The policy must be consistent with supervisory instructions in the financial statements of condition and income for financial institutions and BHCs (bank call report and the FR Y-9C and the other FR Y-series reports). Guidelines should be established to ensure that all accounts are presented to and reviewed by management for charge-off after a stated period of delinquency. See section 2065.1 for disclosure, accounting, and reporting issues related to nonaccrual loans and restructured debt.

16. *Reserve for loan losses and provisions for loan losses.* The policy should set forth the parameters that management considers in determining an appropriate level of loan-loss reserves as well as provisions necessary to attain this level.

Because an analysis of the allowance for loan and lease losses (ALLL) requires an assessment of the relative credit risks in the portfolio, many banking organizations, for analytical purposes, attribute portions of the ALLL to loans and other assets classified “substandard” by management or a supervisory agency. Management may do this because it believes, based on past history or other factors, that there may be unidentified losses associated with loans classified substandard in the aggregate.

Furthermore, management may use this as an analytical approach in estimating the total amount necessary for the ALLL and in comparing the ALLL to various categories of loans over time. As a general rule, an individual loan classified substandard may remain in an accrual status as long as the regulatory reporting requirements for accrual treatment are met, even when an attribution of the ALLL has been made.

17. *Other.* The policy should address the handling of exceptions to the policy as well as provide for adherence to the policy via internal audits, centralized loan review, and/or “director’s examinations.” The policy should be reviewed annually to determine if it continues to be compatible with the BHC’s objectives as well as market conditions.

4. For subsidiaries that are insured depository institutions, real estate loans that are in excess of supervisory loan-to-value limits are to be identified in the subsidiaries’ records. The aggregate amount of these loans is to be reported quarterly to the depository institution’s board of directors.

2010.2.1 UNIFORM REAL ESTATE LENDING STANDARDS

real estate lending, along with the FDIC, OCC, and OTS, as mandated by section 304 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). The Board's Regulation H (12 C.F.R. 208, Membership of State Banking Institutions in the Federal Reserve System) was amended to implement the uniform real estate lending standards for state member banks. Although the Board did not directly apply the regulation to bank holding companies and their nonbank subsidiaries, those entities are expected to conduct and to supervise real estate lending activities prudently, consistent with safe and sound lending standards.

The agencies' regulations require that each insured depository institution adopt and maintain comprehensive written real estate lending policies appropriate to the institution and the nature and scope of its lending activities. Lending policies must be reviewed and approved by the institution's board of directors at least annually. The policies are to include standards for loan diversification and prudent underwriting as well as loan-administration procedures and documentation, approval, and reporting requirements. Depository institutions' policies are to reflect consideration of the appendix to the banking agencies' regulations, "Interagency Guidelines for Real Estate Lending Policies." The guidelines are designed to help an institution formulate and maintain real estate lending policy that is appropriate to its size and the nature and scope of its operations, as required by the regulations. These guidelines are generally comparable to the inspection guidance provided in this section.

2010.2.2 LENDING STANDARDS FOR COMMERCIAL LOANS

The lending decision is properly that of the senior management and boards of directors of banking institutions, and not of their supervisory agencies. However, in fulfilling their roles, directors and senior managers have the obligation to monitor lending practices and to ensure that their policies are enforced and that lending practices generally remain within the overall ability of the institution to manage. The following subsections describe certain sound practices regarding lending standards and credit-approval processes for commercial loans.⁵

5. This guidance is derived, in part, from the June 1998 Federal Reserve supervisory staff report, "The Significance of Recent Changes in Bank Lending Standards: Evidence from the Loan Quality Assessment Project."

Sound lending practices address formal credit policies, formal credit-staff approval of transactions, loan-approval documentation, the use of forward-looking tools in the approval process, and management and lender information systems. In addition to evaluating adherence to these sound practices during inspections, supervisory personnel and examiners may wish to discuss these standards with loan portfolio managers at institutions where a full credit review is being performed. Senior management should be made aware of the potential for deterioration in the loan portfolio if lending discipline is not maintained, whether from inadequate assessment or communication of lending risks, incomplete adherence to prudent lending standards that reflect the risk appetite of the board of directors, or both.

Examiners should evaluate whether adequate internal oversight exists and whether institution management has timely and accurate information. As always, examiners should also discuss matters of concern with the institution and include them in their reports of inspection, even if cited practices and problem loans have not yet reached harmful or criticized levels. Such cautionary remarks help to alert institution management to potential or emerging sources of concern and may help to deter future problems. Any practices that extend beyond prudent bounds should be promptly corrected. See SR-98-18.

2010.2.2.1 Sound Practices in Loan Standards and Approval

Certain sound practices in lending can help to maintain strong credit discipline and ensure that an institution's decision to take risk in lending is well informed, balanced, and prudent. Several of these sound practices are listed and described below.

2010.2.2.1.1 Formal Credit Policies

The Federal Reserve and other supervisory authorities have long stressed the importance of formal written credit policies in a sound credit-risk-management process. Such policies can provide crucial discipline to an institution's lending process, especially when the institution's standards are under assault due to intense competition for loans. They can serve to communicate formally an institution's appetite for

credit risk in a manner that will support sound lending decisions, while focusing appropriate attention on loans being considered that diverge from approved standards.

In developing and refining loan policies, some institutions specify “guidance minimums” for financial performance ratios that apply to certain types of loans or borrowers (for example, commercial real estate). Such guidance makes explicit that loans not meeting certain financial tests (based on current performance, projected future performance, or both) should in general not be made, or alternatively should only be made under clearly specified situations. Institutions using this approach most effectively tend to avoid specifying standards for broad ranges of lending situations and instead focus on those areas of lending most vulnerable to excessive optimism, or where the institution expects loan volume to grow most significantly.

Formal policies can also provide lending discipline by clearly stating the type of covenants to be imposed for specific loan types. When designed and enforced properly, financial covenants can help significantly to reduce credit losses by communicating clear thresholds for financial performance and potentially triggering corrective or protective action at an early stage. Often, however, loan-approval documents do not describe the key financial covenants even when discussions with institutional staff disclose that such covenants are present. The staff and/or management of many institutions acknowledge that they have a “common practice” of imposing certain types of covenants on various types of loans. They indicate that such a practice is well known to lenders and others at the institution (but not articulated in their written loan policies), so that describing the actual covenants in the loan-approval document would be redundant. However, management and other approving authorities within an institution then receive no formal positive indication that “common practice” controls have been imposed and no indication of the level of financial performance that the covenants require of the borrower. As such, management and other approving authorities may be inadequately informed as to the risks and controls associated with the loan under consideration. In contrast, loan policies can create a clear expectation that (1) all key covenants should be described in loan-approval documents, (2) certain covenant types should be applied to all loans meeting certain criteria, and (3) explicit approval of any exception to these

policies is necessary if such covenant requirements are to be waived.

Internal processes and requirements for underwriting decisions should be consistent with the nature, size, and complexity of the banking organization’s (BO) activities. Departures from underwriting policies and standards, however, can have serious consequences for BOs of all sizes. Internal controls and credit reviews should be established and maintained to ensure compliance with those policies and procedures. When there are continued favorable economic and financial conditions, compliance monitoring of the BO’s lending policies and procedures needs to be diligent to make certain that there is no undue reliance on optimistic outlooks for borrowers. Undue reliance on continued favorable economic conditions can be demonstrated by the following characteristics:

1. dependence on very rapid growth in a borrower’s revenue as the “most likely” case
2. heavy reliance on favorable collateral appraisals and valuations that may not be sustainable over the longer term
3. greater willingness to make loans without scheduled amortization prior to the loan’s final maturity
4. willingness to readily waive violations of key covenants, to release collateral or guarantee requirements, or even to restructure loan agreements, without corresponding concessions on the part of the borrower, on the assumption that a favorable environment will allow the borrower to recover quickly

Among the adverse effects of undue reliance on a continued favorable economy is the possibility that problem loans will not be identified properly or in a timely manner. Timely identification of problem loans is critical for providing a full awareness of the BO’s risk position, informing management and directors of that position, taking steps to mitigate risk, and providing a proper assessment of the adequacy of the allowance for credit losses and capital.⁶ Similarly, an overreliance on continued ready access to financial markets on favorable terms can originate from the following situations:

6. See section 2122.0 and SR-98-25, “Sound Credit-Risk Management and the Use of Internal Credit-Risk-Rating Systems at Large Banking Organizations,” and section 4060.7 and SR-99-18, “Assessing Capital Adequacy in Relation to Risk at Large Banking Organizations and Others with Complex Risk Profiles.” Federal Reserve guidance on credit-risk management and mitigation covers both loans and other forms of on- and off-balance-sheet credit exposure.

1. explicit reliance on future public market debt or equity offerings, or on other sources of refinancing, as the ultimate source of principal repayment, which presumes that market liquidity and the market's appetite for such instruments will be favorable at the time that the facility is to be repaid
2. ambiguous or poorly supported analysis of the sources of repayment of the loan's principal, together with implicit reliance for repayment on some realization of the implied market valuation of the borrower (for example, through refinancing, asset sales, or some form of equity infusion), which also assumes that markets will be receptive to such transactions at the time that the facility is to be repaid
3. measuring a borrower's leverage (for example, debt-to-equity) based solely on the market capitalization of the firm without regard to "book" equity, thereby implicitly assuming that currently unrealized appreciation in the value of the firm can be readily realized if needed
4. more generally, extending loans with a risk profile that more closely resembles the profile of an equity investment, under circumstances that leave additional credit or default as the borrower's only resort if favorable expectations are not met

Banking organizations that become lax in adhering to established loan-underwriting policies and procedures, as a result of overreliance on favorable economic and financial market conditions, may have significant credit concentrations that are at great risk to possible economic and financial market downturns. See SR-99-23.

Some institutions have introduced credit scoring techniques into their small-business lending in an effort to improve credit discipline while allowing heavier reliance on statistical analysis rather than detailed and costly analysis of individual loans. Institutions should take care to make balanced and careful use of credit scoring technology for small-business lending and, in particular, avoid using this technology for loans or credit relationships that are large or complex enough to warrant a formal and individualized credit analysis.

In formalizing their lending standards and practices, institutions are not precluded from making loans that do not meet all written standards. Exceptions to policies, though, should be approved and monitored by management. Formal reporting that describes exceptions to loan policies, by type of exception and organizational unit, can be extremely valuable for

informing management and directors of the number and nature of material deviations from the policies that they have designed and approved.

2010.2.2.1.2 Formal Credit-Staff Approval of Transactions

Credit discipline is also enhanced when experienced credit professionals are involved in the approval process and are independent of the line lending functions.⁷ Such staff can play a vital role in ensuring adherence to formal policies and in ensuring that individual loan approvals are consistent with the overall risk appetite of the institution. These independent credit professionals can be most valuable if they have the authority to reject a loan that does not meet the institution's credit standards or, alternatively, if they must concur with a loan before it can be approved.

Providing credit staff with independent approval authority over lending decisions, rather than with a more traditional requirement for "consultation" between the lending function and credit staff, allows credit staff to influence outcomes on a broad and ongoing basis. This influence and indeed the ability of credit staff to reinforce lending discipline is clearly enhanced by their early involvement in negotiations with borrowers; a more traditional approach might be to only involve credit staff once the loan proposal is well developed, allowing credit staff the opportunity to have only minor influence on the outcome of negotiations except in extreme cases. Maintaining a proper balance of lending and control functions calls for a degree of partnership between line lenders and credit staff, but also requires that the independence of credit staff not be compromised by conflicting compensation policies or reporting structures.

Independent credit staff can also support sound lending practice by maintaining complete and centralized credit files that contain all key documents relevant to each loan, including complete loan-approval packages. Such files ensure that decisions are well documented and avoid

7. For example, loan officers might be compensated for bringing loan business into the institution. Independent credit professionals, however, would be another person who would not be compensated for bringing any loan business into the institution. That person would, however, serve as a quality control monitor that would have the independent authority to reject a loan(s) and to ensure that the institution's risk appetite and credit standards are not exceeded.

undue reliance on the files maintained by individual loan officers.

2010.2.2.1.3 Loan-Approval Documents

Institutions can help ensure a careful loan-approval decision by requiring thorough and standardized loan-approval documents. Thoroughness can be enhanced by requiring formal analysis of the borrower's financial condition, key characteristics and trends in the borrower's industry, information on collateral and its valuation, as well as financial analysis of the entities providing support or guarantees and formal forward-looking analyses appropriate to the size and type of loan being considered. Incorporating such elements into standardized formats and requiring that analysis and supporting commentary be complete and in adequate depth allows approving authorities access to all relevant information on the risk profile of the borrower. Loan-approval documents should also include all material details on the proposed loan agreement itself, including key financial covenants. Standardization of formats, and to some extent content, can be useful in ensuring that all relevant information is provided to management and other approving authorities in a manner that is understandable. Standard formats also draw attention to cases in which certain key information is not presented.

One area of particular interest in this regard is analysis and commentary on participations in syndicated loans. While it may be tempting to rely on the analysis and documentation provided by the agent institution to the transaction, it has been long-standing Federal Reserve policy that participating institutions should conduct their own analysis of the borrower and the transactions, particularly if the risk appetite or portfolio characteristics of the agent differs from that of the participating institution.

2010.2.2.1.4 Use of Forward-Looking Tools in the Approval Process

During continued periods of favorable economic conditions, institutions should guard against complacency and, in particular, the temptation to base expectations of a borrower's future financial performance almost exclusively on that borrower's recent performance. In making lending decisions, and in evaluating their loan port-

folio, institutions should give sufficient consideration to the potential for negative events or developments that might limit the ability of borrowers to fulfill their loan obligations. Unforeseen changes in interest rates, sales revenue, and operating expenses can have material and adverse effects on the ability of many borrowers to meet their obligations. In prior decades, inadequate attention to these possibilities during the underwriting process contributed significantly to asset-quality problems in the system. Also, sudden turmoil within various countries can result in quick changes in currency valuations and economic conditions.

Examiners should evaluate the frequency and adequacy with which institutions conduct forward-looking analysis of borrower financial performance when considering an institution's credit-risk-management process. Formal use of forward-looking financial analysis in the loan-approval process, and financial projections in particular, can be important in guarding against such complacency, especially when financial institutions are competing intensely to attract borrowers. Such projections, if they include less favorable scenarios for the key determinants of the borrower's financial performance, can help to contain undue optimism and ensure that management and other approving authorities within the organization are formally presented with a robust analysis of the risks associated with each credit. They also provide credit staff and other risk-management personnel with information that is important for ensuring adherence to the institution's lending standards and overall appetite for loan risk.

The formal presentation of financial projections and/or other forms of forward-looking analyses of the borrower is important in making explicit the conditions required for a loan to perform and in communicating the vulnerabilities of the transaction to those responsible for approving loans. Analyses also provide a useful benchmark against which institutions can assess the borrower's future performance. Although it may be tempting to avoid analyzing detailed projections for smaller borrowers, such as middle-market firms, these customers may collectively represent a significant portion of the institution's loan portfolio. As such, applying formal forward-looking analysis even on a basic level assists the institution in identifying and managing the overall risk of its lending activities.

Detailed analysis of industry performance and trends can be a useful supplement to such analyses. Such projections have the most value in maintaining credit discipline when, rather than

only describing the single “most likely” scenario for future events, they characterize the kind of negative events that might impair the performance of the loan in the future.

2010.2.2.1.5 Stress Testing of the Borrower’s Financial Capacity

The analysis of alternative scenarios, or “stress testing,” should generally focus on the key determinants of performance for the borrower and the loan, such as the level of interest rates, the rate of sales or revenue growth, or the rate at which expense reductions can be realized. Meaningful stress testing of the prospective borrower’s ability to meet its obligations is a vital part of a sound credit decision. Failure to recognize the potential for adverse events—whether specific to the borrower or its industry (for example, a change in the regulatory climate or the emergence of new competitors) or, alternatively, to the economy as a whole (for example, a recession)—can prove costly to a banking organization.

Mechanical reliance on threshold financial ratios (and the “cushion” they imply) alone is generally not sufficient, particularly for complex loans and loans to leveraged borrowers or others that must perform exceptionally well to meet their financial obligations successfully. Scenario analysis specific to the borrower, its industry, and its business plan is critical to identify the key risks of a loan. Such an analysis should have a significant influence on the decision to extend credit and, if credit is extended, on the decisions as to the appropriate loan size, repayment terms, collateral or guarantee requirements, financial covenants, and other elements of the loan’s structure.

When properly conducted, meaningful stress testing can include assessing the effect the following situations or events will have on the borrower:

1. unexpected reductions in revenue growth or reversals, including shocks to revenue of the type and magnitude that would normally be experienced during a recession
2. unfavorable movements in market interest rates, especially for firms with high debt burdens
3. unplanned increases in capital expenditures due to technological obsolescence or competitive factors
4. deterioration in the value of collateral, guarantees, or other potential sources of principal repayment

5. adverse developments in key product or input markets
6. reversals in, or the borrower’s reduced access to, public debt and equity markets

Proper stress testing typically incorporates an evaluation of the borrower’s alternatives for meeting its financial obligations under each scenario, including asset sales, access to alternative funding or refinancing, or ability to raise new equity. In particular, the evaluation should focus not only on the borrower’s ability to meet near-term interest obligations, but also on its ability to repay the principal of the obligation. See SR-99-23.

2010.2.2.1.6 Management and Lender Information

Management information systems that support the loan-approval process should clearly indicate the composition of the institution’s current portfolio or exposure to allow for consideration of whether a proposed new loan—regardless of its own merits—might affect this composition sufficiently to be inconsistent with the institution’s risk appetite. In particular, institutions active in commercial real estate lending should know the nature and magnitude of aggregate exposure within relevant subclasses, such as by the type of property being financed (that is, office, residential, or retail).

In addition to portfolio information, institutions should be encouraged to acquire or develop information systems that provide ready access for lenders and credit analysts to information sources that can support and enhance the financial analysis of proposed loans. Depending on the nature of an institution’s borrowers, appropriate information sources may include industry financial data, economic data and forecasts, and other analytical tools such as bankruptcy scoring and default-probability models.

2010.2.3 LEVERAGED FINANCING

Leveraged financing is an important financing vehicle for mergers and acquisitions, business recapitalizations, and business expansions. These transactions are characterized by a degree of financial leverage that significantly exceeds industry norms, as measured by various debt, cash-flow, or other ratios. Consequently, lever-

aged borrowers generally have a diminished ability to respond to changing economic conditions or unexpected events, creating significant implications for an institution’s overall credit-risk exposure and challenges for bank risk-management systems.

Leveraged-finance activities can be conducted in a safe and sound manner if a risk-management structure provides appropriate underwriting, pricing, monitoring, and controls. To better understand and manage the inherent risk in leveraged-finance portfolios, the board of directors and senior management must ensure that credit-analysis processes are comprehensive, monitoring is frequent, and portfolio reports are detailed.

Many leveraged transactions are underwritten with reliance on the imputed value of a business (enterprise value), which is often highly volatile. Sound valuation methodologies and ongoing stress testing and monitoring of enterprise values for these types of transactions must be emphasized. The following interagency statement provides supervisory guidance on leveraged financing, including guidance about risk rating leveraged-finance loans and how enterprise value should be evaluated in the risk-rating process. The statement is directly applicable to federally insured depository institutions. The boards of directors and senior management of financial holding companies and bank holding companies should consider the guidance as they supervise nonbanking subsidiaries engaged in leveraged-financing activities. The Federal Reserve, along with the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision, issued the guidance on April 9, 2001.⁸ (See SR-01-9.)

2010.2.3.1 Interagency Statement on Leveraged Financing

(The introductory paragraphs have been omitted here, as indicated by a line of asterisks. Some other wording has been slightly altered, as indicated by asterisks and brackets.)

* * * * *

8. This guidance augments previously issued supervisory statements on sound credit-risk management. See SR-99-23, “Recent Trends in Bank Lending Standards for Commercial Loans,” and SR-98-18, “Lending Standards for Commercial Loans.” See also sections 2010.2.2, 2010.10, and 4060.7.

Institutions participate in leveraged financing on a number of levels. In addition to providing senior secured financing, they extend credit on a subordinated basis (mezzanine financing). Institutions and their affiliates also may take equity positions in leveraged companies with direct investments through affiliated securities firms, small business investment companies (SBICs), and venture capital companies or take equity interests via warrants and other equity “kickers” received as part of a financing package. Institutions also may invest in leveraged loan funds managed by investment banking companies or other third parties. Although leveraged financing is far more prevalent in large institutions, this type of lending can be found in institutions of all sizes* * * The extent to which institutions should apply these sound practices will depend on the size and risk profile of their leveraged exposures relative to assets, earnings, and capital and the nature of their leveraged-financing activities (i.e., origination and distribution, participant, equity investor, etc.)* * *

2010.2.3.1.1 Risk-Management Guidelines

Institutions substantively engaged in leveraged financing are expected to adequately risk-rate, track, and monitor these transactions and to maintain policies specifying conditions that would require a change in risk rating, accrual status, loss recognition, or reserves. In general, the risk-management framework for leveraged finance is no different from that which should be applied to all lending activities. However, because of the potential higher level of risk, the degree of oversight should be more intensive.

2010.2.3.1.1.1 Loan Policy

The loan policy should specifically address the institutions’ leveraged-lending activities by including—

- a definition of leveraged lending;
- an approval policy that requires sufficient senior-level oversight;
- pricing policies that ensure a prudent tradeoff between risk and return; and
- a requirement for action plans whenever cash flow, asset-sale proceeds, or collateral values decline significantly from projections. Action plans should include remedial initiatives and triggers for rating downgrades, changes to accrual status, and loss recognition.

2010.2.3.1.1.2 Underwriting Standards

Either the loan policy or separate underwriting guidelines should prescribe specific underwriting criteria for leveraged financing. The standards should avoid compromising sound banking practices in an effort to broaden market share or realize substantial fees. The policy should—

- describe appropriate leveraged loan structures;
- require reasonable amortization of term loans (i.e., allow a moderate time period to realize the benefit of synergies or augment revenues and institute meaningful repayment);
- specify collateral policies including acceptable types of collateral, loan-to-value limits, collateral margins, and proper valuation methodologies;
- establish covenant requirements, particularly minimum interest and fixed-charge coverage and maximum leverage ratios;
- describe how enterprise values and other intangible business values may be used; and
- establish minimum documentation requirements for appraisals and valuations, including enterprise values and other intangibles.

2010.2.3.1.1.3 Limits

Leveraged-finance and other loan portfolios with above-average default probabilities tend to behave similarly during an economic or sectoral downturn. Consequently, institutions should take steps to avoid undue concentrations by setting limits consistent with their appetite for risk and their financial capacity. Institutions should ensure that they monitor and control as separate risk concentrations those loan segments most vulnerable to default. Institutions may wish to identify such concentrations by the leveraged characteristics of the borrower, by the institution's internal-risk grade, by particular industry or other factors that the institution determines are correlated with an above-average default probability. In addition, sublimits may be appropriate by collateral type, loan purpose, industry, secondary sources of repayment, and sponsor relationships. Institutions should also establish limits for the aggregate number of policy exceptions.

2010.2.3.1.1.4 Credit Analysis

Effective management of leveraged-financing risk is highly dependent on the quality of analy-

sis during the approval process and after the loan is advanced. At a minimum, analysis of leveraged-financing transactions should ensure that—

- cash-flow analyses do not rely on overly optimistic or unsubstantiated projections of sales, margins, and merger and acquisition synergies;
- projections provide an adequate margin for unanticipated merger-related integration costs;
- projections are stress-tested for one or two downside scenarios;
- transactions are reviewed quarterly to determine variance from financial plans, the risk implications thereof, and the accuracy of risk ratings and accrual status;
- collateral valuations are derived with a proper degree of independence and consider potential value erosion;
- collateral-liquidation and asset-sale estimates are conservative;
- potential collateral shortfalls are identified and factored into risk-rating and accrual decisions;
- contingency plans anticipate changing conditions in debt or equity markets when exposures rely on refinancing or recapitalization; and
- the borrower is adequately protected from interest-rate and foreign-exchange risk.

2010.2.3.1.1.5 Enterprise Value

Enterprise value is often relied upon in the underwriting of leveraged loans to evaluate the feasibility of a loan request, determine the debt-reduction potential of planned asset sales, assess a borrower's ability to access the capital markets, and to provide a secondary source of repayment. Consideration of enterprise value is appropriate in the credit-underwriting process. However, enterprise value and other intangible values can be difficult to determine, are frequently based on projections, and may be subject to considerable change. Consequently, reliance upon them as a secondary source of repayment can be problematic.

Because enterprise value is commonly derived from the cash flows of a business, it is closely correlated with the primary source of repayment. This interdependent relationship between primary and secondary repayment sources increases the risk in leveraged financing, especially when credit weaknesses develop.

Events or changes in business conditions that negatively affect a company's cash flow will also negatively affect the value of the business, simultaneously eroding both the lender's primary and secondary source of repayment. Consequently, lenders that place undue reliance upon enterprise value as a secondary source of repayment or that utilize unrealistic assumptions to determine enterprise value are likely to approve unsound loans at origination or experience outside losses upon default.

It is essential that institutions establish sound valuation methodologies for enterprise value, apply appropriate margins to protect against potential changes in value, and conduct ongoing stress testing and monitoring.

2010.2.3.1.1.6 Rating Leveraged-Finance Loans

Institutions need thoroughly articulated policies that specify requirements and criteria for risk-rating transactions, identifying loan impairment, and recognizing losses. Such specificity is critical for maintaining the integrity of an institution's risk-management system. Institutions' internal rating systems should incorporate both the probability of default and loss given default in their ratings to ensure that the risk of the borrower and the risk of the transaction structure itself are clearly evaluated. This is particularly germane to leverage-finance-transactions structures, which in many recent cases have resulted in large losses upon default.

In cases where a borrower's condition or future prospects have significantly weakened, leveraged-finance loans will likely merit a substandard classification based on the existence of well-defined weaknesses. If such weaknesses appear to be of a lasting nature and it is probable that a lender will be unable to collect all principal and interest owed, the loan should be placed on nonaccrual and will likely have a doubtful component. Such loans should be reviewed for impairment in accordance with FAS 114, "Accounting by Creditors for Impairment of a Loan."

If the primary source of repayment is inadequate and a loan is considered collateral-dependent, it is generally inappropriate to consider enterprise value unless the value is well supported. Well-supported enterprise values may be evidenced by a binding purchase and sale agreement with a qualified third party or

through valuations that fully consider the effect of the borrower's distressed circumstances and potential changes in business and market conditions. For such borrowers, where a portion of the loan is not protected by pledged assets or a well-supported enterprise value, examiners will generally classify the unprotected portion of the loan doubtful or loss.

In addition, institutions need to ensure that the risks in leveraged-lending activities are fully incorporated in the allowance-for-loan-and-lease-loss and capital-adequacy analysis. For allowance purposes, leverage exposures should be taken into account either through analysis of the expected losses from the discrete portfolio or as part of an overall analysis of the portfolio utilizing the institution's internal risk grades or other factors. At the transaction level, exposures heavily reliant on enterprise value as a secondary source of repayment should be scrutinized to determine the need for and adequacy of specific allocations.

2010.2.3.1.1.7 Problem-Loan Management

For adversely rated borrowers and other high-risk borrowers who significantly depart from planned cash flows, asset sales, collateral values, or other important targets, institutions should formulate individual action plans with critical objectives and time frames. Actions may include working with the borrower for an orderly resolution while preserving the institution's interests sale in the secondary market, and liquidation. Regardless of the action, examiners and bankers need to ensure such credits are reviewed regularly for risk-rating accuracy, accrual status, recognition of impairment through specific allocations, and charge-offs.

2010.2.3.1.1.8 Portfolio Analysis

Higher-risk credits, including leveraged-finance transactions, require frequent monitoring by banking organizations. At least quarterly, management and the board of directors should receive comprehensive reports about the characteristics and trends in such exposures. These reports at a minimum should include—

- total exposure and segment exposures, including subordinated debt and equity holdings, compared to established limits;
- risk-rating distribution and migration data;
- portfolio performance—noncompliance with covenants, restructured loans, delinquencies,

- nonperforming assets, and impaired loans; and
- compliance with internal procedures and the aggregate level of exceptions to policy and underwriting standards.

Institutions with significant exposure levels to higher-risk credits should consider additional reports covering—

- collateral composition of the portfolio, e.g. percentages supported by working assets, fixed assets, intangibles, blanket liens, and stock of borrower's operating subsidiaries;
- unsecured or partially secured exposures, including potential collateral shortfalls caused by defaults that trigger *pari passu* [equable] collateral treatment for all lender classes;
- absolute amount and percentage of the portfolio dependent on refinancing, recapitalization, asset sales, and enterprise value;
- absolute amounts and percentages of scheduled and actual annual portfolio amortizations; and
- secondary-market pricing data and trading volume for loans in the portfolio.

2010.2.3.1.1.9 Internal Controls

Institutions engaged in leveraged finance need to ensure their internal-review function is appropriately staffed to provide timely, independent assessments of leveraged credits. Reviews should evaluate risk-rating integrity, valuation methodologies, and the quality of risk management. Because of the volatile nature of these credits, portfolio reviews should be conducted on at least an annual basis. For many institutions, the risk characteristics of the leveraged portfolio, such as high reliance on enterprise value, concentrations, adverse risk-rating trends or portfolio performance, will dictate more frequent reviews.

2010.2.3.1.2 Distributions

Asset sales, participations, syndication, and other means of distribution are critical elements in the rapid growth of leveraged financing. [Lead and purchasing institutions are expected] to adopt formal policies and procedures addressing the distribution and acquisition of leveraged-financing transactions. The policies should include—

- procedures for defining, managing, and accounting for distribution fails;

- identification of any sales made with recourse and procedures for fully reflecting the risk of any such sales;
- a process to ensure that purchasers are provided with timely, current financial information;
- a process to determine the portion of a transaction to be held in the portfolio and the portion to be held for sale;
- limits on the length of time transactions can be held in the held-for-sale account and policies for handling items that exceed those limits;
- prompt recognition of losses in market value for loans classified as held-for-sale; and
- procedural safeguards to prevent conflicts of interest for both bank and affiliated securities firms.

2010.2.3.1.3 Participations Purchased

Institutions purchasing participations and assignments in leveraged finance must make a thorough, independent evaluation of the transaction and the risks involved before committing any funds. They should apply the same standards of prudence, credit assessment and approval criteria, and “in-house” limits that would be employed if the purchasing organization were originating the loan. At a minimum, policies should include requirements for—

- obtaining and independently analyzing full credit information both before the participation is purchased and on a timely basis thereafter;
- obtaining from the lead lender copies of all executed and proposed loan documents, legal opinions, title insurance policies, UCC searches, and other relevant documents;
- carefully monitoring the borrower's performance throughout the life of the loan; and
- establishing appropriate risk-management guidelines as described in this [statement].

2010.2.3.1.4 Process to Identify Potential Conflicts

Examiners should determine whether an institution's board of directors and management have established policies for leveraged finance that minimize the risks posed by potential legal issues and conflicts of interest.

2010.2.3.1.4.1 Conflicts of Interest

When a banking company plays multiple roles in leveraged finance, the interests of different customers or the divisions of the institution may conflict. For example, a lender may be reluctant to employ an aggressive collection strategy with a problem borrower because of the potential impact on the value of the organization’s equity interest. A lender may also be pressured to provide financial or other privileged client information that could benefit an affiliated equity investor. Institutions should develop appropriate policies to address potential conflicts of interest. Institutions should also track aggregate totals for borrowers and sponsors to which it has both a lending and equity relationship. Appropriate limits should be established for such relationships.

2010.2.3.1.4.2 Securities Laws

Equity interests and certain debt instruments used in leveraged lending may constitute “securities” for the purposes of federal securities laws. When securities are involved, institutions should ensure compliance with applicable securities law requirements, including disclosure and regulatory requirements.⁹ Institutions should also establish procedures to restrict the internal dissemination of material nonpublic information about leveraged-finance transactions.

2010.2.3.1.4.3 Compliance Function

The legal and regulatory issues raised by leveraged transactions are numerous and complex. To ensure that potential conflicts are avoided and laws and regulations are adhered to, an independent compliance function should review all leveraged-financing activity.

* * * * *

9. Institutions also should ensure that any acquired equity positions are consistent with any applicable equity ownership restrictions imposed by federal and state laws, such as those in the Bank Holding Company Act or Federal Reserve Act. Institutions need to take special care to aggregate all the equity positions held throughout the entire organization, including those held in all banking and nonbanking subsidiaries. [footnote added]

2010.2.3.1.5 Examination Risk-Rating Guidance for Leveraged Financing

When evaluating individual borrowers, examiners should pay particular attention to—

- the overall performance and profitability of a borrower and its industry over time, including periods of economic or financial adversity;
- the history and stability of a borrower’s market share, earnings, and cash flow, particularly over the most recent business cycle and last economic downturn; and
- the relationship between a borrowing company’s projected cash flow and debt-service requirements and the resulting margin of debt-service coverage.

2010.2.3.1.5.1 Cash Flow/Debt-Service Coverage

Particular attention should be paid to the adequacy of the borrower’s cash flow and the reasonableness of projections. Before entering into a leveraged-financing transaction, bankers should conduct an independent, realistic assessment of the borrower’s ability to achieve the projected cash flow under varying economic and interest-rate scenarios. This assessment should take into account the potential effects of an economic downturn or other adverse business conditions on the borrower’s cash flow and collateral values. Normally bankers and examiners should adversely rate a credit if material questions exist as to the borrower’s ability to achieve the projected necessary cash flows, or if orderly repayment of the debt is in doubt. Credits with only minimal cash flow for debt service are usually subject to an adverse rating.

2010.2.3.1.5.2 Enterprise Value

Many leveraged-financing transactions rely on “enterprise value” as a secondary source of repayment. Most commonly, enterprise value is based on a “going concern” assumption and derived from some multiple of the expected income or cash flow of the firm. The methodology and assumptions underlying the valuation should be clearly disclosed, well supported, and understood by appropriate decision makers and risk-oversight units. Examiners should ensure that the valuation approach is appropriate for the company’s industry and condition.

Enterprise value is often viewed as a secondary source of repayment and as such would be

relied upon under stressful conditions. In such cases the assumptions used for key variables such as cash flow, earnings, and sale multiples should reflect those adverse conditions. These variables can have a high degree of uncertainty—sales and cash-flow projections may not be achieved; comparable sales may not be available; changes can occur in a firm’s competitive position, industry outlook, or the economic environment. Because of these uncertainties, changes in the value of a firm’s assets need to be tested under a range of stress scenarios, including business conditions more adverse than the base-case scenario. Stress testing of enterprise values and their underlying assumptions should be conducted upon origination of the loan and periodically thereafter, incorporating the actual performance of the borrower and any adjustments to projections. The bank should in all cases perform its own discounted cash-flow analysis to validate “enterprise value” implied by proxy measures such as multiples of cash flow, earnings, or sales.

Finally, it must be recognized that valuations derived with even the most rigorous valuation procedures are imprecise and may not be realized when needed by an institution. Therefore, institutions relying on enterprise value or illiquid and hard-to-value collateral must have lending policies that provide for appropriate loan-to-value ratios, discount rates, and collateral margins.

2010.2.3.1.5.3 Deal Sponsors

Deal sponsors can be an important source of financial support for a borrower that fails to achieve cash-flow projections. However, support from this source should only be considered positively in a risk-rating decision when the sponsor has a history of demonstrated support as well as the economic incentive, capacity, and stated intent to continue to support the transaction. Even with capacity and a history of support, a sponsor’s potential contributions should not mitigate criticism unless there is clear reason to believe it is in the best interests of the sponsor to continue that support or unless there is a formal guarantee.

2010.2.4 CREDIT-RISK MANAGEMENT GUIDANCE FOR HOME EQUITY LENDING

The federal bank and thrift regulatory agencies collectively issued the following interagency

guidance on May 16, 2005. The guidance is intended to promote sound credit-risk management practices at banking organizations¹⁰ that have home equity lending programs, including open-end home equity lines of credit (HELOCs) and closed-end home equity loans (HELs). Banking organizations’ credit-risk management practices for home equity lending need to keep pace with the rapid growth in home equity lending and should emphasize compliance with sound underwriting standards and practices.

The risk factors listed below, combined with an inherent vulnerability to rising interest rates, suggest that banking organizations need to fully recognize the risk embedded in their home equity portfolios. Following are the specific product, risk-management, and underwriting risk factors and trends that deserve scrutiny:

1. interest-only features that require no amortization of principal for a protracted period
2. limited or no documentation of a borrower’s assets, employment, and income (known as “low do” or “no doc” lending)
3. higher loan-to-value (LTV) and debt-to-income (DTI) ratios
4. lower credit-risk scores for underwriting home equity loans;
5. greater use of automated valuation models (AVMs) and other collateral-evaluation tools for the development of appraisals and evaluations
6. an increase in the number of transactions generated through a loan broker or other third party

Home equity lending can be conducted in a safe and sound manner if pursued with the appropriate risk-management structure, including adequate allowances for loan and lease losses and appropriate capital levels. Sound practices call for fully articulated policies that address marketing, underwriting standards, collateral-valuation management, individual-account and portfolio management, and servicing.

10. The agencies are the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration. The interagency guidance frequently uses the term “financial institutions.” Bank holding companies have financial institutions and various credit-extending nonbanking subsidiaries. The combined entity is being referred to in this guidance as a banking organization.

Banking organizations should ensure that risk-management practices keep pace with the growth and changing risk profile of home equity portfolios. Management should actively assess a portfolio's vulnerability to changes in consumers' ability to pay and the potential for declines in home values. Active portfolio management is especially important for banking organizations that project or have already experienced significant growth or concentrations, particularly in higher-risk products such as high-LTV, "low doc" or "no doc," interest-only, or third-party-generated loans. (See SR-05-11.)

2010.2.4.1 Credit-Risk Management Systems

2010.2.4.1.1 Product Development and Marketing

In the development of any new product offering, product change, or marketing initiative, management should have a review and approval process that is sufficiently broad to ensure compliance with the banking organization's internal policies and applicable laws and regulations¹¹ and to evaluate the credit, interest-rate, operational, compliance, reputation, and legal risks. In particular, risk-management personnel should be involved in product development, including an evaluation of the targeted population and the product(s) being offered. For example, material changes in the targeted market, origination source, or pricing could have a significant impact on credit quality and should receive senior management approval.

When HELOCs or HELs are marketed or closed by a third party, banking organizations should have standards that provide assurance that the third party also complies with applicable laws and regulations, including those on marketing materials, loan documentation, and closing procedures. (For further details on agent relationships, see section 2010.2.4.1.3, "Third-Party Originations.") Finally, management should have appropriate monitoring tools and management information systems (MIS) to mea-

sure the performance of various marketing initiatives, including offers to increase a line, extend the interest-only period, or adjust the interest rate or term.

2010.2.4.1.2 Origination and Underwriting

All relevant risk factors should be considered when establishing product offerings and underwriting guidelines. Generally, these factors should include a borrower's income and debt levels, credit score (if obtained), and credit history, as well as the loan size, collateral value (including valuation methodology), lien position, and property type and location.

Consistent with the Federal Reserve's regulations on real estate lending standards, prudently underwritten home equity loans should include an evaluation of a borrower's capacity to adequately service the debt.¹² Given the home equity products' long-term nature and the large credit amount typically extended to a consumer, an evaluation of repayment capacity should consider a borrower's income and debt levels and not just a credit score.¹³ Credit scores are based upon a borrower's historical financial performance. While past performance is a good indicator of future performance, a significant change in a borrower's income or debt levels can adversely alter the borrower's ability to pay. How much verification these underwriting factors require will depend upon the individual loan's credit risk.

HELOCs generally do not have interest-rate caps that limit rate increases.¹⁴ Rising interest rates could subject a borrower to significant payment increases, particularly in a low-interest-rate environment. Therefore, underwriting standards for interest-only and variable-rate HELOCs should include an assessment of the borrower's ability to amortize the fully drawn line over the loan term and to absorb potential increases in interest rates.

12. On December 23, 1992, the Federal Reserve announced the adoption of uniform rules on real estate lending standards and issued the Interagency Guidelines for Real Estate Lending Policies. See subsection 2010.2.1. See also 12 C.F.R., section 208.51 and appendix C.

13. The Interagency Guidelines Establishing Standards for Safety and Soundness also call for documenting the source of repayment and assessing the ability of the borrower to repay the debt in a timely manner. See 12 C.F.R. 208, appendix D-1.

14. While there may be periodic rate increases, the lender must state in the consumer credit contract the maximum interest rate that may be imposed during the term of the obligation. See 12 C.F.R. 226.30(b).

11. Applicable laws include the Federal Trade Commission Act; the Equal Credit Opportunity Act (ECOA); the Truth in Lending Act (TILA), including the Home Ownership and Equity Protection Act (HOEPA); the Fair Housing Act; the Real Estate Settlement Procedures Act (RESPA); and the Home Mortgage Disclosure Act (HMDA), as well as applicable state consumer protection laws.

2010.2.4.1.3 Third-Party Originations

Banking organizations often use third parties, such as mortgage brokers or correspondents, to originate loans. When doing so, they should have strong control systems to ensure the quality of originations and compliance with all applicable laws and regulations, and to help prevent fraud.

Brokers are firms or individuals, acting on behalf of either the banking organization or the borrower, who match the borrower's needs with institutions' mortgage-origination programs. Brokers take applications from consumers. Although they sometimes process the application and underwrite the loan to qualify the application for a particular lender, they generally do not use their own funds to close loans. Whether brokers are allowed to process and perform any underwriting will depend on the relationship between the banking organization and the broker. For control purposes, the banking organization should retain appropriate oversight of all critical loan-processing activities, such as verification of income and employment and independence in the appraisal and evaluation function.

Correspondents are financial companies that usually close and fund loans in their own name and subsequently sell them to a lender. Banking organizations commonly obtain loans through correspondents and, in some cases, delegate the underwriting function to the correspondent. In delegated underwriting relationships, a banking organization grants approval to a correspondent financial company to process, underwrite, and close loans according to the delegator's processing and underwriting requirements and is committed to purchase those loans. The delegating banking organization should have systems and controls to provide assurance that the correspondent is appropriately managed, is financially sound, and provides mortgages that meet the banking organization's prescribed underwriting guidelines and that comply with applicable consumer protection laws and regulations. A quality-control unit or function in the delegating banking organization should closely monitor the quality of loans that the correspondent underwrites. Monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities.

Both brokers and correspondents are compensated based upon mortgage-origination volume and, accordingly, have an incentive to produce and close as many loans as possible. Therefore, banking organizations should perform comprehensive due diligence on third-party originators

prior to entering a relationship. In addition, once a relationship is established, the banking organization should have adequate audit procedures and controls to verify that the third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.¹⁵ Monitoring the quality of loans by origination source, and uncovering such problems as early payment defaults and incomplete packages, enables management to know if third-party originators are producing quality loans. If ongoing credit or documentation problems are discovered, the banking organization should take appropriate action against the third party, which could include terminating its relationship with the third party.

2010.2.4.1.4 Collateral-Valuation Management

Competition, cost pressures, and advancements in technology have prompted banking organizations to streamline their appraisal and evaluation processes. These changes, coupled with banking organizations underwriting to higher LTVs, have heightened the importance of strong collateral-valuation management policies, procedures, and processes.

Banking organizations should have appropriate collateral-valuation policies and procedures that ensure compliance with the Federal Reserve's appraisal regulations¹⁶ and the Interagency Appraisal and Evaluation Guidelines (the guidelines).¹⁷ In addition, the banking organization should—

1. establish criteria for determining the appropriate valuation methodology for a particular transaction, based on the risk in the transaction and loan portfolio (For example, higher-

15. In addition, a banking organization that purchases loans subject to TILA's rules for HELs with high rates or high closing costs (loans covered by HOEPA) can incur assignee liability unless the banking organization can reasonably show that it could not determine the transaction was a loan covered by HOEPA. Also, the nature of its relationship with brokers and correspondents may have implications for liability under ECOA, and for reporting responsibilities under HMDA.

16. 12 C.F.R. 208, subpart E, and 12 C.F.R. 225, subpart G.

17. See SR-94-55, dated October 27, 1994. These revised guidelines include the June 1994 amendments. See also section 2231.0.15, appendix A.

risk transactions or nonhomogeneous property types should be supported by more-thorough valuations. The banking organization should also set criteria for determining the extent to which an inspection of the collateral is necessary.)

2. ensure that an expected or estimated value of the property is not communicated to an appraiser or individual performing an evaluation
3. implement policies and controls to preclude “value shopping” (Use of several valuation tools may return different values for the same property. These differences can result in systematic overvaluation of properties if the valuation choice becomes driven by the highest property value. If several different valuation tools or AVMs are used for the same property, the banking organization should adhere to a policy for selecting the most reliable method, rather than the highest value.)
4. require sufficient documentation to support the collateral valuation in the appraisal or evaluation

2010.2.4.1.5 AVMs

When AVMs are used to support evaluations or appraisals, the banking organization should validate the models on a periodic basis to mitigate the potential valuation uncertainty in the model. As part of the validation process, the banking organization should document the validation’s analysis, assumptions, and conclusions. The validation process includes back-testing a representative sample of the valuations against market data on actual sales (where sufficient information is available). The validation process should cover properties representative of the geographic area and property type for which the tool is used.

Many AVM vendors, when providing a value, will also provide a “confidence score,” which usually relates to the accuracy of the value provided. Confidence scores, however, come in many different formats and are calculated based on differing scoring systems. Banking organizations that use AVMs should have an understanding of how the model works as well as what the confidence scores mean. Confidence levels should be established by the banking organization that are appropriate for the risk in a given transaction or group of transactions.

When tax-assessment valuations are used as a

basis for the collateral valuation, the banking organization should be able to demonstrate and document the correlation between the assessment value of the taxing authority and the property’s market value as part of the validation process.

2010.2.4.1.6 Account Management

Since HELOCs often have long-term, interest-only payment features, banking organizations should have risk-management techniques that identify higher-risk accounts and adverse changes in account risk profiles, thereby enabling management to implement timely preventive action (e.g., freezing or reducing lines). Further, a banking organization should have risk-management procedures to evaluate and approve additional credit on an existing line or extending the interest-only period. Account-management practices should be appropriate for the size of the portfolio and the risks associated with the types of home equity lending.

Effective account-management practices for large portfolios or portfolios with high-risk characteristics include—

1. periodically refreshing credit-risk scores on all customers;
2. using behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
3. periodically assessing utilization rates;
4. periodically assessing payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the line to keep payments current;
5. monitoring home values by geographic area; and
6. obtaining updated information on the collateral’s value when significant market factors indicate a potential decline in home values, or when the borrower’s payment performance deteriorates and greater reliance is placed on the collateral.

The frequency of these actions should be commensurate with the risk in the portfolio. Banking organizations should conduct annual credit reviews of HELOC accounts to determine whether the line of credit should be continued, based on the borrower’s current financial condition.¹⁸

18. Under the Federal Reserve’s risk-based capital guidelines, an unused HELOC commitment with an original matu-

When appropriate, banking organizations should refuse to extend additional credit or reduce the credit limit of a HELOC, bearing in mind that under Regulation Z such steps can be taken only in limited circumstances. These include, for example, when the value of the collateral declines significantly below the appraised value for purposes of the HELOC, default of a material obligation under the loan agreement, or deterioration in the borrower's financial circumstances.¹⁹ In order to freeze or reduce credit lines due to deterioration in a borrower's financial circumstances, two conditions must be met: (1) there must be a "material" change in the borrower's financial circumstances and (2) as a result of this change, the banking organization must have a reasonable belief that the borrower will be unable to fulfill the plan's payment obligations.

Account-management practices that do not adequately control authorizations and provide for timely repayment of over-limit amounts may significantly increase a portfolio's credit risk. Authorizations of over-limit home equity lines of credit should be restricted and subject to appropriate policies and controls. A banking organization's practices should require over-limit borrowers to repay in a timely manner the amount that exceeds established credit limits. Management information systems should be sufficient to enable management to identify, measure, monitor, and control the unique risks associated with over-limit accounts.

2010.2.4.1.7 Portfolio Management

Banking organizations should implement an effective portfolio credit-risk management process for their home equity portfolios that includes the following.

2010.2.4.1.7.1 Policies

The Federal Reserve's real estate lending standards regulations require that a banking organization's real estate lending policies be consistent with safe and sound banking practices and

ity of one year or more may be allocated a zero percent conversion factor if the banking organization conducts at least an annual credit review and is able to unconditionally cancel the commitment (i.e., prohibit additional extensions of credit, reduce the credit line, and terminate the line) to the full extent permitted by relevant federal law. See 12 C.F.R. 208, appendix A, III.D.4., and 12 C.F.R. 225, appendix A, III.D.4.

19. Regulation Z does not permit these actions to be taken in circumstances other than those specified in the regulation. See 12 C.F.R. 226.5b(f)(3)(vi)(A)–(F).

that the banking organization's board of directors review and approve these policies at least annually. Before implementing any changes to policies or underwriting standards, management should assess the potential effect on the banking organization's overall risk profile, which would include the effect on concentrations, profitability, and delinquency and loss rates. The accuracy of these estimates should be tested by comparing them with actual experience.

2010.2.4.1.7.2 Portfolio Objectives and Risk Diversification

Effective portfolio management should clearly communicate portfolio objectives, such as growth targets, utilization, rate-of-return hurdles, and default and loss expectations. For banking organizations with significant concentrations of HELs or HELOCs, limits should be established and monitored for key portfolio segments, such as geographic area, loan type, and higher-risk products. When appropriate, consideration should be given to the use of risk mitigants, such as private mortgage insurance, pool insurance, or securitization. As the portfolio approaches concentration limits, the banking organization should analyze the situation sufficiently to enable the banking organization's board of directors and senior management to make a well-informed decision to either raise concentration limits or pursue a different course of action.

Effective portfolio management requires an understanding of the various risk characteristics of the home equity portfolio. To gain this understanding, a banking organization should analyze the portfolio by segment, using criteria such as product type, credit-risk score, DTI, LTV, property type, geographic area, collateral-valuation method, lien position, size of credit relative to prior liens, and documentation type (such as "no doc" or "low doc").

2010.2.4.1.7.3 Management Information Systems

By maintaining adequate credit MIS, a banking organization can segment loan portfolios and accurately assess key risk characteristics. The MIS should also provide management with sufficient information to identify, monitor, measure, and control home equity concentrations.

Banking organizations should periodically assess the adequacy of their MIS in light of growth and changes in their appetite for risk. For banking organizations with significant concentrations of HELs or HELOCs, MIS should include, at a minimum, reports and analysis of the following:

1. production and portfolio trends by product, loan structure, originator channel, credit score, LTV, DTI, lien position, documentation type, market, and property type
2. delinquency and loss-distribution trends by product and originator channel with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, DTI)
3. vintage tracking
4. the performance of third-party originators (brokers and correspondents)
5. market trends by geographic area and property type to identify areas of rapidly appreciating or depreciating housing values

2010.2.4.1.7.4 Policy and Underwriting-Exception Systems

Banking organizations should have a process for identifying, approving, tracking, and analyzing underwriting exceptions. Reporting systems that capture and track information on exceptions, both by transaction and by relevant portfolio segments, facilitate the management of a portfolio's credit risk. The aggregate data is useful to management in assessing portfolio risk profiles and monitoring the level of adherence to policy and underwriting standards by various origination channels. Analysis of the information may also be helpful in identifying correlations between certain types of exceptions and delinquencies and losses.

2010.2.4.1.7.5 High-LTV Monitoring

To clarify the real estate lending standards regulations and interagency guidelines, the agencies issued *Guidance on High Loan-To-Value (HLTV) Residential Real Estate Lending* (the HLTV guidance) in October 1999. The HLTV guidance clarified the Interagency Real Estate Lending Guidelines and the supervisory loan-to-value limits for loans on one- to four-family residential properties. Banking organizations are

expected to ensure compliance with the supervisory loan-to-value limits of the Interagency Real Estate Lending Guidelines. The HLTV guidance outlines controls that the banking organizations should have in place when engaging in HLTV lending. Banking organizations should accurately track the volume of HLTV loans, including HLTV home equity and residential mortgages, and report the aggregate of such loans to the banking organization's board of directors. Specifically, banking organizations are reminded that:

1. Loans in excess of the supervisory LTV limits should be identified in the banking organization's records. The aggregate of high-LTV one- to four-family residential loans should not exceed 100 percent of the banking organization's total capital.²⁰ Within that limit, high-LTV loans for properties other than one- to four-family residential properties should not exceed 30 percent of capital.
2. In calculating the LTV and determining compliance with the supervisory LTVs, the banking organization should consider all senior liens. All loans secured by the property and held by the banking organization are reported as an exception if the combined LTV of a loan and all senior liens on an owner-occupied one- to four-family residential property equals or exceeds 90 percent and if there is no additional credit enhancement in the form of either mortgage insurance or readily marketable collateral.
3. For the LTV calculation, the loan amount is the legally binding commitment (that is, the entire amount that the banking organization is legally committed to lend over the life of the loan).
4. All real-estate secured loans in excess of supervisory LTV limits should be aggregated and included in a quarterly report for the banking organization's board of directors.

Certain insurance products help banking organizations mitigate the credit risks of HLTV

20. For purposes of the Interagency Real Estate Lending Standards Guidelines, high-LTV one- to four-family residential property loans include (1) a loan for raw land zoned for one- to four-family residential use with an LTV ratio greater than 65 percent; (2) a residential land development loan or improved lot loan with an LTV greater than 75 percent; (3) a residential construction loan with an LTV ratio greater than 85 percent; (4) a loan on non-owner occupied one- to four-family residential property with an LTV greater than 85 percent; and (5) a permanent mortgage or home equity loan on an owner-occupied residential property with an LTV equal to or exceeding 90 percent without mortgage insurance, readily marketable collateral, or other acceptable collateral.

residential loans. Insurance policies that cover a “pool” of loans can be an efficient and effective credit-risk management tool. But if a policy has a coverage limit, the coverage may be exhausted before all loans in the pool mature or pay off. The Federal Reserve considers pool insurance to be a sufficient credit enhancement to remove the HLTV designation in the following circumstances: (1) the policy is issued by an acceptable mortgage insurance company, (2) it reduces the LTV for each loan to less than 90 percent, and (3) it is effective over the life of each loan in the pool.

2010.2.4.1.7.6 Stress Testing for Portfolios

Banking organizations with home equity concentrations as well as higher-risk portfolios are encouraged to perform sensitivity analyses on key portfolio segments. This type of analysis identifies possible events that could increase risk within a portfolio segment or for the portfolio as a whole. Banking organizations should consider stress tests that incorporate interest-rate increases and declines in home values. Since these events often occur simultaneously, the agencies recommend testing for these events together. Banking organizations should also periodically analyze markets in key geographic areas, including identified “soft” markets. Management should consider developing contingency strategies for scenarios and outcomes that extend credit risk beyond internally established risk tolerances. These contingency plans might include increased monitoring, tightening underwriting, limiting growth, and selling loans or portfolio segments.

2010.2.4.1.8 Operations, Servicing, and Collections

Effective procedures and controls should be maintained for such support functions as perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes. Credit-risk management should oversee these support functions to ensure that operational risks are properly controlled.

2010.2.4.1.8.1 Lien Recording

Banking organizations should take appropriate measures to safeguard their lien position. They should verify the amount and priority of any senior liens prior to closing the loan. This infor-

mation is necessary to determine the loan’s LTV ratio and to assess the credit support of the collateral. Senior liens include first mortgages, outstanding liens for unpaid taxes, outstanding mechanic’s liens, and recorded judgments on the borrower.

2010.2.4.1.8.2 Problem-Loan Workouts and Loss-Mitigation Strategies

Banking organizations should have established policies and procedures for problem loan workouts and loss-mitigation strategies. Policies should be in accordance with the requirements of the FFIEC’s Uniform Retail Credit Classification and Account Management Policy, issued June 2000 (see SR-00-8 and section 2241.0) and should, at a minimum, address the following:

1. circumstances and qualifying requirements for various workout programs including extensions, re-ages, modifications, and re-writes (Qualifying criteria should include an analysis of a borrower’s financial capacity to service the debt under the new terms.)
2. circumstances and qualifying criteria for loss-mitigating strategies, including foreclosure
3. appropriate MIS to track and monitor the effectiveness of workout programs, including tracking the performance of all categories of workout loans (For large portfolios, vintage delinquency and loss tracking also should be included.)

While banking organizations are encouraged to work with borrowers on a case-by-case basis, a banking organization should not use workout strategies to defer losses. Banking organizations should ensure that credits in workout programs are evaluated separately for the allowance for loan and lease losses (ALLL), because such credits tend to have higher loss rates than other portfolio segments.

2010.2.4.1.9 Secondary-Market Activities

More banking organizations are issuing HELOC mortgage-backed securities (that is, securitizing HELOCs). Although such secondary-market activities can enhance credit availability and a banking organization’s profitability, they also pose certain risk-management challenges. A

banking organization's risk-management systems should address the risks of HELOC securitizations.²¹

2010.2.4.1.10 Portfolio Classifications, Allowance for Loan and Lease Losses, and Capital

The FFIEC's Uniform Retail Credit Classification and Account Management Policy governs the classification of consumer loans and establishes general classification thresholds that are based on delinquency. Banking organizations and the Federal Reserve's examiners have the discretion to classify entire retail portfolios, or segments thereof, when underwriting weaknesses or delinquencies are pervasive and present an excessive level of credit risk. Portfolios of high-LTV loans to borrowers who exhibit inadequate capacity to repay the debt within a reasonable time may be subject to classification.

Banking organizations should establish appropriate ALLL and hold capital commensurate with the riskiness of their portfolios. In determining the ALLL adequacy, a banking organization should consider how the interest-only and draw features of HELOCs during the lines' revolving period could affect the loss curves for its HELOC portfolio. Those banking organizations engaging in programmatic subprime home equity lending or banking organizations that have higher-risk products are expected to recognize the elevated risk of the activity when assessing capital and ALLL adequacy.²²

2010.2.5 OVERSIGHT OF CONCENTRATIONS IN COMMERCIAL REAL ESTATE LENDING AND SOUND RISK-MANAGEMENT LENDING

As part of a bank holding company inspection,

the examiner should make an assessment of the parent company's supervision and control over its subsidiary lending activities, which includes an overall assessment of the banking organization's credit-risk concentrations, including the risk concentrations in commercial real estate lending. (See also section 2010.2.) Banking organizations, including bank holding companies, are responsible for establishing the necessary and appropriate management oversight of their bank and nonbank subsidiaries by administering, monitoring, and assuring adherence to the organization's lending policies and practices for controlling "concentration risk." Banking organizations should therefore have adequate management information systems (including the appropriate accounting and internal control systems) in place to accomplish their supervisory oversight and to control such credit concentrations.

The following guidance, Concentrations in Commercial Real Estate (CRE) Lending, Sound Risk-Management Practices (the guidance) was issued on December 6, 2006 (effective on December 12, 2006).²³ The guidance was developed to reinforce sound risk-management practices for institutions (includes banking organizations) with high and increasing concentrations of commercial real estate loans on their balance sheets. An institution's strong risk-management practices and its maintenance of appropriate levels of capital are important elements of a sound CRE lending program, particularly when an institution has a concentration in CRE or a CRE lending strategy leading to a concentration. However, institutions needing to improve their risk-management processes may have been provided the opportunity for some flexibility on the time frame for complying with the guidance. This time frame will be commensurate with the level and nature of CRE concentration risk, the quality of the institution's existing risk-management practices, and its levels of capital. (See 71 *Fed. Reg.* 74,580 [December 12, 2006], the Federal Reserve Board's press release dated

21. See SR-02-16, "Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations," (see also section 4060.3.5.3.2.3) and the risk management and capital adequacy of exposures arising from secondary-market credit activities discussion in SR-97-21 (see also section 2129.05).

22. See the January 2001 Interagency Expanded Guidance for Subprime Lending Programs (section 2128.08) for supervisory expectations regarding risk-management processes, the allowance for loan and lease losses, and capital adequacy for banking organizations engaging in subprime-lending programs.

23. The guidance was jointly adopted by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation after the bank supervisory agencies' careful consideration of the comments received following the initial issuance of the January 10, 2006, proposed guidance on concentrations in commercial real estate lending. The final guidance is applicable to state member banks and broadly applicable to bank holding companies and their nonbank subsidiaries. For the purposes of this section the references to banks, institutions, and banking organizations is confined to those entities for which the Board of Governors of the Federal Reserve System has supervisory authority.

December 6, 2006, and SR-07-01 and its attachments.)

2010.2.5.1 Scope of the CRE Concentration Guidance

The guidance focuses on those CRE loans for which the cash flow from the real estate is the primary source of repayment rather than loans to a borrower for which real estate collateral is taken as a secondary source of repayment or through an abundance of caution. For the purposes of this guidance, CRE loans include those loans with risk profiles sensitive to the condition of the general CRE market (for example, market demand, changes in capitalization rates, vacancy rates, or rents). CRE loans are land development and construction loans (including one- to four-family residential and commercial construction loans) and other land loans. CRE loans also include loans secured by multifamily property, and nonfarm nonresidential property where the primary source of repayment is derived from rental income associated with the property (that is, loans for which 50 percent or more of the source of repayment comes from third-party, nonaffiliated, rental income) or the proceeds of the sale, refinancing, or permanent financing of the property. Loans to real estate investment trusts and unsecured loans to developers also should be considered CRE loans for purposes of this guidance if their performance is closely linked to performance of the CRE markets. The scope of the guidance does not include loans secured by nonfarm nonresidential properties where the primary source of repayment is the cash flow from the ongoing operations and activities conducted by the party, or affiliate of the party, who owns the property. Rather than defining a CRE concentration, the guidance's "Supervisory Oversight" section describes the criteria that the Federal Reserve will use as high-level indicators to identify banks potentially exposed to CRE concentration risk.

2010.2.5.2 CRE Concentration Assessments

Banks that are actively involved in CRE lending should perform ongoing risk assessments to identify CRE concentrations. The risk assessment should identify potential concentrations by stratifying the CRE portfolio into segments that have common risk characteristics or sensitivities to economic, financial, or business developments. A bank's CRE portfolio stratification

should be reasonable and supportable. The CRE portfolio should not be divided into multiple segments simply to avoid the appearance of concentration risk.

The Federal Reserve recognizes that risk characteristics vary among CRE loans secured by different property types. A manageable level of CRE concentration risk will vary by bank depending on the portfolio risk characteristics, the quality of risk-management processes, and capital levels. Therefore, the guidance does not establish a CRE concentration limit that applies to all banks. Rather, banks are encouraged to identify and monitor credit concentrations and to establish internal concentration limits, and all concentrations should be reported to senior management and the board of directors on a periodic basis. Depending on the results of the risk assessment, the bank may need to enhance its risk-management systems.

2010.2.5.3 CRE Risk Management

The sophistication of a bank's CRE risk-management processes should be appropriate to the size of the portfolio, as well as the level and nature of concentrations and the associated risk to the bank. Banks should address the following key elements in establishing a risk-management framework that effectively identifies, monitors, and controls CRE concentration risk:

1. board and management oversight
2. portfolio management
3. management information systems
4. market analysis
5. credit underwriting standards
6. portfolio stress testing and sensitivity analysis
7. credit-risk review function

2010.2.5.3.1 Board and Management Oversight of CRE Concentration Risk

A bank's board of directors has ultimate responsibility for the level of risk assumed by the bank. If the bank has significant CRE concentration risk, its strategic plan should address the rationale for its CRE levels in relation to its overall growth objectives, financial targets, and capital plan. In addition, the Federal Reserve's real estate lending regulations require that each bank adopt and maintain a written policy that

establishes appropriate limits and standards for all extensions of credit that are secured by liens on or interests in real estate, including CRE loans. Therefore, the board of directors or a designated committee thereof should—

1. establish policy guidelines and approve an overall CRE lending strategy regarding the level and nature of CRE exposures acceptable to the bank, including any specific commitments to particular borrowers or property types, such as multifamily housing;
2. ensure that management implements procedures and controls to effectively adhere to and monitor compliance with the bank's lending policies and strategies;
3. review information that identifies and quantifies the nature and level of risk presented by CRE concentrations, including reports that describe changes in CRE market conditions in which the bank lends; and
4. periodically review and approve CRE risk exposure limits and appropriate sublimits (for example, by nature of concentration) to conform to any changes in the bank's strategies and to respond to changes in market conditions.

2010.2.5.3.2 CRE Portfolio Management

Banks with CRE concentrations should manage not only the risk of individual loans but also portfolio risk. Even when individual CRE loans are prudently underwritten, concentrations of loans that are similarly affected by cyclical changes in the CRE market can expose a bank to an unacceptable level of risk if not properly managed. Management regularly should evaluate the degree of correlation between related real estate sectors and establish internal lending guidelines and concentration limits that control the bank's overall risk exposure.

Management should develop appropriate strategies for managing CRE concentration levels, including a contingency plan to reduce or mitigate concentrations in the event of adverse CRE market conditions. Loan participations, whole loan sales, and securitizations are a few examples of strategies for actively managing concentration levels without curtailing new originations. If the contingency plan includes selling or securitizing CRE loans, management should assess periodically the marketability of the portfolio. This should include an evaluation

of the bank's ability to access the secondary market and a comparison of its underwriting standards with those that exist in the secondary market.

2010.2.5.3.3 CRE Management Information Systems

A strong management information system (MIS) is key to effective portfolio management. The sophistication of the MIS will necessarily vary with the size and complexity of the CRE portfolio and level and nature of concentration risk. The MIS should provide management with sufficient information to identify, measure, monitor, and manage CRE concentration risk. This includes meaningful information on CRE portfolio characteristics that is relevant to the bank's lending strategy, underwriting standards, and risk tolerances. A bank should periodically assess the adequacy of the MIS in light of growth in CRE loans and changes in the CRE portfolio's size, risk profile, and complexity.

Banks are encouraged to stratify the CRE portfolio by property type, geographic market, tenant concentrations, tenant industries, developer concentrations, and risk rating. Other useful stratifications may include loan structure (for example, fixed-rate or adjustable), loan purpose (for example, construction, short-term, or permanent), loan-to-value (LTV) limits, debt service coverage, policy exceptions on newly underwritten credit facilities, and affiliated loans (for example, loans to tenants). A bank should also be able to identify and aggregate exposures to a borrower, including its credit exposure relating to derivatives.

Management reporting should be timely and in a format that clearly indicates changes in the portfolio's risk profile, including risk-rating migrations. In addition, management reporting should include a well-defined process through which management reviews and evaluates concentration and risk-management reports, as well as special ad hoc analyses in response to potential market events that could affect the CRE loan portfolio.

2010.2.5.3.4 Market Analysis

Market analysis should provide the bank's management and board of directors with information to assess whether its CRE lending strategy and policies continue to be appropriate in light of changes in CRE market conditions. A bank should perform periodic market analyses for the

various property types and geographic markets represented in its portfolio.

Market analysis is particularly important as a bank considers decisions about entering new markets, pursuing new lending activities, or expanding in existing markets. Market information also may be useful for developing sensitivity analysis or stress tests to assess portfolio risk.

Sources of market information may include published research data, real estate appraisers and agents, information maintained by the property taxing authority, local contractors, builders, investors, and community development groups. The sophistication of a bank's analysis will vary by its market share and exposure, as well as the availability of market data. While a bank operating in nonmetropolitan markets may have access to fewer sources of detailed market data than a bank operating in large, metropolitan markets, a bank should be able to demonstrate that it has an understanding of the economic and business factors influencing its lending markets.

2010.2.5.3.5 Credit Underwriting Standards

A bank's lending policies should reflect the level of risk that is acceptable to its board of directors and should provide clear and measurable underwriting standards that enable the bank's lending staff to evaluate all relevant credit factors. When a bank has a CRE concentration, the establishment of sound lending policies becomes even more critical. In establishing its policies, a bank should consider both internal and external factors, such as its market position, historical experience, present and prospective trade area, probable future loan and funding trends, staff capabilities, and technology resources. Consistent with the Federal Reserve's real estate lending guidelines, CRE lending policies should address the following underwriting standards:

1. maximum loan amount by type of property
2. loan terms
3. pricing structures
4. collateral valuation²⁴
5. LTV limits by property type
6. requirements for feasibility studies and sensitivity analysis or stress testing
7. minimum requirements for initial investment

and maintenance of hard equity by the borrower

8. minimum standards for borrower net worth, property cash flow, and debt service coverage for the property

A bank's lending policies should permit exceptions to underwriting standards only on a limited basis. When a bank does permit an exception, it should document how the transaction does not conform to the bank's policy or underwriting standards, obtain appropriate management approvals, and provide reports to the board of directors or designated committee detailing the number, nature, justifications, and trends for exceptions. Exceptions to both the bank's internal lending standards and the Federal Reserve's supervisory LTV limits²⁵ should be monitored and reported on a regular basis. Further, banks would analyze trends in exceptions to ensure that risk remains within the bank's established risk tolerance limits.

Credit analysis should reflect both the borrower's overall creditworthiness and project-specific considerations as appropriate. In addition, for development and construction loans, the bank should have policies and procedures governing loan disbursements to ensure that the bank's minimum borrower equity requirements are maintained throughout the development and construction periods. Prudent controls should include an inspection process, documentation on construction progress, tracking pre-sold units, pre-leasing activity, and exception monitoring and reporting.

2010.2.5.3.6 CRE Portfolio Stress Testing and Sensitivity Analysis

A bank with CRE concentrations should perform portfolio-level stress tests or sensitivity analysis to quantify the impact of changing economic conditions on asset quality, earnings, and capital. Further, a bank should consider the sensitivity of portfolio segments with common risk characteristics to potential market conditions. The sophistication of stress testing practices and sensitivity analysis should be consistent with the size, complexity, and risk characteristics of the CRE loan portfolio. For example, well-

25. The Interagency Guidelines for Real Estate Lending state that loans exceeding the supervisory LTV guidelines should be recorded in the bank's records and reported to the board at least quarterly.

24. Refer to the Federal Reserve's appraisal regulations: 12 C.F.R. 208 subpart E and 12 C.F.R. 225, subpart G.

margined and seasoned performing loans on multifamily housing normally would require significantly less robust stress testing than most acquisition, development, and construction loans.

Portfolio stress testing and sensitivity analysis may not necessarily require the use of a sophisticated portfolio model. Depending on the risk characteristics of the CRE portfolio, stress testing may be as simple as analyzing the potential effect of stressed loss rates on the CRE portfolio, capital, and earnings. The analysis should focus on the more vulnerable segments of a bank's CRE portfolio, taking into consideration the prevailing market environment and the bank's business strategy.

2010.2.5.3.7 Credit-Risk Review Function

A strong credit-risk review function is critical for a bank's self-assessment of emerging risks. An effective, accurate, and timely risk-rating system provides a foundation for the bank's credit-risk review function to assess credit quality and, ultimately, to identify problem loans. Risk ratings should be risk sensitive, objective, and appropriate for the types of CRE loans underwritten by the bank. Further, risk ratings should be reviewed regularly for appropriateness.

2010.2.5.4 Supervisory Oversight Of CRE Concentration Risk

As part of its ongoing supervisory monitoring processes, the Federal Reserve will use certain criteria to identify banks that are potentially exposed to significant CRE concentration risk. A bank that has experienced rapid growth in CRE lending, has notable exposure to a specific type of CRE, or is approaching or exceeds the following supervisory criteria may be identified for further supervisory analysis of the level and nature of its CRE concentration risk:

1. total reported loans for construction, land development, and other land²⁶ represent 100 percent or more of the bank's total capital²⁷ or

2. total commercial real estate loans as defined in this guidance²⁸ represent 300 percent or more of the bank's total capital, and the outstanding balance of the bank's commercial real estate loan portfolio has increased by 50 percent or more during the prior 36 months.

The Federal Reserve will use the criteria as a preliminary step to identify banks that may have CRE concentration risk. Because regulatory reports capture a broad range of CRE loans with varying risk characteristics, the supervisory monitoring criteria do not constitute limits on a bank's lending activity but rather serve as high-level indicators to identify banks potentially exposed to CRE concentration risk. Nor do the criteria constitute a "safe harbor" for banks if other risk indicators are present, regardless of their measurements under (1) and (2).

2010.2.5.4.1 Evaluation of CRE Concentrations

The effectiveness of a bank's risk-management practices will be a key component of the supervisory evaluation of the bank's CRE concentrations. Examiners will engage in a dialogue with the bank's management to assess CRE exposure levels and risk-management practices. Banks that have experienced recent, significant growth in CRE lending will receive closer supervisory review than those that have demonstrated a successful track record of managing the risks in CRE concentrations.

In evaluating CRE concentrations, the Federal Reserve will consider the bank's own analysis of its CRE portfolio, including consideration of factors such as—

1. portfolio diversification across property types
2. geographic dispersion of CRE loans
3. underwriting standards
4. level of pre-sold units or other types of take-out commitments on construction loans
5. portfolio liquidity (ability to sell or securitize exposures on the secondary market)

While consideration of these factors should not change the method of identifying a credit concentration, these factors may mitigate the risk posed by the concentration.

26. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.

27. For purposes of this guidance, the term *total capital*

means the total risk-based capital as reported for commercial banks in the Call Report FFIEC 031 and 041 schedule RC-R—Regulatory Capital, line 21.

28. For commercial banks as reported in the Call Report FFIEC 031 and 041, schedule RC-C, item 1a.

2010.2.5.4.2 Assessment of Capital Adequacy for CRE Concentration Risk

The Federal Reserve's existing capital adequacy guidelines note that a bank should hold capital commensurate with the level and nature of the risks to which it is exposed. Accordingly, banks with CRE concentrations are reminded that their capital levels should be commensurate with the risk profile of their CRE portfolios. In assessing the adequacy of a bank's capital, the Federal Reserve will consider the level and nature of inherent risk in the CRE portfolio as well as management expertise, historical performance, underwriting standards, risk-management practices, market conditions, and any loan loss reserves allocated for CRE concentration risk. A bank with inadequate capital to serve as a buffer against unexpected losses from a CRE concentration should develop a plan for reducing its CRE concentrations or for maintaining capital appropriate to the level and nature of its CRE concentration risk.

[Sections 2010.2.6–2010.2.7 are reserved.]

2010.2.8 INSPECTION OBJECTIVES

Loan Administration

1. To determine if the parent's loan policies are adequate in relation to the responsibilities it has for the supervision of its credit-extending subsidiaries and whether those policies are consistent with safe and sound lending practices.
2. To determine if internal and external factors (for example, the size and financial condition of the credit-extending subsidiary, the size and expertise of its staff, avoidance of or control over credit concentrations, market conditions, and statutory and regulatory compliance) are considered in formulating and monitoring the organization's loan policies and strategic plan.
3. To determine if the loan policy is being monitored and complied with.
4. To establish whether the loan policy ensures sound assessments of the value of real estate and other collateral.

Lending Standards for Commercial Loans

1. To focus on and evaluate the strength of the credit-risk management process.

2. To determine whether the bank holding company has formal credit policies that (1) provide clear guidance on its appetite for credit risk and (2) support sound lending decisions.
3. To determine whether experienced credit professionals who are independent of line lending functions provide adequate internal control in the loan-approval process.
4. To evaluate whether loan-approval documents provide internal approving authorities and management with sufficient information on the risks of loans being considered, and that the information is in a clear and understandable format.
5. To evaluate whether forward-looking analysis tools are being adequately and appropriately used as part of the loan-approval process.
6. To determine whether credit-risk management information systems provide adequate information to management and lenders.
7. To incorporate the examiner's evaluation of the bank holding company's adherence to sound practices into the overall assessment of credit-risk management.
8. To be alert to indications of insufficiently rigorous risk assessment at banking organizations, particularly inadequate stress testing and excessive reliance on strong economic conditions and robust financial markets to support a borrower's capacity to service its debts.
9. To be attentive in reviewing a banking organization's assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead to delayed recognition of emerging weaknesses in some loans.
10. To ascertain whether the banking organization has relied, to a significant and undue extent, on favorable assumptions about borrowers or the economy and financial markets. If so, to carefully consider downgrading, under the applicable supervisory rating framework, a banking organization's risk-management, management, and/or asset-quality ratings and, if deemed sufficiently significant to the banking organization, its capital adequacy rating.
11. To determine if the banking organization's loan-review activities or other internal control and risk-management processes have been weakened by staff turnover, failure to commit sufficient resources, inadequate

training, and reduced scope or by less-thorough internal loan reviews. To incorporate such findings into the determination of supervisory ratings.

Credit-Risk Management for Home Equity Lending

1. To determine if the banking organization has an appropriate review and approval process for new product offerings, product changes, and marketing initiatives.
2. To ascertain whether the banking organization has appropriate control procedures for third parties that generate loans on its behalf and if the control procedures comply with the laws and regulations that are applicable to the organization.
3. To determine if the banking organization has given full recognition to the risks embedded in its home equity lending.
4. To determine whether the banking organization's risk-management practices have kept pace with the growth and changing risk profile of its home equity portfolios and whether underwriting standards have eased.
5. To determine whether the loan policy—
 - a. ensures prudent underwriting standards for home equity lending, including standards to ensure that a thorough evaluation of a borrower's capacity to service the debt is conducted (that is, the banking organization is not relying solely on the borrower's credit score);
 - b. provides risk-management safeguards for potential declines in home values;
 - c. ensures that the standards for interest-only and variable-rate home equity lines of credit (HELOCs) include an assessment of a borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates; and
 - d. provides appropriate collateral-valuation policies and procedures and provides for the use and validation of automated valuation models.

and job functions of individuals involved with the lending function.

2. Obtain and review the BHC's loan policy; determine if the policy contains the appropriate components, as summarized in this section. Determine how the policy is communicated to subsidiaries. Also determine whether the loan policy reflects the December 1992 uniform interagency real estate lending standards and guidelines as they apply to subsidiary depository institutions.
3. Obtain a copy of the most recent management reports concerning the quality of loans and other aspects of the loan portfolio (delinquency list, concentrations, yield analysis, loan-distribution lists, watch loan reports, charge-off reports, participation listings, internal and external audit reports, etc.). Determine the scope and sufficiency of the work performed by any committees related to the lending function. Determine if the information provided to the directorate and senior management is sufficient for them to make judgments about the quality of the portfolio and to determine appropriate corrective action.
4. Determine if an internal process has been established for the review and approval of loans that do not conform to internal lending policy. Establish whether such loans are supported by written documentation that clearly states all the relevant credit factors that culminated in the underwriting decision. Determine if exception loans of a significant size are reported to the board of directors of the subsidiary or to the holding company.
5. Review internal and external audit reports and bank examination reports for critical comments concerning loan-policy exceptions and administration. Determine whether action was taken in response to any identified exceptions. Determine who is responsible for follow-up and what the time frames are; seek rationale if no action was taken or if the action taken was half-hearted.
6. Review the organization's financial statements, the bank Call Reports, and the BHC FR Y-series reports submitted to the Federal Reserve. Determine whether reporting is accurate and disclosure is sufficient to indicate the organization's financial position and the nature of its loan portfolios, including nonaccrual loans.
7. When reviewing lending policies, ascertain whether—
 - a. the loan policies facilitate extensions of

2010.2.9 INSPECTION PROCEDURES

Loan Administration

1. Obtain an organizational chart and determine the various levels of responsibility

- credit to sound borrowers and facilitate the workout of problem loans, and
- b. the loan policies control and reduce concentration risk by placing emphasis on effective internal policies, systems, and controls to monitor the risk.
8. Through interviews with, or review of reports submitted by, the internal auditor, lending officers, loan-review personnel, and senior management, (1) evaluate the effectiveness of the BHC's self-monitoring of adherence to loan policy, (2) determine how changes to the loan policy occur, (3) determine how loans made in contradiction to the loan policy are explained, and (4) determine the various circumstances involving levels of approval and what specific consideration occurs at these levels.
 9. Presuming the inspection is concurrent with a bank's primary regulator, coordinate, on a random basis, the selection of loans subject to classification. Determine whether they conform to loan policy.
 10. Review management's policies and procedures for their determination of an appropriate level of loan-loss reserves.
 11. On the "Policies and Supervision" or an equivalent page of the inspection report, evaluate the BHC's oversight regarding effective lending policy and procedures.
- whether such information is provided clearly and can be easily understood.
4. Based on written policies and review of operating practice, evaluate whether loans being considered are evaluated not only on the basis of the borrower's current performance but on the basis of forward-looking analysis of the borrower.
 - a. Determine whether financial projections or other forward-looking tools are an integral part of the preapproval analysis and loan-approval documents.
 - b. Determine the extent to which alternative or "downside" scenarios are identified, considered, and analyzed in the loan-approval process.
 5. Review credit-risk management information systems and reports to determine whether they provide adequate information to management and lenders about—
 - a. the composition of the institution's current portfolio or exposure, to allow for consideration of whether proposed loans might affect this composition sufficiently to be inconsistent with the institution's risk appetite, and
 - b. data sources, analytical tools, and other information to support credit analysis.
 6. When appropriate, coordinate or conduct sufficient loan reviews and transaction testing in the lending function to accurately determine the quality of loan portfolios and other credit exposures. If deficiencies in lending practices or credit discipline are indicated as a result of the preexamination risk assessment, the inspection, or bank or other examinations, arrange for the commitment of sufficient supervisory resources to conduct in-depth reviews, including transaction testing, that are adequate to ensure that the Federal Reserve achieves a full understanding of the nature, scope, and implications of the deficiencies.
 7. When reviewing loans, lending policies, and lending practices—
 - a. observe and analyze loan-pricing policies and practices to determine whether the institution may be unduly weighting the short-term benefit of retaining or attracting new customers through price concessions, while not giving sufficient consideration to potential longer-term consequences;
 - b. be alert for indications of insufficiently rigorous risk assessment, in particular

Lending Standards for Commercial Loans

1. Review formal credit policies for clear articulation of current lending standards, including—
 - a. a description of the characteristics of acceptable loans and (if applicable) "guidance" minimum financial ratios,
 - b. standards for the types of covenants to be imposed for specific loan types, and
 - c. the treatment and reporting of policy exceptions, both for individual loans and the entire portfolio.
2. Evaluate the role played by independent credit staff in loan approvals and, in particular, whether these credit professionals are adequately experienced, are independent of line lending functions, and have authority to reject loans either because of specific exceptions to policy or because the loan does not meet the institution's credit-risk appetite.
3. Review written policies and determine operating practice in preparing loan-approval documents to evaluate whether sufficient information is provided on the characteristics and risks of loans being considered, and

- (1) excessive reliance on strong economic conditions and robust financial markets to support the capacity of borrowers to service their debts and (2) inadequate stress testing;
- c. be attentive in reviewing an institution's assessment and monitoring of credit risk to ensure that undue reliance on favorable conditions does not lead that institution to delay recognition of emerging weaknesses in some loans or to lessen staff resources assigned to internal loan review;²⁹ and
 - d. give careful consideration to downgrading, under the applicable supervisory rating framework, a banking organization's risk-management, management, and/or asset-quality ratings and its capital adequacy rating (if sufficiently significant) when there is significant and undue reliance on favorable assumptions about borrowers or the economy and financial markets, or when that reliance has slowed the recognition of loan problems.
8. Discuss matters of concern with the senior management and the board of directors of the bank holding company and report those areas of concern on core page 1, "Examiner's Comments and Matters Requiring Special Board Attention."

Credit-Risk Management for Home Equity Lending

1. Review the credit policies for home equity lending to determine if the underwriting standards address all relevant risk factors (that is, an analysis of a borrower's income and debt levels, credit score, and credit history versus the loan's size, the collateral value (including valuation methodology), the lien position, and the property type and location.
2. Determine whether the banking organization's underwriting standards include—
 - a. a properly documented evaluation of the borrower's financial capacity to adequately service the debt and
 - b. an adequately documented evaluation of the borrower's ability to (1) amortize the fully drawn line of credit over the loan term and (2) absorb potential increases in interest rates for interest-only and variable-rate HELOCs.
3. Assess the reasonableness and adequacy of the analyses and methodologies underlying the banking organization's evaluation of borrowers.
4. If the organization uses third parties to originate home equity loans, find out—
 - a. if the organization delegates the underwriting function to a broker or correspondent;
 - b. if the banking organization's internal controls for delegated underwriting are adequate;
 - c. whether the banking organization retains appropriate oversight of all critical loan-processing activities, such as verification of income and employment and the independence of the appraisal and evaluation function;
 - d. if there are adequate systems and controls to ensure that a third-party originator is appropriately managed, is financially sound, provides mortgages that meet the banking organization's prescribed underwriting guidelines, and adheres to applicable consumer protection laws and regulations;
 - e. if the banking organization has a quality-control unit or function that closely monitors (monitoring activities should include post-purchase underwriting reviews and ongoing portfolio-performance-management activities) the quality of loans that the third party underwrites; and
 - f. whether the banking organization has adequate audit procedures and controls to verify that third parties are not being paid to generate incomplete or fraudulent mortgage applications or are not otherwise receiving referral or unearned income or fees contrary to RESPA prohibitions.
5. Evaluate the adequacy of the banking organization's collateral-valuation policies and procedures. Ascertain whether the organization—
 - a. establishes criteria for determining the appropriate valuation methodology for a particular transaction (based on the risk in the transaction and loan portfolio);
 - b. sets criteria for determining when a physical inspection of the collateral is necessary;
 - c. ensures that an expected or estimated

²⁹ Examiners should recognize that an increase in classified or special-mention loans is not per se an indication of lax lending standards. Examiners should review and consider the nature of these increases and the surrounding circumstances in reaching their conclusions about the asset quality and risk management of an institution.

- value of the property is not communicated to an appraiser or individual performing an evaluation;
- d. implements policies and controls to preclude “value shopping”;
 - e. requires sufficient documentation to support the collateral valuation in the appraisal or evaluation.
6. If the banking organization uses automated valuation models (AVMs) to support evaluations or appraisals, find out if the organization—
 - a. periodically validates the models, to mitigate the potential valuation uncertainty in the model;
 - b. adequately documents the validation’s analysis, assumptions, and conclusions;
 - c. back-tests a representative sample of evaluations and appraisals supporting loans outstanding; and
 - d. evaluates the reasonableness and adequacy of its procedures for validating AVMs.
 7. If tax-assessment valuations are used as a basis for collateral valuation, ascertain whether the banking organization is able to demonstrate and document the correlation between the assessment value of the taxing authority and the property’s market value, as part of the validation process.
 8. Review the risk- and account-management procedures. Verify that the procedures are appropriate for the size of the banking organization’s loan portfolio, as well as for the risks associated with the types of home equity lending conducted by the organization.
 9. If the banking organization has large home equity loan portfolios or portfolios with high-risk characteristics, determine if the organization—
 - a. periodically refreshes credit-risk scores on all customers;
 - b. uses behavioral scoring and analysis of individual borrower characteristics to identify potential problem accounts;
 - c. periodically assesses utilization rates;
 - d. periodically assesses payment patterns, including borrowers who make only minimum payments over a period of time or those who rely on the credit line to keep payments current;
 - e. monitors home values by geographic area; and
 - f. obtains updated information on the collateral’s value when significant market factors indicate a potential decline in home values, or when the borrower’s payment performance deteriorates and greater reliance is placed on the collateral.
 10. Verify that annual credit reviews of home equity line of credit (HELOC) accounts are conducted. Verify if the reviews of HELOC accounts determine whether the line of credit should be continued, based on the borrower’s current financial condition.
 11. Determine that authorizations of over-limit home equity lines of credit are restricted and subject to appropriate policies and controls.
 - a. Verify that the banking organization requires over-limit borrowers to repay, in a timely manner, the amount that exceeds established credit limits.
 - b. Evaluate the sufficiency of management information systems (MIS) that enable management to identify, measure, monitor, and control the risks associated with over-limit accounts.
 12. Verify that the organization’s real estate lending policies are consistent with safe and sound banking practices and that its board of directors reviews and approves the policies at least annually.
 13. Determine whether the MIS—
 - a. allows for the segmentation of the loan portfolios;
 - b. accurately assesses key risk characteristics; and
 - c. provides management with sufficient information to identify, monitor, measure, and control home equity concentrations.
 14. Determine whether management periodically assesses the adequacy of its MIS, in light of growth and changes in the banking organization’s risk appetite.
 15. If the banking organization has significant concentrations of home equity loans (HELs) or HELOCs, determine if the MIS includes, at a minimum, reports and analysis of the following:
 - a. production and portfolio trends by product, loan structure, originator channel, credit score, loan to value (LTV), debt to income (DTI), lien position, documentation type, market, and property type
 - b. the delinquency and loss-distribution

- trends by product and originator channel, with some accompanying analysis of significant underwriting characteristics (such as credit score, LTV, or DTI)
- c. vintage tracking
 - d. the performance of third-party originators (brokers and correspondents)
 - e. market trends by geographic area and property type, to identify areas of rapidly appreciating or depreciating housing values
16. Determine whether the banking organization accurately tracks the volume of high-LTV (HLTV) loans, including HLTV home equity and residential mortgages, and if the organization reports the aggregate of these loans to its board of directors.
 17. Determine whether loans in excess of the supervisory LTV limits are identified as high-LTV loans in the banking organization's records. Determine whether the organization reports, on a quarterly basis, the dollar value of such loans to its board of directors.
 18. Find out whether the organization has purchased insurance products to help mitigate the credit risks of its HLTV residential loans. If a policy has a coverage limit, determine whether the coverage may be exhausted before all loans in the pool mature or pay off.
 19. Determine whether the organization's credit-risk management function oversees the support function(s). Evaluate the effectiveness of controls and procedures over staff persons responsible who are responsible for perfecting liens, collecting outstanding loan documents, obtaining insurance coverage (including flood insurance), and paying property taxes.
 20. Determine whether policies and procedures have been established for home equity problem-loan workouts and loss-mitigation strategies.

The System's ability to evaluate the effectiveness of a company's supervision and control of subsidiary investment activities can be strengthened not only by evaluating the parent's role in light of efficiency and operating performance, but also by evaluating the quality of control and supervision. In order to assess quality there must be a standard or measuring block against which a company's policies can be evaluated. By establishing the minimum areas that a company's policies should address with respect to subsidiary investments, a standard is created which can evaluate the quality of company's control and supervision of that activity. The examiner needs to make a qualitative assessment of the parent's supervision and control of subsidiary investment activities.

2010.3.1 INSPECTION OBJECTIVES

1. Determine if the parent's investment policy is adequate for the organization.
2. Determine if the investment policy is being complied with.

2010.3.2 INSPECTION PROCEDURES

1. Determine whether the management has developed a flow chart on investment authorization procedures sufficiently detailed to assure that the execution of transactions precludes the ability to circumvent policy directives.
2. Determine whether all investment policies appear to be adequately tailored to fit the business needs of each subsidiary. Review the

methods and/or process through which prior approval of new activities and investments in new instruments is granted.

3. Determine whether the boards of directors and the management of subsidiaries appear to be sufficiently involved in their respective roles to assure that the performance of fiduciary responsibilities of each appears adequate.

4. Assess the adequacy of the level of management expertise in relation to its involvement in various investment activities.

5. Evaluate the reasonableness of investment activity initiated to achieve corporate objectives in light of its potential impact on the risk exposure of subsidiaries.

6. Assess the adequacy of investment policy directives in regard to the required maintenance of adequate recordkeeping systems at subsidiaries.

7. Evaluate policy directives regarding the appropriateness of accounting practices in regard to transactions involving investment participations, swaps, other transfers of investments as well as specialized investment activities.

8. Evaluate whether investment policies adequately provide for the maintenance of a stable income stream at bank subsidiaries as well as the parent company level.

9. Determine whether investment policy directives adequately address statutory limitations, particularly those involving intercompany transactions.

10. Evaluate the effectiveness of the bank holding company's audit function in assuring that investment policies and directives are adhered to at each corporate level.

This section emphasizes the importance of integrating subsidiaries into a consolidated plan, the essential elements of the planning process, and the ultimate accountability of the board of directors of the holding company. As a minimum, the parent's consolidated plan should include the following ten elements:

1. *All plans should address a long-range goal or focus, intermediate term objectives, and short-term budgets.* A long-range focus is particularly important during a changing environment and during expansions of the organization. Long-range plans generally are broad with a service or customer orientation and market share emphasis. These plans provide the entire organization with a consistent direction and facilitate changes in the organization arising from environmental changes. Intermediate goals generally are narrower in scope. Short-term budgets are generally developed at the subsidiary level; however, they are subject to review and revision by the parent in an effort to maintain consistency throughout the organization.

2. *The planning process should be formalized.* A long-range focus, intermediate term objectives, and budgets should be written and adopted by the parent's board of directors to insure centralized accountability.

3. *Plans should be consistent and interrelated over the differing time periods.* For example, budgets should be consistent with long-range goals—the implementation of a short-term, high return orientation may be inconsistent with a long-term goal of increasing market share, or short-term compensation plans may be dysfunctional in the long run.

4. *A consolidated plan should increase the consistency of goals among differing subsidiaries and the parent.* The long-range goals, intermediate term objectives, and short term goals and objectives should be periodically reviewed, preferably, annually, by the BHC's board of directors. A consolidated plan should reduce unnecessary internal competition.

5. *A consolidated plan should facilitate the allocation of resources throughout the organization.* This is particularly important when the parent is providing most, or all, of the short-term funds and long-term capital. As the parent has an awareness of all subsidiaries, it can better allocate funds and personnel to areas where they will be utilized most effectively.

6. *Plans should be formulated with an awareness to possible weaknesses and recognition to areas likely to be influenced by envi-*

ronmental change. For these areas, flexibility should exist for contingency plans.

7. *Methods should be determined, in the plan, to monitor and evaluate compliance with the plan.*

8. *The consolidated plan should have a measurable aspect to determine whether budgets, objectives, and goals are being met.* If they are not met, determination as to the controllability of variances should be ascertained.

9. *Plans and goals must continually be evaluated to determine whether accomplishing the goal results in the desired and expected outcome.* For example, the desired outcome may be to increase net income by granting loans with higher interest rates and above normal risk. The granting of such loans may result in a need to increase the provision for loan losses, thus causing a decrease in earnings.

10. *Plans should be flexible enough to remain effective in a volatile environment.* If plans are too rigid, they may become dysfunctional if the environment changes and actually constrain an organization's ability to react. On the other hand, flexible goals and plans should enhance an organization's ability to compete by providing the entire organization with a fluid consistent direction.

2010.4.1 INSPECTION OBJECTIVES

1. To determine if the board of directors at the parent company is cognizant of and performing its duties and responsibilities.

2. To determine if the level of supervision over subsidiaries is both adequate and beneficial.

3. To evaluate the consolidated plan for consistency, controls, and effectiveness.

4. To ascertain if the board of directors of the parent company is making judgments and decisions based on adequate information flowing from the management and financial reporting systems of the organization.

2010.4.2 INSPECTION PROCEDURES

1. Evaluate the participation by the board of directors of the parent company in giving overall direction to the organization.

2. Obtain and evaluate descriptions of all im-

portant management and financial policies, procedures, and practices.

3. Determine if contradictions or “conflicts” between expressed and unexpressed strategies and between long-term and short-term goals exist. Also determine that goals are consistent with concern over safety and soundness.

4. Determine whether the planning process is sufficiently flexible and if contingency plans exist.

5. Spell out the lines of authority associated with the planning process.

6. Determine the degree of control exercised by the parent company over the entire organization.

7. Test compliance with policies at all levels.

2010.5.1 BACKGROUND INFORMATION ON ENVIRONMENTAL LIABILITY

Banking organizations are increasingly becoming exposed to liability associated with the clean-up of hazardous substance contamination pursuant to, the Comprehensive Environmental Response, Compensation and Liability Act (“CERCLA”), the federal superfund statute. It was enacted in response to the growing problem of improper handling and disposal of hazardous substances. CERCLA authorizes the Environmental Protection Agency (“EPA”) to clean-up hazardous waste sites and to recover costs associated with the clean-up from entities specified in the statute. The superfund statute is the primary federal law dealing with hazardous substance contamination. However, there are numerous other federal statutes, as well as state statutes, that establish environmental liability that could place banking organizations at risk. For example, underground storage tanks are also covered by separate federal legislation.¹

While the superfund statute was enacted a decade ago, it has been only since the mid-1980s that court actions have resulted in some banking organizations being held liable for the clean-up of hazardous substance contamination. In this connection, recent court decisions have had a wide array of interpretations as to whether banking organizations are owners or operators of contaminated facilities, and thereby liable under the superfund statute for clean-up costs. This has led to uncertainty on the part of banking organizations as to how to best protect themselves from environmental liability.

The relevant provisions of CERCLA, the so-called “superfund” statute, as it pertains to banking organizations, indicate which persons or entities are subject to liability for clean-up costs of hazardous substance contamination. These include “. . . the owner and operator of a vessel or a facility, (or) any person who at the time of disposal of any hazardous substance owned or operated any facility at which such hazardous substances were disposed of. . . .”² A person or entity that transports or arranges to transport hazardous substances can also be held liable for cleaning-up contamination under the superfund statute.

The liability imposed by the superfund statute is strict liability which means the government does not have to prove that the owners or operators had knowledge of or caused the hazardous substance contamination. Moreover, liability is joint and several, which allows the government to seek recovery of the entire cost of the clean-up from any individual party that is liable for those clean-up costs under CERCLA. In this connection, CERCLA does not limit the bringing of such actions to the EPA, but permits such actions to be brought by third parties.

CERCLA provides a secured creditor exemption in the definition of “owner and operator” by stating that these terms do not include “. . . a person, who, without participating in the management of a vessel or facility, holds indicia of ownership primarily to protect his security interest in the vessel or facility.”³ However, this exception has not provided banking organizations with an effective “safe harbor” because recent court decisions have worked to limit the application of this exemption. Specifically, courts have held that actions by lenders to protect their security interests may result in the banking organization “participating in the management” of a vessel or facility, thereby voiding the exemption. Additionally, once the title to a foreclosed property passes to the banking organization, courts have held that the exemption no longer applies and that the banking organization is liable under the superfund statute as an “owner” of the property. Under some circumstances, CERCLA may exempt landowners who acquire property without the knowledge of pre-existing conditions (the so-called “innocent landowner defense”). However, the courts have applied a stringent standard to qualify for this defense. Because little guidance is provided by the statute as to what constitutes the appropriate timing and degree of “due diligence” to successfully employ this defense, banking organizations should exercise caution before relying on it.

2010.5.2 OVERVIEW OF ENVIRONMENTAL HAZARDS

Environmental risk can be characterized as adverse consequences resulting from having gen-

1. Resource Conservation and Recovery Act of 1986 (RCRA).

2. CERCLA, Section 107(a).

3. CERCLA, Section 101(20)(A)..

erated or handled hazardous substances, or otherwise having been associated with the aftermath of subsequent contamination. The following discussion highlights some common environmental hazards, but by no means covers all environmental hazards.

Hazardous substance contamination is most often associated with industrial or manufacturing processes that involve chemicals or solvents in the manufacturing process or as waste products. For years, these types of hazardous substances were disposed of in land fills, or just dumped on industrial sites. Hazardous substances are also found in many other lines of business. The following examples demonstrate the diverse sources of potential hazardous substance contamination which should be of concern to banking organizations:

- Farmers and ranchers (use of fuel, fertilizers, herbicides, insecticides, and feedlot runoff).
- Dry cleaners (various cleaning solvents).
- Service station and convenience store operators (underground storage tanks).
- Fertilizer and chemical dealers and applicators (storage and transportation of chemicals).
- Lawn care businesses (application of lawn chemicals).
- Trucking firms (local and long haul transporters of hazardous substances such as fuel or chemicals).

The real estate industry has taken the brunt of the adverse affects of hazardous waste contamination. In addition to having land contaminated with toxic substances, construction methods for major construction projects, such as commercial buildings, have utilized materials that have been subsequently determined to be hazardous, resulting in significant declines in their value. For example, asbestos was commonly used in commercial construction from the 1950's to the late 1970's. Asbestos has since been found to be a health hazard and now must meet certain federal and, in many instances, state requirements for costly removal or abatement (enclosing or otherwise sealing off).

Another common source of hazardous substance contamination is underground storage tanks. Leaks in these tanks not only contaminate the surrounding ground, but often flow into ground water and travel far away from the original contamination site. As contamination spreads to other sites, clean-up costs escalate.

2010.5.3 IMPACT ON BANKING ORGANIZATIONS

Banking organizations may encounter losses arising from environmental liability in several ways. The greatest risk to banking organizations, resulting from the superfund statute and other environmental liability statutes, is the possibility of being held solely liable for costly environmental clean-ups such as hazardous substance contamination. If a banking organization is found to be a responsible party under CERCLA, the banking organization may find itself responsible for cleaning-up a contaminated site at a cost that far exceeds any outstanding loan balance. This risk of loss results from an interpretation of the superfund statute as providing for joint and several liability. Any responsible party, including the banking organization, could be forced to pay the full cost of any clean-up. Of course, the banking organization may attempt to recover such costs from the borrower, or the owner if different than the borrower, provided that the borrower or owner continues in existence and is solvent. Banking organizations may be held liable for the clean-up of hazardous substance contamination in situations where the banking organization:

- Takes title to property pursuant to foreclosure;
- Involves the banking organization's personnel or contractors engaged by the bank in day-to-day management of the facility;
- Takes actions designed to make the contaminated property salable, possibly resulting in further contamination;
- Acts in a fiduciary capacity, including management involvement in the day-to-day operations of industrial or commercial concerns, and purchasing or selling contaminated property;
- Owns existing, or acquires (by merger or acquisition), subsidiaries involved in activities that might result in a finding of environmental liability;
- Owns existing, or acquires for future expansion, premises that have been previously contaminated by hazardous substances. For example, site contamination at a branch office where a service station having underground storage tanks once operated. Also, premises or other real estate owned could be contaminated by asbestos requiring costly clean-up or abatement.

A more common situation encountered by banking organizations has been where real prop-

erty collateral is found to be contaminated by hazardous substances. The value of contaminated real property collateral can decline dramatically, depending on the degree of contamination. As the projected clean-up costs increase, the borrower may not be able to provide the necessary funds to remove contaminated materials. In making its determination whether to foreclose, the banking organization must estimate the potential clean-up costs. In many cases this estimated cost has been found to be well in excess of the outstanding loan balance, and the banking organization has elected to abandon its security interest in the property and write off the loan. This situation occurs regardless of the fact that the superfund statute provides a secured creditor exemption. Some courts have not extended this exemption to situations where banking organizations have taken title to a property pursuant to foreclosure. These rulings have been based on a strict reading of the statute that provides the exemption to “security interests” only.

Risk of credit losses can also arise where the credit quality of individual borrowers (operators, generators, or transporters of hazardous substances) deteriorates markedly as a result of being required to clean up hazardous substance contamination. Banking organizations must be aware that significant clean-up costs borne by the borrower could threaten the borrower’s solvency and jeopardize the banking organization’s ultimate collection of outstanding loans to that borrower, regardless of the fact that no real property collateral is involved. Therefore, ultimate collection of loans to fund operations, or to acquire manufacturing or transportation equipment can be jeopardized by the borrower’s generating or handling of hazardous substances in an improper manner. Further, some bankruptcy courts have required clean-up of hazardous substance contamination prior to distribution of a debtor’s estate to secured creditors.

Borrowers may have existing subsidiaries or may be involved in merger and acquisition activity that may place the borrower at risk for the activities of others that result in environmental liability. Some courts have held that for the purposes of determining liability under the superfund statute, the corporate veil may not protect parent companies that participate in the day-to-day operations of their subsidiaries from environmental liability and court imposed clean-up costs. Additionally, borrowers can be held liable for contamination which occurred prior to their owning or using real estate.

2010.5.4 PROTECTION AGAINST ENVIRONMENTAL LIABILITY

Banking organizations have numerous ways to identify and minimize their exposure to environmental liability. Because environmental liability is relatively recent, procedures used to safeguard against such liability are evolving. The following discussion briefly describes methods currently being employed by banking organizations and others to minimize potential environmental liability.

Banking organizations should have in place adequate safeguards and controls to limit their exposure to potential environmental liability. Loan policies and procedures should address methods for identifying potential environmental problems relating to credit requests as well as existing loans. The loan policy should describe an appropriate degree of due diligence investigation required for credit requests. Borrowers in high-risk industries or localities should be held to a more stringent due diligence investigation than borrowers in low-risk industries or localities. In addition to establishing procedures for granting credit, procedures should be developed and applied to portfolio analysis, credit monitoring, loan workout situations, and—prior to taking title to real property—foreclosures. Banking organizations may avoid or mitigate potential environmental liability by having sound policies and procedures designed to identify, assess and control environmental liability.

At the same time, banking organizations must be careful that any lending policies and procedures, but especially those undertaken to assess and control environmental liability, cannot be construed as taking an active role in participating in the management or day-to-day operations of the borrower’s business. Activities which could be considered active participation in the management of the borrower’s business, and therefore subject the bank to potential liability, include, but are not limited to:

- having bank employees as members of the borrower’s board of directors or actively participating in board decisions;
- assisting in day-to-day management and operating decisions; and
- actively determining management changes.

These considerations are especially important when the banking organization is actively involved in loan workouts or debt restructuring.

The first step in identifying and minimizing environmental risk is for banking organizations to perform environmental reviews. Such reviews may be performed by loan officers or others, and typically identify past practices and uses of the facility and property, evaluate regulatory compliance, if applicable, and identify potential future problems. This is accomplished by interviewing persons familiar with present and past uses of the facility and property, reviewing relevant records and documents, and visiting and inspecting the site.

Where the environmental review reveals possible hazardous substance contamination, an environmental assessment or audit may be required. Environmental assessments are made by personnel trained in identifying potential environmental hazards and provide a more thorough review and inspection of the facility and property. Environmental audits differ markedly from environmental assessments in that independent environmental engineers are employed to investigate, in greater detail, those factors listed previously, and actually test for hazardous substance contamination. Such testing might require collecting and analyzing air samples, surface soil samples, subsurface soil samples, or drilling wells to sample ground water.

Other measures used by some banking organizations to assist in identifying and minimizing environmental liability include: obtaining indemnities from borrowers for any clean-up costs incurred by the banking organization, and including affirmative covenants in loan agreements (and attendant default provisions) requiring the borrower to comply with all applicable environmental regulations. Although these measures may provide some aid in identifying and minimizing potential environmental liability, they are not a substitute for environmental reviews, assessments and audits, because their effectiveness is dependent upon the financial strength of the borrower.

2010.5.5 CONCLUSION

Potential environmental liability can touch on a great number of loans to borrowers in many industries or localities. Moreover, nonlending activities as well as corporate affiliations can lead to environmental liability depending upon the nature of the these activities and the degree of participation that the parent exercises in the operations of its subsidiaries. Such liability can

result in losses arising from hazardous substance contamination because banking organizations are held directly liable for costly court ordered clean-ups. Additionally, the banking organization's ability to collect the loans it makes may be hampered by significant declines in collateral value, or the inability of a borrower to meet debt payments after paying for costly clean-ups of hazardous substance contamination.

Banking organizations must understand the nature of environmental liability arising from hazardous substance contamination. Additionally, they should take prudential steps to identify and minimize their potential environmental liability. Indeed, the common threat to environmental liability is the existence of hazardous substances, not types of borrowers, lines of business, or real property.

2010.5.6 INSPECTION OBJECTIVES

1. To determine whether adequate safeguards and controls have been established to limit exposure to potential environmental liability.
2. To determine whether the banking organization has identified specific credits and any lending and other banking and nonbanking activities that expose the organization to environmental liability.

2010.5.7 INSPECTION PROCEDURES

1. Review loan policies and procedures and establish whether these and other adequate safeguards and controls have been established to avoid or mitigate potential environmental liability.⁴ In performing this task, ascertain whether:
 - a. an environmental policy statement has been adopted;
 - b. training programs are being conducted so that lending personnel are aware of environmental liability issues and are able to identify borrowers with potential problems;
 - c. guidelines and procedures have been established for dealing with new borrowers and real property offered as collateral.
 - d. the lending policies and procedures and other safeguards, including those to assess and control environmental liability, may not be construed as actively participating in the management of day-to-day operations of borrowers' businesses.

2. When reviewing individual credits determine whether the loan policy has been complied with in regard to a borrower's activities or industry that is associated with hazardous substances or environmental liability.

3. Ascertain whether appropriate periodic analysis of potential environmental liability is conducted.

Such analysis should be more rigorous as the risk of hazardous substance contamination increases. The following are examples of types of analyses and procedures that should be progressively considered as the risk of environmental liability increases:

- Environmental review—screening of the borrower's activities by lending personnel or real estate appraisers for potential environmental problems (using questionnaires, interviews, or observations).

Review procedures might include a survey of past ownership and uses of the property, a property inspection, a review of adjacent or contiguous parcels of property, a review of company records for past use or disposal of hazardous materials, and a review of any relevant Environmental Protection Agency records.

- Environmental assessment—structured analysis by a *qualified* individual that identifies the borrower's past practices, regulatory compliance, and potential future problems. This analysis would include reviewing relevant documents, visiting and inspecting the site, and, in some cases, performing limited tests.
- Environmental audit—a professional environmental engineer performs a similar

structured analysis as previously indicated for "environmental assessments," however, more comprehensive testing might involve collecting and analyzing air samples, surface soil samples, subsurface soil samples, or drilling wells to sample ground water.

4. Determine whether existing loans are reviewed internally to identify credits having potential environmental problems.

5. Review recordkeeping procedures and determine whether there is documentation as to the due diligence efforts taken at the time of making loans or acquiring real property.

6. Review loan agreements to determine if warranties, representations, and indemnifications have been included in loan agreements designed to protect the banking organization from losses stemming from hazardous substance contamination. (Although such provisions provide some protection for the lender, these agreements are not binding against the government or third parties. Such contractual protections are only as secure as the borrower's financial strength.)

7. For situations involving potential environmental liability arising from a banking organization's nonlending activities, verify that similar policies and procedures are in place.⁵

5. A banking organization's policies and procedures relating to environmental liability should apply to nonlending situations where appropriate. For example, banking organizations engaged in trust activities or contemplating a merger or acquisition should evaluate the possibility of existing or subsequent environmental liability arising from these activities.

Supervision of Subsidiaries (Financial Institution Subsidiary Retail Sales of Nondeposit Investment Products) Section 2010.6

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section has been revised to incorporate a name change to the Financial Industry Regulatory Authority, or FINRA (formerly, the National Association of Securities Dealers, or NASD).

The Board of Governors of the Federal Reserve System, along with the other federal banking regulators, issued an interagency statement on February 15, 1994, that provides comprehensive guidance on retail sales of nondeposit investment products occurring on or from depository institution premises. The interagency statement unifies pronouncements previously issued by the banking agencies that addressed various aspects of retail sales programs involving mutual funds, annuities, and other nondeposit investment products.

The interagency statement was made effective immediately and applies to all depository institutions, including state member banks and the U.S. branches and agencies of foreign banks, supervised by the Federal Reserve. The policy statement does not apply directly to bank holding companies. However, the board of directors and management of bank holding companies should consider and administer the provisions of the statement with regard to the holding company's supervision of its banking and thrift subsidiaries that offer such products to retail customers. Reserve Bank examiners will continue to review nondeposit investment product sales activities during examinations of institutions engaging in such activities on their premises, either directly or through a third party or an affiliate. The review process will consist of, at a minimum, an assessment of whether the interagency statement is being followed, particularly with regard to the nature and sufficiency of an institution's disclosures, the separation of functions, and the training of personnel involved with the sales of mutual funds and other nondeposit products. (See SR-94-11.)

The following is the text of the interagency policy statement, further clarified by a September 12, 1995, joint interpretation (SR-95-46). Section numbers have been added for reference.

2010.6.1 INTERAGENCY STATEMENT ON RETAIL SALES OF NONDEPOSIT INVESTMENT PRODUCTS

Insured depository institutions have expanded their activities in recommending or selling such products. Many depository institutions are providing these services at the retail level, directly or through various types of arrangements with third parties.

Sales activities for nondeposit investment products should ensure that customers for these products are clearly and fully informed of the nature and risks associated with these products. In particular, where nondeposit investment products are recommended or sold to retail customers, depository institutions should ensure that customers are fully informed that the products—

- are not insured by the FDIC;
- are not deposits or other obligations of the institution and are not guaranteed by the institution; and
- are subject to investment risks, including possible loss of the principal invested.

Moreover, sales activities involving these investment products should be designed to minimize the possibility of customer confusion and to safeguard the institution from liability under the applicable antifraud provisions of the federal securities laws, which, among other things, prohibit materially misleading or inaccurate representations in connection with the sale of securities.

The four federal banking agencies—the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision—issued the statement to provide uniform guidance to depository institutions engaging in these activities.¹

1. Each of the four banking agencies has in the past issued guidelines addressing various aspects of the retail sale of nondeposit investment products, which are superseded by this statement. Some of the banking agencies had adopted additional guidelines covering the sale of certain specific types of instruments by depository institutions, i.e., obligations of the institution itself or of an affiliate of the institution.

2010.6.1.1 Scope

This statement applies when retail recommendations or sales of nondeposit investment products are made by—

- employees of the depository institution;
- employees of a third party, which may or may not be affiliated with the institution,² occurring on the premises of the institution (including telephone sales or recommendations by employees or from the institution's premises and sales or recommendations initiated by mail from its premises); and
- sales resulting from a referral of retail customers by the institution to a third party when the depository institution receives a benefit for the referral.

Retail sales include (but are not limited to) sales to individuals by depository institution personnel or third-party personnel conducted in or adjacent to the institution's lobby area. Sales of government or municipal securities away from the lobby area are not subject to the interagency statement. The statement also applies to sales activities of an affiliated standalone broker-dealer resulting from a referral of retail customers from the depository institution to the broker-dealer.

These guidelines generally do not apply to the sale of nondeposit investment products to nonretail customers, such as sales to fiduciary accounts administered by an institution.³ The disclosures provided for by the interagency statement, however, should be provided to customers of fiduciary accounts where the customer directs investments, such as self-directed IRA accounts. Such disclosures need not be made to

customers acting as professional money managers. Fiduciary accounts administered by an affiliated trust company on the depository institution's premises should be treated as fiduciary accounts of the institution. However, as part of its fiduciary responsibility, an institution should take appropriate steps to avoid potential customer confusion when providing nondeposit investment products to the institution's fiduciary customers.

2010.6.1.2 Adoption of Policies and Procedures

2010.6.1.2.1 Program Management

A depository institution involved in the activities described above for the sale of nondeposit investment products to its retail customers should adopt a written statement that addresses the risks associated with the sales program and contains a summary of policies and procedures outlining the features of the institution's program and addressing, at a minimum, the concerns described in this statement. The written statement should address the scope of activities of any third party involved as well as the procedures for monitoring compliance by third parties in accordance with the guidelines below. The scope and level of detail of the statement should appropriately reflect the level of the institution's involvement in the sale or recommendation of nondeposit investment products. The institution's statement should be adopted and reviewed periodically by its board of directors. Depository institutions are encouraged to consult with legal counsel with regard to the implementation of a nondeposit investment product sales program.

The institution's policies and procedures should include the following:

Compliance procedures. The procedures for ensuring compliance with applicable laws and regulations and consistency with the provisions of this statement.

Supervision of personnel involved in sales. A designation by senior managers of specific individuals to exercise supervisory responsibility for each activity outlined in the institution's policies and procedures.

Types of products sold. The criteria governing the selection and review of each type of product sold or recommended.

Permissible use of customer information. The procedures for the use of information regarding the institution's customers for any purpose in

2. This statement does not apply to the subsidiaries of insured state nonmember banks, which are subject to separate provisions, contained in 12 C.F.R. 337.4, relating to securities activities. For OTS-regulated institutions that conduct sales of nondeposit investment products through a subsidiary, these guidelines apply to the subsidiary. 12 C.F.R. 545.74 also applies to such sales. Branches and agencies of U.S. foreign banks should follow these guidelines with respect to their nondeposit investment sales programs.

3. Restrictions on a national bank's use as fiduciary of the bank's brokerage service or other entity with which the bank has a conflict of interest, including purchases of the bank's proprietary and other products, are set out in 12 C.F.R. 9.12. Similar restrictions on transactions between funds held by a federal savings association as fiduciary and any person or organization with whom there exists an interest that might affect the best judgment of the association acting in its fiduciary capacity are set out in 12 C.F.R. 550.10.

connection with the retail sale of nondeposit investment products.

Designation of employees to sell investment products. A description of the responsibilities of those personnel authorized to sell nondeposit investment products and of other personnel who may have contact with retail customers concerning the sales program, and a description of any appropriate and inappropriate referral activities and the training requirements and compensation arrangements for each class of personnel.

2010.6.1.2.2 Arrangements with Third Parties

If a depository institution directly or indirectly, including through a subsidiary or service corporation, engages in activities as described above under which a third party sells or recommends nondeposit investment products, the institution should, prior to entering into the arrangement, conduct an appropriate review of the third party. The institution should have a written agreement with the third party that is approved by the institution's board of directors. Compliance with the agreement should be periodically monitored by the institution's senior management. At a minimum, the written agreement should—

- describe the duties and responsibilities of each party, including a description of permissible activities by the third party on the institution's premises; terms as to the use of the institution's space, personnel, and equipment; and compensation arrangements for personnel of the institution and the third party;
- specify that the third party will comply with all applicable laws and regulations, and will act consistently with the provisions of this statement and, in particular, with the provisions relating to customer disclosures;
- authorize the institution to monitor the third party and periodically review and verify that the third party and its sales representatives are complying with its agreement with the institution;
- authorize the institution and the appropriate banking agency to have access to such records of the third party as are necessary or appropriate to evaluate such compliance;
- require the third party to indemnify the institution for potential liability resulting from actions of the third party with regard to the investment product sales program; and
- provide for written employment contracts, satisfactory to the institution, for personnel who

are employees of both the institution and the third party.

2010.6.1.3 General Guidelines

2010.6.1.3.1 Disclosures and Advertising

The banking agencies believe that recommending or selling nondeposit investment products to retail customers should occur in a manner that ensures that the products are clearly differentiated from insured deposits. Conspicuous and easy-to-comprehend disclosures concerning the nature of nondeposit investment products and the risk inherent in investing in these products are one of the most important ways of ensuring that the differences between nondeposit products and insured deposits are understood.

2010.6.1.3.1.1 Content and Form of Disclosure

Disclosures with respect to the sale or recommendation of these products should, at a minimum, specify that the product is—

- not insured by the FDIC;
- not a deposit or other obligation of, or guaranteed by, the depository institution; and
- subject to investment risks, including possible loss of the principal amount invested.

The written disclosures described above should be conspicuous and presented in a clear and concise manner. Depository institutions may provide any additional disclosures that further clarify the risks involved with particular nondeposit investment products.

2010.6.1.3.1.2 Timing of Disclosure

The minimum disclosures should be provided to the customer—

- orally during any sales presentation;
- orally when investment advice concerning nondeposit investment products is provided;
- orally and in writing prior to or at the time an investment account is opened to purchase these products; and
- in advertisements and other promotional materials, as described below.

A statement, signed by the customer, should be obtained at the time such an account is opened, acknowledging that the customer has received and understands the disclosures. Third-party vendors not affiliated with the depository institution need not make the minimum disclosures on confirmations and account statements that contain the name of the depository institution as long as the name of the depository institution is there only incidentally and with a valid business purpose, and as long as it is clear on the face of the document that the broker-dealer, and not the depository institution, has sold the nondeposit investment products. For investment accounts established prior to the issuance of these guidelines, the institution should consider obtaining such a signed statement at the time of the next transaction.

Confirmations and account statements for such products should contain at least the minimum disclosures if the confirmations or account statements contain the name or the logo of the depository institution or an affiliate.⁴ If a customer's periodic deposit account statement includes account information concerning the customer's nondeposit investment products, the information concerning these products should be clearly separate from the information concerning the deposit account and should be introduced with the minimum disclosures and the identity of the entity conducting the nondeposit transaction.

2010.6.1.3.1.3 Advertisements and Other Promotional Material

Advertisements and other promotional and sales material, written or otherwise, about nondeposit investment products sold to retail customers should conspicuously include at least the minimum disclosures discussed above and must not suggest or convey any inaccurate or misleading impression about the nature of the product or its lack of FDIC insurance. The minimum disclosures should also be emphasized in telemarketing contacts. A shorter version of the minimum disclosures is permitted in advertisements. The text of an acceptable logo-format disclosure would include the following statements:

- not FDIC-insured
- no bank guarantee
- may lose value

The logo format should be boxed, set in bold-face type, and displayed in a conspicuous manner. Radio broadcasts of 30 seconds or less, electronic signs, and signs, such as banners and posters, when used only as location indicators, need not contain the minimum disclosures. Any third-party advertising or promotional material should clearly identify the company selling the nondeposit investment product and should not suggest that the depository institution is the seller. If brochures, signs, or other written material contain information about both FDIC-insured deposits and nondeposit investment products, these materials should clearly segregate information about nondeposit investment products from the information about deposits.

2010.6.1.3.1.4 Additional Disclosures

Where applicable, the depository institution should disclose the existence of an advisory or other material relationship between the institution or an affiliate of the institution and an investment company whose shares are sold by the institution and any material relationship between the institution and an affiliate involved in providing nondeposit investment products. In addition, where applicable, the existence of any fees, penalties, or surrender charges should be disclosed. These additional disclosures should be made prior to or at the time an investment account is opened to purchase these products. If sales activities include any written or oral representations concerning insurance coverage provided by any entity other than the FDIC, e.g., the Securities Investor Protection Corporation (SIPC), a state insurance fund, or a private insurance company, then clear and accurate written or oral explanations of the coverage must also be provided to customers when the representations concerning insurance coverage are made, in order to minimize possible confusion with FDIC insurance. Such representations should not suggest or imply that any alternative insurance coverage is the same as or similar to FDIC insurance.

Because of the possibility of customer confusion, a nondeposit investment product must not have a name that is identical to the name of the depository institution. Recommending or selling a nondeposit investment product with a name similar to that of the depository institution should only occur pursuant to a sales program

4. These disclosures should be made in addition to any other confirmation disclosures that are required by law or regulation, e.g., 12 C.F.R. 12 and 344, and 12 C.F.R. 208.8(k)(3).

designed to minimize the risk of customer confusion. The institution should take appropriate steps to ensure that the issuer of the product has complied with any applicable requirements established by the Securities and Exchange Commission regarding the use of similar names.

2010.6.1.3.2 Setting and Circumstances

Selling or recommending nondeposit investment products on the premises of a depository institution may give the impression that the products are FDIC-insured or are obligations of the depository institution. To minimize customer confusion with deposit products, sales or recommendations of nondeposit investment products on the premises of a depository institution should be conducted in a physical location distinct from the area where retail deposits are taken. Signs or other means should be used to distinguish the investment sales area from the retail deposit-taking area of the institution. However, in the limited situation where physical considerations prevent sales of nondeposit products from being conducted in a distinct area, the institution has a heightened responsibility to ensure appropriate measures are in place to minimize customer confusion.

In no case, however, should tellers and other employees, while located in the routine deposit-taking area, such as the teller window, make general or specific investment recommendations regarding nondeposit investment products, qualify a customer as eligible to purchase such products, or accept orders for such products, even if unsolicited. Tellers and other employees who are not authorized to sell nondeposit investment products may refer customers to individuals who are specifically designated and trained to assist customers interested in the purchase of such products.

2010.6.1.3.3 Qualifications and Training

The depository institution should ensure that its personnel who are authorized to sell nondeposit investment products or to provide investment advice with respect to such products are adequately trained with regard to the specific products being sold or recommended. Training should not be limited to sales methods, but should impart a thorough knowledge of the products involved, of applicable legal restrictions, and of customer-protection requirements. If depository institution personnel sell or recom-

mend securities, the training should be the substantive equivalent of that required for personnel qualified to sell securities as registered representatives.⁵ Depository institution personnel with supervisory responsibilities should receive training appropriate to that position. Training should also be provided to employees of the depository institution who have direct contact with customers to ensure a basic understanding of the institution's sales activities and the policy of limiting the involvement of employees who are not authorized to sell investment products to customer referrals. Training should be updated periodically and should occur on an ongoing basis.

Depository institutions should investigate the backgrounds of employees hired for their nondeposit investment products sales programs, including checking for possible disciplinary actions by securities and other regulators if the employees have previous investment industry experience.

2010.6.1.3.4 Suitability and Sales Practices

Depository institution personnel involved in selling nondeposit investment products must adhere to fair and reasonable sales practices and be subject to effective management and compliance reviews with regard to such practices. In this regard, if depository institution personnel *recommend* nondeposit investment products to customers, they should have reasonable grounds for believing that the specific product recommended is suitable for the particular customer on the basis of information disclosed by the customer. Personnel should make reasonable efforts to obtain information directly from the customer regarding, at a minimum, the customer's financial and tax status, investment objectives, and other information that may be useful or reasonable in making investment recommendations to that customer. This information should be documented and updated periodically.

5. Savings associations are not exempt from the definitions of "broker" and "dealer" in sections 3(a)(4) and 3(a)(5) of the Securities Exchange Act of 1934; therefore, all securities sales personnel in savings associations must be registered representatives.

2010.6.1.3.5 Compensation

Depository institution employees, including tellers, may receive a one-time nominal fee of a fixed dollar amount for each customer referral for nondeposit investment products. The payment of this referral fee should not depend on whether the referral results in a transaction.

Personnel who are authorized to sell nondeposit investment products may receive incentive compensation, such as commissions, for transactions entered into by customers. However, incentive compensation programs must not be structured in such a way as to result in unsuitable recommendations or sales being made to customers.

Depository institution compliance and audit personnel should not receive incentive compensation directly related to results of the nondeposit investment sales program.

2010.6.1.3.6 Compliance

Depository institutions should develop and implement policies and procedures to ensure that nondeposit investment product sales activities are conducted in compliance with applicable laws and regulations, the institution's internal policies and procedures, and in a manner consistent with this statement. Compliance procedures should identify any potential conflicts of interest and how such conflicts should be addressed. The compliance procedures should also provide for a system to monitor customer complaints and their resolution. Where applicable, compliance procedures also should call for verification that third-party sales are being conducted in a manner consistent with the governing agreement with the depository institution.

The compliance function should be conducted independently of nondeposit investment product sales and management activities. Compliance personnel should determine the scope and frequency of their own review, and findings of compliance reviews should be periodically reported directly to the institution's board of directors, or to a designated committee of the board. Appropriate procedures for the nondeposit investment product program should also be incorporated into the institution's audit program.

2010.6.1.4 Supervision by Banking Agencies

The federal banking agencies will continue to review a depository institution's policies and procedures governing recommendations and sales of nondeposit investment products, as well as management's implementation and compliance with such policies and all other applicable requirements. The banking agencies will monitor compliance with the institution's policies and procedures by third parties that participate in the sale of these products. The failure of a depository institution to establish and observe appropriate policies and procedures consistent with this statement in connection with sales activities involving nondeposit investment products will be subject to criticism and appropriate corrective action.

2010.6.2 SUPPLEMENTARY FEDERAL RESERVE SUPERVISORY AND EXAMINATION GUIDANCE PERTAINING TO THE SALE OF UNINSURED NONDEPOSIT INVESTMENT PRODUCTS

The above guidelines contained in the Interagency Statement on Retail Sales of Nondeposit Investment Products apply to retail recommendations or sales of nondeposit investment products made by—

- employees of a banking organization,
- employees of an affiliated or unaffiliated third party occurring on the premises of the banking organization (including telephone sales, investment recommendations by employees, and sales or recommendations initiated by mail from its premises), and
- a referral of retail customers by the institution to a third party when the depository institution receives a benefit for the referral.

The following examination procedures are intended to determine if the bank's policies and procedures provide for an operating environment that is designed to ensure customer protections in all facets of the sales program. Furthermore, examiners are expected to assess the bank's ability to conduct such sales activities in a safe and sound manner.

These procedures apply when reviewing the nondeposit investment product retail sales activities conducted by state member banks or the state-licensed U.S. branches or agencies of foreign banks. They also apply to such activities

conducted by a bank holding company nonbank subsidiary on the premises of a bank.⁶

The Rules of Fair Practice of the Financial Industry Regulatory Authority (FINRA) govern sales of securities by its member broker-dealers. In addition, the federal securities laws prohibit materially misleading or inaccurate representations in connection with the offer or sale of securities⁷ and require that sales of registered securities be accompanied by a prospectus that complies with Securities and Exchange Commission (SEC) disclosure requirements.

In view of the existence of these securities rules and laws that are applicable to broker-dealers subject to supervision by the SEC and the FINRA, examiners should note that the examination procedures contained herein have been tailored to avoid duplication of examination efforts by relying on the most recent examination results or sales-practice review conducted by the FINRA and provided to the third party. To the extent that no such FINRA examinations or reviews have been completed within the last two years, Reserve Banks should consult with Board staff to determine an appropriate examination/inspection scope before proceeding further.

Notwithstanding Reserve System use of FINRA results of sales-practice reviews, examiners should still complete the balance of these examination procedures, particularly those pertaining to the separation of sales of nondeposit investment products from the deposit-taking activities of the bank. Examiners should determine whether the institution has adequate policies and procedures to govern the conduct of the sales activities on a bank's premises and, in particular, whether sales of nondeposit investment products are distinguished from the deposit-taking activities of the bank through disclosure and physical means that are designed to prevent customer confusion.

Although the interagency statement does not apply to sales of nondeposit investment products to nonretail customers, such as fiduciary

customers, examiners should apply these examination procedures when retail customers are directed to the bank's trust department where they may purchase nondeposit investment products simply by completing a customer agreement.

For additional information on the subject of retail sales of nondeposit investment products, examiners and other interested parties may find it helpful to refer to "Retail Investment Sales—Guidelines for Banks," February 1994 (industry guidelines), published collectively by six bank trade associations and available from the American Bankers Association, 1120 Connecticut Avenue, N.W., Washington, D.C. 20036.

2010.6.2.1 Program Management

Banking organizations must adopt policies and procedures governing nondeposit investment product retail sales programs. Such policies and procedures should be in place before the commencement of the retail sale of nondeposit investment products on bank premises.

The board of directors of a banking organization is responsible for ensuring that retail sales of nondeposit investment products comply with the interagency statement (see section 2010.6.1) and all applicable state and federal laws and regulations. Therefore, the board or a designated committee of the board should adopt written policies that address the risks and management of such sales programs. Policies and procedures should reflect the size, complexity, and volume of the institution's activities or, when applicable, address the institution's arrangements with any third parties selling such products on bank premises. The banking organization's policies and procedures should be reviewed periodically by the board of directors or its designated committee to ensure that the policies are consistent with the institution's current practices, applicable laws, regulations, and guidelines.

As discussed in more detail below, an institution's policies and procedures for nondeposit investment products should, at a minimum, address disclosure and advertising, physical separation of investment sales from deposit-taking activities, compliance and audit, suitability, and other sales practices and related risks associated with such activities. In addition, policies and procedures should address the following areas.

6. The interagency statement and the majority of these examination procedures apply to all depository institutions. Many of the procedures, however, may not apply directly to the inspection of bank holding companies. Some procedures may be applicable to bank holding companies from the perspective of inspecting a bank holding company with regard to its responsibility to supervise its depository institution and holding company nonbank subsidiaries. Depository institution examination procedures and bank holding company inspection procedures have been included in this section to keep bank holding company examiners fully informed.

7. See, for example, section 10(b) of the Securities Exchange Act (15 U.S.C. 78j(b)) and rule 10b-5 (17 C.F.R. 240.10b-5) thereunder.

2010.6.2.1.1 Types of Products Sold

When evaluating nondeposit investment products, management should consider what products best meet the needs of customers. Policies should outline the criteria and procedures that will be used to select and periodically review nondeposit investment products that are recommended or sold on a depository institution's premises. Institutions should periodically review products offered to ensure that they meet their customers' needs.

2010.6.2.1.2 Use of Identical or Similar Names

Because of the possibility of customer confusion, a nondeposit investment product must not have a name that is identical to the name of a bank or its affiliates. However, a bank may sell a nondeposit investment product with a name similar to the bank's as long as the sales program addresses the even greater risk that customers may regard the product as an insured deposit or other obligation of the bank. Moreover, the bank should review the issuer's disclosure documents for compliance with SEC requirements, which call for a thorough explanation of the relationship between the bank and the mutual fund.

The Federal Reserve applies a stricter rule under Regulation Y (12 C.F.R. 225.125) when a bank holding company (as opposed to a bank) or nonbank subsidiary acts as an investment adviser to a mutual fund. In such a case, the fund may not have a name that is identical to, similar to, or a variation of the name of the bank holding company or a subsidiary bank.

2010.6.2.1.3 Permissible Use of Customer Information

Banking organizations should adopt policies and procedures regarding the use of confidential customer information for any purpose in connection with the sale of nondeposit investment products. The industry guidelines permit banks to share with third parties only limited customer information, such as name, address, telephone number, and types of products owned. It does not permit the sharing of more confidential information, such as specific or aggregate dollar amounts of investments, net worth, etc., without

the customer's prior acknowledgment and written consent.

2010.6.2.1.4 Arrangements with Third Parties

A majority of all nondeposit investment products sold on bank premises are sold by representatives of third parties. Under such arrangements, the third party has access to the institution's customers, while the bank is able to make nondeposit investment products available to interested customers without having to commit the resources and personnel necessary to directly sell such products. Third parties include wholly owned subsidiaries of a bank, bank-affiliated broker-dealers, unaffiliated broker-dealers, insurance companies, or other companies in the business of distributing nondeposit investment products on a retail basis.

A banking institution should conduct a comprehensive review of an unaffiliated third party before entering into any arrangement. The review should include an assessment of the third party's financial status, management experience, reputation, and ability to fulfill its contractual obligations to the bank, including compliance with the interagency statement.

The interagency statement calls for banks to enter into written agreements with any affiliated and unaffiliated third parties that sell nondeposit investment products on a bank's premises. Such agreements should be approved by a bank's board of directors or its designated committee. Agreements should outline the duties and responsibilities of each party; describe third-party activities permitted on bank premises; address the sharing or use of confidential customer information for investment sales activities; and define the terms for use of the institution's office space, equipment, and personnel. If an arrangement includes dual employees, the agreement must provide for written employment contracts that specify the duties of such employees and their compensation arrangements.

In addition, a third-party agreement should specify that the third party will comply with all applicable laws and regulations and will conduct its activities in a manner consistent with the interagency statement. The agreement should authorize the bank to monitor the third party's compliance with its agreement, and authorize the institution and Federal Reserve examination staff to have access to third-party records considered necessary to evaluate such compliance. These records should include examination results, sales-practice reviews, and

related correspondence provided to the third party by securities regulatory authorities. Finally, an agreement should provide for indemnification of the bank by an unaffiliated third party for the conduct of its employees in connection with sales activities.

Notwithstanding the provisions of a third-party agreement, a bank should monitor the conduct of nondeposit investment product sales programs to ensure that sales of nondeposit investment products are distinct from other bank activities and are not conducted in a manner that could confuse customers about the lack of insurance coverage for such investments.

2010.6.2.1.5 Contingency Planning

Nondeposit investment products are subject to price fluctuations caused by changes in interest rates, stock market valuations, etc. In the event of a sudden, sharp drop in the market value of nondeposit investment products, banking institutions may experience a heavy volume of customer inquiries, complaints, and redemptions. Management should develop contingency plans to address these situations. A major element of any contingency plan should be the provision of customer access to information pertaining to their investments. Other factors to consider in contingency planning include public relations and the ability of operations staff to handle increased volumes of transactions.

2010.6.2.2 Disclosures and Advertising

2010.6.2.2.1 Content, Form, and Timing of Disclosure

Nondeposit investment product sales programs should be conducted in a manner that ensures that customers are clearly and fully informed of the nature and risks associated with these products. In addition, nondeposit investment products must be clearly differentiated from insured deposits. The interagency statement identifies the following minimum disclosures that must be made to customers when providing investment advice, making investment recommendations, or effecting nondeposit investment product transactions:

- They are not insured by the Federal Deposit Insurance Corporation (FDIC).
- They are not deposits or other obligations of the depository institution and are not guaranteed by the depository institution.

- They are subject to investment risks, including the possible loss of the principal invested.

Disclosure is the most important way of ensuring that retail customers understand the differences between nondeposit investment products and insured deposits. It is critical that the minimum disclosures be presented clearly and concisely in both oral and written communications. In this regard, the minimum disclosures should be provided—

- orally during any sales presentations (including telemarketing contacts) or when investment advice is given,
- orally and in writing before or at the time an investment account to purchase these products is opened, and
- in all advertisements and other promotional materials (as discussed further below).

The minimum disclosures may be made on a customer-account agreement or on a separate disclosure form. The disclosures must be conspicuous (highlighted through bolding, boxes, or a larger typeface). Disclosures contained directly on a customer-account agreement should be located on the front of the agreement or adjacent to the customer signature block.

Banking organizations are to obtain a written acknowledgment—on the customer-account agreement or on a separate form—from a customer confirming that the customer has received and understands the minimum disclosures. For nondeposit investment product accounts established before the interagency statement, banking organizations should obtain a disclosure acknowledgment from the customer at the time of the customer's next purchase transaction. If an institution solicits customers by telephone or mail, it should ensure that the customers receive the written disclosures and an acknowledgment to be signed and returned to the institution.

Customer-account statements (including combined statements for linked accounts) and trade confirmations that are provided by the bank or an affiliate should contain the minimum disclosures if they display the name or logo of the bank or its affiliate. Statements that provide account information about insured deposits and nondeposit investment products should clearly segregate the information about nondeposit investment products from the information about deposits to avoid customer confusion.

2010.6.2.2.2 Advertising

The interagency statement provides that advertisements in all media forms that identify specific investment products must conspicuously include the minimum disclosures and must not suggest or convey any inaccurate or misleading impressions about the nature of a nondeposit investment product. Promotional material that contains information about both FDIC-insured products and nondeposit investment products should clearly segregate the information about the two product types. Displays of promotional sales materials related to nondeposit investment products in a bank's retail areas should be grouped separately from material related to insured bank products.

Examiners should review telemarketing scripts to determine whether bank personnel are making inquiries about customer investment objectives, offering investment advice, or identifying particular investment products or types of products. In such cases, the scripts must contain the minimum disclosures. Bank personnel relying on the scripts must be formally authorized to sell nondeposit investment products by their employers and must have training that is the substantive equivalent of that required for personnel qualified to sell securities as registered representatives (see the discussion on training below).

2010.6.2.2.3 Additional Disclosures

A depository institution should apprise customers of certain material relationships. For example, sales personnel should inform a customer orally and in writing before the sale about any advisory relationship existing between the bank (or an affiliate) and a mutual fund whose shares are being sold by the depository institution. Similarly, sales personnel should disclose fees, penalties, or surrender charges associated with a nondeposit investment product orally and in writing before or at the time the customer purchases the product. The SEC requires written disclosure of this information in the investment product's prospectus.

If sales activities include any written or oral representations concerning insurance coverage by any entity other than the FDIC (for example, Securities Investor Protection Corporation (SIPC) insurance of broker-dealer accounts, a

state insurance fund, or a private insurance company), then clear and accurate explanations of the coverage must also be provided to customers at that time to minimize possible confusion with FDIC insurance. Such disclosures should not suggest that other forms of insurance are the substantive equivalent to FDIC deposit insurance.

2010.6.2.3 Setting and Circumstances

2010.6.2.3.1 Physical Separation from Deposit Activities

Selling or recommending nondeposit investment products on the premises of a banking institution may give the impression that the products are FDIC-insured or are obligations of the bank. To minimize customer confusion with deposit products, nondeposit investment product sales activities should be conducted in a location that is physically distinct from the areas where retail deposits are taken. Bank employees located at teller windows may not provide investment advice, make investment recommendations about investment products, or accept orders (even unsolicited orders) for nondeposit investment products.

Examiners must evaluate the particular circumstances of each bank in order to form an opinion about whether nondeposit investment product sales activities are sufficiently separate from deposit activities. FDIC insurance signs and promotional material related to FDIC-insured deposits should be removed from the investment-product sales area and replaced with signs indicating that the area is for the sale of investment products. Signs referring to specific investments should prominently contain the minimum disclosures. In the limited situation where physical constraints prevent nondeposit investment product sales activities from being conducted in a distinct and separate area, the institution has a heightened responsibility to ensure that appropriate measures are taken to minimize customer confusion.

A bank that enters into a third-party brokerage arrangement with a broker or dealer registered under the Securities Exchange Act of 1934 (the 1934 Act) will not itself be considered to be a broker subject to registration under the 1934 Act if the bank complies with the nine requirements set forth in section 3(a)(4)(B) of the 1934 Act. These requirements include clear identification of the broker or dealer as the person providing the brokerage services; clear physical separation of deposit-taking activities from bro-

kerage transactions; prohibition of bank employees' receiving incentive compensation based on brokerage transactions; limitation of bank employees to clerical or ministerial functions with respect to brokerage transactions; and specific disclosures and other requirements. Failure by a bank to comply with these requirements will not automatically require the bank to register but brings into question the exemption of the bank from the registration requirements of the 1934 Act.

Business cards for designated sales personnel should clearly indicate that they sell nondeposit investment products or, if applicable, are employed by a broker-dealer.

The interagency statement was intended to generally cover sales made to retail customers in a bank's lobby. However, some banks may have an arrangement whereby retail customers purchase nondeposit investment products at a location generally confined to institutional services (such as the corporate money desk). In such cases, the banking institutions should still ensure that retail customers receive the minimum disclosures to minimize any possible customer confusion about nondeposit investment products and insured deposits.

2010.6.2.3.2 Hybrid Instruments and Accounts

In cases in which a depository institution offers accounts that link traditional bank deposits with nondeposit investment products, such as a cash management account,⁸ the accounts should be opened at the investment sales area by trained personnel. In light of the hybrid characteristics of these products, the opportunity for customer confusion is amplified, so the depository institution must take special care in the account-opening process to ensure that a customer is accurately informed that—

- funds deposited into a sweep account will only be FDIC-insured until they are swept into a nondeposit investment product account and
- customer-account statements may disclose balances for both insured and nondeposit product accounts.

2010.6.2.4 Designation, Training, and Supervision of Sales Personnel and Personnel Making Referrals

2010.6.2.4.1 Hiring and Training of Sales Personnel

Banking organizations hiring sales personnel for nondeposit investment product programs should investigate the backgrounds of prospective employees. In cases in which candidates for employment have previous investment industry experience, the bank should check whether the individual has been the subject of any disciplinary actions by securities, state, or other regulators.

Unregistered bank sales personnel should receive training that is the substantive equivalent of that provided to personnel qualified to sell securities as registered representatives. Training should cover the areas of product knowledge, trading practices, regulatory requirements and restrictions, and customer-protection issues. In addition, training programs should cover the institution's policies and procedures regarding sales of nondeposit investment products and should be conducted continually to ensure that staff are kept abreast of new products and compliance issues.

Bank employees whose sales activities are limited to mutual funds or variable annuities should receive training equivalent to that ordinarily needed to pass FINRA's Series 6 limited representative examination, which typically involves approximately 30 to 60 hours of preparation, including about 20 hours of classroom training. Bank employees who are authorized to sell additional investment products and securities should receive training that is appropriate to pass the NYSE's Series 7 general securities representative examination, which typically involves 160 to 250 hours of study, including at least 40 hours of classroom training.

The training of third-party or dual employees is the responsibility of the third party. When entering into an agreement with a third party, a banking organization should be satisfied that the third party is able to train third-party and dual employees about compliance with the minimum disclosures and other requirements of the interagency statement. The bank should obtain and review copies of third-party training and compliance materials in order to monitor the third party's performance regarding its training obligations.

8. A hybrid account may incorporate deposit and brokerage services, credit/debit card features, and automated sweep arrangements.

2010.6.2.4.2 Training of Bank Personnel Who Make Referrals

Bank employees, such as tellers and platform personnel, who are not authorized to provide investment advice, make investment recommendations, or sell nondeposit investment products but who may refer customers to authorized nondeposit investment products sales personnel, should receive training regarding the strict limitations on their activities. In general, bank personnel who are not authorized to sell nondeposit investment products are not permitted to discuss general or specific investment products, prequalify prospective customers as to financial status and investment history and objectives, open new accounts, or take orders on a solicited or unsolicited basis. Such personnel may contact customers for the purposes of—

- determining whether the customer wishes to receive investment information;
- inquiring whether the customer wishes to discuss investments with an authorized sales representative; and
- arranging appointments to meet with authorized bank sales personnel or third-party broker–dealer registered sales personnel.

The minimum disclosure guidelines do not apply to referrals made by personnel not authorized to sell nondeposit investment products if the referral does not provide investment advice, identify specific investment products, or make investment recommendations.

2010.6.2.4.3 Supervision of Personnel

Banking institution policies and procedures should designate, by title or name, the individuals responsible for supervising nondeposit investment product sales activities, as well as referral activities initiated by bank employees not authorized to sell these products. Personnel assigned responsibility for management of sales programs for these products should have supervisory experience and training equivalent to that required of a general securities principal as required by the FINRA for broker–dealers. Supervisory personnel should be responsible for the institution’s compliance with policies and procedures on nondeposit investment products, applicable laws and regulations, and the interagency statement. When sales of these products

are conducted by a third party, supervisory personnel should be responsible for monitoring compliance with the agreement between the bank and the third party, as well as compliance with the interagency statement, particularly the guideline calling for nondeposit investment product sales to be separate and distinct from the deposit activities of the bank.

2010.6.2.5 Suitability and Sales Practices

2010.6.2.5.1 Suitability of Recommendations

Suitability refers to the matching of customer financial means and investment objectives with a suitable product. If customers are placed into unsuitable investments, the resulting loss of consumer confidence could have detrimental effects on an institution’s reputation. Many first-time investors may not fully understand the risks associated with nondeposit investment products and may assume that the banking institution is responsible for the preservation of the principal of their investment.

Banking institutions that sell nondeposit investment products directly to customers should develop detailed policies and procedures addressing the suitability of investment recommendations and related record-keeping requirements. Sales personnel who recommend nondeposit investment products to customers should have reasonable grounds for believing that the products recommended are suitable for the particular customer on the basis of information provided by the customer. A reasonable effort must be made to obtain, record, and update information concerning the customer’s financial profile (such as tax status, other investments, income), investment objectives, and other information necessary to make recommendations.

In determining whether sales personnel are meeting their suitability responsibilities, examiners should review the practices for conformance with the banking institution’s policies and procedures. The examiner’s review should include a sample of customer files to determine the extent of customer information collected, recorded, and updated (for subsequent purchases), and whether investment recommendations appear unsuitable in light of such information.

Nondeposit investment product sales programs conducted by third-party broker–dealers are subject to FINRA’s suitability and other

sales-practice rules. To avoid duplicating FINRA examination efforts, examiners should rely on FINRA's most recent sales-practice review of the third party, when available. To the extent that no such FINRA review has been completed within the last two years, Reserve Banks should consult with Board staff to determine an appropriate examination scope for suitability compliance before proceeding further.

2010.6.2.5.2 Sales Practices

The banking organization should have policies and procedures that address undesirable practices by sales personnel intended to generate additional commission income through the churning or switching of accounts from one product to another.

2010.6.2.5.3 Customer Complaints

The banking organization should have policies and procedures for handling customer complaints related to nondeposit investment products. The process should provide for the recording and tracking of all complaints and require periodic reviews of complaints by compliance personnel. The merits and circumstances of each complaint (including all documentation relating to the transaction) should be considered when determining the proper form of resolution. Reasonable timeframes should be established for addressing complaints.

2010.6.2.6 Compensation

Incentive compensation programs specifically related to the sale of nondeposit investment products may include sales commissions, limited fees for referring prospective customers to an authorized sales representative, and nonmonetary compensation (prizes, awards, and gifts). Compensation that is paid by unaffiliated third parties (such as mutual fund distributors) to banking organization staff must be approved in writing by bank management; be consistent with the bank's written internal code of conduct relating to the acceptance of remuneration from third parties; and be consistent with the proscriptions of the Bank Bribery Act (18 U.S.C. 215) and the banking agencies' implementing guidelines to that act (see SR-87-36, dated October 30, 1987, or 52 *Federal Register* 39,277, October 21,

1987). Compensation policies should establish appropriate limits on the extent of compensation that may be paid to banking organization staff by unaffiliated third parties.

Incentive compensation programs must not be structured in such a way as to result in unsuitable investment recommendations or sales to customers. In addition, if sales personnel sell both deposit and nondeposit products, similar financial incentives should be in place for sales of both types of products. A compensation program that offers significantly higher remuneration for selling a specific product (for example, a proprietary mutual fund) may be inappropriate if it results in unsuitable recommendations to customers. A compensation program that is intended to provide remuneration for a group of bank employees (such as a branch or department) is permissible as long as the program is based on the overall performance of the group in meeting bank objectives regarding a broad variety of bank services and products, and is not based principally on the volume of sales on nondeposit investment products.

Individual bank employees, such as tellers, may receive a one-time nominal fee of a fixed dollar amount for referring customers to authorized sales personnel to discuss nondeposit investment products. However, the payment of the fee should not depend on whether the referral results in a transaction. Nonmonetary compensation to bank employees for referrals should be similarly structured.

Auditors and compliance personnel should not participate in incentive compensation programs directly related to the results of nondeposit investment product sales programs.

2010.6.2.7 Compliance

Institutions must develop and maintain written policies and procedures that effectively monitor and assess compliance with the interagency statement and other applicable laws and regulations and ensure appropriate follow-up to correct identified deficiencies. Compliance programs should be independent of sales activities with respect to scheduling, compensation, and performance evaluations. Compliance personnel should periodically report compliance findings to the institution's board of directors or a designated committee of the board as part of the board's ongoing oversight of nondeposit investment product activities. Compliance personnel

should have appropriate training and experience with nondeposit investment product sales programs, applicable laws and regulations, and the interagency statement.

Banking organizations should institute compliance programs for nondeposit investment products that are similar to those of securities broker-dealers. This includes a review of new accounts and a periodic review of transactions in existing accounts to identify any potential abusive practices, such as unsuitable recommendations or churning or switching practices. Compliance personnel should also oversee the prompt resolution of customer complaints and review complaint logs for questionable sales practices. Compliance personnel should use MIS reports on early redemptions and sales patterns for specific sales representatives and products to identify any potentially abusive practices. In addition, referral activities of bank personnel should be reviewed to ensure that they are conducted in a manner that conforms to the guidelines in the interagency statement.

When nondeposit investment products are sold by third parties on bank premises, the bank's compliance program should provide for oversight of the third party's compliance with its agreement with the bank, including conformance to the disclosure and separate facilities guidelines of the interagency statement. The results of such oversight should be reported to the board of directors or to a designated committee of the board. Management should promptly obtain the third party's commitment to correct identified problems. Proper follow-up by the bank's compliance personnel should verify the third party's corrective actions.

2010.6.2.8 Audit

Audit personnel should be responsible for assessing the effectiveness of the depository institution's compliance function and overall management of the nondeposit investment product sales program. The scope and frequency of audit's review of nondeposit investment product activities will depend on the complexity and sales volume of a sales program, and whether there are any indications of potential or actual problems. Audits should cover all of the issues discussed in the interagency statement. Internal audit staff should be familiar with nondeposit investment products and receive ongoing training. Audit personnel should report their findings

to the board of directors or a designated committee of the board, and proper follow-up should be performed. Audit activities with respect to third parties should include a review of their compliance function and the effectiveness of the bank's oversight of the third party's activities.

2010.6.2.9 Joint Interpretations of the Interagency Statement

In response to a banking association's inquiry, the banking supervisory agencies issued on September 12, 1995, joint interpretations regarding the February 1994 Interagency Statement on Retail Sales of Nondeposit Investment Products by banking and thrift organizations, previously discussed. The agencies also authorized the use of alternative abbreviated minimum disclosures for advertisements. The alternative minimum disclosures need not be made at all in certain types of advertisements. The use of abbreviated disclosures offers an optional alternative to the longer disclosures prescribed by the interagency statement.

2010.6.2.9.1 Disclosure Matters

The agencies agreed that there are limited situations in which the disclosure guidelines need not apply or where a shorter logo format may be used in lieu of the longer written disclosures called for by the interagency statement.

The interagency statement disclosures do not need to be provided in the following situations:

- radio broadcasts of 30 seconds or less
- electronic signs⁹
- signs, such as banners and posters, when used only as location indicators

Additionally, third-party vendors not affiliated with the depository institution need not make the interagency statement disclosures on nondeposit investment product confirmations and in account statements that may incidentally, with a valid business purpose, contain the name of the depository institution.

The banking agencies have been asked whether shorter, logo-format disclosures may be used in visual media, such as television broadcasts, ATM screens, billboards, signs, and post-

9. "Electronic signs" may include billboard-type signs that are electronic, time and temperature signs, and ticker-tape signs. Electronic signs would not include media such as television, online services, or ATMs.

ers, and in written advertisements and promotional materials, such as brochures. The text of an acceptable logo-format disclosure would include the following statements:

- not FDIC-insured
- no bank guarantee
- may lose value

The logo-format disclosures would be boxed, set in boldface type, and displayed in a conspicuous manner. The full disclosures prescribed by the interagency statement should continue to be provided in written acknowledgment forms that are signed by customers. An example of an acceptable logo disclosure is—

NOT FDIC- INSURED	<p>May lose value</p> <p>No bank guarantee</p>
----------------------------------	--

2010.6.2.9.2 Joint Interpretations on Retail Sales of Nondeposit Investment Products

The banking agencies' joint statement also addressed the following:

- *Sales from lobby area presumed retail.* Retail sales include (but are not limited to) sales to individuals by depository institution personnel or third-party personnel conducted in or adjacent to a depository institution's lobby area. Sales activities occurring in another location of a depository institution may also be retail sales activities covered by the interagency statement depending on the facts and circumstances.
- *Government or municipal securities dealers or desks.* Sales of government and municipal securities made in a depository institution's dealer department that is located away from the lobby area are not subject to the interagency statement. Such departments are already regulated by the banking agencies and are subject to the statutory requirements for registration of government and municipal securities brokers and dealers. Further, such brokers and dealers are subject to sales-practice and other regulations of the Depart-

ment of the Treasury, the SEC, and designated securities self-regulatory organizations.

- *Fiduciary accounts, affiliated trust companies, and custodian accounts.* The interagency statement generally does not apply to fiduciary accounts administered by a depository institution. However, for fiduciary accounts in which the customer directs investments, such as self-directed individual retirement accounts, the disclosures prescribed by the interagency statement should be provided. Nevertheless, disclosures need not be made to customers acting as professional money managers. Fiduciary accounts administered by an affiliated trust company on the depository institution's premises would be treated the same way as the fiduciary accounts of the institution.

With respect to custodian accounts maintained by a depository institution, the interagency statement does not apply to traditional custodial activities, for example, collecting interest and dividend payments for securities held in the accounts or handling the delivery or collection of securities or funds in connection with a transaction.

- *Affiliated standalone broker-dealers.* The statement applies specifically to sales of nondeposit investment products on the premises of a depository institution, for example, whenever sales occur in the lobby area. The statement also applies to sales activities of an affiliated standalone broker-dealer resulting from a referral of retail customers by the depository institution to the broker-dealer.

2010.6.3 INSPECTION/EXAMINATION OBJECTIVES

1. To determine that the banking organization has taken appropriate measures to ensure that retail customers clearly understand the differences between insured deposits and nondeposit investment products and receive the minimum disclosures both orally during sales presentations (including telemarketing) and in writing.
2. To assess the adequacy of the institution's policies and procedures, sales practices, and oversight by management and the board of directors to ensure an operating environment that fosters customer protection in all facets of the sales program.
3. To ensure that the sales program is con-

ducted in a safe and sound manner that is in compliance with the interagency statement, Federal Reserve guidelines, regulations, and applicable laws.

4. To assess the effectiveness of the institution's compliance and audit programs for nondeposit investment product operations.
5. To obtain commitments for corrective action when policies, procedures, practices, or management oversight is deficient or the institution has failed to comply with the interagency statement or applicable laws and regulations.

2010.6.4 INSPECTION/EXAMINATION PROCEDURES

2010.6.4.1 Scope of the Procedures

These procedures are based on the guidelines outlined in the interagency statement. The interagency statement applies to all banking organizations, including state member banks and the U.S. branches and agencies of foreign banks supervised by the Federal Reserve.

These examination procedures are intended to be used when examining a state member bank (or a state-licensed U.S. branch or agency of a foreign bank) that engages directly in the retail sale of nondeposit investment products.

This set of examination procedures is also meant to be used in conjunction with other procedures in this manual when examining a nonbank subsidiary that sells nondeposit investment products on bank premises. See the following sections for related examination procedures:

- Section 3130.1: Section 4(c)(8) of the BHC Act—Investment or Financial Advisers
- Section 3230.0: Section 4(c)(8) of the BHC Act—Securities Brokerage
- Section 3600.27: Providing Administrative and Certain Other Services to Mutual Funds

Program Management and Organization

1. Evaluate the institution's structure and reporting lines (legal and functional) for its retail nondeposit investment products operations. Determine whether retail sales of nondeposit investment products are being made directly by employees of the depository institution or through an affiliated or

unaffiliated third party. Identify the principals responsible for the management of the nondeposit investment products sales program. Review their backgrounds, qualifications, and tenure with the institution.

2. Determine the role of the board of directors of each legal entity involved in the sale of nondeposit investment products in authorizing and controlling nondeposit investment products activities on bank premises. Evaluate the adequacy of MIS reports relied on by the board (or a designated committee) and senior management to manage these activities.
3. Describe the membership and responsibilities of management or board committees for nondeposit investment product retail sales programs. Review the minutes maintained by these committees for information related to the conduct of retail nondeposit investment product sales programs.
4. Review and evaluate the institution's policies and procedures, objectives, and budget for nondeposit investment products activities. In so doing, consider the following:
 - a. who prepared the material
 - b. how it fits into the institution's overall strategic objectives
 - c. whether the goals and objectives are realistic
 - d. whether actual results are routinely compared to plans and budgets
5. Determine how policies and procedures for nondeposit investment products activities are developed and at what level in the institution they are formally approved. Review the policies and procedures to see that they are consistent with the interagency statement and address the following matters:
 - a. disclosure and advertising
 - b. physical separation from deposit-taking activities
 - c. compliance programs and internal audit
 - d. hiring, training, supervision, and compensation practices for sales staff and personnel making referrals
 - e. types of products offered, selection criteria
 - f. restrictions on a mutual fund's use of names similar or identical to that of the bank holding company or its subsidiary banks
 - g. suitability and sales practices
 - h. use of customer information
 - i. transactions with affiliated parties
 - j. role of third parties, if applicable
6. Determine how management oversees com-

- pliance with the policies and procedures in item 5.
7. Review the product selection and development process to ensure that it considers customer needs and investment objectives.
 8. Determine if the depository institution is covered by blanket bond insurance applicable to nondeposit investment product retail sales activities.
 9. If the institution sells proprietary nondeposit investment products and performs related back-office operations, review—
 - a. the work flow and position responsibilities within the sales and operations function, and
 - b. available flow charts, job descriptions, and policies and procedures.

After discussions with management, conduct a walk-through, tracing the path of a typical transaction. Evaluate the effectiveness and efficiency of the work flow and the overall operation.
 10. Determine whether the institution has established any contingency plans for handling adverse events affecting nondeposit investment product programs, such as a sudden market downturn or period of heavy redemptions.
 11. Review the institution's earnings and evaluate the—
 - a. profitability of nondeposit investment products activities, including any investment advisory fees it may receive, and
 - b. income and expense from the sales, investment advisory, and proprietary fund management activities related to nondeposit investment products, as a percentage of non-interest income and expense.
- telemarketing contacts) or when giving investment advice on specific investment products.
13. Determine if the customer-account agreement (or a separate disclosure form) presents the minimum disclosures clearly and conspicuously. The disclosures should be prominent (highlighted through bolding, boxes, or a larger typeface) and should be located on the front of the customer-account agreement or adjacent to the customer signature block.
 14. Determine whether customers sign an acknowledgment that they have received and understand the minimum disclosures. The acknowledgment can be on the customer-account agreement or it can be on a separate disclosure form. Determine if customers who opened accounts before the interagency statement was issued receive the written minimum disclosures and acknowledge receipt at the time of their next transaction. Review a sample of customer accounts to determine whether customers received the minimum oral and written disclosures.
 15. When sales confirmations or account statements provided by the bank or an affiliate bear the name or logo of the bank or an affiliate, determine whether the minimum disclosures are conspicuously displayed on the front of the documents.
 16. Review advertisements and promotional material that identify specific nondeposit investment products to determine whether they conspicuously display the minimum disclosures or the abbreviated logo-format disclosures. Any materials that contain information about insured deposits and nondeposit investment products should clearly segregate the information about investment products from the information about deposits.
 17. Review telemarketing material used to solicit new business. To the extent that employees identify specific products, seek customer investment objectives, make investment recommendations, or give investment advice, determine whether—
 - a. the minimum disclosures are included in the script;
 - b. bank employees engaged in telemarketing activities are authorized by the bank to recommend or sell nondeposit investment products, and whether their train-

Disclosures and Advertising

The interagency statement identifies certain minimum disclosures that must be made to customers. The disclosures must state that nondeposit investment products—

- are not insured by the FDIC;
 - are not deposits or other obligations of the institution and are not guaranteed by the institution; and
 - are subject to investment risks, including the possible loss of the principal invested.
12. Determine whether the minimum disclosures are being provided orally to customers during sales presentations (including

- ing is the substantive equivalent of that required for securities registered representatives; and
- c. the material contains any statements that may be misleading or confusing to customers regarding the uninsured nature of nondeposit investment products.
18. When nondeposit investment products are sold by employees of an affiliated broker-dealer, determine if any written or oral representations concerning insurance coverage provided by SIPC, a state insurance fund, or a private insurance company are clear and accurate and do not suggest that they are the substantive equivalent to FDIC insurance available for certain deposit products.
 19. When the bank or its bank holding company (or affiliate) acts as an investment adviser to or has some other material relationship with a mutual fund whose shares are sold by the bank, determine whether—
 - a. oral and written disclosure of the relationship is made before the purchase of the shares;
 - b. bank-advised mutual funds do not have names identical to the bank's;
 - c. bank-advised mutual funds with names similar to the bank's are sold pursuant to a sales program designed to minimize the risk of customer confusion; and
 - d. mutual funds advised by bank holding companies do not have names identical to, similar to, or a variation of the name of the holding company or its subsidiary bank.
 20. Determine whether disclosure of any sales charges, fees, penalties, or surrender charges relating to nondeposit investment products is made orally and in writing before the purchase of these products.
21. When sales of nondeposit investment products are conducted by employees or representatives of a third party, review all contractual agreements between the bank and the third party to determine whether they cover the following:
 - a. duties and responsibilities of each party
 - b. third-party compliance with all applicable laws and regulations and the inter-agency statement
 - c. authorization for the institution to over-see and verify compliance by the third party
 - d. provision for access to relevant records to the appropriate bank supervisory authorities
 - e. written employment contracts for dual employees
 - f. indemnification of the institution by the third party for the conduct of its employees in connection with nondeposit investment product sales activities
 - g. policies regarding the use of confidential customer information for any purpose in connection with sales of nondeposit investment products.
 22. Obtain and review the most recent FINRA examination results for the third party from the bank or the third-party broker-dealer. Also obtain and review examination-related correspondence and any disciplinary matters between the broker-dealer and the FINRA or SEC. Review the institution's progress in addressing any investment recommendations or deficiencies noted in the examination results or other material.
 23. Where any retail sales facilities of the institution are leased to an affiliated third party that sells nondeposit investment products—
 - a. assess whether the lease was negotiated on an arm's-length basis and on terms comparable to similar lease agreements in the local market and
 - b. review any intercompany relationships for compliance with sections 23A and 23B of the Federal Reserve Act.

Settings and Circumstances

Third-Party Agreements

24. Determine whether the sale of nondeposit investment products is conducted in a physical location distinct from deposit-taking activities of the bank. In so doing—
 - a. verify that nondeposit investment products are not sold from teller windows;
 - b. determine if signs or other means are used to distinguish the nondeposit investment products sales area from the retail deposit-taking area of the institution; and
 - c. determine whether space limitations preclude having a separate investment-products sales area. If so, note how the institution clearly distinguishes nondeposit investment products from insured bank products or obligations.

Qualifications and Training

25. Determine whether employees of a depository institution are providing investment advice, making investment recommendations, or selling nondeposit investment products directly to retail customers. If so, determine whether—
 - a. the depository institution has performed background checks and
 - b. sales personnel have received training that is the substantive equivalent to that provided to a securities registered representative.
26. Review the training program provided to employees of the depository institution who are authorized to provide investment advice, make investment recommendations, or sell nondeposit investment products. Assess whether the program addresses the following subject matters:
 - a. general overview of U.S. financial markets
 - b. detailed information concerning specific product lines being offered for sale
 - c. generally accepted trading practices for the products available for sale
 - d. general overview of federal securities laws and regulations (antifraud and disclosure)
 - e. banking regulations and guidelines applicable to sales activities (such as anti-tying prohibitions, the interagency statement, supervisory letters on sales of specific investment products, etc.)
 - f. policies and procedures specific to the institution
 - g. appropriate sales practices, including suitability of investment recommendations and disclosure obligations
 - h. appropriate use of customer lists and confidential customer information
27. Determine whether the institution has any continuing-education program or periodic seminars on new products or compliance.
28. Determine whether supervisors of bank sales personnel receive special training pertaining to their supervisory responsibilities that is the substantive equivalent of training required for supervisors (General Securities Principals) of registered representatives.
29. Review the training of bank employees who are not authorized to sell nondeposit investment products but who make referrals, such as tellers, customer service representatives, and others. In so doing, determine whether such employees have been provided train-

ing in appropriate referral practices, including the limits on their activities.

Suitability and Sales Practices

The following procedures on suitability and sales practices are applicable when conducting an examination of a depository institution whose employees offer investment advice, make investment recommendations, or sell nondeposit investment products. Examinations involving registered broker-dealers should rely on the FINRA's review of sales practices or its examination to assess the organization's compliance with suitability requirements.

30. Determine whether depository institution personnel recommend nondeposit investment products to customers. If so, determine whether sales personnel obtain, record, and update the following information:
 - a. age
 - b. tax status
 - c. current investments and overall financial profile, including an estimate of net worth*
 - d. investment objectives*
 - e. other personal information deemed necessary to offer reasonable investment advice*
31. Review a representative sample of customer accounts that were opened at several different branch locations. Assess whether customer suitability information is obtained and whether investments appear unsuitable in light of such information.
32. Review customer complaints involving suitability of investment recommendations. Determine whether the bank's original recommendations appear unsuitable in the context of the information available at the time of sale. Note how suitability complaints are resolved.

Compensation

33. If employees of the depository institution provide investment advice, make investment recommendations, or sell nondeposit

*Not necessary when money market mutual funds are being recommended.

- investment products, determine whether—
- a. any incentive compensation plan available to nondeposit investment product sales personnel strongly favors proprietary or other specific products; if so, determine how the institution ensures that customers are not placed into unsuitable investments, and
 - b. compliance and audit personnel are excluded from incentive compensation programs directly related to the results of nondeposit investment product sales.
34. Determine whether fees paid to bank employees for referrals to depository institution sales personnel or third-party sales staff are based on a one-time, nominal fee of a fixed dollar amount and are not dependent on a successful sale.
 35. Determine if the bank's compensation policies address remuneration of bank employees by third parties and if these policies are incorporated into the bank's code of conduct. In so doing, determine whether the bank's policies were approved by the board of directors and are consistent with the prescriptions of the Bank Bribery Act and the interagency guidelines adopted thereunder.
- Compliance and Audit*
36. Review and assess the depository institution's compliance program for nondeposit investment product sales activities. In so doing, consider the following:
 - a. frequency and scope
 - b. workpapers
 - c. degree of independence from the sales program
 - d. follow-up on material findings
 - e. centralization of findings from all compliance areas
 - f. role of the board of directors in reviewing findings
 37. Review the criteria used to evaluate bank sales personnel for compliance with the institution's policies and procedures, specifically those policies relating to disclosure and suitability.
 38. Determine whether compliance personnel approve or review new accounts, periodically review transactions in accounts, and review sales and referral activities of bank personnel.
 39. Review the customer complaint process and the associated complaint log to determine if complaints are addressed on a timely basis.
 40. Review progress in addressing identified compliance problems.
 41. Evaluate the experience, training, and qualifications of compliance personnel.
 42. Review the scope of audits and determine if the following areas were adequately addressed:
 - a. disclosure and advertising
 - b. physical separation of nondeposit investment product sales activities
 - c. compliance
 - d. sales practices and suitability
 - e. product selection and development
 - f. use of confidential customer information by bank and third-party sales personnel
 - g. third-party compliance with its agreement with the institution
 - h. personnel training and background checks
 - i. operations (clearing, cash receipts and disbursements, accounting, redemptions, etc.), if applicable
 43. Obtain all internal and external audit reports regarding the institution's nondeposit investment product activities performed over the past year (including management's responses). Review for exceptions, recommendations, and follow-up actions. Ascertain if significant exceptions were presented to the institution's audit committee or board of directors for their review.
 44. For external audits, obtain a copy of the engagement letter and comment on the adequacy of the firm's audit review.

Supervision of Subsidiaries (Sharing of Facilities and Staff by Banking Organizations)

Section 2010.8

A banking organization should be able to readily determine for which entity within the bank holding company an individual is employed, and members of a banking organization's staff must be able to identify which subsidiary of the holding company employs them. The distinction is important because complex banking organizations must take steps to ensure that their officials and employees have both the corporate and legal authority to carry out their duties, and because the organization's personnel should only be performing activities that are permitted by law to be carried out by the holding company or its particular subsidiaries.

2010.8.1 IDENTIFICATION OF FACILITIES AND STAFF

Generally, unless there are statutory restrictions or the Federal Reserve or other regulators have issued explicit written proscriptions, such as those concerning mutual fund sales on bank premises, there is no fundamental legal prohibition on the entities of a banking organization sharing or using unmarked contiguous facilities and, in some instances, sharing officials and employees. There are, however, concerns about safety and soundness and conflicts of interest. These may arise when a banking organization does not take appropriate actions to define and differentiate the functions and responsibilities of each of its entities and staff.

Good corporate governance requires that a banking organization be able to readily identify the authority and responsibilities of its officials and employees at each of its entities, especially where the entities share facilities or use contiguous offices that are not clearly marked to indicate the identity of the different entities. This is necessary to ensure that—

1. an official or employee who makes a commitment to a counterparty on behalf of the organization has both the corporate and legal authority to do so,
2. the counterparty understands with whom it is dealing, and
3. each entity is in compliance with any legal restrictions under which it operates.

To accomplish the goal of ready identification, a banking organization should maintain well-defined job descriptions for each category of its staff at each entity. When officials and employees of one entity have responsibilities for

other entities, particularly in shared facilities, the staff's responsibilities should be clearly defined and, when appropriate, disclosed or made clear to customers and the public in general. This procedure clarifies for both the public and the regulators for which entity officials or employees are carrying out their duties and responsibilities. Also, this clarifies whether an entity is operating within the scope of its charter, license, or other legal restrictions. Finally, a banking organization should establish and maintain appropriate internal controls designed to ensure the separation of the functions of the legal entities, when required, as well as have an adequate audit program to monitor such activities.

If officials and employees have responsibilities for other offices or affiliates of the banking organization, particularly those that share facilities, these responsibilities should be clearly defined and, when appropriate, disclosed or made clear to customers and the public in general. This procedure clarifies for which entity employees are carrying out their duties. Furthermore, in establishing employee responsibilities, management should ensure that they are within the scope of the entity's license or charter.

2010.8.2 EXAMINER GUIDANCE ON SHARING FACILITIES AND STAFF

Examiners should continue to be fully aware of the issues and potential problems involved in the sharing of staff and the sharing or use of unmarked contiguous facilities by the different entities of a banking organization with varied activities. At a minimum, examiners should check to see that a banking organization maintains clear records indicating the duties and responsibilities of the officials and employees at each of its entities. They should also take steps to check whether, in situations when an official or employee may perform duties for more than one entity in a shared facility, the banking organization has adequate policies and controls in place to ensure that its staff have the corporate and legal capacity to commit the organization to its counterparties and that the duties are carried out in conformance with the statutory restrictions applicable to each of the entities. See SR-95-34 (SUP).

Supervision of Subsidiaries

(Required Absences from Sensitive Positions) Section 2010.9

One of the many basic tenets of internal control is that a banking organization (bank holding company, state member bank, and foreign banking organization) needs to ensure that its employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks. Such a requirement enhances the viability of a sound internal control environment because most frauds or embezzlements require the continuous presence of the wrongdoer.

In brief, this section contains a statement emphasizing the need for banking organizations to conduct an assessment of significant risk areas before developing a policy on required absences from sensitive positions. After making this assessment, the organization should require that employees in sensitive key positions, such as trading and wire transfer, not be allowed to transact or otherwise carry out, either physically or through electronic access, their assigned duties for a minimum of two consecutive weeks per year. The prescribed period of absence should, under all circumstances, be sufficient to allow all pending transactions to clear. It should also require that an individual's daily work be processed by another employee during the employee's absence.

2010.9.1 STATEMENT ON REQUIRED ABSENCES FROM SENSITIVE POSITIONS

A comprehensive system of internal controls is essential for a financial institution to safeguard its assets and capital, and to avoid undue reputational and legal risk. Senior management is responsible for establishing an appropriate system of internal controls and monitoring compliance with that system. Although no single control element should be relied on to prevent fraud and abuse, these acts are more easily perpetrated when proper segregation and rotation of duties do not exist. As a result, the Federal Reserve is reemphasizing the following prudent banking practices that should be incorporated into a banking organization's internal control procedures. These practices are designed to enhance the viability of a sound internal control environment, as most internal frauds or embezzlements necessitate the constant presence of the offender to prevent the detection of illegal activities.

When developing comprehensive internal control procedures, each banking organization should first make a critical assessment of its significant areas and sensitive positions. This

assessment should consider all employees, but should focus more on those with authority to execute transactions, signing authority and access to the books and records of the banking organization, as well as those employees who can influence or cause such activities to occur. Particular attention should be paid to areas engaged in trading and wire-transfer operations, including personnel who may have reconciliation or other back-office responsibilities.

After producing a profile of high-risk areas and activities, it would be expected that a minimum absence of two consecutive weeks per year be required of employees in sensitive positions. The prescribed period of absence should, under all circumstances, be sufficient to allow all pending transactions to clear and to provide for an independent monitoring of the transactions that the absent employee is responsible for initiating or processing. This practice could be implemented through a requirement that affected employees take vacation or leave, the rotation of assignments in lieu of required vacation, or a combination of both so the prescribed level of absence is attained. Some banking organizations, particularly smaller ones, might consider compensating controls such as continuous rotation of assignments in lieu of required absences to avoid placing an undue burden on the banking organization or its employees.

For the policy to be effective, individuals having electronic access to systems and records from remote locations must be denied this access during their absence. Similarly, indirect access can be controlled by not allowing others to take and carry out instructions from the absent employee. Of primary importance is the requirement that an individual's daily work be processed by another employee during his or her absence; this process is essential to bring to the forefront any unusual activity of the absent employee.

Exceptions to the required-absence policy may be necessary from time to time. However, management should exercise the appropriate discretion and properly document any waivers that are granted. Internal auditing should be made aware of individuals who receive waivers and the circumstances necessitating the exceptions.

If a banking organization's internal control procedures do not now include the above practices, they should be promptly amended. After

the procedures have been enhanced, they should be disseminated to all employees, and the documentation regarding their receipt and acknowledgment maintained. Additionally, adherence to the procedures should be included in the appropriate audit schedules, and the auditors should be cognizant of potential electronic access or other circumventing opportunities.

The development and implementation of procedures on required absences from sensitive positions is just one element of an adequate control environment. Each banking organization should take all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.

2010.9.2 INSPECTION OBJECTIVES

1. To determine whether a critical assessment has been performed of a banking organization's significant areas and sensitive positions.
 2. To ascertain that sound internal controls exist, including policies and procedures that provide assurances that employees in sensitive positions are absent from their duties for a minimum of two consecutive weeks per year.
 3. To ascertain whether the banking organization has taken all measures to establish appropriate policies, limits, and verification procedures for an effective overall risk-management system.
 4. To establish that the appropriate audit schedules and the audits include a review of minimum absence policies and procedures, including potential electronic access or other circumventing actions by employees.
2. Ascertain if employees assigned to sensitive positions are required to be absent for a minimum of two weeks per year while—
 - a. pending sensitive transactions are monitored while they clear, and
 - b. daily work is monitored and processed by another employee during the regularly assigned employee's absence.
 3. Determine if required internal control procedures for minimum absences (for example, rotation of assignments, vacation or leave, or a combination of both) are being used in sensitive operations such as trading, trust, wire transfer, reconciliation, or other sensitive back-office responsibilities.
 4. Ascertain if appropriate policies, limits, and verification procedures have been established and maintained for an effective overall risk-management system.
 5. Determine whether the banking organization—
 - a. prohibits others from taking and carrying out instructions from the absent employees, and
 - b. prevents remote electronic access to systems and records involving sensitive transactions during the regularly assigned employee's required minimum two-week absence.
 6. Ascertain that the banking organization documents waivers from the two-week minimum absence policies and procedures involving sensitive positions.
 7. Determine that the appropriate audit schedules and the audits include a review of such procedures, including potential electronic access or other circumventing actions by employees.

2010.9.3 INSPECTION PROCEDURES

1. Determine that a profile of high-risk areas and activities is performed on a regular periodic basis.

Internal loan review is an activity which provides management with information about the quality of loans and effectiveness of a banking organization's lending policies and procedures. The objectives of loan-review procedures are to identify, in a timely manner, existing or emerging credit-quality problems and to determine whether internal lending policies are being adhered to.

The size and complexity of a bank holding company will dictate the need for and structure of internal loan review. One-bank holding companies with no significant credit-extending nonbank subsidiaries will normally establish internal loan-review procedures within the subsidiary bank. In these cases, there is no need to evaluate the loan-review procedures during the inspection.

For larger multibank companies or those with significant credit-extending nonbank subsidiaries, internal loan review is usually centralized at the parent company level. In some cases, a centralized loan-review function could operate in the lead bank and cover all affiliates within the organization. However, since parent company directors and senior management are ultimately accountable for the organization's asset quality, an evaluation of the internal loan-review function should be conducted as part of the inspection process no matter where the operations are technically located within the corporate structure. Since a subsidiary bank's primary regulator will normally want to evaluate the loan-review process as it relates to the respective bank, a coordination of efforts would be appropriate. This should be handled on an ad hoc basis, as deemed necessary by the holding company's examiner-in-charge, to avoid unnecessary duplication of efforts without compromising the independence of the appraisal process.

Internal loan-review procedures may take various forms, from senior officers' review of junior-officer loans to the formation of an independent department staffed by loan-review analysts. An effective system will identify deteriorations in credits, loans that do not comply with written loan policies, and loans with technical exceptions.

The loan-review program should be delegated to a qualified and adequate staff. The review should be systematic in scope and frequency. All related extensions of credit should be identified and analyzed together. A minimum credit size should be established that allows for an efficient review while providing adequate cover-

age. The process should also tie problem loans or technical exceptions to the particular loan officer to allow senior management to evaluate individual performance. Loans should be reviewed shortly after origination to determine their initial quality, technical exceptions, and compliance with written loan policies. Reasonable frequency guidelines should be set for normal reviews, with problem credits receiving special and more frequent analysis. An effective loan-review procedure will incorporate an early warning system of "red flags," such as overdrafts, adverse published reports, and deteriorating financial statements. Loan officers should also be encouraged to inform the organization's internal loan-review unit of developing loan problems, and they should be discouraged from withholding problem loans or adverse information from the review process.

The loan-review process should be independent of the loan-approval function, with written findings reported to a board or senior management committee that is not directly involved in lending. Follow-up and monitoring of problem credits should be instituted. The loan officer should be responsible for reporting on any corrective actions taken. The maintenance of adequate internal controls within the lending process, in particular for loan review or credit audit, is critical for maintaining proper incentives for banking organization staff to be rigorous and disciplined in their credit-analysis and lending decisions. A banking organization's credit analyses, loan terms and structures, credit decisions, and internal rating assignments have historically been reviewed in detail by experienced and independent loan-review staff. Such loan reviews have provided both motivation for better credit discipline within an institution and greater comfort for examiners—and management—that internal policies are being followed and that the banking organization continues to adhere to sound lending practice.

For larger multibank organizations, loan-review procedures are usually centralized and administered at the parent level, with loan-review staff employed by the parent company. In some cases, a centralized loan-review function may operate in the lead bank, covering all other affiliates in the organization. The parent company directors and senior management are ultimately accountable for supervision of the entire organization's asset quality. Therefore, it

should be the System's responsibility to evaluate top management's loan-review policies and procedures as they relate to the subsidiaries, both bank and nonbank, no matter where the function is technically established within the corporate structure. The holding company examiner-in-charge should attempt to coordinate efforts and cooperate with the respective banks' primary supervisors to avoid unnecessary duplication, without compromising the independence of the appraisal process.

During favorable economic and financial markets, relatively low levels of problem loans and credit losses may increase pressure within banking organizations to reduce the resources committed to loan-review functions. These reductions may include a reduction in staff, more limited portfolio coverage, and less thorough reviews of individual loans. Undoubtedly, some useful efficiencies may be gained by reducing loan-review resources, but some banking organizations may reduce the scope and depth of loan-review activities beyond levels that are prudent over the longer horizon. If reduced too far, the integrity of the lending process and the discipline of identifying unrealistic assumptions and discerning problem loans in a timely fashion may deteriorate. This may be especially true when a large proportion of lenders may not have had direct lending experience during a credit cycle when there was an economic and financial market downturn. See SR-99-23.

If supervisors and examiners find that there are weaknesses in the internal loan-review function and in activities or other internal control and risk-management processes (for example, staff turnover, failure to commit sufficient resources, inadequate adherence to established internal controls, or inadequate training), such findings should be discussed with the senior management of the parent bank holding company or other management at a corporate-wide level and, if determined to be a major concern, presented as comments on the "Examiner's Comments and Matters Requiring Special Board Attention" core page. Findings that could adversely affect affiliated insured depository institutions should be conveyed to the primary federal or state supervisor of the insured institution. Those findings should also be considered when assigning supervisory ratings.

Shell one-bank holding companies will not have or need a loan-review program emanating from the parent company level. Loan review

will normally function within the subsidiary bank and be supervised by bank directors and management.

2010.10.1 INSPECTION OBJECTIVES

1. Review the operations of the bank holding company to determine whether there is an internal loan-review program. If not, one should be implemented.
2. Determine whether the loan-review program is independent from the loan-approval function.
3. Determine if the loan-review staff is sufficiently qualified and whether its size is adequate.
4. Determine whether the scope and frequency of the loan-review procedure is adequate to ensure that problems are being identified.
5. Determine that findings from the loan-review process are being properly reported and receive adequate follow-up attention.

2010.10.2 INSPECTION PROCEDURES

1. Review the holding company's operations to determine what types of internal loan-review procedures are being performed and whether an internal loan-review program exists.
2. If no internal loan-review program exists, determine whether the size, complexity, and financial condition of the organization warrants implementation of a formal loan-review process.
3. Review the organizational structure of the loan-review function to ensure its independence from the loan-approval processes.
4. Review the reporting process for internal loan-review findings to determine whether a director committee or independent senior management committee is being appropriately advised of the findings. Determine whether adequate follow-up procedures are in place.
5. Through loan reviews, transaction testing, and discussions with loan-review management, evaluate the quality, effectiveness and adequacy of the internal loan-review staff and internal controls in relation to the organization's size and complexity.
6. Review the operation of the loan-review process to identify the method for selecting loans and the manner in which they are analyzed and graded. Determine whether these procedures are adequate.

7. Determine if loan-review activities or other internal control and risk-management processes have been weakened by turnover of internal loan-review staff; a failure to commit sufficient resources; inadequate internal controls; inadequate training; or the absence of other adequate systems, resources, or controls. If such significant findings are found, discuss those concerns with senior management and report those findings on the core page 1, "Examiner's Comments and Matters Requiring Special Board Attention."
8. Determine what type of "early warning" system is in place and whether it is adequate.
9. Determine how the scope and frequency of the review procedure is established and whether this provides adequate coverage.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2006, this section has been revised to incorporate the statutory requirements of the USA Patriot Act. The requirements of the USA Patriot Act are designed to prevent, detect, and prosecute money laundering and terrorist financing. For banking organizations, the act's provisions are implemented through regulations issued by the U.S. Department of the Treasury (31 C.F.R. 103). Section 326 of the Patriot Act (codified in the Bank Secrecy Act (BSA) at 31 U.S.C. 5318(l)) requires financial institutions to have customer identification programs, that is, programs to collect and maintain certain records and documentation on customers. Institutions are to develop and use identity verification procedures to ensure the identity of their customers. Bank holding companies, as a matter of safety and soundness, should take appropriate measures to ensure that their financial institution subsidiaries are in compliance with the customer identification program (CIP) rule.

The CIP rule for banks (see 31 C.F.R. 103.121) applies only to a bank, not to a bank holding company solely because it owns a bank. Also, a nonbank subsidiary of a bank holding company is not subject to the CIP rule for banks solely as a result of being affiliated with a bank in a holding company structure. Even though this rule is not applicable to bank holding companies and their nonbank subsidiaries (or to savings and loan holding companies and their non-savings association subsidiaries), bank holding companies should, as a matter of safety and soundness, take appropriate measures throughout the organization to ensure that each of their entities is in compliance with any applicable CIP rule. New accounts must receive appropriate due diligence, and a holding company should generally protect the consolidated organization from any risks associated with money laundering and financial crime. The bank holding company may still be subject to other CIP rules if it has ownership in a functionally regulated entity, for example, a securities broker-dealer. (See 31 C.F.R. 103.22)

2010.11.1 OVERVIEW OF PRIVATE BANKING AND ITS ASSOCIATED ACTIVITIES

The role of bank regulators in supervising

private-banking activities is (1) to evaluate management's ability to measure and control the risks associated with such activities and (2) to determine if the proper internal control and audit infrastructures are in place to support effective compliance with relevant laws and regulations. In this regard, the supervisors may determine that certain risks have not been identified or adequately managed by the institution, a potentially unsafe and unsound banking practice.

Private-banking functions may be performed in a specific department of a commercial bank or nonbank subsidiary of a commercial bank, a bank holding company (including a financial holding company), an Edge corporation or its foreign subsidiaries, a branch or agency of a foreign banking organization, or within multiple areas of an institution. Private banking may be the sole business of an institution. Regardless of how an institution is organized or where it is located, the results of the private-banking review should be reflected in the entity's overall supervisory assessment.¹

This section provides examiners with guidance for reviewing private-banking activities at all types and sizes of banking organizations, including financial institutions. It is intended to supplement, not replace, existing guidance on the inspection or examination of private-banking activities and to broaden the examiner's review of general risk-management policies and practices governing private-banking activities. In addition to providing an overview of private banking, the general types of customers, and the various products and services typically provided, the "Functional Review" subsection describes the critical functions that constitute a private-banking operation and identifies certain safe and sound banking practices. These critical functions are supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance. Included in the risk-

1. Throughout this section, the word institution will be used to mean all types of banking organizations, including bank holding companies, their bank and other financial institution subsidiaries, nonbank subsidiaries, and those entities authorized to operate under section 4(k) of the Bank Holding Company Act. Institution also includes branches and agencies of foreign banks and any other types of financial institutions and entities supervised by the Federal Reserve System. The term "board of directors" will be interchangeable with references to the "senior management" of branches and agencies of foreign banks.

management portion is a discussion of the basic “customer-due-diligence” (CDD) principle that is the foundation for the safe and sound operation of a private-banking business. The “Preparation for Inspection” subsection assists in defining the inspection scope and provides a list of core requests to be made in the first-day letter. Additional inspection and examination guidance can be found in this manual, the Federal Financial Institutions Examination Council’s (FFIEC) *Bank Secrecy Act/Anti-Money Laundering (BSA/AML) Examination Manual* (see SR-05-12), the Federal Reserve System’s *Trust Examination Manual* and its *Trading and Capital-Markets Activities Manual*, and in the FFIEC’s *Information Technology Examination Handbook*.

In reviewing specific functional and product-inspection procedures (as found in the private-banking activities module that is part of the framework for risk-focused supervision of large complex institutions), all aspects of the private-banking review should be coordinated with the rest of the inspection to eliminate unnecessary duplication of effort. Furthermore, this section has introduced the review of trust activities and fiduciary services, critical components of most private-banking operations, as part of the overall private-banking review. Although the product nature of these activities differs from that of products generated by other banking activities, such as lending and deposit taking, the functional components of private banking (supervision and organization, risk management, operational controls and management information systems, audit, compliance, and financial condition/business profile) should be reviewed across product lines.

Private banking offers the personal and discrete delivery of a wide variety of financial services and products to an affluent market, primarily to high net worth individuals and their corporate interests. A private-banking operation typically offers its customers an all-inclusive money-management relationship, including investment portfolio management, financial-planning advice, offshore facilities, custodial services, funds transfer, lending services, overdraft privileges, hold mail, letter-of-credit financing, and bill-paying services. As the affluent market grows, both in the United States and globally, competition to serve it is becoming more intense. Consequently, the private-banking marketplace includes banks, nonbanks, and other types of banking organizations and finan-

cial institutions. Private-banking products, services, technologies, and distribution channels are still evolving. A range of private-banking products and services may be offered to customers throughout an institution’s global network of affiliated entities—including branches, subsidiaries, and representative offices—in many different regions of the world, including offshore secrecy jurisdictions.

Typically, private-banking customers are high net worth individuals or institutional investors who have minimum investible assets of \$1 million or more. Institutions often differentiate domestic from international private banking, and they may further segregate the international function on the basis of the geographic location of their international client base. International private-banking clients may be wealthy individuals who live in politically unstable nations and are seeking a safe haven for their capital. Therefore, obtaining detailed background information and documentation about the international client may be more difficult than it is for the domestic customer. Private-banking accounts may, for example, be opened in the name of an individual, a commercial business, a law firm, an investment adviser, a trust, a personal investment company (PIC), or an offshore mutual fund.

In 2001, the USA Patriot Act (the Patriot Act) established new and enhanced measures to prevent, detect, and prosecute money laundering and terrorist financing. In general, these measures were enacted through amendments to the Bank Secrecy Act (BSA). The measures directly affecting banking organizations are implemented primarily through regulations issued by the U.S. Department of the Treasury (31 C.F.R. 103).² Section 326 of the Patriot Act (see the BSA at 31 U.S.C. 5318(l)) requires financial institutions (such as banks, savings associations, trust companies, and credit unions) to have customer identification programs that include measures to—

1. require that certain information be obtained at account opening (for individuals, the information would generally include their name, address, tax identification number, and date of birth);

2. For banking organizations, the regulation implementing the requirements of section 326 of the Patriot Act was jointly issued by the U.S. Department of the Treasury, through the Financial Crimes Enforcement Network (FinCEN), and the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

2. verify the identity of new account holders within a reasonable time period;
3. ensure that a banking organization has a reasonable belief that it knows each customer's identity;
4. maintain records of the information used to verify a person's identity; and
5. compare the names of new customers against government lists of known or suspected terrorists or terrorist organizations.

A customer identification program is an important component of a financial institution's overall anti-money-laundering and BSA compliance program.

SR-04-13 disseminated the interagency BSA examination procedures that should be used to evaluate banking organizations' compliance with the regulation. The scope of the examination or inspection can be tailored to the reliability of the banking organization's compliance-management system and to the level of risk that the organization assumes. Relevant interagency guidance (in a frequently-asked-question format) has been issued to address the customer identification program rules. (See SR-05-9.)

Private-banking accounts are usually generated on a referral basis. Every client of a private-banking operation is assigned a salesperson or marketer, commonly known as a relationship manager (RM), as the primary point of contact with the institution. The RM is generally charged with understanding and anticipating the needs of his or her wealthy clients, and then recommending services and products for them. The number of accounts an RM handles varies, depending on the portfolio size or net worth of the particular accounts. RMs strive to provide a high level of support, service, and investment opportunities to their clients and tend to maintain strong, long-term client relationships. Frequently, RMs take accounts with them to other private-banking institutions if they change employment. Historically, initial and ongoing due diligence of private-banking clients is not always well documented in the institution's files because of RM turnover and confidentiality concerns.

Clients may choose to delegate a great deal of authority and discretion over their financial affairs to RMs. Given the close relationship between clients and their account officers, an integral part of the inspection process is assessing the adequacy of managerial oversight of the nature and volume of transactions conducted within the private-banking department or with other departments of the financial institution, as well as determining the adequacy and integrity

of the RM's procedures. Policy guidelines and management supervision should provide parameters for evaluating the appropriateness of all products, especially those involving market risk. Moreover, because of the discretion given to RMs, management should develop effective procedures to review the activity of client accounts in order to protect the client from any unauthorized activity. In addition, ongoing monitoring of account activity should be conducted to detect activity that is inconsistent with the client profile (for example, frequent or sizable unexplained transfers flowing through the account).

Finally, as clients develop a return-on-assets (ROA) outlook to enhance their returns, the use of leveraging and arbitrage is becoming more evident in the private-banking business. Examiners should be alert to the totality of the client relationship product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

2010.11.1.1 Products and Services

2010.11.1.1.1 Personal Investment Companies, Offshore Trusts, and Token-Name Accounts

Private-banking services almost always involve a high level of confidentiality for clients and their account information. Consequently, it is not unusual for private bankers to help their clients achieve their financial-planning, estate-planning, and confidentiality goals through offshore vehicles such as personal investment companies (PICs), trusts, or more exotic arrangements, such as hedge fund partnerships. While these vehicles may be used for legitimate reasons, without careful scrutiny, they may camouflage illegal activities. Private bankers should be committed to using sound judgment and enforcing prudent banking practices, especially when they are assisting clients in establishing offshore vehicles or token-name accounts.

Through their global network of affiliated entities, private banks often form PICs for their clients. These "shell" companies, which are incorporated in offshore secrecy jurisdictions such as the Cayman Islands, Channel Islands, Bahamas, British Virgin Islands, and Netherlands Antilles, are formed to hold the customer's assets as well as offer confidentiality by opening accounts in the PIC's name. The "beneficial owners" of the shell corporations are

typically foreign nationals. The banking institution should know and be able to document that it knows the beneficial owners of such corporations and that it has performed the appropriate due diligence to support these efforts. Emphasis should be placed on verifying the source or origin of the customer's wealth. Similarly, offshore trusts established in these jurisdictions should identify grantors of the trusts and sources of the grantors' wealth. *Anonymous relationships or relationships in which the RM does not know and document the beneficial owner should not be permitted.*

PICs are typically passive personal investment vehicles. However, foreign nationals have established PICs as operating accounts for business entities they control in their home countries. Accordingly, financial institutions should use extra care when dealing with beneficial owners of PICs and associated trusts; these vehicles can be used to conceal illegal activities.

2010.11.1.1.2 Deposit-Taking Activities of Subsidiary Institutions

A client's private-banking relationship frequently begins with a deposit account and then expands into other products. In fact, many institutions require private-banking customers to establish a deposit account before maintaining any other accounts. Deposit accounts serve as conduits for a client's money flows. To distinguish private-banking accounts from retail accounts, institutions usually require significantly higher minimum account balances and assess higher fees. The private-banking function or institution should have account-opening procedures and documentation requirements that must be fulfilled before a deposit account can be opened. (These standards are described in detail in the "Functional Review" subsection.)

Most private banks offer a broad spectrum of deposit products, including multicurrency deposit accounts that are used by clients who engage in foreign-exchange, securities, and derivatives transactions. The client's transaction activity, such as wire transfers, check writing, and cash deposits and withdrawals, is conducted through deposit accounts (including current accounts). It is very important that the transaction activity into and out of these deposit accounts (including internal transfers between affiliated deposit accounts) be closely monitored for suspicious transactions that are inconsistent

with the client's profile of usual transactions.

Suspicious transactions could warrant the filing of a Suspicious Activity Report (SAR). A bank holding company or any nonbank subsidiary thereof, or a foreign bank that is subject to the Bank Holding Company Act (or any nonbank subsidiary of such a foreign bank operating in the United States), is required to file a SAR in accordance with the provision of section 208.62 of the Federal Reserve Board's Regulation H (12 C.F.R. 208.62) when suspicious transactions or activities are initially discovered and warrant or require reporting. See the reporting requirements discussed in subsection 2010.11.2.2.1.1; SR-03-12 and its attached July 2003 SAR form and instructions; and the expanded examination procedures for private banking in the FFIEC's *BSA/AML Examination Manual*.

2010.11.1.1.3 Investment Management

In private banking, investment management usually consists of two types of accounts: (1) discretionary accounts in which portfolio managers make the investment decisions on the basis of recommendations from the bank's investment research resources and (2) nondiscretionary (investment advisory) accounts in which clients make their own investment decisions when conducting trades. For nondiscretionary clients, the banks typically offer investment recommendations subject to the client's written approval. Discretionary accounts consist of a mixture of instruments bearing varying degrees of market, credit, and liquidity risk that should be appropriate to the client's investment objectives and risk appetite. Both account types are governed under separate agreements between the client and the institution.

Unlike depository accounts, securities and other instruments held in the client's investment accounts are not reflected on the balance sheet of the institution because they belong to the client. These managed assets are usually accounted for on a separate ledger that is segregated according to the customer who owns the assets. For regulatory reporting, domestic trust departments and foreign trust departments of U.S. banks are required to report trust assets annually using FFIEC Form 001 (Annual Report of Trust Assets) and FFIEC Form 006 (Annual Report of International Fiduciary Activities). On the other hand, the fiduciary activities of foreign banking organizations operating in the United States currently are not reported on any FFIEC regulatory report.

2010.11.1.1.4 Credit

Private-banking clients may request extensions of credit on either a secured or an unsecured basis. Loans backed by cash collateral or managed assets held by the private-banking function are quite common, especially in international private banking. Private-banking clients may pledge a wide range of their assets, including cash, mortgages, marketable securities, land, or buildings, to securitize their loans. Management should demonstrate an understanding of the purpose of the credit, the source of repayment, the loan tenor, and the collateral used in the financing. When lending to individuals with high net worths, whether on a secured or an unsecured basis, the creditworthiness determination is bolstered by a thorough and well-structured customer-due-diligence process. If that process is not thorough, collateral derived from illicit activities may be subject to government forfeiture.

Borrowing mechanisms are sometimes established to afford nonresident-alien customers the ability to keep financial assets in the United States and to use such assets (via collateralized borrowing arrangements) to provide operating capital for businesses they own and operate in their home countries. Such arrangements enable these customers to keep the existence of these financial assets secret from their home-country authorities and others, while they continue to use the funds (via collateralized borrowings) to fund their businesses at home.

Private bankers need to maintain in the United States adequate CDD information on such nonresident-alien customers and their primary business interests. A well-documented CDD file may include information on the customer from “who’s who” and similar services, Internet research, foreign tax returns and financial statements, checks conducted by the Office of Foreign Assets Control (OFAC), and written and appropriately documented Call Reports prepared by the RM.

While these lending mechanisms may be used for legitimate reasons, management needs to determine whether the arrangements are being used primarily to obfuscate the beneficial ownership of collateral assets, making it difficult for the customer’s home-country government to identify who owns the assets. If so, management needs to further determine whether the practice varies from both the appropriate standards of international cooperation for transparency issues and with prudent banking practices, and if so, whether the institution is exposed to elevated legal risk.

2010.11.1.1.5 Payable-Through Accounts

Another product that may be available in private-banking operations is payable-through accounts (PTAs). PTAs are transaction deposit accounts through which U.S. banking entities (“payable-through banks”) extend check-writing privileges to the customers of a foreign bank. The foreign bank (“master account holder”) opens a master checking account with the U.S. bank and uses this account to provide its customers with access to the U.S. banking system. The master account is divided into “subaccounts,” each in the name of one of the foreign bank’s customers. The foreign bank extends signature authority on its master account to its own customers, who may not be known to the U.S. bank. Consequently, the U.S. bank may have customers who have not been subject to the same account-opening requirements imposed on its U.S. account holders. These subaccount customers are able to write checks and make deposits at the U.S. banking entity. The number of subaccounts permitted under this arrangement may be virtually unlimited.

U.S. banking entities engage in PTAs primarily because they attract dollar deposits from the domestic market of their foreign correspondents without changing the primary bank-customer relationship; PTAs also provide substantial fee income. Generally, PTAs at U.S. banking entities have the following characteristics: they are carried on the U.S. banking entity’s books as a correspondent bank account, their transaction volume is high, checks passing through the account contain wording similar to “payable through XYZ bank,” and the signatures appearing on checks are not those of authorized officers of the foreign bank. See the expanded examination procedures for PTAs in the FFIEC’s *BSA/AML Examination Manual*.

2010.11.1.1.6 Personal Trust and Estates

In trust and estate accounts, an institution offers management services for a client’s assets. When dealing with trusts under will, or “testamentary trusts,” the institution may receive an estate appointment (executor) and a trustee appointment if the will provided for the trust from the probate. These accounts are fully funded at origination with no opportunity for an outside party to add to the account, and all activities are

subject to review by the probate or surrogates' court. On the other hand, with living trusts, or "grantor trusts," the customer (grantor) may continually add to and, in some instances, has control over the corpus of the account. Trusts and estates require experienced attorneys, money managers, and generally well-rounded professionals to set up and maintain the accounts. In certain cases, bankers may need to manage a customer's closely held business or sole proprietorship. In the case of offshore trust facilities, recent changes in U.S. law have imposed additional obligations on those banks that function as trustees or corporate management for offshore trusts and PICs.

A critical element in offering personal trust and estate services is the fiduciary responsibility of the institutions to their customers. This responsibility requires that institutions always act in the best interest of the clients pursuant to the trust documentation, perhaps even to the detriment of the bank. In these accounts, the bank is the fiduciary and the trust officer serves as a representative of the institution. Fiduciaries are held to higher standards of conduct than other bankers. Proper administration of trusts and estates includes strict controls over assets, prudent investment and management of assets, and meticulous recordkeeping. See the expanded procedures for trust and asset management services in the FFIEC's *BSA/AML Examination Manual*.

2010.11.1.1.7 Custody Services

Custodial services offered to private-banking customers include securities safekeeping, receipt and disbursement of dividends and interest, recordkeeping, and accounting. Custody relationships can be established in many ways, including by referrals from other departments in the bank or from outside investment advisers. The customer or a designated financial adviser retains full control of the investment management of the property subject to the custodianship. Sales and purchases of assets are made by instruction from the customer, and cash disbursements are prearranged or as instructed. Custody accounts involve no investment supervision and no discretion. However, the custodian may be responsible for certain losses if it fails to act properly according to the custody agreement. Therefore, procedures for proper

administration should be established and reviewed.

An escrow account is a form of custody account in which the institution agrees to hold cash or securities as a middleman, or a third party. The customer, for example, an attorney or a travel agency, gives the institution funds to hold until the ultimate receiver of the funds "performs" in accordance with the written escrow agreement, at which time the institution releases the funds to the designated party.

2010.11.1.1.8 Funds Transfer

Funds transfer, another service offered by private-banking functions, may involve the transfer of funds between third parties as part of bill-paying and investment services on the basis of customer instructions. The adequacy of controls over funds-transfer instructions that are initiated electronically or telephonically, such as by facsimile machine, telex, telegram, and telephone, is extremely important. Funds-transfer requests are quickly processed and, as required by law, funds-transfer personnel may have limited knowledge of the customers or the purpose of the transactions. Therefore, strong controls and adequate supervision over this area are critical.

2010.11.1.1.9 Hold Mail, No Mail, and Electronic-Mail Only

Hold-mail, no-mail, or electronic-mail-only accounts are often provided to private-banking customers who elect to have bank statements and other documents maintained at the institution or e-mailed to them, rather than mailed to their residence. Agreements for hold-mail accounts should be in place, and the agreements should indicate that it was the customer's choice to have the statements retained at the bank and that the customer will pick up his or her mail at least annually. Variations of hold-mail services include delivery of mail to a prearranged location (such as another branch of the bank) by special courier or the bank's pouch system.

2010.11.1.1.10 Bill-Paying Services

Bill-paying services are often provided to private-banking customers for a fee. If this service is provided, an agreement between the bank and the customer should exist. Typically, a customer may request that the bank debit a deposit

account for credit card bills, utilities, rent, mortgage payments, or other monthly consumer charges. In addition, the increased use of the Internet has given rise to the *electronic-mail-only account*, whereby customers elect to have statements, notices, etc., sent to them only by e-mail.

2010.11.2 FUNCTIONAL REVIEW

When discussing the functional aspects of a private-banking operation, *functional* refers to managerial processes and procedures, such as reporting lines, quality of supervision (including involvement of the board of directors), information flows, policies and procedures, risk-management policies and methodologies, segregation of duties, management information systems, operational controls (including BSA/AML monitoring), and audit coverage. The examiner should be able to draw sound conclusions about the quality and culture of management and stated private-banking policies after reviewing the functional areas described below. Specifically, the institution's risk-identification process and risk appetite should be carefully defined and assessed. Additionally, the effectiveness of the overall control environment maintained by management should be evaluated by an internal or external audit. The effectiveness of the following functional areas is critical to any private-banking operation, regardless of its size or product offerings.

2010.11.2.1 Supervision and Organization

As part of the examiner's appraisal of an organization, the quality of supervision of private-banking activities is evaluated. The appraisal of management covers the full range of functions and activities related to the operation of the private bank. The discharge of responsibilities by bank directors should be effected through an organizational plan that accommodates the volume and business services handled, local business practices and the bank's competition, and the growth and development of the institution's private-banking business. Organizational planning is the joint responsibility of senior bank and private-bank management, should be integrated with the long-range plan for the institution, and should be consistent with any enterprise-wide risk-management program.

Both the directors and management have important roles in formulating policies and establishing programs for private-banking prod-

ucts, operations, internal controls, and audits. However, management alone must implement policies and programs within the organizational framework instituted by the board of directors.

2010.11.2.2 Risk Management

Sound risk-management processes and strong internal controls are critical to safe and sound banking generally and to private-banking activities in particular. Management's role in ensuring the integrity of these processes has become increasingly important as new products and technologies are introduced. Similarly, the client-selection, documentation, approval, and account-monitoring processes should adhere to sound and well-identified practices.

The quality of risk-management practices and internal controls is given significant weight in the evaluation of management and the overall condition of private-banking operations. A bank's failure to establish and maintain a risk-management framework that effectively identifies, measures, monitors, and controls the risks associated with products and services should be considered unsafe and unsound conduct. Furthermore, well-defined management practices should indicate the types of clients that the institution will and will not accept and should establish multiple and segregated levels of authorization for accepting new clients. Institutions that follow sound practices will be better positioned to design and deliver products and services that match their clients' legitimate needs, while reducing the likelihood that unsuitable clients might enter their client account base. Deficiencies noted in this area are weighted in context of the relative risk they pose to the institution and are appropriately reflected in the appraisal of management.

The private-banking function is exposed to a number of risks, including reputational, fiduciary, legal, credit, operational, and market. A brief description of some of the different types of risks follows:

1. *Reputational risk* is the potential that negative publicity regarding an institution's business practices and clients, whether true or not, could cause a decline in the customer base, costly litigation, or revenue reductions.
2. *Fiduciary risk* refers to the risk of loss due to the institution's failure to exercise loyalty; safeguard assets; and, for trusts, to use assets

productively and according to the appropriate standard of care. This risk generally exists in an institution to the extent that it exercises discretion in managing assets on behalf of a customer.

3. *Legal risk* arises from the potential of unenforceable contracts, client lawsuits, or adverse judgments to disrupt or otherwise negatively affect the operations or condition of a banking organization. One key dimension of legal risk is supervisory action that could result in costly fines or other punitive measures being levied against an institution for compliance breakdowns.
4. *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
5. *Operational risk* arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.

Although effective management of all of the above risks is critical for an institution, certain aspects of reputational, legal, and fiduciary risks are often unique to a private-banking function. In this regard, the following customer-due-diligence policies and practices are essential in the management of reputational and legal risks in the private-banking functions. (In addition, sound fiduciary practices and conflicts-of-interest issues that a private-banking operation may face in acting as fiduciary are described in the subsection on fiduciary standards.)

2010.11.2.2.1 Customer-Due-Diligence Policy and Procedures

Sound customer-due-diligence (CDD) policies and procedures are essential to minimize the risks inherent in private banking. The policies and procedures should clearly describe the target client base in terms such as “minimum investable net worth” and “types of products sought,” as well as specifically indicate the type of clientele the institution will or will not accept. Policies and procedures should be designed to ensure that effective due diligence is performed on all potential clients, that client files are bolstered with additional CDD information on an ongoing basis, and that activity in client accounts is monitored for transactions that are inconsistent with the client profile and may con-

stitute unlawful activities, such as money laundering. The client’s identity, background, and the nature of his or her transactions should be documented and approved by the back office before opening an account or accepting client monies. Certain high-risk clients like foreign politicians or money exchange houses should have additional documentation to mitigate their higher risk.

Money laundering is associated with a broad range of illicit activities: the ultimate intention is to disguise the money’s true source—from the initial placement of illegally derived cash proceeds to the layers of financial transactions that disguise the audit trail—and make the funds appear legitimate. Under U.S. money-laundering statutes, a bank employee can be held personally liable if he or she is deemed to engage in “willful blindness.” This condition occurs when the employee fails to make reasonable inquiries to satisfy suspicions about client account activities.

Since the key element of an effective CDD policy is a comprehensive knowledge of the client, the bank’s policies and procedures should clearly reflect the controls needed to ensure the policy is fully implemented. CDD policies should clearly delineate the accountability and authority for opening accounts and for determining if effective CDD practices have been performed on each client. In addition, policies should delineate documentation standards and accountability for gathering client information from referrals among departments or areas within the institution as well as from accounts brought to the institution by new RMs.

In carrying out prudent CDD practices on potential private-banking customers, management should document efforts to obtain and corroborate critical background information. Private-banking employees abroad often have local contacts who can assist in corroborating information received from the customer. The information listed below should be corroborated by a reliable, independent source, when possible:

1. The customer’s current address and telephone number for his or her primary residence, which should be corroborated at regular intervals, can be verified through a variety of methods, such as—
 - a. visiting the residence, office, factory, or farm (with the RM recording the results of the visit or conversations in a memorandum);
 - b. checking the information against the telephone directory; the client’s residence, as

- indicated on his or her national ID card; a mortgage or bank statement or utility or property tax bill; or the electoral or tax rolls;
- c. obtaining a reference from the client's government or known employer or from another bank;
 - d. checking with a credit bureau or professional corroboration organization; or
 - e. any other method verified by the RM.
2. Sufficient business information about the customer should be gathered so that the RM understands the profile of the customer's commercial transactions. This information should include a description of the nature of the customer's business operations or means of generating income, primary trade or business areas, and major clients and their geographic locations, as well as the primary business address and telephone number. These items can be obtained through a combination of any of the following sources:
 - a. a visit to the office, factory, or farm
 - b. a reliable third party who has a business relationship with the customer
 - c. financial statements
 - d. Dun and Bradstreet reports
 - e. newspaper or magazine articles
 - f. Lexis/Nexis reports on the customer or customer's business
 - g. "Who's Who" reports from the home country
 - h. private investigations
 3. Although it is often not possible to get proof of a client's wealth, an RM can use his or her good judgment to derive a reasonable estimate of the individual's net worth.
 4. As part of the ongoing CDD process, the RM should document in memos or "call reports" the substance of discussions that take place during frequent visits with the client. Additional information about a client's wealth, business, or other interests provides insight into potential marketing opportunities for the RM and the bank, and updates and strengthens the CDD profile.

As a rule, most private banks make it a policy not to accept walk-in clients. If an exception is made, procedures for the necessary documentation and approvals supporting the exception should be in place. Similarly, other exceptions to policy and procedures should readily identify the specific exception and the required due-diligence and approval process for overriding existing procedures.

In most instances, all CDD information and documentation should be maintained and avail-

able for examination and inspection at the location where the account is located or where the financial services are rendered. If the bank maintains centralized customer files in locations other than where the account is located or the financial services are rendered, complete customer information, identification, and documentation must be made available at the location where the account is located or where the financial services are rendered within 48 hours of a Federal Reserve examiner's request. Off-site storage of CDD information will be allowed only if the bank has adopted, as part of its customer-due-diligence program, specific procedures designed to ensure that (1) the accounts are subject to ongoing Office of Foreign Assets Control screening that is equivalent to the screening afforded other accounts, (2) the accounts are subject to the same degree of review for suspicious activity, and (3) the bank demonstrates that the appropriate review of the information and documentation is being performed by personnel at the offshore location.

CDD procedures should be no different when the institution deals with a financial adviser or other type of intermediary acting on behalf of a client. To perform its CDD responsibilities when dealing with a financial adviser, the institution should identify the beneficial owner of the account (usually the intermediary's client, but in rare cases, it is the intermediary itself) and perform its CDD analysis with respect to that beneficial owner. The imposition of an intermediary between the institution and counterparty should not lessen the institution's CDD responsibilities.

The purpose of all private-banking relationships should also be readily identified. Incoming customer funds may be used for various purposes, such as establishing deposit accounts, funding investments, or establishing trusts. The bank's CDD procedures should allow for the collection of sufficient information to develop a transaction or client profile for each customer, which will be used in analyzing client transactions. Internal systems should be developed for monitoring and identifying transactions that may be inconsistent with the transaction or client profile for a customer and which may thus constitute suspicious activity.

2010.11.2.2.1.1 Suspicious Activity Reports

The proper and timely filing of Suspicious Activity Reports (SARs) is an important compo-

ment of a bank's CDD program. Since 1996, the federal financial institution supervisory agencies and the Department of the Treasury's Financial Crimes Enforcement Network (FinCEN) have required banking organizations to report known or suspected violations of law as well as suspicious transactions on a SAR. See the Board's SAR regulation (Regulation H, section 208.62 [12 C.F.R. 208.62] and Regulation Y, section 225.4(f) [12 C.F.R. 225.4(f)]).³ Law enforcement agencies use the information reported on the form to initiate investigations, and Federal Reserve staff use the SAR information in their examination and oversight of supervised institutions.

A member bank and a BHC are required to file a SAR with the appropriate federal law enforcement agencies and the Department of the Treasury. A SAR must be prepared in accordance with the form's instructions. (See SR-03-12 and the attached July 2003 SAR form and instructions.) The completed SAR is to be sent to FinCEN when an institution detects—

1. insider abuse involving any amount;
2. violations aggregating \$5,000 or more in which a suspect can be identified;
3. violations aggregating \$25,000 or more regardless of a potential suspect; or
4. transactions aggregating \$5,000 or more that involve potential money laundering or violations of the Bank Secrecy Act.

When a SAR is filed, the management of a member bank must promptly notify its board of directors or a committee thereof.

A SAR must be filed within 30 calendar days after the date of initial detection of the facts that may constitute a basis for filing a SAR. If no suspect was identified on the date of detection of the incident requiring the filing, a member bank may delay filing a SAR for an additional 30 calendar days in order to identify the suspect. Reporting may not be delayed more than 60 calendar days after the date of initial detection of a reportable transaction. In situations involving violations requiring immediate attention, such as when a reportable violation is ongoing, the financial institution is required to immedi-

ately notify an appropriate law enforcement authority and the Board by telephone, in addition to its timely filing of a SAR.

A banking organization's internal systems for capturing suspicious activities should provide essential information about the nature and volume of activities passing through customer accounts. Any information suggesting that suspicious activity has occurred should be pursued, and, if an explanation is not forthcoming, the matter should be reported to banking organization's management. Examiners should ensure that the institution's approach to SARs is proactive and that well-established procedures cover the SAR process. Accountability should exist within the organization for the analysis and follow-up of internally identified suspicious activity; this analysis should conclude with a decision on the appropriateness of filing a SAR. See SR-03-12 and the attached July 2003 SAR form and instructions. See also the core procedures concerning suspicious-activity-reporting requirements in the FFIEC *BSA/AML Examination Manual*.

2010.11.2.2.2 Credit-Underwriting Standards

The underwriting standards for private-banking loans to high net worth individuals should be consistent with prudent lending standards. The same credit policies and procedures that are applicable to any other type of lending arrangement should extend to these loans. At a minimum, sound policies and procedures should address the following: all approved credit products and services offered by the institution, lending limits, acceptable forms of collateral, geographic and other limitations, conditions under which credit is granted, repayment terms, maximum tenor, loan authority, collections and charge-offs, and prohibition against capitalization of interest.

An extension of credit based solely on collateral, even if the collateral is cash, does not ensure repayment. While the collateral enhances the bank's position, it should not substitute for regular credit analyses and prudent lending practices. If collateral is derived from illegal activities, it is subject to forfeiture through the seizure of assets by a government agency. The bank should perform its due diligence by adequately and reasonably ascertaining and documenting that the funds of its private-banking customers were derived from legitimate means. Banks should also verify that the use of the loan proceeds is for legitimate purposes.

3. The Board's SAR rules apply to state member banks, bank holding companies and their nonbank subsidiaries that do not report on a different SAR form (for example, broker-dealers), Edge and agreement corporations, and the U.S. branches and agencies of foreign banks supervised by the Federal Reserve.

In addition, bank policies should explicitly describe the terms under which “margin loans,” loans collateralized by securities, are made and should ensure that they conform to applicable regulations. Management should review and approve daily MIS reports. The risk of market deterioration in the value of the underlying collateral may subject the lender to loss if the collateral must be liquidated to repay the loan. In the event of a “margin call,” any shortage should be paid for promptly by the customer from other sources pursuant to the terms of the margin agreement.

In addition, policies should address the acceptance of collateral held at another location, such as an affiliated entity, but pledged to the private-banking function. Under these circumstances, management of the private-banking function should, at a minimum, receive frequent reports detailing the collateral type and current valuation. In addition, management of the private-banking function should be informed of any changes or substitutions in collateral.

2010.11.2.3 Fiduciary Standards

Fiduciary risk is managed through the maintenance of an effective and accountable committee structure; retention of technically proficient staff; and development of effective policies, procedures, and controls. In managing its fiduciary risk, the bank must ensure that it carries out the following fiduciary duties:

1. *Duty of loyalty.* Trustees are obligated to make all decisions based exclusively on the best interests of trust customers. Except as permitted by law, trustees cannot place themselves in a position in which their interests might conflict with those of the trust beneficiaries.
2. *Avoidance of conflicts of interest.* Conflicts of interest arise in any transaction in which the fiduciary simultaneously represents the interests of multiple parties (including its own interests) that may be adverse to one another. Institutions should have detailed policies and procedures regarding potential conflicts of interest. All potential conflicts identified should be brought to the attention of management and the trust committee, with appropriate action taken. Conflicts of interest may arise throughout an institution. Care should be taken by fiduciary business lines, in particular, to manage conflicts of interest between fiduciary business lines and other business lines (including other fiduciary busi-

ness lines). Consequently, management throughout the institution should receive training in these matters. For more information on the supervision of fiduciary activities, see section 3120.0 in this manual and section 4200.0 in the *Commercial Bank Examination Manual*.

3. *Duty to prudently manage discretionary trust and agency assets.* Since 1994, the majority of states have adopted laws concerning the prudent investor rule (PIR) with respect to the investment of funds in a fiduciary capacity. PIR is a standard of review that imposes an obligation to prudently manage the portfolio as a whole, focusing on the process of portfolio management, rather than on the outcome of individual investment decisions. Although this rule only governs trusts, the standard is traditionally applied to all accounts for which the institution is managing funds.

2010.11.2.4 Operational Controls

To minimize any operational risks associated with private-banking activities, management is responsible for establishing an effective internal control infrastructure and reliable management information systems. Critical operational controls over any private-banking activity include the establishment of written policies and procedures, segregation of duties, and comprehensive management reporting. Throughout this section, specific guidelines and inspection procedures for assessing internal controls over different private-banking activities are provided. Listed below are some of those guidelines that cover specific private-banking services.

2010.11.2.4.1 Segregation of Duties

Banking organizations should have guidelines on the segregation of employees' duties in order to prevent the unauthorized waiver of documentation requirements, poorly documented referrals, and overlooked suspicious activities. Independent oversight by the back office helps to ensure compliance with account-opening procedures and CDD documentation. Control-conscious institutions may use independent units, such as compliance, risk management, or senior management, to fill this function in lieu of the back office. The audit and compliance

functions of the private-banking entity should be similarly independent so that they can operate autonomously from line management.

2010.11.2.4.2 Inactive and Dormant Accounts

Management should be aware that banking laws in most states prohibit banks from offering services that allow deposit accounts to be inactive for prolonged periods of time (generally, 12 or more months with no externally generated account-balance activity). These regulations are based on the presumption that inactive and dormant accounts may be subject to manipulation and abuse by insiders. Policies and procedures should delineate when inactivity occurs and when inactive accounts should be converted to dormant status. Effective controls over dormant accounts should include a specified time between the last customer-originated activity and its classification as dormant, the segregation of signature cards for dormant accounts, dual control of records, and the blocking of the account so that entries cannot be posted to the account without review by more than one member of senior management.

2010.11.2.4.3 Pass-Through Accounts and Omnibus Accounts

Pass-through accounts (PTAs) extend checking-account privileges to the customers of a foreign bank; several risks are involved in providing these accounts. In particular, if the U.S. banking entity does not exercise the same due diligence and customer vetting for PTAs as it does for domestic account relationships, the use of PTAs may facilitate unsafe and unsound banking practices or illegal activities, including money laundering. Additionally, if accounts at U.S. banking entities are used for illegal purposes, the entities could be exposed to reputational risk and risk of financial loss as a result of asset seizures and forfeitures brought by law enforcement authorities. As stated in SR-95-10, it is recommended that U.S. banking entities terminate a payable-through arrangement with a foreign bank in situations in which (1) adequate information about the ultimate users of PTAs cannot be obtained, (2) the foreign bank cannot be relied on to identify and monitor the transactions of its own customers, or (3) the U.S. banking entity is

unable to ensure that its payable-through accounts are not being used for money laundering or other illicit purposes.

Omnibus, or general clearing, accounts may also exist in the private-banking system. They may be used to accommodate client funds before an account opening to expedite a new relationship, or they may fund products such as mutual funds in which client deposit accounts may not be required. However, these accounts could circumvent an audit trail of client transactions. Examiners should carefully review a bank's use of such accounts and the adequacy of its controls on their appropriate use. Generally, client monies should flow through client deposit accounts, which should function as the sole conduit and paper trail for client transactions.

2010.11.2.4.4 Hold-Mail, No-Mail, and E-Mail-Only Controls

Controls over hold-mail, no-mail, and e-mail-only accounts are critical because the clients have relinquished their ability to detect unauthorized transactions in their accounts in a timely manner. Accounts with high volume or significant losses warrant further inquiry. Hold-mail, no-mail, and e-mail-only account operations should ensure that client accounts are subject to dual control and are reviewed by an independent party.

2010.11.2.4.5 Funds Transfer—Tracking Transaction Flows

One way that institutions can improve their customer knowledge is by tracking the transaction flows into and out of customer accounts and payable-through subaccounts. Tracking should include funds-transfer activities. Policies and procedures to detect unusual or suspicious activities should identify the types of activities that would prompt staff to investigate the customer's activities and should provide guidance on the appropriate action required for suspicious activity. The following is a checklist to guide bank personnel in identifying some potential abuses:

1. indications of frequent overrides of established approval authority or other internal controls
2. intentional circumvention of approval authority by splitting transactions
3. wire transfers to and from known secrecy jurisdictions

4. frequent or large wire transfers for persons who have no account relationship with the bank, or funds being transferred into and out of an omnibus or general clearing account instead of the client's deposit account
5. wire transfers involving cash amounts in excess of \$10,000
6. inadequate control of password access
7. customer complaints or frequent error conditions

2010.11.2.4.6 Custody—Detection of “Free Riding”

Custody departments should monitor account activity to detect instances of “free-riding,” the practice of offering the purchase of securities without sufficient capital and then using the proceeds of the sale of the same securities to cover the initial purchase. Free-riding poses significant risk to the institution and typically occurs without the bank's prior knowledge. Free-riding also violates margin rules (Regulations T, U, and X) governing the extension of credit in connection with securities transactions. (See SR-93-13 and section 2187.0.)

2010.11.2.5 Management Information Systems

Management information systems (MIS) should accumulate, interpret, and communicate information on (1) the private-banking assets under management, (2) profitability, (3) business and transaction activities, and (4) inherent risks. The form and content of MIS for private-banking activities will be a function of the size and complexity of the private-banking organization. Accurate, informative, and timely reports that perform the following functions may be prepared and reviewed by RMs and senior management:

1. aggregate the assets under management according to customer, product or service, geographic area, and business unit
2. attribute revenue according to customer and product type
3. identify customer accounts that are related to or affiliated with one another through common ownership or common control
4. identify and aggregate customer accounts by source of referral
5. identify beneficial ownership of trust, PIC, and similar accounts

To monitor and report transaction activity and to detect suspicious transactions, management reports may be developed to—

1. monitor a specific transaction criterion, such as a minimum dollar amount or volume or activity level;
2. monitor a certain type of transaction, such as one with a particular pattern;
3. monitor individual customer accounts for variations from established transaction and activity profiles based on what is usual or expected for that customer; and
4. monitor specific transactions for BSA and SAR compliance.

In addition, reports prepared for private-banking customers should be accurate, timely, and informative. Regular reports and statements prepared for private-banking customers should adequately and accurately describe the application of their funds and should detail all transactions and activity that pertain to the customers' accounts.

Furthermore, MIS and technology play a role in building new and more direct channels of information between the institution and its private-banking customers. Active and sophisticated customers are increasing their demand for data relevant to their investment needs, which is fostering the creation of online information services. Online information can satisfy customers' desire for convenience, real-time access to information, and a seamless delivery of information.

2010.11.2.6 Audit

An effective audit function is vital to ensuring the strength of a private bank's internal controls. As a matter of practice, internal and external auditors should be independently verifying and confirming that the framework of internal controls is being maintained and operated in a manner that adequately addresses the risks associated with the activities of the organization. Critical elements of an effective internal audit function are the strong qualifications and expertise of the internal audit staff and a sound risk-assessment process for determining the scope and frequency of specific audits. The audit process should be risk-focused and should ultimately determine the risk rating of business lines and client CDD procedures. Compliance with CDD policies and procedures and the

detailed testing of files for CDD documentation are also key elements of the audit function. Finally, examiners should review and evaluate management's responsiveness to criticisms by the audit function.

2010.11.2.7 Compliance

The responsibility for ensuring effective compliance with relevant laws and regulations may vary among different forms of institutions, depending on their size, complexity, and availability of resources. Some institutions may have a distinct compliance department with the centralized role of ensuring compliance institution-wide, including private-banking activities. This arrangement is strongly preferable to a situation in which an institution delegates compliance to specific functions, which may result in the management of private-banking operations being responsible for its own internal review. Compliance has a critical role in monitoring private-banking activities; the function should be independent of line management. In addition to ensuring compliance with various laws and regulations such as the Bank Secrecy Act and those promulgated by the Office of Foreign Assets Control, compliance may perform its own internal investigations and due diligence on employees, customers, and third parties with whom the bank has contracted in a consulting or referral capacity and whose behavior, activities, and transactions appear to be unusual or suspicious. Institutions may also find it beneficial for compliance to review and authorize account-opening documentation and CDD adequacy for new accounts. The role of compliance is a control function, but it should not be a substitute for regular and frequent internal audit coverage of the private-banking function. Following is a description of certain regulations that may be monitored by the compliance function.

2010.11.2.7.1 Office of Foreign Assets Control

The Office of Foreign Assets Control (OFAC) of the U.S. Department of the Treasury administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals. Sanctions are imposed against targeted foreign countries, terrorists, international narcotics traffickers, and those engaged in

activities related to the proliferation of weapons of mass destruction. OFAC acts under presidential wartime and national emergency powers, as well as under authority granted by specific legislation, to impose controls on transactions and freeze foreign assets under U.S. jurisdiction. Many of the sanctions are based on United Nations and other international mandates, are multilateral in scope, and involve close cooperation with allied governments. Under the International Emergency Economic Powers Act, the President can impose sanctions, such as trade embargoes, the freezing of assets, and import surcharges, on certain foreign countries and the "specially designated nationals" of those countries.

A "specially designated national" is a person or entity who acts on behalf of one of the countries under economic sanction by the United States. Dealing with such nationals is prohibited. Moreover, their assets or accounts in the United States are frozen. In certain cases, the Treasury Department can issue a license to a designated national. This license can then be presented by the customer to the institution, allowing the institution to debit his or her account. The license can be either general or specific.

OFAC screening may be difficult when transactions are conducted through PICs, token names, numbered accounts, or other vehicles that shield true identities. Management must ensure that accounts maintained in a name other than that of the beneficial owner are subject to the same level of filtering for OFAC specially designated nationals and blocked foreign countries as other accounts. That is, the OFAC screening process must include the account's beneficial ownership as well as the official account name.

Any violation of regulations implementing designated national sanctions subjects the violator to criminal prosecution, including up to 12 years in prison and \$1 million in corporate fines and \$250,000 in individual fines, per incident. Any funds frozen because of OFAC orders should be placed in a blocked account. Release of those funds cannot occur without a license from the Treasury Department.

2010.11.2.7.2 Bank Secrecy Act

Guidelines for compliance with the Bank Secrecy Act (BSA) can be found in the FFIEC *BSA/AAML Examination Manual*. See also SR-04-13, SR-03-17, SR-01-29 (the customer identification program requirements), and the

question-and-answer format interpretations (SR-05-9) of the U.S. Department of the Treasury's regulation (31 C.F.R. 103) for banking organizations, which is based on section 326 of the Patriot Act. In addition, the procedures for conducting BSA examinations of foreign offices of U.S. banks are detailed in SR-96-5. The SAR filing requirements for nonbank subsidiaries of bank holding companies and state member banks are also set forth in SR-02-24.

2010.11.3 PREPARATION FOR INSPECTION

The following subsections provide examiners with guidance on preparing for the on-site inspection of private-banking operations, including determination of the inspection scope and drafting of the first-day-letter questionnaire that is provided to the institution.

2010.11.3.1 Pre-Inspection Review

To prepare the examiners for their assignments and to determine the appropriate staffing and scope of the inspection, the following guidelines should be followed during the pre-inspection planning process:

1. Review the prior report of inspection and workpapers for the inspection scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior inspection. The prior inspection report and inspection plan should also provide insight to key contacts at the institution and to the time frame of the prior private-banking review.
2. Obtain relevant correspondence sent since the prior inspection, such as management's response to the report of inspection, any applications submitted to the Federal Reserve, and any supervisory action.
3. Research press releases and published news stories about the institution and its private-banking activities.
4. Review internal and external audit reports and any internal risk assessments performed by the institution on its private-banking activities. Such reports should include an assessment of the internal controls and risk profile of the private-banking function.
5. Contact the institution's management to ascertain what changes have occurred since the last inspection or are planned in the near future. For example, examiners should deter-

mine if there have been changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered. If there is no mention of private banking in the prior inspection report, management should be asked at this time if they have commenced or plan to commence any private-banking activities.

6. Follow these inspection procedures and also consider the core examination procedures in the FFIEC *BSA/AML Examination Manual* in order to establish the base scope for the inspection of private-banking activities. Review and follow the expanded procedures for private banking and any other expanded procedures that are deemed necessary.

2010.11.3.2 Inspection Staffing and Scope

Once the inspection scope has been established and before beginning the new inspection, the examiner-in-charge and key administrators of the inspection team should meet to discuss the private-banking inspection scope, the assignments of the functional areas of private banking, and the supplemental reviews of specific private-banking products and services. If the bank's business lines and services overlap and if its customer base and personnel are shared throughout the organization, examiners may be forced to go beyond a rudimentary review of private-banking operations. They will probably need to focus on the policies, practices, and risks within the different divisions of a particular institution and throughout the institution's global network of affiliated entities.

2010.11.3.3 Reflection of Organizational Structure

The review of private-banking activities should be conducted on the basis of the bank holding company's organizational structure. These structures may vary considerably depending on the size and sophistication of the institution, its country of origin and the other geographic markets in which it competes, and the objectives and strategies of its management and board of directors. To the extent possible, examiners should understand the level of consolidated private-banking activities an institution con-

ducts in the United States and abroad. This broad view is needed to maintain the “big picture” impact of private banking for a particular institution.

For bank holding company inspections, examiners must consider the provisions of the Gramm-Leach Bliley Act, which amended section 5(c) of the Bank Holding Company Act, that concern examinations and inspections. In particular, examiners must adhere to those statutory provisions that pertain to the inspections of bank holding company nonbank subsidiaries that are supervised by functional regulators. See section 1040.0.

2010.11.3.4 Risk-Focused Approach

Examiners reviewing the private-banking operations should implement the risk-focused inspection approach. The exam scope and degree of testing of private-banking practices should reflect the degree of risk assumed, prior exam findings on the implementation of policies and procedures, the effectiveness of controls, and an assessment of the adequacy of the internal audit and compliance functions. If initial inquiries into the institution’s internal audit and other assessment practices raise doubts about the internal system’s effectiveness, expanded analysis and review are required—and examiners should perform more transaction testing. Examiners will usually need to follow the core examination procedures in the FFIEC *BSA/AML Examination Manual*, as well as the expanded procedures for private banking. Other expanded procedures should be followed if circumstances dictate.

2010.11.3.5 First-Day Letter

As part of the inspection preparation, examiners should customize the first-day-letter (FDL) questionnaire to reflect the structure and type of private-banking activities of the institution and the scope of the exam. The following is a list of requests regarding private banking that examiners should consider including in the FDL. Responses to these items should be reviewed in conjunction with responses to the BSA, fiduciary, audit, and internal control inquiries:

1. organizational chart for the private bank on both a functional and legal-entity basis

2. business or strategic plan
3. income and expense statements for the prior fiscal year and current year to date, with projections for the remainder of the current and the next fiscal year, and income by product division and marketing region
4. balance-sheet and total assets under management (list the most active and profitable accounts by type, customer domicile, and responsible account officer)
5. most recent audits for private-banking activities
6. copies of audit committee minutes
7. copy of the CDD and SAR policies and procedures
8. list of all new business initiatives introduced last year and this year, relevant new-product-approval documentation that addresses the evaluation of the unique characteristics and risk associated with the new activity or product, and an assessment of the risk-management oversight and control infrastructures in place to manage the risks
9. list of all accounts in which an intermediary is acting on behalf of clients of the private bank, for example, as financial advisers or money managers
10. explanation of the methodology for following up on outstanding account documentation and a sample report
11. description of the method for aggregating client holdings and activities across business units throughout the organization
12. explanation of how related accounts, such as common control and family link, are identified
13. name of a contact person for information on compensation, training, and recruiting programs for relationship managers
14. list of all personal investment company accounts
15. list of reports that senior management receives regularly on private-banking activities
16. description and sample of the management information reports that monitor account activity
17. description of how senior management monitors compliance with global policies for worldwide operations, particularly for offices operating in secrecy jurisdictions
18. appropriate additional items from the core and expanded procedures for private banking, as set forth in the FFIEC *BSA/AML Examination Manual*, as well as any other items from the expanded procedures that are needed to gauge the adequacy of the

BSA/AML program for private-banking activities.

2010.11.4 INSPECTION OBJECTIVES

1. To determine if the policies, practices, procedures, and internal controls regarding private-banking activities are adequate for the risks involved.
2. To determine if the institution's officers and employees are operating in conformance with established guidelines for conducting private-banking activities.
3. To assess the financial condition and income-generation results of the private-banking activities.
4. To determine the scope and adequacy of the audit function for private-banking activities.
5. To determine compliance with applicable laws and regulations for private banking.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations are found.

2010.11.5 INSPECTION PROCEDURES

The examiner-in-charge should supplement the following procedures, as appropriate, with the examination procedures for private banking, as set forth in the FFIEC *BSA/AML Examination Manual*.

2010.11.5.1 Private-Banking Pre-Inspection Procedures

1. As the examiner-in-charge, conduct a meeting with the lead members of the private-banking inspection team and discuss—
 - a. the private-banking inspection scope (*The inspection may need to extend beyond a rudimentary review of private-banking operations if the institution's business lines and services overlap and if its customer base and personnel are shared throughout the organization. Examiners will probably need to focus on the policies, practices, and risks within the different divisions of each particular institution and throughout each institution's global network of affiliated entities.*);
 - b. examiner assignments of the functional areas of private banking; and
 - c. the supplemental reviews of specific private-banking products and services.

2. Review the prior report of inspection and the previous inspection workpapers; description of the inspection scope; structure and type of private-banking activities conducted; and findings, conclusions, and recommendations of the prior inspection. The prior inspection report and inspection plan should also provide information and insight on key contacts at the institution and on the time frame of the prior private-banking review.
3. Review relevant correspondence exchanged since the prior inspection, such as management's response to the report of inspection, any applications submitted to the Federal Reserve, and any supervisory actions.
4. Research press releases and published news stories about the institution and its private-banking activities.
5. Review internal and external audit reports and any internal risk assessments performed by the institution's internal or external auditors on its private-banking activities. Review information on any assessments of the internal controls and risk profile of the private-banking function.
6. Contact management at the institution to ascertain what changes in private-banking services have occurred since the last inspection or if there are any planned in the near future.
 - a. Determine if the previous inspection or examination report(s) mention private banking; if not, ask management if they have commenced or plan to commence any private-banking activities within any part of the bank holding company organization.
 - b. Determine if there have been any changes to the strategic plan; senior management; or the level and type of private-banking activities, products, and services offered.
 - c. During the entire inspection of private-banking activities, be alert to the totality of the client relationship, product by product, in light of increasing client awareness and use of derivatives, emerging-market products, foreign exchange, and margined accounts.

2010.11.5.2 Full-Inspection Phase

1. After reviewing the private-banking functional areas, draw sound conclusions about

- the quality and culture of management and stated private-banking policies.
2. Evaluate the adequacy of risk-management policies and practices governing private-banking activities.
 3. Assess the organization of the private-banking function and evaluate the quality of management's supervision of private-banking activities. An appraisal of management covers the—
 - a. full range of functions (i.e., supervision and organization, risk management, fiduciary standards, operational controls, management information systems, audit, and compliance) and activities related to the operation of the private-banking activities; and
 - b. discharge of responsibilities by the institution's directors through a long-range organizational plan that accommodates the volume and business services handled, local business practices and the institution's competition, and the growth and development of the institution's private-banking business.
 4. Determine if management has effective procedures for conducting ongoing reviews of client-account activity to detect, and protect the client from, any unauthorized activity and any account activity that is inconsistent with the client's profile (for example, frequent or sizeable unexplained transfers flowing through the account).
 5. Determine if the bank holding company has initiated and maintained controls and procedures that require each subsidiary private-banking institution to have account-opening procedures and documentation requirements that must be satisfied before an account can be opened.
 6. Determine if the bank holding company requires its subsidiary institutions to maintain and adhere to well-structured CCD procedures.
 7. Determine if the bank holding company has proper controls and procedures to ensure each institution's proper administration of trust and estates, including strict controls over assets, prudent investment and management of assets, and meticulous record-keeping. Review previous trust examination reports and consult with the designated Federal Reserve System trust examiners.
 8. Ascertain whether the bank holding company adequately supervises the custody services of its subsidiaries. The bank holding company should ensure that each institution has established and currently maintains procedures for the proper administration of custody services, including the regular review of the services on a preset schedule.
 9. Determine whether subsidiary institutions are required to and actually maintain strong controls and supervision over funds transfers.
 10. Ascertain if institution management and staff are required to perform due diligence, that is, to verify and document that the funds of its private-banking customers were derived through legitimate means, and when extending credit, to verify that the use of loan proceeds was legitimate.
 11. Review the institution's use of deposit accounts.
 - a. Assess the adequacy of the institution's controls and whether they are appropriately used.
 - b. Determine if client monies flow through client deposit accounts and whether the accounts function as the sole conduit and paper trail for client transactions.
 12. Determine and ensure that each institution's approach to Suspicious Activity Reports (SARs) is proactive and that the bank holding company and each institution have well-established procedures covering the SAR process. Establish whether there is accountability within the organization for the analysis and follow-up of internally identified suspicious activity (this analysis includes a sound decision on whether the bank holding company or an institution needs to file, or is required by regulation to file, a SAR).

Fees Involving Investments of Fiduciary Assets in Mutual Funds and Potential Conflicts of Interest

Section 2010.12

Banking organizations, including trust institutions, are increasingly encountering various direct or indirect financial incentives to place trust assets with particular mutual funds. Such incentives include the payment of fees to banking organizations for using nonaffiliated fund families as well as other incentives for using those mutual funds that are managed by the institution or an affiliate. The payment of such fees, referred to variously as shareholder, subaccounting, or administrative service fees, may be structured as payments to reimburse the institution for performing standard recordkeeping and accounting functions for the institution's fiduciary accounts. Those functions may consist of maintaining shareholder subaccounts and records, transmitting mutual fund communications as necessary, and arranging mutual fund transactions. These fees are typically based on a percentage or basis point amount of the dollar value of assets invested, or on transaction volume. Another form of compensation may consist of a lump-sum payment based on assets transferred into a mutual fund.

In all cases, decisions to place fiduciary assets in particular investments must be consistent with the underlying trust documents and must be undertaken in the best interests of the trust beneficiary. The primary supervisory concern is that an institution may fail to act in the best interest of beneficiaries if it stands to benefit independently from a particular investment. As a result, an institution may expose itself to an increased risk of legal action by account beneficiaries, as well as to potential violations of law or regulation.

In recent years, nearly every state legislature has modified its laws explicitly to allow fiduciaries to accept fees from mutual funds under certain conditions. As for the permissibility of other financial incentives, guidance under applicable law may be less clear. Conditions involving fee payments under state law often include compliance with standards of prudence, quality, and appropriateness for the account, and a determination of the "reasonableness" of the fees received by the institution. The Office of the Comptroller of the Currency (OCC) has also adopted these general standards for national banks.¹ The Employee Retirement Income Secu-

rity Act of 1974 (ERISA), however, generally prohibits fee arrangements between fiduciaries and third parties, such as mutual fund providers, with limited exceptions.² ERISA requirements supersede state laws and guidelines put forth by the bank regulatory agencies.

Similar conflict-of-interest concerns are raised by the investment of fiduciary-account assets in mutual funds for which the institution or an affiliate acts as investment adviser (referred to as "proprietary" funds). In this case, the institution receives a financial benefit from management fees generated by the mutual fund investments. This activity can be expected to become more prevalent as banking organizations more actively offer proprietary mutual funds.³ See SR-99-7.

2010.12.1 DUE-DILIGENCE REVIEW NEEDED BEFORE ENTERING INTO FEE ARRANGEMENTS

Although many state laws now explicitly authorize certain fee arrangements in conjunction with the investment of trust assets in mutual funds, institutions nonetheless face heightened legal and compliance risks from activities in which a conflict of interest exists, particularly if proper fiduciary standards are not observed and documented. Even when the institution does not exercise investment discretion, disclosure or other requirements may apply. Therefore, institutions should ensure that they perform and document an appropriate level of due diligence before entering into any fee arrangements similar to those described earlier or placing fiduciary assets in proprietary mutual funds. The following measures should be included in this process:

1. *Reasoned legal opinion.* The institution should obtain a reasoned opinion of counsel that addresses the conflict of interest inherent in the receipt of fees or other forms of com-

No. 704, February 1996.

2. ERISA section 406(b)(3). See Department of Labor, Pension Welfare and Benefits Administration Advisory Opinion 97-15A and Advisory Opinion 97-16A.

3. A Board interpretation of Regulation Y addresses investment of fiduciary-account assets in mutual funds for which the trustee bank's holding company acts as investment adviser. In general, such investments are prohibited unless specifically authorized by the trust instrument, court order, or state law. See 12 C.F.R. 225.125.

1. In general, national banks may make these investments and receive such fees if applicable law authorizes the practice and if the investment is prudent and appropriate for fiduciary accounts and consistent with established state law fiduciary requirements. This includes a "reasonableness" test for any fees received by the institution. See OCC Interpretive Letter

compensation from mutual fund providers in connection with the investment of fiduciary assets. The opinion should address the permissibility of the investment and compensation under applicable state or federal laws, the trust instrument, or a court order, as well as any applicable disclosure requirements or reasonableness standard for fees set forth in the law.

2. *Establishment of policies and procedures.* The institution should establish written policies and procedures governing the acceptance of fees or other compensation from mutual fund providers as well as the use of proprietary mutual funds. The policies must be reviewed and approved by the institution's board of directors or its designated committee. Policies and procedures should, at a minimum, address the following issues: (1) designation of decision-making authority; (2) analysis and documentation of investment decisions; (3) compliance with applicable laws, regulations, and sound fiduciary principles, including any disclosure requirements or "reasonableness" standards for fees; and (4) staff training and methods for monitoring compliance with policies and procedures by internal or external audit staff.
3. *Analysis and documentation of investment decisions.* When fees or other compensation are received in connection with fiduciary-account investments over which the institution has investment discretion or when such investments are made in the institution's proprietary mutual funds, the institution should fully document its analysis supporting the investment decision. This analysis should be performed on a regular, ongoing basis and would typically include factors such as historical performance comparisons with similar mutual funds, management fees and expense ratios, and ratings by recognized mutual fund rating services. The institution should also document its assessment that the investment is, and continues to be, (1) appropriate for the individual account, (2) in the best interest of account beneficiaries, and (3) in compliance with the provisions of the "prudent investor" or "prudent man rules," as appropriate.

formed ongoing due-diligence reviews when it is receiving fees or other compensation for investing fiduciary assets in mutual funds or investing such assets in proprietary mutual funds.

2. To determine that the institution maintains full ongoing documentation of investment decisions and performance, and obtains legal opinions regarding its compliance with applicable laws and fiduciary standards, as well as potential conflicts of interest that may arise from its receiving fees or other compensation for investing fiduciary assets in mutual funds, including proprietary funds.

2010.12.3 INSPECTION PROCEDURES

1. Determine if a written legal opinion is on file that focuses on conflicts of interest that may arise from the receipt of fees and other compensation from mutual fund providers for investing fiduciary assets, and from the investment of these assets in proprietary mutual funds. Ascertain whether the legal opinion addresses the investment's permissibility, including its resulting compensation and any disclosure requirements under applicable state or federal laws, the trust instrument, or a court order.
2. Verify that the institution's board of directors has approved written policies and procedures governing the acceptance of fees and other compensation from mutual fund providers for placing investments with their firms and for the use of proprietary funds. Ascertain that the policies and procedures, at a minimum—
 - a. determine what group or individual has decision-making authority;
 - b. analyze and document supporting investment decisions;
 - c. require compliance with applicable laws, regulations, and sound fiduciary principles, including disclosure requirements or reasonableness standards for fees; and
 - d. address staff training and methods for monitoring compliance with policies and procedures by internal and external audit staff.
3. When fees and other compensation are being received in connection with fiduciary-account investments (those in which the institution has authorized discretionary investment authority) or when such assets are involved in proprietary mutual funds, ascertain whether there is full documentation of the institution's analysis supporting its

2010.12.2 INSPECTION OBJECTIVES

1. To determine that the institution has per-

investment decisions on a regular, ongoing basis. Ascertain that the documentation includes—

- a. historical performance comparisons with other mutual funds, engagement fees and expense ratios, and ratings by recognized mutual fund rating agencies;
- b. an assessment that the investments are, and continue to be, appropriate for the individual account and in the best interests of its account beneficiaries; and
- c. evidence of continued compliance with the provisions of the “prudent investor” or “prudent man rules.”

Supervision of Subsidiaries (Establishing Accounts for Foreign Governments, Embassies, and Political Figures) Section 2010.13

On June 15, 2004, an interagency advisory concerning the embassy banking business and related banking matters was issued by the federal banking and thrift agencies¹ in coordination with the U.S. Department of the Treasury's Financial Crimes Enforcement Network. The purpose of the advisory is to provide general guidance to banking organizations regarding the treatment of accounts for foreign governments, foreign embassies, and foreign political figures.

The joint interagency statement advises banking organizations² that the decision to accept or reject an embassy or foreign government account is theirs alone to make. Financial institutions should be aware, however, that there are varying degrees of risk associated with such accounts, depending on the customer and the nature of the services provided. Financial institutions should take appropriate steps to manage such risks, consistent with sound practices and applicable anti-money-laundering laws and regulations. The advisory also encourages banking organizations to direct questions about embassy banking to their primary federal bank regulators. See SR-04-10.

2010.13.1 INTERAGENCY ADVISORY ON ACCEPTING ACCOUNTS FOR FOREIGN GOVERNMENTS, EMBASSIES, AND POLITICAL FIGURES

The interagency advisory answers questions on whether financial institutions should do business with foreign embassies and whether institutions should establish account services for foreign governments, foreign embassies, and foreign political figures. As it would with any new account, an institution should evaluate whether or not to accept a new account for a foreign government, embassy, or political figure. That decision should be made by the institution's management, under standards and guidelines

established by the board of directors, and should be based on the institution's own business objectives, its assessment of the risks associated with particular accounts or lines of business, and its capacity to manage those risks. The agencies will not, in the absence of extraordinary circumstances, direct or encourage any institution to open, close, or refuse a particular account or relationship.

Providing financial services to foreign governments and embassies and to foreign political figures can, depending on the nature of the customer and the services provided, involve varying degrees of risk. Such services can range from account relationships that enable an embassy to handle the payment of operational expenses—for example, payroll, rent, and utilities—to ancillary services or accounts provided to embassy staff or foreign-government officials. Each of these relationships potentially poses different levels of risk. Institutions are expected to assess the risks involved in any such relationships and to take steps to ensure both that such risks are appropriately managed and that the institution can do so in full compliance with its obligations under the Bank Secrecy Act, as amended by the USA Patriot Act, and the regulations promulgated thereunder.

When an institution elects to establish financial relationships with foreign governments, embassies, or foreign political figures, the agencies, consistent with their usual practice of risk-based supervision, will make their own assessment of the risks involved in such business. As is the case with all accounts, the institution should expect appropriate scrutiny by examiners that is commensurate with the level of risk presented by the account relationship. As in any case where higher risks are presented, the institution should expect an increased level of review by examiners to ensure that the institution has in place controls and compliance oversight systems that are adequate to monitor and manage such risks, as well as personnel trained in the management of such risks and in the requirements of applicable laws and regulations.

Institutions that have or are considering taking on relationships with foreign governments, embassies, or political figures should ensure that such customers are aware of the requirements of U.S. laws and regulations to which the institution is subject. Institutions should, to the maximum extent feasible, seek to structure such

1. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the National Credit Union Administration (the agencies).

2. The advisory is primarily directed to financial institutions located in the United States. The boards of directors of bank holding companies, however, should consider whether the advisory should be applied to their other U.S. subsidiaries' financial and other services.

relationships in order to conform them to conventional U.S. domestic banking relationships so as to reduce the risks that might be presented by such relationships.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to incorporate references to the Federal Reserve Board's Regulation W, primarily with regard to the bank holding company (BHC) inspection process. The section includes also a discussion of the mandatory reporting of certain intercompany transactions on the FR Y-8, The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates, and its instructions. The mandatory report is to be submitted quarterly to the Federal Reserve by (1) all top-tier BHCs, including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The examiner's inspection responsibilities are discussed.

2020.0.1 ANALYSIS OF INTERCOMPANY TRANSACTIONS

The analysis of intercompany transactions between a parent company, its nonbank subsidiaries, and its bank subsidiaries is primarily intended to assess the nature of the relationships between these entities and the effect of the relationships on the subsidiary insured depository institutions (IDIs). An *insured depository institution* includes any state bank, national bank, trust company, or banking association and any institution that takes deposits that are insured by the Federal Deposit Insurance Corporation, including savings associations. Both the legal and financial ramifications of such transactions are areas of concern. Certain intercompany transactions are subject to the provisions of section 23A or 23B (or both) of the Federal Reserve Act and the Federal Reserve Board's Regulation W. Section 23A of the Federal Reserve Act is one of the most important statutes on limiting exposures to individual institutions and protecting the federal safety net. Several types of intercompany transactions and the primary regulatory concerns of each are presented below.

Dividends paid by subsidiaries to the parent. Dividends are a highly visible cash outflow by subsidiaries. If the dividend payout ratio exceeds the level at which the growth of retained earnings can keep pace with the growth of assets, the subsidiary's capital ratios will

deteriorate. These dividends may also have a negative effect on the subsidiary's liquidity position.

Transactions with affiliates. Transactions between subsidiary IDI affiliates is another area of potential abuse of subsidiary banks. Regulatory concern centers on the quantitative limits and collateral restrictions on certain transactions by subsidiary banks with their affiliates. These restrictions are designed to protect subsidiary IDIs from losses resulting from transactions with affiliates.

Fees paid by subsidiaries. Management or service fees are another cash outflow of bank subsidiaries. These fees may be paid to the parent, the nonbank subsidiaries, or, in some cases, to the other bank subsidiaries. Regulatory concern focuses on whether such fees are reasonable in relation to the services rendered and on the financial impact of the fees on the bank subsidiaries.

Tax allocation. How a bank holding company organization determines to allocate taxes among its component companies involves questions of both the magnitude and timing of the cash-flow effects. Unreasonable or untimely tax payments or refunds to the bank can have an adverse effect on the financial condition of the banking subsidiaries.

Purchases or swaps of assets. Asset purchases or swaps between a bank and its affiliates can create the potential for abuse of subsidiary banks. Regulatory concern focuses on the fairness of such asset transactions and their financial impact and timing. Fairness and financial considerations include the quality and collectibility and fair values of such assets and their liquidity effects. IDIs generally are prohibited from purchasing low-quality assets from affiliates. Asset exchanges may be a mechanism to avoid regulations designed to protect subsidiary banks from becoming overburdened with non-earning assets. Improper timing or certain structurings of asset transactions also can cause them to be regarded as extensions of credit to affiliates. As such, these types of transactions could potentially violate applicable regulations and statutes.

Compensating balances. A subsidiary bank may be required to maintain excess balances at a correspondent bank that lends to other parts of the holding company organization, possibly to the detriment of the bank. The subsidiary bank may be foregoing earnings on such excess funds, which may adversely affect its financial condition.

Other expense allocations. In general, a subsidiary bank should be adequately compensated for its services or for the use of its facilities and personnel by other parts of the holding company organization. Furthermore, a subsidiary bank should not pay for expenses for which it does not receive a benefit.

2020.0.2 ROLE OF THE EXAMINER

To properly assess intercompany transactions and relationships between affiliates, the examiner must make a thorough analysis of most intercompany transactions and must have a knowledge of applicable laws, regulations, and rulings. In particular, the examiner should be familiar with sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W. The examiner should also be familiar with the FR Y-8, *The Bank Holding Company Report of Insured Depository Institutions' Section 23A Transactions with Affiliates*, and its instructions.

The mandatory report is to be submitted to the Federal Reserve by (1) all top-tier bank holding companies (BHCs), including financial holding companies, and (2) all foreign banking organizations that directly own a U.S. subsidiary bank. The completed quarterly reports are used by the Federal Reserve System to monitor bank exposures to affiliates and to ensure banks' compliance with section 23A of the Federal Reserve Act. With regard to the BHC's inspection, the examiner should review and verify, since the previous inspection, the BHC's accuracy and comprehensiveness in its reporting based on the FR Y-8 report form and instructions.

If a subsidiary IDI of a holding company is not a state member bank, the bank's primary regulator should determine the bank's compliance with pertinent banking laws. In reviewing the subsidiary bank's examination report, any violations of laws and regulations applicable to intercompany transactions should be noted. If the violation resulted from the actions of an affiliate, the affiliate's role should be identified and be subject to criticism in the inspection report.

Violations of banking laws discovered during the inspection should be brought to management's attention and referred to the bank's primary supervisor. However, any action or criticism levied directly on the bank should come from the bank's primary supervisor.

Intercompany Transactions (Transactions Between Affiliates— Sections 23A and 23B of the Federal Reserve Act) Section 2020.1

2020.1.1 SECTION 23A OF THE FEDERAL RESERVE ACT

Section 23A of the Federal Reserve Act (FRA) (12 U.S.C. 371c) applies to all state member banks and FDIC-insured banks (including non-member banks). In addition, section 301 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) made the provisions of section 23A applicable to savings associations as if they were member banks.

Section 23A of the FRA is designed to prevent the misuse of a bank's resources stemming from non-arm's-length transactions with its affiliates. Banks are prohibited, in accordance with section 23A, from engaging in "covered transactions" with an affiliate. The statute defines covered transactions to include an extension of credit and the purchase of assets.

Section 23A prohibits a bank from engaging in covered transactions with an affiliate unless—

1. the bank limits the aggregate amount of covered transactions to that particular affiliate to not more than 10 percent of the bank's capital stock and surplus and
2. a bank limits the aggregate amount of all covered transactions with all of its affiliates to 20 percent of the bank's capital stock and surplus.

An insured depository institution's capital stock and surplus for purposes of section 23A of the FRA is—

1. the sum of tier 1 and tier 2 capital included in an institution's risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the institution's most recent consolidated FFIEC Report of Condition and Income filed under 12 U.S.C. 1817(a)(3), and
2. the balance of an institution's allowance for loan and lease losses not included in its tier 2 capital for purposes of the calculation of risk-based capital by the appropriate federal banking agency, based on the institution's most recent consolidated FFIEC Report of Condition and Income filed under 12 U.S.C. 1817(a)(3).

In addition to the quantitative limitations on covered transactions with affiliates, there are specific prohibitions on the substance of the transaction:

1. A bank must conduct its transaction with its affiliate on terms and conditions that are consistent with safe and sound banking practices.¹
2. A bank and its subsidiaries cannot purchase or accept as collateral a low-quality asset from an affiliate. A low-quality asset is an asset that is (1) classified "substandard," "doubtful," or "loss," or treated as "other loans especially mentioned" in the most recent report of examination prepared by either a federal or state regulatory agency; (2) carried in a nonaccrual status; (3) more than 30 days past due in the payment of principal or interest; or (4) renegotiated or compromised because of the deteriorating financial condition of the obligor.
3. A bank cannot accept securities issued by an affiliate as collateral for a loan to *any* affiliate.

Any transaction by a bank with any person is deemed to be a transaction with an affiliate to the extent that the proceeds of the transaction are transferred to, or used for the benefit of, the affiliate. With respect to any bank within a holding company, its affiliates include, among others, its parent, the parent's subsidiaries, and other companies directly or indirectly controlled by the bank's shareholders.

Section 23A covered transactions also are subject to the provisions of section 23B of the FRA. However, transactions between chain banks or "sister" banks are not subject to section 23B.

During the examination of a bank, transactions between a subsidiary bank and an affiliate are reviewed for compliance with sections 23A and 23B of the FRA and other banking regulations and statutes. Any violations of either section 23A or section 23B involving a transaction with a bank affiliate that are disclosed or found during the examination should be reported on the "Violations" report page of the inspection report.

1. Board staff has taken the position that safety and soundness requires that the transaction be conducted on market terms.

2020.1.1.1 Definition of an Affiliate

In general, companies that control or are under common control with a bank are defined by section 23A as “affiliates” of the bank.² The definition includes a bank subsidiary of a bank and any company that a bank, or its subsidiaries or affiliates, sponsors and advises.³ For example, affiliates include bank, financial, and savings and loan holding companies and their subsidiaries. Banks, savings associations, and nonbanking companies that are under common individual control with the bank also are affiliates for the purposes of section 23A.

With respect to a bank, an affiliate means—

1. any company that controls⁴ the bank and any other company that is controlled by the company that controls the bank;
2. any bank subsidiary of the bank;
3. any company—
 - a. that is controlled directly or indirectly, by a trust or otherwise, by or for the benefit of shareholders who beneficially or otherwise control, directly or indirectly, by trust or otherwise, the bank or any company that controls the bank; or
 - b. in which a majority of its directors or trustees constitute a majority of the persons holding any such office with the bank or any company that controls the bank;
4. any company (including a real estate investment trust) that is sponsored and advised on a contractual basis by the bank or any subsidiary or affiliate of the bank, or any investment company, with respect to which a bank or any affiliate thereof is an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940; and
5. any company that the Board determines by regulation or order to have a relationship with a bank or any subsidiary or affiliate of the bank, such that covered transactions by

the bank or its subsidiary with that company may be affected by the relationship to the detriment of the bank or its subsidiary.

The definition of affiliate does not include—

1. nonbank subsidiaries of a bank (other than a financial subsidiary), unless the Board determines not to exclude such subsidiary company from the definition of affiliate under item 5 above;
2. any company engaged solely in holding the premises of the bank;
3. any company engaged solely in conducting a safe deposit business;
4. any company engaged solely in holding obligations of the United States or its agencies or obligations fully guaranteed by the United States or its agencies as to principal and interest; and
5. any company where control results from the exercise of rights arising out of a bona fide debt previously contracted, but only for the period of time specifically authorized under applicable state or federal law or regulation or, in the absence of such law or regulation, for a period of two years from the date of the exercise of such rights, subject, upon application, to authorization by the Board for good cause shown of extensions of time for not more than one year at a time, but such extensions in the aggregate shall not exceed three years.

The Gramm-Leach-Bliley Act (GLB Act) expanded the definition of affiliate to include financial subsidiaries of banks. A financial subsidiary is defined in the GLB Act as a subsidiary of a bank (1) that engages in activities that national banks are not permitted to engage in directly or that are conducted under terms and conditions that differ from those that govern the conduct of such activities by national banks, and (2) that a national bank is not specifically authorized to control by the express terms of a federal statute (other than section 23A of the FRA). (See 12 U.S.C. 371c(e)(2).)

The GLB Act also created a rebuttable presumption that a company or shareholder controls any other company if the company or shareholder directly or indirectly owns or controls 15 percent or more of the equity capital of the other company, pursuant to the merchant banking provisions of section 4(k)(4)(H) or (I) of the Bank Holding Company Act. (See 12 U.S.C. 371c(b)(11).) Under section 371c(b)(1) of the FRA, these companies (“portfolio companies”) are affiliates under the statute.

2. It is not necessary for banks and nonbanking companies to be under common corporate ownership to be affiliates. For example, banks and nonbanking companies that are part of a chain banking organization are “affiliates” under section 23A.

3. The Board has the authority to expand the definition of affiliate to include a company that has a relationship with the bank so that covered transactions between the company and the bank may be affected by the relationship to the detriment of the bank.

4. “Control” is defined as the power to (1) vote 25 percent or more of the voting shares of a company, excluding situations in which the stock is controlled in a fiduciary capacity; (2) elect a majority of the directors of a company; or (3) exercise a controlling influence over a company.

2020.1.1.2 Covered Transactions

A covered transaction under section 23A of the FRA means—

1. a loan or extension of credit by a bank to an affiliate;
2. a purchase of, or an investment in, the securities of an affiliate by a bank or an affiliate of a bank;⁵
3. a bank's purchase of assets from an affiliate, including assets subject to an agreement to repurchase;
4. the acceptance by a bank of securities issued by an affiliate as collateral security for a loan or extension of credit by the bank to any person or company; or
5. the issuance by a bank of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate.

If a transaction between a bank and an affiliate cannot be determined to be within one of the above categories, it is not a covered transaction for the purposes of section 23A and is not subject to its limitations. For example, dividends or fees paid by a bank to its parent holding company are not covered transactions under section 23A.

2020.1.1.2.1 Leases

Lease transactions that constitute the functional equivalent of a loan or an extension of credit may be subject to section 23A. Such lease arrangements, in effect, are equivalent to a loan by the bank and are essentially financing arrangements. Some of the characteristics that would normally cause a lease to be construed as a loan equivalent include the lessee's having responsibility for the servicing, maintenance, insurance, licensing, or risk of loss or damage, and the lessee's having the option to purchase the equipment.

2020.1.1.2.2 De Facto Extensions of Credit

Other transactions may constitute de facto extensions of credit by a subsidiary bank to other members of the holding company family.

For example, rent subsidies or use of a bank's personnel, funds, or equipment without adequate compensation may be de facto extensions of credit.

2020.1.1.2.3 Limitations of Amount—Valuations of Transactions

Section 23A(b)(7)(D) of the FRA defines as a covered transaction a bank's acceptance of securities issued by an affiliate as collateral security for a loan or extension of credit to any person or company. In a 1984 opinion, the Board's staff said that, for purposes of the quantitative limit in section 23A, the value of an extension of credit that is secured in any part by securities of an affiliate is the amount of the entire loan rather than the value of securities pledged as collateral.

The 1984 staff opinion has been revised. In situations in which a loan is secured by affiliate shares and other collateral, it is reasonable to reflect the fair market value of the nonaffiliate collateral in determining the applicability of the quantitative limits in section 23A to loans by a bank to an unaffiliated third party. For purposes of applying these quantitative limits, such mixed-collateral loans should be valued at the lesser of (1) the total value of the loan less the amount of nonaffiliate collateral (if any) marked to fair market value, or (2) the fair market value of the affiliate's shares that are used as collateral. Under this calculation method, if the loan is fully secured by collateral with a fair market value that equals or exceeds the loan amount (excluding the affiliate's shares), the loan would not be included in the bank's quantitative limits. If the loan is not fully secured by collateral excluding the affiliate's shares, the amount that the bank must count against its quantitative limits is the difference between the full amount of the loan and the fair market value of the nonaffiliate collateral, up to a maximum of the value of the affiliate's shares. This methodology takes account of the bank's reliance on the fair market value of nonaffiliate collateral in a loan transaction, while also recognizing that a portion of the loan may be supported by shares issued by an affiliate. If a portion of a loan is secured with nonaffiliate collateral that was marked to its fair market value, that part of the loan should not be subject to the quantitative limits of section 23A. (See *Federal Reserve Regulatory Service (FRS)* 3-1199.)

Under section 23A(c)(4), the securities issued by an affiliate are not acceptable collateral for a

5. The investment by a bank or its affiliate in a financial subsidiary of the bank excludes the retained earnings of the financial subsidiary.

loan or extension of credit to any affiliate. Moreover, if the proceeds of the loan that are secured by the affiliate's shares are transferred to an affiliate by the third-party borrower to purchase assets or securities from the affiliate, the loan is treated as a loan to the affiliate. The loan must then be secured with collateral in an amount and of a type that meets the requirements of section 23A for loans by a bank to an affiliate. (See FRRS 3-1167.3.) Moreover, a loan that is secured with any amount of an affiliate's shares must be consistent with safe and sound banking practices.⁶

2020.1.1.2.4 Contributing Shares or Assets of a BHC Affiliate to a Bank

The holding company's contribution to a bank of the shares or assets of an affiliate may result in a "purchase of assets" under section 23A to the extent that consideration is given by the bank for the shares or assets it receives. The consideration may be given in the form of cash, a note booked by the bank as a receivable, or the assumption by the bank of the nonbank's liabilities owed to another affiliate. In addition, a bank's assumption of a liability to an unaffiliated party may also raise supervisory concerns. These transactions warrant particular scrutiny to ensure compliance with section 23A and to ensure that the transfer is not indicative of a broader liquidity problem of the holding company.

2020.1.1.3 Collateral for Certain Transactions with Affiliates

Section 23A also requires a bank's use of collateral for certain transactions between a bank and its affiliates.⁷ Each loan or extension of credit to, or each guarantee, acceptance, or letter of credit issued on behalf of, an affiliate by a bank or its subsidiary must be secured at the time of the transaction by collateral having a market value equal to—

1. 100 percent of the amount of such loan or extension of credit, guarantee, acceptance, or

letter of credit, if the collateral is composed of—

- a. obligations of the United States or its agencies;
 - b. obligations fully guaranteed by the United States or its agencies as to principal and interest;
 - c. notes, drafts, bills of exchange, or banker's acceptances that are eligible for rediscount or purchase by a Federal Reserve Bank;⁸ or
 - d. a segregated, earmarked deposit account with the bank;
2. 110 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of obligations of any state or political subdivision of any state;
 3. 120 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of other debt instruments, including receivables; or
 4. 130 percent of the amount of such loan or extension of credit, guarantee, acceptance, or letter of credit if the collateral is composed of stock, leases, or other real or personal property.

2020.1.1.4 Limitations on Collateral

Banks may accept as collateral for covered transactions receivables, leases, or other real or personal property.⁹ The following are limitations and collateral restrictions:

1. Any collateral that is subsequently retired or amortized must be replaced by additional eligible collateral. This is done, when needed, to keep the percentage of the collateral value relative to the amount of the outstanding loan or extension of credit, guarantee, acceptance, or letter of credit equal to the minimum percentage that was required at the inception of the transaction.
2. A low-quality asset is not acceptable as collateral for a loan or extension of credit to, or for a guarantee, acceptance, or letter of credit issued on behalf of, an affiliate.
3. Securities issued by an affiliate of a bank shall not be acceptable as collateral for a loan or extension of credit to, or for a guarantee,

8. Regulation A includes a representative list of acceptable government obligations (12 C.F.R. 201.108).

9. Letters of credit and mortgage-servicing rights may not be accepted as collateral for purposes of section 23A. See FRRS 3-1164.3.

6. Staff opinion of January 21, 1999 (FRRS at 3-1199).

7. The bank must perfect the security interest in the collateral (*Fitzpatrick v. FDIC*, 765 F.2d 569 (6th Cir. 1985)). A bank, however, is not required by section 23A to secure a purchase of assets from an affiliate.

- acceptance, or letter of credit issued on behalf of, that affiliate or any other affiliate of the bank.
4. The above collateral requirements are not applicable to an acceptance that is already fully secured either by attached documents or by other property having an ascertainable market value that is involved in the transaction.

2020.1.1.5 Derivative Transactions with Affiliates and Intraday Extensions of Credit to Affiliates

The GLB Act required the Board of Governors of the Federal Reserve System to adopt, by May 12, 2001, final rules under section 23A of the FRA that would address as covered transactions (1) credit exposure arising out of derivative transactions between member banks and their affiliates and (2) intraday extensions of credit by member banks to their affiliates (12 U.S.C. 371c(f)(3)). The Board adopted interim final rules to address these matters on May 3, 2001. The interim rules are effective January 1, 2002.

2020.1.1.5.1 Derivative Transactions Between Insured Depository Institutions and Their Affiliates

Derivative transactions between an insured depository institution and its affiliates generally arise from the risk-management needs of the institution or the affiliate. Transactions arising from the bank's needs typically occur when an institution enters into a swap or other derivative contract with a customer but chooses not to hedge directly the market risk generated by the derivative contract, or when the institution is unable to hedge the risk directly because it is not authorized to hold the hedging asset. To manage the market risk, the institution may have an affiliate acquire the hedging asset. The institution would then do a bridging derivative transaction between itself and the affiliate maintaining the hedge.

Other derivative transactions between an insured depository institution and its affiliate are affiliate-driven. To accomplish its asset-liability-management goals, an institution's affiliate may enter into an interest-rate or foreign-exchange derivative with the institution. For example, an institution's holding company may hold a substantial amount of floating-rate assets but issue fixed-rate debt securities to obtain cheaper funding. The holding company may then enter into a

fixed-to-floating interest-rate swap with its subsidiary insured depository institution to reduce the holding company's interest-rate risk.

Insured depository institutions and their affiliates that seek to enter into derivative transactions for hedging (or risk-taking) purposes could enter into the desired derivatives with unaffiliated companies. Institutions and their affiliates often choose to use each other as their derivative counterparties, however, to maximize the profits of and manage risks within the consolidated financial group.

Derivative transactions between an insured depository institution and an affiliate are subject to section 23B of the FRA under the express terms of the statute.¹⁰ In many respects, derivative transactions between an insured depository institution and an affiliate resemble section 23A covered transactions. Such transactions may expose an insured depository institution to the credit risk of its affiliates. Although the typical institution-affiliate derivative transaction does not create actual credit exposure for the institution at the inception of the transaction, an institution may incur actual credit exposure to an affiliate during the term of a derivative transaction, and it nearly always faces some amount of potential future exposure on the transaction. The credit exposure of a derivative transaction with an affiliate poses a risk to the safety and soundness of the depository institution that is similar in many respects to the risk posed by a loan to an affiliate. In fact, this credit exposure may be more volatile and indeterminate than the credit exposure created by a loan.

Considering the potential complexities, the Board adopted the interim rule on institution-affiliate derivative transactions. The interim rule clarifies that the transactions are subject to the market-terms requirement of section 23B of the FRA. The rule also requires that, under section 23A, an institution establish and maintain policies and procedures that are reasonably designed to manage in a safe and sound manner the credit exposure arising from the institution's derivative transactions with affiliates. The poli-

10. In addition to applying to covered transactions, as defined in section 23A of the FRA, the market-terms requirement of section 23B of the FRA applies broadly to, among other things, "[t]he payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise" (12 U.S.C. 371c-1(a)(2)(C)). Institution-affiliate derivatives generally involve a contract or agreement to pay money to the affiliate or furnish risk-management services to the affiliate.

cies and procedures must, at a minimum, provide for monitoring and control of the credit exposure arising from the institution's derivative transactions with each affiliate, and from all affiliates in the aggregate, and ensure that the institution's derivative transactions with affiliates comply with section 23B (12 C.F.R. 250.247). In addition, the interim rule defines the term "derivative transaction" to mean any derivative contract that is subject to the Board's capital adequacy guidelines (which would include most interest-rate, currency, equity, and commodity derivative contracts) and any similar derivative contract, including credit derivative contracts (12 C.F.R. 225, appendix A, at III. E.1. a–d).

To comply with section 23B of the FRA, each institution should have in place credit limits on its derivatives exposure to affiliates that are at least as strict as the credit limits the institution imposes on unaffiliated companies that are engaged in similar businesses and are substantially equivalent in size and credit quality. Similarly, each institution should monitor derivatives exposure to affiliates at least as rigorously as it monitors derivatives exposure to comparable unaffiliated companies. In addition, each institution should price and require collateral in its derivative transactions with affiliates in a way that is at least as favorable to the institution as the way in which it would price or require collateral in a derivative transaction with comparable unaffiliated counterparties.

At this time, the Board has not determined to subject all institution-affiliate derivative transactions to all the requirements of section 23A of the FRA. However, credit derivatives between an institution and an unaffiliated third party that reference the obligations of an affiliate of the institution and that are the functional equivalent of a guarantee by the bank on behalf of an affiliate should be treated as a guarantee by the institution on behalf of an affiliate for the purposes of section 23A.

2020.1.1.5.2 Intraday Extensions of Credit

As noted previously, the GLB Act required the Board to address as covered transactions under section 23A of the FRA the credit exposure arising from intraday extensions of credit by insured depository institutions to their affiliates. Depository institutions regularly provide trans-

action accounts to their affiliates in conjunction with providing payment and securities clearing services. As in the case of unaffiliated commercial customers, these accounts are occasionally subject to overdrafts during the day that are repaid in the ordinary course of business.

The interim rule clarifies that intraday extensions of credit by an insured depository institution to an affiliate are subject to the market-terms requirement of section 23B. The rule also requires that, under section 23A, institutions establish and maintain policies and procedures that are reasonably designed to manage the credit exposure arising from an institution's intraday extensions of credit to affiliates. The policies and procedures must, at a minimum, provide for monitoring and control of the institution's intraday credit exposure to each affiliate, and to all affiliates in the aggregate, and ensure that the institution's intraday credit extensions to affiliates comply with section 23B. (See 12 C.F.R. 250.248.)

2020.1.1.6 Statutory Exemptions

There are several exceptions to section 23A for transactions between banks and their affiliates. Except for the requirement that all transactions be on terms and conditions that are consistent with safe and sound banking practices, the provisions of section 23A are not applicable to the following transactions:

1. Any transaction between banks when 80 percent or more of each bank's voting shares are controlled by the same company or one bank controls 80 percent or more of the voting shares of the other bank.¹¹ The purchase of a low-quality asset is prohibited.

Credit card banks insured by the Bank Insurance Fund (BIF), savings associations, and savings banks are banks for purposes of section 23A. Foreign banks are not banks for purposes of section 23A, and thus a transaction between a domestic bank and a foreign bank is not eligible for this exemption.
2. Making deposits in an affiliated bank or affiliated foreign bank in the ordinary course

¹¹ Banks that are affiliated in this manner are referred to as "sister banks." Sister banks can thus improve their efficiency through intercorporate transfers under this exception. Also, "company" in this context is not limited to a bank holding company. For example, if a retail bank owns two credit card banks, the two credit card banks would be sister banks, although owned by a bank, and the sister-bank exception could be used for transactions between two credit card banks.

- of correspondent business, subject to any restrictions that the Board may prescribe by regulation or order.
3. Giving immediate credit to an affiliate for uncollected items received in the ordinary course of business.
 4. Making a loan or extension of credit to, or issuing a guarantee, acceptance, or letter of credit on behalf of, an affiliate that is fully secured by—
 - a. obligations of the United States or its agencies,
 - b. obligations fully guaranteed by the United States or its agencies as to principal and interest, or
 - c. a segregated, earmarked deposit account with the bank.
 5. Purchasing securities that are issued by any of the kinds of investments in entities described in section 4(c)(1) of the BHC Act.¹²
 6. Purchasing assets that have a readily identifiable and publicly available market quotation, and that are purchased at that market quotation.
 7. Subject to the prohibition on the purchase of low-quality assets, purchasing loans on a nonrecourse basis from affiliated banks.
 8. Purchasing from an affiliate a loan or extension of credit that was originated by the bank and sold to the affiliate subject to a repurchase agreement or with recourse.¹³
 9. A transaction between affiliated insured depository institutions if the transaction has been approved by the appropriate federal bank agency pursuant to the Bank Merger Act. (See 12 C.F.R. 250.241 (FRRS 3-1128).)

12. This refers to the purchase of shares of a company that—

- holds or operates properties used substantially or entirely by any banking subsidiary in its operations or property acquired for such future use;
- conducts a safe deposit business;
- furnishes services to, or performs services for, the bank holding company or its banking subsidiaries; or
- liquidates assets acquired from the bank holding company or its banking subsidiaries or those that were acquired from any other source before May 9, 1956, or the date upon which the company became a bank holding company, whichever is later.

13. A sale of federal funds by a bank to an affiliate of the bank, unless the affiliate is a sister bank, is subject to the quantitative and collateral limitations of section 23A. (See 12 C.F.R. 250.160.) A transaction in federal funds involves a loan on the part of the “selling” bank and a borrowing on the part of the “purchasing” bank.

2020.1.1.7 Purchase of a Security by an Insured Depository Institution from an Affiliate

As discussed previously, section 23A of the FRA restricts the ability of a member bank to fund its affiliates through asset purchases, loans, or certain other transactions (referred to as “covered transactions”). Paragraph (d)(6) of section 23A contains an exemption from the statute (the (d)(6) exemption) for “purchasing assets having a readily identifiable and publicly available market quotation,” if the purchase is at or below such quotation (item 6 above). Board staff traditionally has restricted the availability of the (d)(6) exemption to purchases of assets whose prices are routinely quoted in a widely disseminated publication, such as the *Wall Street Journal*. The Board adopted an interpretation of the (d)(6) exemption on May 3, 2001 (effective June 11, 2001), that expands the ability of an insured depository institution to purchase from a registered broker-dealer affiliate securities that, although not so widely traded as to warrant their prices being included in publications of general circulation, are actively traded and whose prices are quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks.

For a securities purchase to qualify under the interpretation, the security must be purchased from a broker-dealer affiliate that is registered with the Securities and Exchange Commission (SEC).¹⁴ The following additional conditions must be met:

1. The security has a “ready market,” as defined in 17 C.F.R. 240.15c3-1(c)(11)(i).¹⁵
2. The security is eligible for a state member

14. A purchase of securities or other assets from other types of affiliates would continue to be exempt under section 23A(d)(6) if the price of the asset is routinely quoted in a widely disseminated news source and the asset is purchased at or below its current market price. For example, gold is an asset that could meet the (d)(6) exemption.

15. The SEC defines a “ready market” to include a recognized established securities market (1) in which independent bona fide offers to buy and sell exist so that a price reasonably related to the last sales price or to current bona fide competitive bid and offer quotations can be determined for a particular security almost instantaneously, and (2) in which payment will be received in settlement of a sale at such price within a relatively short time, conforming to trade custom. (See 17 C.F.R. 240.15c3-1(c)(11)(i).) The types of securities that meet this definition include obligations of the United States and its agencies, as well as many asset-backed, corporate debt, and sovereign debt securities.

bank to purchase directly, subject to the same terms and conditions that govern the investment activities of a state member bank, and the institution records the transaction as a purchase of securities for purposes of the bank call report, consistent with the requirements for a state member bank.¹⁶

3. The security is not a low-quality asset as defined in section 23A(a)(3).
4. The security is not purchased during an underwriting, or within 30 days of an underwriting, if an affiliate is an underwriter of the security, unless the security is purchased as part of an issue of obligations of, or as obligations fully guaranteed as to principal and interest by, the United States or its agencies.
5. The security's price is quoted routinely on an unaffiliated electronic service that provides indicative data from real-time financial networks, provided that—
 - a. the price paid by the insured depository institution is at or below the current market quotation for the security and
 - b. the size of the transaction executed by the insured depository institution does not cast material doubt on the appropriateness of relying on the current market quotation for the security.
6. The security is not issued by an affiliate, unless the security is an obligation fully guaranteed by the United States or its agencies as to principal and interest.

The purchase of the security also must comply with paragraph (a)(4) of section 23A, which requires that any covered transactions between an insured depository institution and an affiliate be on terms and conditions that are consistent with safe and sound banking practices. (See 12 C.F.R. 250.246.)

2020.1.1.8 Board-Approved Exemptions from Section 23A

Section 23A gives the Board the authority to grant exemptions from the statute's restrictions

¹⁶ The security will be eligible for the expanded (d)(6) exemption if it is eligible for purchase by a state member bank under section 9 of the FRA. The purchase must be recorded by the insured depository institution as a security purchased, and not as a loan, pursuant to the instructions of the bank call report. The interpretation is restricted to purchases of assets (purchase of eligible asset-backed securities) that are not low-quality assets.

if such exemptions are “in the public interest and consistent with the purposes of this section” (12 U.S.C. 371c(f)(2)). The Board has approved several exemptions. (See FRRS 3-1125 et seq.)

2020.1.1.8.1 Exemptions from the Attribution Rule of Section 23A

The attribution rule of section 23A provides that “a transaction by a member bank with any person shall be deemed a transaction with an affiliate to the extent that the proceeds of the transaction are used for the benefit of, or transferred to, that affiliate” (12 U.S.C. 371c(a)(2)). One respective interpretation and two exemptions, approved by the Board on May 3, 2001 (effective June 11, 2001), are discussed below.

2020.1.1.8.1.1 Loans to a Nonaffiliate That Purchases Securities or Other Assets Through a Depository Institution Affiliate Agent or Broker

The Board issued an interpretation on an insured depository institution's loan to a nonaffiliate that purchases assets through an institution's affiliate that is acting as agent. This interpretation confirms that section 23A of the FRA does not apply to extensions of credit that an insured depository institution grants to customers that use the loan proceeds to purchase a security or other asset through an affiliate of the depository institution, so long as (1) the affiliate is acting exclusively as an agent or broker in the transaction and (2) the affiliate retains no portion of the loan proceeds as a fee or commission for its services.

Under this interpretation, the Board concluded that when the affiliated agent or broker retains a portion of the loan proceeds as a fee or commission, the portion of the loan not retained by the affiliate as a fee or commission would still be outside the coverage of section 23A. On the other hand, the portion of the loan retained by the affiliate as a fee or commission would be subject to section 23A because it represents proceeds of a loan by a depository institution to a third party that are transferred to, and used for the benefit of, an affiliate of the institution. The Board thus granted an exemption from section 23A for that portion of a loan to a third party that an affiliate retains as a market-rate brokerage or agency fee.

The interpretation would not apply if the securities or other assets purchased by the third-

party borrower through the affiliate of the depository institution were issued or underwritten by, or sold from the inventory of, another affiliate of the depository institution. In that case, the proceeds of the loan from the depository institution would be transferred to, and used for the benefit of, the affiliate that issued, underwrote, or sold the assets on a principal basis to the third party.

The above-mentioned transactions are subject to the market-terms requirement of section 23B, which applies to “any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or any other person” (12 U.S.C. 371c-1(a)(2)(D)). A market-rate brokerage commission or agency fee refers to a fee or commission that is no greater than that prevailing at the same time for comparable agency transactions the affiliate enters into with persons who are neither affiliates nor borrowers from an affiliated depository institution. (See 12 C.F.R. 250.243.)

2020.1.1.8.1.2 Loans to a Nonaffiliate That Purchases Securities from a Depository Institution Securities Affiliate That Acts as a Riskless Principal

The Board has granted an exemption from section 23A of the FRA for extensions of credit by an insured depository institution to customers who use the loan proceeds to purchase a security that is issued by a third party through a broker-dealer affiliate of the institution that acts as riskless principal. The exemption for riskless-principal transactions would not apply if the broker-dealer affiliate sold to the third-party borrower securities that were issued or underwritten by, or sold out of the inventory of, an affiliate of the depository institution. Riskless-principal trades, although the functional equivalent of securities brokerage transactions, involve the purchase of a security by the depository institution’s broker-dealer affiliate. Accordingly, the broker-dealer retains the loan proceeds at least for some moment in time.

There is negligible risk that loans a depository institution makes to borrowers to engage in riskless-principal trades through a broker-dealer affiliate of the depository institution would be used to fund the broker-dealer. For this reason, the Board adopted an exemption from section 23A to cover riskless-principal securities transactions engaged in by depository institution borrowers through broker-dealer affiliates of the depository institution. This exemption is applicable even if the broker-dealer retains a portion

of the loan proceeds as a market-rate markup for executing the riskless-principal securities trade.

2020.1.1.8.1.3 Depository Institution Loan to a Nonaffiliate Pursuant to a Preexisting Line of Credit and the Proceeds Are Used to Purchase Securities

The Board approved an exemption from section 23A for a loan by an insured depository institution to a nonaffiliate pursuant to a preexisting line of credit, in which the loan proceeds are used to purchase securities from a broker-dealer affiliate. The Board exempted extensions of credit by an insured depository institution to its customers that use the credit to purchase securities from a registered broker-dealer affiliate of the institution, so long as the extension of credit is made pursuant to, and consistent with any conditions imposed in, a preexisting line of credit. This line of credit should not have been established in expectation of a securities purchase from or through an affiliate of the institution. The preexisting requirement is an important safeguard to ensure that the depository institution did not extend credit for the purpose of inducing a borrower to purchase securities from or issued by an affiliate. In addition, the line of credit must be “preexisting,” and the exemption may not be used in circumstances in which the line has merely been preapproved.

2020.1.1.9 Financial Subsidiaries and Section 23A

The GLB Act established several special rules for the application of section 23A to financial subsidiaries of a bank. First, the GLB Act provided that the 10 percent quantitative limit of section 23A does not apply to covered transactions between a bank and any individual financial subsidiary of the bank. A bank’s covered transactions with its financial subsidiaries, however, are subject to the statutory 20 percent quantitative limit. Accordingly, a bank may engage in covered transactions with any individual financial subsidiary up to 20 percent of the bank’s capital stock and surplus. For purposes of section 23A, the amount of a bank’s investment in its financial subsidiary should not, however, include the retained earnings of the financial subsidiary.

Section 23A generally applies only to transactions between a bank and an affiliate of the bank and to transactions between a bank and a third party when some benefit of the transactions accrues to an affiliate of the bank. The statute generally does not apply to transactions between two affiliates. Section 23A establishes two special anti-evasion rules, however, that govern transactions between a financial subsidiary of a bank and another affiliate of the bank. First, the FRA provides that any purchase of or investment in the securities of a bank's financial subsidiary by an affiliate of the bank will be deemed to be a purchase of, or investment in, such securities by the bank itself. Second, the GLB Act authorizes the Board to deem a loan or other extension of credit made by a bank's affiliate to any financial subsidiary of the bank to be an extension of credit by the bank to the financial subsidiary, if the Board determines that such action is necessary or appropriate to prevent evasion.

2020.1.2 SECTION 23B OF THE FEDERAL RESERVE ACT

Section 23B of the FRA became law on August 10, 1987, as part of the Competitive Equality Banking Act of 1987. This section also regulates transactions with affiliates. Section 23B applies to any covered transaction with an affiliate, as that term is defined in section 23A, but excludes banks from the term "affiliate." Thus, transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B.¹⁷ FIRREA made section 23B of the Federal Reserve Act, as well as section 23A, applicable to savings associations. The transactions covered by section 23B consist of the following:

1. Any covered transaction with an affiliate.
2. The sale of securities or other assets to an affiliate, including assets subject to an agreement to repurchase.
3. The payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise.

17. Although transactions between banks are exempt from section 23B, the safety-and-soundness provisions of section 23A(a)(4) apply and generally require that transactions be conducted on terms similar to those terms and standards outlined in section 23B.

4. Any transaction in which an affiliate acts as an agent or broker or receives a fee for its services to the bank or to any other person.
5. Any transaction or series of transactions with a third party if—
 - a. an affiliate has a financial interest in the third party, or
 - b. an affiliate is a participant in such transaction or series of transactions.

Any transaction by a bank or its subsidiary with any person is deemed to be a transaction with an affiliate of the bank if any of the proceeds of the transaction are used for the benefit of, or transferred to, the affiliate. A bank and its subsidiaries may engage in transactions covered by section 23B of the FRA, but only on terms and under certain circumstances, including credit standards, that are substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. If comparable transactions do not exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonfinancial companies.

Section 23B restricts transactions with affiliates in the following situations:

1. A bank or its subsidiary cannot purchase as fiduciary any securities or other assets from any affiliate unless the purchase is permitted (1) under the instrument creating the fiduciary relationship, (2) by court order, or (3) by law of the jurisdiction creating the fiduciary relationship.
2. A bank or its subsidiary cannot knowingly purchase or acquire any security during the existence of an underwriting or selling syndicate for that security, if an affiliate of the bank is a principal underwriter in the syndicate, unless the purchase was approved by a majority of the bank's directors before the security was initially offered for sale to the public. The purchase should be based on a determination that it is a sound investment for the bank, irrespective of the fact that an affiliate is a principal underwriter of the securities.

In addition, a bank or its affiliate cannot advertise or enter into any agreement stating or suggesting that it is in any way responsible for the obligations of its affiliates.

2020.1.3 INSPECTION OBJECTIVES

1. To analyze and assess the financial impact of transactions (including loans and purchases of assets) between the subsidiary banks and their subsidiaries and all affiliates.
2. To determine whether covered transactions between a subsidiary bank (and its subsidiaries) and its affiliates in the holding company are conducted consistent with sections 23A and 23B of the FRA.
3. To determine if transactions between a subsidiary bank and its affiliates in the holding company are on terms and conditions and under circumstances, including credit standards, that are consistent with safe and sound banking practices and whether the terms and conditions of the transactions are the same as those that would be offered or applied to nonaffiliated companies.
4. To determine whether a subsidiary bank or its subsidiary has purchased low-quality assets or has purchased, as fiduciary, any securities or other assets from an affiliate in the holding company.
5. To determine whether a subsidiary bank, or any subsidiary or affiliate of the bank, has published any advertisement or has entered into any agreement that states or suggests that it will, in any way, be responsible for the obligations of affiliates.
6. To determine if securities were purchased or acquired by the subsidiary bank or its subsidiaries from an underwriting or selling syndicate affiliated with the bank and, if so, if the majority of outside directors of the bank approved the purchase or acquisition of securities before they were offered for sale to the public.
7. To confirm that the subsidiary bank or its subsidiary has not purchased as fiduciary any securities or other assets from a nonbank affiliate in the holding company unless the purchase was permitted in accordance with the instrument creating the fiduciary relationship, by court order, or by the law governing the fiduciary relationship.
8. To ascertain if any subsidiary bank (or its subsidiary) had knowingly purchased or acquired any security from an affiliate in which the principal underwriter of that security was a nonbank affiliate within the holding company organization.
9. To determine if the subsidiary bank and its subsidiaries have conducted transactions with their parent holding company or any other company affiliated in the holding company organization that are not in compliance

with the restrictions in sections 23A and 23B of the FRA (for FDIC-insured nonmember banks, section 18(j) of the Federal Deposit Insurance Act (FDIA)).

2020.1.4 INSPECTION PROCEDURES

1. During the pre-inspection, perform the following activities:
 - a. Review examination reports of subsidiary banks for comments on loans to affiliates, intercompany transactions, other transactions with affiliates, and violations of the restrictions of sections 23A or 23B of the FRA or, for FDIC-insured nonmember banks, section 18(j) of the FDIA.
 - b. Review the most current FR Y-8 (Report of Intercompany Transactions) and interim reports for information on transactions with affiliates.
2. In the officer's questionnaire, request a list of subsidiary bank (and the subsidiaries of the bank) transactions with affiliates since the previous inspection, including the terms and any collateral, consisting of—
 - a. a loan or extension of credit to the affiliate;
 - b. a purchase or sale of an investment in securities issued by or sold to the affiliate, or a purchase or sale of other assets, including assets subject to an agreement to repurchase;
 - c. the acceptance of securities issued by the affiliate as collateral security for a loan or extension of credit;
 - d. the issuance of a guarantee, acceptance, or letter of credit, including an endorsement or standby letter of credit on behalf of an affiliate;
 - e. the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise;
 - f. transactions in which an affiliate acts as agent or broker or receives a fee for its services to the bank or to any other person;
 - g. any transaction or series of transactions with a third party if—
 - the affiliate has a financial interest in the third party or
 - the affiliate is a participant in such transactions; and
 - h. any transaction by a subsidiary bank or its subsidiary with any person, if the pro-

- ceeds of that transaction are used for the benefit of, or transferred to, the affiliate.
3. During the inspection, perform the following activities:
 - a. Review the listed transactions with affiliates provided in response to the officer's questionnaire.
 - b. Review and determine that all transactions within the holding company organization comply with the restrictions on transactions with affiliates in sections 23A and 23B of the FRA (or in section 18(j) of the FDIA for FDIC-insured non-member banks).
 - c. Review all related documentation, terms, conditions, and circumstances for each transaction, including any resolutions for securities purchased (or established standards for securities purchased from affiliates).
 - d. Determine the purpose and use of the proceeds.
 - e. Review all outstanding guarantees, endorsements, or pledge agreements by the bank to support the affiliates' borrowings.
 - f. Review, on a test-sample basis, advertisements and written agreements to ascertain whether the bank or any subsidiary or affiliate of the bank has stated or suggested that it shall be responsible for the obligations of any affiliates in the holding company organization.
 - g. Review the holding company's policies and procedures regarding intercompany transactions of subsidiary banks.
 4. Give additional attention to the following problems involving the BHC and its subsidiaries:
 - a. The subsidiary bank would not have made the loan or would not have made the loan with such favorable terms and conditions, or engaged in any other covered transaction, except for the parent holding company's insistence due to the affiliate relationship.
 - b. The bank's condition is weakened due to the extension of credit or the nature of the transaction with the affiliate.
 - c. The affiliate has not provided adequate qualifying collateral to support the loan or extension of credit provided by the subsidiary bank.
 - d. The loan, extension of credit, or transaction with an affiliate is not in compliance with the limits and restrictions in sections 23A or 23B of the FRA.
 - e. Purchases of low-quality assets by a subsidiary bank or its subsidiaries from an affiliate, unless previously exempted by Board regulation or order, or unless the bank subsidiary or subsidiary affiliate, pursuant to an independent credit evaluation, had committed itself to purchase the low-quality assets before the time such asset was acquired by the affiliate.
 - f. During the existence of any underwriting or selling syndicate, a subsidiary bank or its subsidiary has purchased or acquired a security from a bank affiliate or bank holding company affiliate, including an affiliated broker-dealer, and the principal underwriter of that security is an affiliate of the bank.
 - g. The purchase or acquisition of securities (1) was not approved by a majority of the outside board of directors before the bank's securities were offered for sale to the public and (2) was not, in the absence of comparable transactions, on terms and under circumstances, including credit standards, that in good faith would have been offered to, or would have applied to, nonaffiliated companies.
 - h. The existence of advertisements or agreements that state or suggest that the bank, its subsidiaries, or affiliate will be responsible for the obligations of its affiliates.
5. Review any checking accounts and bank statements to check for overdrafts the parent company or any of its nonbank subsidiaries may have with a subsidiary bank.
 6. Review the accounts payable to the subsidiary bank (or banks) and other accounts payable accounts for servicers, contractors, lessors, and other affiliates to determine if they arose as the equivalent of an extension of credit, purchase of securities or other assets, or as a liability to third parties. Ascertain whether those transactions were listed in response to the officer's questionnaire and whether the transactions were in accordance with the restrictions in sections 23A and 23B of the FRA.
 7. Review the accounts receivable from the subsidiary bank (or banks) and other accounts receivable of other affiliates for sales of securities or other assets and for the payment of money or the furnishing of services. Ascertain whether those transactions were reported in response to the officer's

- questionnaire and whether they are in accordance with the section 23A and 23B restrictions placed on transactions with affiliates.
8. Determine if subsidiary depository institutions have established and maintain policies and procedures to manage, in a safe and sound manner, the credit exposures of derivative transactions with affiliates and all affiliates in the aggregate.
 9. Ascertain if the institution's credit limits, collateral requirements, and monitoring of its exposures to affiliates are at least as strict as those it imposes on unaffiliated companies.
 10. Determine if the institution has policies and procedures to monitor and control the institution's intraday credit exposure to each affiliate and to all affiliates in the aggregate.
 11. Determine if the institutions intraday extensions of credit to affiliates are on comparable market terms and that they comply with section 23B of the FRA.
 12. Review all other transactions that the holding company organization has engaged in with its affiliated bank (or banks) and their subsidiaries, including lease arrangements, to determine whether they are subject to the restrictions in sections 23A and 23B, and, if so, whether they are in compliance.
 13. Discuss the findings with appropriate senior management and, if findings are significant, the board of directors.
 14.
 - a. Determine management's actions regarding any comments raised by the bank's primary regulator in an examination report. If violations are disclosed in a subsidiary bank's examination report or during an inspection of the holding company, the examiner may criticize management on the "Examiner's Comments and Matters Requiring Special Board Attention" page of the inspection report for causing the bank to be in violation or for engaging in unsafe and unsound practices.
 - b. If loans to or transactions with affiliates within the holding company organization appear to adversely affect a subsidiary bank, request management's assessment of such effects and its rationale for the transactions. Use of the "Examiner's Comments and Matters Requiring Special Board Attention" report page may be appropriate.

2020.1.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>FRRS</i> ³	<i>Orders</i>
Definition of affiliate, subsidiary, bank, company, and covered transaction	371c, FRA section 23A(b)		3-1111	
Treatment of transactions with financial subsidiaries of banks	371c(e), FRA section 23A	208.73(d)	3-1114.1

3. *Federal Reserve Regulatory Service* reference.

It is common practice for a bank to sell to or place with other banks loans that the bank itself has made to its customers. A loan participation is a share or part of a loan which entitles the holder to a pro rata share of the income determined by the extent of the holder's contribution to the original loan and a preference ordering for repayment. Such loans may be sold outright without liability to the selling bank in case of default by the borrower, or they may be sold with terms granting the purchasing bank recourse to the selling bank should the loans become uncollectible. Sales to or placement of loans with other banks are for the accommodation of either the selling or purchasing bank and are arranged for purposes of increasing the rate of return when loan rates differ between banks, achieving diversification of loans by type, and altering liquidity positions. It is also common practice for banks to sell or place with other banks those portions of individual loans that would be in excess of the bank's legal lending limit (overlines) if the total loan were retained. Participations of this type should be placed without recourse as a matter of prudent banking practice; otherwise, the purpose of compliance with the legal lending limitations would be defeated in the event of default.

Banks also sell or place loans or participations with their parent holding companies or nonbank affiliates. A BHC's purchase of loan participations from its subsidiary bank(s) generally constitutes the making of a loan or extension of credit within the meaning of section 225.28(b)(1) of Regulation Y, and as such, a bank holding company needs prior approval to purchase loan participations from its subsidiary bank(s).

A bank may participate in or purchase a loan originated by its parent holding company or one of its nonbank subsidiaries. A subsidiary bank's purchase, or participation of a loan, note, or other asset from an affiliate is considered a purchase of an asset from an affiliate within the meaning of section 23A of the Federal Reserve Act and thus is a "covered transaction" that is subject to the quantitative limitations and the prohibition against purchasing of low-quality assets. Subsidiary banks must make independent judgments as to the quality of such participations before their purchase to avoid compromising the asset quality of such banks for the benefit of other holding company entities. All loans and participations must be purchased on market terms.

A bank's purchase of a loan or loan participa-

tion from a bank holding company or its subsidiary may not be a covered transaction under section 23A if (1) the bank makes an independent credit evaluation on each loan prior to the affiliate making the loan, (2) the bank agrees to purchase the loan prior to the affiliate making the loan, and (3) the bank's purchase of the affiliate's loans is not the primary source of funding for the affiliate.

In some cases, a bank may renew a loan or a participation that it purchased from another affiliated bank even when the original participation has become a low-quality asset. In some instances, a bank's renewal of a low-quality asset, such as a troubled agricultural loan, or an extension of limited amounts of additional credit to such a borrower may enable both the originating and participating banks to avoid or minimize potential losses. It would be inconsistent with the purposes of section 23A to bar a participating bank from using sound banking judgment to take the steps that it may deem necessary to protect itself from harm in such a situation, so long as the loan was not a low-quality asset at the time of the original participation and the participating bank does not assume more than its original proportionate share of the credit.

The following factors thus characterize the situation where it would be reasonable to interpret section 23A as not applying to the renewal of an otherwise low-quality asset:

1. the original extension of credit was not a low-quality asset at the time the affiliated bank purchased its participation,
2. the renewal and/or the extension of additional credit has been approved by the board of directors of the participating bank as necessary to protect the bank's investment by enhancing the ultimate collection of the original indebtedness, and
3. the participating bank's share of the renewal and/or additional loan will not exceed its proportionate share of the original investment. In addition, it is expected that, consistent with safe and sound banking practices, the originating bank would make its best efforts to obtain adequate collateral for the loan(s) to further protect the banks from loss.

Loans and loan participations by the various members of the holding company family to indi-

vidual borrowers or to the same or related interests may represent concentrations of credit which are large in relation to the holding company's consolidated capital position. These concentrations of credit should be assessed for potentially harmful exposure to the holding company's financial condition.

2020.2.1 INSPECTION OBJECTIVES

1. To determine the bank holding company's loan participation policy.
 2. To assess the impact of a subsidiary bank's participation in loans with affiliates and to ensure that the bank's financial condition is not compromised and that the bank is not providing the funding needs of the affiliates, except within the parameters of sections 23A and 23B of the Federal Reserve Act.
 3. To assess the impact of any concentrations of credit on the holding company's overall financial position.
3. During the inspection, review the policy statements and each participation the holding company or the nonbank subsidiaries have with the subsidiary bank(s). The following characteristics should be analyzed:
 - a. any repetitive transaction patterns which may indicate policy;
 - b. the adequacy of credit information on file;
 - c. the extent to which the terms of the participation including interest rates are handled in an arm's-length manner;
 - d. the degree that the bank is accommodating the funding needs of the nonbank subsidiaries or its parent;
 - e. the impact of these transactions on the subsidiary bank;
 - f. eligibility for exclusion from section 23A restrictions and, if applicable, compliance with such restrictions.
 4. Review participations among the bank holding company, nonbank subsidiaries, and the subsidiary banks to determine potentially adverse concentrations of credit.

2020.2.2 INSPECTION PROCEDURES

1. During the preinspection process, review each subsidiary bank's examination report for comments on participations with affiliates.
 2. In the officer's questionnaire to the holding company, request the BHC's policy on loan participation. Request a list of any loan participations the holding company or the nonbank subsidiaries have with the subsidiary bank(s).
4. Review participations among the bank holding company, nonbank subsidiaries, and the subsidiary banks to determine potentially adverse concentrations of credit.
 5. Discuss with management—
 - a. written and verbal policies regarding participations both within the holding company and with nonaffiliated third parties and
 - b. any adverse findings on intercompany participations.
 6. Comment on policy on the appropriate page of the inspection report (see section 5010.6). If any adverse comments on participations with affiliates are contained in a bank subsidiary's examination report, comment on their current status and the bank holding company's efforts to remedy the problem.

2020.2.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Limitations and restrictions	Section 23A(c), FRA 371c			
Purchase of loans from mortgage banking affiliates		250.250	3-1133	

1. 12 U.S.C., unless specifically stated otherwise.
 2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Sales and transfers of assets between subsidiary banks and other entities in a bank holding company organization pose the potential of risk to the subsidiary banks. Asset purchases are covered by Section 23A and Section 23B of the Federal Reserve Act. The limitations state that all covered transactions, including asset purchases, by a bank with a single affiliate, may not exceed 10 percent of a bank's capital and surplus, and transactions with all affiliates may not exceed 20 percent of the bank's capital and surplus. In addition, all transactions must be conducted on market terms.

A bank's purchase of a loan or loan participation from a bank holding company or its subsidiary may not be a covered transaction under Section 23A if:

1. the bank makes an independent credit evaluation on each loan prior to the affiliate making the loan;
2. the bank agrees to purchase the loan prior to the affiliate making the loan; and
3. the bank's purchase of the affiliate's loans is not the primary source of funding for the affiliate.

Sale and transfer of assets can also occur through swaps and spinoffs. Examples of such transactions which may have an adverse effect on a bank include the transfer of a profitable activity or subsidiary from the bank to the holding company, or the transfer of an unprofitable activity or subsidiary from the holding company to the bank. In addition, the transfer of a bank holding company subsidiary to a bank, whereby the bank assumes the liabilities of the affiliate raises supervisory concerns and may violate Sections 23A and 23B of the Federal Reserve Act.

Another example is the transfer of a subsidiary bank's deferred taxes, together with an equivalent amount of cash or earning assets, to the parent. In such a transaction, a subsidiary bank's liquidity position is weakened. All such transfers of deferred taxes must be reversed and the bank's asset and liability accounts restored to their level prior to the transfer. For a detailed discussion on transfers of a bank's deferred tax liability, see Manual section 2070.0.

A bank holding company may transfer a liquidating asset from a subsidiary bank to a section 4(c)(1)(D) liquidating subsidiary of the holding company. Also, pursuant to section 4(c)(3) of

the Act, a BHC may transfer from a subsidiary bank an asset to be disposed of pursuant to the request of the bank's primary regulator. For more information on the transfer of such assets and the time parameters involved, refer to Manual section 3030.0.

The purchase of low-quality assets is prohibited by Section 23A of the Federal Reserve Act. Refer to section 2020.1.1.5 for a listing of transactions that are exempt from the limitations of Section 23A of the Federal Reserve Act.

2020.3.1 INSPECTION OBJECTIVES

1. To review intercompany sale and transfer of assets to assess the impact on the subsidiary bank.
2. To initiate corrective action to reverse the transaction, if necessary.

2020.3.2 INSPECTION PROCEDURES

1. During the preinspection process, review all notes to financial statements, the FR Y-8 report, and the examination reports of subsidiary banks to ascertain whether any purchase or transfer of assets has occurred between the subsidiary banks and the parent holding company or nonbank subsidiaries.

2. In the officer's questionnaire, request information on any transfer or sale of assets between the subsidiary bank and the parent holding company or the nonbank subsidiaries.

3. During the inspection, review all facts regarding any sale or transfer of assets transactions and assess their impact on the subsidiary bank. Examiners should determine:

a. Whether the transaction required and received the approval of the bank's primary regulator; and

b. The quality of the assets transferred or sold, and whether the sale of the assets was at a price significantly higher than would have been realized in an arm's-length transaction.

4. Discuss findings with management including:

a. Apparent prejudicial transactions and violations of regulations; and

b. Any unsound practices.

A compensating balance is a deposit maintained by a firm at a bank to compensate the bank for loans and lines of credit granted to the firm. Often, a commercial bank, when extending credit, requires an average deposit balance equal to a fixed percentage of the outstanding loan balance. Compensating balance requirements vary from informal understandings to formal contracts. Deposits maintained as compensating balances may be demand or time, active or dormant. Frequently, a lending bank will allow compensating balances to be supplied by a depositor other than the borrower itself. If compensating balances are maintained by a BHC's subsidiary bank on behalf of its parent, the practice is considered a diversion of bank income (i.e., the bank loses the opportunity to earn income on the balances that could be invested elsewhere). In general, this practice is inappropriate unless the bank is being compensated at an appropriate rate of interest. If the bank is not being appropriately reimbursed, the practice should be criticized and action taken to insure that the bank is compensated for the use of its funds.

BHCs borrow directly from nonaffiliated banks, using the proceeds for both bank and nonbank operations and investments. Also, bank holding companies seek credit lines from banks to back their borrowings in commercial paper markets and for other liquidity purposes. Nonbank subsidiaries of bank holding companies borrow from banks to fund activities such as mortgage banking, leasing and sales finance. In some cases, when a bank holding company or its nonbank subsidiaries borrow, the subsidiary bank's deposit at the lending institution may be accepted as a compensating balance for the borrowings of other members of the bank holding company organization. Such transactions raise questions under Section 23B of the Federal Reserve Act regarding the bank's compensation for such services.

Often the distinction between correspondent balances and compensating balances is not clear. Occasionally, the rate of the required compensating balance is written into the loan agreement; however, informal understandings usually appear to determine the amount of compensating balance maintained. At times, a balance may be identified in the bank's books as a compensating balance. A compensating balance may also be identified as an amount above a correspondent balance historically maintained by the bank. Compensating balances may also appear as a dormant account or may be the aggregate

amount of a number of deposits of various subsidiary banks.

The interest rate on the loan to the holding company organization may also be helpful in determining the existence of compensating balances. Loans below the lending bank's normal rate may indicate that the lending bank is receiving compensation in another form.

At times, excess correspondent balances are maintained to encourage participation relationships and for other goodwill reasons. Therefore, the existence of excess balances may not always indicate that there is a compensating balance agreement.

Although a bank holding company may compensate its subsidiary banks for the use of the funds, the compensation may not equal the opportunity cost associated with providing the compensating balance. As a result, subsidiary banks which maintain compensating balances for holding company members may forego profit opportunities, and this practice may have a negative impact on the bank's earnings and capital adequacy. The amount of such compensation should be equal to a fair market rate.

If the lending bank has the right of offset to compensating balances maintained by the subsidiary bank in case of default by parent or nonbank subsidiaries, the subsidiary bank's funds are jeopardized. Such potential loss of funds should be commented on by the examiner.

2020.4.1 INSPECTION OBJECTIVES

1. To identify compensating balances maintained by a subsidiary bank for the parent holding company or any nonbank affiliate.
2. To determine whether the subsidiary bank is adequately reimbursed for the maintenance of any compensating balances.

2020.4.2 INSPECTION PROCEDURES

1. During the preinspection process:
 - a. Review the subsidiary bank examination reports or contact management to determine whether the non-affiliated banks, lending to the holding company organization, are correspondents of the subsidiary banks. Where applicable, request detailed loan information which could

provide information on the compensating balances' terms required by the lending bank.

b. Review the notes to the financial statements and other available material, such as 10-K reports filed with the SEC, which may describe compensating balance agreements. FR Y-8 reports should be reviewed for questions applicable to compensating balances.

2. Review interbank loan agreements to determine whether compensating balances are formally required. Assess the terms of the loan to determine whether the loan appears to be at fair market rates for this type of credit request.

3. Request and review the account balance and monthly account statement provided by the lending bank to identify the amount of compensating balances. The statement should be available within the holding company or bank.

4. Request from management information regarding compensating balances maintained by subsidiary banks for the benefit of other affiliates.

5. Review the subsidiary bank's historical level of correspondent balances to assess trends. Compare levels of balances prior to any loan origination or interest rate changes.

6. Review intercompany accounts to determine the amount of compensation paid to the subsidiary bank for maintaining compensating balances. Assess adequacy of compensation. Assess impact of practice on the bank's financial condition.

7. Discuss with management the reasons for any apparent excess balances, and whether compensating balances are formally or informally required.

Dividends are a means by which a corporation distributes earnings or assets to its shareholders. Although the word “dividends” usually applies to funds paid out of net profits or surplus and is usually thought of in such a context, dividends can also be made “in kind,” which means in property or commodities. This section does not discuss “stock dividends” which represent transfers from retained earnings to paid-in capital rather than distributions of earnings. Dividends from the subsidiaries, both bank and non-bank, to the parent company are the means by which a cash return is realized on the investment in subsidiaries, thus enabling the parent to pay dividends to its shareholders and to meet its debt service requirements and other obligations.

Dividends paid by any corporation are generally limited by certain State laws. Banks, however, are subject to further legal restrictions on dividends by their chartering authority and other regulators. Aside from the statutory limitations, the primary consideration in this area is the subsidiary’s level of capital and its ability to meet future capital needs through earnings retention.

Although there are no specific regulations restricting dividend payments by bank holding companies other than State corporate laws, supervisory concern focuses on the holding company’s capital position, its ability to meet its financial obligations as they come due, and its capacity to act as a source of financial strength to its subsidiaries. Some one-bank holding companies may be restricted in the amount of dividends they may pay as a result of certain limitations placed on future dividend distributions at the time of the holding company’s formation. (see Manual section 2090.2)

When analyzing the dividend practices of the subsidiaries and the parent company the following must be considered: the present level of capital in relation to total assets, risk assets, and classified assets; growth rates and additional plans for expansion; past earnings performance and projections; and the ability to service debt.

Aside from reasonable and timely fees for services rendered, the most appropriate way for funds to be paid by the bank to the parent is through dividends. This principle applies, in general, to bank payments of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is not considered an appropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for ser-

ving holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.5.1 POLICY STATEMENT ON CASH DIVIDEND PAYMENTS

On November 14, 1985 the Board approved a policy statement on the payment of cash dividends by state member banks and *bank holding companies that are experiencing financial difficulties*. The policy statement addresses the following practices of supervisory concern by institutions that are experiencing earnings weaknesses, other serious problems, or that have inadequate capital:

- The payment of dividends not covered by earnings,
- The payment of dividends from borrowed funds,
- The payment of dividends from unusual or nonrecurring gains, such as the sale of property or other assets.

It is the Federal Reserve’s view that an organization experiencing earnings weaknesses or other financial pressures should not maintain a level of cash dividends that exceeds its net income, that is inconsistent with the organization’s capital position, or that can only be funded in ways that may weaken the organization’s financial health. In some instances, it may be appropriate to eliminate cash dividends altogether. The policy statement is as follows:

2020.5.1.1 Policy Statement on the Payment of Cash Dividends by State Member Banks and Bank Holding Companies

The Board of Governors of the Federal Reserve System considers adequate capital to be critical to the health of individual banking organizations and to the safety and stability of the banking system. A major determinant of a bank’s or bank holding company’s capital adequacy is the strength of its earnings and the extent to which its earnings are retained and added to capital or paid out to shareholders in the form of cash dividends.

Normally, during profitable periods, dividends represent an appropriate return of a portion of a banking organization's net earnings to its shareholders. However, the payment of cash dividends that are not fully covered by earnings, in effect, represents the return of a portion of an organization's capital at a time when circumstances may indicate instead the need to strengthen capital and concentrate financial resources on resolving the organization's problems.

As a matter of prudent banking, therefore, the Board believes that a bank or bank holding company generally should not maintain its existing rate of cash dividends on common stock unless 1) the organization's net income available to common shareholders over the past year has been sufficient to fully fund the dividends and 2) the prospective rate of earnings retention appears consistent with the organization's capital needs, asset quality, and overall financial condition. Any banking organization whose cash dividends are inconsistent with either of these criteria should give serious consideration to cutting or eliminating its dividends. Such an action will help to conserve the organization's capital base and assist it in weathering a period of adversity. Once earnings have begun to improve, capital can be strengthened by keeping dividends at a level that allows for an increase in the rate of earnings retention until an adequate capital position has been restored.

The Board also believes it is inappropriate for a banking organization that is experiencing serious financial problems or that has inadequate capital to borrow in order to pay dividends since this can result in increased leverage at the very time the organization needs to reduce its debt or increase its capital. Similarly, the payment of dividends based solely or largely upon gains resulting from unusual or nonrecurring events, such as the sale of the organization's building or the disposition of other assets, may not be prudent or warranted, especially if the funds derived from such transactions could be better employed to strengthen the organization's financial resources.

A fundamental principle underlying the Federal Reserve's supervision and regulation of bank holding companies is that bank holding companies should serve as a source of managerial and financial strength to their subsidiary banks. The Board believes, therefore, that a bank holding company should not maintain a level of cash dividends to its shareholders that

places undue pressure on the capital of bank subsidiaries, or that can be funded only through additional borrowings or other arrangements that may undermine the bank holding company's ability to serve as a source of strength. Thus, for example, if a major subsidiary bank is unable to pay dividends to its parent company—as a consequence of statutory limitations, intervention by the primary supervisor, or noncompliance with regulatory capital requirements—the bank holding company should give serious consideration to reducing or eliminating its dividends in order to conserve its capital base and provide capital assistance to the subsidiary bank. . . .

This statement of principles is not meant to establish new or rigid regulatory standards; rather, it reiterates what for most banks, and businesses in general, constitutes prudent financial practice. Boards of directors should continually review dividend policies in light of their organizations' financial condition and compliance with regulatory capital requirements, and should ensure that such policies are consistent with the principles outlined above. Federal Reserve examiners will be guided by these principles in evaluating dividend policies and in formulating corrective action programs for banking organizations that are experiencing earnings weaknesses, asset quality problems, or that are otherwise subject to unusual financial pressures.

2020.5.2 INSPECTION OBJECTIVES

1. To assure compliance with statutes and the Board's November 1985, Policy Statement.
2. To determine reasonableness of dividend payout at both the subsidiary and holding company levels.

Depending on the type of charter and membership in the Federal Reserve, all insured commercial banks are subject to certain legal restrictions on dividends. In the case of nonbank subsidiaries and holding companies, there are no specific federal statutes, other than the policy statements discussed, which apply to dividend payments. State corporate laws would apply. One objective of the inspection process is to check for compliance with these laws and to follow-up on any violations.

In some cases dividends which comply with the regulations still may not be in the best interest of the bank. It is the examiner's responsibility to assess the reasonableness of dividend payments in relation to each subsidiary's capital

needs. Evaluation of the holding company's dividend policy and payment requires a review at both the parent company and the consolidated levels. On a consolidated basis the holding company's capital level in relation to the quantity and quality of total assets, earnings history and potential, and growth rates are important in the assessment of a reasonable dividend payout. At the parent level, the method of funding dividends should be reviewed. For example, a well capitalized corporation with strong earnings might pay dividends which could be considered unreasonable if the organization were in a strained liquidity position.

2020.5.3 INSPECTION PROCEDURES

1. Review dividend payments by subsidiaries and the parent company. Check for compliance with appropriate statutes and the Board's November 14, 1985 policy statement on the Payment of Cash Dividends. Discuss violations with management and comment on the "Examiner's Comments" page.

This step will often require a review of net earnings and changes in the capital accounts in the past years, as legal restrictions on dividends often apply to cumulative income for several years rather than just the year the dividend is actually paid. For this reason detailed working papers are important, as these can help to avoid duplications of effort at future inspections. In some situations the regulations provide that dividends may be paid in excess of current year's earnings. If prior approval from the bank's primary regulator is necessary, verify that it has been obtained. Any violations of dividend statutes should be discussed with management and cited in the "Examiner's Comments" page of the inspection report.

2. Analyze dividend payouts of subsidiaries and the parent in terms of capital adequacy, earnings and earnings potential.

Discuss excessive dividend payouts at any level with management and comment on the "Examiner's Comments" page of the inspection report. In assessing the reasonableness of dividend payments by subsidiaries and the holding company, the organization's capital adequacy and future capital needs must be judged with the following in mind: the volume of total assets; asset quality (the percentage of weighted classified assets to gross capital could be used as an indicator of quality); asset mix and liquidity; asset growth rates and projections; and plans for expansion and development of new areas. The subsidiary's or the holding company's ability to

augment capital through earnings is also important. If a bank, nonbank or holding company has a consistently strong earnings record and its capital position is healthy, a higher dividend payout may be acceptable than would be otherwise. In analyzing the strength of earnings both quantity and quality must be considered. The actual quality of earnings and earnings potential are related to operating income rather than extraordinary items, significant capital or securities gains, or substantial increases resulting from tax considerations.

3. Review the funding of dividends paid by the holding company. Analyze the parent's cash flow and income statements in accordance with section 4010.0 of this manual. Discuss any inappropriate funding with management and comment on, based on their severity, either on the "Cash Flow Statement (Parent)," or the "Analysis of Financial Factors" and the "Examiner's Comments" pages.

An analysis of the parent company's cash flow statement supplemented by the income statement will identify the source of cash for dividend payments. The parent company has cash inflow from various sources including: dividends from subsidiaries, income from activities conducted for its own account, interest income on advances to subsidiaries, management and service fees, borrowings, and tax savings resulting from filing a consolidated tax return. Dividends should be internally funded from dividends paid by the subsidiaries, the parent company's earnings from activities for its own account or from interest income on advances to subsidiaries. Should the analysis of the cash flow statement indicate that dividends paid by the parent exceed cash inflow from these sources, further attention to the area is required to determine the actual underlying source of dividend funding. As discussed in the section on management and service fees, these are properly assessed at market value or cost of services rendered. They are not to be charged simply to divert income from subsidiaries in order to pay dividends. Borrowing to fund dividends is fundamentally an unsound practice.

When dividends paid by the holding company are funded by the bank subsidiary, it is possible to control indirectly the holding company's dividend payout level when it is determined to be detrimental to the bank subsidiary. It is important to remember that the primary responsibility of bank regulators is the promotion of safe and sound banking operations. Other

than the mentioned policy statement there are no specific federal laws restricting dividends paid by bank holding companies; however, the System's cease and desist authority over bank holding companies does afford the ability to curb excessive dividend payouts.

Whenever the examiner determines that divi-

dent payments at the subsidiary level or parent level are not reasonable, are not in the best interest of the organization, or are not funded in a proper manner, discussion with management and a close look at its philosophy are essential. Remarks on the matter should appear on the "Examiner's Comments" page of the report.

2020.5.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Dividend limits for national banks	5199(b) R.S.A.			
Dividend limits	5204 R.S.A.

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

A bank holding company is permitted to own nonbank subsidiaries that furnish services to or perform services for its other subsidiaries pursuant to section 4(a)(2)(A), 4(c)(1)(C), or 4(c)(8) of the BHC Act. Many bank holding companies charge fees for providing to their subsidiaries services such as management advice, personnel services, data processing, marketing, supply administration, investment advice, bookkeeping, and trust services. The fees for these services that are assessed against subsidiary banks take many forms and are an area of potential abuse. In addition to direct fees paid to an affiliate, the compensation for providing these services might take the form of salaries or directors' fees paid to the bank holding company's management. A holding company should not, directly or indirectly through other subsidiaries, burden its bank subsidiaries with excessive fees or charge for services unrelated to value received in order to fund its debt service, dividend payments, or support of other subsidiaries.

Examiners should review the fees charged by a holding company's bank and nonbank subsidiaries to any banking subsidiary and judge the reasonableness of those fees by examining the reasonableness of the services provided and the basis for allocating fees. Fees charged nonbank subsidiaries and independent third parties should not be more favorable than fees charged banking subsidiaries. They should be reasonable and justifiable and be based on the fair market value of services provided or, when there is no market established for a particular service, on actual cost plus a reasonable profit. *The market value of similar services is the preferred basis of fee assessment.* When fees are based on cost plus a reasonable profit, there is less incentive for the efficient and effective use of resources, because a profit margin is built in regardless of the costs involved. In many situations, however, the cost method is the only method possible.

Any method of pricing services provided to bank subsidiaries that is based on anything other than value received is inappropriate. The fee mechanism should not be used to divert income from any bank subsidiary to meet the parent's financial needs if those needs are unrelated to the provision of services to that subsidiary. In addition, banks are prohibited from paying management fees* if it would cause the institution to become undercapitalized (see title I, section 131

of the FDIC Improvement Act of 1991 or section 38 of the FDIC Act).

Any fee for services to a banking subsidiary should be supported by evidence that the parent or other affiliate provided the service. Services provided by bank holding companies should serve the needs of the subsidiary bank; charges for services that appear to duplicate existing subsidiary-bank functions should be supported by a detailed explanation of the net benefit derived by the subsidiary bank and by an analysis of the reasonableness of the fee.

When it is impractical to allocate expenses on a direct-charge basis, bank holding companies frequently allocate overhead expenses to subsidiaries. Although this practice can be considered acceptable with regard to nonbanking subsidiaries, allocating all bank holding company expenses to bank subsidiaries is not permitted. The parent company should bear a portion of the costs connected with, for example, the holding company's investor/shareholder relations, regulatory reporting requirements, acquisitions, formations, applications, board of directors, and strategic planning. Bank holding companies are, however, expected to support their subsidiary banks, and expenses incurred to serve the needs of the subsidiary banks, such as expenses incurred in raising capital for subsidiary banks, can appropriately be allocated to those subsidiary banks that benefit from the services provided, in proportion to the benefit received from the service.

All fees for services rendered should be supported by written agreements that describe the service, the fees to be charged, and the method of allocating the fees among the subsidiaries. The absence of such contracts between the subsidiaries of the holding company is considered inappropriate and an unsafe and unsound banking practice. Supervisory action should be taken, in a manner consistent with the financial condition of the holding company and the subsidiary bank, to eliminate the improper practices. The practices should be criticized in the inspection report and actions taken to see that the situation is satisfactorily resolved. If the practices are having a serious impact on the bank, or if they might reasonably be expected to have a severe impact given the bank's financial condition, formal administrative action should be considered in order to require the holding company to terminate the practices and make restitution to the subsidiary bank.

* "Management fees" does not include fees for such services as electronic data processing or auditing.

A bank's prepayment of service fees to the parent company and payment of expenses incurred primarily in conjunction with holding company activities unconnected with the bank also are cause for supervisory concern. In general, prepayment for services is inappropriate unless the bank holding company can demonstrate that prepayment is standard industry practice for nonbanking companies acquiring the same service. Prepayment of sums for services that are not to be provided in the immediate future (for example, prepayment of an entire year's fees for services to be rendered throughout the year) can have an adverse impact on the bank and is therefore inappropriate. These practices should be addressed by requiring timely and reasonable payments for services and reimbursement to the banks for what are essentially holding company expenses. If bank expenses are incurred substantially in support of a holding company activity, the bank should be reimbursed for that portion of its cash outlay that benefits the holding company. Reimbursement is necessary to ensure that bank resources are not diverted to a holding company affiliate with little or no benefit to the bank.

Aside from reasonable and timely fees for services rendered, the most appropriate way, from a supervisory standpoint, for funds to be paid to the parent company is through dividends. This principle applies, in general, to bank payment of funds to service holding company debt, even when the debt was initially incurred to raise equity capital for the subsidiary bank. It is an inappropriate banking practice for the subsidiary bank to pay management fees for the purpose of servicing holding company debt. Funds for servicing holding company debt should, as a general rule, be upstreamed in the form of dividends.

2020.6.1 TRANSACTIONS SUBJECT TO FEDERAL RESERVE ACT SECTION 23B

Section 23B of the FRA applies to any covered transaction with an "affiliate," as that term is defined in section 23A of the FRA. Section 23B also applies to a number of transactions that are not covered by section 23A, for example, transactions that involve the payment of money or the furnishing of services to an affiliate under contract, lease, or otherwise, or transactions in which an affiliate acts as an agent or a broker or

receives a fee for its services. Although transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B, section 23A requires that covered transactions between a bank and an affiliate be conducted at arm's length. See section 2020.1.2 for other transactions that are covered by section 23B and the requirements that pertain to all such transactions. For examples of transactions that could violate section 23B, see section 3700.10, dealing with an application to provide armored car services through a bank holding company's nonbank subsidiary.

2020.6.2 INSPECTION OBJECTIVES

1. To determine whether the holding company and its subsidiaries charge fees to bank subsidiaries based on value received and fair market value.
2. To determine whether the subsidiaries are actually receiving these services.
3. To determine that the timing of fee payments is appropriate.
4. To determine whether there is an agreement between the entities relating to specific services and fees charged.
5. To determine if any fees result in an unsafe or unsound condition in any subsidiary bank.

Once the management policy underlying the fee structure is clearly understood, it is important for the examiner to determine that practice is consistent with policy. For example, if management indicates that fees charged are based on the fair market value of services received but the fee structure is actually geared to the bank subsidiary's asset size, an inconsistency exists. Assuming either that all of the bank subsidiaries have access to the same or similar markets for the services being provided by the bank holding company or that cost is used consistently to determine pricing, the established pricing structure should be used for all subsidiaries. Deviations from established policy intended to channel a greater proportion of income from financially sound banks to financially weak ones should be noted.

When it has been established that the fee structure is reasonable and is consistently followed, a final question remains. Are the bank subsidiaries actually receiving the services for which they are charged? This may be difficult to ascertain in many cases, but serious efforts must be made.

It is important that the basic business principles of an arm's-length transaction be applied to

all transactions between banks and their affiliates. This approach provides protection for all the interests involved. In addition, payment should be made within a reasonable time of the rendering of the services. It is inequitable for the bank subsidiary to pay fees far in advance in order to suit the parent's cash needs. A clearly understood agreement between the holding company and its bank subsidiaries detailing the duties and responsibilities of each party and the method to be used for fee assessment is also important to the servicing arrangement.

2020.6.3 INSPECTION PROCEDURES

1. Review and analyze the policy regarding management and other services provided to bank subsidiaries and the method of assessing fees.
2. Determine the basis for valuation.
3. Review the actual pricing structure as it is applied.
4. Verify the following:
 - a. Fees are charged in accordance with pricing structure.
 - b. Pricing structure is consistently applied for all bank subsidiaries.
 - c. Bank subsidiaries are actually receiving services for which they are assessed. Determine whether fee payments have caused the institution to become undercapitalized.
 - d. Payments are made in a timely manner.
5. Review examination reports on bank subsidiaries for comments on fee assessment.
6. Analyze the parent company's cash flow and income statements for intercompany fees.
7. Review recordkeeping.

A review of management's written or stated policy regarding services provided subsidiaries and fee assessment is a logical starting point for the analysis of this area. The policy should be discussed with the holding company's officers to ensure that the examiner has a clear understanding of the purpose and basic underlying philosophy. Any policy that calls for fee assessment based on standards other than fair market value or the cost of providing the services requires discussion with management and comment on page 1 of the report.

The determination of fair market value or cost of providing services is the responsibility of the holding company. The examiner should review the market or cost information used to justify the pricing of services and be satisfied that the data presented actually supports the fee structure. Request a copy of the pricing schedule as it is applied, and determine that it is

actually based on the valuation of the services received and consistent with stated policy. Any variations from the basic structure among the bank subsidiaries would also require support from the market or cost data furnished.

Once the holding company's policy, valuation data, and pricing structure are analyzed, they should be verified. Check the service at the bank-subsidary level. The verification process can be modified as deemed appropriate by the examiner.

Note the timing of payment for services. Fees for services should be billed and paid as they are received, just as they would be with an unaffiliated servicer. Prepayments are inappropriate in most cases.

Written service agreements should be in effect specifically detailing the types and extent of services being rendered and the method of pricing. Any significant exceptions found during the verification process merit follow-up and comments in the report.

Thus far, these inspection procedures for management and service fees have emphasized a review of management's stated intent and the actual fees charged on the individual bank-subsidary level and have been somewhat oriented toward micro-level analysis. An overall view of the parent company's cash flow and income statements can also provide certain indicators of appropriateness of fees. The parent company should be servicing its debt and paying dividends from sources other than management fees and service fees collected from bank subsidiaries. If the ratio of management and service fees to parent-company salaries and other expenses significantly exceeds 100 percent, the holding company could be charging fees that are unrelated to the value of the service. This situation would call for further investigation.

2020.6.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Statement of practice and procedure in reference to unsound banking practices; diversion-of-bank-income practices (SR-79-533, March 19, 1979)			4-876	
Potential violations of section 23B of the Federal Reserve Act:				1993 FRB 352
1. Proposal by a bank holding company to provide armored car services to its banking subsidiary through a de novo nonbank subsidiary. The cost of the service would be more than the cost of armored car services currently received from an unaffiliated provider.				
2. Proposal whereby the bank holding company's de novo nonbanking subsidiary would pay a flat fee based on a percentage of its direct operating expenses to cover all the back-office services provided by the holding company's banking subsidiary.				
1. 12 U.S.C., unless specifically stated otherwise.				
2. 12 C.F.R., unless specifically stated otherwise.				
				3. <i>Federal Reserve Regulatory Service</i> reference.

The transfer of low-quality loans or other assets from one depository institution to another can be reason for supervisory concern. Such transfers may be made to avoid detection and classification during regulatory examinations, and may be accomplished through participations, purchases/sales, and asset swaps with other affiliated or nonaffiliated financial institutions. Section 23A of the Federal Reserve Act prohibits bank purchases of low-quality assets from an affiliate. Examiners should be alert to situations where an institution's intention appears to be the concealment of low quality assets for the purpose of avoiding examination scrutiny and possible classification.

During bank holding company inspections, examiners are requested to identify situations where low-quality assets have been transferred between the institution being examined and another depository institution. Low-quality loans broadly defined include loans which are classified or specially mentioned, or if subjected to review would most likely be classified or specially mentioned, past due loans, nonaccrual loans, loans on which the terms have been renegotiated because of a borrower's poor financial condition, and any other loans which the examiner feels are of questionable quality. Other assets of questionable quality would include depreciated or sub-investment grade securities and other real estate. The transfer of assets to avoid supervisory review is a highly improper and unsound banking practice and may be a violation of section 23A of the Federal Reserve Act that should be addressed through formal supervisory enforcement action, if necessary.

Any situations involving the transfer of low-quality or questionable assets should be brought to the attention of Reserve Bank supervisory personnel who, in turn, should notify the local office of the primary Federal regulator(s) of the other depository institution(s) involved in the transaction. For example, Reserve Banks should notify the primary Federal regulator of any depository institution to whom a State member bank or holding company is transferring or has transferred low quality loans. Reserve Banks should also notify the primary regulator of any depository institution from which a State member bank or holding company is acquiring or has acquired low-quality loans. This procedure applies to transfers involving savings and loan associations and savings banks, as well as commercial banking organizations.

If it is determined that a transfer of assets was undertaken for legitimate reasons, the examiner

should make certain that the assets have been properly recorded on the books of the acquiring institution at fair market value. If the transfer was with the parent holding company or a non-bank affiliate, determine that the transaction is also properly recorded on the books of the affiliate. Refer to SR Letter 83-24 (FIS).

2020.7.1 INSPECTION OBJECTIVES

1. To ensure that loan transfers involving state member banks, bank holding companies, and nonbank affiliates are carefully evaluated to determine if they were carried out to avoid classification, and to determine the effect of the transfer on the condition of the institution and to ascertain whether the transfer was consistent with the requirements of Section 23A. Under section 23A of the Federal Reserve Act, an asset purchase is a "covered transaction." All "covered transactions" by a bank with a single affiliate and with all affiliates combined may not exceed 10 percent and 20 percent, respectively, of a bank's capital and surplus.

2. To ensure that the primary regulator of the other financial institution involved in the transfer is notified.

2020.7.2 INSPECTION PROCEDURES

1. Investigate any situations where assets were transferred prior to the date of examination to determine if any were transferred to avoid possible criticism during the examination.

2. Determine whether any of the loans transferred were nonperforming at the time of transfer, classified at the previous examination, or for any other reason were considered to be of questionable quality.

3. Review the policies and procedures to determine whether or not assets or participations purchased are given an independent, complete and adequate credit evaluation. If a bank is a holding company subsidiary or a member of a chain banking organization, review asset purchases or participations from affiliates or other known members of the chain to determine if the asset purchases are given an *arms-length* and *independent* credit evaluation by the purchasing bank.

4. Determine whether or not any purchases

of assets from an affiliate are in conformance with section 23A which generally prohibits purchases of low-quality assets from an affiliate and limits asset purchases and all other “covered transactions” by a bank from a single affiliate and all affiliates combined to 10 percent and 20 percent, respectively, of a bank’s capital and surplus.

5. Determine that any assets purchased are properly reflected at fair market value (while fair market value may be difficult to determine, it should at a minimum reflect both the rate of return being earned on such assets and an appropriate risk premium). Determine that appropriate write-offs are taken on any assets sold at less than book value.

6. Determine that transactions involving transfers of low- quality assets to the parent holding company or a nonbank affiliate are properly reflected at fair market value on the books of both the bank and the holding company affiliate.

7. If poor quality assets were transferred to or from another financial institution for which the Federal Reserve is not the primary regulator, prepare a memorandum to be submitted to the Reserve Bank supervisory personnel. The Reserve Bank will then inform the local office of the primary Federal regulator of the other institution involved in the transfer. The memorandum should include the following information, as applicable:

- Name of originating and receiving institutions.
- Type of assets involved and type of transfer (i.e., participation, purchase/sale, swap).
- Date(s) of transfer.
- Total number and dollar amount of assets transferred.
- Status of the assets when transferred (e.g., nonperforming, classified, etc.)
- Any other information that would be helpful to the other regulator.

Intercompany Transactions (Trade Name or Royalty Fees)

Section 2020.8

A bank holding company may be assessing trade-name or royalty fees on its subsidiary banks for their use of the holding company's name. Such holding companies may assert that the trade name-licensing agreements were created to achieve certain state tax benefits. They may also claim that such agreements were implemented to establish a basis for any damages that the company might seek if its trade name is used by an unauthorized third party. Further, consultants may try to market this practice to other bank holding companies.

Such payments are unlikely to bear any reasonable or justifiable relationship to any tangible asset or service provided by a holding company to a subsidiary bank. They are thus considered an improper diversion of bank income. If this practice is found during the course of an inspection, the practice should be stopped and examiners should direct the parent company to reimburse subsidiary banks for the fees paid. Depending on the materiality of the trade name or royalty fees, the Reserve Bank may also require restatement of regulatory filings. See SR-91-3.

Split-dollar life insurance is a type of life insurance in which the purchaser of the policy pays at least part of the insurance premiums and is entitled to only a portion of the cash surrender value, or death benefit, or both. See SR-93-37 and its attachments for further discussion of the Federal Reserve's position on such arrangements between bank holding companies and their subsidiary banks.

2020.9.1 SPLIT-DOLLAR LIFE INSURANCE POLICY ARRANGEMENTS

Certain split-dollar life insurance policy arrangements involving banks and their parent bank holding companies raise legal and safety-and-soundness concerns. These arrangements fall into two general categories: (1) those in which the subsidiary bank owns the policy, pays all or substantially all of the premiums and is reimbursed for the premium payments (if at all) at some time in the future (endorsement plans) and (2) those in which the parent holding company owns the policy, and pays the premium, but uses the insurance policy as collateral for loans from its subsidiary bank (collateral assignment plans).

2020.9.1.1 Split-Dollar Life Insurance Endorsement Plan

Under an endorsement plan, the subsidiary bank purchases a policy in which its parent bank holding company or an officer, director, or principal shareholder thereof is the primary beneficiary, rather than the bank or one of its officers or directors. In this instance, the subsidiary bank receives only a limited portion of the death benefit—usually an amount equal to its premium payments plus interest. The primary beneficiary—the holding company or one of its officers, directors, or principal shareholders—receives a majority of the insurance proceeds but pays little or nothing for the benefit. Many of the policies in this category are single-premium universal life policies, whereby the subsidiary bank pays one large lump sum premium payment for the policy. Generally, a subsidiary bank involved in an endorsement plan records the cash surrender value of the policy as an asset on its books; the bank holding company does not record anything at the parent-only level.

A variation of the endorsement plan is an arrangement in which the bank pays an annual premium towards the policy and the parent holding company reimburses the bank for a nominal amount of the annual premium payments. These amounts are substantially lower than the premium payments made by the subsidiary bank and therefore do not accurately reflect the economic benefit derived by the holding company as primary beneficiary of the insurance policy.

2020.9.1.2 Split-Dollar Life Insurance Collateral Assignment Plan

Under a collateral assignment plan, the parent bank holding company owns the policy and pays the entire premium. The subsidiary bank makes annual loans to the bank holding company in an amount equal to the annual increase in the cash surrender value of the policy (or, in some cases, in amounts equal to premiums paid) with the policy itself serving as collateral for the loan. The loans are repayable at either the termination of employment or the death of the insured employee, and will be paid using the death benefits available from the policy.

2020.9.2 COMPLIANCE WITH APPLICABLE LAWS

2020.9.2.1 Compliance with Sections 23A and 23B of the FRA

Both of the aforementioned types of split-dollar life insurance policy arrangements may be inappropriate if they are inconsistent with sections 23A or 23B of the Federal Reserve Act (FRA). Section 23A places quantitative restrictions and other requirements on certain transactions, including loans, between banks and their affiliates. The statute also requires that loans between banks and their affiliates be secured with collateral having a specified market value that depends on the type of collateral used to secure the loan. Under an endorsement plan, where the subsidiary bank pays all or substantially all of the insurance premiums, an unsecured extension of credit from the subsidiary bank to its parent holding company generally results because the subsidiary bank has paid the bank holding company's portion of the premium, and the bank

will not be reimbursed fully for its payment until sometime in the future.

Under a collateral assignment plan, if the insurance policy held by the parent bank holding company serves as collateral to secure a loan from its subsidiary bank, the loan may be a violation of section 23A unless it meets the quantitative requirements of section 23A and the cash surrender value of the insurance policy used as security is equal to 130 percent of the amount of the loan. Thus, a bank loan to the parent bank holding company that equals the cash surrender value of the insurance policy that is serving as collateral would not be adequately secured under section 23A, unless additional collateral was provided.

Both categories of split-dollar life insurance policy arrangements may also lead to violations of section 23B of the Federal Reserve Act, which requires that certain transactions involving a bank and its affiliates be on terms and under circumstances substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. Because the bank holding company is the beneficiary of the life insurance policy, it is a participant in a transaction between a bank and a third party; therefore, the split-dollar life insurance transaction must meet the standards of section 23B.¹ In order to conform to the statutory restrictions of section 23B, the return to the bank from ownership of the policy should be commensurate with the size and nature of its financial commitment. In most split-dollar insurance arrangements, the bank makes an investment in the policy not for the purpose of insuring itself against risk but for the purpose of obtaining insurance for its holding company. The only return that the bank will get from its participation in ownership of the policy is the return of its initial investment and possibly some interest. However, the insurance company deducts the cost of maintaining the insurance coverage from interest that would otherwise be credited to the equity in the policy. These costs include policy loads, surrender charges, and mortality costs. The holding company should fully reimburse the bank for all of these charges. Examiners should carefully evaluate these arrangements because, in many cases, the reimbursement the

bank receives from the holding company is based on an implied value of the insurance coverage received by the holding company that is less than the assessments made to the policy equity.

In the process of evaluating split-dollar insurance arrangements, examiners should keep in mind the fact that the advances made by a bank to purchase the insurance are the equivalent of a loan to the holding company. Therefore, to comply with section 23B, the terms of the loan, such as its duration and interest rate, must be on market terms.

2020.9.2.2 Investment Authority Under the National Bank Act

Participation by bank holding companies and their state-chartered and national bank subsidiaries in split-dollar life insurance policy arrangements may also raise concerns whether the policies are permissible bank investments under section 24(7) of the National Bank Act. The Office of the Comptroller of the Currency's interpretation of this provision of the National Bank Act (OCC Banking Circular 249, May 9, 1991).² In addition, under section 24 of the Federal Deposit Insurance Act, a state-chartered bank generally may not, without the FDIC's permission, engage in any activity that is impermissible for a national bank.³

2020.9.3 SAFETY-AND-SOUNDNESS CONCERNS

The purchase of a split-dollar life insurance policy may also constitute an unsafe and unsound banking practice involving the diversion of bank income or assets. If a subsidiary bank pays the entire insurance premium but is not the beneficiary, it provides an economic benefit to its parent holding company or other beneficiary for which it is not being adequately reimbursed or compensated. In this instance, the bank loses the opportunity to use its assets productively. Generally, the bank pays the premium in return for the insurance company's payment of the entire proceeds. When the bank receives less than the entire proceeds, it has, in effect,

1. The Federal Deposit Insurance Corporation has taken the same position in a published interpretive letter, FDIC 92-40, dated June 18, 1992.

2. National banks may not purchase life insurance as an investment. See OCC Banking Circular 249, for the tests under which life insurance may be purchased and held for noninvestment purposes.

3. SR-92-97 (FIS) and SR-92-98 (FIS), dated December 16 and 21, 1992, respectively, describe the provisions of section 24 of the Federal Deposit Insurance Act.

paid a higher than market price for whatever limited benefit it may receive. This is also the case when the primary beneficiary of the policy is an officer, director, or principal shareholder of the parent holding company. Such an arrangement is not consistent with safe and sound banking practices because the subsidiary bank is conferring an economic benefit on an insider of the parent bank holding company without receiving adequate compensation.

2020.9.4 EXAMINER REVIEW OF SPLIT-DOLLAR LIFE INSURANCE

Examiners should be fully aware of the problems inherent in split-dollar life insurance policy arrangements between bank holding companies and their subsidiary banks. During the course of all bank examinations and bank holding company inspections, examiners should review corporate life insurance policy arrangements for compliance with applicable banking laws and safety-and-soundness standards.⁴ If a split-dollar life insurance policy arrangement exists in either a bank holding company or a state member bank, it should be reviewed and modified if it does not comply fully with the law and principles of safe and sound banking. If a bank holding company or a state member bank fails to take appropriate action to bring its split-dollar life insurance policy arrangements into compliance, then the Reserve Bank should consider appropriate follow-up supervisory action (including a formal enforcement action) against the banking organization or its institution-affiliated parties, or both.

2020.9.5 INSPECTION OBJECTIVES

1. To determine if split-dollar life insurance arrangements between the parent holding company and its subsidiary banks are consistent with the provisions of sections 23A and 23B of the FRA.

4. Examiners conducting examinations of U.S. branches and agencies of foreign banks and Edge corporations should also be alerted to the problems associated with split-dollar life insurance arrangements because these institutions could purchase insurance for the benefit of a parent foreign bank or company, or one of the parent's officers or directors. In addition, section 7(h) of the International Banking Act of 1978 prohibits state-licensed branches or agencies from engaging in any activity that is impermissible for a federal branch unless the Board determines that such activity is consistent with "sound banking practice" and, in the case of an FDIC-insured branch, the FDIC determines that the activity poses no significant risk to the deposit insurance fund.

2. To ascertain whether participation by bank holding companies and their national bank or state-chartered bank subsidiaries is consistent with section 24(7) of the National Bank Act and section 24 of the Federal Deposit Insurance Act.

3. To verify the cash surrender values of split-dollar life insurance policies and to establish whether those values have been impaired by loans to, liens by, or assignments to, third parties or by unauthorized borrowings or cancellations.

2020.9.6 INSPECTION PROCEDURES

1. Review corporate life insurance policy arrangements between the parent company and its subsidiary banks.

a. Determine if there are split-dollar life insurance arrangements between any subsidiary bank and the parent company or officers or directors of the parent company.

b. If any such insurance arrangement exists, establish if the plan is either an endorsement plan or a collateral assignment plan.

c. Review arrangements involving a split-dollar life insurance policy purchased by the parent company.

(1) Review external documentation evidencing the cash surrender value. If no documentation exists, ask the audit committee and its internal auditors—

(a) to obtain external documentation verifying its value and

(b) to verify that there are no outstanding loans, liens, or assignments against the insurance policies.

(2) Establish whether the parent company's board of directors has established policies and implemented procedures for transactions between the insurance carrier and the parent company to prevent unauthorized borrowing or cancellation of any insurance policy that has a cash surrender value.

(3) Determine whether the corporate life insurance policy arrangements are consistent with applicable safety-and-soundness standards.

(4) Verify that the recorded value of the respective asset is equal to the unimpaired cash surrender value of the asset.

2. If an endorsement plan arrangement is purchased by a subsidiary bank, establish whether the bank holding company is the beneficiary. If the parent company is the beneficiary, such an arrangement may result in an unsecured exten-

sion of credit when the subsidiary bank pays all or substantially all of the insurance premiums but is not reimbursed until some time in the future. Ascertain if the investment return to the bank from ownership of the policy is commensurate with the size and nature of its financial commitment.

3. If a collateral assignment plan (when the insurance policy held by the parent company serves as collateral to secure a loan from a subsidiary bank), ascertain whether the cash surrender value of the insurance policy is equal to 130 percent of the amount of the loan.

4. For both types of split-dollar life insurance:

a. Determine if the investment return from

ownership of the policy is commensurate with the size and nature of the financial commitment, including all costs incurred for maintaining the insurance coverage.

b. Determine if the terms (duration and market interest rate) of the advances made to purchase the insurance are on market terms.

c. If the bank holding company is the beneficiary of a bank insurance policy and a bank is a participant in the purchase of the insurance from a third party, determine if the transaction was on terms and under circumstances that were substantially the same as or at least as favorable to the bank as those then prevailing for comparable transactions with or involving nonaffiliated companies.

Grandfather Rights—Retention and Expansion of Activities

Section 2030.0

The history of bank holding company legislation reflects a principle that banking and commerce should be separated in order to prevent abuses in the distribution of credit. The 1956 Act generally required companies to divest their nonbank activities and shares within two years. In the 1970 Amendments, the same requirement applied to companies formed in the future. However, one-bank holding companies in existence at the time of these amendments were given a “grace period” to comply with divestiture requirements of the legislation. Those companies whose bank and nonbank interests had been combined on or before June 30, 1968, were permitted to continue the existing combination for an indefinite period (indefinite or permanent grandfather privileges). But those BHCs which existed at the time of the 1970 Amendments, but whose bank was acquired or whose nonbank activity was initiated after June 30, 1968, were permitted to continue their nonbank activities for only 10 years until December 31, 1980. An exception to the divestiture deadline existed with respect to certain real estate holdings.

Because of Congressional concern about the effectiveness of a divestiture, Congress included section 2(g) in the Act, and particularly subsection 2(g)(3) which treats the transfer of control. In this section, care is taken to eliminate possible control relationships between the company and its divested assets.

Although indefinitely grandfathered companies may continue to engage in nonbanking activities, these grandfather privileges are subject to review by the Federal Reserve Board at the time when a company’s banking assets exceed \$60 million.¹

2030.0.1 INDEFINITE GRANDFATHER PRIVILEGES

Under the provisions of section 4(a)(2) of the Act, as amended in 1970, relating to grandfather privileges for certain nonbanking activities of bank holding companies, the Reserve Banks have been delegated the authority to determine that termination of grandfathered activities of a

particular bank holding company is not warranted; provided, the Reserve Bank is satisfied that all of the following conditions are met:

1. The company or its successor is “a company covered in 1970;”

2. The nonbanking activities for which indefinite grandfather privileges are being sought do not present any significant unsettled policy issues; and

3. The bank holding company was lawfully engaged in such activities as of June 30, 1968 and has been engaged in such activities continuously thereafter.

A company covered in 1970 is defined in section 2(b) of the Act as “a company which becomes a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on June 30, 1968, if those amendments had been enacted on that date.” The Board has also determined that the company must have owned at least 25 percent of the voting shares of the same subsidiary bank on June 30, 1968, and December 31, 1970, in order to qualify as a company covered in 1970. If a company was not actively engaged in a nonbank activity prior to June 30, 1968, either directly, or indirectly through a subsidiary, it may still qualify for indefinite grandfather privileges if the company had entered into a binding contract prior to June 30, 1968. The binding contract must be a written document which specifies that the company (or its subsidiary) or persons representing the company will purchase another company which is already engaged in the activity.

Within two years after the subsidiary bank of an indefinitely grandfathered company attains banking assets in excess of \$60 million, the status of the company’s grandfather privileges is subject to review to determine whether the rights should remain in effect or be terminated. The Board or Reserve Bank may also review any company’s grandfather privileges and terminate them if it determines that such action is necessary to prevent (1) undue concentration of resources, (2) decreased or unfair competition, (3) conflicts of interests, or (4) unsound banking practices. Moreover, when a company applies for approval of an acquisition, it may expect the Board or Reserve Bank to review the legitimacy of its grandfather privileges.

1. Effective October 20, 1981 the Board amended its Rules Regarding Delegation of Authority to delegate to the Reserve Banks authority to make these determinations regarding indefinite grandfather privileges.

2030.0.2 ACTIVITIES AND SECURITIES OF NEW BANK HOLDING COMPANIES

A company that becomes a bank holding company may, for a period of two years, engage in nonbanking activities and control voting securities or assets of a nonbank subsidiary, if the bank holding company engaged in such activities or controlled such voting securities or assets on the date it became a bank holding company. The Board can grant requests for up to three one-year extensions of the two-year period. This is in accordance with a December 1983 revision to Regulation Y (12 C.F.R. 225.22(e)). The regulatory provision implements Section 4(a)(2) of the BHC Act.

2030.0.3 LIMITATIONS ON EXPANSION OF GRANDFATHER RIGHTS FOR INSURANCE AGENCY NONBANKING ACTIVITIES OF BANK HOLDING COMPANIES

Refer to Manual section 3170.0.3.4.1.

2030.0.4 SUCCESSOR RIGHTS

When a bank holding company transfers its bank shares to another company in a manner that produces no substantial change in the control of the bank, the transferee qualifies under section 2(e) of the Act as a “successor.” The “successor” provision prevents a bank holding company from transferring its bank to some other organization. A successor is considered a bank holding company from the date the transferor became a bank holding company. Thus, it may hold the same grandfather privileges as its predecessor. By the same token, it becomes subject to any conditions or restrictions, such as divestiture requirements, imposed by the System upon its predecessor. For example, an irrevocable declaration filed by the predecessor would be binding upon the successor.

2030.0.5 EXPANSION OF GRANDFATHER ACTIVITIES

Grandfather privileges apply to activities, not to companies. As a general rule, these activities are permitted to be expanded through internal

growth; however, there are a few exceptions. See Appendix 1 in this section.

In Appendix 1 it is important to distinguish between a purchase in the ordinary course of business and a purchase, in whole or in part, of a going concern. Each of the following conditions must be satisfied in order for the transaction to be in the “ordinary course of business,” which is permissible: (1) less than a substantial amount of the assets of the company to be acquired must be involved; (2) the operations of the purchased company must not be terminated or substantially discontinued; (3) the assets acquired must not be significant in relation to the size of the same line of nonbank activity already in the holding company (an acquisition is deemed significant if the book value of the acquired nonbank assets exceeds 50 percent of the book value of the nonbank assets of the holding company or nonbank subsidiary comprising the same line of activity); (4) if the transaction involves the acquisition of assets for resale, the sale must be a nominal business activity of the acquiring company; and (5) the major purpose of the transaction must not be to hire essentially all of the seller’s principal employees who are expert, skilled and experienced in the business of the company being acquired. If any of these five conditions is not satisfied, the transaction may be considered to be an acquisition of a going concern, which is not permissible without prior approval. Refer to 12 C.F.R. 225.132.

2030.0.6 DIVESTITURES (*also see Manual section 2090.6*)

The act specifies the time in which a company must divest of any impermissible activity. Any company becoming a bank holding company subsequent to the 1970 Amendments has two years in which to divest its impermissible activity. The Act allowed a temporarily grandfathered company ten years from December 31, 1970, to divest of its impermissible activities, except certain real estate holdings discussed earlier; and allows indefinitely grandfathered companies ten years from the date on which grandfather privileges are terminated by the Board or Reserve Bank, should they be terminated for good cause.

As mentioned earlier, reviews of a company’s grandfather privileges may be precipitated by such circumstances as: (1) a subsidiary bank of an indefinitely grandfathered company attaining assets in excess of \$60 million (reviewed within two years); (2) a company seeking approval to engage in another activity or acquire another

bank; (3) a company which violates the Act; or (4) a company operating in a manner which results in an undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices.

When a company has filed an application requiring the Board's or Reserve Bank's approval, the Board or Reserve Bank may approve the application subject to the condition that the company divest of certain grandfathered shares or assets within a specified time period. The specified time period generally will be shorter than the aforementioned time periods stipulated in the Act.

The plan of divestiture should have provided for the removal of any control relationship between the company and its divested activities. These control requirements, as outlined in section 2(g) of the Act, include one or more of the following: (1) no interlocking directorates; (2) ownership of less than 25 percent of the voting shares by the BHC and related parties; (3) no interlocking management positions in policymaking functions; (4) no indebtedness between the transferor and the transferee; (5) no agreement or understanding which restricts the voting privileges of shares. Further discussion of these and other control requirements and issues is found in Manual sections 2090.1 and 2090.6.

2030.0.7 INSPECTION OBJECTIVES

1. To determine when the company acquired its subsidiary bank.
2. To determine when the company commenced its nonbanking activities and whether these activities were conducted continuously thereafter.
3. To determine if the banking assets of a bank controlled by a holding company with indefinite grandfather privileges have reached \$60 million.
4. To determine if a change of ownership or control of the company has taken place, and whether the transferee qualifies as a "successor."

5. To determine if expansions of grandfathered activities occurred in accordance with the Act.

2030.0.8 INSPECTION PROCEDURES

1. If necessary, examine the subsidiary bank's stock certificate book to determine when the company acquired 25 percent or more of the bank.

2. Review the minute books and historical financial records of the company and its subsidiaries for evidence of the date of commencement of any nonbank activity and its continuation thereafter. In particular, the financial records should reflect the activity's impact as either an asset and/or an income item. From these records, also determine whether there has been expansion of the activity and whether such expansion complies with the Act.

3. If necessary, review the latest quarterly Call Report of Condition for the subsidiary bank to determine whether total assets exceeded \$60 million. If appropriate, advise management that its grandfather status is subject to review.

4. If necessary, examine the stock certificate records and minutes of the bank or BHC to determine if the bank's shares have been transferred from one bank holding company to another in such a manner that the transferee qualifies as a successor.

5. Upon review of the aforementioned records, discuss the status of the company's grandfather privileges with the Reserve Bank's management, if necessary.

6. If divestment is required, encourage its execution as soon as possible during the divestment period. Request a divestment plan which specifies the manner by which divestment will be accomplished, the specific steps necessary to effect the divestment, and the time schedule for taking such steps. Advise management that failure to divest within the prescribed time period will be viewed as a violation of the Act.

2030.0.10 APPENDIX 1—EXPANSION OF GRANDFATHERED ACTIVITIES

<i>Permissible Type of Expansion</i>	<i>Without Approval</i>	<i>Requires Approval</i>
FOR COMPANIES WITH AN INDEFINITELY GRANDFATHERED NONBANK ACTIVITY		
1. Opening of additional offices of existing subsidiary	X	
2. Acquisition of assets in the “ordinary course of business” as defined	X	
3. Acquisition of a going concern:		
a. Additional shares of the grandfathered nonbanking subsidiary	X	
b. Additional shares of a nonbanking company which is regarded as an investment (generally companies in which the holding company has an interest of between 5 and 25 percent)		X
c. Initial acquisition of shares of any other company engaging in the activity		X

Commitments to the Board arise most often through the application process. Many commitments are included within the text of accompanying Board orders or letters transmitted to the applicants. Commitments can also arise through the supervisory process. Commitments should be specific and furnished in written form.

The most common type involves a commitment to inject capital (either equity or debt capital) into the company or subsidiary to be acquired or possibly into other subsidiaries of the bank holding company. The required injections may be for a specific dollar amount or for an unspecified amount necessary to achieve a predetermined capital relationship. Determining compliance with such commitments is generally not difficult since an agreed upon quantifiable result must be achieved.

Types of commitments made to the Board in the past include: divestiture of nonpermissible stock holdings or activities; introduction of new services; and reduction or elimination of dividends or management fees from subsidiaries.

Several of the above forms of commitments are rather difficult to monitor due to their inexact nature. The examiner should determine in such cases whether good faith compliance efforts have been made. Where an order approving an application imposes specific conditions, however, compliance is of the utmost importance since a conditional order is based on the theory that such conditions were necessary to eliminate or outweigh adverse factors. Willful noncompliance in these cases might necessitate

the use of cease-and-desist powers to prevent evasion of the purposes of the Act. Pursuant to the Board's request, each Reserve Bank reports semi-annually on the status of all outstanding commitments made by holding companies in its District.

2040.0.1 INSPECTION OBJECTIVES

1. To determine that the bank holding company is taking the necessary steps to fulfill any outstanding commitments as scheduled.
2. To determine whether additional commitments or conditions should be imposed to achieve complete compliance.
3. To determine whether a request for an extension of time to fulfill any outstanding commitment is warranted.

2040.0.2 INSPECTION PROCEDURES

1. Review semi-annual commitment reports to the Board for commitments fulfilled since the last inspection. Determine whether such commitments were completed as required.
2. Review with management any actions taken to comply with outstanding commitments or plans to effect fulfillment.
3. If warranted, initiate action to consider an extension for compliance on outstanding commitments.

WHAT'S NEW IN THIS REVISED SECTION

This section was updated with minor revisions that resulted from the Financial Services Relief Act of 2006 (Relief Act) and the Board's approval of a final amendment of Regulation O on May 25, 2007 (effective July 2, 2007). (See 72 Fed. Reg. 30,470, June 1, 2007.) The Relief Act eliminated certain statutory reporting and disclosure requirements pertaining to insider lending by federally insured financial institutions. Sections 215.9, 215.10, and subpart B (sections 215.20 through 215.23) of Regulation O were deleted also as a result of the changes. (See 12 U.S.C. 375a and 375b, 12 U.S.C. 1972(2), and 12 C.F.R. 215.)

2050.0.1 BHC OFFICIAL AND RELATED INTEREST TRANSACTIONS BETWEEN THE PARENT COMPANY OR ITS NONBANK SUBSIDIARIES

Business transactions between a parent bank holding company or its nonbank subsidiary and a BHC official or a BHC official's related interests require close supervisory review. "Bank holding company official" is defined as any director, executive officer, or principal shareholder of the parent company or any of its subsidiaries, excluding the subsidiary bank's nonbank subsidiaries.

Most of these transactions are soundly structured and have a legitimate business purpose that result in equitable treatment for all parties. However, examiners should pay close attention to all extensions of credit by a BHC or its nonbank subsidiary to a BHC official or related interest to ensure that the terms of the credit, particularly interest-rate and collateral terms, are not preferential and that the credit does not involve more than a normal risk of repayment.

An extension of credit by a BHC or nonbank subsidiary may be considered abusive or self-serving if its terms are unfavorable to the lender, or if the credit would not have been extended on the same terms absent the official relationship; that is, it would be improbable that each party to the credit would have entered into the credit transaction under the same terms if the relationship did not exist. When a transaction appears questionable, a complete inquiry into the facts and circumstances should be undertaken so that a legal determination can be obtained.

In addition to the above supervisory considerations, the Sarbanes-Oxley Act of 2002 (Pub. L. No. 107-204) (the act) imposed certain insider lending restrictions on public companies, including BHCs that are public companies. A BHC generally is considered a public company for these purposes if it has a class of securities registered under section 12 of the Securities Exchange Act of 1934 (the 1934 act) or is required to file reports with the Securities and Exchange Commission (SEC) under section 15 of the 1934 act. The Sarbanes-Oxley Act¹ prohibits a publicly owned BHC (public BHC) and its subsidiaries from extending credit, or arranging for another entity to extend credit, in the form of a personal loan to any director or executive officer of the public BHC.² This prohibition does not apply to any extension of credit made before July 30, 2002, so long as the loan is not renewed or materially modified after that date.

The Sarbanes-Oxley Act includes two exceptions to this loan prohibition. First and most importantly, the prohibition does not apply to any loan made by an insured depository institution that is subject to the insider lending restrictions of section 22(h) of the Federal Reserve Act, as implemented by the Board's Regulation O. Thus, loans by the insured depository institution subsidiaries of a public BHC to a director or executive officer of the BHC likely are exempt from the prohibition, although they would be subject to Regulation O as discussed below. The second exception permits the directors and executive officers of a public BHC to obtain home improvement and manufactured home loans, consumer loans, and loans under open-end credit plans or charge cards from the public BHC or its subsidiaries, so long as the credit (1) is extended in the ordinary course of the company's consumer credit business, (2) is a kind of credit generally made available to the public, and (3) is made on market terms or on terms that are no more favorable than those offered to the general public.^{2a}

1. See 15 U.S.C. 78m (section 402 of the act).

2. The act does not restrict lending by a subsidiary of a public BHC to the subsidiary's own directors and executive officers, so long as these persons are not also directors or executive officers of the public BHC.

2a. A registered broker-dealer that is a public company, or a subsidiary of a public company, also is not prohibited from providing margin credit to its employees to buy, trade, or carry securities if the credit is made in accordance with the

2050.0.2 TRANSACTIONS INVOLVING OTHER PROPERTY OR SERVICES

Other transactions involving BHC officials, their related interests, and the BHC and nonbank subsidiary that should be reviewed by the examiner include the—

1. purchase of assets or services from the BHC or nonbank subsidiary, particularly if at a discount or on preferential terms;
2. sale of assets or services to the BHC or nonbank subsidiary, particularly if at a premium;
3. lease of property to or from the BHC or nonbank subsidiary; and
4. use of BHC or nonbank subsidiary property or personnel by a BHC official or related interest.

As with loans and other extensions of credit to BHC officials on preferential terms, abusive or self-serving insider transactions involving other property or services deprive the BHC or nonbank subsidiary of higher returns or gains that may have been achieved had the same transaction been at a fair market price. A fair market price would be that price charged or received from an unaffiliated party.

A fair market price is often difficult to determine because the assets or services involved may be unique to a given situation and individuals. In general, the fair market price of even unique assets or services can be approximated by the cost of the assets or services to the party selling or furnishing them, if appropriate. The value of services or properties provided by a BHC or nonbank subsidiary should be established and justified either by policy or on a case-by-case basis, and appropriate documentation should be available to the examiner.

Services provided by a BHC official or a related interest to a BHC or nonbank subsidiary, while not unusual, may be most difficult to value. In part because of the problem of valuation, this type of transaction is among the most susceptible to abuse. The cost of providing services is frequently derived by placing value on the time of the individuals providing the services. When services are provided by a BHC

official who normally places a very high billing value on time provided, the benefits to the BHC must be assessed in order to form a basis for determining a fair price. The BHC official may be a highly regarded professional whose time and services have great value to the organization. However, when the BHC requires routine clerical services, officials should not charge the BHC a professional-level rate for such services. Under these or similar circumstances, the BHC would be considered imprudent in paying such rates and could be subject to critical comment.

2050.0.3 REGULATION O

For ease of reference, certain Regulation O definitions and limitations, as revised by the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA), are presented here, some in abbreviated form. A thorough review of the entire regulation (found at FRRS 3-960), and the Board's press releases pertaining to Regulation O, is necessary for a complete understanding of the regulation. (Note that section 108 of the Financial Institutions Regulatory Act of 1978 amended section 18(j) of the Federal Deposit Insurance Act to make section 22(h) of the Federal Reserve Act applicable to nonmember insured banks.)

Purpose of Regulation O. Regulation O governs any extension of credit by a member bank and its subsidiaries (based on amendments contained in FDICIA, Regulation O also applies to nonmember insured depository institutions) to an executive officer, director, or principal shareholder of (1) the member bank, (2) a bank holding company of which the member bank is a subsidiary, and (3) any other subsidiary of that bank holding company. It also applies to any extension of credit by a member bank to (1) a company controlled by such a person and (2) a political or campaign committee that benefits or is controlled by such a person.

Supervision of BHCs and their nonbank subsidiaries. Regulation O deals exclusively with extensions of credit by banks and their subsidiaries, not extensions of credit by BHCs and their nonbank subsidiaries. However, because the regulations curtail or eliminate abusive transactions, they can be used as a guide or model in providing standards for the supervisory review of extensions of credit by BHCs and nonbank subsidiaries. Although a direct extension of credit by a BHC could not be determined to be a *violation* of Regulation O, if

margin rules; is not made to purchase stock of the broker-dealer; and complies with the requirements set forth in (1), (2), and (3) above.

the credit fails to meet the requirements that Regulation O establishes for banks, it may be possible to conclude that the BHC is engaging in either an unsafe or unsound practice that exposes the entire banking organization to undue risk and exposure to loss. Regulation O limits credit extensions by a bank to officials of that bank and their related interests; therefore, examiners should be especially alert to credit extensions from BHCs and nonbank subsidiaries. If credit extensions appear to circumvent the intent of Regulation O, they should be identified and discussed with management and noted in the inspection report for follow-up review and possible formal corrective action by regulatory authorities.

2050.0.3.1 FDICIA and BHC Inspection Guidance for Regulation O

On April 22, 1992, the Board adopted amendments to Regulation O, effective May 18, 1992, to implement the changes required by section 306 of FDICIA. Section 306 amended section 22(h) of the Federal Reserve Act and replaced the language of section 22(h) with the provisions of the Board's Regulation O. Section 306 also made several substantive modifications to section 22(h) that required revisions to Regulation O. These changes are outlined in the Board's press release and *Federal Register* notice of May 28, 1992 (57 Fed. Reg. 22,417).

The following are some of the more significant changes that were made effective May 18, 1992:^{2b}

1. *Aggregate lending limit (section 215.4(d)).* The aggregate limit on the total amount that a bank can lend to its insiders and their related interests as a class was changed. In general, this amount is equal to the bank's unimpaired capital and unimpaired surplus. The Board also decided as a one-year interim measure to permit banks with deposits under \$100 million to adopt a higher limit, not to exceed 200 percent of the bank's unimpaired capital and unimpaired surplus. (This interim period was extended twice by the Board, extending the higher limit through February 18, 1994, when the higher limit became permanent. The board of directors must provide an annual resolution authorizing the use of this higher limit. Other conditions also apply.)

2. *Lending limits for directors and related*

interests (section 215.4(c)). Loans to directors (and their related interests) are subject to the same lending limit that is applicable to executive officers and principal shareholders (and their related interests).

3. *Credit standards (section 215.4(a)).* When lending to an insider^{2c} a bank must follow credit underwriting procedures that are as stringent as those applicable to comparable transactions by the bank with persons outside the bank.

4. *Definition of "principal shareholder" (section 215.2(m)(1)).* The definition of *principal shareholder* was tightened for banks located in small communities. The previously existing 10 percent limitation was made applicable to all banks, regardless of the size of the communities in which they were located.³

5. *Definition of "member bank" (section 215.2(j)).* The term *member bank* was redefined to include any subsidiary of the member bank. This revision clarified that an extension of credit from a subsidiary of a member bank is subject to the same insider restrictions as an extension of credit from a member bank itself.

6. *Coverage of all companies that own banks (section 215.2(b)).* All companies that own banks became subject to Regulation O, regardless of whether they are technically bank holding companies.

7. *Prohibition on knowingly receiving unauthorized extensions of credit (section 215.6).* Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extension of credit not authorized by section 22(h) of the Federal Reserve Act.

8. *Reporting requirement for certain credit (section 215.12).* Executive officers and directors of member banks that do not have publicly traded stock are required to report annually to their institutions the outstanding amount of

2c. The term *insider* refers to an executive officer, director, or principal shareholder, and includes any related interest of such a person.

3. The Board amended the definition of *principal shareholder of a member bank*, effective December 17, 1992, so that it does not include a company of which a member bank is a subsidiary. This amendment excludes from Regulation O loans to a company that owns, controls, or exercises a controlling influence over a member bank, as those relationships are defined in section 2(d) of the Bank Holding Company Act, as well as the related interests of such a parent bank holding company. The definition of *principal shareholder* for purposes of reporting obligations under section 215.11 of Regulation O was not changed as a result of the Housing and Community Development Act of 1992 because those portions of Regulation O implement provisions of law in addition to section 22(h) of the Federal Reserve Act.

2b. The Regulation O cites are to the February 18, 1994, amendment.

any credit secured by shares of the insider's institution.

In a February 18, 1994, press release, the Federal Reserve Board announced its approval of a final rule that further amended several provisions of Regulation O, effective on that date. Some of the provisions carried out or further refined provisions of FDICIA. The amendments were designed to increase the ability of banks to make extensions of credit that pose minimal risk of loss, to eliminate record-keeping requirements that impose a paperwork burden, and to remove certain transactions from the regulation's coverage consistent with bank safety and soundness. The amendments were expected to increase the availability of credit, particularly in communities served by small banks. The following is a discussion of some of the rule's primary provisions.

1. *Aggregate lending limit—exception for small, adequately capitalized banks (section 215.4(d)).* This revision of Regulation O made permanent an interim rule increasing the aggregate lending limit for small, adequately capitalized banks from 100 percent of the bank's unimpaired capital surplus to 200 percent, provided the bank satisfies three conditional criteria.

2. *Exceptions to the general limits on lending (section 215.4(d)(3)).* The Board adopted certain exceptions to the general restrictions on lending to insiders. The exceptions apply to loans fully secured by—

a. obligations of the United States or other obligations fully guaranteed as to principal and interest by the United States;

b. commitments or guarantees of a department or agency of the United States; or

c. a segregated deposit account with the lending bank.

An exception is also made for loans arising from the discount of installment consumer paper by an insider with full or partial recourse endorsement or guarantee by the insider, if the maker of the paper is not an insider and the loan was made relying primarily on the maker and this is properly documented. Such loans continue to be subject to the prohibitions against preferential lending.

3. *Including closing costs in the refinancing of home mortgage loans (section 215.5(c)(2)).* Section 22(g) of the Federal Reserve Act allows a bank to make a loan to its executive officer, without restrictions on the amount, if the loan is secured by a first lien on a dwelling that is

owned and used by the executive officer as a residence after the loan is made. The Board's amendment includes the refinancing of home mortgage loans in this category only if the proceeds are used to pay off the previous home mortgage loan or for the other purposes listed in this section. The regulation states that closing costs can be included as part of the exempt portion of a home mortgage refinancing.

4. *Alternative recordkeeping procedures (section 215.8).* Banks are permitted to follow alternative recordkeeping procedures on loans to insiders of affiliates. The amendment allows a bank to decide on its own how to gather information on related interests, so long as its method is effective. For example, a nonbank credit card bank or other bank that does not make commercial loans could decide not to keep records on related interests. For banks that make commercial loans, one of two acceptable methods is required, unless a bank can demonstrate that another method is equally effective: (a) the "survey" method or (b) the "borrower inquiry" method. Every bank, regardless of the record-keeping method it selects, must conduct an annual survey to identify *its own insiders*, but not those of its holding company affiliates. Every bank is expected to check this short list before extending credit, even if it is using the borrower-inquiry method of recordkeeping for affiliates in lieu of the survey method.

5. *Tangible-economic-benefit rule (section 215.3(f)).* This rule was similar to a provision in section 23A of the Federal Reserve Act and was adopted at a time when the Board was required by section 22(h) of the Federal Reserve Act to use the definition of "extension of credit" found in section 23A. However, the definition of extension of credit in section 22(h) is no longer tied to section 23A. The Board has therefore revised the tangible-economic-benefit rule to clarify that it does not reach certain transactions that may benefit an insider. The Board explicitly provided that the rule does not apply to an arm's-length extension of credit by a bank to a third party where the proceeds of the credit are used to finance the bona fide acquisition of property, goods, or services from an insider or an insider's related interest.

2050.0.3.2 Definitions in Regulation O (abbreviated listing)

Note: Regulation O definitions, prohibitions, exceptions, and exemptions are particularly detailed and complex. Therefore, inspection staff should consult with Reserve Bank or Board

supervisory or legal staff before discussing with management or presenting in an inspection report any BHC inspection findings that rely upon Regulation O.

(a) “Affiliate” means any company of which a member bank is a subsidiary or any other subsidiary of that company.

(b) “Company” means any corporation, partnership, trust (business or otherwise), association, joint venture, pool syndicate, sole proprietorship, unincorporated organization, or any other form of business entity. The term, however, does not include (1) an insured bank (as defined in 12 U.S.C. 1813) or (2) a corporation the majority of the shares of which are owned by the United States or by any state.

(c)(1) “Control of a company or bank” means that a person directly or indirectly, or acting through or in concert with one or more persons (i) owns, controls, or has the power to vote 25 percent or more of any class of voting securities of the company or bank; (ii) controls in any manner the election of a majority of the directors of the company or bank; or (iii) has the power to exercise a controlling influence over the management or policies of the company or bank. (Note: If a company does not have voting securities (that is, a partnership), review the degree of interest in the company to determine control.)

(2) A person is presumed to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank if (i) the person is an executive officer or director of the company or bank and directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank or (ii) the person directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank, and no other person owns, controls, or has the power to vote a greater percentage of that class of voting securities.

(3) An individual is not considered to have control, including the power to exercise a controlling influence over the management or policies, of a company or bank solely by virtue of the individual’s position as an officer or director of the company or bank.

(d) “Director” of a company or bank means any director of the company or bank, whether or not receiving compensation.^{3a} An advisory

director is not considered a director if the advisory director (1) is not elected by the shareholders of the bank or company, (2) is not authorized to vote on matters before the board of directors, and (3) provides solely general policy advice to the board of directors.

(e)(1) “Executive officer” of a company or bank means a person who participates or has authority to participate (other than in the capacity of a director) in major policymaking functions of the company or bank, whether or not the officer has an official title; the title designates the officer an assistant; or the officer is serving without salary or other compensation.⁴ The chairman of the board, the president, every vice president, the cashier, the secretary, and the treasurer of a company or bank are considered executive officers, unless the officer is excluded, by resolution of the board of directors or by the bylaws of the bank or company, from participation (other than in the capacity of a director) in major policymaking functions of the bank or company, and the officer does not actually participate therein.

(2) Extensions of credit to an executive officer of an affiliate of a member bank (other than a company that controls the bank) are not

extensions of credit (section 215.6), and the alternative record-keeping procedures (section 215.8) if—

(1) the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the director does not actually participate in those functions;

(2) the affiliate does not control the bank; and

(3) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the director of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the director of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (1) include the director (by name or by title) in a list of persons excluded from participation in such functions or (2) not include the director in a list of persons authorized (by name or by title) to participate in such functions.

4. The term “executive officer” is not intended to include persons who may have official titles and may exercise a certain measure of discretion in the performance of their duties, including discretion in the making of loans, but who do not participate in determining major policies of the bank or company and whose decisions are limited by policy standards fixed by the senior management of the bank or company. For example, the term does not include a manager or assistant manager of a branch of a bank unless that individual participates, or is authorized to participate, in major policymaking functions of the bank or company.

3a. Extensions of credit to a director of an affiliate of a bank are not subject to the general prohibitions (section 215.4), the prohibitions on knowingly receiving unauthorized

subject to sections 215.4, 215.6, and 215.8 of Regulation O if—

(i) the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, and the executive officer does not actually participate in those functions;

(ii) the affiliate does not control the bank; and

(iii) as determined annually, the assets of the affiliate do not constitute more than 10 percent of the consolidated assets of the company that controls the bank and is not controlled by any other company, and the executive officer of the affiliate is not otherwise subject to sections 215.4, 215.6, and 215.8 of Regulation O.

If the executive officer of the affiliate is excluded, by resolution of the board of directors or by the bylaws of the bank, from participation in major policymaking functions of the bank, a resolution of the board of directors or a corporate bylaw may (i) include the executive officer (by name or by title) in a list of persons excluded from participation in such functions or (ii) not include the executive officer in a list of persons authorized (by name or by title) to participate in such functions.

(f) “Immediate family” means the spouse of an individual, the individual’s minor children, and any of the individual’s children (including adults) residing in the individual’s home.

(g) “Insider” means an executive officer, director, principal shareholder, and any related interest of such person.

(h) The “lending limit” for a member bank is an amount equal to the limit on loans to a single borrower established by section 5200 of the Revised Statutes,⁵ 12 U.S.C. 84. This amount is 15 percent of the bank’s unimpaired capital and unimpaired surplus in the case of loans that are not fully secured, and an additional 10 percent of the bank’s unimpaired capital and unimpaired surplus in the case of loans that are fully secured by readily marketable collateral having a market value, as determined by reliable and continuously available price quotations, at least equal to the amount of the loan. The lending limit also includes any higher

amounts that are permitted by section 5200 of the Revised Statutes for the types of obligations listed therein as exceptions to the limit.

A member bank’s *unimpaired capital and unimpaired surplus* equals the (1) member bank’s tier 1 and tier 2 capital included in the bank’s risk-based capital, under the capital guidelines of the appropriate federal banking agency, and (2) balance of the member bank’s allowance for loan and lease losses that was not included in the bank’s tier 2 capital. This computation is based on the bank’s risk-based capital under the capital guidelines of the appropriate federal banking agency, based on the bank’s most recent consolidated report of condition filed under 12 U.S.C. 1817(a)(3).

(i) “Member bank” means any banking institution that is a member of the Federal Reserve System, including any subsidiary of a member bank. The term does not include any foreign bank that maintains a branch in the United States, whether or not the branch is insured (within the meaning of 12 U.S.C. 1813(s)) and regardless of the operation of 12 U.S.C. 1813(h) and 12 U.S.C. 1828(j)(3)(B).

(j) “Person” means an individual or a company.

(k) “Principal shareholder”⁶ means an individual or a company (other than an insured bank) that directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has the power to vote more than 10 percent of any class of voting securities of a member bank or company. Shares owned or controlled by a member of an individual’s immediate family are considered to be held by the individual. A principal shareholder of a member bank includes (1) a principal shareholder of a company of which the member bank is a subsidiary and (2) a principal shareholder of any other subsidiary of that company, exclusive of nonbank subsidiaries of member banks.

(l) “Related interest” means (1) a company that is controlled by a person or (2) a political or campaign committee that is controlled by a person or the funds or services of which will benefit a person.

5. Where state law establishes a lending limit for a state member bank that is lower than the amount permitted in section 5200 of the Revised Statutes, the lending limit established by the applicable state laws shall be the lending limit for the state member bank.

6. On October 28, 1992, in section 955 of the Housing and Community Development Act of 1992, Congress amended section 22(h) of the Federal Reserve Act to exclude from the definition of *principal shareholder* a company of which a member bank is a subsidiary. Regulation O was amended, effective December 17, 1992, to implement this change. As a result of the amendment, extensions of credit by a bank to its holding company and to any related interests of its subsidiary are governed solely by sections 23A and 23B of the Federal Reserve Act.

(m) “Subsidiary” has the meaning given in section 2(d) of the BHC Act, but does not include a subsidiary of a member bank.

bank or similar organization or (ii) foreclosure on collateral or similar proceeding for the protection of the bank, provided that such indebtedness is not held for a period of more than three years from the date of the acquisition, subject to

2050.0.3.2.1 Extension of Credit

For the purposes of Regulation O, an “extension of credit” is a making or renewal of any loan, a granting of a line of credit, or an extending of credit in any manner whatsoever, and includes—

(1) a purchase under repurchase agreement of securities, other assets, or obligations;

(2) an advance by means of an overdraft, cash item, or otherwise;

(3) issuance of a standby letter of credit (or other similar arrangement regardless of name or description) or an ineligible acceptance;

(4) an acquisition by discount, purchase, exchange, or otherwise of any note, draft, bill of exchange, or other evidence of indebtedness upon which an insider may be liable as maker, drawer, endorser, guarantor, or surety;

(5) an increase of an existing indebtedness, but not if the additional funds are advanced by the bank for its own protection for (i) accrued interest or (ii) taxes, insurance, or other expenses incidental to the existing indebtedness;

(6) an advance of unearned salary or other unearned compensation for a period in excess of 30 days; and

(7) any other similar transaction as a result of which a person becomes obligated to pay money (or its equivalent) to a bank, whether the obligation arises directly or indirectly, or because of an endorsement on an obligation or otherwise, or by any means whatsoever.

An extension of credit *does not* include—

(1) an advance against accrued salary or other accrued compensation, or an advance for the payment of authorized travel or other expenses incurred or to be incurred on behalf of the bank;

(2) a receipt by a bank of a check deposited in or delivered to the bank in the usual course of business unless it results in the carrying of a cash item for or the granting of an overdraft (other than an inadvertent overdraft in a limited amount that is promptly repaid under terms that are not more favorable than those offered to the general public).

(3) an acquisition of a note, draft, bill of exchange, or other evidence of indebtedness through (i) a merger or consolidation of banks or a similar transaction by which a bank acquires assets and assumes liabilities of another

extension by the appropriate federal banking agency for good cause;

(4)(i) an endorsement or guarantee for the protection of a bank of any loan or other asset previously acquired by the bank in good faith or (ii) any indebtedness to a bank for the purpose of protecting the bank against loss or of giving financial assistance to it;

(5) indebtedness of \$15,000 or less arising by reason of any general arrangement by which a bank (i) acquires charge or time credit accounts or (ii) makes payments to or on behalf of participants in a bank credit card plan, check credit plan, or similar open-end credit plan, provided—

(A) the indebtedness does not involve prior individual clearance or approval by the bank other than for the purposes of determining authority to participate in the arrangement and compliance with any dollar limit under the arrangement, and

(B) the indebtedness is incurred under terms that are not more favorable than those offered to the general public;

(6) indebtedness of \$5,000 or less arising by reason of an interest-bearing overdraft credit plan (see Regulation O, section 215.4(e)); or

(7) a discount of promissory notes, bills of exchange, conditional sales contracts, or similar paper, without recourse.

Non-interest-bearing deposits to the credit of a bank are not considered loans, advances, or extensions of credit to the bank of deposit. Also, the giving of immediate credit to a bank upon collected items received in the ordinary course of business is not considered to be a loan, advance, or extension of credit to the depositing bank.

An extension of credit by a member bank (for the purposes of section 215.4 of Regulation O) is considered to have been made at the time the bank enters into a binding commitment to make the extension of credit. A participation without recourse is considered to be an extension of credit by the participating bank, not by the originating bank.

Tangible-economic-benefit rule. In general, an extension of credit is considered made to an insider to the extent that the proceeds are transferred to the insider or are used for the tangible economic benefit of the insider. An extension of credit is not considered made to an insider if—

(1) the credit is extended on terms that would satisfy the standard set forth in section 215.4(a) of Regulation O for extensions of credit to insiders and

(2) the proceeds of the extension of credit are used in a bona fide transaction to acquire property, goods, or services from the insider.

2050.0.3.2.2 *Insider Use of a Bank-Owned Credit Card*

Board staff issued a May 22, 2006, legal opinion in response to an FDIC request for clarification on the application of the Board's Regulation O (12 CFR 215) to credit cards that are issued to bank insiders for the bank's business purposes.⁷ The FDIC asked whether, and under what circumstances, an insider's use of a bank-owned credit card would be deemed an extension of credit by the bank to the insider for purposes of Regulation O.

The FDIC indicated that insiders of a bank often use a bank-owned credit card to purchase goods and services for the bank's business purposes. A bank-owned credit card is a credit card that is issued by a third-party financial institution to a bank to enable the bank (through its employees) to finance the purchase of goods and services for the bank's business. Board staff commented that it was understood that (1) a bank that provides a bank-owned credit card to its employees typically forbids or discourages use of the card by employees for their personal purposes and that an employee who uses the card for personal purposes is obligated to promptly reimburse the bank and (2) a bank is liable to the card-issuing institution for all extensions of credit made under the card (whether for the bank's business purposes or for an employee's personal purposes)⁸.

Although section 215.3(a) of Regulation O broadly defines an extension of credit to include "a making or renewal of a loan, a granting of a line of credit, or an extending of credit in any manner whatsoever," the rule also provides several important exceptions to the definition that are relevant to the FDIC's inquiry. Section 215.3(b)(1) of Regulation O excludes from the

7. The provisions of Regulation O apply to a bank holding company of which a member bank is a subsidiary, and any other subsidiary of that bank holding company. (See 2050.0.3.)

8. In the responding letter, Board legal staff notes that it was understood that some banks directly issue credit cards to their employees to enable the employees to finance the purchase of goods and services for the bank's business (bank-issued credit cards). Also, the letter states that the principles set forth with regard to bank-owned credit cards also would apply to bank-issued credit cards.

definition of extension of credit any advance by a bank to an insider for the payment of authorized or other expenses incurred or to be incurred on behalf of the bank. Also, section 215.3(b)(5) of Regulation O excludes from the definition of extension of credit indebtedness of up to \$15,000 incurred by an insider with a bank under an ordinary credit card.

Considering the provisions of Regulation O and the purposes of the insider lending restrictions in the Federal Reserve Act, Board legal staff opined that a bank does not make an extension of credit to an insider for purposes of Regulation O at the time of issuance of a bank-owned credit card to the insider (regardless of whether the line of credit associated with the card is greater than \$15,000). The opinion states also that a bank does not extend credit to an insider for the purposes of Regulation O when the insider uses the card to purchase goods or services for the bank's business purposes. However, when an insider uses the card to purchase goods or services for the insider's personal purposes, the bank may be making an extension of credit to the insider. The opinion states that an extension of credit would occur for the purposes of Regulation O if—and to the extent that—the amount of outstanding personal charges made to the card, when aggregated with all other indebtedness of the insider that qualifies for the credit card exception in section 215.3(b)(5) of Regulation O, exceeds \$15,000.

The FDIC also asked whether incidental personal expenses charged by an insider to a bank-owned credit card are per se violations of the market-terms requirement in section 215.4(a) of Regulation O because non-insiders do not have access to this form of credit from the bank. In response, Board staff stated that section 215.4(a) requires extensions of credit by a bank to its insiders to (1) be on substantially the same terms (including interest rates and collateral) as, and subject to credit underwriting standards that are not less stringent than, those prevailing at the time for comparable transactions with non-insiders and (2) not involve more than the normal risk of repayment or other features unfavorable to the bank.

The opinion states that a bank may be able to satisfy the market-terms requirement, however, if the bank approves an insider for use of a bank-owned credit card only (1) if the insider meets the bank's normal credit underwriting standards and (2) the card does not have preferential terms (or the card does not have preferen-

tial terms in connection with uses of the card for personal purposes). Nonetheless, use of a bank-owned credit card by an insider for personal purposes may violate the market-terms requirement of Regulation O if the card carries a lower interest rate or permits a longer repayment period than comparable consumer credit offered by the bank.

The Board staff's legal opinion applies only to the specific issues and circumstances described in the letter and does not address any other issues or circumstances.

2050.0.3.3 General Prohibitions and Limitations of Regulation O

(a) *Terms and creditworthiness.* No member bank may extend credit to any insider of the bank or insider of its affiliates unless the extension of credit (1) is made on substantially the same terms (including interest rates and collateral) as, and following credit-underwriting procedures that are not less stringent than, those prevailing at the time for comparable transactions by the bank with other persons that are not covered by Regulation O and who are not employed by the bank and (2) does not involve more than the normal risk of repayment or present other unfavorable features.

Nothing stated above (as to "terms and creditworthiness") should prohibit any extension of credit made in accordance with a benefit or compensation program that—

1. is widely available to employees of the member bank, and in the case of extensions of credit to an insider of its affiliates, is widely available to employees of the affiliates at which that person is an insider and

2. does not give preference to any insider of the member bank over other employees of the member bank and, in the case of extensions of credit to an insider of its affiliates, does not give preference to any insider of its affiliates over other employees of the affiliates of which that person is an insider.

(b) *Prior approval.* A member bank may not extend credit (including granting a line of credit) to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit to that person and to all related interests of that person, exceeds the higher of \$25,000 or 5 percent of the member bank's unimpaired capital and unimpaired surplus, but in no event can it exceed \$500,000. This provision applies unless (1) the extension of credit or line of credit has been approved in advance by a majority of the

entire board of directors of that bank and (2) the interested party has abstained from participating directly or indirectly in the voting.

The board of directors' approval is not required for an extension of credit that is made pursuant to a line of credit that was approved by the board of directors within 14 months of the date of the extension of credit. Participation in the discussion, or any attempt to influence the voting, by the board of directors regarding an extension of credit constitutes indirect participation in the voting by the board of directors on an extension of credit.

(c) *Individual lending limit.* A member bank may not extend credit to any insider of the bank or insider of its affiliates in an amount that, when aggregated with the amount of all other extensions of credit by the member bank to that person and to all related interests of that person, exceeds the lending limit described above in section 2050.0.3.2 (paragraph h). This prohibition does not apply to an extension of credit by a member bank to a company of which the member bank is a subsidiary or to any other subsidiary of that company.

(d) *Aggregate lending limit.*

(1) *General limit.* A member bank may not extend credit to any insider of the bank or insider of its affiliates unless the extension of credit is in an amount that, when aggregated with all outstanding extensions of credit to all such insiders, would exceed the bank's unimpaired capital and unimpaired surplus as defined in section 215.2(i) of Regulation O (see section 2050.0.3.2, paragraph h).

(2) A member bank with deposits of less than \$100,000,000 may, by an annual resolution of its board of directors, increase the general limit (specified above) to a level that does not exceed two times the bank's unimpaired capital and unimpaired surplus if the board of directors determines that such higher limit is consistent with prudent, safe, and sound banking practices in light of the bank's experience in lending to its insiders and is necessary to attract or retain directors or to prevent the restriction of the availability of credit in small communities.

The board of directors' resolution must set forth the facts and reasoning on which it bases its finding, including the amount of the bank's lending to its insiders as a percentage of the bank's unimpaired capital and unimpaired surplus as of the date of the resolution. In addition, the bank must meet or exceed, on a fully phased-in basis, all applicable capital requirements established by the appropriate federal banking agency. The bank would also have had to receive a satisfactory composite rating in its

most recent bank examination report.

If a member bank has adopted a resolution authorizing a higher limit and subsequently fails to meet the above-listed requirements, the member bank cannot extend any additional credit (including a renewal of any existing extension of credit) to any insider of the bank or its affiliates unless the extension or renewal is consistent with the general limit.

(3) *Exceptions to the general limit.* Effective May 3, 1993, the general limit, described in manual section 2050.0.3.3 (paragraph d) and specified in section 215.4(d)(1) of the Board's Regulation O does not apply to—

(i) extensions of credit secured by a perfected security interest in bonds, notes, certificates of indebtedness, or Treasury bills of the United States or in other such obligations fully guaranteed as to principal and interest by the United States;

(ii) extensions of credit to or secured by unconditional takeout commitments or guarantees of any department, agency, bureau, board, commission, or establishment of the United States or any corporation wholly owned directly or indirectly by the United States;

(iii) extensions of credit secured by a perfected security interest in a segregated deposit account in the lending bank; or

(iv) extensions of credit arising from the discount of negotiable installment consumer paper that is acquired from an insider and carries a full or partial recourse endorsement or guarantee by the insider;⁹ provided that—

(A) the financial condition of each maker of such consumer paper is reasonably documented in the bank's files or known to its officers;

(B) an officer of the bank designated for that purpose by the board of directors of the bank certifies in writing that the bank is relying primarily upon the responsibility of each maker for the payment of the obligation and not upon any endorsement or guarantee by the insider; and

(C) the maker of the instrument is not an insider.

(e) *Overdrafts.* A member bank may not pay an overdraft of an executive officer or director of the bank¹⁰ on an account at the bank, unless

9. The exceptions to the aggregate lending limit pertaining to extensions of credit secured in the manner described above (i through iii) apply only to the amounts of such extensions of credit that are secured in such manner.

10. This prohibition does not apply to the payment by a

the payment of funds is made in accordance with (1) a written, preauthorized, interest-bearing extension of credit plan that specifies a method of repayment or (2) a written, preauthorized transfer of funds from another account of the account holder at the bank.

The prohibition above does not apply to payment of inadvertent overdrafts on an account in an aggregate amount of \$1,000 or less, provided (1) the account is not overdrawn for more than five business days and (2) the member bank charges the executive officer or director the same fee charged any other customer of the bank in similar circumstances.¹¹

2050.0.3.4 Additional Restrictions on Loans to Executive Officers of Member Banks

The following restrictions on extensions of credit by a member bank to any of its executive officers are in addition to any restrictions on extensions of credit by a member bank to insiders of itself or its affiliates. The restrictions listed below apply only to the executive officers of the member bank and not to the executive officers of its affiliates.

A member bank may not extend credit to any of its executive officers, and no executive officer of a member bank can borrow from or otherwise become indebted to the bank, except in the amounts, for the purposes, and upon the conditions specified in items 3 and 4 below.

A member bank is authorized to extend credit to any executive officer of the bank—

(1) in any amount to finance the education of the executive officer's children;

(2) in any amount to finance or refinance the purchase, construction, maintenance, or improvement of a residence of the executive officer, provided—

(i) the extension of credit is secured by a first lien on the residence and the residence is

member bank of an overdraft of a principal shareholder of the member bank, unless the principal shareholder is also an executive officer or director. This prohibition also does not apply to the payment by a member bank of an overdraft of a related interest of an executive officer, director, or principal shareholder of the member bank.

11. The requirement that the member bank charge the executive officer or director the same fee charged any other customer of the bank in similar circumstances does not prohibit the member bank from charging a fee provided for in a benefit or compensation program that satisfies the requirements detailed in section 2050.0.3.3, item (a).

owned (or expected to be owned after the extension of credit) by the executive officer; and

(ii) in the case of refinancing, that only the amount used to repay the original extension of credit, together with the closing costs of the refinancing, and any additional amount thereof used for any of the purposes enumerated in item 2 above, are included within this category of credit;

(3) in any amount, if the extension of credit is secured in a manner described in the first three exceptions to the general limit of the aggregate lending limit (see section 2050.0.3.3, paragraph d, subparagraphs i to iii); and

(4) for any other purpose (not specified in items 1 through 3 above), if the aggregate amount of loans to that executive officer does not exceed, at any one time, the higher of 2.5 percent of the bank's unimpaired capital and unimpaired surplus or \$25,000, but in no event more than \$100,000.

Any extension of credit by a member bank to any of its executive officers must be—

(1) promptly reported to the member bank's board of directors,

(2) in compliance with the general prohibitions of section 215.4 of Regulation O (manual section 2050.0.3.3),

(3) preceded by the submission of a current detailed financial statement of the executive officer, and

(4) made subject to the condition in writing that the extension of credit will, at the option of the member bank, become due and payable at any time that the officer is indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit that may be made available by a member bank to any of its executive officers.

No member bank may extend credit in an aggregate amount greater than the amount permitted for general-purpose loans to an executive officer (section 215.5(c)(4) of Regulation O) to a partnership in which one or more of the bank's executive officers are partners and, either individually or together, hold a majority interest. The total amount of credit extended by a member bank to such partnership is considered to be extended to each executive officer of the member bank who is a member of the partnership.

Prohibition on knowingly receiving unauthorized extensions of credit. Insiders are prohibited from knowingly receiving (or permitting their related interests to receive) any extensions of credit not authorized by section 22(h) of the Federal Reserve Act and by Regulation O.

2050.0.3.5 Grandfathering Provisions

(a) *Under FDICIA.* FDICIA provided that the amendments to Regulation O would not affect extensions of credit entered into on or before the effective date of the regulation. Therefore, extensions of credit, including lines of credit, made on or before May 18, 1992, are not required to comply with either the individual-borrower limit made applicable to directors and their related interests, or with the aggregate limit on all loans to insiders. All extensions of credit, loan renewals, and loan rollovers made after May 18, 1992, must comply with all of the provisions of Regulation O. In other words, banks cannot make new loans or renew outstanding extensions of credit in amounts that, when aggregated with all other outstanding loans to insiders, would exceed either of the new limits.

(b) *Extensions of credit outstanding on March 10, 1979.* Any extension of credit that was outstanding on March 10, 1979, and that would have, if made on or after March 10, 1979, violated the individual lending limit, had to be reduced in amount by March 10, 1980, to be in compliance with the aggregate lending limit of Regulation O. Any renewal or extension of such a credit extension on or after March 10, 1979, must have been made only on terms that would have brought it into compliance with the aggregate lending limit by March 10, 1980. However, any extension of credit made before March 10, 1979, that bears a specific maturity date of March 10, 1980, or later, had to be repaid in accordance with the repayment schedule in existence on or before March 10, 1979.

2050.0.3.6 Reports by Executive Officers

Each executive officer of a member bank who becomes indebted to any other bank or banks in an aggregate amount greater than the amount specified for a category of credit in section 215.5(c) of Regulation O (manual section 2050.0.3.4) must make a written report to the board of directors of the officer's bank within 10 days of the date the indebtedness reaches such a level. The report must state the lender's name, the date and amount of each extension of credit, any security for it, and the purposes for which the proceeds have been or are to be used.

Report on credit secured by BHC stock. In addition to the report required above, each executive officer or director of a member bank the shares of which are not publicly traded must report annually to the bank's board of directors

the outstanding amount of any credit that was extended to the executive officer or director that is secured by shares of the member bank. (See also Regulation Y section 225.4(f) for the identical restriction on executive officers and directors of a bank holding company with loans secured by shares of the bank holding company.)

2050.0.3.7 Report on Credit to Executive Officers

Each member bank must include with (but not as part of) each report of condition (and copy thereof) filed pursuant to 12 U.S.C. 1817(a)(3) a report of all extensions of credit made by the member bank to its executive officers since the date of the bank's previous report of condition.

2050.0.3.8 Disclosure of Credit from Member Banks to Executive Officers and Principal Shareholders

(a) *Definitions.* For the purposes of this section, the following definitions apply:

(1) "Principal shareholder of a member bank" means a person (individual or a company), other than an insured bank, or branch or representative office of a foreign bank as defined in 12 U.S.C. 3101(7)¹² that, directly or indirectly, or acting through or in concert with one or more persons, owns, controls, or has power to vote more than 10 percent of any class of voting securities of the member bank or company. The term includes an individual or company that controls a principal shareholder (for example, a person that controls a bank holding company). Shares of a bank (including a foreign bank), bank holding company, or other company owned or controlled by a member of an individual's immediate family are considered to be held or controlled by the individual for the purposes of determining principal shareholder status.¹³

12. A *foreign bank* means any company organized under the laws of a foreign country, a territory of the United States, Puerto Rico, Guam, American Samoa, or the Virgin Islands that engages in the business of banking, or any subsidiary or affiliate, organized under such laws, of any such company. This includes foreign commercial banks, foreign merchant banks, and other foreign institutions that engage in banking activities usual in connection with the business of banking in the countries where such foreign institutions are organized or operating.

13. See footnote 3.

(2) “Related interest” means (i) any company controlled by a person; or (ii) any political or campaign committee the funds or services of which will benefit a person or that is controlled by a person. A related interest does not include a bank or a foreign bank (as defined in 12 U.S.C. 3101(7)).

(b) *Public disclosure.* Upon receipt of a written request from the public, a member bank shall make available the names of each of its executive officers (with the exception of any executive officer of a bank holding company of which the member bank is a subsidiary or of any other subsidiary of that bank holding company unless the executive officer is also an executive officer of the member bank) and each of its principal shareholders to whom, or to whose related interests, the member bank had outstanding at the end of the latest previous quarter of the year, an extension of credit that, when aggregated with all other outstanding extensions of credit at that time from the member bank to such person and to all related interests of such person, equaled or exceeded 5 percent of the member bank’s capital and unimpaired surplus or \$500,000, whichever amount is less. No disclosure under this paragraph is required if the aggregate amount of all extensions of credit outstanding at that time from the member bank to the executive officer or principal shareholder of the member bank and to all related interests of such a person does not exceed \$25,000.

A member bank is not required to disclose the specific amounts of individual extensions of credit.

(c) *Maintaining records.* Each member bank is required to maintain records of all requests for the information described above and the disposition of the requests. These records may be disposed of two years after the date of the request.

2050.0.3.9 Civil Penalties of Regulation O

Any member bank, or any officer, director, employee, agent, or other person participating in the conduct of the affairs of the bank, that violates any provision of Regulation O is subject to a civil penalty, as specified in section 29 of the Federal Reserve Act.

2050.0.3.10 Records of Member Banks (and BHCs)

To help inspection and examination personnel identify BHC officials, Regulation O requires each member bank to maintain records necessary to monitor compliance with this regulation. BHCs and nonbank subsidiaries should be given access to the records identifying “bank officials.” Each state member bank is required to (1) identify, through an annual survey, all insiders of the bank itself; and (2) maintain records of all extensions of credit to insiders of the bank itself, including the amount and terms of each such extension of credit.

2050.0.3.10.1 *Recordkeeping for Insiders of the Member Bank’s Affiliates*

A member bank is required to maintain records of extensions of credit to insiders of the member bank’s affiliates by—

(1) a “survey” method, which identifies, through an annual survey, each of the insiders of the member bank’s affiliates. Under the survey method, the member bank must maintain records of the amount and terms of each extension of credit by the member bank to such insiders or

(2) a “borrower inquiry” method, which requires, as part of each extension of credit, the borrower to indicate whether the borrower is an insider of an affiliate of the member bank. Under this method, the member bank must maintain records that identify the amount and terms of each extension of credit by the member bank to borrowers so identifying themselves.

Alternative recordkeeping method for insiders of affiliates. A member bank may use a recordkeeping method other than those identified above if the appropriate federal banking agency determines that the bank’s method is at least as effective.

2050.0.3.10.2 *Special Rule for Noncommercial Lenders*

A member bank that is prohibited by law or by an express resolution of the bank’s board of directors from making an extension of credit to any company, or other entity that is covered by Regulation O as a company, is not required to maintain any records of the related interests of the insiders of the bank or its affiliates. The bank is also not required to inquire of borrowers

whether they are related interests of the insiders of the bank or its affiliates.

2050.0.3.11 Section 23A Ramifications

Loans to a holding company parent and its affiliates are governed by section 23A of the Federal Reserve Act and are not subject to Regulation O.

2050.0.4 REMEDIAL ACTION

Self-serving and abusive transactions deprive a BHC of opportunities and benefits that may otherwise have been available and may strip a BHC of its ability to serve as a source of financial and managerial strength to its subsidiary banks. Even if not extended on preferential terms, self-serving loans and other extensions of credit to insiders may be an imprudent business practice and may reduce the lender's liquidity or otherwise overextend the BHC. In such situations, formal or informal remedial measures by the Federal Reserve may be necessary. Formal enforcement action is provided for in the 1974 amendments to the Financial Institutions Supervisory Act of 1966 (12 U.S.C. 1818), which grant the Board authority to issue cease-and-desist orders in appropriate situations. For complete details on formal corrective actions, see section 2110.0.

2050.0.5 INSPECTION OBJECTIVES

1. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries are based on preferential treatment.
2. To determine if any transactions between BHC officials, their related interests, and the BHC or its nonbank subsidiaries result in any undue loss exposure to the BHC or its subsidiaries.
3. To determine if any BHC or nonbank extension of credit to a BHC official or related interest is in the spirit of Regulation O's requirements or whether it is an attempt to circumvent Regulation O's prohibition on various bank extensions of credit to similar parties.
4. To determine that BHC officials are aware of Regulation O's limitations and prohibitions and have established internal policies and procedures for the bank subsidiaries to ensure compliance by the banks.

5. To determine that the BHC has arranged to make available, upon request, a listing or some other form of information sufficient to identify all "BHC officials" and to make certain that such information is available to the bank subsidiaries in particular.

2050.0.6 INSPECTION PROCEDURES

1. Review the balance sheets and other records of the parent-only and nonbank subsidiaries to determine if there are any loans or other extensions of credit to BHC officials.
2. Review the income statements and supporting records of the parent-only and nonbank subsidiaries to determine if any interest income, other income, or expense is associated with a transaction with a BHC official or a related interest.
3. Ask management to identify all such transactions and to provide supporting documentation.
4. Review management's familiarity with Regulation O's limitations and the steps they have taken to establish policies for the internal administration of their subsidiary banks' extensions of credit to BHC officials.
5. Review any information prepared by management that presents a listing of all BHC officials and their related interests.
6. Review any corporate resolutions declaring an individual not to be an "executive officer" for purposes of Regulation O and, if necessary, confirm the individual's nonparticipation in the formulation of corporate policy.
7. As the provision of Regulation O apply to the BHC and its subsidiaries, determine if the BHC provides employees or other insiders with extensions of credit, including BHC-owned or BHC-issued credit cards. Find out if any of the credit cards are used to conduct the BHC's business.
 - a. Verify that the BHC has a written policy that forbids or discourages an employee or other insider from using a BHC-owned or BHC-issued credit card for the insider's personal purposes and that the policy obligates the insider to promptly make reimbursement to the BHC.
 - b. Determine the BHC's compliance with Regulation O regarding its extensions of credit (including BHC-owned or BHC-issued credit card loans) to insiders.

- Verify that the BHC monitors the amount of personal charges outstanding on its BHC-owned or BHC-issued credit cards that are held by insiders so that the outstanding charges, when aggregated with all of an insider's other indebtedness owed to the BHC, do not exceed \$15,000.
- c. Verify the BHC's compliance with the market-terms requirement of Regulation O. Determine if—
- the BHC requires employees and other insiders who have extensions of credit, or use BHC-owned or BHC-issued credit cards for personal purposes, to meet the BHC's normal credit underwriting standards and
 - the BHC has verified that the insiders' extensions of credit (or BHC-owned or BHC-issued credit cards) do not have more preferential terms (for example, a lower interest rate or a longer repayment period) than the consumer credit cards offered by the BHC.

2050.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Loans and extensions of credit to executive officers, directors, and principal shareholders	375a and 375b (sections 22(g) and 22(h) of F.R. Act)	215.4 215.5 (Reg. O)		
Granting of below-market interest rate mortgage loans to executives of BHC subsidiaries as compensation	1972(2)		4-514 3-1094	
Restrictions on loans to insiders of a bank or its correspondent bank	1972 (2)			
Board staff interpretation on the use of bank-owned or bank-issued credit cards by bank insiders			3-1081.5	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

Management Information Systems refers to the policies and operating procedures, including systems of internal control, that the board of directors of a bank holding company initiates to monitor and ensure control of its operations and activities, while maintaining and improving the financial strength and objectives of the overall organization. These policies should focus on the overall organizational structure with respect to identifying, monitoring, and managing risks. Subsequent sections of the manual focus on the essential elements of various management information systems. Included are inspection objec-

tives and procedures to be used by Federal Reserve Bank examiners when conducting inspections of bank holding companies.

Policy Statement on the Internal Audit Function and Its Outsourcing (Management Information Systems) Section 2060.05

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section was revised further to include another provision of the FDIC's November 28, 2005, amended rule (effective December 28, 2005) for part 363 of its regulations (12 C.F.R. 363). For insured institutions having total assets of more than \$3 billion, the audit committee must have independent members with (1) banking or related financial management expertise, (2) access to legal counsel, and (3) not include any large customers of the institution. The audit committee may also be required to satisfy other audit committee membership criteria.

2060.05.01 AN EFFECTIVE SYSTEM OF INTERNAL CONTROLS

Effective internal control¹ is a foundation for the safe and sound operation of a financial institution (institution).² The board of directors and senior management of an institution are responsible for ensuring that the system of internal control operates effectively. Their responsibility cannot be delegated to others within the institution or to outside parties. An important element in assessing the effectiveness of the internal control system is an internal audit function.

1. In summary, internal control is a process designed to provide reasonable assurance that the institution will achieve the following internal control objectives: efficient and effective operations, including safeguarding of assets; reliable financial reporting; and compliance with applicable laws and regulations. Internal control consists of five components that are a part of the management process: control environment, risk assessment, control activities, information and communication, and monitoring activities. The effective functioning of these components, which is brought about by an institution's board of directors, management, and other personnel, is essential to achieving the internal control objectives. This description of internal control is consistent with the Committee of Sponsoring Organizations of the Treadway Commission (COSO) report *Internal Control—Integrated Framework*. In addition, under the COSO framework, financial reporting is defined in terms of published financial statements, which, for purposes of this policy statement, encompass both financial statements prepared in accordance with generally accepted accounting principles and regulatory reports (such as the Reports of Condition and Income). Institutions are encouraged to evaluate their internal control against the COSO framework.

2. The term "institution" includes depository institutions insured by the Federal Deposit Insurance Corporation (FDIC), U.S. financial holding companies and bank holding companies supervised by the Federal Reserve System, thrift holding companies supervised by the Office of Thrift Supervision (OTS), and the U.S. operations of foreign banking organizations.

When properly structured and conducted, internal audit provides directors and senior management with vital information about weaknesses in the system of internal control so that management can take prompt, remedial action. The federal banking agencies'³ (agencies) long-standing inspection policies call for examiners to review an institution's internal audit function and recommend improvements, if needed. In addition, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act) (12 U.S.C. 1831p-1), the agencies have adopted Inter-agency Guidelines Establishing Standards for Safety and Soundness that apply to insured depository institutions.⁴ Under these guidelines and policies, each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities.

In addressing various quality and resource issues, many institutions have been engaging independent public accounting firms and other outside professionals (outsourcing vendors) in recent years to perform work that traditionally has been done by internal auditors. These arrangements are often called "internal audit outsourcing," "internal audit assistance," "audit co-sourcing," and "extended audit services" (hereafter, collectively referred to as outsourcing). Typical outsourcing arrangements are more fully illustrated in part II below.

Outsourcing may be beneficial to an institution if it is properly structured, carefully conducted, and prudently managed. However, the agencies have concerns that the structure, scope, and management of some internal audit outsourcing arrangements do not contribute to the institution's safety and soundness. Furthermore, the agencies want to ensure that these arrangements with outsourcing vendors do not leave directors and senior management with the erroneous impression that they have been relieved of their responsibility for maintaining an effective system of internal control and for overseeing the internal audit function.

3. The Board of Governors of the Federal Reserve System (FRS), Federal Deposit Insurance Corporation (FDIC), Office of the Comptroller of the Currency (OCC), and Office of Thrift Supervision (OTS).

4. For national banks, appendix A to part 30; for state member banks, appendix D-1 to part 208; for insured state nonmember banks and insured state-licensed branches of foreign banks, appendix A to part 364; for savings associations, appendix A to part 570.

The Sarbanes-Oxley Act of 2002 (the act) became law on July 30, 2002.⁵ The act addresses weaknesses in corporate governance and the accounting and auditing professions, and includes provisions addressing audits, financial reporting and disclosure, conflicts of interest, and corporate governance at publicly owned companies. The act, among other things, requires public companies to have an audit committee composed entirely of independent directors. Public banking organizations that are listed on the New York Stock Exchange (NYSE) and Nasdaq must also comply with those exchanges' listing requirements, which include audit committee requirements.

The act also established a Public Company Accounting Oversight Board (PCAOB) that has the authority to set and enforce auditing, attestation, quality control, and ethics (including independence) standards for auditors of public companies, subject to SEC review. (See SR-02-20.) Accounting firms that conduct audits of public companies (i.e., registered accounting firms) must register with the PCAOB and be subject to its supervision. The PCAOB is also empowered to inspect the auditing operations of public accounting firms that audit public companies, as well as impose disciplinary and remedial sanctions for violations of its rules, securities laws, and professional auditing and accounting standards.

[Sections 2060.05.02–2060.05.04 are reserved.]

2060.05.05 APPLICATION OF THE SARBANES-OXLEY ACT TO NONPUBLIC BANKING ORGANIZATIONS

In May 2003, the Federal Reserve, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision announced that they did not expect to take actions to apply the corporate-governance and other requirements of the Sarbanes-Oxley Act generally to nonpublic banking organizations that are not otherwise subject to them.^{5a} (See SR-03-08.) The agencies, however, encouraged nonpublic banking

organizations to periodically review their policies and procedures relating to corporate-governance and auditing matters. This review should ensure that such policies and procedures are consistent with applicable law, regulations, and supervisory guidance and remain appropriate in light of the organization's size, operations, and resources. Furthermore, the agencies stated that a banking organization's policies and procedures for corporate governance, internal controls, and auditing will be assessed during the supervisory process, and the agencies may take appropriate supervisory action if there are deficiencies or weaknesses in these areas that are inconsistent with sound corporate-governance practices or safety-and-soundness considerations.

2060.05.06 INTERAGENCY POLICY STATEMENT ON THE INTERNAL AUDIT FUNCTION AND ITS OUTSOURCING

The Federal Reserve and other federal banking agencies⁶ adopted on March 17, 2003, an inter-agency policy statement addressing the internal audit function and its outsourcing (See SR 03-5). The policy statement revises and replaces the former 1997 policy statement and incorporates recent developments in internal auditing. In addition, the revised policy incorporates guidance on the independence of accountants who provide institutions with both internal and external audit services in light of the Sarbanes-Oxley Act of 2002 and associated SEC rules. (See also sections 2124.0.2.4, 2060.1, 3230.0.10.2.5, 5010.7, and 5030.0 [page 7] pertaining to internal and external audits.)

The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit services to the company. The policy statement discusses the applicability of this prohibition to institutions that are public companies, insured depository institutions with assets of \$500 million or more that are subject to the annual audit and reporting requirements of section 36 of the Federal Deposit Insurance Act, and also nonpublic institutions that are not subject to section 36.

5. Pub. L. No. 107-204.

5a. As discussed below, some aspects of the auditor-independence rules established by the Sarbanes-Oxley Act apply to all federally insured depository institutions with \$500

million or more in total assets. See part 363 of the FDIC's regulations.

6. The FDIC, OCC, and OTS.

2060.05.1 INTERNAL AUDIT FUNCTION (PART I)

2060.05.1.1 Director and Senior Management Responsibilities for Internal Audit

The board of directors and senior management are responsible for having an effective system of internal control and an effective internal audit function in place at their institution. They are also responsible for ensuring that the importance of internal control is understood and respected throughout the institution. This overall responsibility cannot be delegated to anyone else. They may, however, delegate the design, implementation, and monitoring of specific internal controls to lower-level management and the testing and assessment of internal controls to others. Accordingly, directors and senior management should have reasonable assurance that the system of internal control prevents or detects significant inaccurate, incomplete, or unauthorized transactions; deficiencies in the safeguarding of assets; unreliable financial reporting (which includes regulatory reporting); and deviations from laws, regulations, and the institution's policies.⁷

Some institutions have chosen to rely on so-called management self-assessments or control self-assessments, wherein business-line managers and their staff evaluate the performance of internal controls within their purview. Such reviews help to underscore management's responsibility for internal control, but they are not impartial. Directors and members of senior management who rely too much on these reviews may not learn of control weaknesses until they have become costly problems, particularly if directors are not intimately familiar with the institution's operations. Therefore, institutions generally should also have their internal

controls tested and evaluated by units without business-line responsibilities, such as internal audit groups.

Directors should be confident that the internal audit function addresses the risks and meets the demands posed by the institution's current and planned activities. To accomplish this objective, directors should consider whether their institution's internal audit activities are conducted in accordance with professional standards, such as the Institute of Internal Auditors' (IIA) *Standards for the Professional Practice of Internal Auditing*. These standards address independence, professional proficiency, scope of work, performance of audit work, management of internal audit, and quality-assurance reviews. Furthermore, directors and senior management should ensure that the following matters are reflected in their institution's internal audit function.

2060.05.1.1.1 Internal Audit Placement and Structure Within the Organization

Careful thought should be given to the placement of the audit function in the institution's management structure. The internal audit function should be positioned so that the board has confidence that the internal audit function will perform its duties with impartiality and not be unduly influenced by managers of day-to-day operations. The audit committee,⁸ using objective criteria it has established, should oversee the internal audit function and evaluate its per-

7. As noted above, under section 36 of the FDI Act, as implemented by part 363 of the FDIC's regulations (12 C.F.R. 363), FDIC-insured depository institutions with total assets of \$500 million or more must submit an annual management report signed by the chief executive officer (CEO) and chief accounting or chief financial officer. This report must contain the following: (1) a statement of management's responsibilities for preparing the institution's annual financial statements, for establishing and maintaining an adequate internal control structure and procedures for financial reporting, and for complying with designated laws and regulations relating to safety and soundness, including management's assessment of the institution's compliance with those laws and regulations; and (2) for an institution with total assets of \$1 billion or more at the beginning of the institution's most recent fiscal year, the report should include an assessment by management of the effectiveness of such internal control structure and procedures as of the end of such fiscal year. (See 12 C.F.R. 363.2(b) and 70 Fed. Reg. 71,232, November 28, 2005.)

8. Depository institutions subject to section 36 of the FDI Act and part 363 of the FDIC's regulations must maintain an independent audit committee (i.e., consisting of directors who are *not* members of management). For institutions with between \$500 million and \$1 billion in assets, only a majority, rather than all, of the members of the audit committee—who must be outside directors—must be independent of management. For insured institutions having total assets of more than \$3 billion, the audit committee must (1) have members with banking or related financial management expertise, (2) have access to outside legal counsel, and (3) not include any large customers of the institution. The audit committee also may be required to satisfy other audit committee membership criteria (see 12 U.S.C. 831m(g)(1)(c) and section 363.5(b)(12) C.F.R. 363.5(b)). Consistent with the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations, the agencies also encourage the board of directors of each depository institution that is not otherwise required to do so to establish an audit committee consisting entirely of outside directors. Where the term "audit committee" is used in this policy statement, the board of directors may fulfill the audit committee responsibilities if the institution is not subject to an audit committee requirement.

formance.⁹ The audit committee should assign responsibility for the internal audit function to a member of management (that is, the manager of internal audit or internal audit manager) who understands the function and has no responsibility for operating the system of internal control. The ideal organizational arrangement is for this manager to report directly and solely to the audit committee regarding both audit issues and administrative matters (e.g., resources, budget, appraisals, and compensation). Institutions are encouraged to consider the IIA's *Practice Advisory 2060-2: Relationship with the Audit Committee*, which provides more guidance on the roles and relationships between the audit committee and the internal audit manager.

Many institutions place the manager of internal audit under a dual reporting arrangement: functionally accountable to the audit committee on issues discovered by the internal audit function, while reporting to another senior manager on administrative matters. Under a dual reporting relationship, the board should consider the potential for diminished objectivity on the part of the internal audit manager with respect to audits concerning the executive to whom he or she reports. For example, a manager of internal audit who reports to the chief financial officer (CFO) for performance appraisal, salary, and approval of department budgets may approach audits of the accounting and treasury operations controlled by the CFO with less objectivity than if the manager were to report to the chief executive officer. Thus, the chief financial officer, controller, or other similar officer should ideally be excluded from overseeing the internal audit activities even in a dual role. The objectivity and organizational stature of the internal audit function are best served under such a dual arrangement if the internal audit manager reports administratively to the CEO.

Some institutions seek to coordinate the internal audit function with several risk-monitoring functions (for example, loan review, market-risk assessment, and legal compliance departments) by establishing an administrative arrangement under one senior executive. Coordination of these other monitoring activities with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of

these monitoring functions, better use available resources, and enhance the institution's ability to comprehensively manage risk. Such an administrative reporting relationship should be designed so as to not interfere with or hinder the manager of internal audit's functional reporting to and ability to directly communicate with the institution's audit committee. In addition, the audit committee should ensure that efforts to coordinate these monitoring functions do not result in the manager of internal audit conducting control activities nor diminish his or her independence with respect to the other risk-monitoring functions. Furthermore, the internal audit manager should have the ability to independently audit these other monitoring functions.

In structuring the reporting hierarchy, the board should weigh the risk of diminished independence against the benefit of reduced administrative burden in adopting a dual reporting organizational structure. The audit committee should document its consideration of this risk and mitigating controls. The IIA's *Practice Advisory III0-2: Chief Audit Executive Reporting Lines* provides additional guidance regarding functional and administrative reporting lines.

2060.05.1.1.2 Internal Audit Management, Staffing, and Audit Quality

In managing the internal audit function, the manager of internal audit is responsible for control risk assessments, audit plans, audit programs, and audit reports.

1. A control risk assessment (or risk-assessment methodology) documents the internal auditor's understanding of the institution's significant business activities and their associated risks. These assessments typically analyze the risks inherent in a given business line, the mitigating control processes, and the resulting residual risk exposure of the institution. They should be updated regularly to reflect changes to the system of internal control or work processes and to incorporate new lines of business.
2. An internal audit plan is based on the control risk assessment and typically includes a summary of key internal controls within each significant business activity, the timing and frequency of planned internal audit work, and a resource budget.
3. An internal audit program describes the objectives of the audit work and lists the

⁹ For example, the performance criteria could include the timeliness of each completed audit, comparison of overall performance to plan, and other measures.

procedures that will be performed during each internal audit review.

4. An audit report generally presents the purpose, scope, and results of the audit, including findings, conclusions, and recommendations. Workpapers that document the work performed and support the audit report should be maintained.

Ideally, the internal audit function's only role should be to independently and objectively evaluate and report on the effectiveness of an institution's risk-management, control, and governance processes. Internal auditors increasingly have taken a consulting role within institutions on new products and services and on mergers, acquisitions, and other corporate reorganizations. This role typically includes helping design controls and participating in the implementation of changes to the institution's control activities. The audit committee, in its oversight of the internal audit staff, should ensure that the function's consulting activities do not interfere or conflict with the objectivity it should have with respect to monitoring the institution's system of internal control. In order to maintain its independence, the internal audit function should not assume a business-line management role over control activities, such as approving or implementing operating policies or procedures, including those it has helped design in connection with its consulting activities. The agencies encourage internal auditors to follow the IIA's standards, including guidance related to the internal audit function acting in an advisory capacity.

The internal audit function should be competently supervised and staffed by people with sufficient expertise and resources to identify the risks inherent in the institution's operations and assess whether internal controls are effective. The manager of internal audit should oversee the staff assigned to perform the internal audit work and should establish policies and procedures to guide the audit staff. The form and content of these policies and procedures should be consistent with the size and complexity of the department and the institution. Many policies and procedures may be communicated informally in small internal audit departments, while larger departments would normally require more formal and comprehensive written guidance.

2060.05.1.1.3 Internal Audit Frequency and Scope

The frequency and extent of internal audit review and testing should be consistent with the nature, complexity, and risk of the institution's on- and off-balance-sheet activities. At least annually, the audit committee should review and approve internal audit's control risk assessment and the scope of the audit plan, including how much the manager relies on the work of an outsourcing vendor. It should also periodically review internal audit's adherence to the audit plan. The audit committee should consider requests for expansion of basic internal audit work when significant issues arise or when significant changes occur in the institution's environment, structure, activities, risk exposures, or systems.¹⁰

2060.05.1.1.4 Communication of Internal Audit Findings to the Directors, Audit Committee, and Management

To properly carry out their responsibility for internal control, directors and senior management should foster forthright communications and critical inspection of issues to better understand the importance and severity of internal control weaknesses identified by the internal auditor and operating management's solutions

10. Major changes in an institution's environment and conditions may compel changes to the internal control system and also warrant additional internal audit work. These include (1) new management; (2) areas or activities experiencing rapid growth or rapid decline; (3) new lines of business, products, or technologies or disposals thereof; (4) corporate restructurings, mergers, and acquisitions; and (5) expansion or acquisition of foreign operations (including the impact of changes in the related economic and regulatory environments).

to these weaknesses. Internal auditors should report internal control deficiencies to the appropriate level of management as soon as they are identified. Significant matters should be promptly reported directly to the board of directors (or its audit committee) and senior management. In periodic meetings with management and the manager of internal audit, the audit committee should assess whether management is expeditiously resolving internal control weaknesses and other exceptions. Moreover, the audit committee should give the manager of internal audit the opportunity to discuss his or her findings without management being present.

Furthermore, each audit committee should establish and maintain procedures for employees of their institution to submit confidentially and anonymously concerns to the committee about questionable accounting, internal accounting control, or auditing matters.¹¹ In addition, the audit committee should set up procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.

2060.05.1.1.5 Contingency Planning

As with any other function, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas. Lack of contingency planning for continuing internal audit coverage may increase the institution's level of operational risk.

2060.05.1.2 U.S. Operations of Foreign Banking Organizations

The internal audit function of a foreign banking organization (FBO) should cover its U.S. operations in its risk assessments, audit plans, and audit programs. Its U.S.-domiciled audit function, head-office internal audit staff, or some combination thereof normally performs the internal audit of the U.S. operations. Internal audit findings (including internal control deficiencies) should be reported to the senior management of the U.S. operations of the FBO and the audit department of the head office. Significant adverse findings also should be reported to the head office's senior management and the board of directors or its audit committee.

2060.05.1.3 Internal Audit Systems and the Audit Function for Small Financial Institutions

An effective system of internal control and an independent internal audit function form the foundation for safe and sound operations, regardless of an institution's size. Each institution should have an internal audit function that is appropriate to its size and the nature and scope of its activities. The procedures assigned to this function should include adequate testing and review of internal controls and information systems.

It is the responsibility of the audit committee and management to carefully consider the extent of auditing that will effectively monitor the internal control system after taking into account the internal audit function's costs and benefits. For institutions that are large or have complex operations, the benefits derived from a full-time manager of internal audit or an auditing staff likely outweigh the cost. For small institutions with few employees and less complex operations, however, these costs may outweigh the benefits. Nevertheless, a small institution without an internal auditor can ensure that it maintains an objective internal audit function by implementing a comprehensive set of independent reviews of significant internal controls. The key characteristic of such reviews is that the person(s) directing and/or performing the review of internal controls is not also responsible for managing or operating those controls. A person who is competent in evaluating a system of internal control should design the review procedures and arrange for their implementation. The person responsible for reviewing the system of internal control should report findings directly to the audit committee. The audit committee should evaluate the findings and ensure that senior management has or will take appropriate action to correct the control deficiencies.

2060.05.2 INTERNAL AUDIT OUTSOURCING ARRANGEMENTS (PART II)

2060.05.2.1 Examples of Internal Audit Outsourcing Arrangements

An outsourcing arrangement is a contract between an institution and an outsourcing vendor to provide internal audit services. Outsourc-

11. Where the board of directors fulfills the audit committee responsibilities, the procedures should provide for the submission of employee concerns to an outside director.

ing arrangements take many forms and are used by institutions of all sizes. Some institutions consider entering into these arrangements to enhance the quality of their control environment by obtaining the services of a vendor with the knowledge and skills to critically assess, and recommend improvements to, their internal control systems. The internal audit services under contract can be limited to helping internal audit staff in an assignment for which they lack expertise. Such an arrangement is typically under the control of the institution's manager of internal audit, and the outsourcing vendor reports to him or her. Institutions often use outsourcing vendors for audits of areas requiring more technical expertise, such as electronic data processing and capital-markets activities. Such uses are often referred to as "internal audit assistance" or "audit co-sourcing."

Some outsourcing arrangements may require an outsourcing vendor to perform virtually all the procedures or tests of the system of internal control. Under such an arrangement, a designated manager of internal audit oversees the activities of the outsourcing vendor and typically is supported by internal audit staff. The outsourcing vendor may assist the audit staff in determining risks to be reviewed and may recommend testing procedures, but the internal audit manager is responsible for approving the audit scope, plan, and procedures to be performed. Furthermore, the internal audit manager is responsible for the results of the outsourced audit work, including findings, conclusions, and recommendations. The outsourcing vendor may report these results jointly with the internal audit manager to the audit committee.

2060.05.2.2 Additional Inspection and Examination Considerations for Internal Audit Outsourcing Arrangements

Even when outsourcing vendors provide internal audit services, the board of directors and senior management of an institution are responsible for ensuring that both the system of internal control and the internal audit function operate effectively. In any outsourced internal audit arrangement, the institution's board of directors and senior management must maintain ownership of the internal audit function and provide active oversight of outsourced activities. When negotiating the outsourcing arrangement with an outsourcing vendor, an institution should care-

fully consider its current and anticipated business risks in setting each party's internal audit responsibilities. The outsourcing arrangement should not increase the risk that a breakdown of internal control will go undetected.

To clearly distinguish its duties from those of the outsourcing vendor, the institution should have a written contract, often taking the form of an engagement letter.¹² Contracts between the institution and the vendor typically include provisions that—

1. define the expectations and responsibilities under the contract for both parties;
2. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
3. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
4. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and stipulations for default and termination of the contract;
5. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
6. specify the locations of internal audit reports and the related workpapers;
7. specify the period of time (for example, seven years) that vendors must maintain the workpapers;¹³
8. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;

12. The engagement letter provisions described are comparable to those outlined by the American Institute of Certified Public Accountants (AICPA) for financial statement audits (see AICPA Professional Standards, AU section 310). These provisions are consistent with the provisions customarily included in contracts for other outsourcing arrangements, such as those involving data processing and information technology. Therefore, the federal banking agencies consider these provisions to be usual and customary business practices.

13. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the bank and examiners to access the electronic workpapers for a specified time period.

9. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
10. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.

2060.05.2.2.1 Management of the Outsourced Internal Audit Function

Directors and senior management should ensure that the outsourced internal audit function is competently managed. For example, larger institutions should employ sufficient competent staff members in the internal audit department to assist the manager of internal audit in overseeing the outsourcing vendor. Small institutions that do not employ a full-time audit manager should appoint a competent employee who ideally has no managerial responsibility for the areas being audited to oversee the outsourcing vendor's performance under the contract. This person should report directly to the audit committee for purposes of communicating internal audit issues.

2060.05.2.2.2 Communication of Outsourced Internal Audit Findings to Directors and Senior Management

Communication between the internal audit function and the audit committee and senior management should not diminish because the institution engages an outsourcing vendor. All work by the outsourcing vendor should be well documented and all findings of control weaknesses should be promptly reported to the institution's manager of internal audit. Decisions not to report the outsourcing vendor's findings to directors and senior management should be the mutual decision of the internal audit manager and the outsourcing vendor. In deciding what issues should be brought to the board's attention, the concept of "materiality," as the term is used in financial statement audits, is generally not a good indicator of which control weakness to report. For example, when evaluating an institution's compliance with laws and regulations, any exception may be important.

2060.05.2.2.3 Competence of Outsourced Internal Audit Vendor

Before entering an outsourcing arrangement, the institution should perform due diligence to satisfy itself that the outsourcing vendor has sufficient staff qualified to perform the contracted work. The staff's qualifications may be demonstrated, for example, through prior experience with financial institutions. Because the outsourcing arrangement is a personal-services contract, the institution's internal audit manager should have confidence in the competence of the staff assigned by the outsourcing vendor and receive timely notice of key staffing changes. Throughout the outsourcing arrangement, management should ensure that the outsourcing vendor maintains sufficient expertise to effectively perform its contractual obligations.

2060.05.2.2.4 Contingency Planning to Avoid Discontinuity of Internal Audit Coverage

When an institution enters into an outsourcing arrangement (or significantly changes the mix of internal and external resources used by internal audit), it may increase its operational risk. Because the arrangement may be terminated suddenly, the institution should have a contingency plan to mitigate any significant discontinuity in audit coverage, particularly for high-risk areas.

2060.05.3 INDEPENDENCE OF THE INDEPENDENT PUBLIC ACCOUNTANT (PART III)

The following discussion applies only when a financial institution is considering using a public accountant to provide both external audit and internal audit services to the institution.

When one accounting firm performs both the external audit and the outsourced internal audit function, the firm risks compromising its independence. These concerns arise because, rather than having two separate functions, this outsourcing arrangement places the independent public accounting firm in the position of appearing to audit, or actually auditing, its own work. For example, in auditing an institution's financial statements, the accounting firm will consider the extent to which it may rely on the

internal control system, including the internal audit function, in designing audit procedures.

2060.05.3.1 Applicability of the SEC's Auditor Independence Requirements

2060.05.3.1.1 Institutions That Are Public Companies

To strengthen auditor independence, Congress passed the Sarbanes-Oxley Act of 2002 (the act). Title II of the act applies to any public company—that is, any company that has a class of securities registered with the SEC or the appropriate federal banking agency under section 12 of the Securities Exchange Act of 1934 or that is required to file reports with the SEC under section 15(d) of that act.¹⁴ The act prohibits an accounting firm from acting as the external auditor of a public company during the same period that the firm provides internal audit outsourcing services to the company.¹⁵ In addition, if a public company's external auditor will be providing auditing services and permissible non-audit services, such as tax services, the company's audit committee must preapprove each of these services.

According to the SEC's final rules (effective May 6, 2003) implementing the act's nonaudit service prohibitions and audit committee preapproval requirements, an accountant is not independent if, at any point during the audit and professional engagement period, the accountant provides internal audit outsourcing or other pro-

hibited nonaudit services to the public company audit client. The SEC's final rules generally become effective May 6, 2003, although a one-year transition period is provided if the accountant is performing prohibited nonaudit services and actual audit services for a public company pursuant to a contract in existence on May 6, 2003. The services provided during this transition period, however, must not have impaired the auditor's independence under the preexisting independence requirements of the SEC, the Independence Standards Board, and the AICPA. Although the SEC's pre-Sarbanes-Oxley independence requirements (issued November 2000 (effective August 2002)) did not prohibit the outsourcing of internal audit services to a public company's independent public accountant, they did place conditions and limitations on internal audit outsourcing.

2060.05.3.1.2 Depository Institutions Subject to the Annual Audit and Reporting Requirements of Section 36 of the FDIC Act

Under section 36, as implemented by part 363 of the FDIC's regulations, each FDIC-insured depository institution with total assets of \$500 million or more is required to have an annual audit performed by an independent public accountant.¹⁶ The part 363 guidelines address the qualifications of an independent public accountant engaged by such an institution by stating that "[t]he independent public accountant should also be in compliance with the AICPA's *Code of Professional Conduct* and meet the independence requirements and interpretations of the SEC and its staff."¹⁷

Thus, the guidelines provide for each FDIC-insured depository institution with \$500 million or more in total assets, whether or not it is a public company, and its external auditor to comply with the SEC's auditor independence requirements that are in effect during the period covered by the audit. These requirements include the nonaudit-service prohibitions and audit committee preapproval requirements implemented by the SEC's January 2003 auditor independence rules, once the rules come into effect.¹⁸

17. Appendix A to part 363, Guidelines and Interpretations, paragraph 14, Independence.

18. If a depository institution subject to section 36 and part 363 satisfies the annual independent audit requirement by relying on the independent audit of its parent holding com-

14. 15 U.S.C. 78l and 78o(d).

15. In addition to prohibiting internal audit outsourcing, the Sarbanes-Oxley Act (15 U.S.C. 78j-1) also identifies other nonaudit services that an external auditor is prohibited from providing to a public company whose financial statements it audits. The legislative history of the act indicates that three broad principles should be considered when determining whether an auditor should be prohibited from providing a nonaudit service to an audit client. These principles are that an auditor should not (1) audit his or her own work, (2) perform management functions for the client, or (3) serve in an advocacy role for the client. To do so would impair the auditor's independence. Based on these three broad principles, the other nonaudit services . . . referred to in this section . . . that an auditor is prohibited from providing to a public company audit client include bookkeeping or other services related to the client's accounting records or financial statements; financial information systems design and implementation; appraisal or valuation services, fairness opinions, or contribution-in-kind reports; actuarial services; management functions or human resources; broker or dealer, investment adviser, or investment banking services; legal services and expert services unrelated to the audit; and any other service determined to be impermissible by the PCAOB.

2060.05.3.1.3 Institutions Not Subject to Section 36 of the FDI Act That Are Neither Public Companies Nor Subsidiaries of Public Companies

The agencies have long encouraged each institution not subject to section 36 of the FDI Act that is neither a public company nor a subsidiary of a public company¹⁹ to have its financial statements audited by an independent public accountant.²⁰ The agencies also encourage each such institution to follow the internal audit outsourcing prohibition in the Sarbanes-Oxley Act, as discussed above for institutions that are public companies. As previously mentioned, some institutions seek to enhance the quality of their control environment by obtaining the services of an outsourcing vendor who can critically assess their internal control system and recommend improvements. The agencies believe that a small nonpublic institution with less complex operations and limited staff can, in certain circumstances, use the same accounting firm to perform both an external audit and some or all of the institution's internal audit activities. These circumstances include, but are not limited to, situations where—

1. splitting the audit activities poses significant costs or burden,
2. persons with the appropriate specialized knowledge and skills are difficult to locate and obtain,
3. the institution is closely held and investors are not solely reliant on the audited financial statements to understand the financial position and performance of the institution, and
4. the outsourced internal audit services are limited in either scope or frequency.

In circumstances such as these, the agencies view an internal audit outsourcing arrangement between a small nonpublic institution and its external auditor as not being inconsistent with

pany, once the SEC's January 2003 regulations prohibiting an external auditor from performing internal audit outsourcing services for an audit client take effect May 6, 2003, or May 6, 2004, depending on the circumstances, the holding company's external auditor cannot perform internal audit outsourcing work for that holding company or the subsidiary institution.

19. FDIC-insured depository institutions with less than \$500 million in total assets are not subject to section 36 of the FDI Act. Section 36 does not apply directly to holding companies, but it provides that, for an insured depository institution that is a subsidiary of a holding company, its audited financial statements requirement and certain of its other requirements may be satisfied by the holding company.

20. See, for example, the 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Institutions.

their safety-and-soundness objectives for the institution.

When a small nonpublic institution decides to hire the same firm to perform internal and external audit work, the audit committee and the external auditor should pay particular attention to preserving the independence of both the internal and external audit functions. Furthermore, the audit committee should document both that it has preapproved the internal audit outsourcing to its external auditor and has considered the independence issues associated with this arrangement.²¹ In this regard, the audit committee should consider the independence standards described in parts I and II of the policy statement, the AICPA guidance discussed below, and the broad principles that the auditor should not perform management functions or serve in an advocacy role for the client.

Accordingly, the agencies will not consider an auditor who performs internal audit outsourcing services for a small nonpublic audit client to be independent unless the institution and its auditor have adequately addressed the associated independence issues. In addition, the institution's board of directors and management must retain ownership of and accountability for the internal audit function and provide active oversight of the outsourced internal audit relationship.

A small nonpublic institution may be required by another law or regulation, an order, or another supervisory action to have its financial statements audited by an independent public accountant. In this situation, if warranted for safety-and-soundness reasons, the institution's primary federal regulator may require that the institution and its independent public accountant comply with the auditor independence requirements of the Act.²²

2060.05.3.1.4 AICPA Guidance

As noted above, the independent public accountant for a depository institution subject to section 36 of the FDI Act also should be in compliance with the AICPA's *Code of Professional Conduct*. This code includes professional ethics standards, rules, and interpretations that are

21. If a small nonpublic institution is considering having its external auditor perform other nonaudit services, its audit committee may wish to discuss the implications of the performance of these services on the auditor's independence.

22. 15 U.S.C. 78j-1.

binding on all certified public accountants (CPAs) who are members of the AICPA in order for the member to remain in good standing. Therefore, this code applies to each member CPA who provides audit services to an institution, regardless of whether the institution is subject to section 36 or is a public company.

The AICPA has issued guidance indicating that a member CPA would be deemed not independent of his or her client when the CPA acts or appears to act in a capacity equivalent to a member of the client's management or as a client employee. The AICPA's guidance includes illustrations of activities that would be considered to compromise a CPA's independence. Among these are activities that involve the CPA authorizing, executing, or consummating transactions or otherwise exercising authority on behalf of the client. For additional details, refer to Interpretation 101-3, Performance of Other Services, and Interpretation 101-13, Extended Audit Services, in the AICPA's *Code of Professional Conduct*.

2060.05.4 INSPECTION GUIDANCE (PART IV)

2060.05.4.1 Review of the Internal Audit Function and Outsourcing Arrangements

Examiners should have full and timely access to an institution's internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. A delay may require examiners to widen the scope of their inspection work and may subject the institution to follow-up supervisory actions.

Examiners should assess the quality and scope of an institution's internal audit function, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Specifically, examiners should consider whether—

1. the internal audit function's control risk assessment, audit plans, and audit programs are appropriate for the institution's activities;
2. the internal audit activities have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
3. the internal audit activities are consistent with the long-range goals and strategic

direction of the institution and are responsive to its internal control needs;

4. the audit committee promotes the internal audit manager's impartiality and independence by having him or her directly report audit findings to it;
5. the internal audit manager is placed in the management structure in such a way that the independence of the function is not impaired;
6. the institution has promptly responded to significant identified internal control weaknesses;
7. the internal audit function is adequately managed to ensure that audit plans are met, programs are carried out, and results of audits are promptly communicated to senior management and members of the audit committee and board of directors;
8. workpapers adequately document the internal audit work performed and support the audit reports;
9. management and the board of directors use reasonable standards, such as the IIA's *Standards for the Professional Practice of Internal Auditing*, when assessing the performance of internal audit; and
10. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.

The examiner should assess the competence of the institution's internal audit staff and management by considering the education, professional background, and experience of the principal internal auditors. In addition, when reviewing outsourcing arrangements, examiners should determine whether—

1. the arrangement maintains or improves the quality of the internal audit function and the institution's internal control;
2. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
3. the scope of the outsourced work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
4. the directors have ensured that the outsourced internal audit activities are effectively managed by the institution;
5. the arrangement with the outsourcing vendor satisfies the independence standards

- described in this policy statement and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant; and
6. the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and has adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement.

2060.05.4.2 Inspection Concerns About the Adequacy of the Internal Audit Function

If the examiner concludes that the institution's internal audit function, whether or not it is outsourced, does not sufficiently meet the institution's internal audit needs; does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, if applicable; or is otherwise inadequate, he or she should determine whether the scope of the inspection should be adjusted. The examiner should also discuss his or her concerns with the internal audit manager or other person responsible for reviewing the system of internal control. If these discussions do not resolve the examiner's concerns, he or she should bring these matters to the attention of senior management and the board of directors or audit committee. Should the examiner find material weaknesses in the internal audit function or the internal control system, he or she should discuss them with appropriate agency staff in order to determine the appropriate actions the agency should take to ensure that the institution corrects the deficiencies. These actions may include formal and informal enforcement actions.

The institution's management and composite ratings should reflect the examiner's conclusions regarding the institution's internal audit function. The report of inspection should contain comments concerning the adequacy of this function, significant issues or concerns, and recommended corrective actions.

2060.05.4.3 Concerns About the Independence of the Outsourcing Vendor

An examiner's initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, may raise questions about the institution's and its vendor's adherence to the independence standards described in

parts I and II of the policy statement, whether or not the vendor is an accounting firm, and in part III if the vendor provides both external and internal audit services to the institution. In such cases, the examiner first should ask the institution and the outsourcing vendor how the audit committee determined that the vendor was independent. If the vendor is an accounting firm, the audit committee should be asked to demonstrate how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence. If the examiner's concerns are not adequately addressed, the examiner should discuss the matter with appropriate agency staff prior to taking any further action.

If the agency staff concurs that the independence of the external auditor or other vendor appears to be compromised, the examiner will discuss his or her findings and the actions the agency may take with the institution's senior management, board of directors (or audit committee), and the external auditor or other vendor. In addition, the agency may refer the external auditor to the state board of accountancy, the AICPA, the SEC, the PCAOB, or other authorities for possible violations of applicable independence standards. Moreover, the agency may conclude that the institution's external auditing program is inadequate and that it does not comply with auditing and reporting requirements, including sections 36 and 39 of the FDI Act and related guidance and regulations, if applicable.

2060.05.5 INSPECTION OBJECTIVES

1. To determine with reasonable assurance whether the institution²³ has an adequate system of internal controls that ensures efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
2. To determine if the internal audit function and the internal audit outsourcing arrangements of the parent company and its subsidiaries are adequately and competently managed by the board of directors and senior management.

23. The term "institution" is used to maintain consistency with the interagency policy statement, but these inspection objectives and procedures apply to financial holding companies, bank holding companies, and their bank and nonbank subsidiaries.

3. To ascertain that the banking organization's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the management process: the control environment, risk assessment, control activities, information and communication, and monitoring activities.
4. To determine whether the internal audit function reports vital information about weaknesses in the system of internal control to the board of directors (or its audit committee) and senior management and that expeditious remedial action is taken to resolve the internal control weaknesses as well as any other exceptions.
5. To determine that the audit committee has established and maintains procedures for employees of the institution to confidentially and anonymously submit concerns to the committee about questionable accounting, internal control, or auditing matters, and that the audit committee has procedures for the timely investigation of complaints received and the retention for a reasonable time period of documentation concerning the complaint and its subsequent resolution.
6. To determine the adequacy of the internal audit function (including its use of outsourced internal audit vendors) as to organizational structure, prudent management, staff having sufficient expertise, audit quality, and the ability of auditors to directly and freely communicate internal audit findings to the board of directors, its audit committee, and senior management.
7. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor, under standards established in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.

2060.05.6 INSPECTION PROCEDURES

Examiners should obtain assurances from the audit committee and senior management that they will have full and timely access to an institution's internal audit resources, including personnel, workpapers, risk assessments, work plans, programs, reports, and budgets. Examiners should consider widening the scope of their inspection work when such assurances are not provided or if there are any significant delays in

gaining access to the internal audit resources. Such a delay may subject the institution to follow-up supervisory action.

2060.05.6.1 Internal Audit Function Inspection Procedures

1. Assess the quality and scope of the internal audit work, regardless of whether it is performed by the institution's employees or by an outsourcing vendor. Consider whether—
 - a. the board of directors (or audit committee) promotes the internal audit manager's impartiality and independence by having him or her directly report audit findings to it;
 - b. the internal audit function's risk assessment, plans, and programs are appropriate for the institution's activities;
 - c. the internal audit function is adequately managed to ensure that audit plans are accomplished, programs are carried out, and results of audits are promptly communicated to the managers and directors;
 - d. the institution has promptly responded to identified internal control weaknesses;
 - e. management and the board of directors use reasonable standards when assessing the performance of internal audit;
 - f. the internal audit plan and program have been adjusted for significant changes in the institution's environment, structure, activities, risk exposures, or systems;
 - g. the activities of internal audit are consistent with the long-range goals of the institution and are responsive to its internal control needs; and
 - h. the audit function provides high-quality advice and counsel to management and the board of directors on current developments in risk management, internal control, and regulatory compliance.
2. Assess the competence of the institution's internal audit staff and management by considering the education and professional background of the principal internal auditors.
3. Broaden the scope of the inspection if the institution's internal audit function, whether or not it is outsourced, does not sufficiently meet its internal audit needs, does not satisfy the Interagency Guidelines Establishing Standards for Safety and Soundness, or is otherwise inadequate.
4. Discuss supervisory concerns and outstanding internal-external audit report comments with the internal audit manager or other person responsible for reviewing the system of

- internal control. If these discussions do not resolve the examiner's comments and concerns, bring these matters to the attention of senior management and the board of directors or audit committee.
5. If material weaknesses in the internal audit function or the internal control system exist, discuss them with appropriate Federal Reserve Bank supervisory staff to determine the appropriate actions that should be taken to ensure that the institution corrects the deficiencies (including formal and informal enforcement actions).
 6. Incorporate conclusions about the institution's internal audit function into its management and composite supervisory ratings.
 7. Include in the inspection report comments concerning the adequacy of the internal audit function, significant issues or concerns, and recommended corrective actions.
- g. specify the period of time (for example, seven years) that vendors must maintain the workpapers;²⁴
 - h. state that outsourced internal audit services provided by the vendor are subject to regulatory review and that examiners will be granted full and timely access to the internal audit reports and related workpapers prepared by the outsourcing vendor;
 - i. prescribe a process (arbitration, mediation, or other means) for resolving disputes and for determining who bears the cost of consequential damages arising from errors, omissions, and negligence; and
 - j. state that the outsourcing vendor will not perform management functions, make management decisions, or act or appear to act in a capacity equivalent to that of a member of management or an employee and, if applicable, will comply with AICPA, SEC, PCAOB, or regulatory independence guidance.

2065.05.6.2 Additional Aspects of the Examiner's Review of an Outsourcing Arrangement

1. Review the internal audit outsourcing arrangement and determine if the institution has a written contract or an engagement letter with the vendor.
2. Determine whether the written contract or engagement letter includes provisions that—
 - a. define the expectations and responsibilities under the contract for both parties;
 - b. set the scope and frequency of, and the fees to be paid for, the work to be performed by the vendor;
 - c. set the responsibilities for providing and receiving information, such as the type and frequency of reporting to senior management and directors about the status of contract work;
 - d. establish the process for changing the terms of the service contract, especially for expansion of audit work if significant issues are found, and establish stipulations for default and termination of the contract;
 - e. state that internal audit reports are the property of the institution, that the institution will be provided with any copies of the related workpapers it deems necessary, and that employees authorized by the institution will have reasonable and timely access to the workpapers prepared by the outsourcing vendor;
 - f. specify the locations of internal audit reports and the related workpapers;
3. Determine whether—
 - a. the outsourcing arrangement maintains or improves the quality of the internal audit function and the institution's internal control;
 - b. key employees of the institution and the outsourcing vendor clearly understand the lines of communication and how any internal control problems or other matters noted by the outsourcing vendor are to be addressed;
 - c. the scope of work is revised appropriately when the institution's environment, structure, activities, risk exposures, or systems change significantly;
 - d. the directors have ensured that the outsourced internal audit function is effectively managed by the institution;
 - e. the arrangement with the outsourcing vendor satisfies the independence standards described in the Policy Statement on the Internal Audit Function and Its Outsourcing and thereby preserves the independence of the internal audit function, whether or not the vendor is also the institution's independent public accountant;

24. If the workpapers are in electronic format, contracts often call for the vendor to maintain proprietary software that enables the banking organization and examiners to access the electronic workpapers for a specified time period.

- f. the institution has performed sufficient due diligence to satisfy itself of the vendor's competence before entering into the outsourcing arrangement and whether there are adequate procedures for ensuring that the vendor maintains sufficient expertise to perform effectively throughout the arrangement; and
 - g. the institution has a contingency plan to ensure continuity in audit coverage, especially for high-risk areas.
4. Adjust the scope of the inspection if the outsourcing arrangement has diminished the quality of the institution's internal audit. If the quality of the internal audit is diminished, inform senior management and the board of directors and consider it in the institution's management and composite ratings.

2060.05.6.3 Assessment of Auditor Independence

1. If the initial review of an internal audit outsourcing arrangement, including the actions of the outsourcing vendor, raises questions about the institution's and its vendor's adherence to the independence standards discussed in parts I, II, and III of the Interagency Policy

Statement on the Internal Audit Function and Its Outsourcing, and if the vendor provides both external and internal audit services to the institution—

- a. question the institution and the outsourcing vendor about how the audit committee determined that the vendor was independent; and
 - b. if the vendor is an accounting firm, ask the audit committee how it assessed that the arrangement has not compromised applicable SEC, PCAOB, AICPA, or other regulatory standards concerning auditor independence.
2. If the answers to the above raise supervisory concern, or are not adequately addressed, discuss the matter with appropriate Reserve Bank management and supervisory staff.
3. If the Reserve Bank management and supervisory staff concurs that the independence of the external auditor or other vendor appears to be compromised, discuss the examination findings and what appropriate supervisory actions the Federal Reserve should take, and discuss the actions to be taken with the bank's senior management, board of directors (or audit committee), and the external auditor or other vendor.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2006, this section has been revised to incorporate the February 9, 2006, Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters. The advisory informs financial institutions (including bank holding companies) that it is unsafe and unsound to enter into external audit contracts (that is, engagement letters) for the performance of auditing or attestation services when the contracts (1) indemnify the external auditor against all claims made by third parties, (2) hold harmless or release the external auditor from liability for claims or potential claims that might be asserted by the client financial institution (other than claims for punitive damages), or (3) limit the remedies available to the client financial institution (other than punitive damages). Such limits on external auditors' liability weaken the auditor's independence and performance, thus reducing the supervisory agency's ability to rely on the auditor's work. Bank holding companies subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions are encouraged to seek an amendment to an engagement letter executed prior to February 9, 2006, to be consistent with the advisory. (See SR-06-4.)

2060.1.1 INTERNAL AND EXTERNAL AUDIT PROGRAMS AND ACTIVITIES

Audit is an independent appraisal activity that serves as a managerial control within an organization. The primary responsibility for the maintenance of sound systems of internal controls and an adequate internal audit program rests with the directorate of the bank holding company. Included among the objectives of a comprehensive audit program are the detection of irregularities; the determination of compliance with applicable laws and regulations; and the appraisal of the soundness and adequacy of accounting, operating, and administrative controls designed to ensure prompt and accurate recording of transactions and proper safeguarding of assets. At a minimum, an audit program should ensure that adequate systems of checks and balances are in effect to deter fraud and detect control deficiencies.

The size and complexity of a bank holding

company operation are major determinants in the scope and extent of the audit program that is developed. In the smaller, less sophisticated organizations, such as holding company shells for small banks, it may not be feasible to employ an auditor or implement an audit program. In some cases, such as those in which banking assets represent virtually all of the parent company's assets and a comprehensive, effective audit program is being implemented in the various subsidiaries, neither an internal nor an external audit program may be necessary at the parent company level.

The development and implementation of an internal audit program should be delegated to a qualified staff large enough to meet the functional requirements of the job under the guidance and leadership of the auditor. When evaluating the effectiveness of an internal audit program, the examiner may want to consider the size of audit staffs of banking organizations of a similar size and complexity. To ensure freedom of access to corporate records and complete independence and objectivity in administering the audit program, the auditor should report directly to the directorate or a committee thereof. Administratively, the internal auditor is usually responsible to an officer at a major policymaking level.

To supplement the internal audit activities, external accountants-auditors may be engaged to certify or audit the financial statements or specified activities of the bank holding company and its subsidiaries. Each top-tier bank holding company with total consolidated assets of \$500 million or more must engage independent public accountants to perform audits and report on its annual financial statements in accordance with generally accepted accounting principles. The scope of the audit engagement must be sufficient to permit such accountant to determine and report whether the financial statements are presented fairly and in accordance with generally accepted accounting principles. Bank holding companies do not have to submit audited financial statements as part of the requirements for the FR Y-6 annual report. The Federal Reserve may request audited consolidated financial statements from any bank holding company with total consolidated assets of less than \$500 million if deemed warranted for supervisory purposes.

The internal and external auditors should

work together in establishing the scope and frequency of audits to be performed. In addition to performing some of the basic functions of the internal auditor, the external auditor should review the internal auditing program to assess its scope and adequacy. When a bank holding company is perhaps too small to employ an internal audit staff, but when the complexities and activities of the organization suggest the need for an audit, the holding company should consider hiring an external auditor. Independence and objectivity are mandatory in any audit program, and these are difficult to maintain if the audit function is a part-time responsibility. When external auditors are employed to perform the internal audit function, they should be permitted to establish the scope of their audits and schedule surprise audits. They also should be given responsibility for suggesting systems and organizational duty assignments for maximum control consistent with the size of the organization.

2060.1.2 EXTERNAL AUDITORS AND THE RELEASE OF REQUIRED INFORMATION

The enactment of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) on August 9, 1989, requires that FDIC-insured depository institutions that are being audited provide their independent auditors with information concerning their financial condition and any supervisory actions being taken against them. Specifically, section 36(h)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831m(h)(1)) (the FDI Act) requires an insured depository institution that has engaged the services of an independent auditor to perform an audit within the past two years to provide the auditor with—

1. a copy of the most recent report of condition made by the institution (pursuant to the FDI Act or any other provision of law) and a copy of the most recent report of examination received by the institution;
2. a copy of any supervisory memorandum of understanding with such institution and any written agreement between a federal or state banking agency and the depository institution that is in effect during the period covered by the audit; and
3. a report of any action initiated or taken by a

federal banking agency during the period covered by the audit under subsection (a), (b), (c), (e), (g), (i), (s), or (t) of section 8 of the FDI Act or of any similar action taken by a state banking agency under state law, or any other civil money penalty assessed under any other provision of law with respect to the depository institution or any affiliated party.

External auditors who are serving as agents of a bank holding company may, with the approval of the organization, review examination or inspection reports and supervisory correspondence received and communicate with examiners. Examiners should remind external auditors of their responsibility to maintain the confidentiality of the reports and other supervisory communications reviewed as part of their engagement. See also the Board's rules on the release of confidential supervisory information (12 C.F.R. 261, subpart C).

2060.1.3 EXTERNAL AUDITOR INQUIRIES

In some situations, examiners may not be able to fully respond to external auditors' inquiries on certain matters relating to examinations still in progress. The examiners' findings may be incomplete or may be under review by higher supervisory authorities within the Federal Reserve System. In addition, as a general practice, examiners will normally only discuss with external auditors issues and inspection findings that have been presented to the bank holding company's management. These situations relate primarily to the timing of the auditors' inquiries in relation to the stage of inspection work and, thus, should not automatically preclude an auditor from expressing an opinion on the organization's financial statements.

2060.1.4 UNSAFE AND UNSOUND USE OF LIMITATION-OF-LIABILITY PROVISIONS IN EXTERNAL AUDIT ENGAGEMENT LETTERS

On February 9, 2006, the Federal Reserve and the other financial institution regulatory agencies (the agencies)¹ issued an interagency advisory (the advisory) to address safety-and-

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

soundness concerns that may arise when financial institutions enter into external audit contracts (typically referred to as *engagement letters*) that limit the auditors' liability for audit services.² The advisory informs financial institutions³ boards of directors, audit committees, management, and external auditors of the safety-and-soundness implications that may arise when the financial institution enters into engagement letters that contain provisions to limit the auditors' liability.

The advisory does not apply to previously executed engagement letters. However, any financial institution subject to a multiyear audit engagement letter containing unsafe and unsound limitation-of-liability provisions should seek an amendment to its engagement letter to be consistent with the advisory for periods ending in 2007 or later. (See SR-06-4.)

Limits on external auditors' liability may weaken the external auditors' objectivity, impartiality, and performance and, thus, reduce the agencies' ability to rely on audits. Therefore, certain limitation-of-liability provisions (described in the advisory and its appendix A; see section 2060.1.4.7) are unsafe and unsound. In addition, such provisions may not be consistent with the auditor-independence standards of the U.S. Securities and Exchange Commission (SEC), the Public Company Accounting Oversight Board (PCAOB), and the American Institute of Certified Public Accountants (AICPA).

2060.1.4.1 Scope of the Advisory on Engagement Letters

The advisory applies to engagement letters between financial institutions and external auditors with respect to financial-statement audits, audits of internal control over financial reporting, and attestations on management's assessment of internal control over financial reporting (collectively, *audit or audits*).

The advisory does not apply to—

1. nonaudit services that may be performed by financial institutions' external auditors,
2. audits of financial institutions' 401(k) plans, pension plans, and other similar audits,
3. services performed by accountants who are not engaged to perform financial institutions' audits (e.g., outsourced internal audits or

loan reviews), and

4. other service providers (e.g., software consultants or legal advisers).

While the agencies have observed several types of limitation-of-liability provisions in external audit engagement letters, this advisory applies to any agreement that a financial institution enters into with its external auditor that limits the external auditor's liability with respect to audits in an unsafe and unsound manner.

2060.1.4.2 External Audits and Their Engagement Letters

A properly conducted audit provides an independent and objective view of the reliability of a financial institution's financial statements. The external auditor's objective in an audit is to form an opinion on the financial statements taken as a whole. When planning and performing the audit, the external auditor considers the financial institution's internal control over financial reporting. Generally, the external auditor communicates any identified deficiencies in internal control to management, which enables management to take appropriate corrective action. In addition, certain financial institutions are required to file audited financial statements and internal control audit or attestation reports with one or more of the agencies. The agencies encourage financial institutions not subject to mandatory audit requirements to voluntarily obtain audits of their financial statements. The FFIEC's September 1999 Interagency Policy Statement on External Auditing Programs of Banks and Savings Associations⁴ notes, "[a]n institution's internal and external audit programs are critical to its safety and soundness." The policy also states that an effective external auditing program "can improve the safety and soundness of an institution substantially and lessen the risk the institution poses to the insurance funds administered by the FDIC."

Typically, a written engagement letter is used to establish an understanding between the external auditor and the financial institution regarding the services to be performed in connection with the financial institution's audit. The engagement letter commonly describes the objective of the audit, the reports to be prepared, the responsibilities of management and the

2. The advisory is effective for audit engagement letters issued on or after February 9, 2006.

3. As used in this advisory, the term *financial institutions* includes bank holding companies, banks, savings associations, and savings and loan holding companies.

4. See 64 Fed. Reg. 52,319 (September 28, 1999).

external auditor, and other significant arrangements (for example, fees and billing). Boards of directors, audit committees, and management are encouraged to closely review all of the provisions in the audit engagement letter before agreeing to sign. As with all agreements that affect a financial institution's legal rights, the financial institution's legal counsel should carefully review audit engagement letters to help ensure that those charged with engaging the external auditor make a fully informed decision.

The advisory describes the types of objectionable limitation-of-liability provisions and provides examples.⁵ Financial institutions' boards of directors, audit committees, and management should also be aware that certain insurance policies (such as error and omission policies and directors' and officers' liability policies) might not cover losses arising from claims.

2060.1.4.3 Limitation-of-Liability Provisions

The provisions of an external audit engagement letter that the agencies deem to be unsafe and unsound can be generally categorized as follows: a provision within an agreement between a client financial institution and its external auditor that effectively—

1. indemnifies the external auditor against claims made by third parties;
2. holds harmless or releases the external auditor from liability for claims or potential claims that might be asserted by the client financial institution, other than claims for punitive damages; or
3. limits the remedies available to the client financial institution, other than punitive damages.

Collectively, these categories of provisions are referred to in this advisory as *limitation-of-liability provisions*.

Provisions that waive the right of financial

5. In the majority of external audit engagement letters reviewed, the agencies did not observe provisions that limited an external auditor's liability. However, for those reviewed external audit engagement letters that did have external auditor limited-liability provisions, the agencies noted a significant increase in the types and frequency of the provisions. The provisions took many forms, which made it impractical for the agencies to provide an all-inclusive list. Examples of auditor limitation-of-liability provisions are illustrated in the advisory's appendix A. See section 2060.1.4.7.

institutions to seek punitive damages from their external auditor are not treated as unsafe and unsound under the advisory. Nevertheless, agreements by clients to indemnify their auditors against any third-party damage awards, including punitive damages, are deemed unsafe and unsound under the advisory. To enhance transparency and market discipline, public financial institutions that agree to waive claims for punitive damages against their external auditors may want to disclose annually the nature of these arrangements in their proxy statements or other public reports.

Many financial institutions are required to have their financial statements audited, while others voluntarily choose to undergo such audits. For example, federally insured banks with \$500 million or more in total assets are required to have annual independent audits.⁶ Furthermore, financial institutions that are public companies⁷ must have annual independent audits. Certain savings associations (for example, those with a CAMELS rating of 3, 4, or 5) and savings and loan holding companies are also required by OTS's regulations to have annual independent audits.⁸ The agencies rely on the results of audits as part of their assessment of a financial institution's safety and soundness.

For audits to be effective, the external auditors must be independent in both fact and appearance, and they must perform all necessary procedures to comply with auditing and attestation standards established by either the AICPA or, if applicable, the PCAOB. When financial institutions execute agreements that limit the external auditors' liability, the external auditors' objectivity, impartiality, and performance may be weakened or compromised, and the usefulness of the audits for safety-and-soundness purposes may be diminished.

By their very nature, limitation-of-liability provisions can remove or greatly weaken external auditors' objective and unbiased consideration of problems encountered in audit engagements and may diminish auditors' adherence to the standards of objectivity and impartiality required in the performance of audits. The existence of such provisions in external audit engagement letters may lead to the use of less extensive or less thorough procedures than would otherwise be followed, thereby reducing

6. For banks and savings associations, see section 36 of the FDI Act (12 U.S.C. 1831m) and part 363 of the FDIC's regulations (12 C.F.R. 363).

7. Public companies are companies subject to the reporting requirements of the Securities Exchange Act of 1934.

8. See OTS regulation at 12 C.F.R. 563.4.

the reliability of audits. Accordingly, financial institutions should not enter into external audit arrangements that include unsafe and unsound limitation-of-liability provisions identified in the advisory, regardless of (1) the size of the financial institution, (2) whether the financial institution is public or not, or (3) whether the external audit is required or voluntary.

2060.1.4.4 Auditor Independence

Currently, auditor-independence standard-setters include the SEC, PCAOB, and AICPA. Depending on the audit client, an external auditor is subject to the independence standards issued by one or more of these standard-setters. For all nonpublic financial institutions that are not required to have annual independent audits, the FDIC's rules, pursuant to part 363 (or section 562.4 of the OTS's regulations) require only that an external auditor meet the AICPA independence standards. The rules do not require the financial institution's external auditor to comply with the independence standards of the SEC and the PCAOB.

In contrast, for financial institutions subject to the audit requirements in part 363 of the FDIC's regulations (or in section 562.4 of the OTS regulations), the external auditor should be in compliance with the AICPA's Code of Professional Conduct and meet the independence requirements and interpretations of the SEC and its staff.⁹ In this regard, in a December 13, 2004, frequently asked question (FAQ) on the application of the SEC's auditor-independence rules, the SEC staff reiterated its long-standing position that when an accountant and his or her client enter into an agreement that seeks to provide the accountant immunity from liability for his or her own negligent acts, the accountant is not independent. The SEC's FAQ also stated that including in engagement letters a clause that would release, indemnify, or hold the auditor harmless from any liability and costs resulting from knowing misrepresentations by management would impair the auditor's independence. The FAQ is consistent with the SEC's Codification of Financial Reporting Policies, section 602.02.f.i, "Indemnification by Client." (See section 2060.1.4.8.)

On the basis of the SEC guidance and the agencies' existing regulations, certain limits on auditors' liability are already inappropriate in

audit engagement letters entered into by—

1. public financial institutions that file reports with the SEC or with the agencies,
2. financial institutions subject to part 363,¹⁰ and
3. certain other financial institutions that are required to have annual independent audits.

In addition, certain of these limits on auditors' liability may violate the AICPA independence standards. Notwithstanding the potential applicability of auditor-independence standards, the limitation-of-liability provisions discussed in the advisory present safety-and-soundness concerns for all financial institution audits.

2060.1.4.5 Alternative Dispute-Resolution Agreements and Jury-Trial Waivers

The agencies observed that a review of the engagement letters of some financial institutions revealed that they had agreed to submit disputes over external audit services to mandatory and binding alternative dispute resolution, binding arbitration, or other binding nonjudicial dispute-resolution processes (collectively, *mandatory ADR*) or to waive the right to a jury trial. By agreeing in advance to submit disputes to mandatory ADR, financial institutions may waive the right to full discovery, limit appellate review, or limit or waive other rights and protections available in ordinary litigation proceedings.

Mandatory ADR procedures and jury-trial waivers may be efficient and cost-effective tools for resolving disputes in some cases. Accordingly, the agencies believe that mandatory ADR or waiver of jury-trial provisions in external audit engagement letters do not present safety-and-soundness concerns, provided that the engagement letters do not also incorporate limitation-of-liability provisions. Institutions are encouraged to carefully review mandatory ADR and jury-trial provisions in engagement letters, as well as review any agreements regarding rules of procedure, and to fully comprehend the ramifications of any agreement to waive any available remedies. Financial institutions should ensure that any mandatory ADR provisions in audit engagement letters are commercially reasonable and—

¹⁰. See also the OTS's regulation (12 C.F.R. 562.4).

⁹. See part 363 of the FDIC's regulation (12 C.F.R. 363), Appendix A—Guidelines and Interpretations, Guideline 14, "Role of the Independent Public Accountant-Independence."

1. apply equally to all parties,
2. provide a fair process (for example, neutral decision makers and appropriate hearing procedures), and
3. are not imposed in a coercive manner.

2060.1.4.6 The Advisory's Conclusion

Financial institutions' boards of directors, audit committees, and management should not enter into any agreement that incorporates limitation-of-liability provisions with respect to audits. In addition, financial institutions should document their business rationale for agreeing to any other provisions that limit their legal rights.

The inclusion of limitation-of-liability provisions in external audit engagement letters and other agreements that are inconsistent with the advisory will generally be considered an unsafe and unsound practice. Examiners will consider the policies, processes, and personnel surrounding a financial institution's external auditing program in determining whether (1) the engagement letter covering external auditing activities raises any safety-and-soundness concerns and (2) the external auditor maintains appropriate independence regarding relationships with the financial institution under relevant professional standards. The agencies may take appropriate supervisory action if unsafe and unsound limitation-of-liability provisions are included in external audit engagement letters or other agreements related to audits that are executed (accepted or agreed to by the financial institution).

2060.1.4.7 Examples of Unsafe and Unsound Limitation-of-Liability Provisions

The following information was contained in appendix A of the February 9, 2006, inter-agency advisory.

Presented below are some of the types of limitation-of-liability provisions (with an illustrative example of each type) that the agencies observed in financial institutions' external audit engagement letters. The inclusion in external audit engagement letters or agreements related to audits of any of the illustrative provisions (which do not represent an all-inclusive list) or any other language that would produce similar

effects is considered an unsafe and unsound practice.

1. "Release from Liability for Auditor Negligence" Provision

In this type of provision, the financial institution agrees not to hold the audit firm liable for any damages, *except* to the extent determined to have resulted from willful misconduct or fraudulent behavior by the audit firm.

Example: In no event shall [the audit firm] be liable to the financial institution, whether a claim be in tort, contract or otherwise, for any consequential, indirect, lost profit, or similar damages relating to [the audit firm's] services provided under this engagement letter, except to the extent finally determined to have resulted from the willful misconduct or fraudulent behavior of [the audit firm] relating to such services.

2. "No Damages" Provision

In this type of provision, the financial institution agrees that in no event will the external audit firm's liability include responsibility for any compensatory (incidental or consequential) damages claimed by the financial institution.

Example: In no event will [the audit firm's] liability under the terms of this agreement include responsibility for any claimed incidental or consequential damages.

3. "Limitation of Period to File Claim" Provision

In this type of provision, the financial institution agrees that *no* claim will be asserted after a fixed period of time that is shorter than the applicable statute of limitations, effectively agreeing to limit the financial institution's rights in filing a claim.

Example: It is agreed by the financial institution and [the audit firm] or any successors in interest that no claim arising out of services rendered pursuant to this agreement by, or on behalf of, the financial institution shall be asserted more than two years after the date of the last audit report issued by [the audit firm].

4. “Losses Occurring During Periods Audited” Provision

In this type of provision, the financial institution agrees that the external audit firm’s liability will be limited to any losses occurring during periods covered by the external audit, and will not include any losses occurring in later periods for which the external audit firm is not engaged. This provision may not only preclude the collection of consequential damages for harm in later years, but could preclude any recovery at all. It appears that no claim of liability could be brought against the external audit firm until the external audit report is actually delivered. Under such a clause, any claim for liability thereafter might be precluded because the losses did not occur during the period covered by the external audit. In other words, it might limit the external audit firm’s liability to a period before there could be any liability. Read more broadly, the external audit firm might be liable for losses that arise in subsequent years only if the firm continues to be engaged to audit the client’s financial statements in those years.

Example: In the event the financial institution is dissatisfied with [the audit firm’s] services, it is understood that [the audit firm’s] liability, if any, arising from this engagement will be limited to any losses occurring during the periods covered by [the audit firm’s] audit, and shall not include any losses occurring in later periods for which is not engaged as auditors.

5. “No Assignment or Transfer” Provision

In this type of provision, the financial institution agrees that it will not assign or transfer any claim against the external audit firm to another party. This provision could limit the ability of another party to pursue a claim against the external auditor in a sale or merger of the financial institution, in a sale of certain assets or a line of business of the financial institution, or in a supervisory merger or receivership of the financial institution. This provision may also prevent the financial institution from subrogating a claim against its external auditor to the financial institution’s insurer under its directors’ and officers’ liability or other insurance coverage.

Example: The financial institution agrees that it will not, directly or indirectly, agree to assign or transfer any claim against [the audit firm] arising out of this engagement to anyone.

6. “Knowing Misrepresentations by Management” Provision

In this type of provision, the financial institution releases and indemnifies the external audit firm from any claims, liabilities, and costs attributable to any knowing misrepresentation by management.

Example: Because of the importance of oral and written management representations to an effective audit, the financial institution releases and indemnifies [the audit firm] and its personnel from any and all claims, liabilities, costs, and expenses attributable to any knowing misrepresentation by management.

7. “Indemnification for Management Negligence” Provision

In this type of provision, the financial institution agrees to protect the external auditor from third-party claims arising from the external audit firm’s failure to discover negligent conduct by management. It would also reinforce the defense of contributory negligence in cases in which the financial institution brings an action against its external auditor. In either case, the contractual defense would insulate the external audit firm from claims for damages even if the reason the external auditor failed to discover the negligent conduct was a failure to conduct the external audit in accordance with generally accepted auditing standards or other applicable professional standards.

Example: The financial institution shall indemnify, hold harmless, and defend and its authorized agents, partners, and employees from and against any and all claims, damages, demands, actions, costs, and charges arising out of, or by reason of, the financial institution’s negligent acts or failure to act hereunder.

8. “Damages Not to Exceed Fees Paid” Provision

In this type of provision, the financial institution agrees to limit the external auditor’s liability to the amount of audit fees the financial institution paid the external auditor, regardless of the extent of damages. This may result in a

substantial unrecoverable loss or cost to the financial institution.

Example: [The audit firm] shall not be liable for any claim for damages arising out of or in connection with any services provided herein to the financial institution in an amount greater than the amount of fees actually paid to [the audit firm] with respect to the services directly relating to and forming the basis of such claim.¹¹

2060.1.4.8 Frequently Asked Questions on the Application of the SEC's Auditor-Independence Rules

The following information is contained in appendix B of the February 9, 2006, inter-agency advisory. The information is derived from the SEC's Office of Chief Accountant's Codification of Financial Reporting Policies.

Question¹²

Inquiry was made as to whether an accountant who certifies financial statements included in a registration statement or annual report filed with the commission under the Securities Act or the Exchange Act would be considered independent if he had entered into an indemnity agreement with the registrant. In the particular illustration cited, the board of directors of the registrant formally approved the filing of a registration statement with the commission and agreed to indemnify and save harmless each and every accountant who certified any part of such statement "from any and all losses, claims, damages or liabilities arising out of such act or acts to which they or any of them may become subject under the Securities Act, as amended, or at 'common law,' other than for their willful misstatements or omissions."

Answer

When an accountant and his client, directly or through an affiliate, have entered into an agree-

ment of indemnity which seeks to assure to the accountant immunity from liability for his own negligent acts, whether of omission or commission, one of the major stimuli to objective and unbiased consideration of the problems encountered in a particular engagement is removed or greatly weakened. Such condition must frequently induce a departure from the standards of objectivity and impartiality which the concept of independence implies. In such difficult matters, for example, as the determination of the scope of audit necessary, existence of such an agreement may easily lead to the use of less extensive or thorough procedures than would otherwise be followed. In other cases it may result in a failure to appraise with professional acumen the information disclosed by the examination. *Consequently, the accountant cannot be recognized as independent for the purpose of certifying the financial statements of the corporation.*

Question

Has there been any change in the commission's long-standing view (Financial Reporting Policies—Section 600—602.02.f.i., "Indemnification by Client") that when an accountant enters into an indemnity agreement with the registrant, his or her independence would come into question?

Answer

No. When an accountant and his or her client, directly or through an affiliate, enter into an agreement of indemnity that seeks to provide the accountant immunity from liability for his or her own negligent acts, whether of omission or commission, *the accountant is not independent.* Further, including in engagement letters a clause that a registrant would release, indemnify, or hold harmless from any liability and costs resulting from *knowing misrepresentations by management would also impair the firm's independence.*

2060.1.3 INSPECTION OBJECTIVES

1. To review the operations of the bank holding company to determine if an audit program exists.
2. To determine the independence and competence of those who administer and provide the internal and external audit function.

11. The agencies also observed a similar provision that limited damages to a predetermined amount not related to fees paid.

12. The subtitles in this section have been revised for this manual.

3. To determine the adequacy of the scope and frequency of the audit program.
4. To determine with reasonable assurance that the bank holding company has adequate internal audit and external audit functions that ensure efficient and effective operations, including the safeguarding of assets, reliable financial reporting, and compliance with applicable laws and regulations.
5. To ascertain if the bank holding company's internal audit function monitors, reviews, and ensures the continued existence and maintenance of sound and adequate internal controls over the bank holding company's management process—the control environment, risk assessment, control activities, information and communication, and monitoring activities.
6. To review and evaluate internal audit outsourcing arrangements and the actions of the outsourcing vendor under the standards established by the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing.
7. To consider the policies, processes, and personnel surrounding the bank holding company's external auditing program and to determine the existence of any unsafe and unsound practices or conditions, including whether—
 - a. any engagement letter or other agreement related to external audit activities (1) provides any assurances of indemnification to the bank's external auditors that relieves them of liability for their own negligent acts (including any losses, claims, damages, or other liabilities) or (2) raises any other safety-and-soundness concerns; and
 - b. the external auditors have not maintained appropriate independence in their relationships with the bank holding company, in accordance with relevant professional standards.
8. To determine, based on the criteria above, if the work performed by internal and external auditors is reliable.

2060.1.6 INSPECTION PROCEDURES

The primary thrust of the inspection should be directed toward the audit activities that relate to the parent company and all subsidiaries. An assessment of the audit function as it pertains to the bank (or banks) is primarily the responsibility of the regulatory agency that examines that particular bank. The examiner should review the latest bank examination reports to note com-

ments and deficiencies cited concerning internal controls and the audit function. In addition to providing an input into the overall assessment of the audit function, review of the bank examination reports may provide a basis for determining areas of investigation during the inspection. Further, if matters cited in the latest bank examination report are deemed to be significant and indications are that corrective action has not been taken, the examiner should mention the facts to senior management of the bank holding company and note the details in the inspection report.

To judge the adequacy of the audit program, including its scope and frequency, the following procedures, with equal emphasis being placed on the parent, bank, and nonbank subsidiaries, are recommended as minimum guidelines for the inspection.

1. Review the parent company and nonbank operations and the audit comments in the bank examination reports to ascertain the adequacy of the existing audit program or the need for developing such a program, if the organization currently lacks one.
2. Review the scope of the audit function to ensure that procedures are in place to cover adequately those areas that may be susceptible to exposure. When reviewing the audit scope, determine whether the auditor was able to perform all the procedures necessary to complete the audit. If not—
 - a. establish whether the scope limitations were imposed by the directorship or management and
 - b. determine whether the auditor established and documented the reasons why the scope limitations were imposed.
 - (1) Was the auditor able to quantify the effects of the scope limitation on the financial statements and the audit results, and, if not pervasive, was a qualified opinion or disclaimer of opinion issued?
 - (2) Did the auditor evaluate all possible effects on his ability to express an opinion on the financial statements?
 - (3) Were there any external circumstances that imposed limitations on the audit's scope?
 - (4) Were alternative procedures used to accomplish the same audit objectives? If so, did the use of the alternative procedures justify issuance of an unqualified opinion?

3. Review the audit schedule to determine that the audits are satisfactorily spaced and that all functions are audited with adequate frequency.
 4. Review audit workpapers and reports on a test-check basis for adequacy of content, satisfactory maintenance, and conformance to audit guidelines outlined by the board of directors.
 5. Determine the qualifications and background of the auditor and others participating in the audit function.
 6. To establish that the auditor has a direct communication line to the board of directors and freedom of access to all records for audit purposes, review audit reports and minutes of meetings held by directors or a committee thereof.
 7. Determine the entity responsible for maintaining the audit function. If a bank provides audit services to affiliates, indicate the manner in which the bank is reimbursed for the cost of such services.
 8. Determine whether audit reports are submitted on a timely basis to—
 - a. the directors and senior management and
 - b. management in the area being audited.
 9. Review responses to exceptions and recommendations noted in audit reports.
 10. Check on the relationship between the internal and any external auditors to determine whether their activities are coordinated in a manner that effects comprehensive coverage of the organization and at the same time avoids duplication of effort.
 11. Review the letter addressed to management by the external auditor and determine that steps have been taken to correct any deficiencies noted. If no deficiencies were noted in the letter, inquire as to whether such comments were communicated to management by any other means.
 12. Ascertain that the audit program is annually reviewed and approved by the directors.
 13. If the BHC has engaged any external audit firms to conduct audits of its financial statements (including their certification), audits of internal control over financial reporting, attestations on management's assessment of internal control, appraisals of the BHC's audit function, or any internal audit or audit function or operational review, the examiner should:
 - a. Review the engagement letters (including past or pending engagement letters) and any agreements between the board of directors (and the audit committee) and the external auditor, noting any qualifications that are contained therein.
 - b. Review any correspondence exchanged between the BHC and the external auditor, including any letters requesting opinions from external auditors. Determine if BHC management influenced any of the opinions.
 - c. Ascertain if any of the engagement letters restricted the scope of the audit in any way, including whether the letters limited the degree of reliance to be placed on the work of the internal audit staff.
14. Determine if the audit engagement letters or other agreements include possible unsafe and unsound provisions or practices that—
 - a. indemnify the external auditor against all claims made by third parties;
 - b. hold harmless, release, or indemnify the external auditor from liability for claims or potential claims that the BHC may assert, thus providing relief from liability for the auditors' own negligent acts, including any losses, claims, damages, or other liabilities, (other than claims for punitive damages); or
 - c. limit the remedies available to the BHC (other than punitive damages).
 15. Find out whether the BHC's board of directors, audit committee, and senior management closely review all of the provisions of audit engagement letters or other agreements for providing external auditing services for the bank before agreeing to sign, thus indicating the BHC's approval and financial commitment.
 16. Verify that the BHC has documented its business rationale for any engagement letter or other agreement provisions with external audit firms that limit or impair the BHC's legal rights.
 17. If new external auditors have been engaged, ascertain the reasons for such change.
 18. Determine if the parent company or non-bank subsidiaries have reported any defalcations. If so, determine if adequate controls have been initiated to lessen any further risk and exposure.
 19. Determine if the BHC's external auditors received copies of the subsidiary FDIC-insured institution's examination and other designated supervisory reports and correspondence required by section 36(h)(1) of the FDI Act.
 20. Determine the degree of independence of

the external audit firm by reviewing any financial ties between the BHC, audit firm, and any of its partners or employees. Also review any other relationships or potential conflicts of interest that may exist.¹³

The independence of the internal auditor should be evaluated by ascertaining whether the following conditions exist: (1) reports are distributed directly to the board or a committee thereof or, less desirably, to an officer not connected with the area being reviewed; (2) there

are no relationships within the organization that are incompatible with the internal audit function; and (3) severe restrictions are not placed on the program or its scheduling by management. In order to maintain the degree of objectivity essential to the audit function, the examiner should establish that the internal auditor does not install procedures, originate and approve entries, or otherwise engage in any activity that would be subject to audit review and appraisal.

The examiner should consider meeting with the audit committee and the auditor and, subsequently, with senior bank holding company management to communicate conclusions concerning the adequacy of the scope and frequency of the audit program. During the discussions, the examiner should concentrate on detailing criticisms or deficiencies noted. The auditor and senior bank holding company management should be made fully cognizant of the examiner's analyses and the comments concerning the audit function that will appear on the relevant pages in the inspection report.

13. The Securities and Exchange Commission (SEC) has also released guidance relating to the independence of auditors for public institutions. According to SEC Rule 101, the independence of an auditor would be impaired if there are financial, employment, or business relationships between auditors and audit clients, or if there are relationships between auditors and audit clients in which the auditors provide certain nonaudit services to their audit clients. Much of the language found in the SEC's independence rules is incorporated in the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing. (See section 2060.05.)

An assessment of management's strategic plans and its success in meeting previously established budgetary goals is one of the factors considered in evaluating a BHC's management, operations, financial condition, and prospects.¹ Through review of the budget figures, insight can be gained concerning an organization's future plans and other matters such as capital adequacy, liquidity, sources and applications of funds, level and quality of earnings, and performance of management.

The budget is a coordinated financial plan used to estimate and control all or a few of the activities of the various divisions or subsidiaries in a bank holding company. Based on an assessment of future economic developments and conditions, management formulates a plan of action and indicates anticipated changes in the balance-sheet accounts and profitability (predicated on implementation of the plan). The budget is a significant management tool in that it projects expected results and also serves as an important check on management decisions and performance by providing a basis for comparison and corrective action on a timely basis. The comparison of actual performance to budget allows management to give careful attention to various possible courses of action and to choose the course which should result in the greatest benefit. Budgeting is also useful in measuring the performance of individuals and the departments they manage. Further, the comparison of budget totals to actual changes in activities such as loans, investments, and deposits assists in decision making and can promote coordination and cooperation among affiliates. The variance indicated by the comparison process may be construed as a measure of management's performance and planning record and its relationship to the organization's goals and objectives. It should be noted that some significant variances may be caused by factors beyond management's control or factors that could not reasonably be anticipated.

1. The *strategic planning process* focuses on intermediate and long-term strategic goals and is the vehicle used to determine the overall direction and focus of the organization. The *budgeting process* refers to the tactical decisions required to meet goals and objectives. The budget is a subset of the strategic plan. While smaller bank holding company organizations may not always have formal written budgets, all organizations should have a strategic planning process, which determines overall corporate direction, general resource allocation, and balance-sheet relationships with respect to capital needs, growth, asset mix, and risk.

While various individuals may be responsible for input to the budget process, the chief executive officer typically has the ultimate responsibility for preparation and implementation of the formal budget. The time period covered by a budget typically encompasses one year, although it often covers longer periods in the larger, more sophisticated bank holding companies. The longer the budget period, the greater are the prospects for increased variances from original budget figures. In some cases in which four- or five-year projections are made, bank holding companies may formulate several forecasts based on different sets of assumptions. In such instances, the examiner should work with the "most likely" situation that may evolve based on economic trends, history, and experience of the organization, but should also give serious consideration to the "worst-case" projections.

Many bank holding companies, particularly the smaller organizations, may not have formal written budgets or plans. In small shell companies, while it is not essential to have a formal budget, budgeting procedures should be encouraged where appropriate. Budgeting at the parent level could be appropriately limited to debt-servicing and dividend considerations.

2060.2.1 INSPECTION OBJECTIVES

1. To determine the extent of an organization's financial planning and budget program.
2. To indicate to management of organizations that are without formal planning procedures the advantages of adopting a budget.
3. To understand the institution's decision-making process as it relates to the budget.
4. To determine the causes of significant variances between the budget and actual performance.
5. To assess the reasonableness of projected figures, including controls over the data throughout the budgeting process.
6. To assess the impact of the budget on the present condition and future prospects of the bank holding company.
7. To determine whether the plan outlined in the budget is supported by the financial and managerial resources of the holding company.

2060.2.2 INSPECTION PROCEDURES

1. Familiarity with a bank holding company's financial condition and results of operations should begin before the start of the inspection with a review of the annual report to shareholders, financial reports submitted to the Federal Reserve System, and other financial documentation contained in the files. The more significant accounts, statistical data, and pertinent ratios should be compared on a period-to-period basis to highlight significant changes and discern trends.

2. The examiner also should become familiar with current and projected economic conditions, both nationally and locally, including general industry conditions.

3. Based on a review of the aforementioned data, the examiner should be in a position to substantiate the reasonableness of budgeted figures without a systematic examination of all of the transactions affecting the figures presented. Further, such an analysis provides a better understanding of the operation and highlights matters of interest and potential problem areas to be investigated during the inspection.

4. Throughout the review process, the examiner must maintain a sense of perspective to avoid spending excessive time on relatively immaterial amounts.

5. The examiner should meet with the officer responsible for the preparation of the budget to determine the scope of the organization's financial plans. The extent of senior management's and the board of directors' involvement in the strategic planning and budgeting process should also be ascertained in this preliminary meeting.

6. Workpapers which document or illustrate the rationale for the budget data should be reviewed and discussed with budget personnel, including the existence and extent of internal controls over the data.

7. The examiner should evaluate plans, projections, and forecasts in light of market-area characteristics and the present condition and history of the organization.

8. The examiner should determine whether the accounting principles of major importance have been applied consistently and, if not, the impact of the alternative accounting treatment on the budget totals.

9. The sources of input for the budget should be reviewed and the frequency and procedures for effecting revision should be ascertained.

10. When there are significant budget variances, the examiner should seek documented explanations. Review any such documentation to determine if management policy or factors beyond management control were responsible for the variances.

11. A final summary discussion should be held with management to discuss goals which the examiner believes may be unattainable and to communicate conclusions concerning the budget. Due consideration should be given to management's views, whether or not in concurrence with the examiner's conclusions. If management indicates future changes which could have a significant impact on the organization, the matter should be noted in the inspection report. Further, management's assessment of the effect of contemplated action on the operations and financial condition of the bank holding company should be noted.

12. For those bank holding companies that do not have formal written plans, the examiner should obtain from senior management information on their plans for matters such as growth and expansion, capital injections, debt retirement, and changes in sources of funding. Except for small, shell companies, the examiner should recommend adoption of a budget program and emphasize the need for strategic planning by indicating how management methods may be improved as a result of a logically conceived and properly operated budget. Budgets and planning are especially important in cases in which a bank holding company is losing its share of the market or in which inefficiencies are depressing profitability.

Adequate and accurate records and financial statements are an integral part of a sound bank holding company operation. Records should be maintained to allow preparation of financial statements in accordance with generally accepted accounting principles and to ensure proper accountability for all assets, liabilities, income, and expenses. Generally, an independently certified statement inspires greater confidence than a statement prepared internally. Moreover, an unqualified, independently certified statement may act as a check on management recordkeeping policies and procedures, and provide more assurance that transactions are being properly recorded and that books accurately reflect overall financial condition.

Management may exercise reasonable discretion in selecting and adopting the type of books and records it uses and in formulating accounting systems and bookkeeping procedures. From the examiner's viewpoint, the test of a bank holding company's records is one of adequacy, consistency, and accuracy. The financial statements of every bank holding company must accurately reflect financial condition and operating results. This principle is applicable whether a bank holding company is small and has a relatively simple bookkeeping system or whether it is a larger institution with a fully automated system. A recordkeeping system that is capable of generating a wide variety of pertinent internal data and other information facilitates problem solving and decision making and, thus, contributes to the efficiency of a bank holding company's operations. Further, such a system serves as a convenient tool to provide directors, stockholders, and other interested parties with information on conditions in a bank holding company.

2060.3.1 INSPECTION OBJECTIVES

1. To determine whether financial statements are prepared in accordance with generally accepted accounting principles and are sufficiently detailed to accurately portray the company's financial condition.

2. To determine that sufficient records are maintained to provide detail on material balance-sheet items, income-statement items, and various contingent liabilities and off-balance-sheet risks that permit the preparation of appropriate financial information.

3. To recommend corrective action when policies and procedures employed have resulted in inadequate or inaccurate records and financial statements.

2060.3.2 INSPECTION PROCEDURES

1. The examiner should review the sections relating to audit and records in the prior inspection report and the latest examination reports of the subsidiary banks to note any comments or deficiencies cited concerning records, including any MIS deficiencies. In addition to providing an input into the overall assessment of the quality of records, the review may provide a basis for determining areas of emphasis and follow-up during the inspection.

2. The examiner should discuss recommendations and criticisms contained in such reports with an appropriate officer to ascertain what changes, if any, have taken place.

3. The examiner should review the external auditing firm's management letter, giving particular attention to comments concerning recordkeeping. Determine if any corrective actions were recommended by the external auditors and the extent to which the cited items have been corrected.

4. In those situations when it appears that records are deficient or financial statements are inaccurate, a thorough investigation of applicable transactions may be required. The purpose of the investigation is to obtain information needed in outlining improved controls over MIS, accounting methods, and records so that the financial data presented are in accordance with generally accepted accounting principles. Thus, information is provided which will better serve bank holding company management. The investigation should not necessarily involve a review of every transaction, but should involve a check of a sufficient number of transactions to ensure the examiner that the records, as checked, reflect an accurate financial condition. The extent of the review will depend largely on the procedures and controls over MIS and the condition and adequacy of the books and underlying records. During the investigative process, the examiner should be careful to distinguish between documented facts and statements of intent or interpretations set forth by company representatives.

The directorate and management of bank holding companies have a responsibility to contribute to the health and growth of the organization they serve. To carry out this responsibility effectively, they must be kept fully informed of conditions throughout the organization and trends within the banking industry. Reporting is the process of developing and communicating information internally to directors and management and externally to shareholders and regulatory authorities. Management and the board of directors must recognize that as a company develops and grows, its environment, strategic goals, and information needs change. The guidelines and requirements for reports flowing to management and the board of directors should be established and allow for change, recognizing the fact that informational needs can vary, including those at different levels of the organization.

Informational needs will also be dictated by the particular type of management structure in place—centralized, decentralized, legal entity, or business line. The ultimate decision-making responsibility rests with the corporation's board of directors, and the responsibility for implementing their decisions rests with designated board committees, executive management, or other designated management committees or individuals. As such, examiners should make an assessment of the qualifications of the persons on the board of directors, executive management staff, and the board and executive management committees to ensure that they have the necessary knowledge, experience, and expertise to understand the information presented and to act on it constructively. The assessment should include a review of reporting lines to identify information flows and the various decision-making levels involved or needed.

All reports flowing to executive management, board committees, and the board of directors should be analyzed for clarity, consistency, timeliness, quality, and coverage of crucial areas of the organization. A review of board and committee minutes should reveal if participants had any questions or whether there were any uncertainties as to the meaning of the data presented.

Each bank holding company prepares various reports for submission to its management and directors; an effective internal reporting system facilitates their ability to analyze a situation and to make informed decisions. Although such reports may vary in content from company to company, emphasis is generally placed on the financial data generated. The important consid-

eration is whether each company is providing sufficient data to keep the interested parties informed of the financial condition and performance of all the divisions or entities. The frequency of the reporting and the detail of information provided can be categorized as being on a need-to-know basis. The form of reports ranges from consultations and meetings to submission of printed material for study and review. The scope and size of the operations will have an effect on the frequency and detail of the information submitted. In the larger, more sophisticated companies, frequent meetings and consultations are held to discuss the performance of various entities, the impact of performance on the organization's goals and objectives, and policies and strategies to be followed. Written reports outlining important matters and summarizing various financial data are typically reviewed and discussed regularly.

The number and variety of reports depends on the size and sophistication of the bank holding company operation. For smaller bank holding companies, the extent of their reports may be limited to annual statements, as more frequent periodic reports may not be necessary under normal conditions. The larger holding companies normally prepare monthly comparative balance sheets and income statements covering similar periods for two consecutive years. Thus, any significant deviation from the prior year's data can be readily detected. Generally, reports detailing the extent of delinquent and nonaccrual loans are prepared monthly. Facts and figures pertaining to the adequacy of the loan-loss provision are presented periodically. Additional reports containing information on budgets, cash flow, liquidity, and capital adequacy are prepared to assist management in assessing the organization's overall financial condition and performance. Summaries of internal audit reports and reports of examinations of subsidiary banks are brought to management's attention. Data relative to other bank holding companies or banks in the same peer groups are assembled, when available, so that comparisons with similarly sized organizations are possible. All of the aforementioned information may be prepared for directors, although not necessarily in as much detail as that submitted to management. On occasion, key management personnel of the holding company attend directors' meetings to expand on the topics being discussed.

Reports to shareholders usually consist of quarterly and annual reports which detail the company's financial condition and results of operations. Additional information may include the chief executive officer's overall assessment of the company, future plans, and other financial and analytical data. The financial information is used for public disclosure and enables investors, depositors, and creditors to make informed judgments concerning the financial condition of the bank holding company. Bank holding companies whose securities have been registered pursuant to the Securities and Exchange Act of 1934 are required to prepare various reports containing specific financial information.

2060.4.1 INSPECTION OBJECTIVES

1. To review the organizational structure to determine the various levels of decision-making and reporting lines, including board and executive management committees.
2. To determine whether the bank holding company has written policies and procedures, and internal controls covering the types of reports required to be submitted to management and the directors.
3. To determine that the required reports are adequate to accurately reflect the financial condition and performance within the organization's divisions and units and whether the reporting systems and reports are adequate to monitor the risks therein.
4. To evaluate whether the reports and reporting systems are adequate to measure and reflect the company's financial position and performance in all areas, to measure the company's progress in meeting its financial and business goals, and to monitor inherent risks.
5. To determine that the contents of the reports are complete and submitted on a timely basis.
6. To recommend corrective action when reporting practices, policies, or procedures are deficient.
7. To evaluate management's procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by reporting systems, and to evaluate the system's ability to adapt to change caused by regulatory and accounting issues or other market conditions.

2060.4.2 INSPECTION PROCEDURES

1. Review the organizational structure to determine reporting lines and the various levels of decision making, risk assessment, and controls.
2. Ascertain whether any corporate policies address risk management or internal reporting requirements and determine:
 - a. the types of reports required to be submitted and
 - b. the adequacy of such reporting requirements in light of a company's particular circumstances.

Comment: In a holding company with a decentralized system of control over subsidiaries, the existence of written policies and procedures is important since each subsidiary operates as a relatively autonomous unit.

3. Obtain a listing of internal reports that are submitted to corporate executive management and the board of directors (including packages for the board of directors and executive committees).
4. Randomly sample, based on a material risk focus, the individual as well as the various types of management reports and determine whether they are adequately prepared in accordance with established policies and procedures and submitted to the appropriate individuals on a timely basis. Determine whether the management reports are sufficient to measure the company's progress in achieving its financial and business goals and forecasts.
5. Identify and document management procedures for reacting to elevated risk, weaknesses, or deficiencies disclosed by MIS. Also evaluate the ability of the information system to handle regulatory and accounting issues and to adapt to change.
6. At the conclusion of the review process, the examiner should discuss with management, as appropriate, topics such as—
 - a. the lack of established policies and procedures and internal controls,
 - b. inadequate reporting requirements, and
 - c. noncompliance with reporting requirements and/or the untimely submission of reports.

2060.4.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Registration, reports, and examinations or inspections		225.5		
Reporting requirements emanating from the Securities Exchange Act of 1934	15 USC 78a et seq.			

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

2060.5.1 INTRODUCTION

In establishing an insurance program, a bank holding company should be aware of where it is exposed to loss, the extent to which insurance is available to cover potential losses and the cost of such insurance. These various factors should be weighed to determine how much risk the bank holding company will assume directly. In assessing the extent of risk an organization is willing to assume, it is important to analyze the impact of an uninsured loss not only on the entity where the loss occurs, but also on the affiliates and the parent. Once appropriate coverage has been acquired, procedures should be established for the periodic review of the program to assure the continuing adequacy of the coverage. Particularly for larger BHCs, these procedures should include at least an annual review of the program by the board of directors of the parent organization.

Insurance is a highly specialized field and no attempt is made here to discuss all the various types and forms of insurance coverage that are available to financial institutions. Examiners are not expected to be insurance experts; however, examiners should recognize that a financial organization's primary defenses against loss include adequate internal controls and procedures and that insurance is intended to complement, not replace, an effective system of internal controls. Thus, an overall appraisal of the control environment becomes a significant consideration in assessing the adequacy of the insurance program. To the extent controls are lacking, the need for additional coverage increases.

2060.5.2 BANKER'S BLANKET BOND

The most important and comprehensive insurance coverage available is the bankers' blanket bond which is usually extended to encompass all the entities in a bank holding company structure. Generally, the scope of the blanket bond contract is intended to cover risks of loss due to criminal acts, such as embezzlement, burglary, robbery, theft, larceny, forgery, etc., but in addition it provides indemnity for loss of property through damage, destruction, misplacement and mysterious, unexplainable disappearance. The most important item of protection under the bond, however, is the blanket fidelity coverage for officers and employees.

2060.5.3 TYPES OF BLANKET BONDS

While there are several similar forms of blanket bonds in use, those commonly found are the Financial Institutions Bond Standard Form No. 24, the Bankers Blanket Bond Standard Form No. 2, and Lloyd's Banks' and Trust Companies' Policy HAN Form (C). Under these blanket forms, every employee is usually covered for the total amount of the bond. Typically, new employees and new offices are automatically covered and no notice is required for an increase in the number of employees or in the number of offices established, unless such increases result from a merger or consolidation with another institution. The word "blanket," however, refers to the over-all amount that applies to the several specified risks covered under the bond and is not intended to mean "all risks" coverage. A most important feature of the bankers' blanket bond is the "discovery rider." The rider, which converts the blanket bond from a "loss sustained basis" to a "discovery basis," provides indemnity against any loss sustained by the insured entity at any time but discovered after the effective date of the bond and prior to the termination or cancellation of the bond, even though lower amounts of insurance and more restrictive coverage may have been carried when the loss was actually sustained.

2060.5.4 DETERMINING THE COVERAGE NEEDED

One of the most difficult insurance problems management faces is the determination of the amount of blanket bond coverage that should be maintained. An estimate of the maximum amount of money and securities that may be lost through burglary or robbery can be calculated with reasonable accuracy, but the potential loss resulting from dishonest acts of officers and employees is not easily measured. The Insurance and Protective Committee of the American Bankers Association has conducted several studies of the problems of determining adequate coverage and has concluded that total deposits represent the most appropriate item in bank financial statements upon which to base an estimate of a reasonable or suitable amount of blanket bond coverage.

In a bank holding company structure, the amount of blanket bond coverage is generally determined by the deposits of the largest bank and the amount of suggested coverage in the ABA's schedule. Such an amount is considered to be a minimum and other factors such as a rapidly expanding operation, excessive cash on hand, or inferior audit and control practices may suggest the need for larger coverage. Since coverages are generally extended to include the nonbank subsidiaries and such subsidiaries usually operate on a smaller scale than their affiliated banks, the question concerning the adequacy of the amount of the blanket bond coverage for a nonbank subsidiary is more easily addressed and is typically a function of the parent's and the bank's coverage.

2. To determine the adequacy of insurance coverage after giving due consideration to the overall control environment and factors such as the organization's claim experience and costs associated with various coverages.

3. To ascertain that a comprehensive review of the insurance program is conducted periodically by management and at least annually by the board of directors and entered into the minutes.

4. To determine the entity(ies) responsible for paying the premiums and the manner in which such payments are allocated among the affiliates that receive the coverage benefits.

5. To determine if procedures are in place to assure that claims are filed promptly.

2060.5.5 NOTIFICATION OF LOSS

When submitting a claim, most blanket bonds have provisions which require a report to be submitted within a specified period after a reportable item comes to the attention of management. Occasionally, items are not reported to the bonding company because of uncertainty as to whether the incident constitutes a reportable item. Failure to report in a timely manner could invalidate the claim and jeopardize existing coverages. Thus, it should be emphasized to management that any questionable items should be reported.

2060.5.6 DIRECTORS' AND OFFICERS' LIABILITY INSURANCE

Directors' and Officers' Liability Insurance ("DOL Insurance") insures the Directors and Officers against *personal* liability resulting from claims of alleged negligence, wrongful acts, errors and omissions, etc. This insurance is not included in the blanket bond or other standard fidelity coverage.

2060.5.7 INSPECTION OBJECTIVES

1. To determine the scope and extent of insurance coverages for the various entities in the organization.

2060.5.8 INSPECTION PROCEDURES

1. The prior year's inspection report should be reviewed for comments relative to controls and insurance. The examiner should note the types and extent of coverages, comments concerning the control environment and any deficiencies related to the administration of the insurance program and the coverages in force.

2. A similar review encompassing the latest examination reports of all major affiliated banks should be conducted. The review process is intended to provide a basis for determining areas of emphasis and follow-up during the inspection. The examiner need not re-examine the insurance program or the controls in force in the individual banks.

3. The examiner should meet with the officer responsible for maintaining the insurance policies and related documentation and ascertain the location of such policies and documentation. Review any independent review of coverages and any deficiencies that may have been cited by the internal or external auditors.

4. Review the manner and frequency of presentations to the board of directors of the insurance coverage.

Nonaccrual Loans and Restructured Debt (Accounting, Reporting, and Disclosure Issues) Section 2065.1

Working with borrowers who are experiencing financial difficulties may involve formally restructuring their loans and taking other measures to conform the repayment terms to the borrowers' ability to repay. Such actions, if done in a way that is consistent with prudent lending principles and supervisory practices, can improve the prospects for collection. Generally accepted accounting principles (GAAP) and regulatory reporting requirements provide a framework for reporting that may alleviate certain concerns that lenders may have about working constructively with borrowers who are having financial difficulties.

Interagency policy statements and guidance, issued on March 1, 1991; March 10, 1993; and June 10, 1993, clarified supervisory policies regarding nonaccrual assets, restructured loans, and collateral valuation (additional clarification guidance may be found in SR-95-38 and in the glossary of the reporting instructions for the bank call report and the FR-Y-9C, the consolidated bank holding company report). When certain criteria¹ are met, (1) interest payments on nonaccrual assets can be recognized as income on a cash basis without first recovering any prior partial charge-offs; (2) nonaccrual assets can be restored to accrual status when subject to formal restructurings, according to Financial Accounting Standards Board (FASB) Statement Nos. 15 and 114, "Accounting by Debtors and Creditors for Troubled Debt Restructurings" (FAS 15) and "Accounting by Creditors for Impairment of a Loan" (FAS 114); and (3) restructurings that specify a market rate of interest would not have to be included in restructured loan amounts reported in the years after the year of the restructuring. These supervisory policies apply to federally supervised financial institutions. The board of directors and management of bank holding companies should therefore incorporate these policies into the supervision of their federally supervised financial institution subsidiaries.

2065.1.1 CASH-BASIS INCOME RECOGNITION ON NONACCRUAL ASSETS

Current regulatory reporting requirements do not preclude the cash-basis recognition of

income on nonaccrual assets (including loans that have been partially charged off), if the remaining book balance of the loan is deemed fully collectible. Interest income recognized on a cash basis should be limited to that which would have been accrued on the recorded balance at the contractual rate. Any cash interest received over this limit should be recorded as recoveries of prior charge-offs until these charge-offs have been fully recovered.

2065.1.2 NONACCRUAL ASSETS SUBJECT TO FAS 15 AND FAS 114 RESTRUCTURINGS

A loan or other debt instrument that has been formally restructured to ensure repayment and performance need not be maintained in nonaccrual status. When the asset is returned to accrual status, payment performance that had been sustained for a reasonable time before the restructuring may be considered. For example, a loan may have been restructured, in part, to reduce the amount of the borrower's contractual payments. It may be that the amount and frequency of payments under the restructured terms do not exceed those of the payments that the borrower had made over a sustained period, within a reasonable time before the restructuring. In this situation, if the lender is reasonably assured of repayment and performance according to the modified terms, the loan can be immediately restored to accrual status.

Clearly, a period of sustained performance, whether before or after the date of the restructuring, is very important in determining whether there is reasonable assurance of repayment and performance. In certain circumstances, other information may be sufficient to demonstrate an improvement in the borrower's condition or in economic conditions that may affect the borrower's ability to repay. Such information may reduce the need to rely on the borrower's performance to date in assessing repayment prospects. For example, if the borrower has obtained substantial and reliable sales, lease, or rental contracts or if other important developments are expected to significantly increase the borrower's cash flow and debt-service capacity and strength, then the borrower's commitment to repay may be sufficient. A preponderance of such evidence may be sufficient to warrant

1. A discussion of the criteria is found within the corresponding subsections that follow.

returning a restructured loan to accrual status. The restructured terms must reasonably ensure performance and full repayment.

It is imperative that the reasons for restoring restructured debt to accrual status be documented. A restoration should be supported by a current, well-documented evaluation of the borrower's financial condition and prospects for repayment. This documentation will be reviewed by examiners.

The formal restructuring of a loan or other debt instrument should be undertaken in ways that will improve the likelihood that the credit will be repaid in full in accordance with reasonably restructured repayment terms.² Regulatory reporting requirements and GAAP do *not* require a banking organization that restructures a loan to grant excessive concessions, forgive principal, or take other steps not commensurate with the borrower's ability to repay in order to use the reporting treatment specified in FAS 15. Furthermore, the restructured terms may include prudent contingent payment provisions that permit an institution to obtain appropriate recovery of concessions granted in the restructuring, if the borrower's condition substantially improves.

2065.1.3 RESTRUCTURINGS RESULTING IN A MARKET INTEREST RATE

A FAS 114 restructuring that specifies an effective interest rate that is equal to or greater than the rate the lending banking organization is willing to accept at the time of the restructuring, for a new loan with comparable risk (assuming the loan is not impaired by the restructuring agreement), does not have to be reported as a troubled-debt restructuring after the year of restructuring.

2065.1.4 NONACCRUAL TREATMENT OF MULTIPLE LOANS TO ONE BORROWER

As a general principle, whether to place an asset in nonaccrual status should be determined by an assessment of the individual asset's collect-

ibility. One loan to a borrower being placed in nonaccrual status does not automatically have to result in all other extensions of credit to that borrower being placed in nonaccrual status. When a single borrower has multiple extensions of credit outstanding and one meets the criteria for nonaccrual status, the lender should evaluate the others to determine whether one or more of them should also be placed in nonaccrual status.

2065.1.4.1 Troubled-Debt Restructuring—Returning a Multiple-Note Structure to Accrual Status

On June 10, 1993, interagency guidance was issued to clarify a March 10, 1993, interagency policy statement on credit availability. The guidance addresses a troubled-debt restructuring (TDR) that involves multiple notes (sometimes referred to as A/B note structures). An example of a multiple-note structure is when the first, or A, note would represent the portion of the original-loan principal amount that would be expected to be fully collected along with contractual interest. The second part of the restructured loan, or B note, represents the portion of the original loan that has been charged off.

Such TDRs generally may take any of three forms: (1) In certain TDRs, the B note may be a contingent receivable that is payable only if certain conditions are met (for example, if there is sufficient cash flow from the property). (2) For other TDRs, the B note may be contingency-forgiven (note B is forgiven if note A is paid in full). (3) In other instances, an institution would have granted a concession (for example, a rate reduction) to the troubled borrower but the B note would remain a contractual obligation of the borrower. Because the B note is not reflected as an asset on the institution's books and is unlikely to be collected, the B note is viewed as a contingent receivable for reporting purposes.

Financial institutions may return the A note to accrual status provided the following conditions are met:

1. *The restructuring qualifies as a TDR as defined by FAS 15, and there is economic substance to the restructuring.* (Under FAS 15, a restructuring of debt is considered a TDR if "the creditor for economic or legal reasons related to the debtor's financial difficulties grants a concession to the debtor that it would not otherwise consider.")

2. A restructured loan may not be restored to accrual status unless there is reasonable assurance of repayment and performance under its modified terms in accordance with a reasonable repayment schedule.

2. *The portion of the original loan represented by the B note has been charged off.* The charge-off must be supported by a current, well-documented evaluation of the borrower's financial condition and prospects for repayment under the revised terms. The charge-off must be recorded before or at the time of the restructuring.
3. *The institution is reasonably assured of repayment of the A note and of performance in accordance with the modified terms.*
4. *In general, the borrower must have demonstrated sustained repayment performance (either immediately before or after the restructuring) in accordance with the modified terms for a reasonable period before the date on which the A note is returned to accrual status.* Sustained payment performance generally would be for a minimum of six months and involve payments in the form of cash or cash equivalents.

The A note would be initially disclosed as a TDR. However, if the A note yields a market rate of interest and performs in accordance with the restructured terms, the note would not have to be disclosed as a TDR in the year after the restructuring. To be considered a market rate of interest, the interest rate on the A note at the time of the restructuring must be equal to or greater than the rate that the institution is willing to accept for a new receivable with comparable risk. (See SR-93-30.)

2065.1.4.2 Nonaccrual Loans That Have Demonstrated Sustained Contractual Performance

Certain borrowers have resumed paying the full amount of scheduled contractual interest and principal payments on loans that are past due and in nonaccrual status. Although prior arrearages may not have been eliminated by payments from the borrowers, some borrowers have demonstrated sustained performance over a time in accordance with contractual terms. The interagency guidance of June 10, 1993, announced that such loans may henceforth be returned to accrual status, even though the loans have not been brought fully current. They may be returned to accrual status if (1) there is reasonable assurance of repayment of all principal and interest amounts contractually due (including arrearages) within a reasonable period and (2) the borrower has made payments of cash or cash equivalents over a sustained period (generally a minimum of six months) *in accordance*

with the contractual terms. When the federal financial institution regulatory reporting criteria for restoration to accrual status are met, previous charge-offs taken would not have to be fully recovered before such loans are returned to accrual status. Loans that meet this criteria should continue to be disclosed as past due as appropriate (for example, 90 days past due and still accruing) until they have been brought fully current. (See SR-93-30.)

2065.1.5 ACQUISITION OF NONACCRUAL ASSETS

Banking organizations (or the receiver of a failed institution) may sell loans or debt securities maintained in nonaccrual status. Such loans or debt securities that have been acquired from an unaffiliated third party should be reported by the purchaser in accordance with AICPA Practice Bulletin No. 6. When the criteria specified in this bulletin are met, these assets may be placed in nonaccrual status.³

2065.1.6 TREATMENT OF NONACCRUAL LOANS WITH PARTIAL CHARGE-OFFS

Whether partial charge-offs associated with a nonaccrual loan that has not been formally restructured must first be fully recovered before the loan can be restored to accrual status is an issue that has not been explicitly addressed by GAAP and bank regulatory reporting requirements. In accordance with the instructions for the bank call report and the bank holding company reports (FR-Y series), restoration to accrual status is permitted when (1) the loan has been brought fully current with respect to principal and interest and (2) it is expected that the full contractual balance of the loan (including any amounts charged off) plus interest will be fully collectible under the terms of the loan.⁴

3. AICPA Practice Bulletin No. 6, "Amortization of Discounts on Certain Acquired Loans," American Institute of Certified Public Accountants, August 1989.

4. The instructions for the call reports and FR-Y reports discuss the criteria for restoration to accrual status in the glossary entries for "nonaccrual status." This guidance also permits restoration to accrual status for nonaccrual assets that are both well secured *and* in the process of collection. In addition, this guidance permits restoration to accrual status, when certain criteria are met, of formally restructured debt and acquired nonaccrual assets.

Thus, in determining whether a partially charged-off loan that has been brought fully current can be returned to accrual status, it is important to determine whether the banking organization expects to receive the full amount of principal and interest called for by the terms of the loan.

When a loan has been brought fully current with respect to contractual principal and interest, and when the borrower's financial condition and economic conditions that could affect the borrower's ability to repay have improved to the point that repayment of the full amount of contractual principal (including any amounts charged off) and interest is expected, the loan may be restored to accrual status even if the charge-off has not been recovered. However, this treatment would not be appropriate if the charge-off reflects continuing doubt about the collectibility of principal or interest. Because loans or other assets are required to be placed in nonaccrual status when full repayment of principal or interest is not expected, such loans could not be restored to accrual status.

It is imperative that the reasons for the restoration of a partially charged-off loan to accrual status be supported by a current, well-documented evaluation of the borrower's financial condition and prospects for full repayment of contractual principal (including any amounts charged off) and interest. This documentation will be subject to review by examiners.

A nonaccrual loan or debt instrument may have been formally restructured in accordance with FAS 15 so that it meets the criteria for restoration to accrual status presented in section 2065.1.2 addressing restructured loans. Under GAAP, when a charge-off was taken before the date of the restructuring, it does not have to be recovered before the restructured loan can be restored to accrual status. When a charge-off occurs after the date of the restructuring, the considerations and treatments discussed earlier in this section are applicable.

2065.1.7 IN-SUBSTANCE FORECLOSURES

FAS 114 addresses the accounting for impaired loans and clarifies existing accounting guidance for in-substance foreclosures. Under the impairment standard and related amendments to FAS

15, a collateral-dependent real estate loan⁵ would be reported as "other real estate owned" (OREO) only if the lender had taken possession of the collateral. For other collateral-dependent real estate loans, loss recognition would be based on the fair value of the collateral if foreclosure is probable.⁶ Such loans would remain in the loan category and would not be reported as OREO. For depository institution examinations, any portion of the loan balance on a collateral-dependent loan that exceeds the fair value of the collateral and that can be identified as uncollectible would generally be classified as a loss and be promptly charged off against the ALLL.

A collateralized loan that becomes impaired is not considered "collateral dependent" if repayment is available from reliable sources other than the collateral. Any impairment on such a loan may, at the depository institution's option, be determined based on the present value of the expected future cash flows discounted at the loan's effective interest rate or, as a practical expedient, based on the loan's observable market price. (See SR-95-38.)

Losses must be recognized on real estate loans that meet the in-substance foreclosure criteria with the collateral being valued according to its fair value. Such loans do not have to be reported as OREO unless possession of the underlying collateral has been obtained. (See SR-93-30.)

2065.1.8 LIQUIDATION VALUES OF REAL ESTATE LOANS

In accordance with the March 10, 1993, interagency policy statement Credit Availability, loans secured by real estate should be based on the borrower's ability to pay over time, rather than on a presumption of immediate liquidation. Interagency guidance issued on June 10, 1993, emphasizes that it is *not* regulatory policy to value collateral that underlies real estate loans on a liquidation basis. (See SR-93-30.)

5. A collateral-dependent real estate loan is a loan for which repayment is expected to be provided solely by the underlying collateral and there are no other available and reliable sources of repayment.

6. The fair value of the assets transferred is the amount that the debtor could reasonably expect to receive for them in a current sale between a willing buyer and a willing seller, other than in a forced or liquidation sale.

Determining an Adequate Level for the Allowance for Loan and Lease Losses (Accounting, Reporting, and Disclosure Issues) Section 2065.2

The adequacy of a banking organization's allowance for loan and lease losses (ALLL) (including amounts based on an analysis of the commercial real estate portfolio) must be based on a careful, well-documented, and consistently applied analysis of the loan and lease portfolio.¹ The determination of the adequacy of the ALLL should be based on management's consideration of all current significant conditions that might affect the ability of borrowers (or guarantors, if any) to fulfill their obligations to the institution. While historical loss experience provides a reasonable starting point, historical losses or even recent trends in losses are not sufficient, without further analysis, to produce a reliable estimate of anticipated loss.

In determining the adequacy of the ALLL, management should consider factors such as changes in the nature and volume of the portfolio; the experience, ability, and depth of lending management and staff; changes in credit standards; collection policies and historical collection experience; concentrations of credit risk; trends in the volume and severity of past-due and classified loans; and trends in the volume of nonaccrual loans, specific problem loans, and commitments. In addition, this analysis should consider the quality of the organization's systems and management in identifying, monitoring, and addressing asset-quality problems. Furthermore, management should consider external factors such as local and national economic conditions and developments, competition, and legal and regulatory requirements, as well as reasonably foreseeable events that are likely to affect the collectibility of the loan portfolio.

Management should adequately document the factors that were considered, the methodology and process that were used in determining the adequacy of the ALLL, and the range of possible credit losses estimated by this process. The complexity and scope of this analysis must be appropriate to the size and nature of the organization and provide for sufficient flexibility to accommodate changing circumstances.

1. The estimation process described in this section permits a more accurate estimate of anticipated losses than could be achieved by assessing the loan portfolio solely on an aggregate basis. However, it is only an estimation process and does not imply that any part of the ALLL is segregated for, or allocated to, any particular asset or group of assets. The ALLL is available to absorb overall credit losses originating from the loan and lease portfolio. The balance of the ALLL is management's estimation of potential credit losses, synonymous with its determination as to the adequacy of the *overall* ALLL.

Examiners will evaluate the methodology and process that management has followed in arriving at an overall estimate of the ALLL to ensure that all of the relevant factors affecting the collectibility of the portfolio have been appropriately considered. In addition, the overall estimate of the ALLL and the range of possible credit losses estimated by management will be reviewed for reasonableness in view of these factors. The examiner's analysis will also consider the quality of the organization's systems and management in identifying, monitoring, and addressing asset-quality problems. (See sections 2065.3, 2065.4, and 2128.08.)

The value of the collateral will be considered by examiners in reviewing and classifying a commercial real estate loan. However, for a performing commercial real estate loan, the supervisory policies of the agencies do not require automatic increases to the ALLL solely because the value of the collateral has declined to an amount that is less than the loan balance.

In assessing the ALLL, it is important to recognize that management's process, methodology, and underlying assumptions require a substantial degree of judgment. Even when an organization maintains sound loan-administration and -collection procedures and effective internal systems and controls, the estimation of losses may not be precise due to the wide range of factors that must be considered. Further, the ability to estimate losses on specific loans and categories of loans improves over time as substantive information accumulates regarding the factors affecting repayment prospects. When management has (1) maintained effective systems and controls for identifying, monitoring, and addressing asset-quality problems and (2) analyzed all significant factors affecting the collectibility of the portfolio, examiners should give considerable weight to management's estimates in assessing the adequacy of the overall ALLL.

Examiners and bank holding company management should consider the impact of the Financial Accounting Standards Board's (FASB) Statement No. 114, "Accounting by Creditors for Impairment of a Loan" (FAS 114) (as amended by FASB Statement No. 118, "Accounting by Creditors for Impairment of a Loan—Income Recognition and Disclosures"), on the ALLL-estimating process. FAS 114 sets forth guidance for estimating the impairment of

a loan for general financial reporting purposes. Under FAS 114, a loan is *impaired* when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due (principal and interest) according to the contractual terms of the loan agreement.

When a creditor has determined that a loan is impaired, FAS 114 requires that an allowance be established based on the present value of the expected future cash flows of the loan discounted at the loan's effective interest rate (that is, the contract rate, as adjusted for any net deferred loan fees or costs, premiums, or discounts) or, as a practical expedient, at the loan's observable market price or at the fair value of the collateral if the loan is collateral dependent. Since the allowances under FAS 114 apply only to a subset of loans,² FAS 114 does not address the adequacy of a creditor's *overall* ALLL or how the creditor should assess the adequacy of its ALLL. Examiners should not focus unduly on the adequacy of this or any other portion of the ALLL established for a subset of loans. Bank holding companies are required to follow FAS 114 (as amended by FAS 118) when reporting in the FR Y-9C report for the holding company on a consolidated basis.

2065.2.1 INSPECTION OBJECTIVES

1. To evaluate the methodology and process that management employs in compiling an *overall* estimate of the ALLL.
2. To understand and evaluate the nature of the external (economic and social climate, the extent of competition) and internal (credit strategies, levels of acceptable credit risk, and lending policies and procedures) lending environment and how they might influence management's estimate of the ALLL.
3. To determine the accuracy and reasonableness of management's estimate of the *overall* ALLL.
4. To evaluate the quality of the BHC's systems and management performance in identifying, monitoring, and resolving asset-quality problems.

2. The guidance on impairment in FAS 114 does not apply to "large groups of smaller balance homogeneous loans that are collectively evaluated for impairment," loans that are measured at fair value or at the lower of cost or fair value, or leases and debt securities as defined in FAS 115, "Accounting for Certain Investments in Debt and Equity Securities." FAS 114 does apply to loans that are restructured in a troubled-debt restructuring involving a modification of terms.

2065.2.2 INSPECTION PROCEDURES

1. Determine whether the banking organization has carefully documented and applied an accurate and consistent method of analysis for estimating the *overall* ALLL. When making such a determination, ascertain whether—
 - a. management has considered all significant factors and conditions that might affect the collectibility of the loan, including the borrower's repayment practices, the value of accessible underlying collateral, and other factors (that is, those factors listed in this section);
 - b. management has documented all factors that were considered and the methodology and process that were used to evaluate the adequacy of the allowance; and
 - c. the complexity and scope of the analysis are appropriate for the size and nature of the organization.
2. Evaluate the methodology and process that management has followed in arriving at an overall estimate of the ALLL.
3. Determine the reasonableness of management's consolidated estimate of the ALLL, including the range of possible credit losses. Determine whether management has properly evaluated the overall composition of the loan portfolio at all organizational levels by—
 - a. identifying potential problem loans, including loans classified by all bank regulatory agencies;
 - b. determining trends with respect to loan volume (growth (in particular, rapid growth), levels of delinquencies, nonaccruals, and nonperforming loans);
 - c. considering the previous loss and recovery experience including the timeliness of charge-offs;
 - d. evaluating the performance of concentrations of credit (related interests, geographic regions, industries, lesser-developed countries (LDCs), highly leveraged loans, and the size of credit exposures (few large loans versus numerous small loans));
 - e. determining the amount of loans and problem loans (delinquent, nonaccrual, and nonperforming) by lending officer or committee; and
 - f. evaluating the levels and performance of loans involving related parties.
4. For each level of the organization, determine the percentage of past-due loans to the loan portfolio and compare it with prior periods.

- The examiner may find it beneficial to compute the ratio for groups of loans by type, size, or risk levels.
5. Compare the loans classified during regulatory examinations or BHC inspections with the previous examinations or inspections and also with those classified by management before the regulatory examinations or inspections. Investigate the current status of previously classified loans.
 6. Compute the percentage of the ALLL to average outstanding loans and compare those results with those of the previous inspection. Investigate the reasons for variations between those periods.
 7. Assess the quality of the organization's systems and internal controls in identifying, monitoring, and addressing asset-quality problems.

Maintenance of an Appropriate Allowance for Loan and Lease Losses (Accounting, Reporting, and Disclosure Issues) Section 2065.3

WHAT'S NEW IN THIS REVISED SECTION

This section has been fully revised to set forth the 2006 Interagency Policy Statement on the Allowance for Loan and Lease Losses (ALLL), which was issued on December 13, 2006, by the federal bank and thrift regulatory agencies (the banking agencies.) (See SR-06-17.) This guidance updates and replaces the 1993 policy statement. The policy was revised to ensure consistency with generally accepted accounting principles (GAAP) and recent supervisory guidance. The Federal Reserve believes the guidance is broadly applicable to bank holding companies. Accordingly, examiners should apply the policy, as appropriate, during inspections of bank holding companies and their nonbank subsidiaries.

2065.3.0 OVERVIEW OF THE ALLL POLICY STATEMENT

The 2006 policy statement discusses the nature and purpose of the allowance for loan and lease losses (ALLL); the responsibilities of boards of directors, the institution's management, and the examiners of banking organizations regarding the ALLL; factors to be considered in the estimation of the ALLL; and the objectives and elements of an effective loan review system, including a sound credit grading system. The statement states that it is the responsibility of the board of directors and management of each institution to maintain the ALLL at an appropriate level. Each institution is responsible for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses. To fulfill this responsibility, each institution should ensure that controls are in place to consistently determine the ALLL in accordance with GAAP, the institution's stated policies and procedures, management's best judgment, and relevant supervisory guidance. The policy statement also discusses the analysis of the loan and lease portfolio, factors to consider in estimating credit losses, and the characteristics of an effective loan-review system.

The policy statement continues the policy that Federal Reserve examiners will generally accept bank management's estimates in their assessment of the appropriateness of the ALLL when management has (1) maintained effective

loan review systems and controls for identifying, monitoring, and addressing asset-quality problems in a timely manner; (2) analyzed all significant environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner; (3) established an acceptable ALLL-evaluation process for both individual loans and groups loans that meets the objectives for an appropriate ALLL; and (4) incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

The policy also reiterates the points of agreement between the Securities and Exchange Commission and the banking agencies since 1999: (1) the need for management to exercise significant judgment when estimating the ALLL, (2) the concept of a range of losses, and (3) the appropriateness of a properly developed and documented ALLL. Accordingly, the policy emphasizes that an institution should provide reasonable support and documentation of its ALLL estimates, including adjustments to the allowance for qualitative or environmental factors and unallocated portions of the allowance. This emphasis on support and documentation supplements, but does not replace, the guidance in the 2001 Interagency Policy Statement on the Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions (see SR-01-17).

Additionally, institutions are reminded that the allowance is an institution-specific estimate and generally should not be based solely on a "standard percentage" of loans. While peer group or other benchmark averages are an appropriate tool to evaluate the reasonableness of the allowance, it is the institution's responsibility to analyze the collectibility of the loan portfolio to estimate the allowance. To that end, the policy statement does not reference standardized loss estimates (that is, 15 percent for loans classified as substandard and 50 percent for loans classified as doubtful).

The policy statement also includes guidance on SFAS 114, "Accounting by Creditors for Impairment of a Loan," which describes the evaluation and measurement of impairment for loans that are impaired on an individual basis, and SFAS 5, "Accounting for Contingencies," which describes the same for pools of loans grouped according to risk factors. The relationship between the two standards is described as

well as the application of each standard in estimating the ALLL. Lastly, the policy reminds institutions that allowances related to off-balance-sheet financial instruments such as loan commitments or letters of credit should not be reported as part of the ALLL. Any allowance for these types of instruments is recorded as an “other liability.”

This policy statement applies to all depository institutions supervised by the banking agencies, except for U.S. branches and agencies of foreign banks. In addition, the Federal Reserve believes the guidance is broadly applicable to bank holding companies as well. Accordingly, examiners should apply the policy, as appropriate, during inspections of bank holding companies and their nonbank subsidiaries, in addition to the examination of state member banks.

Although the policy statement discusses key concepts and requirements in GAAP and existing supervisory guidance on the ALLL, the banking agencies recognized that institutions may not have had sufficient time to complete any enhancements needed to bring their ALLL processes and documentation into full compliance with the revised guidance for year-end 2006 reporting purposes. Nevertheless, such enhancements were to be completed and effective in the subsequent near term.

The text of the interagency policy statement follows. (See also sections 2065.1, 2065.2, and 2065.4.)

2065.3.1 2006 INTERAGENCY POLICY STATEMENT ON THE ALLOWANCE FOR LOAN AND LEASE LOSSES

This 2006 interagency policy statement¹ revises and replaces the 1993 policy statement on the ALLL. It reiterates key concepts and requirements included in generally accepted accounting principles (GAAP) and existing ALLL supervisory guidance.² The principal sources of

guidance on accounting for impairment in a loan portfolio under GAAP are Statement of Financial Accounting Standards No. 5, “Accounting for Contingencies” (FAS 5) and Statement of Financial Accounting Standards No. 114, “Accounting by Creditors for Impairment of a Loan” (FAS 114). In addition, the Financial Accounting Standards Board *Viewpoints* article that is included in Emerging Issues Task Force Topic D-80 (EITF D-80), “Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio,” presents questions and answers that provide specific guidance on the interaction between these two FASB statements and may be helpful in applying them.

In July 1999, the banking agencies and the Securities and Exchange Commission (SEC) issued a Joint Interagency Letter to Financial Institutions. The letter stated that the banking agencies and the SEC agreed on the following important aspects of loan loss allowance practices:

- Arriving at an appropriate allowance involves a high degree of management judgment and results in a range of estimated losses.
- Prudent, conservative—but not excessive—loan loss allowances that fall within an acceptable range of estimated losses are appropriate. In accordance with GAAP, an institution should record its best estimate within the range of credit losses, including when management’s best estimate is at the high end of the range.
- Determining the allowance for loan losses is inevitably imprecise, and an appropriate allowance falls within a range of estimated losses.
- An “unallocated” loan loss allowance is appropriate when it reflects an estimate of probable losses, determined in accordance with GAAP, and is properly supported.
- Allowance estimates should be based on a comprehensive, well-documented, and consistently applied analysis of the loan portfolio.
- The loan loss allowance should take into consideration all available information existing as of the financial statement date, including environmental factors such as industry, geographical, economic, and political factors.

In July 2001, the banking agencies issued the Policy Statement on Allowance for Loan and

1. The policy statement was adopted by, and applies to, all depository institutions (institutions), except U.S. branches and agencies of foreign banks, that are supervised by the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision (the banking agencies), and to institutions insured and supervised by the National Credit Union Administration (NCUA) (collectively, the agencies). U.S. branches and agencies of foreign banks continue to be subject to any separate guidance that has been issued by their primary supervisory agency.

2. As discussed more fully below in the “Nature and

Purpose of the ALLL” within this section, this policy statement and the ALLL generally do not address loans carried at fair value or loans held for sale. In addition, this policy statement provides only limited guidance on “purchased impaired loans.”

Lease Losses Methodologies and Documentation for Banks and Savings Institutions (2001 policy statement). The policy statement is designed to assist institutions in establishing a sound process for determining an appropriate ALLL and documenting that process in accordance with GAAP.³ (See section 2065.4.1.)

In March 2004, the agencies also issued the Update on Accounting for Loan and Lease Losses. This guidance provided reminders of longstanding supervisory guidance as well as a listing of the existing allowance guidance that institutions should continue to apply.

2065.3.1.1 Nature and Purpose of the ALLL

The ALLL represents one of the most significant estimates in an institution's financial statements and regulatory reports. Because of its significance, each institution has a responsibility for developing, maintaining, and documenting a comprehensive, systematic, and consistently applied process for determining the amounts of the ALLL and the provision for loan and lease losses (PLLL). To fulfill this responsibility, each institution should ensure controls are in place to consistently determine the ALLL in accordance with GAAP, the institution's stated policies and procedures, management's best judgment, and relevant supervisory guidance. As of the end of each quarter, or more frequently if warranted, each institution must analyze the collectibility of its loans and leases held for investment⁴ (hereafter referred to as loans) and maintain an ALLL at a level that is appropriate and determined in accordance with GAAP. An appropriate ALLL covers estimated credit losses on individually evaluated loans that are determined to be impaired as well as estimated credit losses inherent in the remainder of the loan and lease portfolio. The ALLL does not apply, however, to loans carried at fair value, loans held for

sale,⁵ off-balance-sheet credit exposures⁶ (for example, financial instruments such as off-balance-sheet loan commitments, standby letters of credit, and guarantees), or general or unspecified business risks.

For purposes of this policy statement, the term *estimated credit losses* means an estimate of the current amount of loans that it is probable the institution will be unable to collect given facts and circumstances since the evaluation date. Thus, estimated credit losses represent net charge-offs that are likely to be realized for a loan or group of loans. These estimated credit losses should meet the criteria for accrual of a loss contingency (that is, through a provision to the ALLL) set forth in GAAP.⁷ When available information confirms that specific loans, or portions thereof, are uncollectible, these amounts should be promptly charged off against the ALLL.

For "purchased impaired loans,"⁸ GAAP pro-

5. See "Interagency Guidance on Certain Loans Held for Sale" (March 26, 2001) for the appropriate accounting and reporting treatment for certain loans that are sold directly from the loan portfolio or transferred to a held-for-sale account. Loans held for sale are reported at the lower of cost or fair value. Declines in value occurring after the transfer of a loan to the held-for-sale portfolio are accounted for as adjustments to a valuation allowance for held-for-sale loans and not as adjustments to the ALLL.

6. Credit losses on off-balance-sheet credit exposures should be estimated in accordance with FAS 5. Any allowance for credit losses on off-balance-sheet exposures should be reported on the balance sheet as an "other liability," and not as part of the ALLL.

7. FAS 5 requires the accrual of a loss contingency when information available prior to the issuance of the financial statements indicates it is probable that an asset has been impaired at the date of the financial statements and the amount of loss can be reasonably estimated. These conditions may be considered in relation to individual loans or in relation to groups of similar types of loans. If the conditions are met, accrual should be made even though the particular loans that are uncollectible may not be identifiable. Under FAS 114, an individual loan is impaired when, based on current information and events, it is probable that a creditor will be unable to collect all amounts due according to the contractual terms of the loan agreement. It is implicit in these conditions that it must be probable that one or more future events will occur confirming the fact of the loss. Thus, under GAAP, the purpose of the ALLL is not to absorb all of the risk in the loan portfolio, but to cover probable credit losses that have already been incurred.

8. A *purchased impaired loan* is defined as a loan that an institution has purchased, including a loan acquired in a purchase business combination, that has evidence of deterioration of credit quality since its origination and for which it is probable, at the purchase date, that the institution will be unable to collect all contractually required payments. When reviewing the appropriateness of the reported ALLL of an institution with purchased impaired loans, examiners should consider the credit losses factored into the initial investment

3. See section 2065.4.1 for the 2001 policy statement. The SEC staff issued parallel guidance in July 2001, which is found in Staff Accounting Bulletin No. 10, "Selected Loan Loss Allowance Methodology and Documentation Issues" (SAB 102), which has been codified as Topic 6.L. in the SEC's Codification of Staff Accounting Bulletins. Both SAB 102 and the codification are available on the SEC's web site.

4. Consistent with the American Institute of Certified Public Accountants' (AICPA) Statement of Position 01-6, "Accounting by Certain Entities (Including Entities With Trade Receivables) That Lend to or Finance the Activities of Others," loans and leases held for investment are those loans and leases that the institution has the intent and ability to hold for the foreseeable future or until maturity or payoff.

hibits “carrying over” or creating an ALLL in the initial recording of these loans. However, if, upon evaluation subsequent to acquisition, it is probable that the institution will be unable to collect all cash flows expected at acquisition on a purchased impaired loan (an estimate that considers both timing and amount), the loan should be considered impaired for purposes of applying the measurement and other provisions of FAS 5 or, if applicable, FAS 114.

Estimates of credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. For loans within the scope of FAS 114 that are individually evaluated and determined to be impaired,⁹ these estimates should reflect consideration of one of the standard’s three impairment measurement methods as of the evaluation date: (1) the present value of expected future cash flows discounted at the loan’s effective interest rate,¹⁰ (2) the loan’s observable market price, or (3) the fair value of the collateral if the loan is collateral dependent.

An institution may choose the appropriate FAS 114 measurement method on a loan-by-loan basis for an individually impaired loan, except for an impaired collateral-dependent loan. The agencies require impairment of a collateral-dependent loan to be measured using the fair value of collateral method. As defined in FAS 114, a loan is collateral dependent if repayment of the loan is expected to be provided solely by the underlying collateral. In general, any portion of the recorded investment in a collateral-dependent loan (including any capitalized accrued interest, net deferred loan fees or

costs, and unamortized premium or discount) in excess of the fair value of the collateral that can be identified as uncollectible, and is therefore deemed a confirmed loss, should be promptly charged off against the ALLL.¹¹

All other loans, including individually evaluated loans determined not to be impaired under FAS 114, should be included in a group of loans that is evaluated for impairment under FAS 5.¹² While an institution may segment its loan portfolio into groups of loans based on a variety of factors, the loans within each group should have similar risk characteristics. For example, a loan that is fully collateralized with risk-free assets should not be grouped with uncollateralized loans. When estimating credit losses on each group of loans with similar risk characteristics, an institution should consider its historical loss experience on the group, *adjusted for changes in trends, conditions, and other relevant factors* that affect repayment of the loans as of the evaluation date.

For analytical purposes, an institution should attribute portions of the ALLL to loans that it evaluates and determines to be impaired under FAS 114 and to groups of loans that it evaluates collectively under FAS 5. However, the ALLL is available to cover all charge-offs that arise from the loan portfolio.

2065.3.1.2 Responsibilities of the Board of Directors and Management

2065.3.1.2.1 Appropriate ALLL Level

Each institution’s management is responsible for maintaining the ALLL at an appropriate level and for documenting its analysis according to the standards set forth in the 2001 policy statement. Thus, management should evaluate the ALLL reported on the balance sheet as of the end of each quarter or more frequently if warranted, and charge or credit the PLLL to bring the ALLL to an appropriate level as of each evaluation date. The determination of the amounts of the ALLL and the PLLL should be based on management’s current judgments about the credit quality of the loan portfolio, and

in these loans when determining whether further deterioration (for example, decreases in cash flows expected to be collected) has occurred since the loans were purchased. The bank’s Consolidated Report of Condition and Income (Call Report) and/or the Consolidated Financial Statement for Bank Holding Companies (such as the FR Y-9C), and the disclosures in the bank’s financial statements may provide useful information for examiners in reviewing these loans. Refer to the AICPA’s Statement of Position 03-3, “Accounting for Certain Loans or Debt Securities Acquired in a Transfer,” for further guidance on the appropriate accounting.

9. FAS 114 does not specify how an institution should identify loans that are to be evaluated for collectibility nor does it specify how an institution should determine that a loan is impaired. An institution should apply its normal loan review procedures in making those judgments. Refer to the ALLL interpretations for further guidance.

10. The effective “interest rate” on a loan is the rate of return implicit in the loan (that is, the contractual interest rate adjusted for any net deferred loan fees or costs and any premium or discount existing at the origination or acquisition of the loan).

11. For further information, refer to the illustration in appendix B of the 2001 policy statement (see the appendix in section 2065.4.1.8).

12. An individually evaluated loan that is determined not to be impaired under FAS 114 should be evaluated under FAS 5 when specific characteristics of the loan indicate that it is probable there would be estimated credit losses in a group of loans with those characteristics. For further guidance, refer to the frequently asked questions that were distributed with this policy statement.

should consider all known relevant internal and external factors that affect loan collectibility as of the evaluation date. Management's evaluation is subject to review by examiners. An institution's failure to analyze the collectibility of the loan portfolio and maintain and support an appropriate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound practice.

In carrying out its responsibility for maintaining an appropriate ALLL, management is expected to adopt and adhere to written policies and procedures that are appropriate to the size of the institution and the nature, scope, and risk of its lending activities. At a minimum, these policies and procedures should ensure the following:

- The institution's process for determining an appropriate level for the ALLL is based on a comprehensive, well-documented, and consistently applied analysis of its loan portfolio.¹³ The analysis should consider all significant factors that affect the collectibility of the portfolio and should support the credit losses estimated by this process. The institution has an effective loan review system and controls (including an effective loan classification or credit grading system) that identify, monitor, and address asset quality problems in an accurate and timely manner.¹⁴ To be effective, the institution's loan review system and controls must be responsive to changes in internal and external factors affecting the level of credit risk in the portfolio.
- The institution has adequate data capture and reporting systems to supply the information necessary to support and document its estimate of an appropriate ALLL.
- The institution evaluates any loss estimation models before they are employed and modifies the models' assumptions, as needed, to

ensure that the resulting loss estimates are consistent with GAAP. To demonstrate this consistency, the institution should document its evaluations and conclusions regarding the appropriateness of estimating credit losses with the models or other estimation tools. The institution should also document and support any adjustments made to the models or to the output of the models in determining the estimated credit losses.

- The institution promptly charges off loans, or portions of loans, that available information confirms to be uncollectible.
- The institution periodically validates the ALLL methodology. This validation process should include procedures for a review, by a party who is independent of the institution's credit approval and ALLL estimation processes, of the ALLL methodology and its application in order to confirm its effectiveness. A party who is independent of these processes could be the internal audit staff, a risk management unit of the institution, an external auditor (subject to applicable auditor independence standards), or another contracted third party from outside the institution. One party need not perform the entire analysis, as the validation can be divided among various independent parties.

The board of directors is responsible for overseeing management's significant judgments and estimates pertaining to the determination of an appropriate ALLL. This oversight should include but is not limited to—

- reviewing and approving the institution's written ALLL policies and procedures at least annually;
- reviewing management's assessment and justification that the loan review system is sound and appropriate for the size and complexity of the institution;
- reviewing management's assessment and justification for the amounts estimated and reported each period for the PLLL and the ALLL; and
- requiring management to periodically validate and, when appropriate, revise the ALLL methodology.

For purposes of the Consolidated Reports of Condition and Income (Call Report) and/or the Consolidated Financial Statement for Bank Holding Companies (such as the FR Y-9C) an

13. As noted in the 2001 policy statement, an institution with less complex lending activities and products may find it more efficient to combine a number of procedures while continuing to ensure that the institution has a consistent and appropriate ALLL methodology. Thus, much of the supporting documentation required for an institution with more complex products or portfolios may be combined into fewer supporting documents in an institution with less complex products or portfolios.

14. Loan review and loan classification or credit grading systems are discussed in attachment 1 of this policy statement. In addition, state member banks and savings associations should refer to the asset quality standards in the Interagency Guidelines Establishing Standards for Safety and Soundness, which were adopted by the Federal Reserve Board (see appendix D-1, 12 C.F.R. 208). For national banks, see appendix A to Part 30; for state nonmember banks, appendix A to Part 364; and for savings associations, appendix A to Part 570.

appropriate ALLL (after deducting all loans and portions of loans confirmed loss) should consist only of the following components (as applicable),¹⁵ the amounts of which take into account *all relevant facts and circumstances as of the evaluation date*:

- For loans within the scope of FAS 114 that are individually evaluated and found to be impaired, the associated ALLL should be based upon one of the three impairment measurement methods specified in FAS 114.¹⁶
- For all other loans, including individually evaluated loans determined not to be impaired under FAS 114,¹⁷ the associated ALLL should be measured under FAS 5 and should provide for all estimated credit losses that have been incurred on groups of loans with similar risk characteristics.
- For estimated credit losses from transfer risk on cross-border loans, the impact to the ALLL should be evaluated individually for impaired loans under FAS 114 or evaluated on a group basis under FAS 5. See this policy statement's attachment 2 for further guidance on considerations of transfer risk on cross-border loans.
- For estimated credit losses on accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution's balance sheet, the associated ALLL should be evaluated under FAS 114 or FAS 5 as appropriate, if not already included in one of the preceding components.

Because deposit accounts that are overdrawn (that is, overdrafts) must be reclassified as loans on the balance sheet, overdrawn accounts should be included in one of the first two components above, as appropriate, and evaluated for estimated credit losses.

Determining the appropriate level for the ALLL is inevitably imprecise and requires a high degree of management judgment. Management's analysis should reflect a prudent, conservative, but not excessive ALLL that falls within an acceptable range of estimated credit losses. When a range of losses is determined, institu-

tions should maintain appropriate documentation to support the identified range and the rationale used for determining the best estimate from within the range of loan losses.

As discussed more fully in attachment 1 of this policy statement, it is essential that institutions maintain effective loan review systems. An effective loan review system should work to ensure the accuracy of internal credit classification or grading systems and, thus, the quality of the information used to assess the appropriateness of the ALLL. The complexity and scope of an institution's ALLL evaluation process, loan review system, and other relevant controls should be appropriate for the size of the institution and the nature of its lending activities. The evaluation process should also provide for sufficient flexibility to respond to changes in the factors that affect the collectibility of the portfolio.

Credit losses that arise from the transfer risk associated with an institution's cross-border lending activities require special consideration. In particular, for banks with cross-border lending exposure, management should determine that the ALLL is appropriate to cover estimated losses from transfer risk associated with this exposure over and above any minimum amount that the Interagency Country Exposure Review Committee requires to be provided in the Allocated Transfer Risk Reserve (or charged off against the ALLL). These estimated losses should meet the criteria for accrual of a loss contingency set forth in GAAP. (See attachment 2 for factors to consider.)

2065.3.1.2.2 *Factors to Consider in the Estimation of Credit Losses*

Estimated credit losses should reflect consideration of all significant factors that affect the collectibility of the portfolio as of the evaluation date. Normally, an institution should determine the historical loss rate for each group of loans with similar risk characteristics in its portfolio based on its own loss experience for loans in that group. While historical loss experience provides a reasonable starting point for the institution's analysis, historical losses—or even recent trends in losses—do not by themselves form a sufficient basis to determine the appropriate level for the ALLL. Management also should consider those qualitative or environmental factors that are likely to cause estimated credit losses associated with the institution's existing portfolio to differ from historical loss experience, including but not limited to—

15. A component of the ALLL that is labeled "unallocated" is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported and documented.

16. As previously noted, the use of the fair value of collateral method is required for an individually evaluated loan that is impaired if the loan is collateral dependent.

17. See footnote 12.

- changes in lending policies and procedures, including changes in underwriting standards and collection, charge-off, and recovery practices not considered elsewhere in estimating credit losses;
- changes in international, national, regional, and local economic and business conditions and developments that affect the collectibility of the portfolio, including the condition of various market segments;¹⁸
- changes in the nature and volume of the portfolio and in the terms of loans;
- changes in the experience, ability, and depth of lending management and other relevant staff;
- changes in the volume and severity of past due loans, the volume of nonaccrual loans, and the volume and severity of adversely classified or graded loans;¹⁹
- changes in the quality of the institution's loan review system;
- changes in the value of underlying collateral for collateral-dependent loans;
- the existence and effect of any concentrations of credit, and changes in the level of such concentrations; and
- the effect of other external factors such as competition and legal and regulatory requirements on the level of estimated credit losses in the institution's existing portfolio.

In addition, changes in the level of the ALLL should be directionally consistent with changes in the factors, taken as a whole, that evidence credit losses, keeping in mind the characteristics of an institution's loan portfolio. For example, if declining credit quality trends relevant to the types of loans in an institution's portfolio are evident, the ALLL level as a percentage of the portfolio should generally increase, barring unusual charge-off activity. Similarly, if improving credit quality trends are evident, the ALLL level as a percentage of the portfolio should generally decrease.

2065.3.1.2.3 Measurement of Estimated Credit Losses

FAS 5. When measuring estimated credit losses

18. Credit loss and recovery experience may vary significantly depending upon the stage of the business cycle. For example, an overreliance on credit loss experience during a period of economic growth will not result in realistic estimates of credit losses during a period of economic downturn.

19. For banks and savings associations, adversely classified or graded loans are loans rated "substandard" (or its equivalent) or worse under its loan classification system.

on groups of loans with similar risk characteristics in accordance with FAS 5, a widely used method is based on each group's historical net charge-off rate adjusted for the effects of the qualitative or environmental factors discussed previously. As the first step in applying this method, management generally bases the historical net charge-off rates on the "annualized" historical gross loan charge-offs, less recoveries, recorded by the institution on loans in each group.

Methodologies for determining the historical net charge-off rate on a group of loans with similar risk characteristics under FAS 5 can range from the simple average of, or a determination of the range of, an institution's annual net charge-off experience to more complex techniques, such as migration analysis and models that estimate credit losses.²⁰ Generally, institutions should use at least an "annualized" or 12-month average net charge-off rate that will be applied to the groups of loans when estimating credit losses. However, this rate could vary. For example, loans with effective lives longer than 12 months often have workout periods over an extended period of time, which may indicate that the estimated credit losses should be greater than that calculated based solely on the annualized net charge-off rate for such loans. These groups may include certain commercial loans as well as groups of adversely classified loans. Other groups of loans may have effective lives shorter than 12 months, which may indicate that the estimated credit losses should be less than that calculated based on the annualized net charge-off rate.

Regardless of the method used, institutions should maintain supporting documentation for

20. Annual charge-off rates are calculated over a specified time period (for example, three years or five years), which can vary based on a number of factors including the relevance of past periods' experience to the current period or point in the credit cycle. Also, some institutions remove loans that become adversely classified or graded from a group of nonclassified or nongraded loans with similar risk characteristics in order to evaluate the removed loans individually under FAS 114 (if deemed impaired) or collectively in a group of adversely classified or graded loans with similar risk characteristics under FAS 5. In this situation, the net charge-off experience on the adversely classified or graded loans that have been removed from the group of nonclassified or nongraded loans should be included in the historical loss rates for that group of loans. Even though the net charge-off experience on adversely classified or graded loans is included in the estimation of the historical loss rates that will be applied to the group of nonclassified or nongraded loans, the adversely classified or graded loans themselves are no longer included in that group for purposes of estimating credit losses on the group.

the techniques used to develop the historical loss rate for each group of loans. If a range of historical loss rates is developed instead for a group of loans, institutions should maintain documentation to support the identified range and the rationale for determining which rate is the best estimate within the range of loss rates. The rationale should be based on management's assessment of which rate is most reflective of the estimated credit losses in the current loan portfolio.

After determining the appropriate historical loss rate for each group of loans with similar risk characteristics, management should consider those current qualitative or environmental factors that are likely to cause estimated credit losses as of the evaluation date to differ from the group's historical loss experience. Institutions typically reflect the overall effect of these factors on a loan group as an adjustment that, as appropriate, increases or decreases the historical loss rate applied to the loan group. Alternatively, the effect of these factors may be reflected through separate stand-alone adjustments within the FAS 5 component of the ALLL.²¹ Both methods are consistent with GAAP, provided the adjustments for qualitative or environmental factors are reasonably and consistently determined, are adequately documented, and represent estimated credit losses. For each group of loans, an institution should apply its adjusted historical loss rate, or its historical loss rate and separate stand-alone adjustments, to the recorded investment in the group when determining its estimated credit losses.

Management must exercise significant judgment when evaluating the effect of qualitative factors on the amount of the ALLL because data may not be reasonably available or directly applicable for management to determine the precise impact of a factor on the collectibility of the institution's loan portfolio as of the evaluation date. Accordingly, institutions should support adjustments to historical loss rates and explain how the adjustments reflect current information, events, circumstances, and conditions in the loss measurements. Management should maintain reasonable documentation to support which fac-

tors affected the analysis and the impact of those factors on the loss measurement. Support and documentation includes descriptions of each factor, management's analysis of how each factor has changed over time, which loan groups' loss rates have been adjusted, the amount by which loss estimates have been adjusted for changes in conditions, an explanation of how management estimated the impact, and other available data that supports the reasonableness of the adjustments. Examples of underlying supporting evidence could include, but are not limited to, relevant articles from newspapers and other publications that describe economic events affecting a particular geographic area, economic reports and data, and notes from discussions with borrowers.

There may be times when an institution does not have its own historical loss experience upon which to base its estimate of the credit losses in a group of loans with similar risk characteristics. This may occur when an institution offers a new loan product or when it is a newly established (that is, *de novo*) institution. If an institution has no experience of its own for a loan group, reference to the experience of other enterprises in the same lending business may be appropriate, provided the institution demonstrates that the attributes of the group of loans in its portfolio are similar to those of the loan group in the portfolio providing the loss experience. An institution should only use another enterprise's experience on a short-term basis until it has developed its own loss experience for a particular group of loans.

FAS 114. When determining the FAS 114 component of the ALLL for an individually impaired loan,²² an institution should consider estimated costs to sell the loan's collateral, if any, on a discounted basis, in the measurement of impairment if those costs are expected to reduce the cash flows available to repay or otherwise satisfy the loan. If the institution bases its measure of loan impairment on the present value of expected future cash flows discounted at the loan's effective interest rate, the estimates of these cash flows should be the institution's best estimate based on reasonable and support-

21. An overall adjustment to a portion of the ALLL that is not attributed to specific segments of the loan portfolio is often labeled "unallocated." Regardless of what a component of the ALLL is labeled, it is appropriate when it reflects estimated credit losses determined in accordance with GAAP and is properly supported.

22. As noted in FAS 114, some individually impaired loans have risk characteristics that are unique to an individual borrower and the institution will apply the measurement methods on a loan-by-loan basis. However, some impaired loans may have risk characteristics in common with other impaired loans. An institution may aggregate those loans and may use historical statistics, such as average recovery period and average amount recovered, along with a composite effective interest rate as a means of measuring impairment of those loans.

able assumptions and projections. All available evidence should be considered in developing the estimate of expected future cash flows. The weight given to the evidence should be commensurate with the extent to which the evidence can be verified objectively. The likelihood of the possible outcomes should be considered in determining the best estimate of expected future cash flows.

2065.3.1.2.4 Analyzing the Overall Measurement of the ALLL

Institutions also are encouraged to use ratio analysis as a supplemental tool for evaluating the overall reasonableness of the ALLL. Ratio analysis can be useful in identifying divergent trends (compared with an institution's peer group and its own historical experience) in the relationship of the ALLL to adversely classified or graded loans, past due and nonaccrual loans, total loans, and historical gross and net charge-offs. Based on such analysis, an institution may identify additional issues or factors that previously had not been considered in the ALLL estimation process, which may warrant adjustments to estimated credit losses. Such adjustments should be appropriately supported and documented.

While ratio analysis, when used prudently, can be helpful as a supplemental check on the reasonableness of management's assumptions and analyses, it is not a sufficient basis for determining the appropriate amount for the ALLL. In particular, because an appropriate ALLL is an institution-specific amount, such comparisons do not obviate the need for a comprehensive analysis of the loan portfolio and the factors affecting its collectibility. Furthermore, it is inappropriate for the board of directors or management to make adjustments to the ALLL when it has been properly computed and supported under the institution's methodology for the sole purpose of reporting an ALLL that corresponds to the peer group median, a target ratio, or a budgeted amount. Institutions that have high levels of risk in the loan portfolio or are uncertain about the effect of possible future events on the collectibility of the portfolio should address these concerns by maintaining higher equity capital and not by arbitrarily increasing the ALLL in excess of amounts supported under GAAP.²³

23. It is inappropriate to use a "standard percentage" as the sole determinant for the amount to be reported as the ALLL on the balance sheet. Moreover, an institution should

2065.3.1.2.5 Estimated Credit Losses in Credit-Related Accounts

Typically, institutions evaluate and estimate credit losses for off-balance-sheet credit exposures at the same time that they estimate credit losses for loans. While a similar process should be followed to support loss estimates related to off-balance-sheet exposures, these estimated credit losses are not recorded as part of the ALLL. When the conditions for accrual of a loss under FAS 5 are met, an institution should maintain and report as a separate liability account, an allowance that is appropriate to cover estimated credit losses on off-balance-sheet loan commitments, standby letters of credit, and guaranties. In addition, recourse liability accounts (that arise from recourse obligations on any transfers of loans that are reported as sales in accordance with GAAP) should be reported in regulatory reports as liabilities that are separate and distinct from both the ALLL and the allowance for credit losses on off-balance-sheet credit exposures.

When accrued interest and fees are reported separately on an institution's balance sheet from the related loan balances (that is, as other assets), the institution should maintain an appropriate valuation allowance, determined in accordance with GAAP, for amounts that are not likely to be collected unless management has placed the underlying loans in nonaccrual status and reversed previously accrued interest and fees.²⁴

2065.3.1.3 Examiner Responsibilities

Examiners should assess the credit quality of an institution's loan portfolio, the appropriateness of its ALLL methodology and documentation, and the appropriateness of the reported ALLL in

not simply default to a peer ratio or a "standard percentage" after determining an appropriate level of ALLL under its methodology. However, there may be circumstances when an institution's ALLL methodology and credit risk identification systems are not reliable. Absent reliable data of its own, management may seek data that could be used as a short-term proxy for the unavailable information (for example, an industry average loss rate for loans with similar risk characteristics). This is only appropriate as a short-term remedy until the institution creates a viable system for estimating credit losses within its loan portfolio.

24. See instructions for the Call Report or the Consolidated Financial Statement for Bank Holding Companies (such as the FR Y-9C) for further guidance on placing a loan in nonaccrual status.

the institution's regulatory reports. In their review and classification or grading of the loan portfolio, examiners should consider all significant factors that affect the collectibility of the portfolio, including the value of any collateral. In reviewing the appropriateness of the ALLL, examiners should do the following:

- Consider the effectiveness of board oversight as well as the quality of the institution's loan review system and management in identifying, monitoring, and addressing asset quality problems. This will include a review of the institution's loan review function and credit grading system. Typically, this will involve testing a sample of the institution's loans. The sample size generally varies and will depend on the nature or purpose of the examination.²⁵
- Evaluate the institution's ALLL policies and procedures and assess the methodology that management uses to arrive at an overall estimate of the ALLL, including whether management's assumptions, valuations, and judgments appear reasonable and are properly supported. If a range of credit losses has been estimated by management, evaluate the reasonableness of the range and management's best estimate within the range. In making these evaluations, examiners should ensure that the institution's historical loss experience and all significant qualitative or environmental factors that affect the collectibility of the portfolio (including changes in the quality of the institution's loan review function and the other factors previously discussed) have been appropriately considered and that management has appropriately applied GAAP, including FAS 114 and FAS 5.
- Review management's use of loss estimation models or other loss estimation tools to ensure that the resulting estimated credit losses are in conformity with GAAP.
- Review the appropriateness and reasonable-

ness of the overall level of the ALLL. In some instances this may include a quantitative analysis (for example, using the types of ratio analysis previously discussed) as a preliminary check on the reasonableness of the ALLL. This quantitative analysis should demonstrate whether changes in the key ratios from prior periods are reasonable based on the examiner's knowledge of the collectibility of loans at the institution and its current environment.

- Review the ALLL amount reported in the institution's regulatory reports and financial statements and ensure these amounts reconcile to its ALLL analyses. There should be no material differences between the consolidated loss estimate, as determined by the ALLL methodology, and the final ALLL balance reported in the financial statements. Inquire about reasons for any material differences between the results of the institution's ALLL analyses and the institution's reported ALLL to determine whether the differences can be satisfactorily explained.
- Review the adequacy of the documentation and controls maintained by management to support the appropriateness of the ALLL.
- Review the interest and fee income accounts associated with the lending process to ensure that the institution's net income is not materially misstated.²⁶

As noted in the "Responsibilities of the Board of Directors and Management" section of this policy statement, when assessing the appropriateness of the ALLL, it is important to recognize that the related process, methodology, and underlying assumptions require a substantial degree of management judgment. Even when an institution maintains sound loan administration and collection procedures and an effective loan review system and controls, its estimate of credit losses is not a single precise amount due to the wide range of qualitative or environmental factors that must be considered.

An institution's ability to estimate credit losses on specific loans and groups of loans should improve over time as substantive information accumulates regarding the factors affecting repayment prospects. Therefore, examiners should generally accept management's estimates

25. In an examiner's review of an institution's loan review system, the examiner's loan classifications or credit grades may differ from those of the institution's loan review system. If the examiner's evaluation of these differences indicates problems with the loan review system, especially when the loan classification or credit grades assigned by the institution are more liberal than those assigned by the examiner, the institution would be expected to make appropriate adjustments to the assignment of its loan classifications or credit grades to the loan portfolio and to its estimated credit losses. Furthermore, the institution would be expected to improve its loan review system. (This policy statement's attachment 1 discusses effective loan review systems.)

26. As noted previously, accrued interest and fees on loans that have been reported as part of the respective loan balances on the institution's balance sheet should be evaluated for estimated credit losses. The accrual of the interest and fee income should also be considered. Refer to GAAP and the agencies' regulatory reporting instructions for further guidance on income recognition.

when assessing the appropriateness of the institution's reported ALLL, and not seek adjustments to the ALLL, when management has—

- maintained effective loan review systems and controls for identifying, monitoring, and addressing asset quality problems in a timely manner;
- analyzed all significant qualitative or environmental factors that affect the collectibility of the portfolio as of the evaluation date in a reasonable manner;
- established an acceptable ALLL evaluation process for both individual loans and groups of loans that meets the GAAP requirements for an appropriate ALLL; and
- incorporated reasonable and properly supported assumptions, valuations, and judgments into the evaluation process.

If the examiner concludes that the reported ALLL level is not appropriate or determines that the ALLL evaluation process is based on the results of an unreliable loan review system or is otherwise deficient, recommendations for correcting these deficiencies, including any examiner concerns regarding an appropriate level for the ALLL, should be noted in the report of examination. The examiner's comments should cite any departures from GAAP and any contraventions of this policy statement and the 2001 policy statement, as applicable. Additional supervisory action may also be taken based on the magnitude of the observed shortcomings in the ALLL process, including the materiality of any error in the reported amount of the ALLL.

2065.3.1.4 ALLL Level Reflected in Regulatory Reports

The agencies believe that an ALLL established in accordance with this policy statement and the 2001 policy statement, as applicable, falls within the range of acceptable estimates determined in accordance with GAAP. When the reported amount of an institution's ALLL is not appropriate, the institution will be required to adjust its ALLL by an amount sufficient to bring the ALLL reported on its Call Report and/or Consolidated Financial Statement for Bank Holding Companies (such as the FR Y-9C) to an appropriate level as of the evaluation date. This adjustment should be reflected in the current period provision or through the restatement of prior period provisions, as appropriate in the circumstances.

2065.3.1.5 Appendix 1—Loan Review Systems

The nature of loan review systems may vary based on an institution's size, complexity, loan types, and management practices.²⁷ For example, a loan review system may include components of a traditional loan review function that is independent of the lending function, or it may place some reliance on loan officers. In addition, the use of the term *loan review system* can refer to various responsibilities assigned to credit administration, loan administration, a problem loan workout group, or other areas of an institution. These responsibilities may range from administering the internal problem loan reporting process to maintaining the integrity of the loan classification or credit grading process (for example, ensuring that timely and appropriate changes are made to the loan classifications or credit grades assigned to loans) and coordinating the gathering of the information necessary to assess the appropriateness of the ALLL. Additionally, some or all of this function may be outsourced to a qualified external loan reviewer. Regardless of the structure of the loan review system in an institution, an effective loan review system should have, at a minimum, the following objectives:

- promptly identify loans with potential credit weaknesses;
- appropriately grade or adversely classify loans, especially those with well-defined credit weaknesses that jeopardize repayment, so that timely action can be taken and credit losses can be minimized;
- identify relevant trends that affect the collectibility of the portfolio and isolate segments of the portfolio that are potential problem areas;

27. The loan review function is not intended to be performed by an institution's internal audit function. However, as discussed in the banking agencies' March 2003 Interagency Policy Statement on the Internal Audit Function and Its Outsourcing, some institutions seek to coordinate the internal audit function with several risk-monitoring functions such as loan review. The policy statement notes that coordination of loan review with the internal audit function can facilitate the reporting of material risk and control issues to the audit committee, increase the overall effectiveness of these monitoring functions, better utilize available resources, and enhance the institution's ability to comprehensively manage risk. However, the internal audit function should maintain the ability to independently audit other risk-monitoring functions, including loan review, without impairing its independence with respect to these other functions.

- assess the adequacy of and adherence to internal credit policies and loan administration procedures and monitor compliance with relevant laws and regulations;
- evaluate the activities of lending personnel including their compliance with lending policies and the quality of their loan approval, monitoring, and risk assessment;
- provide senior management and the board of directors with an objective and timely assessment of the overall quality of the loan portfolio; and
- provide management with accurate and timely credit quality information for financial and regulatory reporting purposes, including the determination of an appropriate ALLL.
- a formal loan classification or credit grading system in which loan classifications or credit grades reflect the risk of default and credit losses and for which a written description is maintained, including a discussion of the factors used to assign appropriate classifications or credit grades to loans;²⁸
- an identification or grouping of loans that warrant the special attention of management²⁹ or other designated “watch lists” of loans that management is more closely monitoring;
- documentation supporting the reasons why particular loans merit special attention or received a specific adverse classification or credit grade and management’s adherence to approved workout plans;
- a mechanism for direct, periodic, and timely reporting to senior management and the board of directors on the status of loans identified as meriting special attention or adversely classified or graded and the actions taken by management; and
- appropriate documentation of the institution’s historical loss experience for each of the groups of loans with similar risk characteristics into which it has segmented its loan portfolio.³⁰

2065.3.1.5.1 *Loan Classification or Credit Grading Systems*

The foundation for any loan review system is accurate and timely loan classification or credit grading, which involves an assessment of credit quality and leads to the identification of problem loans. An effective loan classification or credit grading system provides important information on the collectibility of the portfolio for use in the determination of an appropriate level for the ALLL.

Regardless of the type of loan review system employed, an effective loan classification or credit grading framework generally places primary reliance on the institution’s lending staff to identify emerging loan problems. However, given the importance and subjective nature of loan classification or credit grading, the judgment of an institution’s lending staff regarding the assignment of particular classification or grades to loans should be subject to review by (1) peers, superiors, or loan committee(s); (2) an independent, qualified part-time or full-time employee(s); (3) an internal department staffed with credit review specialists; or (4) qualified outside credit review consultants. A loan classification or credit grading review that is independent of the lending function is preferred because it typically provides a more objective assessment of credit quality. Because accurate and timely loan classification or credit grading is a critical component of an effective loan review system, each institution should ensure that its loan review system includes the following attributes:

2065.3.1.5.2 *Elements of Loan-Review Systems*

Each institution should have a written policy that is reviewed and approved at least annually by the board of directors to evidence its support of and commitment to maintaining an effective loan review system. The loan review policy should address the following elements that are described in more detail below: the qualifications and independence of loan review personnel; the frequency, scope and depth of reviews;

28. A bank or savings association may have a loan classification or credit grading system that differs from the framework used by the banking agencies. However, each institution that maintains a loan classification or credit grading system that differs from the banking agencies’ framework should maintain documentation that translates its system into the framework used by the banking agencies. This documentation should be sufficient to enable examiners to reconcile the totals for the various loan classifications or credit grades under the institution’s system to the banking agencies’ categories.

29. For banks and savings associations, loans that have potential weaknesses that deserve management’s close attention are designated “special mention” loans.

30. In particular, institutions with large and complex loan portfolios are encouraged to maintain records of their historical loss experience for credits in each of the categories in their loan classification or credit grading framework. For banks, these categories should be (1) those used by or (2) categories that can be translated into those used by, the banking agencies.

the review of findings and follow-up; and work-paper and report distribution.

Qualifications of loan review personnel. Persons involved in the loan review or credit grading function should be qualified based on their level of education, experience, and extent of formal credit training. They should be knowledgeable in both sound lending practices and the institution's lending guidelines for the types of loans offered by the institution. In addition, they should be knowledgeable of relevant laws and regulations affecting lending activities.

Independence of loan review personnel. An effective loan review system uses both the initial identification of emerging problem loans by loan officers and other line staff, and the credit review of loans by individuals independent of the credit approval process. An important requirement for an effective system is to place responsibility on loan officers and line staff for continuous portfolio analysis and prompt identification and reporting of problem loans. Because of frequent contact with borrowers, loan officers and line staff can usually identify potential problems before they become apparent to others. However, institutions should be careful to avoid overreliance upon loan officers and line staff for identification of problem loans. Institutions should ensure that loans are also reviewed by individuals who do not have control over the loans they review and who are not part of, and are not influenced by anyone associated with, the loan approval process.

While larger institutions typically establish a separate department staffed with credit review specialists, cost and volume considerations may not justify such a system in smaller institutions. In some smaller institutions, an independent committee of outside directors may fill this role. Whether or not the institution has an independent loan review department, the loan review function should report *directly* to the board of directors or a committee thereof (although senior management may be responsible for appropriate administrative functions so long as they do not compromise the independence of the loan review function).

Some institutions may choose to outsource the credit review function to an independent outside party. However, the responsibility for maintaining a sound loan review process cannot be delegated to an outside party. Therefore, institution personnel who are independent of the lending function should assess control risks, develop the credit review plan, and ensure appropriate follow-up of findings. Furthermore,

the institution should be mindful of special requirements concerning independence should it consider outsourcing the credit review function to its external auditor.

Frequency of reviews. Loan review personnel should review significant credits³¹ at least annually, upon renewal, or more frequently when internal or external factors indicate a potential for deteriorating credit quality in a particular loan, loan product, or group of loans. Optimally, the loan review function can be used to provide useful continual feedback on the effectiveness of the lending process in order to identify any emerging problems. A system of ongoing or periodic portfolio reviews is particularly important to the ALLL determination process because this process is dependent on the accurate and timely identification of problem loans.

Scope of reviews. Reviews by loan review personnel should cover all loans that are significant and other loans that meet certain criteria. Management should document the scope of its reviews and ensure that the percentage of the portfolio selected for review provides reasonable assurance that the results of the review have identified any credit quality deterioration and other unfavorable trends in the portfolio and reflect its quality as a whole. Management should also consider industry standards for loan review coverage consistent with the size and complexity of its loan portfolio and lending operations to verify that the scope of its reviews is appropriate. The institution's board of directors should approve the scope of loan reviews on an annual basis or when any significant interim changes to the scope of reviews are made. Reviews typically include—

- loans over a predetermined size;
- a sufficient sample of smaller loans;
- past due, nonaccrual, renewed, and restructured loans;
- loans previously adversely classified or graded and loans designated as warranting the special attention of management³² by the institution or its examiners;
- insider loans; and
- loans constituting concentrations of credit risk

31. Significant credits in this context may or may not be loans individually evaluated for impairment under FAS 114.

32. See footnote 29.

and other loans affected by common repayment factors.

Depth of reviews. Reviews should analyze a number of important aspects of the loans selected for review, including—

- credit quality, including underwriting and borrower performance;
- sufficiency of credit and collateral documentation;
- proper lien perfection;
- proper approval by the loan officer and loan committee(s);
- adherence to any loan agreement covenants;
- compliance with internal policies and procedures (such as aging, nonaccrual, and classification or grading policies) and laws and regulations; and
- appropriate identification of individually impaired loans, measurement of estimated loan impairment, and timeliness of charge-offs.

Furthermore, these reviews should consider the appropriateness and timeliness of the identification of problem loans by loan officers.

Review of findings and follow-up. Loan review personnel should discuss all noted deficiencies and identified weaknesses and any existing or planned corrective actions, including time frames for correction, with appropriate loan officers and department managers. Loan review personnel should then review these findings and corrective actions with members of senior management. All noted deficiencies and identified weaknesses that remain unresolved beyond the scheduled time frames for correction should be promptly reported to senior management and the board of directors.

Credit classification or grading differences between loan officers and loan review personnel should be resolved according to a prearranged process. That process may include formal appeals procedures and arbitration by an independent party or may require default to the assigned classification or grade that indicates lower credit quality. If an outsourced credit review concludes that a borrower is less creditworthy than is perceived by the institution, the lower credit quality classification or grade should prevail unless internal parties identify additional information sufficient to obtain the concurrence of the outside reviewer or arbiter

on the higher credit quality classification or grade.

Workpaper and report distribution. The loan review function should prepare a list of all loans reviewed (including the date of the review) and documentation (including a summary analysis) that substantiates the grades or classifications assigned to the loans reviewed. A report that summarizes the results of the loan review should be submitted to the board of directors at least quarterly.³³ In addition to reporting current credit quality findings, comparative trends can be presented to the board of directors that identify significant changes in the overall quality of the portfolio. Findings should also address the adequacy of and adherence to internal policies and procedures, as well as compliance with laws and regulations, in order to facilitate timely correction of any noted deficiencies.

2065.3.1.6 Appendix 2—International Transfer Risk Considerations

With respect to international transfer risk, an institution with cross-border exposures should support its determination of the appropriateness of its ALLL by performing an analysis of the transfer risk, commensurate with the size and composition of the institution's exposure to each country. Such analyses should take into consideration the following factors, as appropriate:

- the institution's loan portfolio mix for each country (for example, types of borrowers, loan maturities, collateral, guarantees, special credit facilities, and other distinguishing factors);
- the institution's business strategy and its debt-management plans for each country;
- each country's balance of payments position;
- each country's level of international reserves;
- each country's established payment performance record and its future debt-servicing prospects;
- each country's sociopolitical situation and its effect on the adoption or implementation of economic reforms, in particular those affecting debt servicing capacity;
- each country's current standing with multilateral and official creditors;
- the status of each country's relationships with other creditors, including institutions; and

³³ The board of directors should be informed more frequently than quarterly when material adverse trends are noted.

- the most recent evaluations distributed by the banking agencies' Interagency Country Exposure Review Committee.

ALLL Methodologies and Documentation (Accounting, Reporting, and Disclosure Issues) Section 2065.4

A supplemental interagency Policy Statement on Allowance for Loan and Lease Losses Methodologies and Documentation for Banks and Savings Institutions¹ was issued by the Federal Financial Institutions Examination Council (FFIEC) on July 2, 2001.² The policy statement clarifies the agencies' expectations for documentation that supports the ALLL methodology. Additionally, the statement emphasizes the need for appropriate ALLL policies and procedures, which should include an effective loan-review system. The guidance also provides examples of appropriate supporting documentation, as well as illustrations on how to implement this guidance. (See SR-01-17.) While this policy statement, by its terms, applies only to depository institutions insured by the Federal Deposit Insurance Corporation (which includes state member banks), the Federal Reserve believes this guidance is broadly applicable to bank holding companies. Accordingly, examiners should apply the policy, as appropriate, in their inspections of bank holding companies and their non-bank subsidiaries. This policy, however, does not apply to federally insured branches and agencies of foreign banks. Federally insured branches and agencies of foreign banks continue to be subject to separate guidance issued by their primary supervisory agency.

The guidance requires that a financial institution's ALLL methodology be in accordance with generally accepted accounting principles (GAAP) and all outstanding supervisory guidance. An ALLL methodology should be systematic, consistently applied, and auditable. The methodology should be validated periodically and modified to incorporate new events or findings, as needed. The guidance specifies that management, under the direction of the board of directors, should implement appropriate procedures and controls to ensure compliance with the institution's ALLL policies and procedures. Institution management should (1) segment the portfolio to evaluate credit risks; (2) select loss rates that best reflect the probable loss; and (3) be responsive to changes in the organization, the economy, or the lending environment by changing the methodology, when appropriate. Furthermore, supporting information should be included on summary schedules, whenever feasible. Under this policy, institutions with less-

complex loan products or portfolios, such as community banks, may use a more streamlined approach to implement this guidance.

The policy statement is consistent with the Federal Reserve's long-standing policy to promote strong internal controls over an institution's ALLL process. In this regard, the new policy statement recognizes that determining an appropriate allowance involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. In accordance with GAAP, an institution should record its best estimate within the range of credit losses. (See also sections 2065.2 and 2065.3.) (See also the March 1, 2004, interagency Update on Accounting for Loan and Lease Losses (SR-04-5).)

The policy statement is provided below. Some wording has been slightly modified for this manual, as indicated by asterisks or text enclosed in brackets. Some footnotes have also been renumbered.

2065.4.1 2001 POLICY STATEMENT ON ALLL METHODOLOGIES AND DOCUMENTATION

Boards of directors of banks * * * are responsible for ensuring that their institutions have controls in place to consistently determine the allowance for loan and lease losses (ALLL) in accordance with the institutions' stated policies and procedures, generally accepted accounting principles (GAAP), and ALLL supervisory guidance.³ To fulfill this responsibility, boards of directors instruct management to develop and maintain an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provisions for loan losses. Management should create and implement suitable policies and procedures to communicate the ALLL process internally to all applicable personnel. Regardless of who develops and implements these policies, procedures, and underlying controls, the board of directors

3. [The actual policy statement includes a bibliography] that lists applicable ALLL GAAP guidance, interagency statements, and other reference materials that may assist in understanding and implementing an ALLL in accordance with GAAP. See [the appendix] for additional information on applying GAAP to determine the ALLL.

1. See 66 *Fed. Reg.* 35,629–35,639 (July 6, 2001).
2. The guidance was developed in consultation with Securities and Exchange Commission staff, who are issuing parallel guidance in the form of Staff Accounting Bulletin No. 102.

should assure themselves that the policies specifically address the institution's unique goals, systems, risk profile, personnel, and other resources before approving them. Additionally, by creating an environment that encourages personnel to follow these policies and procedures, management improves procedural discipline and compliance.

The determination of the amounts of the ALLL and provisions for loan and lease losses should be based on management's current judgments about the credit quality of the loan portfolio, and should consider all known relevant internal and external factors that affect loan collectibility as of the reporting date. The amounts reported each period for the provision for loan and lease losses and the ALLL should be reviewed and approved by the board of directors. To ensure the methodology remains appropriate for the institution, the board of directors should have the methodology periodically validated and, if appropriate, revised. Further, the audit committee⁴ should oversee and monitor the internal controls over the ALLL-determination process.⁵

The [Federal Reserve and other] banking agencies⁶ have long-standing examination policies that call for examiners to review an institution's lending and loan-review functions and recommend improvements, if needed. Additionally, in 1995 and 1996, the banking agencies adopted interagency guidelines establishing standards for safety and soundness, pursuant to section 39 of the Federal Deposit Insurance Act (FDI Act).⁷ The interagency asset-quality guidelines and [this guidance will assist] an institution in estimating and establishing a sufficient ALLL supported by adequate documentation, as required under the FDI Act. Additionally, the guidelines require operational and managerial

standards that are appropriate for an institution's size and the nature and scope of its activities.

For financial-reporting purposes, including regulatory reporting, the provision for loan and lease losses and the ALLL must be determined in accordance with GAAP. GAAP requires that allowances be well documented, with clear explanations of the supporting analyses and rationale.⁸ This [2001] policy statement describes but does not increase the documentation requirements already existing within GAAP. Failure to maintain, analyze, or support an adequate ALLL in accordance with GAAP and supervisory guidance is generally an unsafe and unsound banking practice.⁹

This guidance [the 2001 policy statement] applies equally to all institutions, regardless of the size. However, institutions with less-complex lending activities and products may find it more efficient to combine a number of procedures (for example, information gathering, documentation, and internal-approval processes) while continuing to ensure the institution has a consistent and appropriate methodology. Thus, much of the supporting documentation required for an institution with more-complex products or portfolios may be combined into fewer supporting documents in an institution with less-complex products or portfolios. For example, simplified documentation can include spreadsheets, checklists, and other summary documents that many institutions currently use. Illustrations A and C provide specific examples of how less-complex institutions may determine and document portions of their loan-loss allowance.

2065.4.1.1 Documentation Standards

Appropriate written supporting documentation for the loan-loss provision and allowance facili-

4. All institutions are encouraged to establish audit committees; however, at small institutions without audit committees, the board of directors retains this responsibility.

5. Institutions and their auditors should refer to Statement on Auditing Standards No. 61, "Communication with Audit Committees" (as amended by Statement on Auditing Standards No. 90, "Audit Committee Communications"), which requires certain discussions between the auditor and the audit committee. These discussions should include items, such as accounting policies and estimates, judgments, and uncertainties that have a significant impact on the accounting information included in the financial statements.

6. The [other] banking agencies are the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

7. Institutions should refer to the guidelines *** for state member banks, appendix D to part 208***.

8. The documentation guidance within this [2001] policy statement is predominantly based upon the GAAP guidance from Financial Accounting Standards Board (FASB) Statement No. 5 and No. 114 (FAS 5 and FAS 114, respectively); Emerging Issues Task Force Topic No. D-80 (EITF Topic D-80 and attachments), "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio" (which includes the *Viewpoints* article—an article issued in 1999 by FASB staff providing guidance on certain issues regarding the ALLL, particularly on the application of FAS 5 and FAS 114 and how these statements interrelate); Chapter 7, "Credit Losses," the American Institute of Certified Public Accountants' (AICPA) *Audit and Accounting Guide, Banks and Savings Institutions*, 2000 edition (AICPA Audit Guide); and the Securities and Exchange Commission's (SEC) Financial Reporting Release No. 28 (FRR 28).

9. Failure to maintain adequate supporting documentation does not relieve an institution of its obligation to record an appropriate ALLL.

tates review of the ALLL process and reported amounts, builds discipline and consistency into the ALLL-determination process, and improves the process for estimating loan and lease losses by helping to ensure that all relevant factors are appropriately considered in the ALLL analysis. An institution should document the relationship between the findings of its detailed review of the loan portfolio and the amount of the ALLL and the provision for loan and lease losses reported in each period.¹⁰

At a minimum, institutions should maintain written supporting documentation for the following decisions, strategies, and processes:

- policies and procedures—
 - over the systems and controls that maintain an appropriate ALLL and
 - over the ALLL methodology
- loan-grading system or process
- summary or consolidation of the ALLL balance
- validation of the ALLL methodology
- periodic adjustments to the ALLL process

2065.4.1.2 Policies and Procedures

Financial institutions utilize a wide range of policies, procedures, and control systems in their ALLL process. Sound policies should be appropriately tailored to the size and complexity of the institution and its loan portfolio.

In order for an institution's ALLL methodology to be effective, the institution's written policies and procedures for the systems and controls that maintain an appropriate ALLL should address but not be limited to—

- the roles and responsibilities of the institution's departments and personnel (including the lending function, credit review, financial reporting, internal audit, senior management, audit committee, board of directors, and others, as applicable) who determine, or review, as applicable, the ALLL to be reported in the financial statements;
- the institution's accounting policies for loans, [leases, and their loan losses], including the policies for charge-offs and recoveries and for estimating the fair value of collateral, where applicable;

10. This position is fully described in the SEC's FRR 28, in which the SEC indicates that the books and records of public companies engaged in lending activities should include documentation of the rationale supporting each period's determination that the ALLL and provision amounts reported were adequate.

- the description of the institution's systematic methodology, which should be consistent with the institution's accounting policies for determining its ALLL;¹¹ and
- the system of internal controls used to ensure that the ALLL process is maintained in accordance with GAAP and supervisory guidance.

An internal-control system for the ALLL-estimation process should—

- include measures to provide assurance regarding the reliability and integrity of information and compliance with laws, regulations, and internal policies and procedures;
- reasonably assure that the institution's financial statements (including regulatory reports) are prepared in accordance with GAAP and ALLL supervisory guidance;¹² and
- include a well-defined loan-review process containing—
 - an effective loan-grading system that is consistently applied, identifies differing risk characteristics and loan-quality problems accurately and in a timely manner, and prompts appropriate administrative actions;
 - sufficient internal controls to ensure that all relevant loan-review information is appropriately considered in estimating losses. This includes maintaining appropriate reports, details of reviews performed, and identification of personnel involved; and
 - clear formal communication and coordination between an institution's credit-administration function, financial-reporting group, management, board of directors, and others who are involved in

11. Further explanation is presented in the "Methodology" section that appears below.

12. In addition to the supporting documentation requirements for financial institutions, as described in interagency asset-quality guidelines, public companies are required to comply with the books and records provisions of the Securities Exchange Act of 1934 (Exchange Act). Under sections 13(b)(2)–(7) of the Exchange Act, registrants must make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of assets of the registrant. Registrants also must maintain internal accounting controls that are sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to permit the preparation of financial statements in conformity with GAAP. See also SEC Staff Accounting Bulletin No. 99, *Materiality*.

the ALLL-determination or -review process, as applicable (e.g., written policies and procedures, management reports, audit programs, and committee minutes).

2065.4.1.3 Methodology

An ALLL methodology is a system that an institution designs and implements to reasonably estimate loan and lease losses as of the financial statement date. It is critical that ALLL methodologies incorporate management's current judgments about the credit quality of the loan portfolio through a disciplined and consistently applied process.

An institution's ALLL methodology is influenced by institution-specific factors, such as an institution's size, organizational structure, business environment and strategy, management style, loan-portfolio characteristics, loan-administration procedures, and management information systems. However, there are certain common elements an institution should incorporate in its ALLL methodology. A summary of common elements is provided in [the appendix].¹³

2065.4.1.3.1 Documentation of ALLL Methodology in Written Policies and Procedures

An institution's written policies and procedures should describe the primary elements of the institution's ALLL methodology, including portfolio segmentation and impairment measurement. In order for an institution's ALLL methodology to be effective, the institution's written policies and procedures should describe the methodology—

- for segmenting the portfolio:
 - how the segmentation process is performed (i.e., by loan type, industry, risk rates, etc.),
 - when a loan-grading system is used to segment the portfolio:
 - the definitions of each loan grade,
 - a reconciliation of the internal loan grades to supervisory loan grades, and
 - the delineation of responsibilities for the loan-grading system.

- for determining and measuring impairment under FAS 114:
 - the methods used to identify loans to be analyzed individually;
 - for individually reviewed loans that are impaired, how the amount of any impairment is determined and measured, including—
 - procedures describing the impairment-measurement techniques available and
 - steps performed to determine which technique is most appropriate in a given situation.
 - the methods used to determine whether and how loans individually evaluated under FAS 114, but not considered to be individually impaired, should be grouped with other loans that share common characteristics for impairment evaluation under FAS 5.
- for determining and measuring impairment under FAS 5—
 - how loans with similar characteristics are grouped to be evaluated for loan collectibility (such as loan type, past-due status, and risk);
 - how loss rates are determined (e.g., historical loss rates adjusted for environmental factors or migration analysis) and what factors are considered when establishing appropriate time frames over which to evaluate loss experience; and
 - descriptions of qualitative factors (e.g., industry, geographical, economic, and political factors) that may affect loss rates or other loss measurements.

The supporting documents for the ALLL may be integrated in an institution's credit files, loan-review reports or worksheets, board of directors' and committee meeting minutes, computer reports, or other appropriate documents and files.

2065.4.1.4 ALLL Under FAS 114

An institution's ALLL methodology related to FAS 114 loans begins with the use of its normal loan-review procedures to identify whether a loan is impaired as defined by the accounting standard. Institutions should document—

- the method and process for identifying loans to be evaluated under FAS 114 and
- the analysis that resulted in an impairment decision for each loan and the determination of the impairment-measurement method to be

¹³ Also, refer to paragraph 7.05 of the AICPA Audit Guide.

used (i.e., present value of expected future cash flows, fair value of collateral less costs to sell, or the loan's observable market price).

Once an institution has determined which of the three available measurement methods to use for an impaired loan under FAS 114, it should maintain supporting documentation as follows:

- When using the present-value-of-expected-future-cash-flows method—
 - the amount and timing of cash flows,
 - the effective interest rate used to discount the cash flows, and
 - the basis for the determination of cash flows, including consideration of current environmental factors and other information reflecting past events and current conditions.
- When using the fair-value-of-collateral method—
 - how fair value was determined, including the use of appraisals, valuation assumptions, and calculations,
 - the supporting rationale for adjustments to appraised values, if any,
 - the determination of costs to sell, if applicable, and

— appraisal quality, and the expertise and independence of the appraiser.

- When using the observable-market-price-of-a-loan method—
 - the amount, source, and date of the observable market price.

Illustration A describes a practice used by a small financial institution to document its FAS 114 measurement of impairment using a comprehensive worksheet.¹⁴ [Examples 1 and 2 provide examples of applying and documenting impairment-measurement methods under FAS 114. Some loans that are evaluated individually for impairment under FAS 114 may be fully collateralized and therefore require no ALLL. Example 3 presents an institution whose loan portfolio includes fully collateralized loans. It describes the documentation maintained by that institution to support its conclusion that no ALLL was needed for those loans.]

14. The [referenced] illustrations are presented to assist institutions in evaluating how to implement the guidance provided in this document. The methods described in the illustrations may not be suitable for all institutions and are not considered required processes or actions. For additional descriptions of key aspects of ALLL guidance, a series of [numbered examples is provided. These examples were included in appendix A of the policy statement as questions and answers. The wording of the examples has been slightly modified for this format.]

Illustration A Documenting an ALLL Under FAS 114

Comprehensive worksheet for the impairment-measurement process

A small institution utilizes a comprehensive worksheet for each loan being reviewed individually under FAS 114. Each worksheet includes a description of why the loan was selected for individual review, the impairment-measurement technique used, the measurement calculation, a comparison to the current loan balance, and the amount of the ALLL for that loan. The rationale for the impairment-measurement technique used (e.g., present value of expected future cash flows, observable market price of the loan, fair value of the collateral) is also described on the worksheet.

Example 1: ALLL Under FAS 114— Measuring and Documenting Impairment

Facts. Approximately one-third of Institution A's commercial loan portfolio consists of large-balance, nonhomogeneous loans. Due to their large individual balances, these loans meet the criteria under Institution A's policies and procedures for individual review for impairment under FAS 114. Upon review of the large-balance loans, Institution A determines that certain of the loans are impaired as defined by FAS 114.

Analysis. For the commercial loans reviewed under FAS 114 that are individually impaired, Institution A should measure and document the impairment on those loans. For those loans that are reviewed individually under FAS 114 and considered individually impaired, Institution A must use one of the methods for measuring impairment that is specified by FAS 114 (that is, the present value of expected future cash flows,

the loan's observable market price, or the fair value of collateral).

An impairment-measurement method other than the methods allowed by FAS 114 cannot be used. For the loans considered individually impaired under FAS 114, under the circumstances described above, it would not be appropriate for Institution A to choose a measurement method not prescribed by FAS 114. For example, it would not be appropriate to measure loan impairment by applying a loss rate to each loan based on the average historical loss percentage for all of its commercial loans for the past five years.

Institution A should maintain, as sufficient, objective evidence, written documentation to support its measurement of loan impairment under FAS 114. If it uses the present value of expected future cash flows to measure impairment of a loan, it should document (1) the amount and timing of cash flows, (2) the effective interest rate used to discount the cash flows, and (3) the basis for the determination of cash flows, including consideration of current environmental factors¹⁵ and other information reflecting past events and current conditions. If Institution A uses the fair value of collateral to measure impairment, it should document (1) how it determined the fair value, including the use of appraisals, valuation assumptions and calculations; (2) the supporting rationale for adjustments to appraised values, if any, and the determination of costs to sell, if applicable; (3) appraisal quality; and (4) the expertise and independence of the appraiser. Similarly, Institution A should document the amount, source, and date of the observable market price of a loan, if that method of measuring loan impairment is used.

Example 2: ALLL Under FAS 114— Measuring Impairment for a Collateral-Dependent Loan

Facts. Institution B has a \$10 million loan outstanding to Company X that is secured by real estate, which Institution B individually evaluates under FAS 114 due to the loan's size. Company X is delinquent in its loan payments under the terms of the loan agreement. Accord-

ingly, Institution B determines that its loan to Company X is impaired, as defined by FAS 114. Because the loan is collateral dependent, Institution B measures impairment of the loan based on the fair value of the collateral. Institution B determines that the most recent valuation of the collateral was performed by an appraiser 18 months ago and, at that time, the estimated value of the collateral (fair value less costs to sell) was \$12 million.

Institution B believes that certain of the assumptions that were used to value the collateral 18 months ago do not reflect current market conditions and, therefore, the appraiser's valuation does not approximate current fair value of the collateral. Several buildings, which are comparable to the real estate collateral, were recently completed in the area, increasing vacancy rates, decreasing lease rates, and attracting several tenants away from the borrower. Accordingly, credit-review personnel at Institution B adjust certain of the valuation assumptions to better reflect the current market conditions as they relate to the loan's collateral.¹⁶ After adjusting the collateral-valuation assumptions, the credit-review department determines that the current estimated fair value of the collateral, less costs to sell, is \$8 million. Given that the recorded investment in the loan is \$10 million, Institution B concludes that the loan is impaired by \$2 million and records an allowance for loan losses of \$2 million.

Analysis. Institution B should maintain documentation to support its determination of the allowance for loan losses of \$2 million for the loan to Company X. It should document that it measured impairment of the loan to Company X by using the fair value of the loan's collateral, less costs to sell, which it estimated to be \$8 million. This documentation should include (1) the institution's rationale and basis for the \$8 million valuation, including the revised valuation assumptions it used; (2) the valuation calculation; and (3) the determination of costs to sell, if applicable. Because Institution B arrived at the valuation of \$8 million by modifying an earlier appraisal, it should document its rationale and basis for the changes it made to the valuation assumptions that resulted in the collateral value declining from \$12 million 18 months ago to \$8 million in the current period.¹⁷

15. Question 16 in Exhibit D-80A of EITF Topic D-80 and [its] attachments indicates that environmental factors include existing industry, geographical, economic, and political factors.

16. When reviewing collateral-dependent loans, Institution B may often find it more appropriate to obtain an updated appraisal to estimate the effect of current market conditions on the appraised value instead of internally estimating an adjustment.

17. In accordance with the FFIEC's *Federal Register*

Example 3: ALLL Under FAS 114—Fully Collateralized Loans

Facts. Institution C has \$10 million in loans that are fully collateralized by highly rated debt securities with readily determinable market values. The loan agreement for each of these loans requires the borrower to provide qualifying collateral sufficient to maintain a loan-to-value ratio with sufficient margin to absorb volatility in the securities' market prices. Institution C's collateral department has physical control of the debt securities through safekeeping arrangements. In addition, Institution C perfected its security interest in the collateral when the funds were originally distributed. On a quarterly basis, Institution C's credit-administration function determines the market value of the collateral for each loan using two independent market quotes and compares the collateral value to the loan carrying value. If there are any collateral deficiencies, Institution C notifies the borrower and requests that the borrower immediately remedy the deficiency. Due in part to its efficient operation, Institution C has historically not incurred any material losses on these loans. Institution C believes these loans are fully collateralized and therefore does not maintain any ALLL balance for these loans.

Analysis. To adequately support its determination that no allowance is needed for this group

notice, Implementation Issues Arising from FASB No. 114, "Accounting by Creditors for Impairment of a Loan," published February 10, 1995 (60 *Fed. Reg.* 7966), impaired, collateral-dependent loans must be reported at the fair value of collateral, less costs to sell, in regulatory reports. This treatment is to be applied to all collateral-dependent loans, regardless of type of collateral.

of loans, Institution C must maintain the following documentation:

- The management summary of the ALLL must include documentation indicating that, in accordance with the institution's ALLL policy, (1) Institution C has verified the collateral protection on these loans, (2) no probable loss has been incurred, and (3) no ALLL is necessary.
- The documentation in Institution C's loan files must include (1) the two independent market quotes obtained each quarter for each loan's collateral amount, (2) the documents evidencing the perfection of the security interest in the collateral and other relevant supporting documents, and (3) Institution C's ALLL policy, including guidance for determining when a loan is considered "fully collateralized," which would not require an ALLL. Institution C's policy should require the following factors to be considered and fully documented:
 - volatility of the market value of the collateral
 - recency and reliability of the appraisal or other valuation
 - recency of the institution's or third party's inspection of the collateral
 - historical losses on similar loans
 - confidence in the institution's lien or security position including appropriate—
 - type of security perfection (e.g., physical possession of collateral or secured filing);
 - filing of security perfection (i.e., correct documents and with the appropriate officials);
 - relationship to other liens; and
 - other factors as appropriate for the loan type.

2065.4.1.5 ALLL Under FAS 5

2065.4.1.5.1 Segmenting the Portfolio

For loans evaluated on a group basis under FAS 5, management should segment the loan portfolio by identifying risk characteristics that are common to groups of loans. Institutions typically decide how to segment their loan portfolios based on many factors, which vary with their business strategies as well as their information system capabilities. Smaller institutions that are involved in less complex activities often segment the portfolio into broad loan categories. This method of segmenting the portfolio is likely to be appropriate in only small institu-

tions offering a narrow range of loan products. Larger institutions typically offer a more diverse and complex mix of loan products. Such institutions may start by segmenting the portfolio into major loan types but typically have more detailed information available that allows them to further segregate the portfolio into product-line segments based on the risk characteristics of each portfolio segment. Regardless of the segmentation method used, an institution should maintain documentation to support its conclusion that the loans in each segment have similar attributes or characteristics.

As economic and other business conditions change, institutions often modify their business strategies, which may result in adjustments to the way in which they segment their loan portfolio for purposes of estimating loan losses.

Illustration B presents an example in which an institution refined its segmentation method to more effectively consider risk factors and maintains documentation to support this change.

Illustration B

Documenting Segmenting Practices

Documenting a refinement in a segmentation method

An institution with a significant portfolio of consumer loans performed a review of its ALLL methodology. The institution had determined its ALLL based upon historical loss rates in the overall consumer portfolio. The ALLL methodology was validated by comparing actual loss rates (charge-offs) for the past two years to the estimated loss rates. During this process, the

institution decided to evaluate loss rates on an individual-product basis (e.g., auto loans, unsecured loans, or home equity loans). This analysis disclosed significant differences in the loss rates on different products. With this additional information, the methodology was amended in the current period to segment the portfolio by product, resulting in a better estimation of the loan losses associated with the portfolio. To support this change in segmentation practice, the credit-review committee records contain the analysis that was used as a basis for the change and the written report describing the need for the change.

Institutions use a variety of documents to support the segmentation of their portfolios. Some of these documents include—

- loan trial balances by categories and types of loans,
- management reports about the mix of loans in the portfolio,
- delinquency and nonaccrual reports, and
- a summary presentation of the results of an internal or external loan-grading review.

Reports generated to assess the profitability of a loan-product line may be useful in identifying areas in which to further segment the portfolio.

2065.4.1.5.2 Estimating Loss on Groups of Loans

Based on the segmentation of the loan portfolio, an institution should estimate the FAS 5 portion of its ALLL. For those segments that require an ALLL,¹⁸ the institution should estimate the loan and lease losses, on at least a quarterly basis, based upon its ongoing loan-review process and analysis of loan performance. The institution should follow a systematic and consistently applied approach to select the most appropriate

loss-measurement methods and support its conclusions and rationale with written documentation. Regardless of the methods used to measure losses, an institution should demonstrate and document that the loss-measurement methods used to estimate the ALLL for each segment are determined in accordance with GAAP as of the financial statement date.¹⁹

One method of estimating loan losses for groups of loans is through the application of loss rates to the groups' aggregate loan balances. Such loss rates typically reflect the institution's historical loan-loss experience for each group of loans, adjusted for relevant environmental factors (e.g., industry, geographical, economic, and political factors) over a defined period of time. If an institution does not have loss experience of its own, it may be appropriate to reference the loss experience of other institutions, provided that the institution demonstrates that the attributes of the loans in its portfolio segment are similar to those of the loans included in the portfolio of the institution providing the loss experience.²⁰ Institutions should maintain supporting documentation for the technique used to develop their loss rates, including the period of time over which the losses were incurred. If a range of loss is determined, institutions should maintain documentation to support the identified range and the rationale used for determining which estimate is the best estimate within the range of loan losses. An example of

18. An example of a loan segment that does not generally require an ALLL is loans that are fully secured by deposits maintained at the lending institution.

19. Refer to paragraph 8(b) of FAS 5***.

20. Refer to paragraph 23 of FAS 5.

how a small institution performs a comprehensive historical loss analysis is provided as the first item in illustration C.

Before employing a loss-estimation model, an institution should evaluate and modify, as needed, the model's assumptions to ensure that the resulting loss estimate is consistent with GAAP. In order to demonstrate consistency with GAAP, institutions that use loss-estimation models typically document the evaluation, the conclusions regarding the appropriateness of estimating loan losses with a model or other loss-estimation tool, and the support for adjustments to the model or its results.

In developing loss measurements, institutions should consider the impact of current environmental factors and then document which factors were used in the analysis and how those factors affected the loss measurements. Factors that should be considered in developing loss measurements include the following:²¹

- levels of and trends in delinquencies and impaired loans
- levels of and trends in charge-offs and recoveries
- trends in volume and terms of loans
- effects of any changes in risk-selection and underwriting standards, and other changes in

- lending policies, procedures, and practices
- experience, ability, and depth of lending management and other relevant staff
- national and local economic trends and conditions
- industry conditions
- effects of changes in credit concentrations

For any adjustment of loss measurements for environmental factors, the institution should maintain sufficient, objective evidence to support the amount of the adjustment and to explain why the adjustment is necessary to reflect current information, events, circumstances, and conditions in the loss measurements.

The second item in illustration C provides an example of how an institution adjusts its commercial real estate historical loss rates for changes in local economic conditions. Example 4 provides an example of maintaining supporting documentation for adjustments to portfolio-segment loss rates for an environmental factor related to an economic downturn in the borrower's primary industry. Example 5 describes one institution's process for determining and documenting an ALLL for loans that are not individually impaired but have characteristics indicating there are loan losses on a group basis.

21. Refer to paragraph 7.13 in the AICPA Audit Guide.

Illustration C

Documenting the Setting of Loss Rates

Comprehensive loss analysis in a small institution

A small institution determines its loss rates based on loss rates over a three-year historical period. The analysis is conducted by type of loan and is further segmented by originating branch office. The analysis considers charge-offs and recoveries in determining the loss rate. The institution also considers the loss rates for each loan grade and compares them to historical losses on similarly rated loans in arriving at the historical loss factor. The institution maintains supporting documentation for its loss-factor analysis, including historical losses by type of loan, originating branch office, and loan grade for the three-year period.

Adjustment of loss rates for changes in local economic conditions

An institution develops a factor to adjust loss rates for its assessment of the impact of changes in the local economy. For example, when analyzing the loss rate on commercial real estate loans, the assessment identifies changes in recent commercial building occupancy rates. The institution generally finds the occupancy statistics to be a good indicator of probable losses on these types of loans. The institution maintains documentation that summarizes the relationship between current occupancy rates and its loss experience.

Example 4: ALLL Under FAS 5—Adjusting Loss Rates

Facts. Institution D's lending area includes a metropolitan area that is financially dependent

upon the profitability of a number of manufacturing businesses. These businesses use highly specialized equipment and significant quantities of rare metals in the manufacturing process. Due to increased low-cost foreign competition, several of the parts suppliers servicing these manufacturing firms declared bankruptcy. The foreign suppliers have subsequently increased prices, and the manufacturing firms have suffered from increased equipment maintenance costs and smaller profit margins. Additionally, the cost of the rare metals used in the manufacturing process increased and has now stabilized at double last year's price. Due to these events, the manufacturing businesses are experiencing financial difficulties and have recently announced downsizing plans.

Although Institution D has yet to confirm an increase in its loss experience as a result of these events, management knows that it lends to a significant number of businesses and individuals whose repayment ability depends upon the long-term viability of the manufacturing businesses. Institution D's management has identified particular segments of its commercial and consumer customer bases that include borrowers highly dependent upon sales or salary from the manufacturing businesses. Institution D's management performs an analysis of the affected portfolio segments to adjust its historical loss rates used to determine the ALLL. In this particular case, Institution D has experienced similar business and lending conditions in the past that it can compare to current conditions.

Analysis. Institution D should document its support for the loss-rate adjustments that result from considering these manufacturing firms' financial downturns. It should document its identification of the particular segments of its commercial and consumer loan portfolio for which it is probable that the manufacturing business' financial downturn has resulted in loan losses. In addition, it should document its analysis that resulted in the adjustments to the loss rates for the affected portfolio segments. As part of its documentation, Institution D should maintain copies of the documents supporting the analysis, including relevant newspaper articles, economic reports, economic data, and notes from discussions with individual borrowers.

Since Institution D has had similar situations in the past, its supporting documentation should also include an analysis of how the current conditions compare to its previous loss experi-

ences in similar circumstances. As part of its effective ALLL methodology, a summary should be created of the amount and rationale for the adjustment factor, which management presents to the audit committee and board for their review and approval prior to the issuance of the financial statements.

*Example 5: ALLL Under FAS 5—
Estimating Losses on Loans Individually
Reviewed for Impairment but Not
Considered Individually Impaired*

Facts. Institution E has outstanding loans of \$2 million to Company Y and \$1 million to Company Z, both of which are paying as agreed upon in the loan documents. The institution's ALLL policy specifies that all loans greater than \$750,000 must be individually reviewed for impairment under FAS 114. Company Y's financial statements reflect a strong net worth, good profits, and ongoing ability to meet debt-service requirements. In contrast, recent information indicates Company Z's profitability is declining and its cash flow is tight. Accordingly, this loan is rated substandard under the institution's loan-grading system. Despite its concern, management believes Company Z will resolve its problems and determines that neither loan is individually impaired as defined by FAS 114.

Institution E segments its loan portfolio to estimate loan losses under FAS 5. Two of its loan portfolio segments are Segment 1 and Segment 2. The loan to Company Y has risk characteristics similar to the loans included in Segment 1, and the loan to Company Z has risk characteristics similar to the loans included in Segment 2.²²

In its determination of the ALLL under FAS 5, Institution E includes its loans to Company Y and Company Z in the groups of loans with similar characteristics (i.e., Segment 1 for Company Y's loan and Segment 2 for Company Z's loan). Management's analyses of Segment 1 and Segment 2 indicate that it is probable that each segment includes some losses, even though the losses cannot be identified to one or more specific loans. Management estimates that the use of its historical loss rates for these two segments, with adjustments for changes in environmental factors, provides a reasonable estimate of the institution's probable loan losses in these segments.

22. These groups of loans do not include any loans that have been individually reviewed for impairment under FAS 114 and determined to be impaired as defined by FAS 114.

Analysis. Institution E should adequately document an ALLL under FAS 5 for these loans that were individually reviewed for impairment but are not considered individually impaired. As part of its effective ALLL methodology, Institution E documents the decision to include its loans to Company Y and Company Z in its determination of its ALLL under FAS 5. It should also document the specific characteristics of the loans that were the basis for grouping

these loans with other loans in Segment 1 and Segment 2, respectively. Institution E maintains documentation to support its method of estimating loan losses for Segment 1 and Segment 2, including the average loss rate used, the analysis of historical losses by loan type and by internal risk rating, and support for any adjustments to its historical loss rates. The institution also maintains copies of the economic and other reports that provided source data.

2065.4.1.6 Consolidating the Loss Estimates

To verify that ALLL balances are presented fairly in accordance with GAAP and are auditable, management should prepare a document that summarizes the amount to be reported in the financial statements for the ALLL. The board of directors should review and approve this summary.

Common elements in such summaries include—

- the estimate of the probable loss or range of loss incurred for each category evaluated (e.g., individually evaluated impaired loans, homogeneous pools, and other groups of loans that are collectively evaluated for impairment);
- the aggregate probable loss estimated using the institution's methodology;
- a summary of the current ALLL balance;
- the amount, if any, by which the ALLL is to be adjusted;²³ and
- depending on the level of detail that supports the ALLL analysis, detailed subschedules of loss estimates that reconcile to the summary schedule.

23. Subsequent to adjustments, there should be no material differences between the consolidated loss estimate, as determined by the methodology, and the final ALLL balance reported in the financial statements.

Illustration D describes how an institution documents its estimated ALLL by adding comprehensive explanations to its summary schedule.

Generally, an institution's review and approval process for the ALLL relies upon the data provided in these consolidated summaries. There may be instances in which individuals or committees that review the ALLL methodology and resulting allowance balance identify adjustments that need to be made to the loss estimates to provide a better estimate of loan losses. These changes may be due to information not known at the time of the initial loss estimate (e.g., information that surfaces after determining and adjusting, as necessary, historical loss rates, or a recent decline in the marketability of property after conducting a FAS 114 valuation based upon the fair value of collateral). It is important that these adjustments are consistent with GAAP and are reviewed and approved by appropriate personnel. Additionally, the summary should provide each subsequent reviewer with an understanding of the support behind these adjustments. Therefore, management should document the nature of any adjustments and the underlying rationale for making the changes. This documentation should be provided to those making the final determination of the ALLL amount. Example 6 addresses the documentation of the final amount of the ALLL.

Illustration D

Summarizing Loss Estimates

Descriptive comments added to the consolidated ALLL summary schedule

To simplify the supporting documentation process and to eliminate redundancy, an institution adds detailed supporting information to its summary schedule. For example, this institution's board of directors receives, within the body of the ALLL summary schedule, a brief description of the institution's policy for selecting loans for evaluation under FAS 114. Additionally, the institution identifies which FAS 114 impairment-measurement method was used for each individually reviewed impaired loan. Other items on the schedule include a brief description of the loss factors for each segment of the loan portfolio, the basis for adjustments to loss rates, and explanations of changes in ALLL amounts from period to period, including cross-references to more detailed supporting documents.

Example 6: Consolidating the Loss Estimates—Documenting the Reported ALLL

Facts. Institution F determines its ALLL using an established systematic process. At the end of each period, the accounting department prepares a summary schedule that includes the amount of each of the components of the ALLL, as well as the total ALLL amount, for review by senior management, the credit committee, and, ultimately, the board of directors. Members of senior management and the credit committee meet to discuss the ALLL. During these discussions, they identify changes that are required by GAAP to be made to certain of the ALLL

estimates. As a result of the adjustments made by senior management, the total amount of the ALLL changes. However, senior management (or its designee) does not update the ALLL summary schedule to reflect the adjustments or reasons for the adjustments. When performing their audit of the financial statements, the independent accountants are provided with the original ALLL summary schedule that was reviewed by senior management and the credit committee, as well as a verbal explanation of the changes made by senior management and the credit committee when they met to discuss the loan-loss allowance.

Analysis. Institution F's documentation practices supporting the balance of its loan-loss allowance, as reported in its financial statements, are not in compliance with existing documentation guidance. An institution must maintain supporting documentation for the loan-loss allowance amount reported in its financial statements. As illustrated above, there may be instances in which ALLL reviewers identify adjustments that need to be made to the loan-loss estimates. The nature of the adjustments, how they were measured or determined, and the underlying rationale for making the changes to the ALLL balance should be documented. Appropriate documentation of the adjustments should be provided to the board of directors (or its designee) for review of the final ALLL amount to be reported in the financial statements. For institutions subject to external audit, this documentation should also be made available to the independent accountants. If changes frequently occur during management or credit committee reviews of the ALLL, management may find it appropriate to analyze the reasons for the frequent changes and to reassess the methodology the institution uses.

2065.4.1.7 Validating the ALLL Methodology

An institution's ALLL methodology is considered valid when it accurately estimates the amount of loss contained in the portfolio. Thus, the institution's methodology should include procedures that adjust loss-estimation methods to reduce differences between estimated losses and actual subsequent charge-offs, as necessary.

To verify that the ALLL methodology is valid and conforms to GAAP and supervisory guidance, an institution's directors should establish internal-control policies, appropriate for the size of the institution and the type and complexity of its loan products. These policies should include procedures for a review, by a party who is independent of the ALLL-estimation process, of the ALLL methodology and its application in order to confirm its effectiveness.

In practice, financial institutions employ numerous procedures when validating the reasonableness of their ALLL methodology and

determining whether there may be deficiencies in their overall methodology or loan-grading process. Examples are—

- a review of trends in loan volume, delinquencies, restructurings, and concentrations;
- a review of previous charge-off and recovery history, including an evaluation of the timeliness of the entries to record both the charge-offs and the recoveries;
- a review by a party that is independent of the ALLL-estimation process (this often involves the independent party reviewing, on a test basis, source documents and underlying assumptions to determine that the established methodology develops reasonable loss estimates); and
- an evaluation of the appraisal process of the underlying collateral. (This may be accomplished by periodically comparing the appraised value to the actual sales price on selected properties sold.)

2065.4.1.7.1 Supporting Documentation for the Validation Process

Management usually supports the validation process with the workpapers from the ALLL-review function. Additional documentation often includes the summary findings of the independent reviewer. The institution's board of directors, or its designee, reviews the findings and acknowledges its review in its meeting minutes. If the methodology is changed based upon the findings of the validation process, documentation that describes and supports the changes should be maintained.

2065.4.1.8 Appendix—Application of GAAP

[This appendix was designated appendix B in the policy statement.] An ALLL recorded pursuant to GAAP is an institution's best estimate of the probable amount of loans and lease-financing receivables that it will be unable to collect based on current information and events.²⁴ A creditor should record an ALLL

24. This appendix provides guidance on the ALLL and does not address allowances for credit losses for off-balance-sheet instruments (e.g., loan commitments, guarantees, and standby letters of credit). Institutions should record liabilities for these exposures in accordance with GAAP. Further guidance on this topic is presented in the American Institute of Certified Public Accountants' Audit and Accounting Guide, *Banks and Savings Institutions*, 2000 edition (AICPA Audit Guide). Additionally, this appendix does not address allow-

when the criteria for accrual of a loss contingency as set forth in GAAP have been met. Estimating the amount of an ALLL involves a high degree of management judgment and is inevitably imprecise. Accordingly, an institution may determine that the amount of loss falls within a range. An institution should record its best estimate within the range of loan losses.²⁵

Under GAAP, Statement of Financial Accounting Standards No. 5, "Accounting for Contingencies" (FAS 5), provides the basic guidance for recognition of a loss contingency, such as the collectibility of loans (receivables), when it is probable that a loss has been incurred and the amount can be reasonably estimated. Statement of Financial Accounting Standards No. 114, "Accounting by Creditors for Impairment of a Loan" (FAS 114) provides more specific guidance about the measurement and disclosure of impairment for certain types of loans.²⁶ Specifically, FAS 114 applies to loans that are identified for evaluation on an individual basis. Loans are considered impaired when, based on current information and events, it is probable that the creditor will be unable to collect all interest and principal payments due according to the contractual terms of the loan agreement.

For individually impaired loans, FAS 114 provides guidance on the acceptable methods to measure impairment. Specifically, FAS 114 states that when a loan is impaired, a creditor should measure impairment based on the present value of expected future principal and interest cash flows discounted at the loan's effective interest rate, except that as a practical expedient, a creditor may measure impairment based on a loan's observable market price or the fair value of collateral, if the loan is collateral dependent. When developing the estimate of expected future cash flows for a loan, an institution should consider all available information reflecting past events and current conditions, including the

ances or accounting for assets or portions of assets sold with recourse, which is described in Statement of Financial Accounting Standards No. 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities—A Replacement of FASB Statement No. 125" (FAS 140).

25. Refer to FASB Interpretation No. 14, "Reasonable Estimation of the Amount of a Loss," and Emerging Issues Task Force Topic No. D-80, "Application of FASB Statements No. 5 and No. 114 to a Loan Portfolio" (EITF Topic D-80).

26. EITF Topic D-80 includes additional guidance on the requirements of FAS 5 and FAS 114 and how they relate to each other.***

effect of existing environmental factors. The following illustration provides an example of an

institution estimating a loan's impairment when the loan has been partially charged off.

Illustration

Interaction of FAS 114 with an Adversely Classified Loan, Partial Charge-Off, and the Overall ALLL

An institution determined that a collateral-dependent loan, which it identified for evaluation, was impaired. In accordance with FAS 114, the institution established an ALLL for the amount that the recorded investment in the loan exceeded the fair value of the underlying collateral, less costs to sell.

Consistent with relevant regulatory guidance, the institution classified as "Loss," the portion

of the recorded investment deemed to be the confirmed loss and classified the remaining recorded investment as "Substandard." For this loan, the amount classified "Loss" was less than the impairment amount (as determined under FAS 114). The institution charged off the "Loss" portion of the loan. After the charge-off, the portion of the ALLL related to this "Substandard" loan (1) reflects an appropriate measure of impairment under FAS 114, and (2) is included in the aggregate FAS 114 ALLL for all loans that were identified for evaluation and individually considered impaired. The aggregate FAS 114 ALLL is included in the institution's overall ALLL.

Large groups of smaller-balance homogeneous loans that are collectively evaluated for impairment are not included in the scope of FAS 114.²⁷ Such groups of loans may include, but are not limited to, credit card, residential mortgage, and consumer installment loans. FAS 5 addresses the accounting for impairment of these loans. Also, FAS 5 provides the accounting guidance for impairment of loans that are not identified for evaluation on an individual basis and loans that are individually evaluated but are not individually considered impaired. Institutions should ensure that they do not layer their loan-loss allowances. Layering is the inappropriate practice of recording in the ALLL more than one amount for the same probable loan loss. Layering can happen when an institution includes a loan in one segment, determines its best estimate of loss for that loan either individually or on a group basis (after taking into account all appropriate environmental factors, conditions, and events), and then includes the loan in another group, which receives an additional ALLL amount.²⁸

While different institutions may use different methods, there are certain common elements that should be included in any loan-loss allowance methodology. Generally, an institution's methodology should—

- include a detailed analysis of the loan portfolio, performed on a regular basis;
- consider all loans (whether on an individual or group basis);
- identify loans to be evaluated for impairment on an individual basis under FAS 114 and segment the remainder of the portfolio into groups of loans with similar risk characteristics for evaluation and analysis under FAS 5;
- consider all known relevant internal and external factors that may affect loan collectibility;
- be applied consistently but, when appropriate, be modified for new factors affecting collectibility;
- consider the particular risks inherent in different kinds of lending;
- consider current collateral values (less costs to sell), where applicable;
- require that analyses, estimates, reviews, and other ALLL methodology functions be performed by competent and well-trained personnel;
- be based on current and reliable data;
- be well documented, in writing, with clear explanations of the supporting analyses and rationale; and
- include a systematic and logical method to consolidate the loss estimates and ensure the

27. In addition, FAS 114 does not apply to loans measured at fair value or at the lower of cost or fair value, leases, or debt securities.

28. According to the Federal Financial Institutions Examination Council's *Federal Register* notice, Implementation Issues Arising from FASB Statement No. 114, "Accounting by Creditors for Impairment of a Loan," published February 10, 1995, institution-specific issues should be reviewed when estimating loan losses under FAS 114. This analysis should be conducted as part of the evaluation of each individual loan reviewed under FAS 114 to avoid potential ALLL layering.

ALLL balance is recorded in accordance with GAAP.²⁹

A systematic methodology that is properly designed and implemented should result in an institution's best estimate of the ALLL. Accordingly, institutions should adjust their ALLL balance, either upward or downward, in each period for differences between the results of the systematic determination process and the unadjusted ALLL balance in the general ledger.³⁰

2065.4.2 INSPECTION OBJECTIVES

1. To evaluate internal controls over the loan-loss estimation process by evaluating the ALLL written policy and the process used to create and maintain the policy, loan-grading systems, and other associated internal controls over credit risk.
2. To determine the existence of an ALLL balance and review the summary schedule supporting it.
3. To analyze and review the evaluation for Statement of Financial Accounting Standards No. 114 (FAS 114) (for individually listed loans).
4. To analyze and review the evaluation for Statement of Financial Accounting Standards No. 5 (FAS 5) (for groups of loans).
5. To determine if the BHC has adequately developed a range of loss and a margin for imprecision.
6. To determine that the ALLL reflects estimated credit losses for specifically identified loans (or groups of loans) and any estimated *probable* credit losses inherent in the remainder of the loan portfolio at the balance-sheet date.
7. To analyze and review the ALLL-documentation support.
8. To determine the adequacy of the BHC's process to evaluate the ALLL methodology and to adjust the methodology, as needed.

2065.4.3 INSPECTION PROCEDURES

1. Determine if the board of directors has developed and maintained an appropriate, systematic, and consistently applied process to determine the amounts of the ALLL and provision for loan losses, or if it has instructed management to do so. Determine if the ALLL policies specifically address the BHC's goals, risk profile, personnel, and other resources.
2. Determine if the board of directors has approved the written ALLL policy.
3. Determine if the BHC's loan-loss estimate, in accordance with its methodology, is consistent with generally accepted accounting principles and supervisory guidance. Additionally, ensure that the BHC's loan-loss estimate is materially consistent with the reported balance of the BHC's ALLL account.
4. Determine if the ALLL methodology is periodically validated by an independent party and, if appropriate, revised.
5. Ascertain whether the audit committee is overseeing and monitoring the internal controls over the ALLL-documentation process.
6. Ascertain that the BHC maintains adequate written documentation of its ALLL, including clear explanations of the supporting analyses and rationale. The documentation should consist of—
 - policies and procedures over the systems and controls that maintain an appropriate ALLL and over the ALLL methodology,
 - the loan-grading system or process,
 - a summary or consolidation (including losses) of the ALLL balance,
 - a validation of the ALLL methodology, and
 - periodic adjustments to the ALLL process.
7. Determine if the amount reported for the ALLL for each period and the provisions for loan and leases losses are reviewed and approved by the board of directors.

29. Refer to paragraph 7.05 of the AICPA Audit Guide.

30. Institutions should refer to the guidance on materiality in SEC Staff Accounting Bulletin No. 99, *Materiality*.

A holding company and its depository institution subsidiaries may generally file a consolidated group income tax return. For bank regulatory purposes, however, each depository institution is viewed as, and reports as, a separate legal and accounting entity. Each holding company subsidiary that participates in filing a consolidated tax return should record its tax expenses or tax benefits as though it had filed a tax return as a separate entity. The amount and timing of any intercompany payments or refunds to the subsidiary that result from its being a part of the consolidated return group should be no more favorable than if the subsidiary was a separate taxpayer. A consolidated return permits the parent's and other subsidiaries' taxable losses to be offset against other subsidiaries' taxable income, with the parent most often providing the principal loss. This can be illustrated with the following example:

	<i>Parent Only</i>	<i>Bank</i>	<i>Non- bank A</i>	<i>Non- bank B</i>	<i>Consoli- dated</i>
Contribution to consolidated net taxable income (loss):	\$ (100)	\$ 2,000	\$ 500	\$ (50)	\$ 2,350
Assumed tax rate	40%	40%	40%	40%	40%
Tax payment/ (benefit)	\$ (40)	\$ 800	\$ 200	\$ (20)	\$ 940

In this example, the parent, as the representative of the consolidated group to the Internal Revenue Service, would collect \$800 from the bank subsidiary and \$200 from Nonbank Subsidiary A, and pay \$20 to Nonbank Subsidiary B. In return, the parent would remit to the tax authorities \$940, resulting in a net cash retention of \$40 by the parent.

Bank holding companies employ numerous methods to determine the amount of estimated payments to be received from their subsidiaries. Although the tax-accounting methods to be used by bank holding companies are not prescribed by the Federal Reserve System, the method employed must afford subsidiaries equitable treatment compared with filing separate returns. In general terms, tax transactions between any subsidiary and its parent should be conducted as though the subsidiary was dealing directly with state or federal taxing authorities.

In 1978 the Board of Governors addressed the issue of intercorporate income tax settlements by issuing a formal Policy Statement

Regarding Intercorporate Income Tax Accounting Transactions of Bank Holding Companies and State-Chartered Banks That Are Members of the Federal Reserve System. The statement was revised and replaced by the December 1998 Policy Statement on Income Tax Allocation in a Holding Company Structure, which does not materially change any of the guidance previously issued.

The tax structure of bank holding companies becomes more complicated when deferred taxes are considered in the intercorporate tax settlements.¹ Deferred taxes occur when taxable income, for financial reporting purposes, differs from taxable income as reported to the taxing authorities. This difference is due to timing differences between financial-statement income and tax income for loan-loss provisions and other items, such as foreign tax credits. In addition, differences result from the use of the cash basis of accounting for tax purposes, as opposed to the accrual basis of accounting used in financial reporting. The different bases are chosen by management.

An example of deferred income taxes follows, using an estimated tax rate of 40 percent.

	<i>Financial Reporting</i>	<i>Tax Return</i>
Pre-tax income	\$ 200	\$ 150
Currently payable	60	60
Deferred portion	<u>20</u>	<u>—</u>
TOTAL	<u>80</u>	<u>60</u>
Net income	\$ 120	\$ 90

The deferred portion represents the tax effect of delaying the recognition of income or taking more of a deduction for tax-return purposes (40% x \$50). This is a temporary difference since over the "life" of the bank holding company, income and deductions should theoretically equalize for both book and tax purposes.

Financial Accounting Standards Board State-

1. The issue becomes more complex because of GAAP-based tax expenses versus actual taxes paid under relevant tax laws (the difference between the two expenses is either a deferred tax liability or asset on the balance sheet). If the sharing agreement is based on the tax expense on the statement of income, more funds may be transferred to the paying agent than are required to settle the actual taxes owed.

ment No. 109 (FASB 109), "Accounting for Income Taxes," provides guidance on many aspects of accounting for income taxes, including the accounting for deferred tax liabilities and assets. FASB 109 describes how a bank holding company should record (1) taxes payable or refundable for the current year and (2) deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the banking organization's financial statements or tax returns.

Generally, all bank holding companies must file annual income tax returns. The bank holding company can pay the entire amount of tax (that is, the amount still due after estimated tax payments) on or before the due date for filing, or it can elect to pay by the extension deadline if one is granted. Bank holding companies may receive extensions from taxing authorities to file their returns later. For the federal tax return, a six-month extension may be granted.

Bank holding companies generally pay estimated taxes throughout the year. The most common payment dates will be as follows (assuming calendar period):

- April 15 — first estimate (25%)
- June 15 — second estimate (25%)
- September 15 — third estimate (25%)
- December 15 — fourth estimate (25%)
- March 15 — Due date for income tax return for U.S. corporations or foreign corporations with offices in the United States. Last day for filing for the automatic six-month extension.
- September 15 — Due date of return if six-month extensions were granted.

The bank holding company will calculate the amount of the estimated payments to the Internal Revenue Service by using one of two methods: (1) prior year's tax liability (most commonly used) or (2) 90 percent of the estimated tax based on the current year's estimated taxable income.

Bank holding companies have engaged in intercorporate income tax settlements that have the effect of transferring assets and income from a bank subsidiary to the parent company in excess of those settlements that would be consistent with the Board's 1978 policy statement. The Board will apply appropriate supervisory remedies to situations that are considered inequitable or improper. These remedies may

include, under certain circumstances, the Board's cease-and-desist powers.

On occasion, bank holding companies have used deferred tax assets as a vehicle to transfer cash or other earning assets of subsidiaries, principally from the bank, into the parent company. The Board's opinion is that each deferred tax asset or liability must remain on the books of the subsidiary. If deferred tax assets have been transferred to the parent, regardless of when the transfer may have occurred, immediate arrangements must be made to return the asset to the appropriate subsidiary. Instances of transferring deferred tax assets to the parent are worthy of inclusion in the Examiner's Comments and Matters Requiring Special Board Attention, page one of the inspection report.

2070.0.1 INTERAGENCY POLICY STATEMENT ON INCOME TAX ALLOCATION IN A HOLDING COMPANY STRUCTURE

The federal bank and savings association's regulatory agencies (the agencies) issued the following policy statement to provide guidance to banking organizations and savings associations regarding the allocation and payment of taxes among a holding company and its subsidiaries. A holding company and its subsidiaries will often file a consolidated group income tax return. However, for bank regulatory purposes, each depository institution of the consolidated group is viewed as, and reports as, a separate legal and accounting entity. Accordingly, each depository institution's applicable income taxes, reflecting either an expense or benefit, should be recorded as if the institution had filed as a separate tax-paying entity.² The amount and timing of payments or refunds should be no less favorable to a subsidiary than if it was a separate taxpayer. Any practice that is not consistent with this policy statement may be viewed as an unsafe and unsound practice prompting either informal or formal corrective action. See SR-98-38.

2070.0.1.1 Tax-Sharing Agreements

A holding company and its subsidiary institutions are encouraged to enter into a written,

2. Throughout the policy statement, the terms "separate entity" and "separate taxpayer" are used synonymously. When a depository institution has subsidiaries of its own, the institution's applicable income taxes on a separate-entity basis include the taxes of the subsidiaries of the institution that are included with the institution in the consolidated group return.

comprehensive tax-allocation agreement tailored to their specific circumstances. The agreement should be approved by the respective boards of directors. Although each agreement will be different, tax-allocation agreements usually address certain issues common to consolidated groups.

Therefore, such an agreement should—

1. require a subsidiary depository institution to compute its income taxes (both current and deferred) on a separate-entity basis;
2. discuss the amount and timing of the institution's payments for current tax expense, including estimated tax payments;
3. discuss reimbursements to an institution when it has a loss for tax purposes; and
4. prohibit the payment or other transfer of deferred taxes by the institution to another member of the consolidated group.

2070.0.1.2 Measurement of Current and Deferred Income Taxes

Generally accepted accounting principles, instructions for the preparation of both the Thrift Financial Report and the federally supervised bank Reports of Condition and Income, and other guidance issued by the agencies require depository institutions to account for their current and deferred tax liability or benefit.

When the depository-institution members of a consolidated group prepare separate bank regulatory reports, each subsidiary institution should record current and deferred taxes as if it files its tax returns on a separate-entity basis, regardless of the consolidated group's tax-paying or -refund status. Certain adjustments for statutory tax considerations that arise in a consolidated return, e.g., application of graduated tax rates, may be made to the separate-entity calculation as long as they are made on a consistent and equitable basis among the holding company affiliates.

In addition, when an organization's consolidated income tax obligation arising from the alternative minimum tax (AMT) exceeds its regular tax on a consolidated basis, the excess should be consistently and equitably allocated among the members of the consolidated group. The allocation method should be based upon the portion of tax preferences, adjustments, and other items generated by each group member which causes the AMT to be applicable at the consolidated level.

2070.0.1.3 Tax Payments to the Parent Company

Tax payments from a subsidiary institution to the parent company should not exceed the amount the institution has properly recorded as its current tax expense on a separate-entity basis. Furthermore, such payments, including estimated tax payments, generally should not be made before the institution would have been obligated to pay the taxing authority had it filed as a separate entity. Payments made in advance may be considered extensions of credit from the subsidiary to the parent and may be subject to affiliate transaction rules, i.e., sections 23A and 23B of the Federal Reserve Act.

A subsidiary institution should not pay its deferred tax liabilities or the deferred portion of its applicable income taxes to the parent. The deferred tax account is not a tax liability required to be paid in the current reporting period. As a result, the payment of deferred income taxes by an institution to its holding company is considered a dividend subject to dividend restrictions,³ not the extinguishment of a liability. Furthermore, such payments may constitute an unsafe and unsound banking practice.

2070.0.1.4 Tax Refunds from the Parent Company

An institution incurring a loss for tax purposes should record a current income tax benefit and receive a refund from its parent in an amount no less than the amount the institution would have been entitled to receive as a separate entity. The refund should be made to the institution within a reasonable period following the date the institution would have filed its own return, regardless of whether the consolidated group is receiving a refund. If a refund is not made to the institution within this period, the institution's primary federal regulator may consider the receivable as either an extension of credit or a dividend from the subsidiary to the parent. A parent company may reimburse an institution more than the

3. These restrictions include the prompt-corrective-action provisions of section 38(d)(1) of the Federal Deposit Insurance Act (12 U.S.C. 1831o(d)(1)) and its implementing regulations: for insured state nonmember banks, 12 CFR 325, subpart B; for national banks, 12 CFR section 6.6; for savings associations, 12 CFR 565; and for state member banks, 12 CFR 208.45.

refund amount it is due on a separate-entity basis. Provided the institution will not later be required to repay this excess amount to the parent, the additional funds received should be reported as a capital contribution.

If the institution, as a separate entity, would not be entitled to a current refund because it has no carry-back benefits available on a separate-entity basis, its holding company may still be able to utilize the institution's tax loss to reduce the consolidated group's current tax liability. In this situation, the holding company may reimburse the institution for the use of the tax loss. If the reimbursement will be made on a timely basis, the institution should reflect the tax benefit of the loss in the current portion of its applicable income taxes in the period the loss is incurred. Otherwise, the institution should not recognize the tax benefit in the current portion of its applicable income taxes in the loss year. Rather, the tax loss represents a loss carry-forward, the benefit of which is recognized as a deferred tax asset, net of any valuation allowance.

Regardless of the treatment of an institution's tax loss for regulatory reporting and supervisory purposes, a parent company that receives a tax refund from a taxing authority obtains these funds as agent for the consolidated group on behalf of the group members.⁴ Accordingly, an organization's tax-allocation agreement or other corporate policies should not purport to characterize refunds attributable to a subsidiary depository institution that the parent receives from a taxing authority as the property of the parent.

2070.0.1.5 Income-Tax-Forgiveness Transactions

A parent company may require a subsidiary institution to pay it less than the full amount of the current income tax liability that the institution calculated on a separate-entity basis. Provided the parent will not later require the institution to pay the remainder of the current tax liability, the amount of this unremitted liability should be accounted for as having been paid with a simultaneous capital contribution by the parent to the subsidiary.

In contrast, a parent cannot make a capital contribution to a subsidiary institution by "forgiving" some or all of the subsidiary's deferred

tax liability. Transactions in which a parent "forgives" any portion of a subsidiary institution's deferred tax liability should not be reflected in the institution's regulatory reports. These transactions lack economic substance because each member of the consolidated group is jointly and severally liable for the group's potential future obligation to the taxing authorities. Although the subsidiaries have no direct obligation to remit tax payments to the taxing authorities, these authorities can collect some or all of a group liability from any of the group members if tax payments are not made when due.

2070.0.2 QUALIFYING SUBCHAPTER S CORPORATIONS

The Small Business Job Protection Act of 1996 made changes to the Internal Revenue Code (the code). On October 29, 1996, the FFIEC issued a bulletin notifying all federally insured banks and thrifts of the impact of these changes. Thrift organizations may qualify for Subchapter S corporation status under the code's revisions and could generally receive pass-through tax treatment for federal income tax purposes if certain criteria are met.

The bulletin states that no formal application is required to be filed with the federal bank and thrift regulatory agencies merely as a result of an election by a bank, thrift, or parent holding company to become a Subchapter S corporation. However, if an institution takes certain steps to meet the criteria to qualify for this tax status, particularly the code's limitations on the number and types of shareholders, applications or notices to the agencies may be required.

The FFIEC bulletin also states that any distributions made by the Subchapter S banking organization to its shareholders, including distributions intended to cover shareholders' personal tax liabilities for their shares of the income of the institution, will continue to be regarded as dividends and subject to any limitations under relevant banking law. See SR-96-26.

2070.0.3 INSPECTION OBJECTIVES

1. To determine whether the supervisory and accounting guidance set forth in FASB 109, other tax-accounting standards, and the 1998 interagency policy statement on income tax allocation has been appropriately, equitably, and consistently applied.

4. See 26 CFR 1.1502-77(a).

2. To verify that the parent's intercorporate tax policy contains a provision requiring the subsidiaries to receive an appropriate refund from the parent when they incur a loss, and that such a refund would have been receivable from the tax authorities if the subsidiary was filing a separate return.
3. To ascertain that tax payments and tax refunds between financial institution subsidiaries and the parent company have been limited to no more than what the institution might have paid to or received from the tax authorities, if it had filed its tax returns on a timely, separate-entity basis.⁵
4. To determine that no deferred tax liability, corresponding asset, or the deferred portion of its applicable income taxes has been transferred from a bank subsidiary to the parent company.
5. To verify that there has been proper accountability for tax-forgiveness transactions between the parent company and its financial institution subsidiaries.
6. To substantiate that corporate practices are consistent with corporate policies.

2070.0.4 INSPECTION PROCEDURES

1. Obtain and discuss with the bank holding company's management its intercorporate income tax policies and tax-sharing agreements. Obtain and retain a copy of the intercorporate tax policies and agreements in the workpaper files. Review the written intercorporate tax-settlement policy and ascertain that it includes the following:
 - a. a description of the method(s) used in determining the amount of estimated taxes paid by each subsidiary to the parent
 - b. an indication of when payments are to be made
 - c. a statement that deferred taxes are maintained on the affiliate's general ledger
 - d. procedures for handling tax claims and refunds

Bank holding companies should also have written tax-sharing agreements with their subsidiaries that specify intercorporate tax-settlement policies. The Board encourages bank holding companies to develop such agreements. For tax-

sharing agreements, the following inspection procedures should be followed:

- a. Determine whether each subsidiary is required to compute its income taxes (current and deferred) on a separate-entity basis.
 - b. Ascertain if the amount and timing of payments for current tax expense, including estimated tax payments, are discussed.
 - c. Determine if reimbursements are discussed when an institution has a loss for tax purposes.
 - d. Determine if there is a prohibition on the payment or other transfer of deferred taxes by an institution to another member of the consolidated group.
2. Review briefly the parent's intercompany transaction report; general ledger income tax accounts; cash receipts and disbursements; and, if necessary, tax-return workpapers and other pertinent corporate documents.
 - a. Ascertain that the taxes collected by the parent company from each depository institution subsidiary do not exceed the amount that would have been paid if a separate return had been filed.
 - b. When depository institution subsidiaries are making their tax payments directly to the taxing authorities, determine whether other subsidiaries are paying their proportionate share.
 3. Review the separate regulatory reports for depository institution members of the holding company that are included in the filing of a consolidated tax return.
 - a. Verify that each subsidiary institution is recording current and deferred taxes as if it was filing its own tax returns on a separate-entity basis.
 - b. Ascertain that any adjustments for statutory tax considerations, arising from filing a consolidated return, are also made to the separate-entity calculations consistently and equitably among the holding company affiliates.
 4. Determine if any excess amounts (tax benefits), resulting from the filing of a consolidated return, are consistently and equitably allocated among the members of the consolidated group.
 5. Review the tax payments that are made from the bank and the nonbank subsidiaries to the parent company.

⁵ The term "separate-entity basis" recognizes that certain adjustments, in particular tax elections in a consolidated return, may, in certain periods, result in higher payments by the bank than would have been made if the bank was unaffiliated.

- a. Determine that payments, including estimated payments, that are being requested do not significantly precede the time that a consolidated or estimated current tax liability would be due and payable by the parent to the tax authorities.
 - b. Verify with management that the tax payments to the parent company were not in excess of the amounts recorded by its depository institution subsidiaries as current tax expense on a separate-entity basis.
 - c. Determine that subsidiary institutions are not paying their deferred tax liabilities on the deferred portions of their applicable income taxes to the parent company.
 - d. Ascertain that the parent company is not deriving tax monies from depository institution subsidiaries that are used for other operating needs.
6. When a subsidiary incurs a loss, review the tax system to determine that bank and non-bank subsidiaries are receiving an appropriate refund from the parent company, that is, an amount that is no less than what would have been received if the tax return had been filed on a separate-entity basis.
- a. Verify that the refund(s) are received no later than the date the institutions would have filed their own returns and that the refund is not characterized as the parent company's property.
 - b. If the parent company does not require a subsidiary to pay its full amount of current tax liability, ascertain that the amount of the tax liability is recorded as having been paid and that the corresponding credit is recorded as a capital contribution from the parent company to the subsidiary.
7. Determine that the deferred tax accounts of each bank subsidiary are maintained on its books and that they are not transferred to the parent organization.
 8. Determine if the Internal Revenue Service or other tax authorities have assessed any additional tax payments on the consolidated group, and whether the holding company has provided an additional reserve to cover the assessment.
 9. Complete the Other Supervisory Issues page of the Report of Bank Holding Company Inspection (FR 1225 and FR 1241).
 10. Verify the accuracy of the FR Y-8, Report of Intercompany Transactions, pertaining to the information on tax settlements.

2070.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
FFIEC Policy Statement on Income Tax Allocation in a Holding Company Structure			4-870	1999 FRB 111

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

The purpose of this Section is to discuss the types of funding ordinarily found in holding companies and to analyze their respective characteristics. It is not intended that this section include an analysis of the inter-relationships of these factors because that will be addressed in the various subsections of Section 4000 of the Manual.

The three major types of funding are short-term debt, long-term debt and equity. The ideal "hypothetical" holding company balance sheet would reflect sufficient equity to fund total bank and nonbank capital needs.

The complexity of the debt and/or equity financing will depend greatly upon the size and financial status of the holding company as well as the access to certain capital markets. The small holding company will be limited in the type and/or sophistication of financing instru-

ments available for its use, and probably would look to local sources for its debt and equity needs. This would include sale of equity and debt instruments to owners of the holding company. The medium-sized holding company has access to public markets through investment bankers and occasionally may issue its own corporate notes in the commercial paper market. The large holding company has a wide range of choices depending upon its financial condition and the economic climate at the time of any offering. It also has the ability to place debt privately as an alternate to dealing with public markets. In summary, the type of financing needed by a holding company will vary with the size and nature of its banking and nonbanking operations. The following subsections address those issues.

A key principle underlying the Federal Reserve's supervision of bank holding companies is that such companies should be operated in a way that promotes the soundness of their subsidiary banks. Holding companies are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Consequently, bank holding companies should develop and maintain funding programs that are consistent with their lending and investment activities and that provide adequate liquidity to the parent company and its nonbank subsidiaries.

2080.05.1 FUNDING AND LIQUIDITY

A principal objective of a parent bank holding company's funding strategy should be to support capital investments in subsidiaries and long-term assets with capital and long-term sources of funds. Long-term or permanent financing not only reduces funding and liquidity risks, but also provides an organization with investors and lenders that have a long-run commitment to its viability. Long-term financing may take the form of term loans, long-term debt securities, convertible debentures, subordinated debt, and equity.

In general, liquidity can be measured by the ability of an organization to meet its maturing obligations, convert assets into cash with minimal loss, obtain cash from other sources, or roll over or issue new debt obligations. A major determinant of a bank holding company's liquidity position is the level of liquid assets available to support maturing liabilities. The use of short-term debt, including commercial paper, to fund long-term assets can result in unsafe and unsound banking conditions, especially if a bank holding company does not have alternative sources of liquidity or other reliable means to refinance or redeem its obligations. In addition, commercial paper proceeds should not be used to fund corporate dividends or pay current expenses. Funding mismatches can exacerbate an otherwise manageable period of financial stress or, in the extreme, undermine public confidence in an organization's viability. For this reason, bank holding companies, in managing their funding positions, should control liquidity risk by maintaining an adequate cushion of liquid assets to cover short-term liabilities. Holding companies should at all times have sufficient liquidity and funding flexibility to handle any runoff, whether anticipated or unforeseen, of

commercial paper or other short-term obligations—without having an adverse impact on their subsidiary banks.

This objective can best be achieved by limiting the use of short-term debt to funding assets that can be readily converted to cash without undue loss. It should be emphasized, however, that the simple matching of the maturity of short-term debt with the stated or nominal maturity of assets does not, by itself, adequately ensure an organization's ability to retire its short-term obligations if the condition of the underlying assets precludes their timely sale or liquidation. In this regard, it is particularly important that parent company advances to subsidiaries be considered a reliable source of liquidity only to the extent that they fund assets of high quality that can readily be converted to cash. Consequently, effective procedures to monitor and ensure on an ongoing basis the quality and liquidity of the assets being funded by short-term debt are critical elements of a holding company's overall funding program.

Bank holding companies should establish and maintain reliable funding and contingency plans to meet ongoing liquidity needs and to address any unexpected funding mismatches that could develop over time. Such plans could include reduced reliance on short-term purchased funds, greater use of longer-term financing, appropriate internal limitations on parent company funding of long-term assets, and reliable alternate sources of liquidity. It is particularly important that bank holding companies have reliable plans or backup facilities to refinance or redeem their short-term debt obligations in the event assets being funded by these obligations cannot be liquidated in a timely manner when the debt must be repaid. In this connection, holding companies relying on backup lines of credit for contingency plan purposes should seek to arrange standby facilities that will be reliable during times of financial stress, rather than facilities that contain clauses which may relieve the lender of the obligation to fund the borrower in the event of a deterioration in the borrower's financial condition.

In developing and carrying out funding programs, bank holding companies should avoid overreliance or excessive dependence on any single short-term or potentially volatile source of funds, such as commercial paper, or any single maturity range. Prudent internal liquidity

policies and practices should include specifying limits for, and monitoring the degree of reliance on, particular maturity ranges and types of short-term funding. Special attention should be given to the use of overnight money since a loss of confidence in the issuing organization could lead to an immediate funding problem. Bank holding companies issuing overnight liabilities should maintain on an ongoing basis a cushion of superior quality assets that can be immediately liquidated or converted to cash with minimal loss. The absence of such a cushion or a clear ability to redeem overnight liabilities when they become due should generally be viewed as an unsafe and unsound banking practice.

2080.05.2 ADDITIONAL SUPERVISORY CONSIDERATIONS

Bank holding companies and their nonbank affiliates should maintain sufficient liquidity and capital strength to provide assurance that outstanding debt obligations issued to finance the activities of these entities can be serviced and repaid without adversely affecting the condition of the affiliated bank(s). In this regard, bank holding companies should maintain strong capital positions to enable them to withstand potential losses that might be incurred in the sale of assets to retire holding company debt obligations. It is particularly important that a bank holding company not allow its liquidity and funding policies or practices to undermine its ability to act as a source of strength to its affiliated bank(s).

The principles and guidelines outlined above constitute prudent financial practices for bank holding companies and most businesses in general. Holding company boards of directors should periodically assure themselves that funding plans, policies and practices are prudent in light of their organizations' overall financial condition. Such plans and policies should be consistent with the principles outlined above, including the need for appropriate internal limits on the level and type of short-term debt outstanding and the need for realistic and reliable contingency plans to meet any unanticipated runoff of short-term liabilities without adversely affecting affiliated banks.

2080.05.3 EXAMINER'S APPLICATION OF PRINCIPLES IN EVALUATING LIQUIDITY AND IN FORMULATING CORRECTIVE ACTION PROGRAMS

Reserve Bank examiners should be guided by these principles in evaluating liquidity and in formulating corrective action programs for bank holding companies that are experiencing earnings weaknesses or asset-quality problems, or that are otherwise subject to unusual liquidity pressures. In particular, bank holding companies with less than satisfactory parent or consolidated supervisory ratings (that is, 3 or worse), or any other holding companies subject to potentially serious liquidity or funding pressures, should be asked to prepare a realistic and specific action plan for reducing or redeeming entirely their outstanding short-term obligations without directly or indirectly undermining the condition of their affiliated bank(s).¹ Such contingency plans should be reviewed and evaluated by Reserve Bank supervisory personnel during or subsequent to on-site inspections. Any deficiencies in the plan, if not addressed by management, should be brought to the attention of the organization's board of directors. If the liquidity or funding position of such a company appears likely to worsen significantly, or if the company's financial condition worsens to a sufficient degree, the company should be expected to implement on a timely basis its plan to curtail or eliminate its reliance on commercial paper or other volatile, short-term sources of funds. Any decisions or steps taken by Reserve Banks in this regard should be discussed and coordinated with Board staff.

Reference should also be made to other manual sections that address funding, cash flow, or liquidity (for example, 2010.1, 2080.0, 2080.1, 2080.2, 2080.4, 2080.5, 2080.6, 4010.0, 4010.1, 4010.2, 5010.27, and 5010.28).

1. It is important to note that there are securities registration requirements under the Securities Act of 1933 related to the issuance of commercial paper. A bank holding company should have procedures in place to ensure compliance with all applicable securities and SEC requirements. Refer to manual section 2080.1.

Funding (Commercial Paper and Other Short-term Uninsured Debt Obligations and Securities) Section 2080.1

Commercial paper is a generic term that is generally used to describe short-term unsecured promissory notes issued by well-recognized and generally financially sound corporations. The largest commercial paper issuers are finance companies and bank holding companies which use the proceeds as a source of funds in lieu of fixed rate borrowing.

Generally accepted limitations on issuances and uses of commercial paper derive from Section 3(a)(3) of the Securities Act of 1933 (1933 Act). Section 3(a)(3) exempts from the registration requirements of the 1933 Act “any note . . . which arises out of a current transaction or the proceeds of which have been or are to be used for current transactions and which has a maturity at the time of issuance not exceeding nine months, exclusive of days of grace, or any renewal thereof the maturity of which is likewise limited. . . .” The Securities and Exchange Commission (SEC) has rulemaking authority over the issuance of commercial paper.

The five criteria, as set forth in an SEC interpretation (SA Release #33-4412, September 20, 1961), that are deemed necessary to qualify securities for the commercial paper exemption are that the commercial paper must:

- Be of prime quality and negotiable;
- Be of a type not ordinarily purchased by the general public;
- Be issued to facilitate current operational business requirements;
- Be eligible for discounting by a Federal Reserve Bank;
- Have a maturity not exceeding nine months.

2080.1.1 MEETING THE SEC CRITERIA

The above criteria are discussed below.

2080.1.1.1 Nine-Month Maturity Standard

Although roll-over of commercial paper proceeds on maturity is common, the SEC has stated that obligations that are payable on demand or have provisions for automatic roll-over do not satisfy the nine-month maturity standard. However, the SEC staff has issued “no action” letters for commercial paper master note agreements which allow eligible investors to make daily purchases and withdrawals (subject to a

minimum amount of \$25,000) as long as the note and each investor’s interest therein, does not exceed nine months. Such master note agreements may permit prepayment by the issuer, or upon demand of the investor, at any time.

2080.1.1.2 Prime Quality

Most commercial paper is rated by at least one of five nationally recognized statistical rating organizations. The SEC has not clearly articulated the line at which it will regard a specific rating of commercial paper as being “not prime” and, indeed, there is no requirement that a rating be obtained at all in order to qualify. SEC staff has issued a series of “no-action” letters to individual bank holding companies based on specific facts and circumstances even where it does not appear that a rating was obtained. However, where commercial paper is downgraded to below what is generally regarded as “investment quality” (ratings of less than medium grade—refer to the *Commercial Bank Examination Manual*, section 203.1), or a rating is withdrawn, BHCs may not be able to issue commercial paper based on the Section 3(a)(3) exemption, in the absence of a marked significant improvement in the issuer’s financial condition.

2080.1.1.3 Current Transactions

There have been considerable interpretative problems arising out of the current transactions concept. The SEC staff has issued a partial laundry list of activities which would not be deemed suitable for investment of commercial paper proceeds, namely:

1. The discharge of existing indebtedness, unless such indebtedness is itself exempt under section 3(a)(3) of the 1933 Act;
2. The purchase or construction of a plant or the purchase of durable machinery or equipment;
3. The funding of commercial real estate development or financing;
4. The purchase of real estate mortgages or other securities;
5. The financing of mobile homes or home improvements; or

6. The purchase or establishment of a business enterprise.

The SEC has opined that commercial paper, which is used as bridge financing by a bank holding company to fund a permanent acquisition within the 270-day maturity period of the paper, will meet the current transactions criterion. The amount of a bank holding company's commercial paper cannot exceed the aggregate amount of "current transactions" of the bank holding company and its subsidiaries *on a consolidated basis*. For this purpose, "current transactions" include dividends, interest, taxes and short-term loan repayments. In summary, in most cases, the "current transactions" requirement will not be a significant limitation on issuances of commercial paper by bank holding companies.

In addition to meeting SEC requirements, a bank holding company must meet funding and liquidity criteria prescribed by the Board. For a detailed discussion on acceptable use of commercial paper in connection with a bank holding company overall funding strategies, see Sections 2080.05 and 2080.6.

2080.1.1.4 Sales to Institutional Investors

Commercial paper is generally marketed only to institutional investors (corporations, pension funds, insurance companies, etc.) although sales to individuals are not prohibited. It is clear, however, from the legislative history of the Section 3(a)(3) exemption that commercial paper was not to be marketed for sale to the general public. Currently, SEC staff will not issue a no-action letter if the minimum denomination of the commercial paper to be issued is less than \$25,000. One of the underlying premises of the Section 3(a)(3) exemption is that purchasers of commercial paper have sufficient financial sophistication to make informed investment decisions without the benefit of the information provided by a registration statement. It is, therefore, generally recognized today that any individual purchaser of commercial paper should meet the "accredited investor" criteria of commercial paper set forth in SEC Regulation D (17 C.F.R. 230.501(a)). To qualify as an "accredited investor", an individual can meet one of two tests—a net worth test or an income test. To qualify under the net worth test, an individual or an individual and his or her spouse must have a net worth at the time of purchase in excess

of \$1 million. The alternative test requires \$200,000 in income for each of the last two years (\$300,000 if the spouse's income is included) and a reasonable expectation of reaching the same income level in the current year.

For additional information on marketing of commercial paper, see the next subsection.

2080.1.2 MARKETING OF COMMERCIAL PAPER

The sale of bank holding company (or nonbank subsidiary) commercial paper by an affiliated bank to depositors or other investors raises a number of supervisory issues. Of particular concern is the possibility that individuals may purchase holding company paper with the misunderstanding that it is an insured deposit or obligation of the subsidiary bank. The probability of this occurring is increased when a bank subsidiary is actively engaged in the marketing of the paper of its holding company or nonbank affiliate, or when the holding company or nonbank affiliate has a name similar to the name of the commercial bank subsidiary.

It is a long-standing policy of the Federal Reserve (refer to letters SR 90-19 and SR-620) that debt obligations of a bank holding company or a nonbank affiliate should not be issued, marketed or sold in a way that conveys the misimpression or misunderstanding that such instruments are either: 1) federally-insured deposits, or 2) obligations of, or guaranteed by, an insured depository institution. The purchase of such holding company obligations by retail depositors of an affiliated depository institution can, in the event of default, result in losses to individuals who believed that they had acquired federally-insured or guaranteed instruments. In addition to the problems created for these individuals, such a situation could impair public confidence in the affiliated depository institution and lead to unexpected withdrawals or liquidity pressures.

Events surrounding the sale of uninsured debt obligations of holding companies to retail customers of affiliated depository institutions have focused attention on the potential for problems in this area. In view of these concerns, the Federal Reserve emphasizes that this policy applies to the sale of both long- and short-term debt obligations of a bank holding company and any nonbank affiliate, as well as to the sale of uninsured debt securities issued by a state member bank or its subsidiaries. Debt obligations covered by this supervisory policy include commercial paper and all other short-term and long-

term debt securities, such as thrift notes and subordinated debentures.

Bank holding companies and nondepository affiliates that have issued or plan to issue uninsured obligations or debt securities should not market or sell these instruments in any public area of an insured depository institution where retail deposits are accepted, including any lobby area of the depository institution. Bank holding companies and any affiliates that are engaged in issuing debt obligations should establish appropriate policies and controls over the marketing and sale of the instruments. In particular, internal controls should be established to ensure that the promotion, sale, and subsequent customer relationship resulting from the sale of uninsured debt obligations is separated from the retail deposit-taking functions of affiliated depository institutions.

State member banks, including their subsidiaries, may also be engaged in issuing nondeposit debt securities (such as subordinated debt), and it is equally important to ensure that such securities are not marketed or sold in a manner that could give the purchaser the impression that the obligations are federally-insured deposits. Consequently, state member banks and their subsidiaries that have issued or plan to issue nondeposit debt securities should not market or sell these instruments in any public area of the bank where retail deposits are accepted, including any lobby area of the bank. Consistent with long-standing Federal Reserve policy, debt obligations of bank holding companies or their nonbank affiliates, including commercial paper and other short- or long-term debt securities, should prominently indicate that: 1) they are not obligations of an insured depository institution; and 2) they are not insured by the Federal Deposit Insurance Corporation. In cases where purchasers do not take physical possession of the obligation, the purchasers should be provided with a printed advice that conveys this information. Employees engaged in the sale of bank holding company debt obligations should be instructed to relate this information verbally to potential purchasers. In addition, with respect to the sale of holding company debt obligations, the instruments or related documentation should not display the name of the affiliated bank in such a way that could create confusion among potential purchasers about the identity of the obligor. State member banks involved in the sale of uninsured nondeposit debt securities of the bank should establish procedures to ensure that potential purchasers understand that the debt security is not federally-insured or guaranteed.

Federal Reserve examiners are responsible

for monitoring compliance with this supervisory policy; and, as part of the examination of state member banks and bank holding companies, are expected to continue to review the policies and internal controls relating to the marketing and sale of debt obligations and securities. Examiners should determine whether the marketing and sale of uninsured nondeposit debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function of the insured depository affiliate.

In determining whether the activities are sufficiently separated, examiners should take into account: 1) whether the sale of uninsured debt obligations of a holding company affiliate or uninsured nondeposit debt securities of a state member bank is physically separated from the bank's retail-deposit taking function, including the general lobby area¹; 2) whether advertisements that promote uninsured debt obligations of the holding company also promote insured deposits of the affiliated depository institution in a way that could lead to confusion; 3) whether similar names or logos between the insured depository institution and the issuing nonbank affiliate are used in a misleading way to promote securities of a nonbank affiliate without clearly identifying the obligor; 4) whether retail deposit-taking employees of the insured depository institution are engaged in the promotion or sale of uninsured debt securities of a nonbank affiliate; 5) whether information on the sale of uninsured debt obligations of a nonbank holding company affiliate is available in the retail banking area; and 6) whether retail deposit statements for bank customers also promote information on the sale of uninsured debt obligations of the bank holding company or a nonbank affiliate.

The Board's policy is that the manner in which commercial paper is sold should not lead bank customers or investors to construe commercial paper as an insured obligation or an instrument which may be higher in yield but equal in risk to insured bank deposits. All purchasers of commercial paper should clearly understand that such paper is an obligation of the parent company or nonbank subsidiary and not an obligation of the bank and that the quality

1. This policy is not intended to preclude the sale of holding company affiliate obligations from a bank's money market desk, provided that the money market function is separate from any public area where retail deposits are accepted, including any lobby area.

of the investment depends on the risks and operating characteristics associated with the overall holding company and its nonbanking activities.

2080.1.3 THRIFT NOTES AND SIMILAR DEBT INSTRUMENTS

In the event a bank holding company or nonbanking affiliate issues thrift notes or other debt obligations which do not fall within the generally accepted definition of commercial paper, examiners should be guided by the Board's 1978 position on the issuance of small denomination debt obligations by bank holding companies and their nonbanking affiliates. At that time, the Board was considering thrift notes issued by a nonbanking subsidiary of a bank holding company and concluded that such obligations should prominently indicate in bold type on their face that the obligations are not obligations of a bank and are not FDIC insured. The Board also stated that the obligations should not be sold on the premises of affiliated banks. Where there is substantial reliance on the sale of thrift notes to fund the operations of a bank holding company or nonbanking subsidiary, other than an industrial bank, a violation of the Glass-Steagall Act may be involved. Such cases should be discussed with Reserve Bank counsel.

2080.1.4 OTHER SHORT-TERM INDEBTEDNESS

A company's access to bank credit is almost universal, and most small to medium-sized companies will reflect this type of debt on their balance sheets. An important point to remember about bank debt is that maturities of the bank notes are usually short-term while the proceeds of the borrowings are often applied to long-term assets, that is, investment in the bank's capital and/or long-term debt accounts. The note may be subject to renewal on an annual basis, and the creditor may have the opportunity to call the note at renewal if the financial condition of the company has deteriorated. Rates of interest on short-term bank notes are usually pegged to the creditor's prime rate plus some fraction thereof. The principal is often repaid over a period of years as the notes are rolled over despite their short-term maturity.

2080.1.5 CURRENT PORTION OF LONG-TERM DEBT

This type of debt has many of the short-term characteristics of bank debt, with possibly one additional important feature. Such debt is usually tied to a written agreement between creditor and debtor, and encompasses certain minimum standards of performance to be adhered to by the company. The examiner must review the agreement to determine that the company is operating within the parameters of the covenants laid out in the agreement. Failure to abide by the covenants can trigger default provisions of the agreement and escalate the repayment of the total loan balance outstanding.

2080.1.6 INSPECTION OBJECTIVES

1. To determine the company's policy and actual practices with respect to the sale of uninsured debt obligations and securities issued by bank holding companies, nonbank affiliates or State member banks. More often than not, an informal policy evolves from practice. It then becomes important to interview senior officers in charge of this function to determine if they are adequately aware of the statutory and regulatory constraints with respect to appropriate usage of commercial paper.

2. To review the company's funding and liquidity strategy with a view to determining whether it has sufficient liquid assets to support maturing liabilities and whether there are any funding mismatches. (See Manual sections 2080.05, 4010.2.3, 4010.2.7, and 5010.24.1)

3. To determine compliance with the Federal Reserve System's supervisory policy with regard to the marketing of commercial paper, thrift notes or similar type debt instruments (refer to Board letter S 2427 dated June 27, 1980, and supervisory letters SR 90-19 and SR 620).

4. To identify potential weaknesses in corporate policy and practices.

2080.1.7 INSPECTION PROCEDURES

1. Review the bank holding company's procedures for authorizing the issuance of commercial paper and other uninsured debt obligations and securities of the holding company and/or its nonbank affiliates.

2. Review the board of directors' resolution authorizing the issuance of commercial paper and other uninsured debt obligations and securities.

3. Determine whether the company has sought a “no action” letter from the SEC. A “no action” letter indicates the SEC has reviewed the company’s issuance of commercial paper and plans “no action” to require the registration of the commercial paper as “securities.” Some companies rely on the opinion of their own counsel that their paper is not subject to SEC registration requirements. If the company does not have a “no action” letter there should be a legal opinion on file from the holding company’s attorney regarding exemption from registration under section 5 of the 1933 Act.

4. Obtain a copy of the holding company’s written policy on paper usage to compare with resolution and practice.

5. Review to determine the extent to which the commercial paper and other uninsured debt obligations are supported by back-up lines of credit provided by unaffiliated banks. These lines are established to cover any unexpected run-off of paper at maturity. Commitments for lines of credit should be in writing and have expiration dates. Commitment fees substantiate the enforceability of the commitment whereas compensating balances tend to indicate that the lending commitment is less formal. The examiner should determine whether material adverse change clauses exist in back-up line of credit agreements which may affect their reliability. Comment if it appears that those provisions might be utilized.

Compensating balance arrangements should be disclosed. A company may commit to a compensating balance, but if it relies on its bank subsidiary to provide the funds the bank should be compensated for utilization of its funds.

Reciprocal back-up lines may be established. This may eliminate the need for fees or compensating balances and may provide a certain comfort level for company management.

6. Obtain a listing of commercial paper and other uninsured debt obligation holders from management to the extent known. In the case of larger BHCs, there is a choice between issuing paper on a local level or placing it nationally through the auspices of an investment banking firm. In the latter case, there is likely to be no record of who purchases the paper because the paper is usually sold on a bearer basis. Holding companies looking for a wider market, national recognition, and higher ratings place their paper through an investment banking firm. However, it should be recognized that the market for commercial paper placed in this manner is more sophisticated and knowledgeable and therefore more sensitive to adverse developments than a

local market. The smaller company can be content to sell its paper on a local level through its corporate headquarters, knowing its customer profile and limiting the amount to any one paperholder, thereby limiting its exposure to refinancing problems caused by large scale redemptions.

7. Review for potential weaknesses in corporate policy and practices. Any amounts in excess of 10 percent in the hands of one paperholder should be discussed with management and noted in the report. A large paperholder could refuse to purchase new paper at maturity (rollover) and place the company in a liquidity squeeze, requiring sell-off of assets or draw down of back-up lines.

Rollovers are prohibited under the 1933 Act. The instrument must have a definite date of maturity with no automatic provision for reinvestment of proceeds. Companies must abide by the 270-day provision and if the paperholder elects to reinvest the funds, a new instrument should be executed.

8. Request a copy of the commercial paper, thrift note or similar type instrument, and any printed advice to the purchasing customer for review. These documents should be checked for compliance with the standards set forth under the captions “Marketing of Commercial Paper” and “Thrift Notes and Similar Debt Instruments” in this section of the Manual.

9. If a bank sells the commercial paper and/or other uninsured debt obligations of its holding company or nonbanking affiliate, review the procedures to separate their sale from the retail operations of the bank.

This segregation should be reviewed as part of all holding company inspections. Examiner judgment must be relied upon, to a large extent, to determine whether the marketing activities of commercial bank subsidiaries for the bank holding company’s commercial paper and other uninsured debt obligations are sufficiently separated and distinguished from retail banking operations, particularly the deposit-taking function. In making this determination, the examiner should consider whether:

a. The sale of uninsured debt obligations of a holding company affiliate or uninsured non-deposit debt securities of a state member bank is physically separated from the bank’s retail-deposit taking function, including the general lobby area;

b. Advertisements that promote uninsured debt obligations of the holding company also

promote insured deposits of the affiliated depository institution in a way that could lead to confusion;

c. Similar names or logos between the insured depository institution and the issuing nonbank affiliate are used in a misleading way to promote securities of a nonbank affiliate without clearly identifying the obligor;

d. Retail deposit-taking employees of the insured depository institution are engaged in the promotion or sale of uninsured debt securities of a nonbank affiliate;

e. Information on the sale of uninsured debt obligations of a nonbank holding company affiliate is available in the retail banking area; and

f. Retail deposit statements for bank customers also promote information on the sale of uninsured debt obligations of the bank holding company or a nonbank affiliate.

In those cases where the bank holding company or nonbanking affiliates issue thrift notes or similar type debt instruments, ascertain

that these obligations are not being sold on the premises of affiliated banks.

10. The procedures in Nos. 8 and 9 address the manner in which bank holding companies (or nonbanking subsidiaries) market their commercial paper, thrift notes or similar type debt instruments; consequently, implementation will necessitate review of marketing procedures of all holding companies (or nonbanking subsidiaries), regardless of the type of charter or the identity of the primary supervisor of the subsidiary (affiliate) bank. Exceptions to the policies on the marketing of such paper should be noted on the "Commercial Paper and Lines of Credit" pages and discussed on the "Examiner's Comments" page of the inspection report. The managements of all bank holding companies must be fully informed of the Federal Reserve's policy with respect to the marketing of holding company debt obligations, as in SR Letter 90-19, and exceptions should be addressed in the supervisory follow-up process.

Long-term debt represents an alternative financing method to short-term debt and equity funds. Before choosing this type of funding the bank holding company will need to determine how the advantages and disadvantages of long-term debt apply to its financial position and funding needs. Interest on long-term debt is an expense item and therefore is tax deductible. The company issuing debt effectively pays approximately “half-price” (interest expense net of tax deduction) on debt while the company issuing equity pays the full dividend rate without a tax benefit. Counterbalancing the tax advantage is the fact that long-term debt must be serviced and retired to prevent default and cannot be used as an offset for losses.

The issuance of long-term debt will be relatively advantageous to the holding company whose price/earnings ratio is low and whose stock is selling significantly below book value. In this instance, the cost to the company of equity funding rises proportionately to the drop in the price of the stock since less funds are obtained for an equal number of shares, yet the dividend per share remains the same.

A major factor influencing a bank holding company’s decision to issue long-term debt instead of equity is the dilution impact of new equity. Straight debt will not dilute ownership and is typically retired from cash flow, whereas new equity dilutes earnings per share (more so than the impact of the debt’s interest expense on earnings).

Preferred stock can be retired through a sinking fund and is sometimes convertible to common shares. Convertible stock adds to the dilution effect when the conversion is exercised and prior to conversion, “fully diluted” earnings per share must be reported that assume full conversion. The bank holding company will consider both stockholder and market reaction to any dilution effects of long-term financing. The BHC may view debt financing as the best alternative if it feels that a diluted earnings per share would drive down the market price of its stock and contribute to stockholder discontent.

Inherent in any financing are intangible costs. While it is evident that on the surface debt financing is cheaper than equity financing, it would be hard to quantify the effects of potential missed interest payment or default associated with debt instruments. The bank holding company also will be concerned with its additional “debt capacity” if the present issuance of debt pushes the debt/equity ratio beyond acceptable limits.

Theoretically, “straight debt” is a direct secured or unsecured obligation requiring repayment at maturity and generally taking a senior position in the claim on assets. Principal is sometimes payable in a lump sum, often through the use of a sinking fund, while interest is paid at stated periods throughout the life of the note.

2080.2.1 CONVERTIBLE SUBORDINATED DEBENTURE

A convertible subordinated debenture is an unsecured debt that is subordinate to other debt and convertible to common stock at a certain date or price. The essential provision of this debt is that it may eventually be retired by equity and inherently has the potential for dilution. With this type of financing, the creditor typically has the right to convert the bond into a stated number of shares of common stock at some future time. Usually the conversion price is 10 to 15 percent above the market price of the stock. This encourages the bondholder to keep the bond until the market price meets or surpasses the conversion price. In many convertible debt agreements, the bank holding company issuing debt will have the option to call the issue when the conversion price equals the market price.

The bank holding company will issue a convertible subordinated debenture when its stock price is depressed. The convertibility provision is added as a “sweetener” to the issue and counteracts the negative aspect of its subordinated position. The subordinated nature of this issue will help a bank holding company with prior debt which includes covenants that dictate against additional senior debt.

2080.2.2 CONVERTIBLE PREFERRED DEBENTURE

This debt instrument is similar to straight convertible debt except it is convertible into preferred stock. This alternative is open to the bank holding company which needs to add a “sweetener” to this issue in order to market it, but does not want dilution of “common” ownership.

2080.2.3 NEGATIVE COVENANTS

The lender will be concerned with the borrower's debt structure when offering financing. If the borrower's debt/equity ratio is approaching an unacceptable level, the lender will try to assure that the bank holding company does not overextend itself. While the lender may demand the right to approve future equity issues, the lender is likely to be more willing to give such approval than to allow more debt because the equity issue adds to the capital base, and this base is a possible source of funds for the payment of debt.

Closely related to the restriction on further debt is the position of the lender in the liquidation of assets. The holder of a straight debt issue will usually demand to be senior to other debt holders. This characteristic is particularly suited to straight debt because straight debt is more vulnerable to default than convertible debt and doesn't have other sweeteners such as a conversion right or a right to participate in distributions of earnings. The examiner will want to determine how the covenants affect future debt financing and if the effect is positive or negative.

The lender is likely to seek to insure that neither the structure nor policies of the bank holding company are altered without its approval during the life of the debt. The lender can insure this through other negative covenants attached to the debt. Some common covenants of this type include (1) limitations on capital expenditures and on the sale of assets, (2) restrictions on the BHC's redemption of its own stock, (3) restrictions on investments in general, (4) restrictions on dividend payment without prior approval, and (5) the imposition of loan to capital ratios, deposit to capital ratios and asset to capital ratios.

2080.2.4 INSPECTION OBJECTIVES

1. To determine the existence of and adherence to policies on long-term debt.
2. To review the use of long-term funds.
3. To determine the existence of debt covenants and compliance by the holding company.

2080.2.5 INSPECTION PROCEDURES

1. Review the parent-only balance sheet and income statement for debt and interest expense captions.

2. Review the consolidated balance sheet and income statement for debt and interest expense captions.

3. Review any written policies and procedures available as part of an overall capital plan. If no plan or policies exist, the examiner should encourage management to develop them, and in large BHCs, to put them in writing.

4. Determine that the bank holding company does not finance long-term assets with short-term debt, as this leaves the holding company vulnerable to rising interest rates and the possibility of a credit crunch. On the other hand, it may be beneficial for the holding company to finance short-term assets with long-term debt. This is particularly true during periods of rising interest rates because the bank holding company can get higher yields on loans financed by lower cost long-term debt, than it can with commercial paper that has to be turned over at generally increasing rates. In any event, the bank holding company will need to insure that it has ample capacity to finance additional long-term assets with long-term debt when the opportunity presents itself.

5. Review any sinking fund provisions usually found with straight debt and straight preferred issues if the issue is not going to be refinanced by further debt or by an equity issue. Since payments to the fund will directly drain cash reserves, it is imperative that the bank holding company have adequate annual cash flow to service both the interest and add to the sinking fund. The larger the debt, the more the lender will look for a sinking fund feature as a means of precluding a default when maturity occurs and refinancing is not available. When a sinking fund exists the examiner will need to analyze the parent's cash flow statement to see that payments do not produce an adverse cash drain.

The capacity of the holding company to serve as a source of financial strength to its bank subsidiaries is a major consideration of the Federal Reserve Board in supervising a bank holding company. The cornerstone of this financial strength is capital adequacy.

The financial structure of banking organizations allows for the use of substantial leverage. If capital is large in relation to debt, additional borrowing is relatively inexpensive. However, because of added risk to lenders, the cost of borrowing increases as new obligations are assumed. At some point, therefore, equity financing becomes less costly and may become the only alternative available for needed funds.

Basically, a holding company's financial structure can be viewed in two ways: the "single entity" approach, whereby the holding company is considered an integrated entity and financial strength is assessed on the basis of its consolidated totals, and the "building block" approach, wherein the holding company is seen as a collection of individual components. In the latter view, the company's financial strength is assessed primarily in terms of the financial structure of each component.

When applying the "building block" approach, the liability and capital structure of each subsidiary is compared to the norm of its particular industry. The use of the "building block" approach has some advantages:

1. Comparative statistics are usually available to measure the performance and strength of the individual subsidiaries.
2. It permits comparison of capitalization between holding companies engaged in differing activities.
3. It identifies the degree of leveraging within a single subsidiary of a bank holding company.

The parent should maintain a favorable balance of debt and equity so that it will be able to assist its subsidiaries when necessary through contributions of its own capital or through additional funds generated from debt or equity financing.

At times, however, sale of additional stock may not be a viable alternative for capital formation, even when a company can show a favorable debt/equity balance. Reluctance to enter into a new stock offering may stem from a desire to avoid further dilution of existing ownership interest or from an unfavorable market price of outstanding stock in relation to book value. In these instances, long-term quasi-capital funds may sometimes be obtained through other

sources, such as convertible securities or subordinated debt.

2080.3.1 PREFERRED STOCK

Preferred stock is becoming a more acceptable alternative due to certain advantages. Through contracted covenants, it is senior to common stock because it usually has no voting voice in management as does common stock. Preferred stock usually carries a fixed dividend rate that is either cumulative or noncumulative. Cumulative preferred provides that unpaid dividends in prior years must be paid to preferred shareholders before common dividends can be paid. A noncumulative feature provides that dividends foregone during lean years are lost permanently. From the viewpoint of the bank holding company, a noncumulative preferred issue is more desirable, while investors would desire a cumulative feature.

Perpetual preferred stock does not have a stated maturity date and it may not be redeemed at the option of the holder. Advantages that preferred stock can offer the bank holding company are (1) avoidance of dilution of earnings per common share and (2) absence of voting rights. On the other hand, dividend payments, particularly cumulative dividends, are expensive since they are not a tax-deductible expense as is interest on debt. Cumulative dividends can be particularly draining on cash when they are declared after several years of suspended dividends and payment is then made in a lump sum.

Preferred stock is usually retired by refinancing with debt or through its own conversion feature. If the bank holding company feels that it can afford an equity issue in the future but not at present, it can issue a convertible preferred debenture to postpone the equity issue until a later date. On the other hand, if debt is the desired method of financing but the present debt/equity ratio is not acceptable, the bank holding company will issue preferred and refinance with debt at a more opportune time. However, the Board has expressed concern that in applications to form a BHC, preferred stock not be used as a debt substitute resulting in circumvention of its debt guidelines. On applications with preferred stock which has debt-like characteris-

tics, such stock may be treated as debt in the financial analysis.

3. To review any debt covenants that pertain to a minimum acceptable capital position.

2080.3.2 INSPECTION OBJECTIVES

1. To determine the existence of and adherence to parent company policies on capital adequacy within the subsidiaries and for the consolidated organization.

2. To review the use of proceeds of equity capital financings.

2080.3.3 INSPECTION PROCEDURES

1. Review any existing BHC policies regarding capital adequacy or capital planning.

2. Request any plans regarding proposed capital issues.

Earnings retention provides the most immediate source of capital formation and growth. Earnings retained after dividend payout can often be sufficient to keep pace with asset growth, thereby preserving the balance or relationship between equity capital and total assets. Often referred to as “internal funding,” earnings retention should be carefully reviewed to assure that the BHC’s capital base is keeping pace with asset growth.

Bank earnings retention should be reviewed carefully due to the dividend requirements often imposed on banks by their parent companies. Although a bank’s board of directors must approve the declaration and payment of any bank dividend, often the bank’s board is actually ratifying a decision determined at the parent level. The need for bank retention of earnings is particularly pronounced either during periods of expansion or periods of declining earnings or losses.

Parent company management may be under pressure from shareholders or “the market” to increase dividends or to maintain dividends at historic levels despite reversals in consolidated earnings trends. Examiners should be careful to point out to management that dividend pressures often serve to the detriment of the bank subsidiary(ies) which is often asked to supply the proceeds via a dividend to the parent company. As a regulator of banks (and bank holding companies), the Federal Reserve System is concerned with the preservation and maintenance of a sound banking system and in particular, soundly capitalized banks. Earnings retention contributes to capital growth and should be encouraged. For additional information on earnings retention and dividends see sections 2020.5.1, 4010.1, and 4020.1.

2080.4.1 PAYMENT OF DIVIDENDS BY BANK SUBSIDIARIES

Bank dividends can be determined to be excessive if they exceed the limitations imposed by either section 5199(b) or 5204 (also referred to as sections 56 and 60(b)) of the Revised Statutes and accordingly, should be reviewed with regard to those limitations. The Federal Reserve Board amended Regulation H on December 20, 1990, regarding the payment of dividends by state member banks [12 C.F.R. 208.19(a) and 208.19(b)]. These new regulations make the elements that are taken into account in determining a state member bank’s dividend paying capacity

more consistent with generally accepted accounting principles. Two different calculations are performed to measure the amount of dividends that may be paid, a Net Profits Test and an Undivided Profits Test.

2080.4.1.1 Net Profits Test

The approval of the Federal Reserve is required for dividends declared by a member bank that in any calendar year exceeds the net profits of the current year, combined with retained net profits for the two preceding years (the “Net Profits Test”). Under the regulation, net profits of a year will equal net income. A member bank is required to use these rules in calculating net profits beginning in 1991 and thereafter.

2080.4.1.2 Undivided Profits Test

The parent company’s bank subsidiaries must receive prior approval of the Federal Reserve before paying dividends in amounts greater than undivided profits then on hand, after deducting any bad debts in excess of the allowance for loan and lease losses. Under the regulations effective January 25, 1991, undivided profits then on hand include undivided profits plus the amount of “surplus surplus” that meets certain conditions. “Surplus surplus” is defined as the amount of capital surplus in excess of the amount required under applicable state law, and the regulations provide that a bank may include surplus surplus in undivided profits then on hand only if the bank can demonstrate that surplus surplus is from earnings of prior periods (“earned surplus surplus”). Transfers from surplus surplus to undivided profits must receive prior approval of the Federal Reserve. Bad debts in excess of the allowance for loan and lease losses must be subtracted from undivided profits then on hand in calculating the amount available for dividends. Bad debts are defined as debts due and unpaid for a period of six months unless well secured and in the process of collection.¹

1. Because for most banks bad debts are less than the allowance for loan and lease losses, this subtraction will not apply to most banks.

Holding companies have turned to employee pension plans and, to a lesser degree, stock option plans as ways to provide added capital for holding company operations. While there may be a number of reasons for implementing such programs, one of the by-products is the flow of working capital into the holding company. The program usually involves a pre-tax contribution by the holding company to an employee benefit plan (e.g., profit sharing plan) and the resulting purchase by such plan of common or preferred shares of the holding company's stock. The holding company benefits through the use of the funds for working capital, and the plan provides for retirement benefits for employees as shareholders in the company. Since ESOPs are administered under the Employees Retirement Income Security Act of 1974 (ERISA), the guidelines delineated in SR 85-21 should be followed in determining whether possible ERISA violations exist. Reference should also be made to Manual section 4010.1.1.

2080.5.1 STOCK OPTION PROGRAMS

Employee stock option programs generate a nominal percentage of a holding company's financing needs to reward key employees for service rendered via the reduced price of the company's stock. While such programs constitute one method of available funding for a holding company, they generally may not be expected to add any capital amounts beyond nominal levels.

2080.5.2 EMPLOYEE STOCK OWNERSHIP PLANS (ESOPs)

Employee Stock Ownership Plans (ESOP) are an alternative holding company funding tool. An ESOP is a tax-qualified employee benefit plan which is designed to be invested primarily in employer stock. The concept of an ESOP is to encourage the establishment of employee benefit programs which expand the employees' share in company stock ownership. Participation in an ESOP may also significantly enhance employee motivation. The essential differences between an ESOP and other qualified stock bonus plans are that an ESOP is permitted, in certain circumstances, to incur liabilities in the acquisition of employer securities, and that an employer may receive additional tax credits for

amounts contributed to ESOPs. Under limited circumstances, lenders to ESOP's may also receive benefits that result in reduced borrowing costs to the ESOP. As long as ESOP meets the IRS requirements for a qualified employee plan, it may invest up to 100% of its assets in "qualifying" employer securities. It is exempt from some of the self-dealing limitations applicable to most employee benefit plans, as it is viewed as a means of providing stock ownership interests for employees rather than as strictly a retirement plan. Furthermore, an ESOP may purchase the stock either from the employer company or from shareholders. Therefore, in addition to use as a tool of corporate finance, an ESOP may serve as a ready purchaser for outstanding stock, without a corresponding loss of voting control.

ESOPs are in some ways similar to deferred profit sharing plans. ESOPs are authorized under the same section, namely, section 401 of the Internal Revenue Code. Employer contributions (within limits based on a percentage of eligible payroll) are allowable deductions from the employer's pre-tax income. Contributions are held in trust, and benefits when paid out upon an employee's retirement, death, or termination of service, must be paid in company stock. The distinguishing feature of an ESOP lies in the fact that the direct purpose of the plan is to invest employer contributions in the stock of the company.

2080.5.2.1 Accounting Guidelines for Leveraged ESOP Transactions

Newly issued or existing shares of BHC stock are sometimes sold to the ESOP and paid for with money borrowed from a third party; these types of ESOPs are commonly referred to as "leveraged ESOPs." The borrowings are generally serviced with contributions by the employer, which are a tax deductible expense. The borrowing arrangement by the ESOP often includes a guarantee or commitment by the employer (the BHC or the subsidiary bank) to make future contributions to the ESOP sufficient to meet debt service requirements.

When this occurs, questions arise involving the appropriate accounting for the leveraged ESOP transaction. The Accounting Standards Executive Committee of the American Institute

of CPAs has issued a Statement of Position (SOP) 72-3 which discusses ESOP borrowing situations. Since the Federal Reserve applies generally accepted accounting principles, banks and bank holding companies should follow SOP 76-3. The SOP statement covers cases where the employer either guarantees the ESOP loan or commits to make future ESOP contributions sufficient to service the debt. For such cases, the SOP indicates that the employer should credit a liability account for the amount of the ESOP debt and offset that entry by reducing shareholders' equity. The liability recorded by the employer should be reduced as the ESOP makes payments on the debt. This liability is recorded because the guarantee or commitment is in substance the employer's debt. When there is no guarantee, the ESOP is treated like any other shareholder.

In other words, where there is a leveraged ESOP which has purchased BHC stock, and there is a guarantee, commitment, or other arrangement which is in effect a guarantee relative to the debt service of the ESOP, for analytical purposes the amount of ESOP debt will be considered as parent debt and thus parent equity will be reduced accordingly. This will affect debt to equity ratios as well as consolidated capital ratios, where applicable.

2080.5.2.2 Fiduciary Standards under ERISA Pertaining to ESOPs

There are also general fiduciary standards under ERISA pertaining to ESOPs which have been delineated largely through court decisions rather than issuance of regulations. Although exempted from ERISA's asset diversification requirement, ESOP transactions are still required to meet fiduciary standards of prudence, and must be designed and administered for the "exclusive benefit" of plan employees. (ERISA § 404(a) and 29 CFR 2550.407d-6). Yet, as stated above, ESOPs may have distinct advantages which inure primarily to the sponsoring company, its management and large shareholders. Due to these potential or actual conflicts of interest, it is important that the sponsoring employer and any other fiduciaries of a plan undertake every effort to assure full consideration of the best interests of plan employees.

The safeguarding of the statutory "exclusive" interests of plan employees pursuant to ERISA is within the jurisdiction of the IRS and the

Department of Labor. The bank regulatory agencies also have some responsibility in their review and examination activities where employee benefit plans such as ESOPs are involved. In this connection, a Uniform Interagency Referral Agreement mandated by statute, has been in effect since 1980 whereby certain possible violations of the provisions of ERISA are referred to the DOL by the Division of Banking Supervision and Regulation, pursuant to delegated authority. SR 81-697 (SA) contains the procedures for making referrals to the Department of Labor. Attached to the SR letter is an exhibit, *ERISA Referral Format*, which lists the information necessary when making referrals. Holding company examiners can expedite the ERISA referral process by including that information in their reports.

2080.5.3 STATUS OF ESOP'S UNDER THE BHC ACT

On August 6, 1985, the Board determined (1985 FRB 804) that an ESOP that controls more than 25 percent of the voting shares of a bank or bank holding company is a bank holding company. The Board determined that the underlying trust which held the shares of the bank holding company is a "business trust" as defined in the BHC Act and was thus not excluded from the definition of a "company" under the terms of the Act.

2080.5.4 INSPECTION CONSIDERATIONS

Examiners should review unfunded pension liabilities of the BHC to determine their potential impact on the organization. In addition, examiners should review the soundness of any borrowings used to fund ESOP purchases of BHC stock. ESOP borrowings from an affiliated bank used to purchase BHC shares may result in an apparent increase in BHC capital which in fact turns out to have been funded with subsidiary bank funds, a practice considered suitable for in-depth review by examination staff. Section 401 (of the Internal Revenue Code) plan holdings of BHC stock need to be evaluated under the "content" provisions of the BHC Act, change in Bank Control Act, and Regulation Y.

When an ESOP is subject to the Change in Bank Control Act, this fact should be brought to the attention of a BHC's management. Section 225.41 of Regulation Y specifies transactions—acquisitions—that would require providing the

Board with 60 days prior written notice before acquiring control of a bank holding company (or a state member bank), unless the transaction is exempt under section 225.42 of the Regulation. In addition to the above, a determination

should be made as to whether the ESOP is a bank holding company. The examiner may also refer to the Financial Accounting Standards Board's Statement No. 87, "Employers' Accounting for Pensions."

A key principle underlying the Federal Reserve's supervision of bank holding companies is that such companies should be operated in a way that promotes the soundness of their subsidiary banks. Holding companies are expected to avoid funding strategies or practices that could undermine public confidence in the liquidity or stability of their banks. Consequently, bank holding companies should develop and maintain funding programs that are consistent with their lending and investment activities and that provide adequate liquidity to the parent company and its nonbank subsidiaries.

2080.6.1 FUNDING BY SWEEPING DEPOSIT ACCOUNTS

A principal objective of a bank holding company's funding strategy should be to maintain an adequate degree of liquidity at the parent company and its subsidiaries. Funding mismatches can exacerbate an otherwise manageable period of financial stress and, in the extreme, undermine public confidence in an organization's viability. In developing and carrying out funding programs, bank holding companies should give special attention to the use of overnight or extremely short-term liabilities since a loss of confidence in the issuing organization could lead to an immediate funding problem. Accordingly, bank holding companies relying on overnight or extremely short-term funding sources should maintain a level of superior quality assets, namely, assets that can be immediately liquidated or converted to cash with minimal loss, that is at least equal to the amount of those funding sources.

A potential source of funding mismatch arises from the use of what has been commonly referred to as deposit sweeps. This practice is based upon an agreement with a subsidiary bank's deposit customers (typically corporate accounts) which permits these customers to re-invest amounts in their deposit accounts above a designated level in overnight obligations of the parent bank holding company. These obligations include such instruments as commercial paper, program notes, and master notes.

In view of the extremely short-term maturity of most sweep arrangements, banking organizations should exercise great care when investing the proceeds. Appropriate uses of the proceeds of deposit sweep arrangements are limited to short-term bank obligations, short-term U.S. Government securities, or other highly liquid,

readily marketable, investment grade assets that can be disposed of with minimal loss of principal.¹ Use of such proceeds to finance mismatched asset positions, such as those involving leases, loans, or loan participations, can lead to liquidity problems at the parent company and are not considered appropriate. The absence of a clear ability to redeem overnight or extremely short-term liabilities when they become due should generally be viewed as an unsafe and unsound banking activity.

Reserve Bank supervisory and examination personnel are to ensure that bank holding companies and their state member banks are in compliance with this section and related supervisory letters addressing the marketing of uninsured debt instruments, including master notes and other sweep arrangements (refer to Manual sections 2080.05 and 2080.1). Banking organizations not in compliance should take the necessary steps to achieve full compliance within a reasonable period of time. Reserve Banks should provide copies of the supervisory letter SR 90-31 to any bank holding company engaged in sweep arrangements with their subsidiary banks, or to any other organization if necessary to facilitate compliance.

1. Some banking organizations have interpreted language in a 1987 letter signed by the Secretary of the Board as condoning funding practices that may not be consistent with the principles set forth in this supervisory letter and prior Board rulings. The 1987 letter involved a limited set of facts and circumstances that pertained to a particular banking organization; it did not establish or revise Federal Reserve policies on the proper use of the proceeds of short-term funding sources. In any event, banking organizations should no longer rely on the 1987 letter to justify the manner in which they use the proceeds of sweep arrangements. Banking organizations employing sweep arrangements are expected to ensure that these arrangements conform with the policies contained in this section and in the Manual section 2080.05 on bank holding company funding.

The control provisions of the Bank Holding Company Act (the act) are found in section 2(a)(1) and (2) (see 12 U.S.C. 1841(a)) under the definition of a bank holding company. A bank holding company is defined as “any company which has control over any bank or over any company that is or becomes a bank holding company by virtue of the Act.”

The term “company” means any corporation, partnership, business trust, association, or similar organization, or any other trust.¹ Any corporation in which the majority of the shares are owned by the United States or by any state is not considered a company.

A “company covered in 1970” means a company that became a bank holding company as a result of the enactment of the Bank Holding Company Act Amendments of 1970 and which would have been a bank holding company on June 30, 1968, if those amendments had been enacted on that date.

2090.0.1 CONCLUSIVE PRESUMPTIONS OF CONTROL

The conclusive presumptions of control are established in section 2(a)(2)(A) and (B) of the act when—

1. a company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of a bank or company or
2. a company controls in any manner the election of a majority of the directors or trustees of the bank or company.

“Acting through one or more other persons” could include—

1. acting through the executive officer of a company, or a relative or business associate of that officer;
2. financing the purchase of shares of a bank or company when—
 - a. the amount of credit approximates the purchase price,
 - b. there is no definite maturity on the credit extended,
 - c. the credit is obtained at a favorable rate of interest, and
 - d. the bank whose shares are held as collat-

eral maintains an excessive balance with the lending company;

3. by a resolution of a company’s board of directors, guaranteeing an individual against any loss in relationship to his ownership in a bank or company when such ownership represents 25 percent or more of any voting class;
4. recognizing earnings from another company; or
5. participating in policy formation or daily operations of another company.

The “power to vote” includes the right to vote, to direct the voting of shares, or to immediately transfer shares to the name of the holder of such rights or the holder’s nominee, pursuant to any proxy, contract, or agreement. However, when stock is held as collateral for a loan under an agreement which enables the lender to transfer the stock into the name of the lender or its nominee without the power to vote, the right to have the shares transferred does not in itself constitute control. To constitute control, the power to vote must be perfected along with the transfer of the stock into the name of the lender or its nominee.

2090.0.2 DIRECT CONTROL

Direct control exists when a company (as defined in section 2(b) of the act) owns 25 percent or more of any one class of voting securities of a bank (as defined in section 2(c) of the act) or company. “Voting securities” includes potential as well as actual voting authority.

2090.0.3 INDIRECT CONTROL

Indirect ownership or control is defined in section 2(g) of the act in subsections 1 and 2 as follows:

“(1) Shares owned or controlled by any subsidiary of a bank holding company shall be deemed to be indirectly owned or controlled by such bank holding company; and

“(2) Shares held or controlled directly or indirectly by trustees for the benefit of (A) a company, (B) the shareholders or members of a company, or (C) the employees

1. Unless the terms of the trust require it to terminate within 25 years or not later than 21 years and 10 months after the death of individuals living on the effective date of the trust.

(whether exclusively or not) of a company, shall be deemed to be controlled by such company.”

To assist in the interpretation of the above subsections the following explanations are provided.

1. All shares owned by a subsidiary of a bank holding company are deemed to be controlled by the parent’s ownership interest in the directly owned subsidiary.
2. Shares held in a trust for the benefit of a company are deemed to be controlled by such company regardless of whether the trustee or company votes the shares. A company is deemed to be the beneficial owner of shares which it does not vote if all other shareholders’ rights are retained by such company (that is, dividends, or other rights).
3. Shares owned by a trustee for the benefit of a company’s subsidiary (or the subsidiary’s shareholders, members, or employees) are deemed to be controlled by both the subsidiary and its parent.
4. Shares held in a trust for the benefit of an individual “stockholder, member, or employee” are not deemed to be controlled by a company because such shares are held for the individual regardless of his or her relationship with the company. For a company to have control over the shares held for the benefit of a company’s “stockholders, members, or employees,” the shares must be held as a class.
5. If a trust meets the definition of a company, it is possible for such a trust to be a bank holding company. In addition, it is possible for a bank through the administration of a trust(s)(which does not meet the definition of a company) to become a bank holding company (that is, a bank which has control over various trusts whose shares aggregate to 25 percent or more of a bank or bank holding company could be deemed a bank holding company; a bank which administers a trust that owns 25 percent or more of a bank or bank holding company (and such trust does not meet the definition of a company) could be a bank holding company.

In addition to the above determinants involving conclusive presumptions of control, the Board has determined that whenever the transferability of 25 percent or more of any class of voting securities of a company is restricted, in any manner, upon the transfer of 25 percent or more of any class of voting securities of another

company, the holders of the two securities affected by the restriction constitute a company for the purposes of the act. This determination applies unless one of the issuers of such securities is a subsidiary of the other and is so identified in a Board order or in a registration statement or report accepted by the Board under the act.

In any administrative or judicial proceedings regarding conclusive presumptions of control, a company would not be considered to control a bank or company at any given time unless that company, at the time in question, directly or indirectly owned, controlled, or had power to vote 5 percent or more of any class of voting securities of the bank or company.

2090.0.4 REBUTTABLE PRESUMPTIONS OF CONTROL

A rebuttable presumption of control exists when the Board determines, after notice and opportunity for hearings, that a company directly or indirectly exercises a controlling influence over the management or policies of a bank or company (section 2(a)(2)(C) of the act). With regard to the above, there is a presumption that any company which directly or indirectly owns, controls, or has power to vote less than 5 percent of any class of voting securities of a given bank or company does not have control over that bank or company (section 2(a)(3) of the act). This 5 percent presumption does not prohibit the Board from determining that a company exercises a “controlling influence” when such company owns, controls, or has power to vote less than 5 percent of any class of voting securities of another company or bank. However, in overcoming the presumption, the Board bears the burden of proving that such a controlling influence exists.

2090.0.4.1 Regulation Y Determinants of Control

The Board has established the following rebuttable presumptions of control in section 225.31 of Regulation Y for use in proceedings:

1. Control of voting securities.
 - a. *Securities convertible into voting securities.* A company that owns, controls, or holds securities that are immediately convertible, at the option of the holder or owner, into voting securities of a bank

or other company controls the voting securities.

- b. *Option or restriction on voting securities.* A company that enters into an agreement or understanding under which the rights of a holder of voting securities of a bank or other company are restricted in any manner controls the securities. This presumption does not apply where the agreement or understanding—
 - (1) is a mutual agreement among shareholders granting to each other a right of first refusal with respect to their shares;
 - (2) is incident to a bona fide loan transaction; or
 - (3) relates to restrictions on transferability and continues only for the time necessary to obtain approval from the appropriate federal supervisory authority with respect to acquisition by the company of the securities.
2. Control over company.
 - a. *Management agreement.* A company that enters into any agreement or understanding with a bank or other company (other than an investment advisory agreement), such as a management contract, under which the first company or any of its subsidiaries directs or exercises significant influence over the general management or overall operations of the bank or other company controls the bank or other company.
 - b. *Shares controlled by company and associated individuals.* A company that, together with its management officials or principal shareholders (including members of the immediate families of either (as defined in 12 C.F.R. 206.2(k)) owns, controls, or holds with power to vote 25 percent or more of the outstanding shares of any class of voting securities of a bank or other company, if the first company owns, controls, or holds with power to vote more than 5 percent of the outstanding shares of any class of voting securities of the bank or other company.
 - c. *Common management officials.* A company that has one or more management officials in common with a bank or other company controls the bank or other company, if the first company owns, controls, or holds with power to vote more than 5 percent of the outstanding shares of any class of voting securities of the bank or other company, and no other person controls as much as 5 percent of the outstand-

ing shares of any class of voting securities of the bank or other company.

- d. *Shares held as fiduciary.* The presumptions of control in paragraphs 225.31(d)(2)(ii) and (iii) of Regulation Y do not apply if the securities are held by the company in a fiduciary capacity without sole discretionary authority to exercise the voting rights.

2090.0.4.2 Other Presumptions of Control

In addition to the rebuttable presumptions, there are a number of other circumstances that are indicative of control and may call for further investigation to uncover facts that support a determination of control. Such circumstances include the following:

1. A company owns at least 10 percent of each of two banks or at least 5 percent of each of three or more banks.
2. A company owns 5 percent or more of a bank or bank holding company and has been instrumental in the hiring or firing of one or more persons; establishing policies or places for branches; establishing hours of business; deciding on rates, terms, or acceptance of loans or deposits; following uniform advertising practices or using a common telephone system; or any other respects directing the activities of management or establishing the policies of the bank or company.
3. A company lends to a borrower on more favorable terms than it would have for a borrower of comparable credit standing to enable the borrower to acquire voting shares of a bank or other company.

If the Board proposes to make a determination based on the above indicators of control, the Board bears the burden of providing evidence that such a control situation exists.

2090.0.5 PROCEDURES FOR DETERMINING CONTROL

The question of whether a control situation exists may arise from information coming to the Board's attention or from a company's seeking to obtain the Board's opinion regarding a specific situation. When this question arises, the Board has instructed each Reserve Bank to make every effort to resolve the matter with the company without resorting to the procedures

outlined in this section. However, if the Reserve Bank is unsuccessful in resolving the matter, it is referred to the Board staff. If the Board staff feels the matter warrants Board consideration, it will recommend that the Board make a preliminary determination of control based on the available facts and so inform the company. (See section 225.31(a).) Following the preliminary determination of control, the company must, within 30 days (or longer as may be permitted by the Board), submit the information required by section 225.31(b).

If the company contests the Board's determination, it is entitled to a formal hearing at its request. (See section 225.31(c).)

Notwithstanding any other provision of the act, a company is not deemed to be a bank holding company by virtue of its control of—

1. “. . . shares [held] in a fiduciary capacity, except as provided in paragraphs (2) and (3) of subsection (g)” (section 2(a)(5)(A) of the act);
 2. “. . . shares acquired by it in connection with its underwriting of securities if such shares are held only for such period of time as will permit the sale thereof on a reasonable basis” (section 2(a)(5)(B) of the act);
 3. “[a] company formed for the sole purpose of participating in a proxy solicitation if the voting rights of the shares acquired by such company are acquired in the ordinary course of such a solicitation” (section 2(a)(5)(C) of the act);
 4. “. . . shares acquired in securing or collecting a debt previously contracted in good faith, until two years after the date of acquisition” (section 2(a)(5)(D) of the act);
(The Board is authorized upon application by a company to extend, from time to time for not more than one year at a time, the two-year period referred to herein for disposing of any shares acquired by a company in the regular course of securing or collecting a debt previously contracted in good faith, if, in the Board's judgment, such an extension would not be detrimental to the public interest, but no such extension shall in the aggregate exceed three years.)
 5. “. . . any State-chartered bank or trust company which
 - (i) is wholly owned by thrift institutions or savings banks; and
 - (ii) is restricted to accepting—
 - (I) deposits from thrift institutions or savings banks;
 - (II) deposits arising out of the corporate business of thrift institutions or savings banks that own the bank or trust company; or
 - (III) deposits of public moneys.” (section 2(a)(5)(E) of the act); and
6. “. . . a single . . . bank, if such . . . company is a trust company or mutual savings bank located in the same State as the bank and if . . . (i) such ownership or control existed on the date of enactment of the Bank Holding Company Act Amendments of 1970 and is specifically authorized by applicable State law, and (ii) the trust company or mutual savings bank does not after that date acquire an interest in any company that, together with any other interest it holds in that company, will exceed 5 percentum of any class of the voting shares of that company, except that this limitation shall not be applicable to investments of the trust company or mutual savings bank, direct and indirect, which are otherwise in accordance with the limitations applicable to national banks under section 5136 of the Revised Statutes (12 U.S.C. 24)” (section 2(a)(5)(F) of the act).

2090.0.6 INSPECTION OBJECTIVES

1. To determine whether any change in control of a bank holding company has resulted in a company (as defined by section 2(b) of the act) becoming a bank holding company in violation of section 3(a)(1) of the act.
2. To ascertain whether an existing bank holding company has acquired either directly or indirectly additional banking assets in violation of section 3(a)(3) of the act.
3. To establish whether a company which has purchased its own stock is in compliance with section 225.4(b) of Regulation Y. (See section 2090.3.)

2090.0.7 INSPECTION PROCEDURES

1. Review the company's stock records and the company's investment portfolio.
2. If there are any subsidiaries that are indirectly owned or controlled as defined in section 2(g) of the act, determine if such shares are held in a trust and, if so, whether the trust agreement contains any provisions that could potentially expose the holding company or any of its subsidiaries to financial or other liabilities.

Section 2 (o) of the Bank Holding Company Act (the act) (as amended by section 2610 of the Economic Growth and Regulatory Paperwork Reduction Act of 1996) exempts “qualified family partnerships” from the definition of “company” in the act.¹ Under this change to the act, a qualified family partnership would be able to own and control a bank holding company without the partnership becoming subject to the registration, source of strength, approval, reporting, or other requirements imposed on a bank holding company.

To qualify for the exemption, a qualified family partnership must have as partners only individuals who are related by blood, marriage, or adoption, or trusts for the primary benefit of those individuals. In addition, the partnership must—

- control any bank through a company that is itself a registered bank holding company subject to all of the provisions of the act;
- control only one registered bank holding company;
- not engage in any business activity except indirectly through ownership of other business entities (that is, the partnership must be an investment vehicle for the family and may not be an operating company);
- limit its investments to those permitted for a

bank holding company under section 4 of the act; and

- not be obligated on any debt, either directly or as a guarantor.

Any partnership requesting qualification as a qualified family partnership must commit (1) to be subject to Federal Reserve Board examination to ensure compliance with the conditions for eligibility and (2) to be treated as a bank holding company for purposes of enforcement actions by the Board. In addition, while a qualified family partnership is exempt from the prior-approval requirements of section 3 of the act in connection with a bank acquisition, the partnership continues to be subject to the notice provisions of the Change in Bank Control Act.

As noted above, the primary benefits to becoming a qualified family partnership are (1) exemption from the capital requirements applicable to bank holding companies, (2) exemption from the reporting requirements applicable to a bank holding company, and (3) the freedom to make permissible nonbanking investments without prior Board approval. Because the qualified family partnership must use a single registered bank holding company to hold all of its bank investments, there continues to be a bank holding company subject to the requirements of the act in every case. This structure ensures that the cross-guarantee provisions of the Federal Deposit Insurance Act continue to apply to all banks controlled by a qualified family partnership.

1. Pub. L. 104-2089, section 2610; 110 Stat. 3009.

The Change in Bank Control Act of 1978 (the CBC Act), title VI of the Financial Institutions Regulatory and Interest Rate Control Act of 1978, gives the federal bank supervisory agencies the authority to disapprove changes in control of insured depository institutions.¹ The Federal Reserve Board is the responsible federal banking agency for changes in control of bank holding companies and state member banks, and the Federal Deposit Insurance Corporation and the Office of the Comptroller of the Currency are responsible for insured state nonmember and national banks respectively.

The CBC Act requires any person (that is, an individual, a partnership, a corporation, a trust, an association, a joint venture, a pool, a sole proprietorship, or an unincorporated organization) seeking to acquire control of any insured depository institution or bank holding company to provide 60 days' prior written notice to the appropriate federal banking agency. The act specifically exempts transactions that are subject to section 3 of the Bank Holding Company Act of 1956 or section 18 of the Federal Deposit Insurance Act because those transactions are covered by existing regulatory approval procedures. Accordingly, changes in control due to acquisitions by bank holding companies and changes in control of insured depository institutions resulting from mergers, consolidations, or other similar transactions are not covered by the CBC Act.

The CBC Act describes the factors that the Federal Reserve and the other federal banking agencies are to consider in determining whether a transaction covered by the CBC Act should be disapproved. These factors include the financial condition, competence, experience, and integrity of the acquiring person (or persons acting in concert); the effect of the transaction on competition; whether the acquiring persons have provided all required information; and whether the proposed transaction would result in an adverse effect on the Bank Insurance Fund or the Savings Association Insurance Fund. The Federal Reserve Board's objectives in its administration of the CBC Act are to enhance and maintain public confidence in the banking system by preventing identifiable, serious adverse effects resulting from anticompetitive combinations of interests, inadequate financial support, and unsuitable management in the institutions. The

Board will review each notice to acquire control of a state member bank or bank holding company and will disapprove transactions that are likely to have serious harmful effects. The Board's intention is to administer the CBC Act in a manner that will minimize delays and government regulation of private-sector transactions.

If the Board disapproves a change-in-control filing, the Board will notify the proposed acquiring party in writing within three days after its decision. The notice of disapproval will include a statement of the basis for disapproval. The CBC Act provides that the acquiring party may request a hearing by the Board in the event of a disapproval and provides a procedure for further review by the courts.

Forms for filing notices of proposed transactions covered by the CBC Act are available from the Federal Reserve Banks. Persons contemplating an acquisition that would result in a change in control of a BHC or state member bank should request the appropriate forms and instructions from the Reserve Bank in whose District the affected institution is located. Forms and instructions may also be accessed from the Federal Reserve Board's public web site (www.federalreserve.gov). The primary forms to be completed are the Interagency Biographical and Financial Report and the Interagency Notice of Change in Control. Filers are requested to consult with the appropriate Reserve Bank to confirm what specific information should be included in a particular notice. The Reserve Bank can provide specialized publication material that will assist the filers in placing a complete announcement of the proposed acquisition in the appropriate newspaper of general circulation. The Board of Governors also will publish the notices in the *Federal Register*. (See SR-03-19.)

When a substantially complete notice is received by the Federal Reserve Bank, a letter of acknowledgment will be sent to the acquiring person indicating the date of receipt. After reviewing the submitted information, the Federal Reserve may initiate name checks with certain other U.S. government agencies (including law enforcement) on some or all of the individuals related to the proposal. The information received from those name checks will be used to further the assessment of the relevant statutory factors, including the competence,

1. The term *insured depository institution* includes any depository institution holding company and any *other* company that controls an insured depository institution. The CBC Act is found in 12 U.S.C. 1817(j)(1)-(18).

experience, integrity, and financial ability of the individual filers.

2090.1.1 COMMITMENTS AND CONDITIONS FOR APPROVAL

Approvals granted by the Federal Reserve under the CBC Act may be subject to commitments or conditions that require the filer to consult with appropriate Federal Reserve staff before acquiring further shares of the subject banking organization. The Board or the Reserve Bank may also impose restrictions on the acquisition of additional shares by any person who already controls an institution. The imposition of such commitments, conditions, or limitations is intended to ensure that statutory factors remain consistent with approval.

2090.1.2 COMPLETION OF THE TRANSACTION

The transaction may be completed 61 days after the date of receipt stated in the acknowledgment letter, unless the acquiring person has been notified by the Board that the acquisition has been disapproved or that the 60-day period has been extended as provided for in subparagraph (j)(1) of the CBC Act. To avoid undue interference with normal business transactions, the Board may issue a notice of its intention not to disapprove a proposal, after consulting with the relevant state banking authorities as the CBC Act requires.

2090.1.3 INFORMATION TO BE INCLUDED IN NOTICES

The CBC Act requires a person proposing to acquire control of a bank holding company or state member bank to file a notice with the Federal Reserve Board that includes biographical and financial information on the filers; details of the proposed acquisition; information on any proposed structural, managerial, or financial changes that would affect the banking organization to be acquired; and other relevant information required by the Board.

A current statement of assets and liabilities, a brief income summary, and a statement of any material changes since the effective date of this financial-statement information is required. The Board reserves the right to require up to five

years of financial data from any acquiring person. For complete details on the informational requirements of a change-in-control filing, see the Board's public web site at www.federalreserve.gov/generalinfo/applications/afi/. In particular, review the System's Form FR 2081a, Interagency Notice of Change in Control.

2090.1.4 TRANSACTIONS REQUIRING SUBMISSION OF PRIOR NOTICE

The CBC Act defines *control* as the power, directly or indirectly, to vote 25 percent or more of any class of voting securities or to direct the management or policies of a bank holding company or insured depository institution. Therefore, unless exempted by the CBC Act, any transaction that results in the acquiring party having voting control of 25 percent or more of any class of voting securities or that results in the power to direct the management or policies of such an institution would trigger the notice requirement. However, any person who on March 9, 1979, controlled a bank holding company or state member bank shall not be required to file a notice to maintain or increase control positions in the same institution. In addition, the Board's regulation on a rebuttable presumption of control allows persons who on March 9, 1979, fell within a presumption to acquire additional shares of an institution without filing notice so long as they will not have voting control of 25 percent or more of the institution (Regulation Y, 12 C.F.R. 225.41). In connection with transactions that would result in greater voting control, such persons may file the required notice or request that the Board make a determination that they already control the institution.

Section 225.41 of Regulation Y sets forth the specific types of transactions that require prior notice under the CBC Act. Prior notice is required by any person (acting directly or indirectly) that seeks to acquire control of a state member bank or bank holding company. A *person* may include an individual, a group of individuals acting in concert, or certain entities (for example, corporations, partnerships, or trusts) that own shares of banking organizations but that do not qualify as bank holding companies. A person acquires *control* of a banking organization whenever the person acquires ownership, control, or the power to vote 25 percent or more of any class of voting securities of the institution.

2090.1.4.1 Rebuttable Presumption of Control

Persons who have the power to vote less than 25 percent of an institution's shares may be required to file notice under the Board's rebuttable presumption of control, found in section 225.41 of Regulation Y. The Board presumes that an acquisition of voting securities of a state member bank or bank holding company constitutes the acquisition of control under the CBC Act, requiring prior notice to the Board, if, immediately after the transaction, the acquiring person (or persons acting in concert) will own, control, or hold with power to vote 10 percent or more of any class of voting securities of the institution, and if—

1. the institution has registered securities under section 12 of the Securities Exchange Act of 1934 (15 U.S.C. 78l); or
2. no other person will own, control, or hold the power to vote a greater percentage of that class of voting securities immediately after the transaction.²

Other transactions resulting in a person's control of less than 25 percent of a class of voting shares of a bank holding company or state member bank would not result in control for purposes of the CBC Act. In addition, customary one-time proxy solicitations and the receipt of pro rata stock dividends are not subject to the CBC Act's notice requirements.

In some cases, corporations, partnerships, certain trusts, associations, and similar organizations that are not already bank holding companies may be uncertain whether to proceed under the CBC Act or under the Bank Holding Company Act with respect to a particular acquisition. These organizations should comply with the notice requirements of the CBC Act if they are not required to secure prior Board approval under the Bank Holding Company Act. However, some transactions (described in sections 2(a)(5)(D) and 3(a)(5)(A) and (B) of the Bank Holding Company Act), particularly foreclosures by institutional lenders, fiduciary acquisitions by banks, and increases of majority holdings by bank holding companies, do not require the Board's prior approval. They are considered subject to section 3 of the Bank Holding Com-

pany Act and, therefore, do not require notices under the CBC Act.

2090.1.4.2 Rebuttable Presumption of Concerted Action

The following persons are presumed to be acting in concert³ and must file a CBC Act notice if their share of ownership reaches the required levels:

1. a company and any controlling shareholder, partner, trustee, or management official of the company, if both the company and the person own voting shares of the state member bank or bank holding company
2. an individual and the individual's immediate family
3. companies under common control
4. persons that are parties to an agreement, contract, understanding, relationship, or other arrangement, whether written or otherwise, regarding the acquisition, voting, or transfer of control of voting securities of a state member bank or bank holding company, other than through a revocable proxy
5. persons who have made or propose to make a joint filing under sections 13 and 14 of the Securities Exchange Act of 1934 (15 U.S.C. 78m), and the rules promulgated thereunder by the Securities and Exchange Commission
6. any person and any trust for which the person serves as trustee

If there is any doubt whether a proposed transaction requires a notice, the acquiring person should consult the Federal Reserve Bank for guidance. The CBC Act places the burden of providing notice on the prospective acquiring person.

2090.1.5 TRANSACTIONS NOT REQUIRING ANY NOTICE

Section 225.42 of Regulation Y sets forth the transactions that do not require any notice under the CBC Act or that require after-the-fact notice. The following transactions do not require any notice to the Federal Reserve:

3. *Acting in concert* includes knowing participation in a joint activity or parallel action towards a common goal of acquiring control of a state member bank or bank holding company whether or not pursuant to an express agreement.

2. If two or more persons, not acting in concert, each propose to acquire simultaneously equal percentages of 10 percent or more of a class of voting securities of the state member bank or bank holding company, each person must file prior notice to the Board.

1. *Existing control relationships.* The acquisition of additional shares if the acquirer is deemed to already have control of the banking organization.
2. *An increase in previously authorized acquisitions.* The acquisition of additional shares of a class of voting securities of a state member bank or bank holding company by any person (or persons acting in concert) who acquired and maintained control of the institution after complying with federal requirements.
3. *Any acquisition subject to approval under the Bank Holding Company Act or the Bank Merger Act.* Any acquisition of voting securities subject to approval under section 3 of the BHC Act or under the Bank Merger Act (section 18(c) of the Federal Deposit Insurance Act).
4. *Transactions exempt under the BHC Act.*
5. *A proxy solicitation.* Receipt of a revocable proxy in connection with a proxy solicitation for the purpose of conducting business at a regular or special meeting of the institution if the proxy terminates within a reasonable time.
6. *Stock dividends.* Receipt of voting securities as a result of a stock dividend (if the proportional interest of the recipient remains substantially the same).
7. *Acquisition of voting securities of a foreign banking organization.* The acquisition of voting securities of a qualifying foreign banking organization.

2090.1.6 TRANSACTIONS NOT REQUIRING PRIOR NOTICE

The transactions that require after-the-fact notice include the acquisition of voting securities (1) through inheritance, (2) as a bona fide gift, or (3) in satisfaction of a debt previously contracted in good faith. In these situations, the appropriate Reserve Bank must be notified within 90 days after the acquisition, and the acquirer must provide any relevant information requested by the Reserve Bank.

2090.1.7 UNAUTHORIZED OR UNDISCLOSED CHANGES IN BANK CONTROL

In some instances, a person acquires control of a

banking organization without submitting the prior or after-the-fact notice required by Regulation Y. These unauthorized or undisclosed changes in bank control may not be known to the person, the state member bank, or the bank holding company but are discovered by Reserve Bank examiners during an inspection or examination of the affected institution. In most cases, such a violation of the CBC Act is addressed by having the person immediately file a notice with the Federal Reserve requesting authority to retain the acquired shares.⁴ The filing should include an explanation of the circumstances that resulted in the violation and a description of the actions that have been (or will be) taken by the filers to ensure no further violations of the statute. Although the burden to file a timely change in bank control notice is on the persons who are acquiring control or causing a change in control of a banking organization, an acquired banking organization or a banking organization undergoing a change in control may have better information regarding current ownership positions, including shareholder lists, than the acquiring individuals or individuals who propose a change in control. Therefore, it is important that state member banks and bank holding companies be familiar with the regulations and policies governing changes in bank control and, when possible, share such information with shareholders who have significant ownership positions.

2090.1.8 CHANGES OR REPLACEMENT OF AN INSTITUTION'S CHIEF EXECUTIVE OFFICER OR ANY DIRECTOR

Institutions must report promptly any changes or replacement of its chief executive officer or of any director, in accordance with paragraph 12 of the CBC Act. Under section 225.42(a)(7) of Regulation Y, acquisitions of control of foreign bank holding companies are also exempt from the prior-notice requirements of the CBC Act, but this exemption does not extend to the reports and information required under paragraphs 9, 10, and 12 of the act. (See section 2090.1.5.)

⁴ A violation may be addressed through two other means. The affected party may either (1) submit, for the Federal Reserve's approval, a specific plan for the prompt termination of the control relationship or (2) contest the preliminary determination of a control relationship by filing a response that sets forth the facts and circumstances in support of the party's position that no control exists or, if appropriate, presenting such views orally to Federal Reserve staff.

2090.1.9 DISAPPROVAL OF CHANGES IN CONTROL

The CBC Act sets forth various factors to be considered in the evaluation of a proposal. The Board is required to review the competitive impact of the transaction; the financial condition of the acquiring person; and the competence, experience, and integrity of that person and the proposed management of the institution. In assessing the financial condition of the acquiring person, the Board will weigh any debt-servicing requirements in light of the acquiring person's overall financial strength and the institution's earnings performance, asset condition, capital adequacy, and future prospects, as well as the likelihood of an acquiring party making unreasonable demands on the resources of the institution.

2090.1.10 ADDITIONAL REPORTING REQUIREMENTS

Paragraph 12 of the CBC Act requires that whenever a change in control of a bank holding company occurs, each insured depository institution is required to report promptly to the appropriate federal banking agency any changes or replacement of its chief executive officer or of any director occurring in the next 12-month period. A statement of the past and current business and professional affiliations of the new chief executive officer or directors should be included in each institution's report.

Paragraph 9 of the CBC Act indicates that whenever any insured depository institution makes a loan secured by 25 percent or more of the outstanding voting stock of an insured depository institution (or bank holding company), the president or other chief executive officer of the lending bank shall promptly report such fact to the appropriate federal banking agency of the bank (or bank holding company) whose stock secures the loan. However, no report need be made when the borrower has been the owner of record of the stock for a period of one year or more or when the stock is that of a newly organized bank before its opening. Reports required by this paragraph shall contain information similar to the informational requirements of the Notice of Change in Control.

2090.1.11 STOCK REDEMPTIONS

A stock redemption by a BHC may result in an existing shareholder (or shareholders) owning

25 percent or more of a class of voting securities, which would require the filing of both a change-in-control and treasury stock notification. Furthermore, a stock redemption by a BHC may result in an existing shareholder (or shareholders) owning between 10 percent and 25 percent of the outstanding shares and being the largest shareholder, thereby resulting in a rebuttable presumption of control. For additional information, see section 2090.3 "Treasury Stock Redemptions."

2090.1.12 CORRECTIVE ACTION

The Federal Reserve has enforcement jurisdiction over those persons who file or *should file* notices under the CBC Act. Accordingly, violations of the requirement to file a change in bank control notice may result in the Federal Reserve taking enforcement action against the relevant persons in appropriate circumstances, including those involving willful or negligent misconduct. Violations may result in the persons being subject to a variety of sanctions, including the assessment of a civil money penalty.

Violations of the CBC Act are addressed through the same type of investigative and enforcement authority and formal corrective actions that are used in other administrative remedies (12 U.S.C. 1818(b)–(n)). The CBC Act also authorizes the assessment of civil money penalties for any violation of the CBC Act (12 U.S.C. 1817(j)(16)) and allows the Board to seek divestiture of a BHC or bank from any person or company who violates the CBC Act (12 U.S.C. 1817(j)(15)).

2090.1.13 INSPECTION OBJECTIVES

1. To determine that the BHC has complied with the prior-notification requirements of the CBC Act and that changes in ownership between 10 percent and 25 percent have been reviewed for *rebuttable presumption* considerations.
2. To determine that the BHC has complied with the reporting requirements of paragraph 12 of the CBC Act regarding changes in its board of directors or its chief executive officer that occur within 12 months of a change in control.
3. To determine that the BHC has complied with the reporting requirements of paragraph

9 of the CBC Act regarding loans made directly by the BHC secured by 25 percent or more of the outstanding voting stock of an insured depository institution (or bank holding company).

the management of the BHC is still valid. When changes in directors or the chief executive officer occurred within 12 months of the change in control, determine if the BHC has reported such changes in compliance with paragraph 12 of the CBC Act.

2090.1.14 INSPECTION PROCEDURES

1. Review the BHC's stock certificate register or log to determine if any person (or group of persons acting in concert) has acquired 10 percent or more of any class of voting securities.
2. Review changes in control of between 10 percent and 25 percent of any class of voting securities to determine if the controlling party is the single largest shareholder.
3. When inspecting a BHC that was the subject of a change in control and when a prior notification was filed, review the notification to determine that information submitted on
4. When inspecting a BHC that has redeemed any of its own shares subsequent to March 9, 1979, thereby lowering the number of shares outstanding, determine whether the holdings of any individual shareholder have increased proportionally to greater than 10 percent, which might trigger the rebuttable presumption of control and may require prior notification of a change in control.
5. Review any loans made directly by the BHC that are secured by 25 percent or more of the outstanding shares of a bank (or bank holding company) and determine if the BHC has complied with the reporting requirements of paragraph 9 of the CBC Act.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2006, this revised section incorporates the Board's February 16, 2006, revision of Regulation Y (effective March 30, 2006). The revised rule increased the asset-size threshold from \$150 million to \$500 million in consolidated assets and amended the related eligibility criteria for determining whether a bank holding company (BHC) may qualify for the Board's Small Bank Holding Company Policy Statement (the policy statement) and the capital guidelines. The revised rule includes an exemption from the capital guidelines; modified the qualitative criteria used in determining if a BHC, that is under the asset-size threshold, would not qualify for the policy statement or the exemption from the capital guidelines; and clarified the treatment under the policy statement of subordinated debt associated with trust preferred securities.

2090.2.1 FORMATION OF A BANK HOLDING COMPANY AND CHANGES IN OWNERSHIP

The formation of a bank holding company and certain changes in the ownership of banks owned by a bank holding company come under the provisions of section 3 of the BHC Act. Section 3(a)(1) prohibits the formation of a bank holding company without prior Board approval. A company may receive approval pursuant to section 3(a)(1) to become either a one-bank holding company or a multibank holding company.

A primary reason for the formation of a one-bank holding company is to obtain income tax benefits.¹ These benefits include offsetting

1. A corporation is entitled to a special deduction from gross income for dividends received from a taxable domestic corporation. There is (1) a 70 percent deduction for dividends received from a corporation that is less than 20 percent owned; (2) an 80 percent deduction for dividends received from a corporation that is 20 to less than 80 percent owned; (3) a 100 percent deduction for dividends received from members of the same affiliated group (i.e., a corporation that is 80 percent or more commonly owned); and (4) a 100 percent deduction for dividends received from small business investment corporations. There is also an overall limitation on dividends received. The recipient's aggregate amount is limited to 70 percent (80 percent for those corporations that are 20 to less than 80 percent owned) of taxable income. The manner in which the deduction is computed is also subject to further limitation.

operating/capital losses of one corporation against the profits/capital gains of another.

Once a company becomes a bank holding company, either by the formation of a one-bank or multibank holding company, section 3(a)(3) of the act prohibits the direct or indirect acquisition of over 5 percent of any additional bank's or bank holding company's shares without prior Board approval. In addition to the above, section 3(a)(3) serves to prevent an existing bank holding company from increasing, without prior Board approval, its ownership in an existing subsidiary bank unless greater than 50 percent of the shares are already owned (section 3(a)(B)). A bank holding company which owns more than 50 percent of a bank's shares may buy and sell those shares freely without Board approval, provided the ownership never drops to 50 percent or less. If a bank holding company owns 50 percent or less of a bank's shares, prior Board approval is required before each additional acquisition of shares takes place until the ownership reaches more than 50 percent.

2090.2.2 HISTORY OF APPLYING THE CAPITAL ADEQUACY GUIDELINES TO THE POLICY STATEMENT ON THE FORMATION OF SMALL BANK HOLDING COMPANIES

On March 28, 1980, the Board issued a policy statement with regard to the formation of small one-bank holding companies. The policy statement was included with the revision of Regulation Y (12 C.F.R. 225, appendix C) on January 5, 1984. Subsequent to this policy statement, capital adequacy standards were adopted for large multibank holding companies (on a consolidated basis²) in December 1981 (amended in June 1983, April 1985, and November 1986) that set minimum capital levels and capital zones relating to primary and total capital.³ These were replaced in January 1989 (amended in October 1991) by the current minimum capi-

2. Capital adequacy is evaluated on a bank-only basis for small bank holding companies.

3. Primary capital included common stockholders' equity, contingency and other capital reserves, the allowances for loan and lease losses, and the minority interest in the equity accounts of consolidated subsidiaries. It also included limited amounts of perpetual preferred stock, mandatory convertible securities, and perpetual debt.

tal adequacy standards that use the risk-based capital and leverage capital measures.

Typically, a small bank holding company's capital position has not been evaluated on a consolidated basis. The capital adequacy evaluation of applications for the formation of small bank holding companies initially followed an 8 percent gross capital to total assets standard.⁴ Subsequently, the 1981 guidelines established minimum 5.5 percent primary and 6.0 percent total capital ratios and the concept of capital zones above the minimum capital ratios. When analyzing bank capital for small bank holding company formations, December 1981's 7 percent (zone 1) total capital to assets leverage ratio (after adjusting for the addition of the allowance for loan and lease losses to the ratio's numerator and denominator) became the financial equivalent of 1980's 8 percent gross capital standard. For the bank, the change resulted in evaluating applications for capital adequacy based on a 7 percent total capital to total assets ratio. Since most small banks did not have qualifying secondary capital, the practical effect of the change was that both the zone 1 primary and total capital ratios were at least 7 percent. In September 1990, a minimum tier 1 leverage ratio became effective. A tier 1 to total assets leverage ratio of 6 percent was applied as the financial equivalent of the former 7 percent total capital ratio.

Even though the components of the various capital ratios have changed over time, the capital standards used to evaluate capital positions of banks for small bank holding formations have not. The fundamental policy is still the same. In both instances, approximately the same percentage of small banks meets both ratios. It also should be noted that, if at any time, state or federal banking authorities or loan agreements require the banks of small bank holding company formations to satisfy higher capital standards, those standards will be used when evaluating capital adequacy.

Effective April 21, 1997, revisions to Regulation Y included revisions to the Board's one-bank holding company policy statement. The policy statement was revised to generalize its applicability beyond the formation of a bank holding company to include acquisitions by qualifying small bank holding companies.

On February 16, 2006, the Board approved a revision to Regulation Y (effective March 30, 2006) that increased the asset-size threshold from \$150 million to less than \$500 million in pro forma consolidated assets for determining if (1) a BHC may qualify under the Board's Small Bank Holding Company Policy Statement (the policy statement) and (2) the BHC qualifies for an exemption from the Board's risk-based and leverage capital guidelines for BHCs. The Board also established eligibility qualitative criteria for determining if a BHC that otherwise meets the asset threshold should not qualify for the policy statement and the exemption from the capital guidelines. The qualitative criteria emphasize that a BHC should *not*: (1) be engaged in significant nonbanking activities through a nonbank subsidiary, (2) conduct significant off-balance-sheet activities through a nonbank subsidiary, or (3) have a material amount of SEC-registered debt or equity securities outstanding.

2090.2.3 SMALL BANK HOLDING COMPANY POLICY STATEMENT

In acting on applications filed under the act, the Board follows the principle that bank holding companies should serve as a source of strength for their subsidiary banks. When bank holding companies incur debt and rely on the earnings of their subsidiary banks as the means of repaying such debt, a question arises as to the probable effect on the financial condition of the holding company and its subsidiary bank or banks.

The Board believes that a high level of debt at the parent holding company level impairs the ability of a bank holding company to provide financial assistance to its subsidiary bank or banks, and, in some cases, the servicing requirements on such debt may be a significant drain on the bank's resources. For these reasons, the Board has not favored the use of acquisition debt in the formation of bank holding companies or in the acquisition of additional banks. Nevertheless, the Board has recognized that the transfer of ownership of small banks often requires the use of acquisition debt. The Board therefore has permitted the formation and expansion of small bank holding companies with debt levels that are higher than what would be permitted for larger bank holding companies. Approval of these applications has been given on the condition that the small bank holding companies demonstrate the ability to service the acquisition debt without straining the capital of

4. The allowance for loan and lease losses was not added back to total assets. In other words, the "total assets" were net of the allowance for loan and lease losses, a contra asset.

their subsidiary banks and, further, that such companies restore their ability to serve as a source of strength for their subsidiary bank within a relatively short period of time.

In the interest of facilitating the transfer of ownership in banks without compromising bank safety and soundness, the Board has adopted the procedures and standards for the formation and expansion of small bank holding companies subject to the small bank holding company policy statement.

The policy statement focuses on the relationship between debt and equity at the parent holding company. The holding company has the option of improving the relationship of debt-to-equity by repaying the principal amount of its debt or through the retention of earnings, or both. Under these procedures, newly organized small one-bank holding companies are expected to reduce the relationship of their debt-to-equity over a reasonable period of time to a level that is comparable to that maintained by many large and multibank holding companies.

2090.2.3.1 Applicability of Policy Statement

The policy statement applies only to BHCs with pro forma consolidated assets of less than \$500 million that (1) are not engaged in significant nonbanking activities either directly or through a nonbank subsidiary, (2) do not conduct significant off-balance-sheet activities (including securitization and asset management or administration) either directly or through a nonbank subsidiary, and (3) do not have a material amount of SEC-registered debt or equity securities outstanding (other than trust preferred securities). The Board may, in its discretion, exclude any BHC, regardless of asset size, from the policy statement if such action is warranted for supervisory purposes. Although the policy statement primarily applies to the formation of small BHCs, it also applies to existing BHCs that wish to acquire an additional bank or company and to transactions involving changes in control, stock redemptions, or other shareholder transactions. The criteria are described below.

2090.2.3.2 Ongoing Requirements

All organizations operating under the policy statement must meet the requirements set forth below on an ongoing basis.

2090.2.3.2.1 Reduction in Parent Company Leverage

Small BHCs are to reduce their parent company debt consistent with the requirement that all debt be retired within 25 years of being incurred. The Board expects these BHCs to reach a debt-to-equity ratio of .30 to 1 or less within 12 years after incurrence of the debt. The bank holding company must also comply with debt-servicing and other requirements imposed by its creditors. The term *debt* as used in the ratio of debt to equity, means any borrowed funds (exclusive of short-term borrowings that arise out of current transactions, the proceeds of which are used for current transactions) and any securities issued by, or obligations of, the holding company that are the functional equivalent of borrowed funds.

Subordinated debt associated with trust preferred securities generally would be treated as debt for purposes of this policy statement. See paragraphs 2.C., 3.A., 4.A.i, and 4.B.i of the policy statement. A BHC, however, may exclude from debt an amount of subordinated debt associated with trust preferred securities that is up to 25 percent of the bank holding company's equity (as defined below) less goodwill⁵ on the parent company's balance sheet, in determining compliance with the requirements of such paragraphs of the policy statement. In addition, a BHC subject to this policy statement that has not issued subordinated debt associated with a new issuance of trust preferred securities after December 31, 2005, may exclude from debt any subordinated debt associated with trust preferred securities until December 31, 2010. BHCs subject to this policy statement may also exclude from debt until December 31, 2010, any subordinated debt associated with refinanced issuances of trust preferred securities originally issued on or prior to December 31, 2005, provided that the refinancing does not increase the BHC's outstanding amount of subordinated debt. Subordinated debt associated with trust preferred securities will not be included as debt in determining compliance with any other requirements of this policy statement.

The term *equity* as used in the ratio of debt to equity, means total stockholders' equity of the BHC, as defined in accordance with generally

5. *Goodwill* is defined as the excess of purchase price of any acquired company or asset over the sum of the fair market values assigned to identifiable assets or asset acquired, less the fair market values of the liabilities assumed, accounted for in accordance with generally accepted accounting principles.

accepted accounting principles. In determining the total amount of stockholders' equity, the BHC should account for its investments in the common stock of subsidiaries by the equity method of accounting.

Ordinarily, the Board does not view redeemable preferred stock as a substitute for common stock in a small BHC. Nevertheless, to a limited degree and under certain circumstances, the Board will consider redeemable preferred stock as equity in the capital accounts of the holding company if the following conditions are met: (1) the preferred stock is redeemable only at the option of the issuer and (2) the debt-to-equity ratio of the holding company would be at or remain below .30:1 following the redemption or retirement of any preferred stock. Preferred stock that is convertible into common stock of the holding company may be treated as equity.

2090.2.3.2.2 Capital Adequacy

Each insured depository subsidiary of a small BHC is expected to be well capitalized. Any institution that is not well capitalized is expected to become well capitalized within a brief period of time.

2090.2.3.2.3 Dividend Restrictions

A small BHC whose debt-to-equity ratio is greater than 1:1 is not expected to pay any corporate dividends on common stock until it reduces its debt-to-equity ratio to 1:1 or less and otherwise meets the requirements in sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y. Dividends may be paid by small BHCs with debt-to-equity of at or below 1:1, provided all of the following conditions are met: the dividends are (1) reasonable in amount, (2) do not adversely affect the ability of the BHC to service its debt in an orderly manner, and (3) do not adversely affect the ability of the subsidiary banks to be well capitalized.⁶ Also, it is expected that dividends will be eliminated if

6. For BHCs with consolidated assets under \$500 million, *well-capitalized* means that the BHC meets the requirements for expedited/waived processing of the policy statement and that, on a consolidated basis, the BHC (1) maintains a total risk-based capital ratio (as defined in appendix A of Regulation Y) of 10.0 percent or greater; (2) maintains a tier 1 risk-based capital ratio of 6.0 percent or greater; and (3) is not subject to any written agreement, order, capital directive, or prompt-corrective-action directive issued by the Board to

the holding company is (1) not reducing its debt consistent with the requirement that the debt-to-equity ratio be reduced to 30 percent within 12 years of consummation of the proposal or (2) not meeting the requirements of its loan agreement(s).

2090.2.3.3 Core Requirements for All Applicants

When an organization subject to the policy statement (1) files an application or notice pursuant to the BHC Act, as amended, and (2) intends to incur debt to finance the acquisition of a small bank or company, the Board will assess the application or notice and take into account a full range of financial and other information. The Board will consider the recent trend and stability of the bank's or company's earnings, prospective growth of the bank or company to be acquired, asset quality, the ability of the applicant to meet debt-servicing requirements without placing an undue strain on the resources of the bank(s), and the record and competency of management. In addition, the Board will require applicants to meet the minimum requirements set forth below. As a general rule, failure to meet any of these requirements will result in denial of an application; however, the Board reserves the right to make exceptions if the circumstances warrant.

2090.2.3.3.1 Minimum Down Payment

The amount of acquisition debt should not exceed 75 percent of the purchase price of the bank(s) or company to be acquired. When the owner(s) of the holding company incurs debt to finance the purchase of the bank(s) or company, such debt will be considered acquisition debt even though it does not represent an obligation of the BHC, unless the owner(s) can demonstrate that such debt can be serviced without reliance on the resources of the bank(s) or BHC.

2090.2.3.3.2 Ability to Reduce Parent Company Leverage

The BHC must clearly be able to reduce its debt-to-equity ratio and comply with its loan agreement(s) as stated within the ongoing requirements discussed previously. Failure to

meet and maintain a specific capital level for any capital measure.

meet the criteria would normally result in denial of an application.

2090.2.3.4 Additional Application Requirements for Expedited Processing

2090.2.3.4.1 *Expedited Notices*

A small BHC proposal will be eligible for the expedited processing procedures set forth in sections 225.14 and 225.23 of Regulation Y if (1) the BHC is in compliance with the ongoing requirements of the policy statement, (2) the BHC meets the previously discussed core requirements for all applicants, and (3) the following requirements are met:

1. The parent BHC has a pro forma debt-to-equity ratio of 1:1 or less.
2. The BHC meets all the criteria for expedited action of sections 225.14 and 225.23 of Regulation Y.

2090.2.3.4.2 *Waiver of Stock-Redemption Filing*

A small BHC will be eligible for the stock-redemption filing exemption for well-capitalized BHCs that is found in sections 225.14(c)(2) and 225.14(c)(6) if the following requirements are met:

1. The parent BHC has a pro forma debt-to-equity ratio of 1:1 or less.
2. The BHC is in compliance with the ongoing requirements of the policy statement and meets the requirements of sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.

2090.2.4 CAPITAL CONSIDERATIONS IN SMALL MULTIBANK AND CHAIN BANK HOLDING COMPANY APPLICATIONS

Multibank holding companies and chain banking organizations (whether or not the chain members are banks or bank holding companies) with less than \$500 million in combined assets that meet certain conditions will not be consolidated or combined for capital adequacy purposes. Rather, such organizations will be analyzed in the context of the standards described in the Board's policy statement on small bank holding companies (appendix C of Regu-

lation Y) discussed previously in this section. A bank holding company application that seeks to expand a small bank holding company with or without creating or expanding a chain controlling assets of less than \$500 million would be evaluated on the basis of the policy statement in the same manner as if the proposed bank holding company was not part of a chain.

The above application would be evaluated on the basis of the financial and managerial condition of the entire organization. Although the policy statement would generally be applied, the focus of the analysis would be as much on the organization as an operating entity as on the instant proposal. For example, it would be expected that the condition of the applicant organization and that of its subsidiaries would be consistent with expansion, one aspect of which is that each banking subsidiary generally would be expected to maintain capital well above the minimum levels. The policy statement would generally govern the payment of dividends by the applicant organization and any prospective use of preferred stock. The bank to be acquired would be expected to maintain above-minimum capital ratios consistent with those contemplated by the Board's capital adequacy guidelines.

An acquisition debt retirement period would apply with respect to each proposal and the acquisition debt/purchase price ratio limitation of 75 percent would generally apply to the instant application. A specific parent-only debt/equity limit would not be applied. However, it would be expected that the ratio would decline over time.

In addition, the financial and managerial condition of the members of any chain thereby formed or expanded (including compliance considerations and general consistency with the capital adequacy guidelines, giving consideration to the need to maintain capital positions well above the minimum ratios) would be evaluated. The chain would not have to meet a specific, combined parent-only debt/equity standard. However, there would be a general presumption that the debt/equity level of the chain would tend to decline after the initial leveraged approval. Although individual bank holding companies might be leveraged up to .30:1, over time the combined leverage of the chain would tend to be less than this level through increases in the equity or reductions in the debt of the organization. Proposals by banking organizations whose combined banking

assets exceed \$500 million would be evaluated for capital adequacy on the basis of an analysis of the consolidated organization. (The term *consolidated* as used with the analysis of large chains would involve actually consolidating each parent bank holding company with its subsidiary (or subsidiaries), and then combining each such consolidated entity as well as any other bank in the chain). An analysis of the capital adequacy of each constituent entity in a large banking organization would also continue to be assessed to determine whether the holding company would serve as a source of strength to its subsidiary banks.

2090.2.5 INSPECTION OBJECTIVES

1. To determine compliance with all commitments made in the application/notification process.
2. To determine if the BHC is in compliance with the Small Bank Holding Company Policy Statement (Regulation Y, appendix C), including whether the BHC's debt is being reduced within the required or expected time periods.
2. Determine if the BHC is in compliance with the Small Bank Holding Company Policy Statement (Regulation Y, appendix C) by—
 - a. verifying that the board of directors and senior management have established and regularly maintain a plan to
 - retire the BHC's debt within 25 years of incurring the debt and
 - reach a debt-to-equity ratio of .30:1 or less within 12 years of incurring the debt.
3. Ascertain if the BHC uses a regular periodic monitoring process to ensure the full retirement of the holding company's debt within the above-stated required or expected periods.
4. Determine whether the BHC is well capitalized or, if not, whether it will be well capitalized within a brief period of time.
5. Determine if the payment of corporate dividends has been restricted until the BHC's debt-to-equity ratio is 1:1 or less and until the BHC otherwise meets the criteria set forth in sections 225.14(c)(1)(ii), 225.14(c)(2), and 225.14(c)(7) of Regulation Y.

2090.2.6 INSPECTION PROCEDURES

1. Review all commitments made by the company and its shareholders to determine compliance therewith.

2090.2.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Capital adequacy guidelines Regulation Y, appendixes A and D		225	4-797 4-798 4-855	
Small BHC Policy Statement Regulation Y, appendix C		225	4-856	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

“Bootstrapping” is the term generally used to describe a treasury stock transaction in which a company incurs debt to purchase or redeem its own outstanding shares. Bootstrapping is often used to facilitate a change in control whereby a shareholder or shareholder group need only buy few or no shares in order to gain control. The repurchase or redemption is often made in accordance with a written agreement made between a former controlling shareholder(s) and the new controlling shareholder(s).

Section 225.4(b) of Regulation Y requires a bank holding company to file prior written notice with the Board before a purchase or redemption of any of its own equity securities if the gross consideration for the purchase or redemption, when aggregated with the net consideration paid by the company for all such purchases or redemptions during the preceding 12 months, is equal to 10 percent or more of the company’s consolidated net worth. (Net consideration is the gross consideration paid by the company for all of its equity securities purchased or redeemed during the period minus the gross consideration received for all of its equity securities sold during the period other than as a part of a new issue.)

Each notice shall furnish the following information:

- The purpose of the transaction, a description of the securities to be purchased or redeemed, the total number of each class outstanding, the gross consideration to be paid, and the terms of any debt incurred in connection with the transaction.
- A description of all equity securities redeemed within the preceding 12 months, the net consideration paid, and the terms of any debt incurred in connection with those transactions.
- A current and pro forma consolidated balance sheet if the bank holding company has total assets of over \$150 million, or a current and pro forma parent-company-only balance sheet if the bank holding company has total assets of \$150 million or less.

2090.3.1 CHANGE IN CONTROL ACT CONSIDERATIONS

As indicated earlier, treasury stock redemptions are often intended to facilitate a change in control of a bank holding company. By redeeming the shares held by an existing shareholder(s),

the remaining shareholder(s) increases his proportionate ownership. If a “person’s” share ownership should rise above 25 percent or more of the remaining outstanding shares (subsequent to March 9, 1979), that person would then “control” the BHC. Under these circumstances, a change in control notification would have to be filed. If the treasury stock redemption is for an amount sufficient to trigger the requirement for a prior notification of redemption, then dual notifications are called for (change in control and redemption of treasury shares).

Similarly, prior notification is also required if a treasury stock redemption should result in a shareholder’s holdings rising to between 10 percent and 25 percent of the remaining outstanding shares, and if (a) that shareholder is the firm’s largest single shareholder immediately after the acquisition; or (b) the institution is registered under section 12 of the Securities Exchange Act of 1934 (i.e., corporations having assets exceeding \$1 million, more than 500 shareholders, and securities that are publicly traded). For additional information on change in control notification requirements, see section 2090.1.

Additional notices under the CIBC Act do not have to be filed if regulatory clearance had already been received to acquire 10 percent or more of the voting shares of a bank holding company, and subsequent treasury stock redemptions resulted in ownership of between 10 and 25 percent of the shares of the bank holding company. Refer to section 225.41(a)(2) of Regulation Y.¹

2090.3.2 INSPECTION OBJECTIVES

1. To determine that a BHC that has redeemed shares of its own stock has complied with section 225.4(b) of Regulation Y.

2. To determine that any new controlling shareholder of a BHC that has redeemed shares of its own stock has complied with section 225.41(a) of Regulation Y.

3. To determine if a treasury stock transaction has taken place for the purpose of depleting the original 25 percent equity investment in the purchase price.

1. Revised by the Board, effective November 9, 1990.

2090.3.3 INSPECTION PROCEDURES

1. Review the BHC's reconciliation of stockholders' equity to determine if shares have been redeemed.

2. If shares have been redeemed, review for compliance with treasury stock redemption approval and reporting requirements.

3. Determine whether the BHC is using, repeatedly, the less than 10 percent ownership exemption to avoid notice requirements, thus undermining the capital position of the banking organization, resulting in an unsafe and unsound practice.

4. Determine if the less than 10 percent ownership exemption is being used by the bank holding company when it does not satisfy the requirements of the Board's capital guidelines for redemptions.

The exemption should not be used by a bank holding company that does not meet the Board's capital guidelines for redemptions. Redemptions of permanent equity or other capital instruments before stated maturity could have a significant impact on an organization's overall capital structure. Use of the exemption could significantly reduce its capital. Conse-

quently, an organization considering such a step should consult with the Federal Reserve before redeeming any equity (prior to maturity) if such redemption could have a material effect on the level or composition of the organization's capital base.

The exemption should not be used by a small one-bank holding company if it would increase its debt-to-equity ratios significantly above those relied on by the Board in approving its application to become a bank holding company.

5. If shares have been redeemed, determine if any shareholder's holdings have risen to 25 percent or more of the outstanding shares.

6. If shares have been redeemed, determine if any shareholder's holdings have risen to between 10 percent and 25 percent of the outstanding shares. Furthermore, determine whether the shareholder is then the largest shareholder or the institution has registered securities under section 12 of the Securities Exchange Act of 1934.

7. If a stock redemption occurred recently in a bank holding company, determine if the shareholders have maintained a 25 percent equity investment.

Control and Ownership (Policy Statements on Equity Investments in Banks and Bank Holding Companies) Section 2090.4

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2009, this section has been revised to incorporate the Board's September 21, 2008, "Policy Statement on Equity Investments in Banks and Bank Holding Companies." (See the Board's September 22, 2008, Press Release and section 2090.4.4.) The policy statement provides additional guidance on the Board's position on minority equity investments in banks and bank holding companies that generally do not constitute "control" for purposes of the Bank Holding Company Act. This policy updates the guidance found in the Board's July 1982 "Policy Statement on Nonvoting Equity Investments by Bank Holding Companies."

2090.4.1 OVERVIEW AND GUIDING PRINCIPLES

For many years, bank holding companies, nonbank financial companies, private equity funds, and other firms made minority equity investments in banks and bank holding companies. These investments often raised questions about the extent to which the investment would cause the investor to become subject to supervision, regulation, and the other requirements applicable to bank holding companies under the Bank Holding Company Act (BHC Act or the Act) and the Board's Regulation Y. In general, the BHC Act applies to any company that controls a bank or bank holding company (banking organization). The BHC Act provides that a company has control over a banking organization if (1) the company directly or indirectly or acting through one or more other persons owns, controls, or has power to vote 25 percent or more of any class of voting securities of the banking organization; (2) the company controls, in any manner, the election of a majority of the directors or trustees of the banking organization; or (3) the Board determines, after notice and opportunity for hearing, that the company directly or indirectly exercises a controlling influence over the management or policies of the banking organization.¹ Minority equity investments in banking organizations are designed not to trigger either of the first two prongs of the definition of control. These investments often raised questions, however, regarding whether the investor would be able to

exercise a controlling influence over the management or policies of a banking organization.²

The text and legislative history of the control definition in the BHC Act make manifest that possession by an investor of a modicum of influence over a banking organization would not amount to a controlling influence. At the same time, the definition does not require that an investor have absolute control over the management and policies of a banking organization. Instead, the Act requires that an investor be able to exercise an amount of influence over a banking organization's management or policies that is significant but less than absolute control in fact of the banking organization. Notably, the primary definition of control in the Act is based on ownership of 25 percent or more of the voting shares of a banking organization—an amount that does not provide an investor in most cases with complete control over decisions but would allow the investor to play a significant role in the decision-making process.

In assessing whether an investor has the ability to exercise a controlling influence over a banking organization, the Board has been especially mindful of two key purposes of the BHC Act. First, the BHC Act was intended to ensure that companies that acquire control of banking organizations have the financial and managerial strength, integrity, and competence to exercise that control in a safe and sound manner. The BHC Act is premised on the principle that a company that controls a banking organization may reap the benefits of its successful management of the banking organization but also must be prepared to provide additional financial and managerial resources to the banking organization to support the company's exercise of control. In this way, the Act ties the potential upside benefits of having a controlling influence over the management and policies of a banking organization to responsibility for the potential downside results of exercising that controlling influence. By tying control and responsibility together, the Act ensures that

2. Contemporaneous minority investments in the same banking organization by multiple different investors also often raise questions about whether the multiple investors are a group acting in concert for purposes of the Change in Bank Control Act or are a single association for purposes of the BHC Act. These questions are beyond the scope of the 2008 Policy Statement.

1. 12 U.S.C. 1841(a)(2).

companies have positive incentives to run a successful banking organization but also bear the costs of their significant involvement in the banking organization's decision-making process, thus protecting taxpayers from imprudent risk taking by companies that control banking organizations. Minority investors in banking organizations typically seek to limit their potential downside financial exposure in the event of the failure of the banking organization. Concomitantly, the BHC Act requires that minority investors seeking this protection limit their influence over the management and policies of the banking organization.

Second, the BHC Act was intended to limit the mixing of banking and commerce. In particular, the Act effectively prevents commercial firms and companies with commercial interests from also exercising a controlling influence over a banking organization. Many minority investors in banking organizations own commercial investments that conflict with this limitation.

2090.4.2 BOARD'S 1982 POLICY STATEMENT ON NONVOTING EQUITY INVESTMENTS BY BANK HOLDING COMPANIES

On July 8, 1982, the Board issued a Policy Statement on Nonvoting Equity Investments by Bank Holding Companies (the 1982 Policy Statement) to provide guidance on the Board's interpretation of the "controlling influence" prong of the control definition in the BHC Act.³ That statement for the first time outlined the policies that the Board would consider in reviewing whether a minority investment in a banking organization would result in the exercise by the investor of a controlling influence over the management or policies of the banking organization. The 1982 Policy Statement focused on issues of particular concern in the 1980s in the context of investments by bank holding companies in out-of-state banking organizations. For example, the 1982 Policy Statement primarily addressed investments that included a long-term merger or stock purchase agreement between the investor and the banking organization that would be triggered on a change in the interstate banking laws, and so-called "lock-up" arrangements designed to

prevent another company from acquiring the banking organization without the permission of the investor.

The 1982 Policy Statement sets out the Board's concerns with these investments, the considerations the Board will take into account in determining whether the investments are consistent with the Act, and the general scope of arrangements to be avoided by bank holding companies. The Board recognized that the complexity of legitimate business arrangements precludes rigid rules designed to cover all situations and that decisions regarding the existence or absence of control in any particular case must take into account the effect of the combination of provisions and covenants in the agreement as a whole and the particular facts and circumstances of each case.

2090.4.2.1 Statutory and Regulatory Provisions

Under section 3(a) of the Act, a bank holding company may not acquire direct or indirect ownership or control of more than 5 percent of the voting shares of a bank without the Board's prior approval (12 U.S.C. 1842(a)(3)). In addition, this section of the Act provides that a bank holding company may not, without the Board's prior approval, acquire control of a bank: that is, in the words of the statute, "for any action to be taken that causes a bank to become a subsidiary of a bank holding company" (12 U.S.C. 1842(a)(2)). Under the Act, a bank is a subsidiary of a bank holding company if

1. The company directly or indirectly owns, controls, or holds with power to vote 25 percent or more of the voting shares of the bank;
2. The company controls in any manner the election of a majority of the board of directors of the bank; or
3. The Board determines, after notice and opportunity for hearing that the company has the power, directly or indirectly, to exercise a controlling influence over the management or policies of the bank (12 U.S.C. 1841(d)).

2090.4.2.2 Review of Agreements

Prior to the permissibility of interstate banking, bank holding companies sought to make substantial equity investments in other bank holding companies across state lines, but without obtaining more than 5 percent of the voting shares or control of the acquiree. These invest-

3. See 1982 FRB 413, 12 C.F.R. 225.143, or the *F.R.R.S* at 4-172.1.

ments involved a combination of the following arrangements:

1. Options on, warrants for, or rights to convert nonvoting shares into substantial blocks of voting securities of the acquiree bank holding company or its subsidiary bank(s);
2. Merger or asset acquisition agreements with the out-of-state bank or bank holding company that are to be consummated in the event interstate banking is permitted;
3. Provisions that limit or restrict major policies, operations, or decisions of the acquiree; and
4. Provisions that make acquisitions of the acquiree or its subsidiary bank(s) by a third party either impossible or economically impracticable.

The various warrants, options, and rights were not exercisable by the investing bank holding company until interstate banking was permitted. They were transferred by the investor either immediately or after the passage of a period of time or upon the occurrence of certain events.

After a careful review of a number of these arrangements, the Board concluded that investments in nonvoting stock, absent other arrangements, could be consistent with the Act. Some of the agreements reviewed appeared consistent with the Act because they were limited to investments of relatively moderate size in nonvoting equity that may become voting equity. . .

However, other agreements reviewed by the Board raised substantial problems of consistency with the control provisions of the Act because the investors. . . sought to assure the soundness of their investments, prevent takeovers by others, and allow for sale of their options, warrants, or rights to a person of the investor's choice in the event a third party obtains control of the acquiree or the investor otherwise becomes dissatisfied with its investment. Since the Act precludes the investors from protecting their investments through ownership or use of voting shares or other exercise of control, the investors substituted contractual agreements for rights normally achieved through voting shares.

For example, various covenants in certain of the agreements sought to assure the continuing soundness of the investment by substantially limiting the discretion of the acquiree's management over major policies and decisions, including restrictions on entering into new banking activities without the investor's approval and requirements for extensive consultations with

the investor on financial matters. By their terms, these covenants suggested control by the investing company over the management and policies of the acquiree.

Similarly, certain of the agreements deprived the acquiree bank holding company, by covenant or because of an option, of the right to sell, transfer, or encumber a majority or all of the voting shares of its subsidiary bank(s) with the aim of maintaining the integrity of the investment and preventing takeovers by others. These long-term restrictions on voting shares were within the presumption in the Board's Regulation Y that attributes control of shares to any company that enters into any agreement placing long-term restrictions on the rights of a holder of voting securities (12 C.F.R. 225.31(d)(2)).

Finally, investors wished to reserve the right to sell their options, warrants or rights to a person of their choice to prevent being locked into what may become an unwanted investment. The Board took the position that the ability to control the ultimate disposition of voting shares to a person of the investor's choice and to secure the economic benefits therefrom indicates control of the shares under the Act.⁴ The Board concluded that the ability to transfer rights to large blocks of voting shares, even if nonvoting in the hands of the investing company, could result in such a substantial position of leverage over the management of the acquiree as to involve a structure that would inevitably result in control prohibited by the Act.

2090.4.2.3 Provisions that Avoid Control

In 1982, the context of any particular agreement, provisions of the type described above were acceptable if combined with other provisions that serve to preclude control. The Board believed that such agreements would not be consistent with the Act unless provisions are included that will preserve management's discretion over the policies and decisions of the acquiree and avoid control of voting shares.

As a first step towards avoiding control, management had to be free to conduct banking and permissible nonbanking activities. Another step to avoid control included the right of the acquiree to "call" the equity investment and

4. See Board letter dated March 18, 1982, to C.A. Cavendes, Sociedad Financiera.

options or warrants to assure that covenants that may become inhibiting can be avoided by the acquirer. This right made such investments or agreements more like a loan in which the borrower has a right to escape covenants and avoid the lender's influence by prepaying the loan.

A measure to avoid problems of control arising through the investor's control over the ultimate disposition of rights to substantial amounts of voting shares of the acquirer might have included a provision granting the acquirer a right of first refusal before warrants, options, or other rights may be sold and requiring a public and dispersed distribution of those rights if the right of first refusal is not exercised.

The Board concluded that agreements that involve rights to less than 25 percent of the voting shares, with a requirement for a dispersed public distribution in the event of sale, have a much greater prospect of achieving consistency with the Act than agreement involving a greater percentage. This guideline was drawn by analogy from the provision in the Act that ownership of 25 percent or more of the voting securities of a bank constitutes control of the bank.

One effect of the guideline was to hold down the size of the nonvoting equity investment by the investing company relative to the acquirer's total equity, thus avoiding the potential for control because the investor holds a very large proportion of the acquirer's total equity. Observance of the 25 percent guideline also made provisions in agreements providing for a right of first refusal or a public and widely dispersed offering of rights to the acquirer's shares more practical and realistic.

Finally, acquirers were to avoid certain arrangements regardless of other provisions in the agreement that were designed to avoid control. These are

1. Agreements that enabled the investing bank holding company (or its designee) to direct in any manner the voting of more than 5 percent of the voting shares of the acquirer;
2. Agreements whereby the investing company had the right to direct the acquirer's use of the proceeds of an equity investment by the investing company to effect certain actions, such as the purchase and redemption of the acquirer's voting shares; and
3. The acquisition of more than 5 percent of the voting shares of the acquirer that "simultaneously" with their acquisition by the invest-

ing company become nonvoting shares, remain nonvoting shares while held by the investor, and revert to voting shares when transferred to a third party.

2090.4.2.4 Review by the Board

The 1982 Policy Statement did not constitute the exclusive scope of the Board's concerns, nor were the considerations with respect to control outlined in this statement an exhaustive catalog of permissible or impermissible arrangements. The Board instructed its staff to review agreements of the kind discussed in this statement and to bring to the Board's attention those that raise problems of consistency with the Act.

2090.4.3 ACTIVITIES OF BANKING ORGANIZATIONS AND BOARD DETERMINATIONS SUBSEQUENT TO THE 1982 POLICY STATEMENT

Many aspects of the 1982 Policy Statement have broader applicability and have served as the foundation for the Board's review more generally of whether a minority investment in a banking organization would give the investor a controlling influence over the management or policies of the banking organization. In this regard, the 1982 Policy Statement identified a number of structural measures that the Board believed would limit the ability of an investor to exercise a controlling influence over a banking organization. These included restricting the use of covenants that constrain the discretion of banking organization management, limiting the amount of voting and nonvoting shares of the banking organization acquired by the investor, and limiting the ability of the investor to transfer large blocks of voting shares.

The Board made clear in the 1982 Policy Statement that the complexity of legitimate business arrangements precluded establishing rigid rules designed to cover all situations and that decisions regarding the presence or absence of control must take into account the specific facts and circumstances of each case. Accordingly, since the 1982 Policy Statement, the Board has determined whether an equity investor in a banking organization has a controlling influence over the management or policies of the banking organization by considering carefully all the facts and circumstances surrounding the investor's investment in, and relationship with, the banking organization. Large minority investors in a banking organization typically

have avoided acquiring a controlling influence over the banking organization by providing the Board with a set of passivity commitments and by avoiding certain control-enhancing mechanisms. Specifically, minority investors have avoided acquiring control over a banking organization by, among other things

- restricting the size of their voting and total equity investment in the banking organization;
- avoiding covenants that would enable the investor to restrict the ability of the banking organization's management to determine the major policies and operations of the banking organization;
- not attempting to influence the banking organization's process for making decisions about major policies and operations;
- limiting director and officer interlocks with the banking organization; and
- limiting business relationships between the investor and the banking organization.

2090.4.4 BOARD'S 2008 POLICY STATEMENT ON EQUITY INVESTMENTS IN BANKS AND BANK HOLDING COMPANIES

Since issuing the 1982 Policy Statement, the Board has reviewed a significant number of noncontrolling investments in banking organizations. The Board believed that it would be useful and appropriate to update its guidance in this area and therefore issued its Policy Statement on Equity Investments in Banks and Bank Holding Companies (the 2008 Policy Statement) on September 21, 2008. (See the Board's September 22, 2008, Press Release.)

2090.4.4.1 Specific Approaches to Avoid Control

The 2008 Policy Statement discusses the Board's views on specific approaches to avoid control.⁵

2090.4.4.1.1 Director Representation

The Board generally has not permitted a company that acquires between 10 and 24.9 percent of the voting stock of a banking organization (a minority investor) to have representation on

the board of directors of the banking organization. The principal exception to this guideline has been in situations in which the investor owns less than 15 percent of the voting stock of the banking organization and another person (or group of persons acting together) owns a larger block of voting stock of the banking organization.

The Board has reexamined its precedent in this area and, based on its experience with minority investors and director representation, believes that a minority investor generally should be able to have a single representative on the board of directors of a banking organization without acquiring a controlling influence over the management or policies of the banking organization. Typically, boards of directors of banking organizations have 9 or 10 members. Although having a representative on the board of the banking organization enhances the influence of a minority investor, the Board's experience has shown that, in the absence of other indicia of control, it would be difficult for a minority investor with a single board seat to have a *controlling* influence over the management or policies of the banking organization.⁶

Moreover, a minority investor that has up to two representatives on the board of directors of the banking organization is unlikely, absent other indicia of control, to be able to exercise a controlling influence over the banking organization when the investor's aggregate director representation is proportionate to its total interest in the banking organization⁷ but does not exceed 25 percent of the voting members of the board,⁸

6. In addition to formal representation on the board of directors of a banking organization, minority investors also frequently seek to have a representative attend meetings of the board of directors of the banking organization in the capacity of a nonvoting observer. Attendance by a representative of a minority investor as an observer at meetings of the board of directors of a banking organization allows the investor access to information and a mechanism for providing advice to the banking organization but has not in previous situations allowed the investor to exercise a controlling influence over the management or policies of the banking organization as long as the observer does not have any right to vote at meetings of the board.

7. An investor's total interest is equal to the greater of the investor's voting interest or total equity interest in the banking organization.

8. For example, an investor with a 10 percent voting interest and a 20 percent total equity interest generally could have two representatives on the board of directors of the banking organization if the investor's director representation does not exceed 20 percent of the board seats. On the other hand, an investor with a 15 percent voting interest and a 33 percent total equity interest generally could have two representatives on the board of directors of the banking organization if the investor's director representation does not exceed 25 percent

5. See the 2008 Policy Statement at 12 C.F.R. 225.144, beginning at paragraph (c).

and another shareholder of the banking organization is a bank holding company that controls the banking organization under the BHC Act.⁹ The presence of another larger, controlling shareholder of the banking organization that has been approved by the Board, is subject to supervision and regulation by the Board, and is obligated to serve as a source of strength for the banking organization should serve as a powerful countervailing force to whatever influence the minority investor may have as a result of its investment and proportional director representation.

The Board continues to believe that a representative of a minority investor that serves on the board of directors of the banking organization should not serve as the chairman of the board of the banking organization or as the chairman of a committee of the board of the banking organization. The Board generally believes, however, that representatives of a noncontrolling minority investor may serve as members of committees of the board of the banking organization when those representatives do not occupy more than 25 percent of the seats on any committee and do not have the authority or practical ability unilaterally to make (or block the making of) policy or other decisions that bind the board or management of the banking organization.

2090.4.4.1.2 Total Equity

The three-prong control test in the BHC Act makes no explicit reference to nonvoting equity investments. Nevertheless, the Board has long subscribed to the view that the overall size of an equity investment, including both voting and nonvoting equity, is an important indicator of the degree of influence an investor may have. Accordingly, the Board traditionally has taken account of the presence and size of nonvoting equity investments in its controlling influence analysis. For example, in the 1982 Policy Statement, the Board set forth a guideline that non-

(rather than 33 percent) of the board seats.

9. In determining what amount of director representation is proportional to an investor's voting interest in a banking organization, the investor should round to the nearest whole number. For example, the Board would consider a minority investor that owns 15 percent of the voting stock of a banking organization to have proportionate director representation if it had two representatives on a board of directors with 10 or more members (but not on a board of directors with 9 or fewer members).

voting equity investments that exceed 25 percent of the total equity of a banking organization generally raise control issues under the BHC Act.¹⁰ The Board has recognized in a few limited circumstances, however, that ownership by a minority investor of 25 percent or more of a banking organization's total equity may not confer a controlling influence, usually in situations when another controlling investor is present or other extenuating circumstances indicate that the exercise of a controlling influence by the minority investor is unlikely.

The Board continues to believe that an investor that makes a very large equity investment in a banking organization is likely to have a controlling influence over the banking organization's management or policies. Investors with large equity investments have a powerful incentive to wield influence over the banking organization in which they have invested. They have a substantial amount of money at stake in the enterprise, are among the first to absorb losses if the banking organization has financial difficulties, and participate in the profits of the banking organization going forward. Moreover, a banking organization is likely to pay heed to its large shareholders to help ensure it has the ability to raise equity capital in the future and to prevent the negative market signal that would be created by the sale of a large block of equity by an unhappy existing shareholder.

On the other hand, the Board recognizes that nonvoting equity does not provide the holder with voting rights that empower the holder to participate directly in the selection of banking organization management or otherwise in the banking organization's decision-making process. Moreover, as noted above, the BHC Act defines control in terms of ownership of 25 percent or more of a class of voting securities but does not impose an express limit on ownership of nonvoting shares. The Board continues to believe that, in most circumstances, an investor that owns 25 percent or more of the total equity of a banking organization owns enough of the capital resources of a banking organization to have a controlling influence over the management or policies of the banking organization. The Board continues to recognize, however, that the ability of an investor to exercise a controlling influence through nonvoting equity instruments depends significantly on the nature and extent of the investor's overall investment in the banking organization and on the capital structure of the banking organization.

In particular, the Board would not expect that a minority investor would have a controlling influence over a banking organization if the investor owns a combination of voting shares and nonvoting shares that, when aggregated, represents less than one-third of the total equity of the organization (and less than one-third of any class of voting securities, assuming conversion of all convertible nonvoting shares held by the investor) and does not allow the investor to own, hold, or vote 15 percent or more of any class of voting securities of the organization. In these situations, the limitation on voting rights reduces the potential that the investor may exercise influence that is controlling.

In previous cases, investors that have acquired nonvoting shares often have sought the right to convert those shares to voting shares under various circumstances. The Board continues to believe that nonvoting shares that may be converted into voting shares at the election of the holder of the shares, or that mandatorily convert after the passage of time, should be considered voting shares at all times for purposes of the BHC Act. However, in previous cases, the Board has recognized that nonvoting shares that are convertible into voting shares carry less influence when the nonvoting shares may not be converted into voting shares in the hands of the investor and may only be transferred by the investor: (1) to an affiliate of the investor or to the banking organization; (2) in a widespread public distribution; (3) in transfers in which no transferee (or group of associated transferees) would receive 2 percent or more of any class of voting securities of the banking organization; or (4) to a transferee that would control more than 50 percent of the voting securities of the banking organization without any transfer from the investor. Ownership of this form of nonvoting, convertible shares, within the limits discussed above, allows investors to provide capital to a banking organization in a way that is useful to the organization, minimizes the opportunity for the investor to exercise a controlling influence over the organization, and allows the investor to exit the investment without conveying control to another party outside the parameters of the BHC Act.

2090.4.4.1.3 Consultations with Management

In many previous cases, minority investors have agreed not to attempt to influence the operations, management, or strategies of the banking organization in which they have invested; not to

threaten to sell their shares in the banking organization as a method for influencing decisions of banking organization management; and not to solicit proxies on any matter from the other shareholders of the banking organization. These commitments were designed to limit the exercise by a minority investor of a controlling influence over the management or policies of a banking organization.

The Board believes that it would be useful to provide additional guidance on the extent of communications between a minority investor and a banking organization's management that would be consistent with a noncontrol determination. The Board believes that a noncontrolling minority investor, like any other shareholder, generally may communicate with banking organization management about, and advocate with banking organization management for changes in, any of the banking organization's policies and operations. For example, an investor may, directly or through a representative on a banking organization's board of directors, advocate for changes in the banking organization's dividend policy; discuss strategies for raising additional debt or equity financing; argue that the banking organization should enter into or avoid a new business line or divest a material subsidiary; or attempt to convince banking organization management to merge the banking organization with another firm or sell the banking organization to a potential acquirer. These communications also generally may include advocacy by minority investors for changes in the banking organization's management and recommendations for new or alternative management.¹¹ Although these types of discussions represent attempts by an investor to influence the management or policies of the banking organization, discussions alone are not the type of controlling influence targeted by the BHC Act.

To avoid the exercise of a controlling influence, in all cases, the decision whether or not to adopt a particular position or take a particular action must remain with the banking organization's shareholders as a group, its board of directors, or its management, as appropriate. The role of the minority investor in these decisions must be limited to voting its shares in its discretion at a meeting of the shareholders of the banking

11. As discussed later in the 2008 Policy Statement, a minority investor may not have a contractual right to determine (or a veto right over) any of the major policies and operations of the bank or the composition of the bank's management team.

organization (directly or by proxy, including in connection with a proxy solicitation launched by another shareholder), and by exercising voting privileges as a member of the board of directors of the banking organization (to the extent permitted as discussed above). Importantly, communications by minority investors should not be accompanied by explicit or implicit threats to dispose of shares in the banking organization or to sponsor a proxy solicitation as a condition of action or non-action by the banking organization or its management.

2090.4.4.1.4 Other Indicia of Control

2090.4.4.1.4.1 Business Relationships

The Board traditionally has prohibited a non-controlling minority investor in a banking organization from having any material business transactions or relationships with the banking organization. The Board historically has taken the view that a major supplier, customer, or lender to a banking organization can exercise considerable influence over the banking organization's management and policies—especially when coupled with a sizeable voting stock investment—by threatening to terminate or change the terms of the business relationship.

The Board has recognized over the years, however, that not all business relationships—even when accompanied by a material investment—provide the investor a controlling influence over the management or policies of the banking organization. Accordingly, the Board has frequently allowed business relationships that were quantitatively limited and qualitatively nonmaterial, particularly in situations where an investor's voting securities percentage in the banking organization was closer to 10 percent than 25 percent. The Board continues to believe that business relationships should remain limited and will continue to review business relationships on a case-by-case basis within the context of the other elements of the investment structure. In that review, the Board will pay particular attention to the size of the proposed business relationships and to whether the proposed business relationships would be on market terms, non-exclusive, and terminable without penalty by the banking organization.

2090.4.4.1.4.2 Covenants

Because the BHC Act explicitly defines control (and many of its other thresholds) in terms that include a percentage of voting securities, companies often have structured their investments in banking organizations in the form of nonvoting securities and have attempted to substitute contractual agreements for the rights that normally are obtained through voting securities. The Board has taken and continues to hold the view that covenants that substantially limit the discretion of a banking organization's management over major policies and decisions suggest the exercise of a controlling influence.¹² In particular, the Board has been concerned about covenants or contractual terms that place restrictions on, or otherwise inhibit, the banking organization's ability to make decisions about the following actions: (1) hiring, firing, and compensating executive officers; (2) engaging in new business lines or making substantial changes to its operations; (3) raising additional debt or equity capital; (4) merging or consolidating; (5) selling, leasing, transferring, or disposing of material subsidiaries or major assets; or (6) acquiring significant assets or control of another firm.¹³

On the other hand, the Board generally has not viewed as problematic for control purposes those covenants that give an investor rights permissible for a holder of nonvoting securities as described in section 2(q)(2) of Regulation Y.¹⁴ These would include covenants that prohibit the banking organization from issuing senior securities or borrowing on a senior basis, modifying the terms of the investor's security, or liquidating the banking organization. Noncontrolling covenants also could include covenants that provide the investor with limited financial information rights and limited consultation rights.

12. See 12 C.F.R. 225.143(d)(2).

13. For an investment to be eligible for inclusion in a banking organization's regulatory capital, it must not contain or be covered by any covenants, terms, or restrictions that are inconsistent with safe and sound banking practices, see 12 C.F.R. 208, Appendix A, II and 12 C.F.R. 225, Appendix A, II.(i). As described in 12 C.F.R. 250.166(b)(3), such provisions include terms that could adversely affect the banking organization's liquidity or unduly restrict management's flexibility to run the organization, particularly in times of financial difficulty, or that could limit the regulator's ability to resolve problem bank situations.

14. 12 C.F.R. 225.2(q)(2).

2090.4.4.2 Conclusion of the 2008 Policy Statement

As noted above, whether a minority investor in a banking organization has a controlling influence over the management or policies of the banking organization depends on all the facts and circumstances surrounding the investor's investment in, and relationship with, the banking organization. This policy statement sets forth some of the most significant factors and principles the Board will consider in determining whether investments in a banking organization are noncontrolling for purposes of the BHC Act.

Importantly, controlling-influence determinations depend not just on the contractual rights

and obligations of the investor and the banking organization; they also depend on the amount of influence the investor, in fact, exercises over the banking organization. Accordingly, the Board has and will continue to monitor carefully minority investments in banking organizations to ensure that investors do not, in fact, exercise a controlling influence over the management or policies of the banking organizations in which they invest. The Board also continues to evaluate its policies in this area and will modify them as appropriate going forward to ensure that minority investments in banking organizations remain consistent with the BHC Act.

2090.4.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Required Federal Reserve approval if a BHC acquires more than 5 percent (direct or indirect control) of voting shares of a bank	1842(a)(3)			
Federal Reserve approval of a BHC acquiring control of a bank	1842(a)(2)			
BHCs and direct or indirect controlling influence over a bank	1841(d)			
Acquiring a bank outside of the home state of the investing bank holding company	1842(d)(1)			
Long-term restrictions on the rights of a holder of voting securities		225.31(d)(2)		
Specific approaches that avoid control		225.144(e)		
Nonvoting equity investments as a percent of total equity and control issues		225.143(d)(4) and (d)(5)		
Covenants and controlling influence issues		225.143(d)(2)		
Covenants and rights permissible for a holder of nonvoting securities.		225.2(q)(2)		
Nonvoting Equity Investments by BHCs (1982 Policy Statement)		225.143	4-172.1	
Equity investments in banks and BHCs (2008 Policy Statement)		225.144

Control and Ownership—General (Acquisitions of Bank Shares Through Fiduciary Accounts) Section 2090.5

Pursuant to Section 3 of the Bank Holding Company Act, a bank holding company, directly or through its subsidiary banks, may not acquire more than 5 percent of the shares of an additional bank without the Board's prior approval. However, it is recognized that banks acting as trustee may acquire such shares without prior notice. Therefore, the Act requires a bank or banks which are subsidiaries of bank holding companies and acquire in excess of the 5 percent threshold limit, to file an application with the Board within 90 days after the shares exceeding the limit are acquired. The limit generally applies *only* to other bank shares over which the acquiring fiduciary exercises sole discretionary voting authority. Nevertheless, the Board has waived this application requirement under most circumstances in Section 225.12 of Regulation Y, unless—

1. the acquiring bank or other company has sole discretionary authority to vote the securities and retains the authority for more than two years; or

2. the acquisition is for the benefit of the acquiring bank or other company, or its shareholders, employees, or subsidiaries.

In determining whether the threshold limits have been reached, shares acquired prior to January 1, 1971 can ordinarily be excluded. On the other hand, shares of another bank held under the following circumstances should, in certain instances, be included in the 5 percent thresh-

old, even though sole discretionary voting authority is not held:

1. Shares held by a trust which is a "company", as defined in Section 2(b) of the Bank Holding Company Act; and,

2. Shares held as trustee for the benefit of the acquiring bank or bank holding company, or its shareholders, employees or subsidiaries.

A bank holding company should have procedures for monitoring holdings of the stock of other banks and bank holding companies for compliance with the foregoing application requirements of the Act, for compliance with reporting requirements on form Y-6, and for compliance with certain similar reporting requirements under the federal securities laws. A general 5 percent threshold applies in all three situations, although differing requirements and exemptions apply.

Examiners specifically trained in trust examinations may need to conduct this portion of an inspection and, in appropriate circumstances, the examiner may need to consult with Federal Reserve Bank legal counsel. Trust examiners routinely review such matters in connection with individual trust examinations. The inspection objectives will be to determine whether the holdings of shares of other banks or bank holding companies, in a fiduciary capacity, are appropriately monitored to comply with section 3(a) of the Bank Holding Company Act with other reporting requirements for such holdings.

The spin-off or sale of property by a bank holding company may not sever the bank holding company's control relationship over such property for purposes of the Bank Holding Company Act. The factors which are normally considered in determining whether control has ceased include the presumptions of control listed in section 225.31(a) of Regulation Y and in sections 2(a)(2) and 2(g) of the Act, and certain ownership and voting rights.

Most of the irrebuttable and rebuttable presumptions of control were written to establish initially a control relationship between two companies. Only the provisions of section 2(g)(3) relate solely to a continued control relationship after an attempt has been made to end that control. However, all of the presumptions of control must be considered before presuming that a divestiture is effective. Irrebuttable control relationships are established, or continue to be recognized, when any of the conditions listed in section 225.2(e) of Regulation Y or sections 2(a)(2)(A), 2(a)(2)(B), 2(g)(1), or 2(g)(2) of the Act exist. Thus, a company is assumed to have irrebuttable control over a bank or another company without a Board determination if:

1. The company directly or indirectly owns, controls, or has power to vote 25 percent or more of the voting securities of the bank or other company;
2. The company controls in any manner the election of a majority of the directors or trustees of the bank or other company;
3. Trustees directly or indirectly hold or control shares of the bank or other company for the benefit of the company, the shareholders or members of the company, or the employees of the company.

Rebuttable presumptions of control are listed in section 225.31(d) of Regulation Y and in sections 2(a)(2)(C) and 2(g)(3) of the Act. These sections describe situations which are not as clearly defined as the irrebuttable presumptions. For example, a company which enters into a management contract that gives the company significant control over the operations or management of a bank or other company may be deemed to exercise a controlling influence over that bank or other company. Section 225.31(c) of Regulation Y and section 2(a)(2)(C) of the Act require a Board determination to establish that a company directly or indirectly exercises a controlling influence over the management or policies of a bank or other company. Thus, it is assumed that no control exists unless the Board

determines that it does. Section 2(g)(3) of the Act, however, is "automatic" in the sense that an effective control relationship is assumed to continue without the need for a determination by the Board if certain conditions are met. This presumption is "rebuttable" because, at the request of the company, the Board later may determine that the control relationship in fact does not exist.

Section 2(g)(3) was added to the Act with the 1966 Amendments to provide the Board with an opportunity to consider the consequences of a transfer before it is deemed to be effective. It states that:

"shares transferred after January 1, 1966, by any bank holding company (or by any company which, but for such transfer, would be a bank holding company) directly or indirectly to any transferee that is indebted to the transferor, or has one or more officers, directors, trustees, or beneficiaries in common with or subject to control by the transferor, shall be deemed to be indirectly owned or controlled by the transferor unless the Board, after opportunity for hearing, determines that the transferor is not in fact capable of controlling the transferee."

Section 2(g)(3) contains the factors most commonly cited as reasons for a control determination; i.e., the purchaser is indebted to the divesting company or has officers or directors in common with the divesting company. If the transferee is indebted to or has personnel in common with the transferor, an effective control relationship is assumed to continue at the date of the transfer without the need for an order or a determination by the Board. Control will continue to be presumed until either the condition causing the presumption is removed or the Board determines, that "the transferor is not in fact capable of controlling the transferee."

Although section 2(g)(3) refers to transfers of "shares" it is not limited to the disposition of corporate stock, but includes any transfer of a "significant volume of assets." Thus, when the transfer constitutes the disposition of all or substantially all of the assets of a subsidiary or a separate activity of the company, it is deemed to represent a transfer of "shares." General or limited partnership interests are included in this definition. A determination of whether the vol-

ume of assets transferred is "significant" will be made on an *ad hoc* basis. Included in the definition of "shares" are shares or other assets acquired in satisfaction of a debt previously contracted, or acquired as an incident to an essentially separate transaction.

The term "transferor" includes the bank holding company, its parent, and its subsidiaries. Likewise, "transferee" includes the parent and subsidiaries of any company to which assets are transferred. Thus, when the transferee, its parent, or its subsidiary is indebted to or has common personnel with the transferor, its parent, or its subsidiary, a presumption under section 2(g)(3) arises. For example, if a subsidiary of the transferee is indebted to the parent of the transferor, the presumption arises.

The term "transferee" has been interpreted also to include individuals. Thus, if property is transferred to an individual who holds a position with or is indebted to the transferor, its parent, or its subsidiaries, the presumption arises.

The indebtedness to which section 2(g)(3) refers may be debt incurred in connection with the transfer, or pre-existing debt. For instance, if a bank holding company transfers to an outside individual a subsidiary to which it had made a working capital loan, the presumption of control arises as a result of that debt. Although a presumption arises even when the debt was previously in existence, this factor may not be viewed as an indication of control in determinations pursuant to section 2(g)(3).

The statutory presumption of control in section 2(g)(3) will not apply in certain cases if the indebtedness of the transferee to the transferor or a subsidiary involves certain routine loans to companies (as defined in section 2(b) of the Act) in an aggregate amount not exceeding 10 percent of the total purchase price of the transferred asset; or certain personal loans to an individual such as a credit card balance, student loan or home mortgage loan. Such loans must have been made on normal terms in the ordinary course of business, and may not be secured by the transferred asset.

The phrase "officers, directors, trustees, or beneficiaries" has been interpreted to include policy-making employees or consultants, general partners in a partnership, or limited partners having a right to participate in management, and any person who performs (directly or through an agent, representative, or nominee) functions comparable to those normally associated with

the foregoing offices or positions. The presumption is valid even if the position is held in an honorary or advisory capacity. The presumption is also valid even if the person involved does not hold the same type of position with the transferor as with the transferee or the transferred company. For example, if a bank holding company sells assets to a trust whose trustee is an officer of the holding company, the presumption is applicable.

When a divestiture takes place through the distribution of shares, quite often officers and directors will receive a portion of the shares. Because these individuals are considered to be transferees and because they are officers or directors of the transferor, a presumption of control under section 2(g)(3) results. However, the presumption will be of legal significance only when the shares subject to this presumption constitute more than 5 percent of the voting stock of a nonbanking company or 25 percent or more of the voting stock of a bank (5 percent if the transferor continues to be a bank holding company without reference to the shares transferred).

Finally, section 2(g)(3) provides that a Board determination will be made after opportunity for hearing. When the Board's General Counsel, acting under delegated authority, has determined that a control situation does continue to exist, the case will be referred to the Board for a decision and an opportunity for hearing will be made through publication of a notice in the *Federal Register*.

In addition to the review of the applicability of each of the conclusive and rebuttable presumptions of control, a review of certain ownership and voting rights will be made before a divestiture is considered effective. Generally, the Board has not regarded a divestiture of holdings of voting shares to less than 25 percent, but more than 5 percent, as effective though in most cases an acquisition of less than 25 percent of a company would not result in that company being regarded as a subsidiary. This policy pertains because the retention of such an economic interest in such a company could provide an incentive for the transferor to influence the management of the company. However, the reduction of ownership to less than 5 percent of the outstanding voting stock of a company usually is considered to be an effective divestiture. In addition, due to its continuing economic interest, a bank holding company cannot effectively divest of a company by converting its holdings of the company's voting shares to non-voting shares or by agreeing not to vote the shares.

2090.6.1 INSPECTION OBJECTIVES

1. To determine whether or not the divesting company retained a significant voting or ownership interest in the divested property.

2. To determine whether section 2(g)(3) of the Act or any of the rebuttable presumptions of control listed in section 225.31(d) of Regulation Y raise a control issue with regard to the transferor and the transferee or the transferred property.

3. To determine whether section 2(g)(2) of the Act or any of the other irrebuttable presumptions of control listed in section 225.2(e) of Regulation Y raise a control issue with regard to the transferor and the transferee or the transferred property.

2090.6.2 INSPECTION PROCEDURES

The examiner should review the stock records of the transferor, the transferee, and the transferred entity, if possible. Management contracts, trust agreements, and any pertinent agreements among these parties also should be reviewed for any evidence of a control relationship. When

following these procedures for a bank holding company which has divested or will divest of property, the examiner should be aware that the criteria for establishing a continuing control relationship are more stringent than those for establishing an initial control relationship. Thus, the examiner should review all ownership and voting rights rather than just those above 5 or 25 percent.

The examiner should review the records of the bank holding company, its parents, and its subsidiaries as well as the records of the company being divested and the company (and its parent and subsidiaries) acquiring the divested property for evidence of a continuing control relationship as described in section 2(g)(3) of the Act. If the transferee is an individual or if the records of the transferee are not available, the examiner should inquire whether any of the specific control relationships exist. Specifically, the examiner should determine whether the transferee, its parent, or its subsidiaries, are indebted to or have common personnel (officers, directors, trustees, beneficiaries, policy making employees, consultants, etc.) with the transferor, its parent, or its subsidiaries.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to include a March 21, 2006, Board staff legal opinion that confirms that a direct conversion from a state-chartered bank to a national bank would not, by itself, cause a parent company to lose its grandfather rights maintained under section 4(f) of the BHC Act. The BHC Act prevents a grandfathered nonbank BHC from acquiring control of an additional bank or thrift as a limited-purpose trust company, which would not be a bank for the purposes of the BHC Act.

2090.7.1 CEBA AND FIRREA PROVISIONS FOR NONBANK BANKS

The Competitive Equality Banking Act (CEBA), effective August 10, 1987, amended section 2(c) of the BHC Act by expanding the definition of *bank* to include all FDIC-insured depository institutions. The definition also includes any other institution that (1) accepts demand deposits or other deposits that the depositor may make payable to third parties (demand deposits) and (2) is engaged in the business of making commercial loans. The new definition covers institutions that were not previously covered by the BHC Act (nonbank banks). Thrift institutions that remain primarily residential mortgage lenders continue to be excepted from the definition of bank.

CEBA amended section 4 of the BHC Act by adding a grandfather provision that permits a nonbanking company that on March 5, 1987, controlled an institution that became a bank under CEBA to retain the institution and not be treated as a bank holding company. A grandfathered company will lose its exemption, however, if it violates any of several prohibitions governing its activities. Among these prohibitions, a grandfathered company may not acquire control of an additional bank or a thrift institution or acquire more than 5 percent of the assets or shares of an additional bank or thrift.¹ In addition,

1. An exception to this prohibition is made for cases involving the acquisition of a failing thrift provided that (1) the thrift is acquired in an emergency acquisition and is either located in a state where the grandfathered company already controls a bank or has total assets of \$500 million or more at the time of the acquisition or (2) the thrift is acquired from the RTC, FDIC, or director of the OTS in an acquisition in which federal or state authorities find the institution to be in danger of default.

no bank subsidiary of the grandfathered company may commence to accept demand deposits and engage in the business of making commercial loans. A bank subsidiary of the grandfathered company may also not permit an overdraft² (including an interday overdraft) or incur an overdraft on behalf of an affiliate³ at a Federal Reserve Bank.⁴

If a grandfathered company no longer qualifies for an exemption, the company must divest control of all the banks it controls within 180 days after the date that the company receives notice from the Board that it no longer qualifies for the exemption. The exemption may be reinstated if, before the end of the 180-day notice period, the company (1) corrects the condition or ceases the activity that caused its exemption to end or submits a plan to the Board for approval to correct the condition or cease the activity within one year and (2) implements procedures reasonably adapted to avoid a recurrence of the condition or activity.

The Board may examine and require reports of grandfathered companies and of the nonbank banks they control but only to monitor or enforce compliance with the grandfather restrictions. The Board also may use civil enforcement powers, including cease-and-desist orders, to enforce compliance.

Grandfathered companies, their affiliates, and their nonbank banks are also subject to the

2. Section 225.52 of Regulation Y further defines the restrictions on overdrafts.

3. Section 225.52(b)(2)(ii) of Regulation Y provides that a nonbank bank (or an industrial bank) incurs an overdraft on behalf of an affiliate when (1) the nonbank bank holds an account at a Federal Reserve bank for an affiliate from which third-party payments can be made and (2) the posting of an affiliate's transactions to the nonbank bank's or industrial bank's account creates an overdraft or increases the amount of an existing overdraft in the account.

4. The overdraft prohibition does not apply if the overdraft (1) results from an inadvertent computer or accounting error that is beyond the control of both the bank and the affiliate; (2) is permitted or incurred on behalf of an affiliate that is monitored by, reports to, and is recognized as a primary dealer by the Federal Reserve Bank of New York and is fully secured, as required by the Board, by direct U.S. obligations, obligations fully guaranteed as to principal and interest by the United States, or securities or obligations eligible for settlement by the Federal Reserve book-entry system; or (3) is permitted or incurred by or on behalf of an affiliate in connection with an activity that is financial in nature or incidental to a financial activity and does not cause the bank to violate any provision of sections 23A or 23B of the Federal Reserve Act directly or indirectly or by virtue of section 18(j) of the Federal Deposit Insurance Act.

anti-tying restrictions of the BHC Act and to the insider-lending restrictions of section 22(h) of the FRA and in Regulation O. Thus, for example, a nonbank bank may not condition a grant of credit on the purchase of a product or service from its grandfathered holding company, or vice versa, and it may not extend credit to insiders of the nonbank bank or its grandfathered holding company on preferential terms.

A bank holding company that controls a nonbank bank may retain it as long as the nonbank bank does not (1) engage in an activity⁵ that would have caused it to be a bank before the effective date of CEBA or (2) increase the number of locations from which it does business after March 5, 1987. These limitations do not apply if (1) the nonbank bank is viewed as an additional bank subsidiary of the bank holding company and (2) the BHC's acquisition of the nonbank bank would be permissible under the interstate banking provisions of the BHC Act.

2090.7.2 RETAINING GRANDFATHER RIGHTS UNDER SECTION 4(F) OF THE BHC ACT

A state nonmember bank (Bank A) that became a "bank" for purposes of the BHC Act as a result of CEBA requested a determination that its conversion to a national bank and merger with a limited-purpose trust company would not cause its parent company to lose certain grandfather rights that it maintains under section 4(f) of the BHC Act. (See 12 U.S.C. 1843(f).)

The parent company could retain ownership of Bank A and not be treated as a bank holding company, but only if it and Bank A abided by the conditions set forth in section 4(f) of the BHC Act. One of these conditions generally prohibits the parent company from acquiring control of more than 5 percent of the shares or assets of an additional bank or savings association. (See 12 U.S.C. 1843(f)(2)(A)(i) and (ii).)

The parent company wished to convert Bank A into a national bank. The conversion would be effected directly, and the parent company

would not establish, or acquire any shares of, a separate bank or savings association as part of the conversion process. Simultaneously with the conversion process, however, the parent company would establish a new, limited-purpose national bank trust company (trust company). It was represented that the trust company would comply with the limitations and restrictions in, and would qualify for, the trust company exception from the definition of *bank* under section 2(c)(2)(D) of the BHC Act. (See 12 U.S.C. 1841.) The parent company would then cause the trust company to merge into Bank A, with Bank A being the entity that survives the merger. Bank A would then change its name (new bank) and the location of its headquarters.

Under the proposed transaction, the parent company would remain the sole shareholder of new bank. It was represented that, prior to its merger with Bank A, the trust company would not be an operating company and would have no assets or liabilities. It was also represented that the proposal would not result in any change in ownership or control of Bank A.

The Board's legal staff concluded that the direct conversion of Bank A from a state-chartered bank to a national bank would not, by itself, cause the parent company to lose its grandfather rights under section 4(f) of the BHC Act.⁶ Also, the BHC Act would not prevent the parent company from chartering the trust company. Although the BHC Act prevents a grandfathered nonbank bank from acquiring control of an additional bank or thrift (12 U.S.C. 1843(f)(2)(A)), the trust company as a limited-purpose trust company would not be a *bank* for the purposes of the BHC Act.

The Board's Legal Division staff stated that it would not recommend that the Board determine that the transactions described in the request would cause the parent company to lose its grandfather rights under section 4(f) of the BHC Act. New bank is required to comply with the conditions applicable to a nonbank bank and a grandfathered holding company, respectively, under the BHC Act. (See the Board staff legal opinion dated March 21, 2006.)

5. Previously, a nonbank bank could accept demand deposits or engage in the business of making commercial loans, but could not engage in both activities.

6. See letter from the general counsel of the Board, dated October 12, 2004.

2090.7.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Limitations on nonbank banks	1843(f)	225.52		

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.
3. *Federal Reserve Regulatory Service* reference.

The Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), effective August 9, 1990, provided [12 U.S.C. 1815 (e)] that any insured depository institution will be liable for any actual or reasonably anticipated loss incurred or to be incurred by the FDIC in connection with:

1. The default of a commonly controlled¹ depository institution; or
2. Any assistance provided by the FDIC to any commonly controlled insured depository institution.

2090.8.1 FIVE YEAR PROTECTION FROM LIABILITY (5-YEAR TRANSITION RULE)

Sister banks, for five years from the enactment of the law, are protected against losses due to the default of a thrift acquired before enactment. The law also grants a five-year protection to thrifts for loss due to the default of a bank acquired before the law's enactment.

2090.8.2 CROSS-GUARANTEE PROVISIONS

FIRREA contains cross-guarantee provisions. These provisions enable the FDIC to obtain reimbursement from insured depository institutions, in the event that the FDIC incurs a loss due to any assistance provided to, or a default of, a commonly controlled bank or thrift.

The FDIC will provide written notice when an insured depository institution is being held liable for losses sustained by the FDIC in connection with assistance to a commonly controlled bank or thrift. Upon receipt of the written notice from the FDIC, the insured depository institution is required to pay the amount specified. An insured depository institution is not liable for losses incurred by the FDIC, in connection with a commonly controlled institution, if the written notice is not received within two years from the date of the FDIC's loss.

1. Depository institutions are commonly controlled if:
a. Such institutions are controlled by the same depository institution holding company (including any company, such as nonbank banks, that are required to file reports under [12 U.S.C. 1843(f)(6)]; or
b. One depository institution is controlled by another depository institution.

The liability the insured depository institution has to the FDIC is senior to shareholders' claims and any obligation or liability owed to any affiliate of the depository institution.² Claims of the FDIC against the depository institution are subordinate to any deposit liabilities, secured obligations and obligations that are subordinated to depositors (i.e. subordinated debt).

The FDIC may grant an insured depository institution a waiver of the cross-guarantee provisions, if it determines that such an exemption is in the best interests of the either the Bank or Savings Association Insurance Funds. Limited partnerships and affiliates of limited partnerships (other than an insured depository institution, which is a majority owned subsidiary of such partnership) may also be exempted from the provisions, if the limited partnership or its affiliate has filed a registration statement with the Securities and Exchange Commission, on or before April 10, 1989. The registration statement must indicate that as of the date of the filing, the partnership intended to acquire one or more insured depository institutions. If an insured depository institution is granted an exemption from the cross-guarantee provisions, then the institution and all of its insured depository institution affiliates must comply with the restrictions of sections 23A and 23B of the Federal Reserve Act without regard to section 23A(d)(1) which provides for certain exemptions.

2090.8.3 EXCLUSION FOR INSTITUTIONS ACQUIRED IN DEBT COLLECTIONS

FIRREA provides an exclusion from the cross-guarantee provisions for an institution acquired in securing or collecting a debt previously contracted in good faith. However, during the entire exclusion period, the controlling bank and all of its insured depository institution affiliates must comply with sections 23A and 23B of the Federal Reserve Act (FRA),³ for transactions with the insured depository institution involving acquisitions as a result of debts previously contracted in good faith.

2. Does not apply to any obligation to affiliates secured as of May 1, 1989.

3. Without regard to section 23A(d)(1) of the FRA.

The subsections following this introduction address the Board's supervisory authority over, and reporting requirements for foreign banking organizations. Supervisory policy statements issued by the Board or the Federal Financial Institutions Examination Council in conjunction with other federal financial institution regulatory agencies are also discussed. Foreign banks continue to expand their operations in the United States and are significant participants in the U.S. banking system. As of December 31, 1991, 313 foreign banks operated 529 state-licensed branches and agencies (of which 53 had FDIC insurance) and 84 branches and agencies licensed by the Office of the Comptroller of the Currency (of which 9 had FDIC insurance). Foreign banks also directly owned 11 Edge corporations and 13 commercial lending companies. In addition, foreign banks held an interest of at least 25 percent in 90 U.S. commercial banks. Together, these foreign banks controlled approximately 24 percent of U.S. banking assets.

The Federal Reserve has broad authority for the supervision and regulation of foreign banks that engage in banking in the United States through branches, agencies, and commercial lending companies. Foreign banks owning Edge corporations or U.S. banks are more directly subject to Federal Reserve supervision—in the former case as the Edge's chartering authority and in the latter as primary supervisor of bank

holding companies. In all cases, the Board is primarily responsible for supervising the U.S. nonbanking operations of foreign banks with a U.S. banking presence.

Before the December 19, 1991 passage of the Federal Deposit Insurance Corporation Improvement Act, the Federal Reserve had residual authority to examine all branches, agencies, and commercial lending subsidiaries of foreign banks in the United States. The International Banking Act of 1978 instructed the Federal Reserve to use, to the extent possible, the examinations reports of other state and federal regulators. The FDICIA amended the International Banking Act and increased the Federal Reserve's authority with respect to these foreign bank operations, including representative offices, in the United States. The Federal Reserve may coordinate the examinations of foreign bank operations with other state and federal regulators. Branches and agencies are now required to be examined at least once during each twelve-month period in an on-site examination.

The FDICIA also authorized the Federal Reserve to terminate the operations of foreign banks in the United States under certain conditions. The legislation requires Federal Reserve approval to establish foreign bank branches, agencies, commercial lending subsidiaries, and representative offices in the United States.

2100.1.1 POLICY STATEMENT ON THE SUPERVISION AND REGULATION OF FOREIGN BANKING ORGANIZATIONS

On February 23, 1979, the Board issued a statement of policy on supervision and regulation of foreign banking organizations that control a U.S. subsidiary bank. The policies set forth in this statement continue to provide the framework within which the Board analyzes foreign bank acquisitions of U.S. banks. The Board has stated in a number of cases it has acted upon since 1984, that it views as “a negative factor” the failure of a foreign bank’s stated capital ratio to meet the Board’s capital adequacy guidelines. In addition to certain mitigating factors such as the existence of “hidden reserves” or a highly liquid funding position, the Board has relied upon assurances and commitments that the capital adequacy of the U.S. bank subsidiary will be maintained at a high level to offset this “negative factor.” Following are major excerpts from the policy statement.

The Board of Governors has a number of supervisory responsibilities over the operations of foreign banking organizations in the United States under the Bank Holding Company Act and under the International Banking Act of 1978. In order to inform the public and the banking industry, the Board issued this statement setting forth its policy toward regulating foreign bank holding companies in the United States.

Bank supervision in the United States has as a principal objective, the promotion of the safety and soundness of banking institutions as going concerns serving depository and credit needs of their communities and the economy as a whole. To this end, a number of standards have been established governing domestic entry into the banking business and ongoing supervision of banking operations of domestic banks and bank holding companies.

In urging legislation to provide for federal regulation of foreign banks in the United States, the Board endorsed the principle of national treatment, or nondiscrimination, as a basis for the rules governing the entry and subsequent operations of foreign banks in this country. The International Banking Act of 1978 generally incorporates that principle in its provisions.

The Board continues to believe that the principle of national treatment should be the guiding rule in administering the Bank Holding Company Act and the International Banking Act of

1978 as they affect foreign banks. Following this rule, the Board believes that in general, foreign banks seeking to establish banks or other banking operations in the United States should meet the same general standards of strength, experience and reputation as required for domestic organizers of banks and bank holding companies. The Board also believes that foreign banks should meet on a continuing basis these standards of safety and soundness if they are to be a source of strength to their U.S. banking operations.

At the same time, the Board is cognizant that foreign banks operate outside the United States in accordance with different banking practices and traditions and in different legal and social environments. The Board also recognizes that its supervisory responsibilities are for the safety and soundness of U.S. banking operations. Its supervisory concerns for the operations and activities of foreign banks outside the United States are, therefore, limited to their possible effects on the ability of those banks to support their operations inside the United States. As embodied in both the Bank Holding Company Act and the International Banking Act of 1978, it is the general policy of the Board not to extend U.S. bank supervisory standards extraterritorially to foreign bank holding companies. The Board will give due regard to these factors in applying the principle of national treatment.

The Board has jurisdiction over foreign entry in the case of foreign organizations seeking to acquire U.S. banks. Whenever a foreign bank applies to become a bank holding company, the Board will seek to assure itself of the foreign bank’s ability to be a source of financial and managerial strength and support to the U.S. subsidiary bank. In reaching this judgment, the Board will analyze the financial condition of the foreign organization, evaluate the record and integrity of management, assess the role and standing of the bank in its home country, and request the views of the bank regulatory authorities in the home country. In connection with its financial analysis, the Board will require sufficient information to permit an assessment of the financial strength and operating performance of the foreign organization. Information will consist of reports prepared in accordance with local practices together with an explanation and reconciliation of major differences between local accounting standards and U.S. generally ac-

cepted accounting procedures including full information on earnings, capital, charge-offs, and reserves. The Board will also continue to work with bank supervisory authorities of other major countries to improve overall cooperation in international bank regulation.

Once a foreign bank holding company has been established, Board supervisory procedures will be primarily directed at promoting the safety and soundness of the subsidiary U.S. banks. Examinations carried out by the relevant federal and/or State supervisory authority will continue to be the primary instrument for this purpose. Special attention will be given to transactions and correspondence between the U.S. subsidiary bank and its foreign parent and to monitoring credits by the U.S. bank to parties that are also customers of the parent. In particular, federal bank supervisors will expect the U.S. bank to maintain sufficient information on all borrowers to permit both the U.S. bank and bank examiners to make an independent appraisal of the bank's credits. In addition to the examination process, the Board will require foreign bank holding companies to report semiannually on transactions between the U.S. subsidiary bank and its foreign parent.

The Board requires submission of sufficient financial information to enable it to assess the operations and general condition of the parent institution. In particular, full information on earnings, reserves and capital will be required along with an explanation of major material differences between U.S. and foreign accounting practices. In its use and handling of the information, the Board will take into account the fact that much of the information required may be confidential commercial information that is not generally disclosed and the parent's majority owned subsidiaries.

2100.1.2 INTERAGENCY POLICY STATEMENT ON THE SUPERVISION OF U.S. BRANCHES AND AGENCIES OF FOREIGN BANKS

A second policy statement was issued on July 20, 1979, through the Federal Financial Institutions Examination Council on the supervision of U.S. branches and agencies of foreign banks. Principal excerpts from this statement are as follows:

The International Banking Act of 1978 gives the three Federal bank regulatory agencies ex-

panded supervisory authority and responsibility with respect to the operations of foreign banks' U.S. branches, agencies, and commercial lending companies.¹ It provides for the establishment of Federal branches and agencies by the Office of the Comptroller of the Currency and permits U.S. branches to apply for insurance coverage by the Federal Deposit Insurance Corporation. It also subjects these U.S. offices to many provisions of the Federal Reserve and Bank Holding Company Acts.

In order to insure adequate supervision of these offices within the present Federal-State regulatory framework, the IBA provides that the Comptroller, the FDIC, and the various State authorities will have primary examining authority over the offices within their jurisdictions. Additionally, the Act gives the Federal Reserve Board residual examining authority over all U.S. banking operations of foreign banks, similar to its existing authority over U.S. subsidiary banks of bank holding companies. This distribution of responsibilities calls for close coordination of the efforts of the relevant authorities. Accordingly, the Comptroller, the FDIC, and the Board, in coordination with the Federal Financial Institutions Examination Council (FFIEC), issued this joint statement to inform the public and the banking industry of their supervisory policy toward these U.S. offices.

The agencies' supervisory interests in the operations of U.S. branches and agencies of foreign banks are directed to the safety and soundness of those operations in serving the needs of borrowers and depositors and other creditors in the United States. For this reason, the regulatory agencies place primary emphasis on assessing the financial well-being of the U.S. offices. They are also concerned with adherence to U.S. law and regulation by these offices.

At the same time, the agencies recognize that, even more than in the case of U.S. bank subsidiaries of foreign banks, the strength of these branches and agencies devolves from their head offices and organizations outside the United States and that ultimate responsibility for branch and agency activities resides in head offices overseas. Consequently, the agencies will seek to assure themselves that the parent institutions are financially sound. To this end, they will collect information on the consolidated operations of the foreign banks and expand their contacts with senior managements of the banks.

1. The term "commercial lending companies" is intended to refer to investment companies organized under Article XII of the New York State Banking Law, and any similar corporations that may be organized under the laws of other States.

Additionally, United States authorities are working and will continue to work with bank supervisory authorities of other nations to improve both the coordinated exchange of banking information and the compatibility of international banking regulation.

The International Banking Act of 1978 mandates that the Federal regulatory agencies cooperate closely with State banking authorities in examining U.S. offices of foreign banks. In furtherance of this mandate, a uniform approach to examining these offices has been developed through the FFIEC in order to minimize dual examinations and to facilitate joint Federal-State examinations, when desirable. In exercising their responsibilities, the agencies will ensure that each U.S. office of a foreign bank is examined regularly by either State or Federal authorities.

2100.1.3 BOARD REPORTING REQUIREMENTS FOR FOREIGN PARENT INSTITUTIONS

To gain information on the consolidated bank, the Board has developed reporting requirements for the foreign parent institutions. These information requirements are the same as those for foreign bank holding companies, including disclosure of specific information on earnings, reserves, and capital, and an explanation for material differences between U.S. and foreign accounting practices. In use and handling of this information, the (Board) will take into account the fact that some of the information required may be confidential commercial information that is not generally disclosed.

2110.0.1 STATUTORY TOOLS FOR FORMAL SUPERVISORY ACTION

Statutory tools are available to the Federal Reserve's Board of Governors if formal supervisory action is warranted against a bank holding company or its bank or nonbank subsidiaries, or against certain individuals associated with either of them. The objective of formal actions is to correct practices that the regulators believe to be unlawful, unsafe, or unsound. The initial consideration and determination of whether formal action is required usually results from the inspection process. This section discusses the following topics:

1. Board jurisdiction under the law
2. actions or practices that may trigger the statutory remedies
3. Board staff procedures
4. the elements of a corrective order
5. temporary orders
6. written agreements
7. suspensions and removals
8. enforcement of orders
9. civil money penalties
10. termination of certain nonbank subsidiary activities or ownership

2110.0.2 TYPES OF CORRECTIVE ACTIONS

Generally, under 12 U.S.C. 1818(b), the Board may use its cease-and-desist authority and other enforcement tools against (1) a bank holding company, (2) a nonbank subsidiary of a bank holding company, and (3) any institution-affiliated party. Institution-affiliated party includes any director, officer, employee, controlling shareholder (other than a bank holding company), agent, person who has filed or is required to file a change in control notice, consultant, joint venture partner, or other person who participates in the conduct of the affairs of a bank holding company or nonbank subsidiary, and any independent contractor (including any attorney, appraiser, or accountant) who knowingly or recklessly participates in any violation of law or regulation, any breach of fiduciary duty, or any unsafe or unsound practice that causes or is likely to cause more than a minimal financial loss to, or a significant adverse effect on, the institution. The Board's enforcement authority also extends to foreign financial institutions and their branches and agencies doing

business in the United States, their nonbank subsidiaries, Edge Act and agreement corporations, and institution-affiliated parties of those entities.

2110.0.2.1 Cease-and-Desist Orders

When Board staff, in conjunction with the appropriate Federal Reserve Bank, determine that a cease-and-desist action is necessary, the Board may issue a notice of charges and of hearing to the offending institution or person. The notice of charges will contain a statement describing the facts constituting the alleged violations or unsafe or unsound practices. The issuance of the notice of charges and of hearing starts a formal process that may include the convening of an administrative hearing to be conducted before an administrative law judge, who makes a recommended decision to the Board. At the conclusion of the hearing process and after consideration of the proceeding by the Board, the Board may issue a final cease-and-desist order. Institutions and individuals who are subject to cease-and-desist orders that were issued as a result of contested proceedings can appeal the Board's issuance of the order to federal courts of appeal.

To abbreviate the period of litigation, the offending party or institution is permitted an opportunity to consent to the issuance of a cease-and-desist order without the need for the notice and an administrative hearing. Board staff has the option of first drafting a proposed cease-and-desist order and presenting the matter to the offenders for their consent before submission of the case to the Board. Banks (and bank holding companies) or individuals are advised that they may have legal counsel present at all meetings with Board or Reserve Bank staff concerning formal corrective actions. If the parties voluntarily agree to settle the case by the issuance of a consent cease-and-desist order, the terms of the settlement will be presented to the Board for its ratification and formal issuance of the order, at which time the order will be final and binding.

Once it is issued by the Board, a cease-and-desist order may require the persons or entity subject to the order to (1) cease and desist from the practices or violations or (2) take affirmative

action to correct the violations or practices. Affirmative actions might include returning the holding company to its original condition (as it was before the practice or violation), having an individual reimburse the company for unauthorized or improper payments received, or both. Affirmative actions may also include (1) restitution, reimbursement, indemnification, or guarantee against loss if the person or entity was unjustly enriched by the violation or practice, or if the violation or practice involved a reckless disregard for the law, applicable regulations, or a prior order; (2) restrictions on growth; (3) disposition of any loan or asset; (4) rescission of agreements or contracts; (5) employment of qualified officers or employees; and (6) any other action the Board determines to be appropriate. Under 12 U.S.C. 1818(b)(3), it is clear that the cease-and-desist authority in section 8(b) of the Federal Deposit Insurance Act also applies to BHCs and Edge and agreement corporations, as well as to all institution-affiliated parties associated with them.

2110.0.2.2 Temporary Cease-and-Desist Orders

The Board may issue a temporary (emergency) cease-and-desist order for a violation of law, rule, or regulation, or for the undertaking of an unsafe or unsound practice that is likely to cause the insolvency of a subsidiary bank or company, cause the significant dissipation of a subsidiary bank's or BHC's assets or earnings, weaken the condition of the subsidiary bank or company, or otherwise seriously prejudice the interests of depositors. The Board may also issue a temporary order if it determines that an institution's books and records are so incomplete or inaccurate that the institution's financial condition or the details or purpose of any transaction cannot be determined through the normal supervisory process. The temporary order may require the same corrections as an order issued either on consent or after the full administrative process. The advantage of the temporary order is that it is effective immediately upon service on the entity or individual. The temporary order remains in effect pending the completion of the administrative process, unless set aside or modified by a court. Within 10 days of the service of the temporary order, the subject may appeal to a U.S. district court for relief from the order.

2110.0.2.3 Written Agreements

When circumstances warrant a less severe form of formal supervisory action, a formal written agreement may be used. A written agreement may be with either the Board or with the Reserve Bank under delegated authority (12 C.F.R. 265.11(a)(15)). All written agreements must be approved by the Board's staff director of the Division of Banking Supervision and Regulation and by the general counsel. The provisions of a written agreement may relate to any of the problems found at the institution or involving institution-affiliated parties.

2110.0.2.4 Removal Authority

In addition to its cease-and-desist authority, the Board is authorized by 12 U.S.C. 1818(e) to suspend and remove current or former institution-affiliated parties of bank holding companies and their nonbank subsidiaries for certain violations and activities. The Board may also prohibit permanently their future involvement with insured depository institutions, BHCs, and nonbank subsidiaries. The Board is authorized to issue a written notice of its intention to remove from office or prohibit from further participation (or, under certain conditions, to suspend immediately) any institution-affiliated party of a BHC whenever it determines the following:

1. The institution-affiliated party has directly or indirectly—
 - a. violated any law, regulation, cease-and-desist order, condition imposed in writing, or any written agreement;
 - b. engaged in any unsafe or unsound practice; or
 - c. breached a fiduciary duty; and
2. because of the violation, practice, or breach—
 - a. the institution has suffered or will suffer financial loss or other damage;
 - b. the interests of depositors have been or could be prejudiced; or
 - c. the institution-affiliated party has received financial gain or other benefit from the violation or practice; and
3. such violation, practice, or breach—
 - a. involves personal dishonesty; or
 - b. demonstrates a willful or continuing disregard for the safety or soundness of the institution.

If an institution-affiliated party's actions war-

rant immediate attention, the Board is authorized to temporarily suspend the person pending the outcome of the complete administrative process. An institution-affiliated party currently associated with a BHC may also be suspended or removed for cause based on actions taken while formerly associated with a different insured depository institution, BHC, or other business institution. “Other business institution” is not specifically defined in the statute so that it may be interpreted to include any other business interests of the institution-affiliated party.

Under 12 U.S.C. 1818(g), the appropriate federal banking agency is authorized to suspend from office or prohibit from further participation any institution-affiliated party charged or indicted for the commission of a crime involving personal dishonesty or breach of trust that is punishable by imprisonment for a term exceeding one year under state or federal law, if the continued participation might threaten either the interests of depositors or public confidence in the bank. The suspension can remain in effect until the criminal action is disposed of or until the suspension is terminated by the agency.

The statute also authorizes the Board to initiate removal or prohibition actions against (1) any institution-affiliated party who has committed a violation of any provision of the Bank Secrecy Act that was not inadvertent or unintentional, (2) any officer or director of a bank who has knowledge that an institution-affiliated party has violated the money-laundering statutes and did not take appropriate action to stop or prevent the recurrence of such a violation, or (3) any officer or director of a bank who violates the prohibitions on management interlocks. These removal or prohibition actions do not require a finding of gain to the individual, loss to the institution, personal dishonesty, or willful or continuing disregard for the safety or soundness of the institution.

2110.0.2.5 Termination of Nonbank Activity

The Board is authorized by 12 U.S.C. 1844(e) to order a bank holding company to terminate certain activities of its nonbank subsidiary (other than a nonbank subsidiary of a bank) or to sell its shares of the nonbank subsidiary. When the Board has reasonable cause to believe that the bank holding company’s continuation of any activity or ownership or control of any of its nonbank subsidiaries constitutes a serious risk to the financial safety, soundness, or stability of

the holding company, and if the activity, ownership, or control is inconsistent with sound banking principles or inconsistent with the purposes of the Bank Holding Company Act or the Financial Institutions Supervisory Act of 1966, the Board may order the bank holding company to terminate the activity or sell control of the nonbank subsidiary.

2110.0.2.6 Violations of Final Orders and Written Agreements

When any of the various types of formal enforcement orders discussed above has been violated, including a temporary cease-and-desist order, the Board may apply to a U.S. district court for enforcement of the action, and the court may order and require compliance. Violations of final orders and written agreements may also give rise to the assessment of civil money penalties against the offending institution or its institution-affiliated parties, as the circumstances warrant. The amount of the civil money penalty is the same as that described in the civil money penalty section below. Any institution-affiliated party who violates a suspension or removal order is subject to a criminal fine of up to \$1 million, imprisonment for up to five years, or both, as well as a civil money penalty assessment or federal court action.

2110.0.2.7 Civil Money Penalties

The Board may assess civil money penalties against any institution or institution-affiliated party for (1) any violation of law or regulation, (2) any violation of a final cease-and-desist, temporary cease-and-desist, suspension, removal, or prohibition order, or with respect to federally insured depository institutions, any failure to comply with a prompt-corrective-action directive,¹ (3) any violation of a condi-

1. Prompt-corrective-action directives may be enforced in the federal courts, and they may cause any bank, company, or institution-affiliated party that violates the directive to be subject to civil money penalties. The failure of a bank to implement a capital-restoration plan, or the failure of a company having control of a state member bank to fulfill a guarantee that the company has given in connection with a capital plan accepted by the Federal Reserve, could subject the bank or company or any of its institution-affiliated parties to a civil money penalty assessment. See section 4133.1 of the Federal Reserve’s *Commercial Bank Examination Manual*.

tion imposed in writing by the Board in connection with the granting of an application or other request, and (4) any violation of a written agreement.

The Board can assess a fine of up to \$5,000 per day for any of these violations. A fine of up to \$25,000 per day can be assessed for any of these violations if the offender recklessly engages in an unsafe or unsound practice in conducting the affairs of the institution, or if an individual breaches his or her fiduciary duty, when such violation, practice, or breach is part of a pattern of misconduct, causes or is likely to cause more than a minimal loss, or results in pecuniary gain or other benefit for the offender. A civil money penalty of up to \$1 million per day can be assessed for any of these violations if the offender knowingly committed the violation, knowingly engaged in the unsafe or unsound practice, or knowingly breached his or her fiduciary duty and, in so doing, knowingly or recklessly caused a substantial loss to the financial institution or received substantial pecuniary gain or other benefit. Civil money penalties may also be assessed for any violation of the Change in Bank Control Act and for violations of the anti-typing provisions of federal banking law, among other provisions (12 U.S.C. 1972).

The Board may also assess civil money penalties for the submission of any late, false, or misleading reports required by the Bank Holding Company Act and Regulation Y of the Board of Governors. If a financial institution maintains procedures that are reasonably adapted to avoid inadvertent errors and unintentionally fails to publish any report, submits any false or misleading report or information, or is minimally late with the report, it can be assessed a fine of up to \$2,000 per day. The financial institution has the burden of proving that the error was inadvertent under these circumstances. If the error was not inadvertent, a penalty of up to \$20,000 per day can be assessed for all false or misleading reports or information submitted to the Board. If the submission was done in a knowing manner or with reckless disregard for the law, a fine of up to \$1 million or 1 percent of the institution's assets can be assessed for each day of the violation. Notwithstanding the above, violations of the Bank Holding Company Act (with the exception of late, false, or inaccurate report violations as described above) may be addressed by the assessment of civil money penalties of not more than \$25,000 per day.

2110.0.2.8 Publication

Under 12 U.S.C. 1818(u), the Board is required to publish and make publicly available any final order issued with respect to an administrative enforcement proceeding it has initiated. If the Board determines that publication would seriously threaten the safety and soundness of the institution, it may delay publication for a reasonable time. The Board is also required to publish any written agreement or other written statement, a violation of which may be enforced by the Board, as well as publish any modifications to or terminations of orders or agreements.

2110.0.2.9 Public Hearings

All hearings on the record, including contested cease-and-desist, removal, and civil money penalty proceedings, are open to the public. Transcripts of all testimony and copies of all documents, which could include examination and inspection reports and supporting documents (except those filed under seal), are made available to the public. These documents could include examiner's workpapers, file memorandums, reports of examination and inspection, and correspondence between a problem institution or wrongdoer and the Federal Reserve Bank. Appropriate actions should always be taken to ensure that all written material prepared in connection with any supervisory matter be accurate and free of insupportable conclusions or opinions.

2110.0.2.10 Subpoena Power

Under 12 U.S.C. 1818(n), which is made applicable to BHCs by 12 U.S.C. 1818(b)(3) and 1844(f), the Board has the authority to issue subpoenas directly or through its delegated representatives, and it has the authority to administer oaths or take depositions in connection with an examination or inspection. An examiner may find it necessary to apply some of these enforcement powers to collect certain information from unwilling sources.

2110.0.2.11 Interagency Notification

Any federal banking regulatory agency that proposes to take formal enforcement action (such as a cease-and-desist order, civil money penalty, or removal) must notify the other federal financial institution regulatory agencies (including

the Office of Thrift Supervision) that such action is being taken. The Board must take similar steps in connection with actions against bank holding companies, their nonbank subsidiaries, and all institution-affiliated parties. In the case of an informal enforcement action, such as memorandums of understanding, notification must be made when there is an affiliation or inter-institution relationship. Notifications are to be made to a designated contact person specified by each agency.

With respect to federal–state agency coordination, the Federal Reserve provides the appropriate state supervisory authority with notice of its intent to institute a formal corrective action against a bank holding company. Pursuant to 12 U.S.C. 1818(m), the federal regulatory agencies are required to provide the appropriate state supervisory authority with notice of their intent to institute a formal corrective action against a state-chartered bank. This requirement is made applicable to bank holding companies, their nonbank subsidiaries, and all institution-affiliated parties by 12 U.S.C. 1818(b)(3). (See SR-97-5.)

2110.0.3 GOLDEN PARACHUTE PAYMENTS AND INDEMNIFICATION PAYMENTS

The Crime Control Act authorizes the Federal Deposit Insurance Corporation (FDIC) to prohibit or limit, by order or regulation, any golden parachute payment or indemnification payment an insured depository institution or bank holding company makes to any institution-affiliated party of an insured depository institution. In general, an indemnification payment reimburses an insider for a specified liability or cost that the person incurred (for example, a bank might indemnify a director for the cost of legal fees or even, theoretically, penalties in connection with a Federal Reserve investigation or enforcement action). Golden parachute payments are severance payments or agreements to make severance payments that are paid or entered into at a time when the bank or holding company is in a troubled condition. These payments require the prior written approval of the institution's primary regulator and the FDIC. A golden parachute payment includes a glorified severance payment to a former insider that is paid under specified circumstances. Although both types of payments fall under the same statute, section 18(k) of the Federal Deposit Insurance Act (the FDI Act) (12 U.S.C. 1828(k)), the two types of payments are quite different and distinct. How-

ever, some of the restrictions on these payments are the same or similar. The FDIC's regulations generally prohibit insured depository institutions and their holding companies from making golden parachute payments except in certain circumstances.²

The FDIC's regulations define a golden parachute payment to mean any payment in the nature of compensation (or agreement to make such a payment) for the benefit of any current or former institution-affiliated party of an insured depository institution or its holding company that meets four criteria. First, the payment or agreement must be contingent on the termination of the institution-affiliated party's employment or association. Second, the payment or agreement is received on or after, or made in contemplation of, among other things, a determination that the institution or holding company is in a troubled condition under the regulations of the applicable banking agency.³ Third, the payment or agreement must be payable to an institution-affiliated party when an insured depository institution has been assigned a CAMELS composite rating of 4 or 5 under the Uniform Financial Institutions Rating System or when its holding company is assigned a composite rating of 4 or 5 or unsatisfactory under the Federal Reserve Bank Holding Company Rating System. Fourth, the payment or agreement is payable to an institution-affiliated party when the insured depository institution is subject to a proceeding to terminate or suspend its deposit insurance by the FDIC. Several other factors are also considered in determining whether a payment is a golden parachute.

The definition of a golden parachute payment also covers a payment made by a bank holding company that is not in a troubled condition to an institution-affiliated party of an insured depository institution subsidiary that is in a troubled condition, if the other criteria in the definition are met. This circumstance may arise when a bank holding company, as part of an agreement to acquire a troubled bank or savings associa-

2. See the FDIC's golden parachute regulations in 12 C.F.R. 359.

3. See section 225.71 of Regulation Y (12 C.F.R. 225.71), which defines a "troubled condition" for a state member bank or bank holding company as an institution that (1) has a composite rating of 4 or 5; (2) is subject to a cease-and-desist order or formal written agreement that requires action to improve the institution's financial condition, unless otherwise informed in writing by the Federal Reserve; or (3) is informed in writing by the Federal Reserve that it is in a troubled condition.

tion, proposes to make payments to the troubled institution's institution-affiliated parties that are conditioned on their termination of employment.⁴

A state member bank or bank holding company may make or enter into an agreement to make a golden parachute payment only (1) if the Federal Reserve, with the written concurrence of the FDIC, determines that the payment or agreement is permissible; (2) as part of an agreement to hire competent management in certain conditions, with the consent of the Federal Reserve and the FDIC as to the amount and terms of the proposed payment; or (3) pursuant to an agreement to provide a reasonable severance not to exceed 12 months' salary in the event of an unassisted change in control of the depository institution, with the consent of the Federal Reserve. In determining the permissibility of the payment, the Federal Reserve may consider a variety of factors, including the individual's degree of managerial responsibilities and length of service, the reasonableness of the payment, and any other factors or circumstances that would indicate that the proposed payment would be contrary to the purposes of the statute or regulations.

A state member bank or bank holding company requesting approval to make a golden parachute payment or enter into an agreement to make such a payment should submit its request simultaneously to the appropriate FDIC regional office and Reserve Bank. The request must detail the proposed payments and demonstrate that the state member bank or bank holding company does not possess and is not aware of any evidence that there is reasonable basis to believe, at the time the payment is proposed to be made, (1) that the institution-affiliated party receiving such a payment has committed any fraud, breach of fiduciary duty, or insider abuse or has materially violated any applicable banking law or regulation that had or is likely to have a material adverse effect on the bank or company; (2) that the individual is substantially responsible for the institution's insolvency or

troubled condition; and (3) that the individual has violated specified banking or criminal laws.

If a state member bank or bank holding company makes or enters into an agreement to make a golden parachute payment without prior regulatory approval when such approval is required, appropriate follow-up supervisory action should be taken. The follow-up could include an enforcement action requiring the offending institution-affiliated party to reimburse the institution for the amount of the prohibited payment. The appropriate Reserve Bank supervisory staff, and also the appropriate staff of the Board's Division of Banking Supervision and Regulation, should be notified and consulted on the golden parachute-related issues. (See SR-03-06.)

Bank holding companies or banks (including state member banks) may seek to indemnify their officers, directors, and employees from any judgments, fines, claims, or settlements, whether civil, criminal, or administrative. The bylaws of some bank holding companies or banks may have broadly worded indemnification provisions, or they may have entered into separate indemnification agreements that cover the ongoing activities of their own institution-affiliated parties. Such indemnification provisions may be inconsistent with federal banking law and regulations, as well as safe and sound banking practices.

Supervisory and examiner staff should be alert to the limitations and prohibitions on indemnification imposed by section 18(k) of the FDI Act⁵ and the regulations issued thereunder by the FDIC. The purpose of the law and regulations is to safeguard the assets of financial institutions and to preserve the deterrent effects of administrative enforcement actions by ensuring that individuals subject to final enforcement actions bear the costs of any judgments, fines, and associated legal expenses.

A "prohibited indemnification payment" includes any payment (or agreement to make a payment) by a bank holding company or federally insured bank to an institution-affiliated party to pay or reimburse such person for any liability or legal expense in any federal banking agency administrative proceeding that results in a final order or settlement in which the institution-affiliated party is assessed a civil money penalty, is removed or prohibited from banking, or is required to cease an action or take any affirmative action, including making restitution, with respect to the bank holding company or bank.⁶ In cases in which the institution-

4. The FDIC's regulations exclude from the definition of a golden parachute payment several types of payments, such as payments made pursuant to a qualified pension or retirement plan; a benefit plan or bona fide deferred compensation plan (which are further defined in the FDIC's regulations); or a severance plan that provides benefits to all eligible employees, does not exceed the base compensation paid over the preceding 12 months, and otherwise meets the regulatory definition of nondiscriminatory and other conditions in the FDIC's regulations.

5. See 12 U.S.C. 1828(k).

6. See 12 C.F.R. 359.

affiliated party prevails, the institution can make a payment if the board of directors determines that the payment is in the best interest of the institution and it does not have a material adverse effect on the institution's safety and soundness.

The law and the FDIC's regulations reinforce the Federal Reserve's long-standing policy that an institution-affiliated party who engages in misconduct *should not* be insulated from the consequences of his or her misconduct. From a safety-and-soundness perspective, a federally insured bank should not divert its assets to pay a fine or other final judgment issued against an institution-affiliated party for misconduct that presumably violates the bank's policy of compliance with applicable law, especially when the individual's misconduct has already harmed the bank.

The senior management of bank holding companies and federally insured banks should oversee the review of the banking organization's bylaws, as well as any outstanding indemnification agreements and insurance policies, to ensure that they conform with the requirements of federal law and regulations. If a bank holding company or state member bank fails to take appropriate action to bring its indemnification provisions into compliance with federal laws and regulations, appropriate follow-up supervisory action may be taken. As part of the supervisory process, which will include merger and acquisition applications, the Federal Reserve's supervisory and examiner staff will review identified agreements having indemnification-related issues for compliance with federal law and regulations. (See SR-02-17.)

The Crime Control Act does not specifically authorize the Board to prohibit these payments. Whenever the Board becomes aware of such payments by a bank holding company or a state member bank, however, it will refer these matters to the FDIC for action. Also, the Board may use its general cease-and-desist authority to prohibit such payments if they are deemed to be an unsafe or unsound practice.

2110.0.4 DISCIPLINARY ACTIONS AGAINST ACCOUNTANTS AND ACCOUNTING FIRMS PERFORMING CERTAIN AUDIT SERVICES

Section 36 of the Federal Deposit Insurance Act (the FDI Act) authorizes the federal bank and thrift regulatory agencies (the agencies)⁷ to take

disciplinary actions against independent public accountants and accounting firms that perform audit services covered by the act's provisions. Section 36, as implemented by part 363 of the FDIC's rules (12 C.F.R. 363), requires that each federally insured depository institution with total assets of \$500 million or more obtain an audit of its financial statements and an attestation on management's assertions concerning internal controls over financial reporting performed by an independent public accountant (the accountant). The insured depository institution must include the accountant's audit and attestation reports in its annual report.

The agencies jointly published amended rules pursuant to section 36 that set forth the practices and procedures to implement their authority to remove, suspend, or debar, for good cause,⁸ an accountant or firm from performing audit and attestation services for an insured state member bank, or from performing these services for a bank holding company that obtains audit services to satisfy statutory or regulatory requirements imposed by section 36 or part 363 on an insured subsidiary bank of that holding company. Immediate suspensions are permitted in limited circumstances. Also, an accountant or accounting firm is prohibited from performing audit services for the covered institution if an authorized agency has taken such a disciplinary action against the accountant or firm, or if the U.S. Securities and Exchange Commission or the Public Company Accounting Oversight Board (PCAOB) has taken certain disciplinary action against the accountant or firm.

The amended rules reflect the agencies' increasing concern about the quality of audits and internal controls for financial reporting. The rules emphasize the importance of maintaining high quality in the audits of the financial position and in the attestations of management assessments at federally insured depository institutions and bank holding companies.

the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision. The Board approved its rules on August 6, 2003 (see press release of August 8, 2003). The rules, which became effective October 1, 2003, are found in part 263, section 263.94, and subpart J, sections 263.400–263.405 (12 C.F.R. 263.94 and 12 C.F.R. 263.400–263.405).

8. The rules provide that certain violations of law, negligent conduct, reckless violations of professional standards, or lack of qualifications to perform auditing services may be considered good cause.

7. The Board of Governors of the Federal Reserve System,

2110.0.5 APPOINTMENT OF DIRECTORS AND SENIOR EXECUTIVE OFFICERS

Under section 32 of the Federal Deposit Insurance Act (12 U.S.C. 1831i) and subpart H of Regulation Y (12 C.F.R. 225.71 et seq.), any state member bank or bank holding company that is in a troubled condition or does not meet minimum capital standards must provide 30 days' written notice to the Board of Governors before appointing any new director or senior executive officer.⁹ This requirement also applies to any change in the responsibilities of any

current senior executive officer who is proposing to assume a different senior officer position. Subpart H of Regulation Y details the procedures for filing and the content of the notice. The Board may disapprove a notice if it finds that the competence, experience, character, or integrity of the proposed individual indicates that his or her service would not be in the best interest of the institution's depositors or the public. A disapproved individual or the institution that filed the notice may appeal the Federal Reserve's notice of disapproval under the procedures detailed in Regulation Y. The individual may not serve as a director or senior executive officer while the appeal is pending. If a state member bank or bank holding company that is in a troubled condition appoints a director or senior officer without the required 30 days' prior written notice, appropriate follow-up supervisory action should be taken.

9. Under extraordinary circumstances, the Board or Reserve Bank may permit an individual to serve as a director or senior executive officer before a notice is provided; however, this permission does not affect the Federal Reserve's authority to disapprove a notice within 30 days of its filing.

2120.0.1 INTRODUCTION

On January 17, 1978, the three federal bank supervisory agencies issued a joint policy statement to address their concern with regard to the potential for improper payments by banks and bank holding companies in violation of the Foreign Corrupt Practices Act and the Federal Election Campaign Act.

While not widespread, the federal bank supervisory agencies were concerned that such practices could reflect adversely on the banking system and constitute unsafe and unsound banking practices in addition to their possible illegality.

The potential devices for making political payments in violation of the law could include compensatory bonuses to employees, designated expense accounts, fees or salaries paid to officers, and preferential interest rate loans. In addition, political contributions could be made by providing equipment and services without charge to candidates for office. Refer to F.R.R.S. at 3-447.1 and 4-875.

2120.0.2 SUMMARY OF THE FEDERAL ELECTION CAMPAIGN ACT

The Federal Election Campaign Act (FECA), enacted in 1971, was designed to curb potential abuses in the area of federal election financing. In general, FECA regulates the making of campaign contributions and expenditures in connection with primary and general elections to federal offices. Since 1907, federal law has prohibited national banks from making contributions in connection with political elections. FECA does not specifically address the making of contributions and expenditures by banks or other corporations to advocate positions on issues that are the subjects of public referenda. As originally enacted, FECA required disclosure of contributions received or expenditures made; however, amendments to the law in 1974 and 1976 imposed additional limitations on contributions and expenditures as well. The 1974 amendments also established the Federal Election Commission (Commission) to administer FECA's provisions. The Commission is responsible for adopting rules to carry out FECA, for rendering advisory opinions, and for enforcing the Act. The Commission was reorganized as a result of the FECA Amendments of 1976, and it has issued regulations interpreting the statute (11 C.F.R.).

2120.0.3 BANKS AND THE FECA

National banks and other federally chartered corporations are specifically prohibited from making contributions or expenditures in connection with *any* election; other corporations, including banks and bank holding companies, may not make contributions or expenditures in connection with *federal* elections. However, corporations may establish and solicit contributions to "separate segregated funds" to be used for political purposes; these are discussed in greater detail below.

State member banks and bank holding companies may make contributions or expenditures that are consistent with state and local law in connection with state or local elections. Because many states have laws that prohibit or limit political contributions or expenditures by banks, familiarization with applicable state and local laws is a necessity. According to the joint policy statement of the three banking agencies, a political contribution must meet not only the requirement of legality but also the standards of safety and soundness. Thus, a contribution or expenditure, among other things, must be recorded properly on the bank's books, may not be excessive relative to the bank's size and condition, and may not involve self-dealing.

Banks may make loans to political candidates provided the loans satisfy the requirements set out below.

2120.0.4 CONTRIBUTIONS AND EXPENDITURES

The words "contribution" and "expenditure" are defined broadly by FECA and the Commission's regulations to include any loan, advance, deposit, purchase, payment, distribution, subscription or gift of money or anything of value which is made for the purpose of influencing the nomination or election of any person to federal office. The payment by a third party of compensation for personal services rendered without charge to a candidate or political committee is also treated as a contribution by FECA, although the term does *not* include the value of personal services provided by an individual without compensation on a volunteer basis.

Although loans are included in the definitions of contribution and expenditure under FECA, a

specific exemption is provided for bank loans made in the ordinary course of business and in accordance with applicable banking laws and regulations. The Commission's regulations provide, further, that in order for extensions of credit to a candidate, political committee or other person in connection with a federal election to be treated as a loan and not a contribution, they must be on terms substantially similar to those made to non-political debtors and be similar in risk and amount. The regulations also provide that a debt may be forgiven only if the creditor has treated it in a commercially reasonable manner, including making efforts to collect the debt which are similar to the efforts it would make with a non-political debtor. In considering whether a particular transaction is a contribution or a loan, it is expected that a factor would be the extent to which the creditor may have departed from its customary credit risk analysis.

FECA and the implementing regulation permit certain limited payments to candidates or their political committees. For example, payment of compensation to a regular employee who is providing a candidate or political committee with legal or accounting services which are solely for the purpose of compliance with the provisions of the FECA is exempt from the definitions of contribution and expenditure. The Commission's regulations also permit occasional use of a corporation's facilities by its shareholders and employees for volunteer political activity; however, reimbursement to the corporation is required for the normal rental charge for anything more than occasional or incidental use.

2120.0.5 SEPARATE SEGREGATED FUNDS AND POLITICAL COMMITTEES

FECA allows the establishment and administration by corporations of "separate segregated funds" to be utilized for political purposes. While corporate monies may not be used to make political contributions or expenditures, corporations may bear the costs of establishing and administering these separate segregated funds, including payment of rent for office space, utilities, supplies and salaries. These costs need not be disclosed under FECA. Commission regulations also permit a corporation to exercise control over its separate segregated fund.

In practice, most corporate segregated funds are administered by a group of corporate personnel, which, if the fund receives any contributions or makes any expenditures during a calendar year, constitutes a "political committee," as defined by FECA. As such, it is required to file a statement of organization with the Commission, to keep detailed records of contributions and expenditures, and to file with the Commission reports identifying contributions in excess of \$200 and candidates who are recipients of contributions from the fund.

Solicitation of contributions to corporate segregated funds by political committees must be accomplished within the precise limits established by FECA. All solicitations directed to corporate employees must satisfy the following requirements: (1) the contribution must be entirely voluntary; (2) the employee must be informed of the political purposes of the fund at the time of the solicitation; and (3) the employee must be informed of his right to refuse to contribute without reprisal. Beyond those basic requirements, FECA distinguishes between "executive and administrative" personnel and other employees. The former and their families may be solicited any number of times, while the latter and their families may only be solicited through a maximum of two written solicitations per year, and these solicitations must be addressed to the employees at their homes. Solicitations may also be directed to corporate stockholders and their families in the same manner as to executive and administrative personnel.

Although a corporation, or a corporation and its subsidiaries, may form several political committees, for purposes of determining the statutory limitations on contributions and expenditures, all committees established by a corporation and its subsidiaries are treated as one. Thus, the total amount which all political committees of a corporation and its subsidiaries may make to a single candidate is \$5,000 in any federal election (provided that the committees are qualified multicandidate committees under FECA).

2120.0.6 INSPECTION OBJECTIVES

1. To determine if the company has made improper or illegal payments in violation of either of these statutes, and regardless of legality, and whether they constitute an unsafe and unsound banking practice.

2. To determine if controls have been established to prevent improper payments in violation of these statutes.

2120.0.7 INSPECTION PROCEDURES

1. Determine whether the company and its nonbank subsidiaries have a policy prohibiting improper or illegal payments, bribes, kickbacks, or loans covered by either the Foreign Corrupt Practices Act or the Federal Election Campaign Act.

2. Determine how the policy, if any, has been communicated to officers, employees, or agents of the organization.

3. Review any investigation or study performed by, or on behalf of, the board of directors that evaluates policy or operations associated with the advancement of funds in possible violation of the statutes mentioned above. In addition, ascertain whether the organization has been investigated by any other government agency in connection with possible violations of the statutes and, if this is the case, review available materials associated with the investigation.

4. Review and analyze any internal or external audit program employed by the organization to determine whether the internal and external auditors have established appropriate routines to identify improper or illegal payments under the statutes. In connection with the evaluation of the adequacy of any audit program, the examiner should:

a. Determine whether the auditor is aware of the provisions of the Foreign Corrupt Practices Act and the Federal Election Campaign Act and whether audit programs are in place which check for compliance with these laws;

b. Review such programs and the results of any audits; and

c. Determine whether the program directs the auditor to be alert to unusual entries or charges which might indicate that improper or illegal payments have been made to persons or organizations covered by the statutes.

5. Analyze the general level of internal control to determine whether there is sufficient protection against improper or illegal payments being irregularly recorded on the organization's books.

6. Both the examiner and assistants should be alert in the course of their usual inspection procedures for any transactions, or the use of organization services or equipment, which might indicate a violation of the statutes. Examination personnel should pay particular attention to:

a. Commercial and other loans (including participations), which may have been made in connection with a political campaign, to assure that any such loans were made in the ordinary

course of business in accordance with applicable laws.

b. Income and expense ledger accounts for unusual entries including unusual debit entries (reductions) in income accounts or unusual credit entries (reductions) in expense accounts, significant deviations from the normal amount of recurring entries, and significant entries from an unusual source, such as a journal entry.

Procedure 7, following here, should only be undertaken in cases in which the examiner believes that there is some sufficient evidence indicating that improper or illegal payments have occurred. Such evidence would justify the implementation of these additional procedures.

7. Verification of audit programs and internal controls.

a. Randomly select charged-off loan files and determine whether any charged-off loans were made to (i) foreign government officials or other persons or organizations covered by the Foreign Corrupt Practices Act, or (ii) persons or organizations covered under the Federal Election Campaign Act.

b. For those significant income and expense accounts on which verification procedures have not been performed: (i) prepare an analysis of the account for the period since the last examination, preferably by month, and note any unusual fluctuations for which explanations should be obtained, and (ii) obtain an explanation for significant fluctuations or any unusual items through discussions with organization personnel and review of supporting documents.

2120.0.8 APPARENT VIOLATIONS OF THE STATUTES

Where violations of law or unsafe and unsound banking practices result from improper payments, the Federal Reserve System should exercise its full legal authority, including cease-and-desist proceedings and referral to the appropriate law enforcement agency for further action, to ensure that such practices are terminated. In appropriate circumstances, the fact that such payments have been made may reflect so adversely on an organization's management as to be a relevant factor in connection with the consideration of applications submitted by the organization.

In addition, the Reserve Bank should forward any information on apparent violations of the Federal Election Campaign Act to the Federal

Election Commission. The Federal Election Commission is authorized to enforce FECA. The Commission may be prompted to investigate possible illegal payments by either a sworn statement submitted by an individual alleging a violation of the law, or on its own initiative based on information it has obtained in the course of carrying out its supervisory responsibilities. When the Commission determines that there is probable cause to believe a violation has occurred or is about to occur, it endeavors to enter into a conciliation agreement with the violator. If, however, it finds probable cause to believe that a willful violation has occurred or is about to occur, it may refer the matter directly to the Department of Justice for possible criminal prosecution, without having first attempted conciliation.

If informal means of conciliation fail, the Commission may begin civil proceedings to obtain relief. Should the Commission prevail, a maximum penalty of a fine equal to the greater

of \$10,000 or 200 percent of the amount of the illegal payment may be imposed. Knowing and willful violations involving over \$1,000 may subject the violator to a fine, up to the greater of \$25,000 or 300 percent of the illegal payment, and imprisonment for up to one year.

2120.0.9 ADVISORY OPINIONS

Any person, including a bank or a corporation, may request an advisory opinion concerning the application of FECA or of the Commission's regulations to a specific transaction or activity in which that person wishes to engage. The Commission must render such advisory opinion within 60 days from receipt of a complete request. Banks or bank employees wishing to engage in activity which may be regulated by FECA are encouraged to request advisory opinions from the Commission.

Techniques, practices, and tools for credit-risk management are evolving rapidly, as are the challenges that banking organizations face in their business-lending activities. For larger institutions, the number and geographic dispersion of their borrowers make it increasingly difficult for such institutions to manage their loan portfolios simply by remaining closely attuned to the performance of each borrower. As a result, one increasingly important component of the systems for controlling credit risk at larger institutions is the identification of gradations in credit risk among their business loans, and the assignment of internal credit-risk ratings to loans that correspond to these gradations.¹ The use of such an internal rating process is appropriate and necessary for sound risk management at large institutions. See SR-98-25.

Certain elements of internal rating systems are necessary to support sophisticated credit-risk management. Supervisors and examiners, both in their on-site inspections and other contacts with banking organizations, need to emphasize the importance of development and implementation of effective internal credit-rating systems and the critical role such systems should play in the credit-risk-management process at sound large institutions. See SR-98-18 with regard to lending standards for commercial loans.

Internal rating systems are currently being used at large institutions for a range of purposes. At one end of this range, they are primarily used to determine approval requirements and identify problem loans. At the other end, they are an integral element of credit-portfolio monitoring and management, capital allocation, the pricing of credit, profitability analysis, and the detailed analysis to support loan-loss reserving. Internal rating systems being used for these latter purposes should be significantly richer and more robust than systems used for the purposes such as approval requirements and identifying problem loans.

As with all material financial institutional activities, a sound risk-management process should adequately illuminate the risks being taken. It should also cause management to initiate and apply appropriate controls that will allow the institution to balance risks against returns. Furthermore, the process should pro-

vide information as to the institution's overall appetite for risk, giving due consideration to the uncertainties faced by lenders and the long-term viability of the institution. Accordingly, large banking organizations should have strong risk-rating systems which should take proper account of gradations in risk. They should also consider (1) the overall composition of portfolios in originating new loans, (2) assessing overall portfolio risks and concentrations, and (3) reporting on risk profiles to directors and management. Moreover, such rating systems should also play an important role in (1) establishing an appropriate level for the allowance for loan and lease losses, (2) conducting internal analyses of loan and relationship profitability, (3) assessing capital adequacy, and possibly (4) administering performance-based compensation.

Examiners should evaluate the adequacy of internal credit-risk-rating systems, including ongoing development efforts, when assessing both asset quality and the overall strength of risk management at large institutions. Recognizing that a strong risk-rating system is an important element of sound credit-risk management for such institutions, examiners should specifically evaluate the adequacy of internal risk-rating systems at large institutions as one factor in determining the strength of credit-risk management. In doing so, examiners should be cognizant that an internal risk-identification and -monitoring system should be consistent with the nature, size, and complexity of the banking organization's activities.

2122.0.1 APPLICATION TO LARGE BANK HOLDING COMPANIES

The guidance provided in this section should be applied to all "large" bank holding companies. For this purpose, examiners should treat an institution as being "large" if its lending activities are sufficient in scope and diversity such that informal processes that rely on keeping track of the condition of individual borrowers are inadequate to manage its loan portfolio. In this context, those institutions with significant involvement in relevant secondary-market credit activities, such as securitization of business loans or credit derivatives, should have more elaborate and formal approaches for managing

1. For information on current practices in risk rating among large banking organizations, see "Credit Risk Rating at Large U.S. Banks," *Federal Reserve Bulletin*, November 1998, pp. 897-921.

the risks associated with these activities.² Whether or not they are active in such secondary-market credit activities, however, larger and complex institutions typically would require a more structured and sophisticated set of arrangements for managing credit risk than smaller regional or community institutions. In performing their evaluation, examiners should also consider whether other elements of the risk-management process might compensate for any specific weaknesses attributable to an inadequate rating system.

In addition, examiners should review internal management information system reports to determine whether the portion of loans in lower-quality pass grades has grown significantly over time, and whether any such change might have negative implications for the adequacy of risk management or capital at the institution. Examiners should also consider whether a significant shift toward higher-risk pass grades, or an overall large proportion of loans in a higher-risk pass grade, should have negative implications for the institution's asset-quality rating, including the adequacy of the loan-loss reserve. To some extent, such reviews are already an informal part of the current inspection process. Examiners should also continue the longstanding practice of evaluating trends in categories associated with problem assets.

Examiners should discuss these issues, including plans to enhance existing credit-rating systems, with bank management and directors. Inspection comments on the adequacy of risk-rating systems and the credit quality of the pass portfolio should be incorporated within the inspection report, noting deficiencies where appropriate.

2122.0.2 SOUND PRACTICES IN FUNCTION AND DESIGN OF INTERNAL RATING SYSTEMS

A consistent and meaningful internal risk-rating system is a useful means of differentiating the degree of credit risk in loans and other sources of credit exposure. This consistency and meaning is rooted in the design of the risk-grading

system itself. Although assigning such risk ratings—as with ratings issued by public rating agencies—necessarily involves subjective judgment and experience, a properly designed rating system will allow this judgment to be applied in a structured, more or less formal manner.

Credit-risk ratings are designed to reflect the quality of a loan or other credit exposure, and thus, explicitly or implicitly, the loss characteristics of that loan or exposure. Increasingly, large institutions link definitions to one or more measurable outcomes such as the probability of a borrower's default or expected loss (which couples the probability of default with some estimate of the amount of loss to be incurred in the event a default occurs). In addition, credit-risk ratings may reflect not only the likelihood or severity of loss but also the variability of loss over time, particularly as this relates to the effect of the business cycle. Linkage to these measurable outcomes gives greater clarity to risk-rating analysis and allows for more consistent evaluation of performance against relevant benchmarks. The degree of linkage varies among institutions, however.

Although the degree of formality may vary, most institutions distinguish the risks associated with the borrowing entity (essentially default risk) from the risks stemming from a particular transaction or structure (more oriented to loss in event of default). In documenting their credit-administration procedures, institutions should clearly identify whether risk ratings reflect the risk of the borrower or the risk of the specific transaction. In this regard, many large institutions currently assign both a borrower and facility rating, requiring explicit analysis of both the loan's obligor and how the structure and terms of the particular loan being evaluated (that is, collateral or guarantees) might strengthen or weaken the quality of the loan.

The rating scale chosen should meaningfully distinguish gradations of risk within the institution's portfolio so that there is clear linkage to loan quality (and/or loss characteristics), rather than just to levels of administrative attention.³

2. Secondary-market credit activities generally include loan syndications, loan sales and participations, credit derivatives, and asset securitizations, as well as the provision of credit enhancements and liquidity facilities to such transactions. Such activities are described further in section 2129.05 and in SR-97-21.

3. See the December 1993 Interagency Policy Statement on the Allowance for Loan and Lease Losses in section 2010.7. The policy does not apply to bank holding companies directly. As they supervise their respective FDIC-insured financial institution subsidiaries, bank holding companies are advised to apply this supervisory guidance. Internal risk-rating systems and/or supporting documentation should be sufficient to enable examiners to reconcile the totals for the various internal risk ratings under the institution's system to the federal banking agencies' categories for those loans graded below "pass" (that is, loans classified as special mention, substandard, doubtful, or loss).

To do so, the rating system should be designed to address the range of risks typically encountered in the underlying businesses involving the institution's loan portfolio. One reflection of this degree of meaning is that there should be a fairly wide distribution of portfolio outstandings or exposure across grades, unless the portfolio is genuinely homogeneous. Many current rating systems include grades intended solely to capture credits needing heightened administrative attention, such as so-called "watch" grades. Prompt and systematic tracking of credits in need of such attention is an essential element of managing credit risk. However, to the extent that loans in need of attention vary in the risk they pose, isolating them in a single grade may detract from that system's ability to indicate risk. One alternative is the use of separate or auxiliary indicators for those loans needing such administrative attention.

Institutions whose risk-rating systems are least effective in distinguishing risk use them primarily to identify loans that are classified for supervisory purposes or that bank management otherwise believes should be given increased attention (that is, "watch" loans). Such systems contribute little or nothing to evaluating the bulk of loans in the portfolio—that is, loans for which no specific difficulties are present or foreseen. In some cases these institutions might also establish one or two risk grades for loans having very little perceived risk, such as those collateralized by cash or liquid securities or those to "blue-chip" private firms. Although the foregoing gradations are well-defined in terms of the relative credit risk they represent, the consequence for these least effective systems is that the bulk of the loan portfolio falls into one or two remaining broad risk grades—representing "pass" loans that are neither extremely low risk nor current or emerging problem credits—even though such grades may encompass many different levels of underlying credit risk.

2122.0.3 SOUND PRACTICES IN ASSIGNING AND VALIDATING INTERNAL RISK RATINGS

Experience and judgment, as well as more objective elements, are critical both in making the credit decision and in assigning internal risk grades. Institutions should provide clear and explicit criteria for each risk grade in their credit policies, as well as other guidance to promote consistency in assigning and reviewing grades. Criteria should be specified, even when addressing subjective or qualitative considerations, that

allow for consistent assignment of risk grades to similarly risky transactions. Such criteria should include guidance both on the factors that should be considered in assigning a grade and how these factors should be weighed in arriving at a final grade.

Such criteria can promote consistency in assessing the financial condition of the borrower and other objective indicators of the risk of the transaction. One vehicle for enhancing the degree of consistency and accuracy is the use of "guidance" or "target" financial ratios or other objective indicators of the borrower's financial performance as a point of comparison when assigning grades. Banking organizations may also provide explicit linkages between internal grades and credit ratings issued by external parties as a reference point, for example, senior public debt ratings issued by one or more major ratings agencies. The use of default probability models, bankruptcy scoring, or other analytical tools can also be useful as supporting analysis. However, the use of such techniques requires institutions to identify the probability of default that is "typical" of each grade. The borrower's primary industry may also be considered, both in terms of establishing the broad characteristics of borrowers in an industry (for example, degree of vulnerability to economic cycles or long-term favorable or unfavorable trends in the industry) and of a borrower's position within the industry.

In addition to quantitative indications and tools, credit policies and ratings definitions should also cite qualitative considerations that should affect ratings. These might include factors such as (1) the strength and experience of the borrower's management, (2) the quality of financial information provided, and (3) the access of the borrower to alternative sources of funding. Addressing qualitative considerations in a structured and consistent manner when assigning a risk rating can be difficult. It requires experience and business judgment. Nonetheless, adequate consideration of these factors is important to assessing the risk of a transaction appropriately. In this regard, institutions may choose to cite significant and specific points of comparison for qualitative factors in describing how such considerations can affect the rating (for example, whether a borrower's financial statements have been audited or merely compiled by its accountants, or whether collateral has been independently valued).

Although the rating process requires the exercise of good business judgment and does not

lend itself to formulaic solutions, some formalization of the process can be helpful in promoting accuracy and consistency. For example, the use of a “risk-ratings analysis form” can be important (1) in providing a clear *structure* for identifying and addressing the relevant qualitative and quantitative elements to be considered in determining internal risk grades, and (2) for *documenting* how those grades were set by requiring analysis or discussion of key quantitative and qualitative elements of a transaction.

Risk ratings should be reviewed, if not assigned, by independent credit-risk management or loan-review personnel both at the inception of a transaction and periodically over the life of the loan.⁴ Such independent reviewers should reflect a level of experience and business judgment that is comparable to that of the line staff responsible for assigning and reviewing initial risk grades. Among the elements of such independent review should be whether risk-rating changes (and particularly downgrades) have been timely and appropriate. Such independent reviews of individual ratings support the discipline of the rating assignments by allowing management to evaluate the performance of those individuals assigning and reviewing risk ratings. If an institution relies on outside consultants, auditors, or other third parties to perform all or part of this review role, such individuals should have a clear understanding of the institution’s “credit culture” and its risk-rating process, in addition to commensurate experience and competence in making credit judgments.

Finally, institutions should track performance of grades over time to gauge migration, consistency, and default/loss characteristics to allow for evaluation of how well risk grades are being assigned. Such tracking also allows for *ex post* analysis of the loss characteristics of loans in each risk grade.

Because ratings are typically applied to different types of loans—for example, to both commercial real estate and commercial loans—it is important that each grade retains the same meaning to the institution (in terms of overall risk) across the exposure types. Such comparability allows management to treat loans in high-risk grades as a potential concentration of credit risk and to manage them accordingly. It also allows management and supervisors to monitor the overall degree of risk, and changes in the

risk makeup, of the portfolio. Such consistency further permits risk grades to become a reliable input into portfolio credit-risk models.⁵

2122.0.4 APPLICATION OF INTERNAL RISK RATINGS TO INTERNAL MANAGEMENT AND ANALYSIS

As noted earlier, robust internal credit-rating systems are an important element in several key areas of the risk-management process. Although nearly all large institutions currently use risk ratings, many of the institutions need to further develop these systems so that they provide accurate and consistent indications of risk and sufficient granularity—finer distinctions among risks, especially for riskier assets. Described below are approaches to risk management and analysis that are based on robust internal risk-rating systems and that are currently being used at some banking organizations. These techniques appear to be emerging as sound practices in the use of risk ratings.

2122.0.4.1 Limits and Approval Requirements

Many large institutions have different approval requirements and thresholds for different internal grades, allowing less scrutiny and greater latitude in decision making for loans with lesser risk.⁶ While this appears reasonable, institutions should also consider whether the degree of eased approval requirements (or the degree to which limits are higher) is supported by the degree of reduced risk and uncertainty associated with these lower-risk loans. If not, lesser requirements may provide incentives to rate loans too favorably, particularly in the current benign economic environment, with resulting underassessment of transaction risks.

2122.0.4.2 Reporting to Management on Credit-Risk Profile of the Portfolio

As part of reports that analyze the overall credit risk in the institution’s portfolio, management

5. For a discussion of these models and the role played by internal credit-risk ratings, see the May 1998 Federal Reserve System report, “Credit Risk Models at Major U.S. Banking Institutions: Current State of the Art and Implications for Assessments of Capital Adequacy,” prepared by the Federal Reserve System Task Force on Internal Credit-Risk Models.

6. See section 2160.0 for more general guidance involving risk evaluation and control.

4. See section 2010.10 regarding internal loan review.

and directors should receive information on the profile of actual outstanding balances, exposures, or both by internal risk grade.⁷ Such information can thus be one consideration among others, such as concentrations in particular industries or borrower types, in evaluating an institution's appetite for originating various types of new loans. Portfolio analysis may range from simple tallies of aggregates by risk grade to a formal model of portfolio behavior that incorporates diversification and other elements of the interaction among individual loan types. In this more complex analysis, gradations of risk reflect only one among many dimensions of portfolio risk, along with potential industry concentrations, exposure to an unfavorable turn in the business cycle, geographical concentrations, and other factors.

2122.0.4.3 Allowance for Loan and Lease Losses

The makeup of the loan portfolio and the loss characteristics of each grade—including individual pass grades—should be considered, along with other factors, in determining the adequacy of an institution's allowance for loan and lease losses.⁸

2122.0.4.4 Pricing and Profitability

In competitive marketplaces, it is properly the role of bankers rather than supervisors to judge the appropriateness of pricing, particularly with regard to any single transaction or group of transactions. One way that some institutions choose to discipline their overall pricing practices across their portfolio is by incorporating risk-rating-specific loss factors in the determination of the minimum profitability requirements (that is, "hurdle rates"). Following this practice may render such institutions less likely to price loans well below the level indicated by the long-term risk of the transaction. Given that bank lending, particularly pricing, can be highly competitive, the application of appropriate disciplines to pricing, in conjunction with a clear and

meaningful assessment of the risks inherent in each transaction and in the portfolio as a whole, can be important tools in avoiding competitive future excessive practices.

2122.0.4.5 Internal Allocation of Capital

Those institutions that choose to allocate capital may use their internal risk grades as important inputs in identifying appropriate internal capital allocations. Use of appropriately allocated capital in evaluating profitability offers many advantages, including the incentive to consider both risk and return in making lending decisions rather than merely rewarding loan volume and short-term fee revenue. Under appropriate circumstances—that is, where internal capital allocations are sufficiently consistent, rigorous, and well-documented—such allocations may also be considered as a source of input for supervisory evaluations of capital adequacy.⁹

2122.0.5 INSPECTION OBJECTIVES

1. To evaluate whether the internal risk-identification and -monitoring systems are consistent with—
 - a. sound practices in the function and design of internal rating systems;
 - b. sound practices in assigning and reviewing internal risk ratings; and
 - c. the nature, size, and complexity of activities within the banking organization.
2. To determine whether the level and volume of lower-quality pass grades of loans have grown significantly over time and whether any such trends should—
 - a. have adverse implications for determining the adequacy of risk management and capital, and
 - b. materially alter the institution's asset-quality ratings and valuations, and the examiner's evaluation of the adequacy of the allowance for loan and lease losses.
3. To determine whether improvements are needed in the credit-risk-management process and to discuss them with the board of directors and senior management.
4. To document the extent to which the institution has adopted current and emerging sound

7. See section 2010.2 regarding a bank holding company's supervision of its subsidiaries and loan administration. See also the more general financial analysis sections 4020.2 and 4060.1 with regard to evaluating the asset quality of subsidiary financial institutions and evaluating the asset quality of the holding company on a consolidated basis.

8. See footnote 3. Section 2010.7 emphasizes the bank holding company's responsibility as it supervises its subsidiaries with respect to each entity maintaining an adequate allowance for loan and lease losses.

9. See sections 4060.3 and 4060.4 regarding the evaluation of capital adequacy of bank holding companies.

practices in the use of internal ratings information in internal risk management and analysis.

5. To incorporate the examiner's evaluation of sound credit-risk-rating practices into the assessment of management and capital adequacy.

2122.0.6 INSPECTION PROCEDURES

1. Determine whether the institution is considered "large" for purposes of applying this section's guidance and procedures.
2. Evaluate the adequacy of internal credit-risk-rating systems, including ongoing development efforts, when assessing the quality and overall strength of risk management. Give particular attention to the following practices:
 - a. *Function and design of internal rating systems.*
 - Ascertain whether the rating scale meaningfully distinguishes gradations of risk within the institution's portfolio evidencing clear linkage to loan quality and/or loss characteristics.
 - Determine if the design of the rating system has an adequate number of internal ratings to distinguish among levels of risks in its portfolio, and whether the grades used address the range of risks typically encountered in the underlying businesses of the institution.
 - Determine whether loans or exposures are broadly distributed across the internal grades.
 - Establish if there are "watch grades" that are intended to capture loans needing heightened administrative attention, or whether separate or auxiliary indicators are used for such loans.
 - Determine whether credit-risk-rating definitions are linked to one or more measurable outcomes (for example, the probability of a borrower's default or expected loss).
 - b. *Sound practices in assigning internal risk ratings.*
 - Determine whether loan policies provide clear and explicit criteria for each risk grade as to the risk factors that are to be considered in assigning a grade

with respect to—

- financial analysis, including whether reference financial ratios or other objective indicators are used to indicate the borrower's financial performance;
 - explicit linkages between the internal grades assigned and credit ratings issued by external parties (for example, senior public debt ratings by major rating agencies);
 - default probability models, bankruptcy scoring, or other analytical tools used;
 - analysis of a borrower's primary industry, considering both the broad characteristics of borrowers within that industry and the borrower's position within that industry; and
 - qualitative factors (for example, the quality of the financial information that is provided, the borrower's access to alternative sources of funding, whether the financial statements were audited or merely compiled, or whether collateral was independently valued).
- Determine whether loan policies provide clear and explicit guidance as to how these risk factors should be weighed in arriving at a final grade.
 - Determine whether the ratings assignment is well documented, possibly including the use of a risk-rating form to provide formalization and standardization of the quantitative and qualitative criteria elements used in rating borrowers and/or transactions.
 - Establish whether risk ratings are independently reviewed at the inception of a loan and periodically over the life of a loan, and whether risk-rating changes have been timely and appropriate (particularly downgrades).
 - Ascertain whether the performance of rating grades is tracked over time to evaluate migration, consistency, and default/loss characteristics and trends.
- c. *Application of internal risk ratings to internal management and analysis.*
 - Determine whether loan-approval requirements for each grade appear to be supported by the degree of risk and uncertainty associated with the respective loans.
 - Review internal management information system reports and determine

- whether such reporting is adequate for the institution.
- Ascertain if the risk-rating-specific loss factors are used to determine risk pricing, minimum profitability requirements, and capital adequacy needs, and document the institution's progress in this regard.
3. Determine whether other risk elements may compensate for any specific weaknesses attributable to an inadequate rating system.
 4. Review internal management information system reports to determine whether the portion of loans in lower-quality pass grades has grown significantly over time, and whether any such change might have negative implications for the adequacy of risk management or capital at the institution.
 5. Determine whether a significant shift toward higher-risk pass grades, or an overall large proportion of loans in a higher-risk pass grade, should have negative implications for the institution's asset-quality rating, including the adequacy of the loan-loss reserve.
 6. Evaluate trends in risk-rating categories associated with problem assets.
 7. Discuss the results of the evaluations with management, including whether there are any plans to enhance existing credit-rating systems.
 8. Prepare written comments for the inspection report on the adequacy of risk-rating systems and the credit quality of the pass portfolio, noting any deficiencies.

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2006, footnote 3 was revised to include a reference to SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations."

2124.0.1 FULL-SCOPE INSPECTIONS AND TRANSACTION TESTING

Full-scope inspections under a risk-focused approach must be performed to fulfill the objectives of a full-scope inspection. Inspections can be adjusted, depending on the circumstances of the banking organization being evaluated. At a minimum, full-scope inspections should include sufficient procedures to reach an informed judgment on the assigned ratings for the factors addressed by the bank holding company RFI/C(D) rating system. The business of banking is fundamentally predicated on taking risks, and the components of the supervisory rating system are strongly influenced by risk exposure. Consequently, the procedures for full-scope inspections focus to a large degree on assessing the types and extent of risks to which a bank holding company and its subsidiaries are exposed, evaluating the organization's methods of managing and controlling its risk exposures, and ascertaining whether management and directors fully understand and are actively monitoring the organization's exposure to those risks. Given the Federal Reserve's responsibility for ensuring compliance with banking laws and regulations, inspections also include an appropriate level of compliance testing. (See SR-96-14.)

Historically, Federal Reserve examinations and inspections have placed significant reliance on transaction-testing procedures. For example, to evaluate the adequacy of the credit-administration process, assess the quality of loans, and ensure the adequacy of the allowance for loan and lease losses (ALLL), a high percentage of large loan amounts have traditionally been reviewed individually. Similarly, the assessment of the accuracy of regulatory reporting often has involved extensive review of reconciliations of a bank holding company's general ledger to the FR Y-9C report and other FR Y-series reports. Other similar procedures typically have been completed to ascertain compliance with applicable laws and regulations, to

determine whether the banking and nonbank subsidiaries are following their internal policies and procedures and those of the bank holding company, and to evaluate the adequacy of internal control systems.

Transaction testing remains a reliable and essential inspection technique for assessing a banking organization's condition and verifying its adherence to internal policies, procedures, and controls. In a highly dynamic banking market, however, such testing is not sufficient for ensuring continued safe and sound operations. As evolving financial instruments and markets have enabled banking organizations to rapidly reposition their portfolio risk exposures, periodic assessments of a banking organization's condition, based on transaction testing alone, cannot keep pace with the moment-to-moment changes occurring in financial risk profiles.

To ensure that banking organizations have in place the processes necessary to identify, measure, monitor, and control their risk exposures, inspections must focus more on evaluating the appropriateness of a very high degree of transaction testing. Under a risk-focused approach, the degree of transaction testing should be reduced when internal risk-management processes are determined to be adequate or risks are considered minimal. However, when an organization's risk-management processes or internal controls are considered inappropriate (such as when there is an inadequate segregation of duties or when on-site testing determines that such processes or controls are lacking), additional transaction testing sufficient to fully assess the degree of risk exposure in that function or activity must be performed. In addition, if an examiner believes that a banking organization's management is being less than candid, has provided false or misleading information, or has omitted material information, then substantial on-site transaction testing should be undertaken and appropriate follow-up actions should be initiated, including the requirement of additional audit work and appropriate enforcement actions.

In most cases, full-scope inspections are conducted on or around a single date. This approach is appropriate for the vast majority of banking organizations supervised by the Federal Reserve. However, as the largest banking organizations have undergone considerable geographic expansion and the range of their products has become more diversified, coordinating

the efforts of the large number of examiners necessary to conduct inspections at a single point in time has become more difficult. To avoid causing undue burden on these banking organizations, full-scope inspections for many large companies are conducted over the course of a year, rather than over a span of weeks, in a series of targeted reviews focusing on one or two significant aspects of the bank holding company's operations. This approach to conducting full-scope inspections provides more-continuous supervisory contact with the largest bank holding companies and facilitates improved coordination of inspection efforts with other federal banking agencies. It also provides more flexibility in the allocation of examiner resources, which has been especially important as the complexity of banking markets and products has increased and led to the development of cadres of examiners with specialized skills.

2124.0.2 RISK-FOCUSED INSPECTIONS

Developments in the business of banking have increased the range of banking activities, heightening demands on examiner resources and making the need for examiners to effectively focus their activities on areas of the greatest risk even more crucial. Improved in-office planning can result in more efficient and effective on-site inspections that are focused on risks particular to specific organizations of the bank holding company. Such improved planning minimizes supervisory burden and provides for the close coordination of the supervisory efforts of the Federal Reserve with those of the other state and federal banking agencies. Improved planning also allows information requests to be better tailored to the specific organizations.

2124.0.2.1 Risk Assessment

To focus procedures on the areas of greatest risk, a risk assessment should be performed before on-site supervisory activities. The risk-assessment process highlights both the strengths and vulnerabilities of a bank holding company and provides a foundation from which to determine the procedures to be conducted during an inspection. Risk assessments identify the financial activities in which a banking organization has chosen to engage, determine the types and

quantities of risks to which these activities expose the organization, and consider the quality of management and control of these risks. At the conclusion of the risk-assessment process, a preliminary supervisory strategy can be formulated for the bank holding company and its subsidiaries and for each of their major activities. Naturally, those activities that are most significant to the organization's risk profile or that have inadequate risk-management processes or rudimentary internal controls represent the highest risks and should undergo the most rigorous scrutiny and testing.

Identifying the significant activities of a bank holding company, including those activities conducted off-balance-sheet, should be the first step in the risk-assessment process. These activities may be identified through the review of prior bank examination and bank holding company inspection reports and workpapers, surveillance and monitoring reports generated by Board and Reserve Bank staffs, Uniform Bank Performance Reports and Bank Holding Company Performance Reports, regulatory reports (for example, bank Call Reports and the FR Y-9C and FFIEC 002 reports), and other relevant supervisory materials. When appropriate, the following information should be reviewed: strategic plans and budgets, internal management reports, board of directors information packages, correspondence and minutes of meetings between the bank holding company and the Reserve Bank, annual reports and quarterly SEC filings, press releases and published news stories, and stock analysts' reports. In addition, examiners should hold periodic discussions with management to gain insight into their latest strategies or plans for changes in activities or management processes.

Once significant activities have been identified, the types and quantities of risks to which these activities expose the bank holding company should be determined. This allows examiners to identify high-risk areas that should be emphasized in conducting inspections. The types of risk that may be encountered in banking activities individually or in various combinations include, but are not limited to, credit, market, liquidity, operational, legal, and reputational risks.¹ For example, lending activities are a primary source of credit and liquidity risks. They may also present considerable market risk (if the bank holding company or its subsidiaries are originating mortgage loans for later resale), interest-rate risk (if fixed-rate loans are being granted), or legal risk (if loans are poorly docu-

1. Appendix A defines these primary risk types.

mented). Similarly, the asset-liability management function has traditionally been associated with exposures to interest-rate and liquidity risks. Operational risks are also associated with many of the transactions undertaken by this function, and market risks are associated with the investments and hedging instruments commonly used by the asset-liability management function. The quantity of risks associated with a

given activity may be indicated by the volume of assets and off-balance-sheet items that the activity represents or by the portion of revenue for which the activity accounts. Activities that are new to an organization or for which exposure is not readily quantified may also represent high risks that should be evaluated during inspections.

A number of analytical techniques may be used to estimate the quantity of risk exposure, depending on the activity or risk type being evaluated. For example, to assess the quantity of credit risk in loans and commitments, the level of past-due loans, internally classified or watch list loans, nonperforming loans, and concentrations of credit exposure to particular industries or geographic regions should be considered (see section 2010.2). In addition, as part of the assessment of credit risk, the adequacy of the overall ALLL can be evaluated by considering trends in past-due, special-mention, and classified loans; historic charge-off levels; and the coverage of nonperforming loans by the ALLL. Analytical techniques for gauging the exposure of a bank holding company and its subsidiaries to interest-rate risk, as part of the evaluation of asset-liability management practices, can include a review of the historical performance of net interest margins, as well as the results of internal projections of future earnings performance or net economic value under a variety of plausible interest-rate scenarios. The measurement of the quantity of market risk arising from trading in cash and derivative instruments may take into account the historic volatility of trading revenues, the results of internal models calculating the level of capital and earnings at risk under various market scenarios, and the market value of contracts relative to their notional amounts.

Once the types and quantities of risk in each activity have been identified, a preliminary assessment of the banking organization's process to identify, measure, monitor, and control these risks should be completed. This evaluation should be based on findings from previous examination and inspection activities conducted by the Reserve Bank or other banking agencies, supplemented by the review of internal policies and procedures, management reports, and other documents that provide information on the extent and reliability of internal risk-management systems. Sound risk-management processes vary from one banking organization to another, but generally include four basic elements for each individual financial activity or function and for the organization in aggregate. These elements are (1) active board and senior

management oversight; (2) adequate policies, procedures, and limits; (3) adequate risk-measurement, risk-monitoring, and management information systems; and (4) comprehensive internal audits and controls. (See section 4070.1 and SR-95-51.)

The preliminary evaluation of the risk-management process for each activity or function also helps determine the extent of transaction testing that should be planned for each area. If the organization's risk-management process appears appropriate and reliable, then a limited amount of transaction testing may well suffice. If, on the other hand, the risk-management process appears inappropriate or inadequate to the types and quantities of risk in an activity or function, examiners should plan a much higher level of transaction testing. They should also plan to conduct the most testing in those areas that comprise the most significant portions of a bank holding company's activities and, thus, typically represent high potential sources of risk.

2124.0.2.2 Preparation of a Scope Memorandum

Once the inspection planning and risk-assessment processes are completed, a scope memorandum should be prepared. A scope memorandum provides a detailed summary of the supervisory strategy for a bank holding company and assigns specific responsibilities to inspection team members. A scope memorandum should be tailored to the size and complexity of the bank holding company that is subject to review, define the objectives of each inspection, and generally include—

1. a summary of the results of the prior inspection;
2. a summary of the strategy and significant activities of the banking organization, including its new products and activities;
3. a description of the bank holding company's organization and management structure;
4. a summary of performance since the prior inspection;
5. a statement of the objectives of the current inspection;
6. an overview of the activities and risks to be addressed by the inspection; and
7. a description of the procedures that are to be performed at the inspection.

For large complex organizations operating in a number of states or internationally, the planning and risk-assessment processes are necessarily more complicated. The traditional scope memorandum may have to be broadened into a more extensive set of planning documents to reflect the unique requirements of complex bank holding companies. Examples of these planning documents include annual consolidated analyses, periodic risk assessments, and supervisory plans.

2124.0.2.3 On-Site Procedures

The amount of review and transaction testing necessary to evaluate particular functions or activities of a bank holding company generally depends on the quality of the process the company uses to identify, measure, monitor, and control the risks of an activity. When the risk-management process is considered sound, further procedures are limited to a relatively small number of tests of the integrity of the management system. Once the integrity of the management system is verified through limited testing, conclusions on the extent of risks within the function or activity are drawn based on internal management assessments of those risks rather than on the results of more-extensive transaction testing by examiners. On the other hand, if initial inquiries into the risk-management system—or efforts to verify the integrity of the system—raise material doubts as to the system's effectiveness, no significant reliance should be placed on the system. A more extensive series of tests should be undertaken to ensure that the banking organization's exposure to risk from a given function or activity can be accurately gauged and evaluated. More-extensive transaction testing is also generally completed for activities that are much more significant to a bank holding company than is completed for other areas, although the actual level of testing for these significant activities may be reduced commensurate with the quality of internal risk-management processes.

Consider, as an example, the risk exposure associated with commercial lending activities. Traditionally, examiners have reviewed a relatively high number and dollar volume of real estate-associated loans.² If, however, credit-

administration practices are considered satisfactory, fewer loans may need to be reviewed to verify that this is the case (that is, fewer loans than would be reviewed if deficiencies in credit-administration practices were suspected). This review may be achieved through a valid statistical sampling technique, when appropriate. It should be noted that if credit-administration practices are initially considered sound, but if loans reviewed to verify this raise doubts about the accuracy of internal assessments or the compliance with internal policies and procedures, the number and volume of loans subject to review should generally be expanded. Examiners should thus review a sufficient number of loans in order to ensure that the level of risk is clearly understood, an accurate determination of the adequacy of the ALLL can be made, and the deficiencies in the credit risk-management process can be comprehensively detailed.

2124.0.2.4 Evaluation of Audit Function as Part of Assessment of Internal Control Structure

A bank holding company's internal control structure is critical to its safe and sound functioning in general and to its risk-management system in particular. When properly structured, internal controls promote effective operations and reliable financial and regulatory reporting; safeguard assets; and help to ensure compliance with laws, regulations, and internal policies and procedures. In many banking organizations, internal controls are tested by an independent internal auditor who reports directly to the board of directors or its audit committee. However, in some smaller banking organizations whose size and complexity of operations do not warrant an internal audit department, reviews of internal controls may be conducted by other personnel independent of the area subject to review.

Because the audit function is an integral part of a bank holding company's assessment of its internal control system, examiners must include a review of the organization's control-assessment activities in every inspection. Such reviews help identify significant risks and facilitate a comprehensive evaluation of the organization's internal control structure and also provide information to determine the inspection procedures that should be completed in assessing internal controls for particular functions and activities and for the bank holding company overall. When conducting this review, examiners should evaluate the independence and com-

² Guidance on the selection of loans for review is provided in SR-94-13, "Loan Review Requirements for On-Site Examinations."

petence of the personnel conducting control assessments and the effectiveness of the assessment program in covering the bank holding company's significant activities and risks. In addition, examiners should meet with the internal auditors or other personnel responsible for evaluating internal controls. Examiners should review internal control risk assessments, work plans, reports, workpapers, and related communications with the audit committee or board of directors.

Depending on the size and complexity of the activities conducted by a bank holding company, the examiner should also consider conducting a similar review of the work performed by the company's external auditors. Such a review often provides added insight into key risk areas by detailing the nature and extent of the external auditors' testing of those areas.

2124.0.2.5 Evaluation of Overall Risk-Management Process

To highlight the importance of a banking organization's risk-management process, bank holding companies are assigned a risk-management rating on a five-point scale as a significant part of the evaluation of the management components of the bank holding company RFI/C(D) rating system. (See section 4070.0.) In addition, U.S. branches and agencies of foreign banking organizations are assigned a similar rating under the ROCA rating system.³ These risk-management ratings encompass evaluations of the quality of risk-management processes for all significant activities and all types of risks. As such, they should largely summarize conclusions on the adequacy of risk-management processes for each individual function or activity evaluated.

In assigning risk-management ratings, it is important that examiners consider the quality of the risk-management process for the bank holding company overall, as well as for each individual function. At smaller bank holding companies engaged in traditional banking and nonbanking activities, relatively basic risk-management processes established for each significant activity, such as lending or asset-liability management, may be adequate to allow senior management to effectively manage the organization's overall risk profile. On the other

hand, at larger bank holding companies that are typically engaged in more-complex and widely diversified activities, effective risk-management systems must evaluate various functional management processes in combination so that aggregate risk exposures can be identified and monitored by senior management. Management information reports should typically be generated for the overall organization, as well as for individual functional areas. Some aggregate or specific company-wide limits may also be needed for the principal types of risks that are relevant to the company's activities.

A critical aspect of ensuring that a bank holding company's risk-management and control procedures remain adequate is the ongoing testing of the strength and integrity of these procedures and the extent to which the procedures are understood and followed throughout the organization. When assigning a risk-management rating, examiners should assess the adequacy of the company's efforts to ensure that its procedures are being followed. The company's validation efforts must be conducted by individuals who have proper levels of organizational independence and expertise, such as internal or external auditors, internal risk-management units, or managers or other professionals of the bank holding company who have no direct connection to the activities for which procedures are being assessed.

2124.0.2.6 Evaluation of Compliance with Laws and Regulations

Compliance with relevant laws and regulations should be assessed at every inspection. The steps taken to complete these assessments, however, will vary depending on the circumstances of the bank holding company being reviewed. When an organization has a history of satisfactory compliance with relevant laws and regulations or an effective compliance function, only a relatively limited degree of transaction testing need be conducted to assess compliance. For example, when evaluating compliance with the appraisal requirements of Regulation Y at a bank holding company with a formal compliance function, compliance may be ascertained by reviewing the scope and findings of internal and external audit activities, evaluating the internal appraisal-ordering and -review processes, and sampling a selection of appraisals for compliance, as part of the supervisory loan-

3. U.S. branches and agencies of foreign banking organizations are assigned separate ROCA ratings for risk management, operational controls, compliance, and asset quality, under guidance included in SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations."

review process. On the other hand, at bank holding companies that have a less satisfactory compliance record or that lack a compliance function, more appraisals would naturally need to be tested to assess the overall compliance with the appraisal requirements of Regulation Y.

2124.0.2.7 Documentation of Supervisory Findings

The examiners' workpaper documentation of supervisory findings is necessary for Reserve Bank management to objectively verify the inspection work performed. Such documentation also provides a source of information on the condition and prospects of a bank holding company that is invaluable for planning future reviews. Most important, examiners' workpaper documentation provides support for the conclusions and recommendations detailed in the inspection report.

2124.0.2.8 Communication of Supervisory Findings

Effective and open communication between bank supervisory agencies and the board of directors and management of bank holding companies is essential to ensuring that the results of inspections are fully understood; the directorship and management are aware of any identified deficiencies; and, when necessary, they take appropriate corrective actions.

2124.0.3 INSPECTION OBJECTIVES

1. To ensure that the bank holding company has in place the processes necessary to identify, measure, monitor, and control its risk exposures for each of its activities or functions.
2. To improve inspection efficiencies by stressing increased in-office planning of inspections, using a risk-focused emphasis.
3. To identify and assess significant on- and off-balance-sheet activities and the greatest types and quantities of risk exposures and vulnerabilities to the bank holding company, tailoring the extent of transaction testing to the results of this review and other inspections' findings.
4. To review and assess the effectiveness and adequacy of documentation of the bank holding company's control and assessment activi-

- ties and arrangements, including its internal control structure, and the qualifications of internal and external auditors and other independent personnel involved in the program.
5. To emphasize the preparation of a risk-focused scope memorandum that is tailored to the size and complexity of the bank holding company under inspection.
6. To evaluate compliance with laws and regulations.
7. To adequately document and communicate inspection supervisory findings, recommendations, and conclusions.

2124.0.4 INSPECTION PROCEDURES

1. Identify the significant on- and off-balance-sheet activities of the bank holding company.
 - a. Review prior inspection reports and workpapers, surveillance and monitoring reports generated by the Board and Reserve Bank staff, Uniform Bank Performance Reports and Bank Holding Company Performance Reports, regulatory reports (for example, bank Call Reports and FR Y-series and other FFIEC reports), and other relevant supervisory materials.
 - b. Review strategic plans and budgets; internal management reports; board of directors information packages; correspondence and minutes, including minutes of meetings held between the bank holding company and the Reserve Bank; annual reports and quarterly SEC filings; press releases and published news stories; and stock analysts' reports.
2. Hold periodic discussions with management to gain insight into recently adopted strategies or plans to change activities or management processes.
3. Once the significant activities have been identified, determine and analyze the types (for example, credit, market, liquidity, operational, legal, and reputational) and quantities of risks to which those activities expose the bank holding company, placing greater inspection emphasis on the high-risk areas.
4. Develop an assessment of the processes that are used to identify, measure, monitor, and control the risks. Focus on the extent of board and senior management oversight; the adequacy of policies, procedures, limits, risk-measurement, risk-monitoring, and management information systems; and the

- existence of adequately documented internal audits and controls.
5. Prepare a scope memorandum tailored to the size and complexity of the bank holding company under inspection.
 6. Conduct limited tests of the integrity of the risk-management system. Conduct more-extensive transaction testing for those areas of a bank holding company that are very significant compared with other areas, adjusting the level of transaction testing to the quality of internal risk-management processes. If initial inquiries or efforts to verify the system raise material doubts as to its effectiveness, place no reliance on the integrity of the bank holding company's risk-management system and conduct more-extensive transaction testing.
 7. Review the bank holding company's risk-assessment control activities, including an assessment of internal controls for particular functions and activities and for the bank holding company overall.
 - a. Evaluate the independence and competence of the personnel conducting control assessments and the effectiveness of the assessment program in covering the bank holding company's significant activities and risks.
 - b. Meet the independent external and internal auditors and other personnel responsible for evaluating internal controls and review the internal control risk assessments, work plans, reports, workpapers, and related communications with the audit committee or the board of directors.
 8. Assess the adequacy of efforts to ensure that the current risk-management and control procedures are being followed.
 9. Assess compliance with laws and regulations, adjusting the extent of transaction testing with the organization's history of satisfactory compliance.
 10. Document all work performed and the supervisory findings. Include information

on the condition and prospects of the bank holding company and its significant subsidiaries, as well as the inspection's conclusions and recommendations.

2124.0.5 APPENDIX A—DEFINITIONS OF RISK TYPES EVALUATED AT INSPECTIONS

1. *Credit risk* arises from the potential that a borrower or counterparty will fail to perform on an obligation.
2. *Market risk* is the risk to a bank holding company's condition resulting from adverse movements in market rates or prices, such as interest rates, foreign-exchange rates, or equity prices.
3. *Liquidity risk* is the potential that a bank holding company will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as "funding liquidity risk") or that it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions ("market liquidity risk").
4. *Operational risk* arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses.
5. *Legal risk* arises from the potential that unenforceable contracts, lawsuits, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a bank holding company.
6. *Reputational risk* is the potential that negative publicity on a bank holding company's business practices, whether true or not, will cause a decline in the customer base, costly litigation, or revenue reductions.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2009, this section has been revised to include additional risk-focused SR letter topics and manual references in appendix A.

2124.01.1 INSPECTION APPROACH FOR RISK-FOCUSED SUPERVISION

The inspection approach for large complex banking organizations (LCBOs) is a risk-focused process that relies on (1) an understanding of the banking organization¹ (the institution), (2) the performance of risk assessments, (3) the development of a supervisory plan, and (4) inspection procedures that are tailored to the risk profile. The process for a complex institution relies more heavily on a central point of contact (CPC), detailed risk assessments, and a supervisory plan before the on-site inspection. The risk-focused inspection also incorporates the U.S. operations of foreign banking organizations (FBOs), for which the Federal Reserve has overall supervisory authority. See SR-97-24, SR-99-15, and section 2124.04.

2124.01.1.1 Risk-Focused Supervisory Objectives

The Federal Reserve is committed to ensuring that the supervisory process for all banking organizations under its purview meets the following objectives:

1. *To provide flexible and responsive supervision.* The supervisory process is designed to be dynamic and forward-looking so that it responds to technological advances, product innovation, and new risk-management systems and techniques, as well as to changes in the condition of an individual financial institution and developments in the market.
2. *To foster consistency, coordination, and communication among the appropriate supervi-*

1. For this section, the term *banking organization* refers to bank holding companies (BHCs) and their domestic and foreign banking and nonbank subsidiaries. It is used synonymously with the term *institutions*. That term, however, has an even broader meaning since it may include other entities (for example, Edge Act corporations and foreign branches of state member banks). See section 2124.01.1.3.1.

sors. Seamless supervision, which reduces regulatory burden and duplication, is promoted. The supervisory process uses examiner resources effectively by using the institution's internal and external risk-assessment and risk-monitoring systems; making appropriate use of joint and alternating examinations and inspections; and tailoring supervisory activities to an institution's condition, risk profile, and unique characteristics.

3. *To promote safety and soundness.* The supervisory process effectively evaluates the safety and soundness of banking organizations, including the assessment of risk-management systems, financial condition, and compliance with laws and regulations.
4. *To provide a comprehensive assessment of the institution.* The supervisory process integrates specialty areas (for example, information technology systems, trust, capital markets, and consumer compliance (see SR-03-22/CA-03-15)) and functional risk assessments and reviews, in cooperation with interested supervisors, into a comprehensive assessment of the institution.

2124.01.1.2 Key Elements of the Risk-Focused Framework

To meet the established objectives and respond to the characteristics of large institutions, the framework for risk-focused supervision of large complex institutions contains the following key elements:

1. *Designation of a central point of contact.* Large institutions typically have operations in several jurisdictions, multiple charters, and diverse product lines. Consequently, the program requires that a CPC be designated for each institution to facilitate coordination and communication among the principal bank and other regulatory authorities (for example, securities, insurance, and other nonbanking supervisory entities). Further, the program requires that each CPC and LCBO be assigned a dedicated supervisory team and staff with specialized skills, knowledge, and experience tailored to the unique profile of a particular institution.
2. *Review of functional activities.* Large institutions are generally structured along business

lines or functions, and some activities are managed on a centralized basis. As a result, a single type of risk may cross several legal entities. Therefore, the supervisory program incorporates assessments along functional lines to evaluate risk exposure and its impact on safety and soundness. These functional reviews will be integrated into the risk assessments for specific legal entities and used to support the supervisory ratings for individual legal entities.²

3. *Focus on risk-management processes.* Large institutions generally have highly developed risk-management systems, such as internal audit, loan review, and compliance. The supervisory program emphasizes each institution's responsibility to be the principal source for detecting and deterring abusive and unsound practices through adequate internal controls and operating procedures. The program incorporates an approach that focuses on and evaluates the institution's risk-management systems, processes, and core proficiencies for identifying, measuring, monitoring, and controlling key risks, including credit, market, and operational risks. Yet, the program retains transaction testing and supervisory rating systems, such as CAMELS, RFI/C(D), and ROCA. This diagnostic perspective provides insight into how effectively an institution is managing its operations and how well it is positioned to meet future business challenges. The program places less emphasis on traditional "point-in-time" balance-sheet assessments.
4. *Tailoring of supervisory activities.* Large institutions are unique, but all possess the ability to quickly change their risk profiles. To deliver effective supervision, the program incorporates an approach that tailors supervisory activities to the risk profile of an institution. By concentrating on an institution's major risk areas, examiners can achieve a more relevant and penetrating understanding of the institution's condition.
5. *Review of internally and externally generated management information.* A review of internal management and board reports, internal and external audit reports, and publicly available information will further

supplement existing supervisory processes. Banking organizations are also encouraged to continually review and enhance their public disclosures in order to promote transparency and to foster and support supervisory processes and effective market discipline.

6. *Emphasis on ongoing supervision.* Large institutions face a rapidly changing environment. The supervisory program thus emphasizes ongoing supervision, monitoring, and assessment through increased planning; a no-less-than-quarterly reassessment of the organization's profile; and continuous off-site monitoring. Ongoing supervision allows for timely adjustments to the supervisory strategy as conditions change within the institution, enhanced information sharing System-wide and on an interagency basis, and the use of information technology platforms that foster more-effective collaboration and communication.
7. *Effective communication with management.* An effective program of regular and meaningful contacts with management is necessary to maintain a current understanding of the institution's risk profile and risk-management processes without imposing undue burden, interfering with legitimate management prerogatives, or compromising the objectivity of the supervisory process.

2124.01.1.3 Banking Organizations Covered by the Framework

For purposes of the risk-focused supervision framework, LCBOs generally have a functional-management structure, a broad array of products, operations that span multiple supervisory jurisdictions, and consolidated assets of \$1 billion or more.³ These institutions may be state member banks, BHCs (including their nonbank and foreign subsidiaries), and branches and agencies of FBOs. The complex-institution process may also be appropriate for some organizations with consolidated assets less than \$1 billion.

LCBOs are larger institutions that have particularly complex operations and dynamic risk profiles. To be effective, a supervisory program

2. When functions are located entirely in legal entities that are not primarily supervised by the Federal Reserve, the results of supervisory activities conducted by the primary regulator will be used to the extent possible to avoid duplication of activities.

3. Large institutions are defined differently in other regulatory guidance regarding regulatory reports and examination mandates.

for LCBOs requires a heightened level of planning, coordination, and innovative techniques. These organizations typically have significant on- and off-balance-sheet risk exposures, offer a broad range of products and services at the domestic and international levels, are subject to multiple supervisors in the United States and abroad, and participate extensively in large-value payment and settlement systems.

An important aspect of the LCBO program is the assessment and evaluation of banking practices across a group of institutions with similar business lines, characteristics, and risk profiles. This “portfolio” approach to supervision will (1) support and enhance timely judgments about individual institutions, including the identification of possible “outliers”; (2) facilitate peer-group assessments; (3) provide an improved framework for discerning industry trends; (4) foster more-consistent supervision of institutions with similar businesses and risk profiles; (5) contribute substantially to the maintenance of a highly informed and skilled supervisory staff; and (6) promote the development and sharing of the best supervisory practices within the Federal Reserve and the supervisory community more broadly.

2124.01.1.3.1 Foreign Institutions

U.S. supervisory authorities are host-country rather than home-country supervisors for most of the U.S. operations of FBOs; therefore, the supervisory focus and objectives are somewhat different for U.S. operations of FBOs and are addressed separately in the FBO supervision program. The desired result of a risk-focused examination process, however, should be the same. The framework encompasses the supervision and examination processes and procedures relevant to the U.S. operations of FBOs, to the extent that they are appropriate. Any significant remaining differences are incorporated in the FBO supervision program.

2124.01.1.3.2 Nonbank Subsidiaries of Domestic Institutions

Nonbank subsidiaries of large complex domestic institutions are covered by the risk-focused supervision program. These subsidiaries include (1) nonbank subsidiaries of the parent bank holding company and those of the subsidiary state member banks; (2) the significant branch operations, primarily foreign-branch operations,

of state member banks; and (3) subsidiary foreign banks of the holding company. The level of supervisory activity to be conducted for nonbank subsidiaries and foreign branches and subsidiaries of domestic institutions should be based on their individual risk levels relative to the consolidated organization. The risk associated with significant nonbank subsidiaries or branches should be identified as part of the consolidated risk-assessment planning process, and the appropriate level of supervisory coverage (whether on- or off-site) should be described in the supervisory plan for the organization. Risk-focused supervisory planning should use the workpaper “Nonbank Subsidiary of a Bank Holding Company Risk-Assessment Questionnaire” (see appendix B). It should be used as a guide for (1) determining whether a nonbank subsidiary poses significant risk to the entire LCBO (parent bank holding company) and (2) determining whether an on-site supervisory inspection or examination of the entity is needed.⁴ The supervisory plan for the organization should also include a review of the institution’s processes to ensure compliance with sections 23A and 23B of the Federal Reserve Act, Regulation W, and various other regulations and guidelines that govern transactions between the bank and nonbank affiliates.

2124.01.1.3.3 Edge Act Corporations

Under section 25A, paragraph 17, of the Federal Reserve Act, Edge Act corporations are subject to examination once a year and at such other times as deemed necessary by the Federal Reserve. While Reserve Banks must fulfill this legal mandate, there is flexibility in determining the extent of examination coverage. The scope of Edge Act corporation examinations should be determined through the risk-assessment process. Additionally, separate reports of examination are not required for Edge Act corporations, provided that all relevant findings are included in the consolidated report of examination of the

4. When this workpaper is used, a separate risk assessment of each nonbank subsidiary of the LCBO (for domestic bank holding companies) is not required. The separate-risk-assessment requirements of SR-93-19 are thus partially superseded for LCBOs. Nonbank subsidiary risk assessments should be reflected in the entire consolidated organization’s risk assessment.

parent bank.⁵ This reporting procedure also applies to other nonbank subsidiaries of the bank or bank holding company.

2124.01.1.3.4 Specialty Areas Covered by the Framework

The Federal Reserve regularly conducts examinations, inspections, or reviews of several specialty areas. To achieve more-efficient supervision and reduce the regulatory burden on institutions, steps have been taken to coordinate these reviews with the annual full-scope inspection of the consolidated organization. Under the risk-focused approach, the specialty areas should be included in the planning process in relation to the perceived level of risk to the consolidated organization or any state member bank subsidiary. Reviews of any specialty areas can be performed in conjunction with the annual full-scope inspection, or through targeted examinations or inspections, at any time during the supervisory cycle. The findings of all specialty reviews should be included in the inspection report for the consolidated organization.

2124.01.2 COORDINATION OF SUPERVISORY ACTIVITIES

Many large complex institutions have interstate operations that expand with the continuation of mergers and acquisitions. In this environment, close cooperation with the other federal and state banking agencies is critical. To facilitate coordination between the Federal Reserve and other regulators, district Reserve Banks have been assigned roles and responsibilities that reflect their status as the responsible Reserve Bank (RRB).

2124.01.2.1 Responsible Reserve Bank

The RRB facilitates the increased flexibility, planning, and coordination needed to effectively and efficiently supervise institutions with interstate operations. Considering the overriding

objectives of seamless risk-focused supervision, the RRB is responsible for designating the CPC and for ensuring that all aspects of the supervisory process are fully coordinated with LRBs and home-state supervisors. Close coordination among the other appropriate regulators for each organization is critical to ensure a consistent risk-focused approach to supervision.

2124.01.2.2 RRBs Working with Local Reserve Banks

The RRB is accountable for all aspects of the supervision of a fully consolidated banking organization, which includes the supervision of all the organization's subsidiaries and affiliates (domestic, foreign, and Edge corporations) for which the Federal Reserve has supervisory oversight responsibility. The RRB is generally expected to work with local Reserve Banks (LRBs) in conducting examinations (and inspections) and other supervisory activities, particularly where significant banking operations are conducted in a local District. Thus, for state member banks, the LRB has an important role in the supervision of that subsidiary. However, the RRB retains authority and accountability for the results of all examinations, inspections, and reviews that an LRB may perform on its behalf.

2124.01.2.2.1 RRB Defined

In general, the RRB for a banking organization has been the Reserve Bank in the District where the banking operations of the organization are principally conducted. For domestic banking organizations, the RRB typically will be the Reserve Bank District where the head office of the top-tier organization is located and where its overall strategic direction is established and overseen. For foreign banking organizations, the RRB typically will be the Reserve Bank District where the Federal Reserve has the most direct involvement in the day-to-day supervision of the U.S. banking operations of the organization.

When necessary, the Board's Division of Banking Supervision and Regulation (BS&R), in consultation with the Division of Consumer and Community Affairs (C&CA), may designate an RRB when the general principles set forth above could impede the ability of the Federal Reserve to perform its functions under law, do not result in an efficient allocation of supervisory resources, or are otherwise not appropriate. When more than one Reserve Bank currently shares supervisory responsibilities for

5. A separate memorandum to the file should be prepared and retained. The memorandum should provide the date of examination of the Edge Act corporation, a summary of findings, the rating assigned, and a reference to the consolidated report of examination. This information should also be forwarded to Federal Reserve Board staff.

a consolidated banking organization, Board staff will work with Reserve Bank staff to determine the RRB.

2124.01.2.2.2 *Duties of RRBs*

The RRB develops the consolidated risk assessment and supervisory plan and ensures that the scope and timing of planned activities conducted by participating Districts and agencies pursuant to the plan are appropriate, given the consolidated risk assessment. The RRB designates the central point of contact or lead examiner and ensures that all safety-and-soundness, information technology, trust, consumer compliance, Community Reinvestment Act (CRA), and other specialty examinations (and inspections) and visitations are conducted and appropriately coordinated within the System and with other regulators. In addition, the RRB manages all formal communications with the foreign and domestic supervised entity, including the communication of supervisory assessments, ratings, and remedial actions.⁶

2124.01.2.2.3 *Sharing of RRB Duties*

To take advantage of opportunities to enhance supervisory effectiveness or efficiency, an RRB is encouraged to arrange for the LRB to undertake on its behalf certain examinations or other supervisory activities. For example, a local District may have relationships with local representatives of the organization or local supervisors; leveraging these relationships may reduce costs or facilitate communication. Additionally, LRBs may provide specialty examination resources— in the case of CRA examinations, LRB staff often provide valuable insights into local communities and lending institutions that should be factored into the CRA assessment. When other Reserve Bank Districts conduct examinations, inspections, and other supervisory activities for the RRB, substantial reliance should be placed on the conclusions and ratings recommended by the participating Reserve Bank(s).

The RRB retains authority and accountability for the results of all examinations and reviews performed on its behalf and, therefore, must work closely with LRB examination teams to ensure that examination scopes and conclusions

are consistent with the supervisory approach and message applied across the consolidated organization. If an LRB identifies major issues in the course of directly conducting supervisory activities on behalf of an RRB, those issues should be brought to the attention of the RRB in a timely manner.

If an RRB arranges for an LRB to conduct supervisory activities on its behalf, the LRB is responsible for the costs of performing the activities. If the LRB is unable to fulfill the request from the RRB to perform the specified activities, the RRB should seek System assistance, if needed, by contacting Board staff or using other established procedures for coordinating resources.

2124.01.2.3 *Central Point of Contact*

A CPC is critical to fulfilling the objectives of seamless risk-focused supervision. The RRB should designate a CPC for each large complex institution it supervises. Generally, all Federal Reserve System contacts, activities, and duties, as well as those conducted with other supervisors, should be coordinated through this contact. The CPC should—

1. be knowledgeable, on an ongoing basis, about the institution's financial condition, management structure, strategic plan and direction, and overall operations;
2. remain up-to-date on the condition of the assigned institution and be knowledgeable regarding all supervisory activities, monitoring and surveillance information, applications issues, capital-markets activities, meetings with management, and enforcement issues, if applicable;
3. ensure that the objectives of seamless risk-focused supervision are achieved for each institution and that the supervisory products (that is, an institutional overview, a risk matrix, a risk assessment, a supervisory plan, an inspection program, a scope memorandum, inspection modules, and an inspection report) are prepared in a timely manner;
4. ensure appropriate follow-up and tracking of supervisory concerns, corrective actions, or other matters that come to light through ongoing communications and/or surveillance; and
5. participate in the inspection or examination process, as needed, to (1) ensure consistency

6. Additional guidance on inter-District coordination and supervisory responsibilities can be found in section 2124.04; SR-97-24, "Risk-Focused Framework for Supervision of Large Complex Institutions"; and SR-96-33, "State/Federal Protocol and Nationwide Supervisory Agreement."

with the institution's supervisory plan and effective allocation of resources, including coordination of on-site efforts with specialty examination areas and other supervisors, as appropriate, and (2) facilitate requests for information from the institution, wherever possible.

2124.01.2.4 Sharing of Information

To further promote seamless risk-focused supervision, information related to a specific institution should be provided, as appropriate, to other interested supervisors. Sharing of these products with the institution, however, should be carefully evaluated on a case-by-case basis. The institutional overview, risk assessment, and supervisory plan may not be appropriate for release if they contain a hypothesis about an institution's risk rather than assessments verified through the inspection or examination process. On the other hand, it may be appropriate to share the inspection program with the institution in the interest of better coordination of activities.

2124.01.2.5 Coordination with Other Supervisors

Section 305 of the Riegle Community Development and Regulatory Improvement Act of 1994 directed the agencies to coordinate their examinations, to the extent possible, when they are jointly responsible for the examination of various entities of a bank holding company.⁷ To help achieve the desired degree of coordination, staffs of the agencies are expected, primarily at the regional level, to discuss examination plans and coordination issues. The institution involved is to be kept fully informed of the coordinated activities planned by the agencies, including a general time frame of when each agency expects to conduct its examination activities.

2124.01.3 FUNCTIONAL APPROACH AND TARGETED INSPECTIONS

The framework for risk-focused supervision of large complex institutions relies more heavily

on a functional-business-line approach to supervising institutions, while effectively integrating the functional approach into the legal-entity assessment. Bank holding companies are increasingly being managed on a functional basis. Functional management allows organizations to take advantage of the synergies among their components, deliver better products to the market, and provide higher returns to stockholders. Virtually all of the large bank holding companies operate as integrated units and are managed as such. For these companies, the risk-management systems are generally organized along business lines on a centralized basis. A key implication of this shift in management structure is that much of the information and insight gathered on inspections and examinations of individual legal entities can be fully understood only in the context of examination findings of other related legal entities or centralized functions. Developing that understanding means adapting some of the same functional-business-line approaches to supervision, including examination processes. Consequently, the risk-focused supervision framework incorporates risk assessments, that is, inspection and examination procedures that are organized by function.

The functional approach focuses principally on the key business activities (for example, lending, treasury, retail banking) rather than reviewing the legal entity and its balance sheet. This does not mean that the responsibility for a legal-entity assessment is ignored, nor should the Federal Reserve perform examinations of institutions for which other regulators have primary supervisory responsibility.⁸ Rather, Federal Reserve examiners should integrate the findings of a functional review into the legal-entity assessment and should coordinate closely with the primary regulator to gather sufficient information to form an assessment of the consolidated organization. Nonetheless, in some cases, effective supervision of the consolidated organization may require Federal Reserve examiners to perform process reviews and, possibly, transaction testing at all levels of the organization.

Functional-risk-focused supervision is to be achieved by the following actions:

7. In a December 1996 letter to the House Committee on Banking and Financial Services, the agencies outlined their cooperative efforts to meet the objectives of section 305.

8. With respect to U.S. banks owned by FBOs, it is particularly important to review the U.S. bank on a legal-entity basis and also the risk exposure to the U.S. bank from its parent foreign bank, as U.S. supervisory authorities do not supervise or regulate the parent bank.

1. Planning and conducting joint inspections and examinations with the primary regulator in areas of mutual interest, such as nondeposit investment products, interest-rate risk, liquidity, and mergers and acquisitions.
2. Leveraging off, or working from, the work performed by the primary regulator and the work performed by the institution's internal and external auditors by reviewing and using their workpapers and conclusions to avoid duplication of effort and to lessen the burden on the institution.
3. Reviewing inspection and examination reports and other communications to the institution that were issued by other supervisors.
4. Conducting a series of functional reviews or targeted inspections or examinations of business lines, relevant risk areas, or areas of significant supervisory concern during the supervisory cycle.⁹ Functional reviews and targeted inspections or examinations are increasingly necessary to evaluate the relevant risk exposure of a large complex institution and the effectiveness of related risk-management systems.
5. *Communicated in a formal written report to the institution's management or board of directors when significant weaknesses are detected or when the findings result in a downgrade of any rating component.* Otherwise, the vehicle for communicating the results is left to the judgment of the Reserve Bank's management and may either be a formal report or a supervisory letter.¹⁰

The functional approach to risk assessments and the planning of supervisory activities should include a review of the parent company and its significant nonbank subsidiaries. However, it is anticipated that the level of supervisory activities, on- or off-site, will be appropriate to the risk profile of the parent company or its nonbank subsidiary in relation to the consolidated organization. Intercompany transactions should continue to be reviewed as part of the inspection procedures performed, to ensure that they comply with laws and regulations and do not pose safety-and-soundness concerns.

2124.01.4 OVERVIEW OF THE PROCESS AND PRODUCTS

The risk-focused methodology for the supervision program for large complex institutions reflects a continuous and dynamic process. As table 1 indicates, the methodology consists of six key steps, each of which uses certain written products to facilitate communication and coordination.

The relevant findings of functional reviews or targeted inspections and examinations should be handled as outlined below.

1. *Incorporated into the annual full-scope inspection.* In this context, a full-scope inspection involves the analysis of data sufficient to determine the safety and soundness of the institution and to assign supervisory ratings. The inspection or examination procedures required to arrive at those determinations do not necessarily have to be performed at the time of the annual inspection; they can be a product of the collective activities performed throughout the supervisory cycle. However, inspection procedures should include follow-up for deficiencies noted in functional reviews or targeted inspections and examinations.
2. *Conveyed to the institution's management during a close-out or exit meeting with the relevant area's line management.* The need to communicate the findings to senior management or the board of directors is left to the judgment of Reserve Bank management, based on the significance of the findings.

9. A supervisory cycle is the period of time from the close of one annual examination to the close of the following annual examination.

10. As discussed in SR-99-17, it is Federal Reserve System practice to update RFI/C(D) ratings between inspections to keep them current and to ensure that they reflect the latest information on the institution's financial condition. For state member banks, Reserve Banks are to refrain from revising CAMELS ratings based on off-site analysis in view of the emphasis being placed on the CAMELS ratings for implementing risk-based insurance assessments and other supervisory initiatives. In accordance with SR-99-17 (see also section 5010.4), Reserve Banks should notify the institution's management whenever the rating is changed as a result of off-site analysis.

Table 1—Steps and Products Involved in the Risk-Focused Supervision Process

<i>Steps</i>	<i>Products*</i>
1. Understanding the institution	1. Institutional overview
2. Assessing the institution's risk	2. Risk matrix 3. Risk assessment
3. Planning and scheduling supervisory activities	4. Supervisory plan 5. Inspection/examination program
4. Defining inspection activities	6. Scope memorandum 7. Entry letter
5. Performing inspection procedures	8. Functional-inspection modules
6. Reporting the findings	9. Inspection report(s)

* For examples of products 1 through 8, see appendixes D through K of the Federal Reserve's handbook "Framework for Risk-Focused Supervision of Large, Complex Institutions," referred to in SR-97-24. See also appendix B, the bank holding company nonbank subsidiary risk-assessment questionnaire, which is discussed in section 2124.01.1.3.2.

With the exception of the entry letter, the written products associated with steps 1 through 4 are designed to sharpen the supervisory focus on an institution's business activities that pose the greatest risk, as well as to assess the adequacy of the institution's risk-management systems to identify, measure, monitor, and control risks. The products should be revised as new information is received from such sources as the current inspection, recent targeted inspections and examinations, and periodic reviews of regulatory reports.

The focus of the products should be on fully achieving a risk-focused, seamless, and coordinated supervisory process. The content and format of the products are flexible and should be adapted to correspond to the supervisory practices of the agencies involved and to the structure and complexity of the institution.

2124.01.5 UNDERSTANDING THE INSTITUTION

The starting point for risk-focused supervision is developing an understanding of the institution. This step is critical to tailoring the supervi-

sion program to meet the characteristics of the organization and to adjusting that program on an ongoing basis as circumstances change. It is also essential to clearly understand the Federal Reserve's supervisory role in relation to an institution and its affiliates. For example, the Federal Reserve's role pertaining to an FBO will vary depending on whether the Federal Reserve is the home- or host-country supervisor for the particular legal entity. Thus, planning and monitoring are key components.

Through increased emphasis on planning and monitoring, supervisory activities can focus on the significant risks to the institution and on related supervisory concerns. Given the technological and market developments within the financial sector and the speed with which an institution's financial condition and risk profile can change, it is critical to keep abreast of events and changes in risk exposure and strategy. The CPC for each large complex institution should continuously review certain information and prepare an institutional overview that will communicate the contact's understanding of that institution.

2124.01.5.1 Sources of Information

Information generated by the Federal Reserve, other supervisors, the institution, and public organizations may assist the CPC in forming and maintaining an ongoing understanding of the institution's risk profile and current condition. For example, the Federal Reserve maintains a significant amount of financial and structure information in various automated databases. In addition, prior inspection and examination reports are excellent sources of information regarding previously identified problems.

Each Reserve Bank has various surveillance reports that identify outliers when an institution is compared with its peer group. The Bank Holding Company Performance Report and the Uniform Bank Performance Report may identify significant deviations in performance relative to institutions' peer groups, currently and between the inspections and examinations of those institutions. For branches and agencies, state member banks, and domestic bank holding companies that are part of FBOs, the strength-of-support assessment (SOSA) rating and relevant credit assessments from major rating agencies provide information that needs to be considered in developing an appropriate supervisory strategy. For FBOs, the Federal Reserve has developed automated systems that provide information on foreign financial systems, for-

eign accounting standards, and the financial performance of FBOs with U.S. operations.

Leveraging off the work, knowledge, and conclusions of other supervisors is of key importance to understanding a large complex organization. Ongoing contact and the exchange of information with other supervisors who have responsibilities for a given institution may provide insights that cannot be obtained from other sources. Additional information can be obtained from examination reports issued by other supervisors and from their databases, for example, the OCC's Supervisory Monitoring System (SMS) and the FDIC's Bank Information Tracking System (BITS).

Using information generated by the institution's management information system improves the supervisory process. It provides an efficient way to reduce on-site time, identify emerging trends, and remain informed about the activities of the institution and financial markets. Information that may be periodically reviewed by the contact includes the size and composition of intra-day balance sheets, internal risk-ratings of loans, internal limits and current risk measures regarding trading activities, and internal limits and measures covering the institution's interest-rate and market risk. Additionally, functional-organization charts reflecting the major lines of business across legal entities, changes to the organization's strategic plan, and information provided to the board of directors and management committees should be reviewed.

The CPC should also hold periodic discussions with the institution's management to cover, among other topics, credit-market conditions, new products, divestitures, mergers and acquisitions, and the results of any recently completed internal and external audits. When other agencies have supervisory responsibilities for the organization, joint meetings should be considered.

Publicly available information may provide additional insight into an institution's condition. This information may be particularly valuable in assessing an organization's ability to raise capital. Public sources of information include SEC reports, press releases, and analyses by private rating agencies and by securities dealers and underwriters.

2124.01.5.2 Preparation of the Institutional Overview

The institutional overview should provide an executive summary that communicates, in one

concise document, information demonstrating an understanding of the institution's present condition and its current and prospective risk profiles. The overview should also highlight key issues and past supervisory findings. General types of information that may be valuable to present in the overview are listed below:^{10a}

1. a brief description of the organizational structure (with comments on the legal and business units) and changes through merger, acquisition, divestitures, consolidation, or charter conversion since the prior review
2. a summary of the organization's business strategies, key business lines, product mix, marketing emphasis, growth areas, acquisition or divestiture plans, and new products introduced since the prior review
3. key issues for the organization, either from external or internal factors (for example, difficulties in keeping pace with competition or poorly performing business lines)
4. an overview of management, commenting on the level of board oversight, leadership strengths or weaknesses, policy formulation, and the adequacy of management information systems (Comments should include anticipated changes in key management, unusual turnover in line management, and management-succession plans. Key executives and the extent of their participation in strategic planning, policy formulation, and risk management may also be described.)
5. a brief analysis of the consolidated financial condition and trends, including earnings, invested capital, and return on investment by business line
6. a description of the future prospects of the organization, expectations or strategic forecasts for key performance areas, and budget projections
7. descriptions of internal and external audit, including the nature of any special work performed by external auditors during the period under review
8. a summary of supervisory activity performed since the last review, including safety-and-soundness inspections, examinations, and targeted or specialty inspections or

^{10a}. This list is provided in the context of institutions for which the Federal Reserve is the home-country supervisor. In the case of an FBO, the analysis should begin with the SOSA rating and the Summary of Condition of its U.S. operations. See SR-00-14 and also sections 2124.0.2.5, 2127.0, and 3903.0.

examinations; supervisory actions and the institution's degree of compliance; and applications approved or in process

9. considerations for conducting future inspections, including the institution's preference for the coordination of specialty inspections or examinations and combined inspection and examination reports, as well as logistical and timing considerations, including conversion activities, space planning, and management availability

2124.01.6 ASSESSING THE INSTITUTION'S RISKS

In order to focus supervisory activities on the areas of greatest risk to an institution, the CPC or designated staff personnel should perform a risk assessment. The risk assessment highlights both the strengths and vulnerabilities of an institution and provides a foundation for determining the supervisory activities to be conducted. Further, the assessment should apply to the entire spectrum of risks facing an institution, including the following risks:

1. *credit risk*, which arises from the potential that a borrower or counterparty will fail to perform on an obligation
2. *market risk*, which is the risk to an institution's financial condition resulting from adverse movements in market rates or prices, such as interest rates, foreign-exchange rates, or equity prices
3. *liquidity risk*, which is the potential that an institution will be unable to meet its obligations as they come due because of an inability to liquidate assets or obtain adequate funding (referred to as "funding liquidity risk") or because it cannot easily unwind or offset specific exposures without significantly lowering market prices because of inadequate market depth or market disruptions (referred to as "market liquidity risk")
4. *operational risk*, which arises from the potential that inadequate information systems, operational problems, breaches in internal controls, fraud, or unforeseen catastrophes will result in unexpected losses
5. *legal risk*, which arises from the potential that unenforceable contracts, lawsuits, or adverse judgments can disrupt or otherwise negatively affect the operations or condition of a banking organization

6. *reputational risk*, which is the potential that negative publicity regarding an institution's business practices, whether true or not, will cause a decline in the customer base, costly litigation, or revenue reductions

An institution's business activities present various combinations and concentrations of the above risks depending on the nature and scope of the particular activity. When conducting the risk assessment, consideration must be given to the institution's overall risk environment, the reliability of its internal risk management, the adequacy of its information technology systems, and the risks associated with each of its significant business activities. The preparation of the risk matrix provides a structured approach to assessing an institution's risks and is the basis for preparing the narrative risk assessment. See section 4070.1 and SR-95-51 for additional guidance on the evaluation of an institution's risk management.

2124.01.6.1 Assessment of the Overall Risk Environment

The starting point in the risk-assessment process is an evaluation of the institution's risk tolerance and of management's perception of the organization's strengths and weaknesses. Such an evaluation should entail discussions with management and a review of supporting documents, strategic plans, and policy statements. Management, in general, is expected to have a clear understanding of the institution's markets; the general banking, business, and economic environment; and how these factors affect the institution (in other words, their effect on the institution's use of technology, products, and delivery channels).

The institution should have a clearly defined risk-management structure. This structure may be formal or informal, centralized or decentralized. However, the greater the risk assumed by the institution, the more sophisticated its risk-management system should be. Regardless of the approach, the types and levels of risk an institution is willing to accept should reflect the risk appetite determined by its board of directors.

2124.01.6.1.1 Internal-Risk-Management Evaluation

In assessing the overall risk environment, the CPC should make a preliminary evaluation of

the institution's internal risk management. That includes an assessment of the adequacy of the institution's internal audit, loan-review, and compliance functions. External audits also provide important information regarding the risk profile and condition of the institution and may be used in the risk assessment. In completing this evaluation, Reserve Banks should consider holding meetings with the external auditor and senior management who are responsible for internal audit, loan review, and compliance, as well as with other key risk managers. As appropriate, the meetings should be held jointly with a representative from other supervisory agencies that have an interest in the institution.

In addition, the CPC or designated staff personnel should consider reviewing risk assessments developed by the internal audit department for significant lines of business, and then compare their results with the supervisory risk assessment. Further, the CPC should consider evaluating management's ability to aggregate risks on a global basis. Examiners can use this preliminary evaluation to determine how much they can rely on the institution's internal risk management when developing their scope of inspection and examination activities.

2124.01.6.1.2 Supervision Program for Consumer Compliance Risk Assessment at BHCs

Changes in the banking and financial services industry have highlighted the importance of incorporating an assessment of consumer compliance risk into the evaluation of a banking organization's overall risk profile. To address this need, the Federal Reserve enhanced its bank holding company supervision program to ensure that examiners are focusing appropriately on consumer compliance risk-related matters across the broad range of a BHC's activities. (See SR-03-22.)

An enhanced supervisory framework for the supervision of consumer compliance risk was developed for large complex banking organizations (LCBOs) and for large banking organizations (LBOs).^{10b} Under the framework, consumer compliance examiners are to assess consumer compliance risk across the broad

range of a banking organization's activities to determine the level and trend of consumer compliance risk. To address the risks identified in an organization's business activities, the supervisory team will develop a supervisory plan that includes activities appropriate to the level of the organization's consumer compliance risk.

Supervisory framework for consumer compliance risk. For LCBOs and LBOs that are subject to the System's continuous supervision program, safety-and-soundness examiners are to incorporate an assessment of consumer compliance risk into the overall risk assessment and planned supervisory activities for these organizations. When performing the consumer compliance risk assessment, consumer compliance examiners are to rely, to the extent possible, on the work conducted by the dedicated supervisory team or primary bank regulator, and expand that analysis to focus on consumer compliance risk. The consumer compliance risk assessment is to include a determination of the level of consumer compliance risk (high, moderate, or low), taking into consideration the internal control and review processes in place to mitigate the inherent risk. In addition, the risk assessment is to include a determination of the direction of consumer compliance risk (increasing, stable, or decreasing). The consumer compliance examiner is to discuss the identified areas of significant consumer compliance risk with the CPC. In addition, in coordination with the CPC and the supervisory team, the consumer compliance examiner is to evaluate how consumer compliance risk affects the reputational, legal, and operational risk profiles of the LCBO or LBO. The CPC will then incorporate this information and the assessment of consumer compliance risk into the LCBO's or LBO's overall risk assessment.

The consumer compliance examiner and the CPC will determine, on a case-by-case basis, whether and what type of supervisory activities should be included in the organization's supervisory plan. The planned supervisory activities will vary depending on the nature and level of an organization's consumer compliance risk.

The CPC and the consumer compliance examiner will coordinate with other regulators before communicating their findings to the banking organization's management. This coordination should help to ensure a seamless process in which consistent messages are delivered to LCBO or LBO management.

^{10b}. The Board's Division of Banking Supervision and Regulation and its Division of Consumer and Community Affairs developed the consumer compliance risk assessment framework. The supervisory approach does not apply to shell BHCs.

2124.01.6.1.3 Adequacy of Information Technology Systems

Effective risk monitoring requires institutions to identify and measure all material risk exposures. Consequently, risk-monitoring activities must be supported by management information systems (MIS) that provide senior managers and directors with timely and reliable reports on the financial condition, operating performance, and risk exposure of the consolidated organization. Such systems must also provide managers engaged in the day-to-day management of the organization's activities with regular and sufficiently detailed reports for their areas of responsibility. Moreover, in most large complex institutions, MIS not only provides reporting systems but also supports a broad range of business decisions through sophisticated risk-management and decision tools, such as credit scoring and asset/liability models and automated trading systems. Accordingly, the institution's risk assessment must consider the adequacy of information technology systems.

Institutions need to determine which business unit or units are responsible for the development and operation of the information technology system. Traditionally, such systems were largely centered on mainframe computers. However, the development of increasingly powerful and inexpensive personal computers and sophisticated network communication capabilities has given institutions more timely access to a greater volume of information that supports a broader range of business decisions—moving some transaction processing out of the mainframe environment. Consequently, many large institutions are transferring responsibility for development and operation of the hardware (generally, a local area or wide area network) and the related operating systems and applications from a centralized, mainframe function to individual business units. Many of these institutions are also integrating the information technology audit function with the general internal audit function.

Once it has been determined which business units are responsible for information technology, a fuller understanding of the risk profile of specific functions and of the consolidated organization can be gained through close coordination between information systems specialists and safety-and-soundness examiners. Since business managers must have MIS reports that are sufficient and appropriate for identifying

risks, examiners must work with specialists to assess the adequacy of the information technology system and the extent to which it can be relied upon. Evaluating the integrity of the information in reports for business managers requires an understanding of the information flows and the control environment for the operation. Knowledge of the business application is essential to determine whether the information flows are complete, accurate, and appropriate in a particular MIS. In addition, such a determination requires an assessment of the extent to which the institution's internal audit function has procedures in place for reviewing and testing the effectiveness of the processes and internal controls related to information technology systems.

2124.01.6.2 Preparation of the Risk Matrix

A risk matrix is used to identify significant activities, the type and level of inherent risks in these activities, and the adequacy of risk management over these activities, as well as to determine composite risk assessments for each of these activities and the overall institution. A risk matrix can be developed for the consolidated organization, for a separate affiliate, or along functional business lines. The matrix is a flexible tool that documents the process followed to assess the overall risk of an institution and is a basis for preparation of the narrative risk assessment.

2124.01.6.2.1 Identification of Significant Activities

Activities and their significance can be identified by reviewing information from the institution, the Reserve Bank, or other supervisors. Information generated by the institution may include the balance sheet, off-balance-sheet reports, the income statement, management accounting reports, or any other report that is prepared for the institution's board of directors and senior management to monitor performance. A detailed income statement is particularly informative because it reflects significant activities and their relative importance to the institution's revenue and net income. The income statement also yields information regarding the relationship between the return on individual assets and the inherent risk associated with these assets, providing an important indicator of the institution's overall risk appetite.

Off-site surveillance information is another source of information that can be used to identify new or expanding business activities. For example, substantial growth in the loan portfolio may indicate that the institution has introduced a new lending activity.

In addition to financial factors, information on strategic plans, new products, and possible management changes needs to be considered. The competitive climate in which the institution operates is important and should be assessed in the identification of significant activities. Industry segmentation and the position the institution occupies within its markets should also be considered.

2124.01.6.2.2 Type and Level of Inherent Risk of Significant Activities

After the significant activities are identified, the type and level of risk inherent in those activities should be determined. Types of risk may be categorized according to section 4070.1.2 and SR-95-51 (as amended by SR-04-18), or by using categories defined either by the institution or other supervisory agencies. If the institution uses risk categories that differ from those defined by the supervisory agencies, the examiner should determine if all relevant types of risk are appropriately captured. If risks are appropriately captured by the institution, the examiner should use the categories identified by the institution.

Table 2 illustrates risk types as defined by the Federal Reserve and the OCC. This table is designed to show the relationship between the respective agencies' risk categories.

Table 2—Types of Risk

<i>Federal Reserve</i>	<i>OCC</i>
Credit	Credit
Market	Price Interest rate Foreign exchange
Liquidity	Liquidity
Reputational	Reputation
Operational	Transaction
Legal	Compliance Strategic*

* Elements of strategic risk are reflected in each of the risk categories as defined by the Federal Reserve.

For the identified functions or activities, the inherent risk involved in that activity should be described as high, moderate, or low for each type of risk associated with it. For example, it may be determined that a portfolio of commercial loans in a particular institution has high credit risk, moderate market risk, moderate liquidity risk, low operational risk, low legal risk, and low reputational risk. The following definitions apply:

1. *High inherent risk* exists when (1) the activity is significant or positions are large in

relation to the institution's resources or to its peer group, (2) there are a substantial number of transactions, or (3) the nature of the activity is inherently more complex than normal. Thus, the activity could potentially result in a significant and harmful loss to the organization.

2. *Moderate inherent risk* exists when (1) positions are average in relation to the institution's resources or to its peer group, (2) the volume of transactions is average, and (3) the activity is more typical or traditional. Thus, while the activity could potentially result in a loss to the organization, the loss could be absorbed by the organization in the normal course of business.
3. *Low inherent risk* exists when the volume, size, or nature of the activity is such that even if the internal controls have weaknesses, the risk of loss is remote or, if a loss were to occur, it would have little negative impact on the institution's overall financial condition.

It is important to remember that this assessment of risk is made without considering management processes and controls. Those factors are considered in evaluating the adequacy of the institution's risk-management systems.

2124.01.6.2.3 Risk-Management Adequacy Assessment for Significant Activities

When assessing the adequacy of an institution's risk-management systems for identified functions or activities, the CPC or designated staff personnel should place primary consideration on findings related to the following key elements of a sound risk-management system:

1. active board and senior management oversight
2. adequate policies, procedures, and limits
3. adequate risk-management, risk-monitoring, and management information systems
4. comprehensive internal controls

Taking these key elements into account, the contact should assess the relative strength of the risk-management processes and controls for each identified function or activity. Relative

strength should be characterized as strong, acceptable, or weak as defined below:

1. *Strong risk management* indicates that management effectively identifies and controls all major types of risk posed by the BHC's activities. Management is fully prepared to address risks emanating from new products and changing market conditions. The board and management are forward looking and active participants in managing risk. Management ensures that appropriate policies and limits exist and are understood, reviewed, and approved by the board. Policies and limits are supported by risk-monitoring procedures, reports, and management information systems that provide management and the board with the information and analysis necessary to make timely and appropriate decisions in response to changing conditions. Risk-management practices and the organization's infrastructure are flexible and highly responsive to changing industry practices and current regulatory guidance. Staff has sufficient experience, expertise, and depth to manage the risks assumed by the institution.

Internal controls and audit procedures are sufficiently comprehensive and appropriate to the size and activities of the institution. There are few noted exceptions to the institution's established policies and procedures, and none is material. Management effectively and accurately monitors the condition of the institution consistent with the standards of safety and soundness and in accordance with internal and supervisory policies and practices. Risk-management processes are fully effective in identifying, monitoring, and controlling the risks to the institution.

2. *Acceptable risk management* indicates that the institution's management of risk is largely effective but lacking in some modest degree. Management demonstrates a responsiveness and ability to cope successfully with existing and foreseeable risks that may arise in carrying out the institution's business plan. While the institution may have some minor risk-management weaknesses, these problems have been recognized and are in the process of being resolved. Overall, board and senior management oversight, policies and limits, risk-monitoring procedures, reports, and management information systems are considered satisfactory and effective in maintaining a safe and sound institution. Risks are controlled in a manner that does not require more-than-normal supervisory attention.

The BHC's risk-management practices

and infrastructure are satisfactory and generally are adjusted appropriately in response to changing industry practices and current regulatory guidance. Staff experience, expertise, and depth are generally appropriate to manage the risks assumed by the institution.

Internal controls may display modest weaknesses or deficiencies, but they are correctable in the normal course of business. The examiner may have recommendations for improvement, but the weaknesses noted should not have a significant effect on the safety and soundness of the institution.

3. *Weak risk management* indicates that risk-management practices are lacking in some important ways and, therefore, are a cause for more-than-normal supervisory attention. One or more of the four elements of sound risk management¹¹ (active board and senior management oversight; adequate policies, procedures, and limits; adequate risk-management monitoring and management information systems; comprehensive internal controls) are considered less than acceptable and have precluded the institution from fully addressing one or more significant risks to its operations. Certain risk-management practices are in need of improvement to ensure that management and the board are able to identify, monitor, and control all significant risks to the institution. Also, the risk-management structure may need to be improved in areas of significant business activity, or staff expertise may not be commensurate with the scope and complexity of business activities. In addition, management's response to changing industry practices and regulatory guidance may need to improve.

The internal control system may be lacking in some important aspects, particularly as indicated by continued control exceptions or by a failure to adhere to written policies and procedures. The risk-management weaknesses could have adverse effects on the safety and soundness of the institution if corrective action is not taken by management.

The definitions above apply to the risk management of individual functions or activities. They parallel the definitions set forth in section

4070.1.2 (See SR-04-18 and SR-95-51) that examiners are to use to rate an institution's overall risk management. However, unlike the overall risk-management rating, the assessment of the adequacy of risk-management systems incorporated into the risk matrix is to be used primarily for planning supervisory activities. In addition, because the risk matrix is prepared during the planning process, it generally would not be appropriate to make fine gradations in the strength of risk-management systems on a function-by-function basis. In particular, for purposes of rating an institution's overall risk management, section 4070.1.2 (SR-04-18 and SR-95-51) makes distinctions in degrees of weakness—fair, marginal, and unsatisfactory—that generally cannot be made appropriately on a function-by-function basis, as called for when preparing the risk matrix. After appropriate inspection and examination procedures are performed, the assessment of the institution's risk management that was prepared for the risk matrix may be a starting point for assigning an overall risk-management rating for the institution.

2124.01.6.2.4 Composite Risk Assessment of Significant Activities

The composite risk for each significant activity is determined by balancing the overall level of inherent risk of the activity with the overall strength of risk-management systems for that activity. For example, commercial real estate loans usually will be determined to be inherently high risk. However, the probability and the magnitude of possible loss may be reduced by having very conservative underwriting standards, effective credit administration, strong internal loan review, and a good early-warning system. Consequently, after accounting for these mitigating factors, the overall risk profile and level of supervisory concern associated with commercial real estate loans may be moderate. Table 3 provides guidance on assessing the composite risk of an activity by balancing the observed quantity and degree of risk with the perceived strength of related management processes and internal controls.

To facilitate consistency in the preparation of the risk matrix, general definitions of the composite level of risk for significant activities are provided below.

11. See SR-04-18, "Bank Holding Company Rating System," which amended the rating definitions of SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies."

Table 3—Composite Risk for Significant Activities

Risk-management systems	Inherent risk of the activity		
	Low	Moderate	High
	Composite risk assessment		
Weak	Low or moderate	Moderate or high	High
Acceptable	Low	Moderate	High
Strong	Low	Low or moderate	Moderate or high

1. A *high composite risk* generally would be assigned to an activity when the risk-management system does not significantly mitigate the high inherent risk of the activity. Thus, the activity could potentially result in a financial loss that would have a significant negative impact on the organization's overall condition—in some cases, even where the systems are considered strong. For an activity with moderate inherent risk, a risk-management system that has significant weaknesses could result in a high composite risk assessment, because management appears to have an insufficient understanding of the risk and an uncertain capacity to anticipate and respond to changing conditions.
2. A *moderate composite risk* generally would be assigned to an activity with moderate inherent risk where the risk-management systems appropriately mitigate the risk. For an activity with a low inherent risk, significant weaknesses in the risk-management system may result in a moderate composite risk assessment. On the other hand, a strong risk-management system may reduce the risks of an inherently high-risk activity so that any potential financial loss from the activity would have only a moderate negative impact on the financial condition of the organization.
3. A *low composite risk* generally would be assigned to an activity that has low inherent risks. An activity with moderate inherent risk may be assessed a low composite risk where internal controls and risk-management systems are strong and effectively mitigate much of the risk.

2124.01.6.2.5 Overall Composite Risk Assessment

Once the examiner has assessed the composite risk of each identified significant activity or function, an overall composite risk assessment should be made for off-site analytical and planning purposes. This assessment is the final step in the development of the risk matrix; the evaluation of the overall composite risk is incorporated into the written risk assessment.

2124.01.6.2.6 Preparation of the Risk Assessment

A written risk assessment should be prepared to serve as an internal supervisory planning tool and to facilitate communication with other supervisors. A sample risk assessment is provided below. The goal is to develop a document that presents a comprehensive risk-focused view of the institution. The risk assessment delineates the areas of supervisory concern and is a platform for developing the supervisory plan.

The format and content of the written risk assessment are flexible and should be tailored to the individual institution. The risk assessment reflects the dynamics of the institution and, therefore, should consider the institution's evolving business strategies and be amended as significant changes in the risk profile occur. It should include input from other affected supervisors and specialty units to ensure that all significant risks of the institution are identified. The risk assessment should—

1. include an overall risk assessment of the organization;
2. describe the types of risks (credit, market, liquidity, reputational, operational, legal), their level (high, moderate, low), and the direction (increasing, stable, decreasing) of risks;
3. identify all major functions, business lines, activities, products, and legal entities from which significant risks emanate, and identify the key issues that could affect the risk profile;
4. consider the relationship between the likelihood of an adverse event and the potential impact on an institution (for example, the likelihood of a computer system failure may be remote, but the financial impact could be significant); and
5. describe the institution's risk-management systems. Reviews and risk assessments performed by internal and external auditors

should be discussed, as should the ability of the institution to take on and manage risk prospectively.

The CPC should attempt to identify and report the cause of unfavorable trends, as well as their symptoms. Also, it is very important that the risk assessment reflect a thorough, detailed analysis that supports the conclusions made about the institution's risk profile.

2124.01.7 PLANNING AND SCHEDULING SUPERVISORY ACTIVITIES

The supervisory plan is a bridge between the institution's risk assessment, which identifies significant risks and supervisory concerns, and the supervisory activities to be conducted. In developing the supervisory plan and inspection and examination schedules, the CPC should minimize disruption to the institution and, whenever possible, avoid duplicative inspection and examination efforts and requests for information from other supervisors.¹²

The institution's organizational structure and complexity are significant considerations in planning the specific supervisory activities to be conducted. Additionally, interstate banking and branching activities have implications for planning on-site and off-site reviews. The scope and location of on-site work for interstate banking operations will depend on the significance and risk profile of local operations, the location of the supervised entity's major functions, and the degree of its centralization. Consistent with the Federal Reserve practice of not examining each branch of an intrastate branching network, the bulk of safety-and-soundness examinations for branches of an interstate bank would likely be conducted at the head office or regional offices, supplemented by periodic reviews of branch operations and internal controls. The supervisory plan should reflect the need to coordinate these reviews of branch operations with other supervisors.

2124.01.7.1 Preparation of the Supervisory Plan

A comprehensive supervisory plan should be developed annually and updated as appropriate for the consolidated organization.¹³ The plan should demonstrate the supervisory concerns identified through the risk-assessment process and how the deficiencies noted in the previous inspection or examination are being or will be addressed. To the extent that the institution's risk-management systems are adequate, the level of supervisory activity may be adjusted. The plan should generally address the following areas:

1. All supervisory activities to be conducted, the scope of those activities (full or targeted), the objectives of those activities (for example, review of specific business lines, products, support functions, legal entities), and specific concerns regarding those activities, if any. Consideration should be given to—
 - a. prioritizing supervisory resources on areas of higher risk,
 - b. pooling examiner resources to reduce burden and redundancies,
 - c. maximizing the use of examiners located where the activity is being conducted,
 - d. coordinating examinations of different disciplines,
 - e. determining compliance with or the potential for supervisory action, and
 - f. balancing mandated requirements with the objectives of the plan.
2. General logistical information (for example, timetable of supervisory activities, participants, and expected resource requirements).
3. The extent to which internal and external audit, internal loan review, compliance, and other risk-management systems will be tested and relied upon.

The planning horizon to be covered by the plan is generally 18 months for domestic institutions.¹⁴ The overall supervisory objectives and basic framework need to be outlined by midyear

12. See section 5000.0.8.3 and SR-93-30, "Interagency Policy Statements on Supervisory Initiatives," and its attachments for guidance on examination coordination of holding company inspections with subsidiary bank and thrift examinations. See SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations," regarding coordination with other agencies as part of the FBO supervision program.

13. The supervisory plan is a high-level plan of supervisory activities to be conducted in monitoring the consolidated organization. More-detailed procedures for a specific on-site inspection are appropriately addressed in a scope memorandum, which is discussed in section 2124.01.8.

14. The examination plans and assessments of condition of U.S. operations that are used for FBO supervision use a 12-month period.

to facilitate preliminary discussions with other supervisors and to coincide with planning for the Federal Reserve's scheduling conferences. The plan should be finalized by the end of the year, for execution in the following year.

2124.01.7.2 Preparation of the Inspection or Examination Program

The inspection or examination program should provide a comprehensive schedule of inspection or examination activities for the entire organization and aid in the coordination and communication of responsibilities for supervisory activities. An inspection or examination program provides a comprehensive listing of all inspection and examination activities to be conducted at an institution for the given planning horizon. To prepare a complete program and to reflect the current conditions and activities of an institution and the activities of other supervisors, the CPC needs to be the focal point for communications on a particular institution, including any communications with the Federal Reserve and the institution's management and other supervisors. The inspection or examination program should generally incorporate the following logistical elements:

1. a schedule of activities, the duration of time, and resource estimates for planned projects
2. an identification of the agencies conducting and participating in the supervisory activity (when conducted jointly with other agencies, indicate the lead agency and the agency responsible for a particular activity) and the resources committed by all participants to the area(s) under review
3. the planned product for communicating findings (indicate whether it will be a formal report or supervisory memorandum)
4. the need for special examiner skills and the extent of participation by specialty disciplines

2124.01.8 DEFINING INSPECTION OR EXAMINATION ACTIVITIES

The scope memorandum is an integral product in the risk-focused methodology. The memorandum identifies the key objectives of the on-site inspection or examination. The focus of on-site inspection or examination activities, as identi-

fied in the scope memorandum, should be oriented to a top-down approach that includes a review of the organization's internal risk-management systems and an appropriate level of transaction testing. The risk-focused methodology provides flexibility in the amount of on-site transaction testing. Although the focus of the inspection or examination is on the institution's processes, an appropriate level of transaction testing and asset review will be necessary to verify the integrity of internal systems. If internal systems are considered reliable, then transaction testing should be targeted to a level sufficient to validate that the systems are effective and accurate. Conversely, if internal management systems are deemed unreliable or ineffective, then transaction testing must be adjusted to increase the amount of coverage. The entry letter identifies the information necessary for the successful execution of the on-site inspection or examination procedures.

2124.01.8.1 Scope Memorandum

After the areas to be reviewed have been identified in the supervisory plan, a scope memorandum should be prepared that documents specific objectives for the projected inspection or examination. This document is of key importance, as the scope will likely vary from year to year. Thus, it is necessary to identify the specific areas chosen for review and the extent of those reviews. The scope memorandum will help ensure that the supervisory plan for the institution is executed, and it will define and communicate those specific objectives to the inspection or examination staff.

The scope memorandum should be tailored to the size, complexity, and current rating of the institution subject to review. For large but less-complex institutions, the scope memorandum may be combined with the supervisory plan or risk assessment. The scope memorandum should generally include—

1. a statement of the objectives;
2. an overview of the activities and risks to be evaluated;
3. the level of reliance on internal risk-management systems and internal or external audit findings;
4. a description of the procedures that are to be performed, indicating any sampling process to be used and the level of transaction testing, when appropriate;
5. identification of the procedures that are expected to be performed off-site; and

6. a description of how the findings of targeted reviews, if any, will be used on the current inspection or examination.

2124.01.8.2 Entry Letter

Standardized entry inspection and examination letters have been developed that are closely aligned with the risk-focused approach for large complex institutions.¹⁵ The letters are designed to reduce the institution's paperwork burden. The entry letters include a core section of required information that is pertinent to all large institutions, regardless of size or complexity. In addition to the core requests, supplementary questionnaires should be used as needed for the specialized areas such as asset securitization/sales, information systems, private banking, securities clearance/lending, trading activities, and transfer risk. The cover letters must be used (but can be modified), as they provide specific guidance to the inspected or examined institution.

The entry letters direct management to provide written responses to questions and to provide copies of specific documents requested, but only if the requested information is new or has changed since the previous examination or inspection. Examiners should not request that management provide them with copies of the institution's regulatory reports that are available within each Federal Reserve Bank or from other bank regulatory agencies, such as regulatory inspection and examination reports and various financial information (for example, annual reports or Call Reports). These reports should be gathered from internal sources during the pre-examination planning process. Also, entry letters should not request information that is regularly provided to designated CPCs. The examiner-in-charge should always review anticipated information and document needs with the CPC for the inspected or examined institution before the mailing of any entry letter.

The entry letters should be used as a starting point, or template, in preparing for an examination or inspection. They should be tailored during the planning process to fit the specific character and profile of the institution to be inspected or examined and the scope of the activities to be performed. Thus, the effective use of entry letters is highly dependent on the planning and scoping of a risk-focused inspection or examination.

The entry letters request internal management information reports for each of the key inspection or examination areas. Internal management

reports should be used in all instances. If they do not provide sufficient information to inspect or examine the institution, then it would appear that management is not adequately informed—this may well be the first inspection or examination finding. As specific items are selected for inclusion in the entry letter, the following guidelines for items should be considered:

1. *Reflect risk-focused supervision objectives and the inspection or examination scope.* Items that are not needed to support selected inspection or examination procedures should not be requested.
2. *Facilitate efficiency in the inspection or examination process and lessen the burden on financial institutions.* Minimize the number of requested items and avoid, to the extent possible, duplicate requests for information already provided to other agencies.
3. *Limit, to the extent possible, requests for special management reports.*
4. *Eliminate items used for audit-type procedures.* Such procedures (for example, verifications) are generally performed only when there is a reason to suspect that significant problems exist.
5. *Distinguish information to be mailed to the examiner-in-charge for off-site inspection or examination procedures from information to be held at the institution for on-site procedures.* Information that is not easily reproduced should be reviewed on-site (for example, policies, corporate minutes, or audit workpapers).
6. *Allow management sufficient lead time to prepare the requested information.*

2124.01.9 PERFORMING INSPECTION OR EXAMINATION PROCEDURES

Inspection or examination procedures should be tailored to the characteristics of each institution, keeping in mind its size, complexity, and risk profile. The procedures should focus on developing appropriate documentation to adequately assess management's ability to identify, measure, monitor, and control risks. Procedures should be completed to the degree necessary to determine whether the institution's management understands and adequately controls the levels and types of risks that are assumed. In terms of

15. Such entry letters should be used for a (1) combined bank holding company inspection and lead state member bank examination, (2) bank holding company inspection (see appendix B), and (3) state member bank examination.

transaction testing, the volume of transactions tested should be adjusted according to management's ability to accurately identify problem and potential problem transactions and to measure, monitor, and control the institution's risk exposure. Likewise, the level of transaction testing for compliance with laws, regulations, and supervisory policy statements should take into account the effectiveness of management systems to monitor, evaluate, and ensure compliance.

Most full-scope inspections or examinations are expected to include the examiners' evaluation of 10 functional areas during the supervisory cycle. There may be a need to identify and include additional functional areas. To evaluate these functional areas, examiners must perform procedures tailored to fit (1) the risk assessment prepared for the institution and (2) the scope memorandum. These functional areas represent the primary business activities and functions of large complex institutions, as well as common sources of significant risk to them. Further, consistent with the risk-focused approach, examiners are expected to evaluate other areas that are significant sources of risk to an institution or that are central to the assignment of CAMELS, RFI/C(D), and ROCA ratings. The identified functional areas include the following:

1. loan-portfolio analysis (portfolio management, loan review, consumer compliance, allowance for loan and lease losses)
2. treasury activities (asset-liability management, interest-rate risk, parent company liquidity, funding, investments, deposits)
3. trading and capital-markets activities (foreign exchange, commodities, equities, and other interest-rate risk; credit risk; and liquidity risk)
4. audit and internal control review
5. final assessment of supervisory ratings (CAMELS, RFI/C(D), ROCA, or other)
6. information systems
7. insurance and fiduciary activities
8. private banking
9. retail banking activities (new products and delivery systems)
10. payments system risk (wire transfers, reserves, settlement)

2124.01.10 REPORTING THE FINDINGS

After performing the inspection or examination procedures, examiners should document their overall conclusions. Conclusions, as they relate to the functional area under review, should clearly communicate the examiner's assessment of the internal risk-management system, the financial condition, and compliance with laws and regulations.

Inspection and examination activities should be coordinated with the respective state and other federal banking authorities, with joint examinations performed and joint inspection and examination reports completed wherever practicable. The inspection and examination activities should be planned over the supervisory cycle, culminating with an annual full-scope inspection or examination of the organization. As part of the FBO supervision program, individual examination findings are integrated into an assessment of the FBO's entire U.S. operations.

The results of a targeted, subsidiary, or specialty inspection or examination are usually reported to the institution's management in a separate report or supervisory letter. Therefore, the report for the annual full-scope inspection of the consolidated parent organization should include a summary of the relevant results of any preceding supervisory activity. When targeted or specialty inspections or examinations of affiliates are conducted concurrently with the annual full-scope inspection of the consolidated parent organization, the findings from the targeted, consumer compliance, or specialty examinations (fiduciary, insurance, information technology, etc.) should be incorporated into the parent's inspection report in lieu of separate reports, unless the institution's management requests separate reports. For organizations in which the lead bank is a state member bank, the annual full-scope examination report should be combined with the bank holding company inspection report, as appropriate. The bank holding company inspection report, or combined inspection/examination report, may also include other bank and nonbank subsidiary examinations, according to the organization's supervisory plan.

The contents of the report should clearly and concisely communicate to the institution's management or to the directorate any supervisory issues, problems, or concerns related to the institution, as well as disclose the assigned

supervisory rating.¹⁶ The report should also include appropriate comments regarding deficiencies noted in the institution's risk-management systems. Accordingly, the descriptions accompanying each component of the CAMELS rating system should emphasize man-

agement's ability to identify, measure, monitor, and control risks.¹⁷ The rating assigned should reflect the adequacy of the institution's risk-management systems in light of the amount and types of risks that the institution has taken on.

16. See section 5010.4 and SR-96-26 for additional information.

17. See SR-96-38 for additional information on the revised CAMELS rating system.

2124.01.12 APPENDIX B—NONBANK SUBSIDIARY RISK-ASSESSMENT QUESTIONNAIRE

NONBANK SUBSIDIARY OF A BANK HOLDING COMPANY
RISK-ASSESSMENT QUESTIONNAIRE

Name of subsidiary _____

Name of bank holding company _____

BHC Consolidated:

Tier 1 capital: \$ _____ Total operating revenue*: \$ _____

*Defined as the sum of total interest income and total non-interest income, before extraordinary items.

Subsidiary total assets: \$ _____ Subsidiary total operating revenue: \$ _____

Questions: (*Circle answer.*)

1. Are the subsidiary's total assets 10 percent or more of BHC consolidated tier 1 capital?
Yes No
2. Is the subsidiary's total operating revenue 10 percent or more of BHC consolidated operating revenue? Yes No
3. Does the subsidiary issue debt to unaffiliated parties? Yes No
4. Does the subsidiary rely on affiliated banks for funding debt that is either greater than \$10 million or 5 percent of BHC consolidated tier 1 capital? (See SR-93-19.) Yes No
5. Is the subsidiary involved in asset securitization? Yes No
6. Does the subsidiary generate assets and sell assets to affiliates? Yes No
7. Is the subsidiary a broker-dealer affiliate engaged in underwriting, dealing, or market making? Yes No
8. Does the subsidiary provide derivative instruments for sale or as a service to unaffiliated parties? Yes No
9. Has the subsidiary had a significant impact on the BHC's condition or performance? Yes No

If any question is answered yes, then this subsidiary should be considered for on-site review. If an on-site review is not being conducted, state the reason below.

2124.01.13 APPENDIX C—FEDERAL RESERVE BANK COVER LETTER AND
BHC INSPECTION QUESTIONNAIREFederal Reserve Bank
of San FranciscoDivision of Banking Supervision and Regulation
San Francisco, California 94120

D.F. Roe
Senior Vice President
DEF BanCorp
Greentree Boulevard
Anytown, U.S.A. 11111

Dear Mr. Roe:

In order to facilitate an inspection of DEF BanCorp on a fully consolidated basis, you are requested to instruct the appropriate staff to provide the information described in this questionnaire. Unless indicated otherwise, information is requested as of the financial statement date December 31, 20X2. You are asked to provide written responses to questions and copies of specific documents requested in this questionnaire only if the requested information is new or has changed since the previous inspection, which was conducted as of December 31, 20X1 (indicate no change where applicable). For each area covered by this questionnaire, please provide the most recent reports used by management to identify, measure, monitor, and control risk in the respective areas. Please note that examiners may make additional requests during the inspection.

Single copies of all submissions in response to the requests will be satisfactory unless otherwise indicated and should be delivered to the examiner-in-charge or designee. Any requests for clarification or definition of terms should also be directed to the examiner-in-charge.

In order to expedite the inspection, each completed schedule and other requested information should be submitted as soon as prepared and should not be accumulated for submission as a package. Please respond to every item in the questionnaire, indicating N/A if a question is not applicable.

Most of the requested data will not be needed until the commencement of the inspection, which is March 15, 20X3. However, certain information may be needed earlier. Such information and the date due will be discussed with you.

Federal Reserve examiner-in-charge

Examiner's telephone number

FEDERAL RESERVE BANK
BANK HOLDING COMPANY INSPECTION QUESTIONNAIRE

Please provide the following:

Structure

1. The most recent organization chart—
 - (a) for the holding company and its subsidiaries by legal entity, showing percentage of ownership if less than 100 percent; and
 - (b) of management by legal entity and functional business lines, if different, indicating lines of authority and allocation of duties for all key business lines and support areas of the organization.
2. List new activities that the bank holding company or nonbank subsidiaries have engaged in since the previous inspection, either on- or off-balance-sheet, and identify the group responsible for the management of these activities. How has management identified and evaluated risk in relation to these new activities? Provide copies of any management reports regarding these products/activities. Please provide a copy of the company's risk policy statement regarding new activities.
3. The following on each new subsidiary formed or acquired since the prior inspection and changes, where applicable, on existing subsidiaries.
 - (a) name
 - (b) location
 - (c) date acquired or formed
 - (d) percentage of ownership
 - (e) nature of business or business purpose
 - (f) list of branch locations by city and state
 - (g) balance sheet and income statement
 - (h) off-balance-sheet, asset securitization, and derivatives activities and description of such
 - (i) list of principal officers
 - (j) management contact person
4. Since (date), has there been any change in or transfer of functions or responsibilities between the corporation and its subsidiaries and between subsidiaries and/or their affiliates? If so, describe fully.
5. Since (date), have there been any sales or other transfers of any assets among the corporation and its subsidiary banks, affiliates of the banks, and/or other subsidiaries? If so, describe fully and include details on loan participations purchased and sold.
6. Since (date), have any subsidiaries been deactivated, sold, liquidated, transferred, or disposed of in some other way? If so, identify the subsidiary, the reason for disposition, and the effective date of disposition.
7. Has the corporation planned or entered into any new agreements, written or oral, to acquire any additional entities? If so, give pertinent details, including name, location, type of business, and purchase terms.

Corporate Planning and Policy Information

8. The latest financial projections or business plan(s) for revenues, expenses, assets, liabilities, capital, and contingent liabilities for the current and next fiscal years. Please include details on the assumptions used in the preparation of the projections.
9. A copy of the strategic business plan with updates or revisions, if any.
10. If new or amended since the prior inspection, copies of policies for the following:
 - (a) the level of supervision exercised over subsidiaries
 - (b) loans and investments of subsidiaries
 - (c) loan participations by and between subsidiaries
 - (d) dividends and fees from subsidiaries
 - (e) dividends paid to stockholders
 - (f) budgeting and tax planning for subsidiaries
 - (g) insider transactions
 - (h) funds, asset-liability, and interest-rate risk management at the parent company and subsidiaries
 - (i) risk identification, evaluation, and control (for example, any credit risks, market risks, liquidity risks, reputational risks, operational risks, and legal risks)
 - (j) internal loan-review and -grading system
 - (k) internal audit
 - (l) any authorized outstanding commitments to the Federal Reserve
 - (m) description of any routine tie-in arrangements that are used in providing or contracting for services

Corporate Financial Information

11. For the consolidated company, provide consolidating balance sheet and income statement, including schedules of eliminating entries.
12. Full details on unaffiliated borrowings of the consolidated organization. For debt issued since the prior inspection, please provide the prospectus for public-debt offerings and a summary of terms for private-debt placements.
13. A copy of the most current periodic financial package prepared for senior management and/or directors.

Subsidiary Information

14. Consolidating and consolidated balance sheets, including off-balance-sheet items, and income statements for each nonbank first-tier subsidiary.
15. Details of all capital injections made to subsidiaries or returns of capital from subsidiaries (excluding normal operating dividends) since the prior inspection. Also provide details on any advance to a subsidiary which has been reclassified as equity.
16. If subsidiary banks have made any extensions of credit to the bank holding company and/or other affiliates, give details.

17. Describe any services performed by the parent for any subsidiaries or any company in which it has a 5 percent or greater interest.

Parent Company

18. Details on intercompany payments either (1) from the parent company to affiliates or subsidiaries or (2) from subsidiaries or affiliates to the parent company. Segregate into dividends, interest, management or service fees, expense payments, or other transfers made since the prior inspection. If a payment is governed by an intercompany agreement, please provide a copy of the agreement. If not, please provide the basis of the payment made.
19. Internally generated cash-flow statement and liquidity schedule for the latest quarter ending. Make available supporting documentation. Provide access to the workpapers supporting the preparation of the Cash-Flow Schedule (schedule PI-A) from the Y-9LP report
20. Full details on new parent company's investments in or advances to subsidiaries, and extensions of credit to and borrowings from subsidiaries (including unused lines of credit) since the previous inspection.
21. Full details on the terms of any third-party borrowing and credit lines made available since the previous inspection.
22. If any entities (parent company and/or subsidiaries) maintain compensating balances with third parties, indicate restrictions, if any.
23. A copy of the contingency funding plan. If such a plan does not exist, please provide a description of what actions would be taken to meet disruptions in the corporation's short-term liability market.
24. Details on security and other investments held by type; par; book and market values; number of shares owned; interest rates; maturity dates; and convertibility features, where applicable. Include a copy of all investment authorization policies and delegations of authority pertaining thereto.
25. For equity investments or any lending activity, please provide a listing with comments on any significant items that may not be fully collectible and any other relevant factors.
26. A copy of the capital funding plan or planned changes in equity funding, a financial analysis of any changes in equity (including any stock redemptions), and any internal financial analysis used to evaluate capital adequacy.
27. Since the previous inspection, if the corporation has purchased or sold securities or other assets under an agreement to resell or repurchase, give details.
28. If the corporation has, for its own account, any incomplete purchases or sales of securities pending, give details.
29. If the parent corporation and/or any nonbank subsidiaries have loans outstanding that are secured by stock or any obligations of the corporation or any of its subsidiaries, give details.
30. Since the prior inspection, if the corporation, either for its own account or for others, has guaranteed the payment of any loan or other debt obligation or guaranteed the performance of any other undertaking, provide details.

Corporate-Debt-Markets Activities

31. The following information on commercial paper:
 - (a) direct placements outstanding

- (b) dealer placements outstanding
 - (c) monthly maturity schedules showing breakdown for direct and dealer placements
 - (d) a copy of a “no action” letter, if the SEC has issued one
32. Identify any subsidiary which sells commercial paper for its own use or for its parent.
 33. If any commercial paper, stock, and/or convertible debt of the corporation or its subsidiaries is held by trust departments of subsidiary banks, provide details.
 34. If there are any concentrations of commercial paper holdings in excess of 10 percent of the outstanding commercial paper by any individual or organization, provide details.

Corporate Tax Information

35. If the corporation files a consolidated tax return, on what basis does it determine the amount of taxes to be paid by subsidiaries? Provide a copy of the tax-sharing agreement with subsidiaries.
36. A schedule detailing the following information for (specify dates)—
 - (a) payments (estimated or otherwise) made by the corporate-tax-paying entity to the taxing authorities and the dates of such payments; and
 - (b) payments received by the tax-paying entity from other holding company subsidiaries (or the tax benefits paid to those subsidiaries) and transaction dates.
37. Provide details of any ongoing IRS audit.

Officers, Directors, and Shareholders

38. For senior officers of the corporation, indicate their title, responsibility, and position(s) held at subsidiary and/or other organizations.
39. List of directors of the corporation, including—
 - (a) number of shares owned directly and/or indirectly, and
 - (b) occupation or principal business affiliation.
40. A brief biography of each senior officer appointed and director elected since the prior inspection. Please include the person’s date of birth, business background, education, and affiliations with any outside organizations. For senior officers, indicate date of hire. For directors, indicate date of election to board.
41. List of board committees, their memberships, and frequency of meetings.
42. Make available board and committee minutes.
43. Details on fees paid to directors.
44. If the corporation has entered into any contracts or agreements to pay or provide additional sums or fringe benefits to any director, officer, or employee, provide cost and details.
45. Details on any stock option, incentive, bonus, or performance plans for officers and employees.
46. List of loans made by the parent company and/or nonbank subsidiaries to directors and executive officers (and their interests) of the parent company and/or subsidiaries. For the purpose of this request, a director’s or executive officer’s interest refers to a beneficial ownership, directly or indirectly, amounting to 25 percent or more and also to companies otherwise controlled by a director or officer.
47. List of investments of the parent and/or subsidiaries in stocks, bonds, or other obligations of

corporations in which directors and executive officers have a beneficial interest.

48. List of loans to any borrower that are secured by stocks, bonds, or other obligations of corporations in which directors and executive officers have a beneficial interest.
49. List of shareholders who own 5 percent or more of any class of voting stock and the percentage held.
50. List of loans made by the parent company and/or nonbank subsidiaries to shareholders who own 5 percent or more of the parent company's outstanding shares.

Asset Quality

51. A copy of the latest internal consolidated asset-quality tracking report with aggregate totals of internally criticized assets and off-balance-sheet items. Identify aggregate exposures by type, risk rating, and entity where the exposure is booked. Distinguish between direct and indirect extensions of credit.
52. Details on consolidated loans past due as to principal and/or interest, nonperforming loans and other real estate owned, and totals of such for each subsidiary.
53. A breakdown of the corporation's consolidated and major subsidiaries' loan-loss reserves (for example, the allowance for loan and lease losses), including portions earmarked for the commercial, consumer, and other segments, with a description of and supporting data for the methodology used in determining its adequacy.

Audit

(The following information should be requested only if the function resides within the parent company. If the function is performed at a nonmember lead bank subsidiary, then assess the audit function through discussions with the bank's primary regulator.)

54. A copy of the most recent engagement letters or equivalent information which describes the scope of external audit activities performed for the corporation and any of its nonbank subsidiaries. Make available a copy of the audit program.
55. An organization chart which shows the structure and staffing of the audit function.
56. The following information about the auditor and key assistants (if not provided at prior inspections):
 - (a) present position and date assumed
 - (b) date of employment
 - (c) brief summary of education, experience at this institution, and prior work experience
57. Make available the audit timetable and audit program, workpapers, and procedures used in conducting audits of the parent company and all subsidiaries.

Miscellaneous

58. A summary schedule of fidelity bond and general liability insurance, listing all areas covered for loss/liability, and date of board approval.
59. Make available the corporation's latest pending litigation report describing any significant pending or potential litigation or investigations against the organization or any director, officer, or policy-making employee in their official capacity, with the following information:

- (a) name(s) of plaintiff
- (b) nature of claim and damages requested
- (c) current status
- (d) an opinion of the probable outcome, including an estimation of the organization's liability

Ongoing Risk-Focused Supervision Program for Large Complex Banking Organizations

Section 2124.04

The Federal Reserve's ongoing large complex banking organization (LCBO) supervisory program is designed to recognize dramatic changes in the financial, technological, legal, and regulatory environment that necessitate a flexible supervisory framework. This includes the ongoing review and assessment of LCBO risk profiles and the continual adjustment of supervisory plans and programs for individual banking organizations (BOs). Environmental factors that have a significant impact on the nature of LCBO operations and the financial system include the following:

1. *Financial innovation and deregulation.* The range, volume, and complexity of traditional banking businesses have increased, and BOs have moved into nontraditional and potentially more-complex financial activities and services, such as securitizations, securities underwriting and dealing, trading, derivatives, and other capital-markets activities.¹
2. *Increasing competitive pressures.* The distinctions between financial products have blurred, and the competition in national and global markets between BOs, nonbank financial firms, and diversified financial services conglomerates has intensified.
3. *Geographic expansion and globalization.* The continued expansion of BOs, both nationally and globally, and the integration of financial markets have increased the challenges associated with assessing and supervising the worldwide activities of U.S. BOs and the U.S. operations of foreign banking organizations.
4. *Revolution in information technology.* The dramatic changes in information and telecommunications technology have increased the speed, complexity, geographic scope, and volume of financial transactions, and have made possible new techniques for BOs to take on and manage risks.

These environmental factors have the potential for swift and dramatic changes in the risk profiles of LCBOs and can provide avenues for the more rapid transmission of financial shocks. Such developments in turn require supervisors to employ more-continuous and risk-focused supervision processes. See SR-99-15, SR-97-24, and section 2124.01.

2124.04.1 CONTINUED UNDERSTANDING OF AN LCBO AND ITS MAJOR RISKS

The process of maintaining a *current* understanding of an LCBO and its major risks relies heavily on gathering information from a wide variety of public and confidential sources, including supervisory reviews and evaluations and discussions with management and other supervisors. One of the primary objectives of this enhanced supervisory method is to generate a flow of meaningful information that continuously promotes a comprehensive understanding of the LCBO. This understanding should include the LCBO's major business lines and strategies, the risks inherent in its business activities, and the quality and effectiveness of its risk-management systems. Maintaining an up-to-date understanding of an LCBO's risk profile reduces the time-consuming and burdensome discovery process associated with conducting on-site examinations. Similarly, this understanding can also facilitate the timely and efficient processing of major regulatory applications, including acquisitions and mergers, and other requests from BOs. Publicly available information, internal management reports, discussions with management, regulatory reports, information from internal and external auditors, and information from other supervisors are examples of the sources that are used to develop and maintain a current understanding of the organization. It may be less burdensome for the BO if supervisors can access management reports electronically, so electronic access should be employed when and where feasible and appropriate.

It is important that the principal risk-focused supervisory tools and documents, including the overview, risk matrix, and risk assessment for the LCBO, remain current. Accordingly, the central point of contact (CPC) should regularly distill and incorporate significant new information into these documents *at least quarterly*. Factors such as emerging risks; new products; and significant changes in business strategy, management, condition, or ownership may warrant more-frequent updates. In general, the more dynamic the LCBO's operations and risks, the more frequently the CPC should update the risk assessment, strategies, and plans.

1. The term "banking organizations" refers to bank holding companies and their bank and nonbank subsidiaries.

2124.04.2 DESIGN AND EXECUTION OF A CURRENT SUPERVISORY PLAN

Effective risk-focused supervision requires the development and maintenance of a supervisory plan that is current and relevant to the organization's changing risk profile. In addition to addressing all key supervisory objectives, the supervisory plan should be individually tailored for each BO to reflect its particular organizational and operational structure and, where appropriate, the activities of other principal or functional supervisors. The supervisory plan and attendant supervisory activities, including on-site examinations, inspections, and supervisory reviews, should be sufficiently robust to maintain an up-to-date and thorough understanding of the BO's operations and risks, as well as to maintain the quality of its risk-management systems.

Ongoing assessments of the LCBO's major risks (for example, credit, market, liquidity, operational, legal, and reputational risks) should be used to formulate, revise, and update the supervisory plan. The Federal Reserve's supervisory plan should endeavor to take into account (1) the nature and scope of major activities conducted by other regulators involved in the LCBO and (2) any actions necessary to address existing or emerging supervisory concerns, including follow-up on past supervisory issues. For BOs supervised by the Federal Reserve, a combination of full- and limited-scope examinations, inspections, targeted reviews, meetings with management, and analyses of public and supervisory information should be used to maintain an up-to-date risk assessment and to reduce unnecessary regulatory burden. The necessary level of transaction testing and the degree of reliance on sampling should be fully explained in the scope documents of the supervisory plan and should adequately address the types and level of risks in the organization's business lines. Instances in which efficiencies can be gained by relying on the work of other regulators, internal and external auditors, and the internal risk-management function should, where appropriate, be specified in the plan and incorporated into the supervisory program.

The CPC should review and revise the supervisory plan whenever necessary (*but in no case less frequently than quarterly*) to reflect any significant new information or emerging trends or risks. The supervisory plan and any revisions should be periodically discussed with represen-

tatives of the principal regulators of major affiliates to reconfirm agreement on the overall plan and to coordinate its implementation, when warranted.

2124.04.3 COMMUNICATION AND COORDINATION AMONG SUPERVISORS TO DEVELOP AND ADMINISTER A SUPERVISORY PLAN

The communication process as described herein can serve as the basis for executing a comprehensive supervisory approach that capitalizes on the mandates and resources of the various supervisory authorities (for example, banking, securities, and insurance authorities), while minimizing possible duplication and burden on the BO. The objective is for supervisors to work cooperatively in developing supervisory plans and scope documents and, when possible and appropriate, to carry out important supervisory activities on a joint or coordinated basis. Coordination and communication among supervisors can reduce the burden on BOs and result in a more efficient deployment of supervisory resources.

An important element of the LCBO program is effective communication between the Federal Reserve and the BO's management throughout the supervision cycle. Communication with the LCBO can take various forms, including formal and informal meetings with management and the board of directors, as well as the issuance of periodic and annual supervisory reports, including examination or inspection reports, to the organization's management and board. The objective of these reports is to identify significant risks and summarize the Federal Reserve's view of the financial condition and effectiveness of the LCBO's risk-management processes.

As part of the LCBO program, the management of the BO should be encouraged to continue and, if warranted, strengthen communications with Reserve Bank management, CPCs, and the supervisory teams, particularly with respect to providing information to supervisors on a timely basis regarding material financial or operational issues or problems. BOs should also be encouraged to continuously review and enhance their public disclosures in order to promote transparency and foster effective market discipline. Also, if BOs promptly notify supervisors of emerging problems, they often can be resolved in a way that minimizes disruptions. Strong two-way communications and information flows between supervisors and the LCBO's senior management, including key business-line

and risk managers, are essential to the success of the LCBO program. In carrying out this program, the Federal Reserve will continue to assign its highest priority to information security and to protecting the integrity of sensitive, confidential supervisory information and examination or inspection information.

The LCBO supervisory framework also requires that results and findings of supervisory activities conducted throughout the supervisory cycle be continually evaluated and reflected in the Federal Reserve's current understanding and assessment of the organization's risk profile. Reports of examination or inspection or letters to the LCBO's management and board of directors should routinely be prepared when examinations, inspections, and targeted reviews are completed. If necessary, the organization's supervisory ratings should be revised in a timely manner, based on those findings.² Risk-management and composite supervisory ratings should be adjusted appropriately if material weaknesses in risk-management systems or controls exist, even if these weaknesses have not yet affected the organization's reported financial results.

At least annually, a comprehensive summary supervisory report should be prepared that supports the organization's assigned ratings and encompasses the results of the entire supervisory cycle. This report should convey the Federal Reserve's view of the condition of the LCBO and its key risk-management processes, communicate the composite supervisory rating(s), discuss each of the major business risks, summarize the supervisory activities conducted during the supervisory cycle and the resulting findings, and assess the effectiveness of any corrective actions taken by the LCBO. This report will satisfy supervisory and legal requirements for a full-scope examination or inspection. Reserve Bank management, as well as Board officials, when warranted, will meet with the LCBO's board of directors to present and discuss the contents of the report and the Federal Reserve's assessment of the condition of the BO.

2124.04.3.1 Information Sharing and Coordination with Supervisory Authorities and External and Internal Auditors

Information sharing and coordination within the Federal Reserve and with supervisors of major

affiliates are critical elements of the LCBO program and are essential to successful supervision of LCBOs. Most LCBOs, regardless of their business lines and functional management structure, operate through a variety of legal entities that may be under the jurisdiction of different licensing and supervisory authorities in the United States and abroad.

To maximize efficiency and reduce regulatory burden, the risk-assessment and supervisory-planning processes should use and leverage off, or benefit from, the efforts of other principal supervisors to the extent possible, consistent with achieving the Federal Reserve's key supervisory objectives. The Reserve Bank responsible for the supervision of the LCBO should have regular contacts with supervisors of important affiliates of the organization to discuss and coordinate matters of common interest; to develop supervisory plans; and, when and where appropriate, to coordinate the scheduling and conduct of examinations, inspections, and targeted reviews. Consistent with the supervisory needs and responsibilities of the Federal Reserve and the other supervisors, information may be exchanged as permitted by law and in accordance with applicable rules and policies of the Board. In addition, meetings should be held at reasonable intervals with internal and external auditors to review audit plans, evaluate significant audit findings and other control assessments, and foster opportunities to leverage off the auditors' work. Building on the work of auditors, when and where appropriate, can enhance supervisory efficiency and reduce the regulatory burden on the LCBO.

2124.04.3.2 Enhanced Use of Information Technology

The Federal Reserve's supervisory approach for LCBOs continues to use enhanced information technology. Timely and user-friendly access to a full range of internal and third-party information, as well as mechanisms to foster collaboration among Federal Reserve staff and other supervisors, is essential to effective risk-focused supervision for LCBOs. Effective and timely information flows, facilitated by the use of enhanced information technology, can provide a way for supervisors to "harvest" and share the core knowledge and experience gained through the conduct of supervisory activities and through ongoing contacts with BOs. Ready

2. The supervisory ratings include the RFI/C(D) and CAMELS ratings, and an FBO's combined U.S. operations rating.

access to the collective knowledge, insights, and current assessments of fellow supervisors, bank management, financial markets, and other relevant third parties can enhance the ability of supervisors to identify problems in a timely manner and formulate effective supervisory responses. To this end, the Federal Reserve System's information-sharing and information technology strategies will continue to be aimed at broadening and strengthening the role of the CPCs, supervisory teams, and other System staff who are responsible for conducting and overseeing its supervisory programs, including the LCBO program.

2124.04.4 ORGANIZATION OF FEDERAL RESERVE SUPERVISORY TEAMS

A principal component of the supervisory framework is the assignment of a dedicated supervisory team to each LCBO. The teams are made up of individuals with specialized skills, which are based on the organization's particular business lines and risk profile. This full-time, dedicated cadre will be supplemented, as necessary, by other specialized System staff, who will

participate in examinations and targeted reviews.

In addition to designing and executing the supervisory strategy for an LCBO, the CPC has responsibility for managing the supervisory team. Important objectives in managing the supervision resources for a particular LCBO are to maximize institutional knowledge and minimize burden to the BO, while maintaining an objective, ongoing understanding of the BO's risk profile. The CPC serves as the Federal Reserve's primary day-to-day contact for a particular LCBO and has, together with other members of the Reserve Bank management team, primary responsibility for communicating with senior officials of the LCBO.

The supervisory team's major responsibilities are to maintain a high level of knowledge on the BO and to ensure that supervisory strategies and priorities are consistent with the identified risks and the LCBO's profile. The team should include supervisors with broad-based knowledge and experience in banking, as well as specialists whose technical skills and market knowledge bring depth and perspective to highly focused reviews of selected LCBO activities.

Banking organizations have greatly expanded the scope, complexity, and global nature of their business activities. At the same time, compliance requirements associated with these activities have become more complex. As a result, organizations have confronted significant risk management and corporate governance challenges, particularly with respect to compliance risks that transcend business lines, legal entities, and jurisdictions of operation.¹ To address these challenges, many banking organizations have implemented or enhanced firmwide compliance risk-management programs and program oversight.

While the guiding principles of sound risk management are the same for compliance as for other types of risk, the management and oversight of compliance risk presents certain challenges. For example, quantitative limits reflecting the board of directors' risk appetite can be established for market and credit risks, allocated to the various business lines within the organization, and monitored by units independent of the business line. Compliance risk does not lend itself to similar processes for establishing and allocating overall risk tolerance, in part because organizations must comply with applicable rules and standards. Additionally, existing compliance risk metrics are often less meaningful in terms of aggregation and trend analysis as compared with more traditional market- and credit-risk metrics. These distinguishing characteristics of compliance risk underscore the need for a firmwide approach to compliance risk management and oversight for large, complex organizations. A firmwide compliance function that plays a key role in managing and overseeing compliance risk while promoting a strong culture of compliance across the organization is particularly important for large, complex organizations that have a number of separate business lines and legal entities that must comply with a wide range of applicable rules and standards.

The Federal Reserve strongly encourages large banking organizations with complex compliance profiles to ensure that the necessary resources are dedicated to fully implementing effective firmwide compliance risk-

management programs and oversight in a timely manner.²

The Federal Reserve's expectations for all supervised banking organizations are consistent with the principles outlined in a paper issued in April 2005 by the Basel Committee on Banking Supervision, entitled *Compliance and the compliance function in banks* (Basel compliance paper). The principles in the Basel compliance paper have become widely recognized as global sound practices for compliance risk management and oversight, and the Federal Reserve endorses these principles. This section provides clarification as to the Federal Reserve's views regarding certain compliance risk management and oversight matters with regard to banking organizations with complex compliance profiles in the specific areas addressed within this section (see SR-08-8/CA-08-11):

1. organizations that should implement a firmwide approach to compliance risk management and oversight;
2. independence of compliance staff;
3. compliance monitoring and testing; and
4. responsibilities of boards of directors and senior management regarding compliance risk management and oversight.

2124.07.1 FIRMWIDE COMPLIANCE RISK MANAGEMENT AND OVERSIGHT

2124.07.1.1 Overview

Organizations supervised by the Federal Reserve, regardless of size and complexity, should have effective compliance risk-management programs that are appropriately tailored to the organizations' risk profiles.³ The

2. Effective compliance risk-management programs incorporate controls designed to maintain compliance with applicable rules and standards, including safety and soundness and consumer protection guidance issued by supervisory authorities.

3. See SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies" (section 4070.1). This letter or section provides general guidance on risk-management processes and internal controls for consolidated organizations and discusses the elements of a sound risk-management system applicable to all banking organizations for which the Federal Reserve has supervisory responsibility. SR-95-51

1. Compliance risk is the risk of legal or regulatory sanctions, financial loss, or damage to reputation resulting from failure to comply with laws, regulations, rules, other regulatory requirements, or codes of conduct and other standards of self-regulatory organizations applicable to the banking organization (applicable rules and standards). (See, generally, *Compliance and the compliance function in banks*, Basel Committee on Banking Supervision, April 2005, www.bis.org.)

manner in which the program is implemented and the type of oversight needed for that program can vary considerably, depending upon the scope and complexity of the organization's activities, the geographic reach of the organization, and other inherent risk factors. Larger, more complex banking organizations tend to conduct a wide range of business activities that are subject to complex compliance requirements that frequently transcend business lines and legal entities and, accordingly, present risk-management and corporate governance challenges. Consequently, these organizations typically require a firmwide approach to compliance risk management and oversight that includes a corporate compliance function. In contrast, smaller, less-complex banking organizations are not generally confronted with the types of compliance risks and challenges that require a comprehensive firmwide approach to effectively manage and oversee compliance risk. The following discussion, therefore, is *not* directed at smaller, less-complex banking organizations.

Firmwide compliance risk management refers to the processes established to manage compliance risk across an entire organization, both within and across business lines, support units, legal entities, and jurisdictions of operation. This approach ensures that compliance risk management is conducted in a context broader than would take place solely within individual business lines or legal entities. The need for a firmwide approach to compliance risk management at larger, more complex banking organizations is well demonstrated in areas such as anti-money-laundering, privacy, affiliate transactions, conflicts of interest, and fair lending, where legal and regulatory requirements may apply to multiple business lines or legal entities within the banking organization. Certain other compliance risks may also warrant a firmwide risk-management approach to address similar rules and standards that apply to the organization's operations across different jurisdictions. In all such instances, compliance risk management benefits from an aggregate view of the organization's compliance risk exposure and an integrated approach to managing those risks.

The processes established for managing compliance risk on a firmwide basis should be formalized in a compliance *program* that establishes the framework for identifying, assessing, controlling, measuring, monitoring, and reporting compliance risks across the organization, and for providing compliance training throughout the organization. A banking organization's compliance risk-management program should be documented in the form of compliance policies and procedures and compliance risk-management standards.⁴

Firmwide compliance oversight refers to the processes established to oversee compliance risk management across the entire organization, both within and across business lines, legal entities, and jurisdictions of operation. In addition to the oversight provided by the board of directors and various executive and management committees of an organization, a key component of firmwide compliance oversight in larger, more complex banking organizations is a corporate compliance function that has day-to-day responsibility for overseeing and supporting the implementation of the organization's firmwide compliance risk-management program, and that plays a key role in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.

4. Compliance policies refer to both (1) firmwide compliance policies that apply to all employees throughout the organization as they conduct their business and support activities and (2) the more detailed, business-specific policies that are further tailored to, and more specifically address, compliance risks inherent in specific business lines and jurisdictions of operation, and apply to employees conducting business and support activities for the specific business line and/or jurisdiction of operation. Compliance procedures refer to the control procedures that are designed to implement compliance policies. Compliance risk-management standards refer to policies and procedures applicable to compliance staff as they fulfill their day-to-day compliance responsibilities. Compliance standards should clearly articulate expectations regarding the processes to be followed in implementing the organization's firmwide compliance risk-management program, including the processes and criteria to be utilized in identifying, assessing, controlling, measuring, monitoring, and reporting compliance risk, and in providing compliance training. Compliance standards should also clearly articulate the roles and responsibilities of the various committees, functions, and staff with compliance support and oversight responsibilities.

states that all bank holding companies should be able to assess the major risks of the consolidated organization. See also 12 C.F.R. 208, appendix D-1, "Interagency Guidelines Establishing Standards for Safety and Soundness."

2124.07.1.2 Federal Reserve Supervisory Policies on Compliance Risk Management and Oversight

2124.07.1.2.1 Large Banking Organizations with Complex Compliance Profiles

Although balance sheet size is not the defining indication of a banking organization's compliance risk-management needs, experience has demonstrated that banking organizations with \$50 billion or more in consolidated total assets typically have multiple legal entities that pose the type of compliance risks and challenges that call for a comprehensive firmwide approach to appropriately control compliance risk and provide effective oversight. Accordingly, such organizations should generally implement firmwide compliance risk-management programs and have a corporate compliance function.

Compliance programs at such organizations should include more robust processes for identifying, assessing, controlling, measuring, monitoring, and reporting compliance risk, and for providing compliance training throughout the organization in order to appropriately control the heightened level and complexity of compliance risk. The corporate compliance function should play a key role in overseeing and supporting the implementation of the compliance risk-management program and in controlling compliance risks that transcend business lines, legal entities, and jurisdictions of operation.⁵

2124.07.1.2.2 Large Banking Organizations with Less-Complex Compliance Profiles

In some instances, banking organizations that meet the \$50 billion asset threshold may have few legal entities, may be less complex in nature, and may engage in only a very limited range of business activities. Such organizations

may be able to effectively manage and oversee compliance risk without implementing a comprehensive firmwide approach. Alternatively, these organizations may choose to implement a firmwide approach whose scope is highly risk-focused on particular compliance risks that exist throughout the organization. In lieu of relying on a corporate compliance function to play a key role in providing day-to-day oversight of the compliance program, these organizations may rely on executive and management committees that are actively involved in providing ongoing corporate oversight of the compliance risk-management program. An organization that adopts this approach, however, should ensure that its compliance program incorporates controls that effectively address compliance risks that transcend business lines, legal entities, and jurisdictions of operation; that appropriate firmwide standards are established for the business lines to follow in managing compliance risk and reporting on key compliance matters; and that the organization is appropriately overseeing the implementation of its compliance risk-management program.

2124.07.1.2.3 Foreign Banking Organizations

Each foreign banking organization supervised by the Federal Reserve should implement a compliance program that is appropriately tailored to the scope, complexity, and risk profile of the organization's U.S. operations. The program should be reasonably designed to ensure that the organization's U.S. operations comply with applicable U.S. rules and standards and should establish effective controls over compliance risks that transcend business lines or legal entities. Foreign banking organizations with large, complex U.S. operations should implement compliance programs for these operations that have more robust processes for identifying, assessing, controlling, measuring, monitoring, and reporting compliance risk, and for providing compliance training, than would be appropriate for foreign banking organizations with smaller, less-complex U.S. operations.⁶

5. While the corporate compliance function is generally responsible for overseeing and supporting the compliance risk-management program, it is recognized that the board of directors may assign primary responsibility for aspects of the compliance program to other units within the organization (e.g., finance, information technology, human resources, etc.). The corporate compliance function, therefore, may or may not have responsibility for monitoring and testing the controls over certain compliance activities embedded within these units, such as those over regulatory reporting and regulatory capital. Nevertheless, it is important that an organization's compliance program incorporates appropriate controls over these risks and that proper oversight of the management of these risks is conducted.

6. Foreign banking organizations with \$50 billion or more in U.S. third-party assets will generally be considered as large banking organizations with complex compliance profiles for purposes of SR 08-8/CA 08-1, unless their U.S. activities are less complex in nature as described in subsection 2124.07.1. The Federal Reserve's views on compliance risk-management

With respect to oversight, foreign banking organizations should provide effective oversight of compliance risks within their U.S. operations, including risks that transcend business lines or legal entities. A foreign banking organization, however, has flexibility in organizing its oversight structure. Compliance oversight of U.S. activities may be conducted in a manner that is consistent with the foreign banking organization's broader compliance risk-management framework. Alternatively, a separate function may be established specifically to provide compliance oversight of the organization's U.S. operations. Regardless of the oversight structure utilized by a foreign banking organization, its established oversight mechanisms, governing policies and procedures, and supporting infrastructure for its U.S. operations should be sufficiently transparent for the Federal Reserve to assess their adequacy.

2124.07.2 INDEPENDENCE OF COMPLIANCE STAFF

Federal Reserve supervisory findings at large, complex banking organizations consistently reinforce the need for compliance staff to be appropriately independent of the business lines for which they have compliance responsibilities. Compliance independence facilitates objectivity and avoids inherent conflicts of interest that may hinder the effective implementation of a compliance program. A particular challenge for many organizations is attaining an appropriate level of independence with respect to compliance staff operating within the business lines.

The Federal Reserve does not prescribe a particular organizational structure for the compliance function. Large banking organizations with complex compliance profiles are encouraged, however, to avoid inherent conflicts of interest by ensuring that accountability exists between the corporate compliance function and compliance staff within the business lines. Such accountability would provide the corporate compliance function with ultimate authority regarding the handling of compliance matters, personnel decisions, and actions relating to compliance staff, including retaining control over the budget

for, and remuneration of, all compliance staff.⁷ Compliance independence should not, however, preclude compliance staff from working closely with the management and staff of the various business lines. To the contrary, compliance functions are generally more effective when strong working relationships between compliance and business line staff exist.

The Federal Reserve recognizes, however, that many large, complex banking organizations have chosen to implement an organizational structure in which compliance staff within a business line have a reporting line into the management of the business. In these circumstances, compliance staff should also have a reporting line through to the corporate compliance function with respect to compliance responsibilities. In addition, a banking organization that chooses to implement such a dual reporting structure should ensure that the following minimum standards are observed in order to minimize potential conflicts of interest associated with this approach:

1. In organizations with dual reporting-line structures, the corporate compliance function should play a key role in determining how compliance matters are handled and in personnel decisions and actions (including remuneration) affecting business-line compliance and local compliance staff, particularly senior compliance staff. Furthermore, the organization should have in place a process designed to ensure that disputes between the corporate compliance function and business-line management regarding compliance matters are resolved objectively. Under such a process, the final decision-making authority should rest either with the corporate compliance function or with a member or committee of senior management that has no business-line responsibilities.
2. Compensation and incentive programs should be carefully structured to avoid undermining the independence of compliance staff. Compliance staff should not be compensated on the basis of the financial performance of the business line. Such an arrangement creates an improper conflict of interest.
3. Banking organizations with dual reporting-line structures should implement appropriate controls and enhanced corporate oversight to identify and address issues that may arise from conflicts of interest affecting compli-

programs apply equally to the large, complex U.S. operations of foreign banking organizations.

7. The reference to all compliance staff includes corporate, business-line, and local compliance staff.

ance staff within the business lines. For example, in these circumstances, the process for providing corporate oversight of monitoring and testing activities performed by compliance staff within the business lines should be especially robust.

2124.07.3 COMPLIANCE MONITORING AND TESTING

Robust compliance monitoring and testing play a key role in identifying weaknesses in existing compliance risk-management controls and are, therefore, critical components of an effective firmwide compliance risk-management program.

2124.07.3.1 Risk Assessments and Monitoring and Testing Programs

Risk assessments are the foundation of an effective compliance monitoring and testing program. The scope and frequency of compliance monitoring and testing activities should be a function of a comprehensive assessment of the overall compliance risk associated with a particular business activity.⁸ Large complex banking organizations should ensure that comprehensive risk-assessment methodologies are developed and fully implemented, and that compliance monitoring and testing activities are based upon the resulting risk assessments.

2124.07.3.2 Testing

Compliance testing is necessary to validate (1) that key assumptions, data sources, and procedures utilized in measuring and monitoring compliance risk can be relied upon on an ongoing basis and (2) in the case of transaction testing, that controls are working as intended. The testing of controls and remediation of deficiencies identified as a result of testing activities are essential to maintaining an effective internal control framework.

The scope and frequency of compliance testing activities should be based upon the assessment of the specific compliance risks associated with a particular business activity. Periodic test-

8. Risk assessments should be based upon firmwide standards that establish the method for, and criteria to be utilized in, assessing risk throughout the organization. Risk assessments should take into consideration both the risk inherent in the activity and the strength and effectiveness of controls designed to mitigate the risk.

ing of compliance controls by compliance staff is strongly encouraged as this practice tends to result in an enhanced level of compliance testing. If, however, compliance testing is performed exclusively by the internal audit function, particular care should be taken to ensure that high-risk compliance elements are not otherwise obscured by a lower overall risk rating of a broadly defined audit entity. Otherwise, the scope and frequency of audit coverage of higher-risk compliance elements tend to be insufficient.

2124.07.4 RESPONSIBILITIES OF THE BOARD OF DIRECTORS AND SENIOR MANAGEMENT

The primary responsibility for complying with applicable rules and standards rests with the individuals within the organization as they conduct their day-to-day business and support activities. The board, senior management, and the corporate compliance function are responsible for working together to establish and implement a comprehensive and effective compliance risk-management program and oversight framework that is reasonably designed to prevent and detect compliance breaches and issues.

2124.07.4.1 Boards of Directors.⁹

Boards of directors are responsible for setting an appropriate culture of compliance within their organizations, for establishing clear policies regarding the management of key risks, and for ensuring that these policies are adhered to in practice. The following discussion is intended to clarify existing Federal Reserve supervisory views with regard to responsibilities of the board related to compliance risk management and oversight, and to differentiate these responsibilities from those of senior management.

To achieve its objectives, a sound and effective firmwide compliance risk-management program should have the support of the board and senior management. As set forth in applicable

9. Foreign banking organizations should ensure that, with respect to their U.S. operations, the responsibilities of the board described in this section are fulfilled in an appropriate manner through their oversight structure and risk-management framework.

law and supervisory guidance, the board and senior management of a banking organization have different, but complementary, roles in managing and overseeing compliance risk.¹⁰

The board has the responsibility for promoting a culture that encourages ethical conduct and compliance with applicable rules and standards. A strong compliance culture reinforces the principle that an organization must conduct its activities in accordance with applicable rules and standards and encourages employees to conduct all activities in accordance with both the letter and the spirit of applicable rules and standards. The board should have an appropriate understanding of the types of compliance risks to which the organization is exposed. The level of technical knowledge required of directors to fulfill these responsibilities may vary, depending on the particular circumstances at the organization.

The board should ensure that senior management is fully capable, qualified, and properly motivated to manage the compliance risks arising from the organization's business activities in a manner that is consistent with the board's expectations. The board should ensure that its views about the importance of compliance are understood and communicated by senior management across, and at all levels of, the organization through ongoing training and other means. The board should ensure that senior management has established appropriate incentives to integrate compliance objectives into the management goals and compensation structure across the organization and that appropriate disciplinary actions and other measures are taken when serious compliance failures are identified. Finally, the board should ensure that the corporate compliance function has an appropriately prominent status within the organization. Senior management within the corporate compliance function and senior compliance personnel within individual business lines should have the appropriate authority, independence, and access to personnel and information within the organization, and appropriate resources to conduct their activities effectively.

10. See, for example, the Basel compliance paper; SR-04-18, "Bank Holding Company Rating System"(section 4070.0); SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies"(section 4070.1); and the United States Sentencing Commission's *Federal Sentencing Guidelines Manual*, Chapter Eight, "Sentencing of Organizations."

The board should be knowledgeable about the general content of the compliance program and exercise appropriate oversight of the program. Accordingly, the board should review and approve key elements of the organization's compliance risk-management program and oversight framework, including firmwide compliance policies, compliance risk-management standards, and roles and responsibilities of committees and functions with compliance oversight responsibilities. The board should oversee management's implementation of the compliance program and the appropriate and timely resolution of compliance issues by senior management. The board should exercise reasonable due diligence to ensure that the compliance program remains effective by at least annually reviewing a report on the effectiveness of the program. The board may delegate these tasks to an appropriate board-level committee.

2124.07.4.2 Senior Management

Senior management across the organization is responsible for communicating and reinforcing the compliance culture established by the board and for implementing measures to promote the culture. Senior management also should implement and enforce the compliance policies and compliance risk-management standards that have been approved by the board. Senior management of the corporate compliance function should establish, support, and oversee the organization's compliance risk-management program. The corporate compliance function should report to the board, or a committee thereof, on significant compliance matters and the effectiveness of the compliance risk-management program.

Senior management of a foreign banking organization's U.S. operations should provide sufficient information to governance or control functions in its home country and should ensure that responsible senior management, including in the home country, maintain a thorough understanding of the risk and control environment governing U.S. operations. U.S. management should assess the effectiveness of established governance and control mechanisms on an ongoing basis, including processes for reporting and escalating areas of concern and implementation of corrective action as necessary.

Assessment of Information Technology in Risk-Focused Supervision

Section 2124.1

The Federal Reserve had adopted risk-focused supervision frameworks for community banks and large complex banking organizations, including foreign banking organizations. These frameworks incorporate a methodology to assess an organization's risks and business activities and to tailor supervisory activities to its risk profile. These frameworks aim to sharpen the focus of supervisory activities on areas that pose the greatest risk to the safety and soundness of banking organizations and on management processes to identify, measure, monitor, and control risks.¹

The Federal Reserve recognizes that the use of information technology can greatly affect a banking organization's financial condition and operating performance.² With the increasing dependency of banking organizations on the use of information technology, the Federal Reserve expects an organization's management and board of directors to effectively manage the risks associated with information technology. Accordingly, examiners must consider the risks associated with information technology in their evaluations of an organization's significant business activities and assess the effectiveness of the risk-management process that the organization applies to information technology. See SR-98-09.

This section supplements further the guidance on the evaluation of banking organizations' risk-management processes. The primary objectives are to—

1. highlight the critical dependence of the financial services industry on information technology and its potential effect on safety and soundness,
2. reinforce the concept that the risk-focused supervisory process and related products (risk assessments, supervisory plans, and scope memoranda) for an organization must

- address the risks associated with its use of information technology,³ and
3. provide a basic framework and a common vocabulary to evaluate the effectiveness of processes used to manage the risks associated with information technology.

2124.1.1 CHANGING ROLE OF INFORMATION TECHNOLOGY

As the automated processing of information has moved beyond centralized mainframe operations to encompass end-user computer and distributed processing systems, the use of information technology in general has expanded greatly. In the banking industry, information technology was once limited to automation of routine transactions and preparation of financial reports but is now used to automate all levels of a banking organization's operations and information processing. Some decision-making processes such as credit scoring and securities trading have been fully automated. New, complex financial products are possible largely because of valuation models that depend on technology. Moreover, technological advances in communications and connectivity have minimized geographic constraints within the industry.

While information technology enables banking organizations to carry out their activities more efficiently and effectively, information technology also can be a source of risk to the industry. The operational concerns associated with information processing, traditionally the domain of the "back office," have assumed critical importance during banking mergers and consolidations.

Banking organizations, recognizing the dependency of their operations and decision-making processes on information technology, have placed increased emphasis on the management of this important resource. In large banking organizations, the positions of the chief information officer and chief technology officer have become more visible in the top executive ranks of banking organizations. In addition, managers of activities that rely on end-user computing and distributed processing systems

1. The types of risk may be categorized according to those presented in the guidelines for rating risk management (that is, credit, market, liquidity, operational, legal, and reputational) or by categories defined by the institution or other supervisory agencies. If the institution uses risk categories that differ from those defined by the supervisory agencies, those categories may be used if all relevant types of risks are captured. See SR-95-51, "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies."

2. Information technology refers to a business resource that is the combination of computers (hardware and software), telecommunications, and information.

3. The supervisory products are described in SR-97-24 for large complex institutions and SR-97-25 for community banks.

have been assigned more direct responsibility for the information technology used in conducting their business. As a result, the management of the risks associated with information technology must be evaluated for each significant business activity as well as for the overall organization.

Notwithstanding the move towards decentralized management of information technology, large centralized mainframe computer systems are still an integral part of the information technology on which many large banking organizations rely. This includes systems critical to the global payments system and to the transfer and custody of securities. Similarly, with the continued growth of outsourcing, many third-party information technology service centers also perform a vital role in the banking industry. Therefore, the review of the effectiveness and reliability of the critical mainframe systems and third-party processors will continue to be an important part of the Federal Reserve's supervisory activities.

2124.1.2 IMPLICATIONS FOR RISK-FOCUSED SUPERVISION

The risk-focused supervisory process is evolving and adapting to the changing role of information technology, with a greater emphasis being placed on an evaluation of information technology and an assessment of its effect on an organization's safety and soundness. Accordingly, examiners should explicitly consider information technology when developing their risk assessments and supervisory plans. It is expected that examiners will exercise appropriate judgment in determining the level of review, given the characteristics, size, and business activities of the organization. Moreover, to determine the scope of supervisory activities close coordination is needed between general safety-and-soundness examiners and information technology specialists during the risk assessment and planning, as well as during the on-site phase of the examination or inspection. In general, examiners should take the following actions:

1. Develop a broad understanding of the organization's approach, strategy, and structure with regard to information technology. This requires a determination of the role and importance of information technology to the

organization and any unique characteristics or issues.

2. Incorporate an analysis of information technology systems into risk assessments, supervisory plans, and scope memoranda. The analysis should include identification of critical information technology systems, related management responsibility, and the major technology components.⁴ An organization's information technology systems should be considered in relation to the size, activities, and complexity of the organization, as well as the degree of reliance on these systems.
3. Assess the organization's critical systems, that is, those that support its major business activities, and the degree of reliance those activities have on information technology systems. The level of review should be sufficient to determine that the systems are delivering the services necessary for the organization to conduct its business safely and soundly.
4. Determine whether the board of directors and senior management are adequately identifying, measuring, monitoring, and controlling the significant risks associated with information technology for the overall organization and its major business activities.

2124.1.3 FRAMEWORK FOR EVALUATING INFORMATION TECHNOLOGY

In order to provide a common terminology and consistent approach for evaluating the adequacy of an organization's information technology, five information technology elements are introduced and defined below. These elements may be used to evaluate the information technology processes at the functional business level or for the organization as a whole. They may also be applied to a variety of information technology management structures: centralized, decentralized, or outsourced.⁵

Although deficiencies in information technology appear to be most directly related to operational risk, information technology also can affect the other business risks (credit, market, liquidity, legal, and reputational) depending on

4. These components include mainframe, local area network, and personal computers, as well as software applications.

5. When banking organizations outsource operations, they delegate a certain level of responsibility and authority to an outside party (depending on the contractual arrangements). However, ultimate accountability remains with the banking organization.

the specific circumstances. Examiners should view the information technology elements in an integrated manner with the overall business risks of the organization or business activity; a deficiency in any one of the elements could have a substantive adverse effect on the organization's or activity's business risks. Moreover, the elements below do not replace or independently add to the business risks described in SR-95-51. Rather, these elements should be assessed in relation to all business risks.

The elements are to be used as a flexible tool to facilitate consideration and discussion of the risks associated with information technology. Where an organization uses different terminology to describe information technology elements, examiners may use that terminology provided the organization adequately addresses all elements. Regardless of the terminology employed, examiners should focus on those systems and issues that are considered critical to the organization.

The five information technology elements are described below:

1. *Management processes.* Management processes⁶ encompass planning, investment, development, execution, and staffing of information technology from a corporate-wide and business-specific perspective. Management processes over information technology are effective when they are adequately and appropriately aligned with, and supportive of, the organization's mission and business objectives. Management processes include strategic planning, management and reporting hierarchy, management succession, and a regular independent review function. Examiners should determine if the information technology strategy for the business activity or organization is consistent with the organization's mission and business objectives and whether the information technology function has effective management processes to execute that strategy.
2. *Architecture.* Architecture⁷ refers to the underlying design of an automated information system and its individual components. The underlying design encompasses both physical and logical architecture, including operating environments, as well as the organization of data. The individual components refer to network communications, hardware, and software, which includes operating systems, communications software, database management systems, programming languages, and desktop software. Effective architecture meets current and long-term organizational objectives, addresses capacity requirements to ensure that systems allow users to easily enter data at both normal and peak processing times, and provides satisfactory solutions to problems that arise when information is stored and processed in two or more systems that cannot be connected electronically. In assessing the adequacy of information technology architecture, examiners should consider the hardware's capability to run the software, the compatibility and integration with other systems and sources of data, the ability to upgrade to higher levels of performance and capacity, and the adequacy of controls.
3. *Integrity.* Integrity refers to the reliability, accuracy, and completeness of information delivered to the end-user. An information technology system has an effective level of integrity when the resulting information flows are accurate and complete. Insufficient integrity in an organization's systems could adversely affect day-to-day reliability, processing performance, input and output accuracy, and the ease of use of critical information. Examiners should review and consider whether the organization relies upon information system audits or independent application reviews to ensure the integrity of its systems. To assess the integrity of an organization's systems, examiners should review the reliability, accuracy, and completeness of information delivered.
4. *Security.* Security refers to the safety afforded to information assets and their data processing environments, using both physical and logical controls to achieve a level of protection commensurate with the value of the assets. Information technology has effective security when controls prevent unauthorized access; modification; destruction; or disclosure of information assets during their creation, transmission, processing, maintenance, or storage. Examiners should ensure that operating procedures and controls are commensurate with the potential for and risks associated with security breaches, which may be either physical or electronic, inadvertent or intentional, or internal or external.
5. *Availability.* Availability refers to the delivery of information to end-users. Information technology has effective availability when

6. Also referred to as "organization" or "strategic."

7. Sometimes referred to as "infrastructure."

information is consistently delivered on a timely basis in support of business and decision-making processes. In assessing the adequacy of availability, examiners should consider the capability of information technology to provide information from either primary or secondary sources to the end-users, as well as the ability of back-up systems, presented in contingency plans, to mitigate business disruption. Contingency plans should set out a process for an organization to restore or replace its information-processing resources, reconstruct its information assets, and resume its business activity from disruption caused by human error or intervention, natural disaster, or infrastructure failure (including the loss of utilities and communication lines and operational failure of hardware, software, and network communications).

Appendix A provides a table with examples of situations where deficiencies in information technology elements potentially have a negative effect on the business risks of an organization. The table also provides possible actions that an organization could take in these situations to mitigate its risks. The examples in this table are representative and should not be viewed as an exhaustive list of the risks associated with information technology.

2124.1.4 ALIGNING EXAMINER STAFFING WITH THE TECHNOLOGY ENVIRONMENT

While mainframe computer systems are still an integral part of the information technology for large organizations, information technology processes have become embedded in the various business activities of a banking organization—particularly with the increased use of local area network and personal computers. In contrast, many community and regional banks continue to rely on third-party information technology service centers. Given this variability of information technology environments, the level of technical expertise needed for a particular examination or inspection will vary and should be identified during its planning phase. For example, a specialist in information technology or the particular business activity may be the most appropriate person to review information technology integrity, while general safety-and-

soundness examiners may be better suited to review management processes related to information technology. Development of the overall supervisory approach for an organization requires continuous collaboration between general safety-and-soundness examiners and information technology specialists. Accordingly, a discussion of information technology should be integrated into the supervisory process and products. That is, examiners should consider and comment on the risks associated with information technology when developing an understanding of an organization, assessing an organization's risks, and preparing a scope memorandum.

2124.1.5 INSPECTION OBJECTIVES

1. To assess the risks associated with information technology when developing the scope of supervisory plans and activities.
2. To consider the various risks associated with information technology along with the risk evaluation of the banking organization's business activities.
3. To assess the effectiveness of the risk-management process that the banking organization applies to information technology.
4. To view the banking organization's information technology elements in an integrated manner along with the overall business risks of the banking organization or its business activity, and ascertain if there are any deficiencies therein.

2124.1.6 INSPECTION PROCEDURES

1. Develop a broad understanding of the organization's approach, strategy, and structure with regard to information technology.
2. Incorporate an analysis of information technology systems into risk assessments, supervisory plans, and scope memoranda.
3. Assess the banking organization's critical systems and the degree of reliance those activities have on information technology systems.
4. Determine that the information systems are delivering the services necessary for the organization to conduct its business safely and soundly.
5. Determine if the board of directors or senior management has conducted an independent review, either by independent qualified staff or by an independent third-party consultant, of the current architecture, assessing the risks

- associated with the institution's information technology. Did the review establish whether the organization's architecture had provided for—
- a. current and long-term organizational objectives,
 - b. capacity requirements during normal and peak processing periods,
 - c. solutions when information is stored and processed in two or more separate systems,
 - d. the hardware's capability to run the software and its compatibility and integration with other systems and sources of data,
 - e. the ability to upgrade to higher levels of performance and capacity, and
 - f. the adequacy of controls.
6. Determine if the institution relies on information system audits or independent application reviews to determine whether information flows are accurate and complete.
 7. Review, on a sample basis, the reliability, accuracy, and completeness of processed delivered information.
 8. Determine whether the operating procedures and controls are commensurate with the potential for, and risks associated with, security breaches, which may be either physical or electronic, inadvertent or intentional, or internal or external.
 9. Determine whether the board of directors and senior management are adequately identifying, measuring, monitoring, and controlling the significant risks associated with information technology for the overall banking organization and its major business activities.
 10. After developing an understanding of the banking organization, assess and comment on the information technology risks and management in a scope memorandum.

2124.1.7 Appendix A—Examples of Information Technology Elements that Should Be Considered in Assessing Business Risks of Particular Situations

<i>Situation</i>	<i>IT elements to be considered</i>	<i>Potential effect on business risks</i>	<i>Risk mitigants</i>
A bank holding company expands very rapidly via acquisition into new product lines and geographic areas.	<p><i>Management processes.</i> Lack of clear, cohesive strategies could result in dependence on different systems that are incompatible and fragmented.</p> <p><i>Integrity.</i> Unreliable information could be produced due to incompatible systems.</p> <p><i>Availability.</i> Critical information may not be available to management when needed.</p>	<p><i>Credit risk.</i> Exposure to less creditworthy borrowers may increase.</p> <p><i>Liquidity risk.</i> Depositors may withdraw funds or close accounts due to unreliable account information.</p> <p><i>Operational risk.</i> Controls may be inadequate to address the increase in manual interventions to correct incompatibility problems between affiliates' systems, leading to a greater potential for fraudulent transactions.</p>	Develop a well-thought-out plan for integrating acquired systems, mapping data flows and sources, and ensuring reliability of systems.
A bank's consumer loan division inputs erroneous entries into the general-ledger system.	<p><i>Integrity.</i> Billing errors and unwarranted late-payment fees could occur due to the inaccurate loan information maintained by the system.</p>	<p><i>Reputational risk.</i> Knowledge of errors could become widespread resulting in adverse public opinion.</p> <p><i>Operational risk.</i> Increased expenditures may be required to resolve accounting operations problems.</p> <p><i>Legal risk.</i> Litigation could arise because of errors in customer accounts due to processing deficiencies.</p>	<p>Improve policies and procedures related to input of accounting entries.</p> <p>Ensure internal audit considers system aspects of accounting operations.</p>
Substantial turnover occurs in bank's wire-transfer department.	<p><i>Security.</i> Security procedures could be compromised due to inadequate training and lack of qualified personnel.</p> <p><i>Integrity.</i> System may not be able to provide "real-time" funds availability.</p>	<p><i>Operational risk.</i> Financial losses could occur due to fraud or incorrectly sent wire transfers.</p> <p><i>Legal risk.</i> Litigation could arise as a result of errors in customer accounts and fraudulent wire transfers.</p> <p><i>Reputational risk.</i> Knowledge of fraudulent or erroneous wire operations could result in adverse public opinion.</p>	<p>Increase and strengthen procedural and access controls for wire operations.</p> <p>Implement security measures such as passwords and firewalls.</p> <p>Develop and monitor appropriate audit trails.</p> <p>Provide for adequate training program and staffing levels.</p>

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2006, footnote 12 was revised to include a reference to SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations."

Effective January 2006, this section, previously titled "Standards for Safeguarding Customer Information," has been retitled "Information Security Standards" to conform with an interagency final rule that implements section 216 of the Fair and Accurate Credit Transactions Act of 2003. The Interagency Guidelines Establishing Information Security Standards, as amended December 16, 2004, generally require each bank holding company to develop, implement, and maintain, as part of its existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports in order to address the risks associated with identity theft. (See 12 C.F.R. 225, appendix F.) The amendments to the information security standards were effective July 1, 2005.

The section has also been revised to incorporate the Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice (the guidance), which was jointly issued on March 23, 2005 (effective March 29, 2005), by the adopting agencies. The guidance describes the response programs, including customer notification procedures, that a bank holding company should develop and implement to address unauthorized access to or use of customer information that could result in substantial harm or inconvenience to a customer. (See SR-05-23/CA-05-10.)

2124.4.1 INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

The federal banking agencies jointly issued interagency guidelines establishing information security standards (the information security standards), which became effective July 1, 2001.¹ (See appendix A, section 2124.4.5.) The

1. The 2001 information security standards were titled Interagency Guidelines Establishing Standards for Safeguarding Customer Information. See 66 Fed. Reg. 8,616–8,641 (February 1, 2001); 69 Fed. Reg. 7,610–7,621 (December 28,

Board of Governors of the Federal Reserve System approved amendments to the standards on December 16, 2004 (effective July 1, 2005). The amended information security standards implement sections of 501 and 505 of the Gramm-Leach-Bliley Act (15 U.S.C. 6801 and 6805) and section 216 of the Fair and Accurate Credit Transactions Act of 2003 (15 U.S.C. 1681w). The Gramm-Leach-Bliley Act requires the agencies to establish information standards consisting of administrative, technical, and physical safeguards for customer records and information. (See SR-01-15.) Bank holding companies and financial holding companies must comply with the information security standards (see appendix F for Regulation Y).² The information security standards apply to customer information maintained by or on behalf of state member banks, bank holding companies, and the non-bank subsidiaries or affiliates of each.³ (The information security standards include standards for the proper disposal of consumer and customer information and guidance on response programs for unauthorized access to customer information. (See SR-05-23/CA-05-10.) See sections 2124.4.1.1 and 2124.4.2.

Under the information security standards, each bank holding company falling within the scope of the standards must implement a comprehensive, written information security program.⁴ A bank holding company's board of directors, or an appropriate committee of the board, must oversee the company's development, implementation, and maintenance of the

2004); and Regulation H, 12 CFR 208, appendix D-2; Regulation K, 12 CFR 211.9 and 211.24; and Regulation Y, 12 CFR 225, appendix F.

2. The discussion in this section applies equally to financial holding companies and bank holding companies.

3. The information security standards do not apply to brokers, dealers, investment companies, and investment advisers, or to persons providing insurance under the applicable state insurance authority of the state in which the person is domiciled. The appropriate federal agency or state insurance authority regulates these insurance entities under sections 501 and 505 of the Gramm-Leach-Bliley Act.

4. The information security standards apply to customer information; as a result, a bank holding company that does not maintain any customer information is not subject to the information security standards. In addition, when customer information is maintained only in the banking subsidiaries or functionally regulated nonbank subsidiaries of the holding company, examiners generally may rely on the primary supervisor's assessment of the subsidiaries' information security programs, if applicable, to determine the holding company's compliance with the information security standards.

information security program—this board oversight includes assigning specific responsibility for the program’s implementation and reviewing reports received from management. The information security program should include administrative, technical, and physical safeguards appropriate to the size and complexity of the bank holding company and the nature and scope of its activities.

While all parts of a bank holding company are not required to implement a uniform information security program and set of policies, all elements of the information security program must be coordinated. A bank holding company must ensure that each of its subsidiaries is subject to a comprehensive information security program. It may fulfill this requirement either 1) by including a subsidiary within the scope of the bank’s holding company’s comprehensive information security program or (2) by having the subsidiary implement a separate comprehensive information security program in accordance with the information security standards and procedures of appendix F, Regulation Y.

A bank holding company’s information security program must be designed to (1) ensure the security and confidentiality of customer information,⁵ (2) protect against anticipated threats or hazards to the security or integrity of such information, (3) protect against unauthorized access to or use of customer information that could result in substantial harm or inconvenience to any customer, and (4) ensure the proper disposal of customer information and consumer information.⁶ Each bank holding company must identify reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems. An assessment must be made of the (1) likelihood and potential damage of these threats, taking into consideration the sensitivity of the customer information, and

5. *Customer information* is defined to include any record, whether in paper, electronic, or other form, containing *non-public personal information*, as defined in Regulation P, about a financial institution’s customer that is maintained by or on behalf of the bank holding company.

6. A *customer* is defined in the same manner in Regulation P—a consumer who has established a continuing relationship with a bank holding company, under which the bank holding company provides one or more financial products or services to the consumer to be used primarily for personal, family, or household purposes. The definition of customer does not include a business, nor does it include a consumer who has not established an ongoing relationship with the bank holding company.

(2) sufficiency of policies, procedures, customer information systems, and other arrangements that are in place to control risks.

Appropriate policies, procedures, training, and testing must be implemented to manage and control identified risks. Management must also report at least annually to the board of directors or an appropriate committee of the board. Management’s reports should describe the overall status of the information security program and the bank holding company’s compliance with the information security standards. The reports should discuss material matters related to the BHC’s information security program, addressing issues such as risk assessment, risk-management and -control decisions, service-provider arrangements, results of testing, security breaches or violations and management’s responses to them, and recommendations for changes in the information security program.

The information security standards outline specific information security measures that bank holding companies must consider in implementing an information security program. A bank holding company should adopt appropriate measures to manage and control identified risks, commensurate with the sensitivity of the information as well as the complexity and scope of its activities. The measures that a bank holding company must consider and may adopt include access controls, access restrictions, encryption of electronic customer information, dual control procedures, segregation of duties, and employee background checks for employees who have responsibilities for or access to customer information. In addition, a bank holding company must have monitoring systems and response programs and measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures. Training and testing, are critical components to implement an effective information security program. Each bank holding company must regularly test the key controls, systems, and procedures. Tests should be conducted or reviewed by independent third parties or by staff who are independent of the individuals who develop or maintain the security program.

The Federal Reserve recognizes that banking organizations are highly sensitive to the importance of safeguarding customer information and the need to maintain effective information security programs. Existing examination and inspection procedures and supervisory processes already address information security. As a result, most banking organizations may not need to

implement any new controls and procedures.

Examiners should assess compliance with the information security standards during each safety-and-soundness inspection, which may include targeted reviews of information technol-

ogy. Ongoing compliance with the information security standards should be monitored as needed during the risk-focused inspection process. Material instances of noncompliance should be noted in the inspection report.

Bank holding companies are required to oversee their service-provider arrangements in order to (1) protect the security of customer information maintained or processed by their service providers; (2) ensure that their service providers properly dispose of customer and consumer information; and (3) whenever warranted, monitor their service providers to confirm that a provider has satisfied its contractual obligations.

A bank holding company must use appropriate due diligence in selecting its service providers. Bank holding companies should review a potential service provider's information security program or the measures the service provider will use to protect the bank holding company's customer information.⁷ All contracts must require that the service provider implement appropriate measures designed to meet the objectives of the information security standards.

When indicated by the bank holding company's risk assessment, the performance of its service providers must be monitored to confirm that they have satisfied their obligations under the information security program. A bank holding company's methods for overseeing its service providers may differ depending on the type of services, the service provider, or the level of risk to the customer information. For example, if a service provider is subject to regulations or a code of conduct that imposes a duty to protect customer information consistent with the objectives of the information security standards, a bank holding company may consider that duty in exercising its due diligence and oversight of the service provider. If a service provider hires a subservicer (that is, subcontracts), the subservicer would not be considered a "service provider" under the guidelines.

2124.4.1.1 Disposal of Customer and Consumer Information

The information security standards address standards for the proper disposal of consumer information, pursuant to sections 621 and 628 of the Fair Credit Reporting Act (15 U.S.C. 1681s and 1681w). Under section 225.4 of Regulation Y, a

BHC is required to properly dispose of consumer information in accordance with 16 C.F.R. 682. To address the risks associated with identity theft, a BHC and its nonbank subsidiaries and affiliates (a financial institution) is generally required to develop, implement, and maintain, as part of its existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports.

Consumer information is defined as any record about an individual, whether in paper, electronic, or other form, that is a consumer report or is derived from a consumer report and that is maintained or otherwise possessed by or on behalf of the banking organization for a business purpose. Consumer information also means a compilation of such records.

The following are examples of consumer information:

1. a consumer report that a bank obtains
2. information from a consumer report that the bank obtains from its affiliate after the consumer has been given a notice and has elected not to opt out of that sharing
3. information from a consumer report that the bank obtains about an individual who applies for but does not receive a loan, including any loan sought by an individual for a business purpose
4. information from a consumer report that the bank obtains about an individual who guarantees a loan (including a loan to a business entity)
5. information from a consumer report that the bank obtains about an employee or prospective employee

Consumer information does not include any record that does not personally identify an individual, nor does it include the following:

1. aggregate information, such as the mean credit score, derived from a group of consumer reports
2. blind data, such as payment history on accounts that are not personally identifiable, that may be used for developing credit scoring models or for other purposes

7. A *service provider* is deemed to be a person or entity that maintains, processes, or is otherwise permitted access to customer information through its direct provision of services directly to the bank holding company.

2124.4.2 RESPONSE PROGRAMS FOR UNAUTHORIZED ACCESS TO CUSTOMER INFORMATION AND CUSTOMER NOTICE

The information security standards list measures to be included in a bank holding company's information security program. These measures include "response programs that specify actions to be taken when the bank suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies."⁸ A response program is the principal means for a financial institution to protect against the unauthorized "use" of customer information that could lead to "substantial harm or inconvenience" for its customer. For example, customer notification is an important tool that enables a customer to take steps to prevent identity theft, such as by arranging to have a fraud alert placed in his or her credit file.

Prompt action by both the institution and the customer following any unauthorized access to customer information is crucial to preventing or limiting damages from identity theft. As a result, every financial institution should develop and implement a response program appropriate to its size and complexity and to the nature and scope of its activities. The program should be designed to address incidents of unauthorized access to customer information.

The Interagency Guidance on Response Programs for Unauthorized Access to Customer Information and Customer Notice⁹ (the guidance) interprets section 501(b) of the Gramm-Leach-Bliley Act (the GLB Act) and the information security standards.¹⁰ The guidance describes the response programs, including customer notification procedures, that a financial institution should develop and implement to address unauthorized access to or use of customer information that could result in substantial harm or inconvenience to a customer.

8. See the information security standards, 12 CFR 225, appendix F, supplement A.

9. The guidance was jointly issued on March 23, 2005 (effective March 29, 2005), by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

10. See 12 C.F.R. 225, appendix F. The Interagency Guidelines Establishing Information Security Standards were formerly known as the Interagency Guidelines Establishing Standards for Safeguarding Customer Information.

When evaluating the adequacy of an institution's required information security program, examiners are to consider whether the institution has developed and implemented a response program equivalent to the guidance. At a minimum, an institution's response program should contain procedures for (1) assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused; (2) notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined later in the guidance; (3) immediately notifying law enforcement in situations involving federal criminal violations requiring immediate attention; (4) taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, such as by monitoring, freezing, or closing affected accounts, while preserving records and other evidence; and (5) notifying customers when warranted.

The guidance does not apply to a financial institution's foreign offices, branches, or affiliates. However, a financial institution subject to the information security standards is responsible for the security of its customer information, whether the information is maintained within or outside of the United States, such as by a service provider located outside of the United States.

The guidance also applies to customer information, meaning any record containing nonpublic personal information about a financial institution's customer, whether in paper, electronic, or other form, *that is maintained by or on behalf of the institution*.¹¹ (See the Board's privacy rule, Regulation P, at section 216.3(n)(2) (12 C.F.R. 216.3(n)(2).) Consequently, the guidance applies only to information that is within the control of the institution and its service providers. The guidance would not apply to information directly disclosed by a customer to a third party, for example, through a fraudulent web site.

The guidance also does not apply to information involving business or commercial accounts. Instead, the guidance applies to nonpublic personal information about a "customer" as that term is used in the information security standards, namely, a consumer who obtains a financial product or service from a financial institution to be used primarily for personal, family, or

11. See the information security standards, 12 C.F.R. 225, appendix F, section I.C.2.c.

household purposes, and who has a continuing relationship with the institution.¹²

2124.4.2.1 Response Programs

Financial institutions should take preventive measures to safeguard customer information against attempts to gain unauthorized access to the information. For example, financial institutions should place access controls on customer information systems and conduct background checks on employees who are authorized to access customer information.¹³ However, every financial institution should also develop and implement a risk-based response program to address incidents of unauthorized access to customer information in customer information systems¹⁴ that occur nonetheless. A response program should be a key part of an institution's information security program.¹⁵ The program should be appropriate to the size and complexity of the institution and the nature and scope of its activities.

In addition, each institution should be able to address incidents of unauthorized access to customer information in customer information systems maintained by its domestic and foreign service providers. Therefore, consistent with the obligations in the information security standards that relate to these arrangements and with existing guidance on this topic issued by the agencies,¹⁶ an institution's contract with its service provider should require the service provider to take appropriate actions to address incidents of unauthorized access to the financial institution's customer information. These actions include notifying the institution as soon as possible of any such incident, which enables the institution

to expeditiously implement its response program.

2124.4.2.1.1 Components of a Response Program

At a minimum, an institution's response program should contain procedures for the following:

1. assessing the nature and scope of an incident, and identifying what customer information systems and types of customer information have been accessed or misused
2. notifying its primary federal regulator as soon as possible when the institution becomes aware of an incident involving unauthorized access to or use of *sensitive* customer information, as defined below
3. consistent with the Suspicious Activity Report (SAR) regulations,¹⁷ notifying appropriate law enforcement authorities, in addition to filing a timely SAR in situations involving federal criminal violations requiring immediate attention, such as when a reportable violation is ongoing
4. taking appropriate steps to contain and control the incident to prevent further unauthorized access to or use of customer information, for example, by monitoring, freezing, or closing affected accounts, while preserving records and other evidence
5. notifying customers when warranted

As noted above for the second component, a financial institution and a bank holding company are to notify its primary federal regulator of a security breach involving sensitive customer information, whether or not it notifies its customers. The banking organization experiencing such a breach should promptly notify its supervisory central point of contact at its Reserve Bank and provide information on the nature of the incident and on whether law enforcement authorities were notified or a Suspicious Activity Report (SAR) was or will be

12. See the information security standards, 12 C.F.R. 225, appendix F, at section I.C.2.b. and the Board's Privacy Rule (Regulation P), section 216.3(h) (12 C.F.R. 216.3(h)).

13. Institutions should also conduct background checks on employees to ensure that they do not violate 12 U.S.C. 1829, which prohibits an institution from hiring an individual convicted of certain criminal offenses or who is subject to a prohibition order under 12 U.S.C. 1818(e)(6).

14. Under the information security standards, an institution's *customer information systems* consist of all the methods used to access, collect, store, use, transmit, protect, or dispose of customer information, including the systems maintained by its service providers. See the information security standards, 12 C.F.R. 225, appendix F, section I.C.2.d.

15. See SR-97-32, "Sound Practices Guidance for Information Security for Networks," for additional guidance on preventing, detecting, and responding to intrusions into financial institution computer systems.

16. See SR-00-04, "Outsourcing of Information and Transaction Processing."

17. An institution's obligation to file a SAR is set out in the SAR regulations and supervisory guidance. See 12 C.F.R. 208.62 (state member banks); 12 C.F.R. 211.5(k) (Edge and agreement corporations); 12 C.F.R. 211.24(f) (uninsured state branches and agencies of foreign banks); and 12 C.F.R. 225.4(f) (bank holding companies and their nonbank subsidiaries). See also SR-03-12, "Revisions to the Suspicious Activity Report Form," and SR-01-11, "Identity Theft and Pretext Calling."

filed. When reporting security breaches involving sensitive customer information, the institution should provide the central point of contact with information on the steps taken to contain and control the incident, the number of customers potentially affected, whether customer notification is warranted, and whether a service provider was involved. A banking organization should not delay providing prompt initial notification to its central point of contact. (See SR-05-23/CA-05-10.)

If an incident of unauthorized access to customer information involves customer information systems maintained by an institution's service providers, the financial institution is responsible for notifying its customers and regulator. However, an institution may authorize or contract with its service provider to notify the institution's customers or regulator on its behalf.

2124.4.2.2 Customer Notice

Financial institutions have an affirmative duty to protect their customers' information against unauthorized access or use. Notifying customers of a security incident involving the unauthorized access or use of the customer information, in accordance with the standard set forth below, is a key part of that duty.

Timely notification of customers is important to managing an institution's reputation risk. Effective notice also may reduce an institution's legal risk, assist in maintaining good customer relations, and enable the institution's customers to take steps to protect themselves against the consequences of identity theft. When customer notification is warranted, an institution may not forgo notifying its customers of an incident because the institution believes that it may be potentially embarrassed or inconvenienced by doing so.

2124.4.2.2.1 Standard for Providing Notice

When a financial institution becomes aware of an incident of unauthorized access to sensitive customer information, the institution should conduct a reasonable investigation to promptly determine the likelihood that the information has been or will be misused. If the institution determines that misuse of its information about a customer has occurred or is reasonably pos-

sible, it should notify the affected customer as soon as possible.

Customer notice may be delayed if an appropriate law enforcement agency determines that notification will interfere with a criminal investigation and provides the institution with a written request for the delay. However, the institution should notify its customers as soon as notification will no longer interfere with the investigation.

2124.4.2.2.2 Sensitive Customer Information

Under the information security standards, an institution must protect against unauthorized access to or use of customer information that could result in substantial harm or inconvenience to any customer. Substantial harm or inconvenience is most likely to result from improper access to *sensitive customer information* because this type of information is most likely to be misused, as in the commission of identity theft.

For purposes of the guidance, *sensitive customer information* means a customer's name, address, or telephone number, in conjunction with the customer's Social Security number, driver's license number, account number, credit or debit card number, or with a personal identification number or password that would permit access to the customer's account. *Sensitive customer information* also includes any combination of components of customer information that would allow someone to log on to or access the customer's account, such as a user name and password or a password and an account number.

2124.4.2.2.3 Affected Customers

If a financial institution, on the basis of its investigation, can determine from its logs or other data precisely which customers' information has been improperly accessed, it may limit notification to those customers for whom the institution determines that misuse of their information has occurred or is reasonably possible. However, there may be situations in which an institution determines that a group of files has been accessed improperly but is unable to identify which specific customers' information has been accessed. If the circumstances of the unauthorized access lead the institution to determine that misuse of the information is reasonably possible, it should notify all customers in the group.

2124.4.2.2.4 *Content of Customer Notice*

Customer notice should be given in a clear and conspicuous manner. The notice should describe the incident in general terms and the type of customer information that was the subject of unauthorized access or use. The notice should also generally describe what the institution has done to protect the customers' information from further unauthorized access, and include a telephone number that customers can call for further information and assistance.¹⁸ The notice should remind customers of the need to remain vigilant over the next 12 to 24 months, and to promptly report incidents of suspected identity theft to the institution. The notice should include the following additional items, when appropriate:

1. a recommendation that the customer review account statements and immediately report any suspicious activity to the institution
2. a description of fraud alerts and an explanation of how the customer may place a fraud alert in his or her consumer reports to put the customer's creditors on notice that the customer may be a victim of fraud
3. a recommendation that the customer periodically obtain credit reports from each nationwide credit reporting agency and have information relating to fraudulent transactions deleted
4. an explanation of how the customer may obtain a credit report free of charge
5. information about the availability of the Federal Trade Commission (FTC) online guidance regarding steps consumers can take to protect themselves against identity theft (The notice should encourage the customer to report any incidents of identity theft to the FTC and should provide the FTC's web site address and toll-free telephone number that customers may use to obtain the identity theft guidance and to report suspected incidents of identity theft.)¹⁹

18. The institution should, therefore, ensure that it has reasonable policies and procedures in place, including trained personnel, to respond appropriately to customer inquiries and requests for assistance.

19. The FTC web site for the ID theft brochure and the FTC hotline phone number are www.consumer.gov/idtheft/ and 1-877-IDTHEFT. The institution may also refer customers to any materials developed pursuant to section 151(b) of the FACT Act (educational materials developed by the FTC to teach the public how to prevent identity theft).

Financial institutions are encouraged to notify the nationwide consumer reporting agencies before sending notices to a large number of customers when those notices include contact information for the reporting agencies.

2124.4.2.2.5 *Delivery of Customer Notice*

Customer notice should be delivered in any manner designed to ensure that a customer can reasonably be expected to receive it. For example, the institution may choose to contact all affected customers by telephone, by mail, or by electronic mail in the case of customers for whom it has a valid e-mail address and who have agreed to receive communications electronically.

2124.4.3 Inspection Objective

1. To review and assess the bank holding company's compliance with the Interagency Guidelines Establishing Information Security Standards, which include standards for safeguarding customer information (the examiners should thus review the BHC's information security program, including its response program for unauthorized access to customer information and customer notice and its guidelines on the proper disposal of customer information and consumer information) and all other applicable laws, rules, and regulations.

2124.4.4 Inspection Procedures

1. Referencing the "Establishment of Information Security Standards" section of the internal control questionnaire in section 4060.4 of the System's *Commercial Bank Examination Manual*, assess the BHC's compliance with the Interagency Guidelines Establishing Information Security Standards including its standards for safeguarding customer information.
2. Conduct a review that is a sufficient basis for evaluating the BHC's overall information security program and its compliance with the information security standards.

2124.4.5 APPENDIX A— INTERAGENCY GUIDELINES ESTABLISHING INFORMATION SECURITY STANDARDS

Sections II and III of the information security standards are provided below. For more information, see the Interagency Guidelines Establishing Information Security Standards in Regulation Y, section 225, appendix F (12 C.F.R. 225, appendix F). The guidelines were previously titled Interagency Guidelines Establishing Standards for Safeguarding Customer Information. The information security standards were amended, effective July 1, 2005, to implement section 216 of the Fair and Accurate Credit Transactions Act of 2003 (the FACT Act). To address the risks associated with identity theft, the amendments generally require financial institutions to develop, implement, and maintain, as part of their existing information security program, appropriate measures to properly dispose of consumer information derived from consumer reports. The term *consumer information* is defined in the revised rule.

II. Standards for Safeguarding Customer Information

A. Information Security Program

Each bank holding company is to implement a comprehensive, written information security program that includes administrative, technical, and physical safeguards appropriate to the size and complexity of the bank holding company and the nature and scope of its activities. While all parts of the bank holding company are not required to implement a uniform set of policies, all elements of the information security program are to be coordinated. A bank holding company is also to ensure that each of its subsidiaries is subject to a comprehensive information security program. The bank holding company may fulfill this requirement either by including a subsidiary within the scope of the bank holding company's comprehensive information security program or by causing the subsidiary to implement a separate comprehensive information security program in accordance with the standards and procedures in sections II and III that apply to bank holding companies.

B. Objectives

A bank holding company's information security program shall be designed to—

1. ensure the security and confidentiality of customer information;
2. protect against any anticipated threats or hazards to the security or integrity of such information;
3. protect against unauthorized access to or use of such information that could result in substantial harm or inconvenience to any customer; and
4. ensure the proper disposal of customer information and consumer information.

III. Development and Implementation Of Information Security Program

A. Involve the Board of Directors

The board of directors or an appropriate committee of the board of each bank holding company is to—

1. approve the bank holding company's written information security program; and
2. oversee the development, implementation, and maintenance of the bank holding company's information security program, including assigning specific responsibility for its implementation and reviewing reports from management.

B. Assess Risk

Each bank holding company is to—

1. identify reasonably foreseeable internal and external threats that could result in unauthorized disclosure, misuse, alteration, or destruction of customer information or customer information systems;
2. assess the likelihood and potential damage of these threats, taking into consideration the sensitivity of customer information;
3. assess the sufficiency of policies, procedures, customer information systems, and other arrangements in place to control risks; and
4. ensure the proper disposal of customer information and consumer information.

C. Manage and Control Risk

Each bank holding company is to—

1. Design its information security program to control the identified risks, commensurate with the sensitivity of the information as well as the complexity and scope of the bank holding company's activities. Each bank holding company must consider whether the following security measures are appropriate for the bank holding company and, if so, adopt those measures the bank holding company concludes are appropriate:
 - a. access controls on customer information systems, including controls to authenticate and permit access only to authorized individuals and controls to prevent employees from providing customer information to unauthorized individuals who may seek to obtain this information through fraudulent means
 - b. access restrictions at physical locations containing customer information, such as buildings, computer facilities, and records storage facilities to permit access only to authorized individuals;
 - c. encryption of electronic customer information, including while in transit or in storage on networks or systems to which unauthorized individuals may have access
 - d. procedures designed to ensure that customer information system modifications are consistent with the bank holding company's information security program
 - e. dual control procedures, segregation of duties, and employee background checks for employees with responsibilities for or access to customer information
 - f. monitoring systems and procedures to detect actual and attempted attacks on or intrusions into customer information systems
 - g. response programs that specify actions to be taken when the bank holding company suspects or detects that unauthorized individuals have gained access to customer information systems, including appropriate reports to regulatory and law enforcement agencies
 - h. measures to protect against destruction, loss, or damage of customer information due to potential environmental hazards, such as fire and water damage or technological failures
2. Train staff to implement the bank holding company's information security program.
3. Regularly test the key controls, systems, and

procedures of the information security program. The frequency and nature of such tests should be determined by the bank holding company's risk assessment. Tests should be conducted or reviewed by independent third parties or staff independent of those that develop or maintain the security programs.

4. Develop, implement, and maintain, as part of its information security program, appropriate measures to properly dispose of customer information and consumer information in accordance with each of the requirements in this section III.

D. Oversee Service-Provider Arrangements

Each bank holding company is to—

1. exercise appropriate due diligence in selecting its service providers;
2. require its service providers by contract to implement appropriate measures designed to meet the objectives of the information security standards; and
3. where indicated by the bank holding company's risk assessment, monitor its service providers to confirm that they have satisfied their obligations with regard to the requirements for overseeing provider arrangements. As part of this monitoring, a bank holding company should review audits, summaries of test results, or other equivalent evaluations of its service providers.

E. Adjust the Program

Each bank holding company is to monitor, evaluate, and adjust, as appropriate, the information security program in light of any relevant changes in technology, the sensitivity of its customer information, internal or external threats to information, and the bank holding company's own changing business arrangements, such as mergers and acquisitions, alliances and joint ventures, outsourcing arrangements, and changes to customer information systems.

F. Report to the Board

Each bank holding company is to report to its board or an appropriate committee of the board

at least annually. This report should describe the overall status of the information security program and the bank holding company's compliance with the information security standards. The reports should discuss material matters related to its program, addressing issues such as risk assessment; risk management and control decisions; service-provider arrangements; results of testing; security breaches or violations

and management's responses; and recommendations for changes in the information security program.

G. Implement the Standards

For effective dates, see 12 C.F.R. 225, appendix F, section III.G.

2124.5.1 IDENTITY THEFT RED FLAGS PREVENTION PROGRAM

The federal financial institution regulatory agencies¹ and the Federal Trade Commission (FTC) have issued joint regulations and guidelines on the *detection, prevention, and mitigation* of identity theft in connection with opening of certain accounts or maintaining certain existing accounts in response to the Fair and Accurate Credit Transactions Act of 2003 (The FACT Act).² Under the FACT Act, bank holding companies (BHCs) and their nonbank subsidiaries are subject to the FTC's regulations.³ These regulations require financial institutions⁴ or creditors⁵ that offer or maintain one or more "covered accounts" to develop and implement a written Identity Theft Prevention Program (Program). A Program is to be designed to detect, prevent, and mitigate identity theft in connection with the opening of a covered account or any existing covered account. The Program must be tailored to the entity's size, complexity, and the nature and scope of its operations and activities. The regulations also require (debit and credit) card issuers to validate notifications of changes of address under certain circumstances.

The joint final rules and guidelines were effective on January 1, 2008. The mandatory compliance date for the rules was November 1, 2008.⁶ (See section 681 of the FTC's Red Flags

Rule (16 CFR 681) and 72 *Fed. Reg.* 63718-63775, November 9, 2007.)

This section describes the provisions of the Red Flags Rule and its guidelines (appendix A) to be used when examining a BHC and its nonbank subsidiaries over which the Federal Reserve has supervisory authority (collectively referred to as "BHC"). (See SR-08-7/CA-08-10 and its interagency attachments.)

2124.5.1.1 Risk Assessment

Prior to the development of the Program, a financial institution or creditor must initially and then periodically conduct a risk assessment to determine whether it offers or maintains covered accounts. It must take into consideration (1) the methods it provides to open its accounts, (2) the methods it provides to access accounts, and (3) its previous experiences with identity theft. If the financial institution or creditor has covered accounts, it must evaluate its potential vulnerability to identity theft. The institution should also consider whether a reasonably foreseeable risk of identity theft may exist in connection with the accounts it offers or maintains and those that may be opened or accessed remotely, through methods that do not require face-to-face contact, such as through the Internet or telephone. Financial institutions or creditors that offer or maintain business accounts that have been the target of identity theft should factor those experiences with identity theft into their determination.

If the financial institution or creditor determines that it has covered accounts, the risk assessment will enable it to identify which of its accounts the Program must address. If a financial institution or creditor initially determines that it does *not* have covered accounts, it must periodically reassess whether it must develop and implement a Program in light of changes in the accounts that it offers or maintains.

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Office of Thrift Supervision (OTS), the Federal Deposit Insurance Corporation (FDIC), and the National Credit Union Administration (NCUA).

2. Section 111 of the FACT Act defines "identity theft" as "a fraud committed or attempted using the identifying information of another person."

3. The FACT Act gives the Board the authority to write rules for state member banks but not BHCs. Nonetheless, the Board retains its supervisory and enforcement authority over BHCs, pursuant to section 1818 of the Federal Deposit Insurance Act. The Board and FTC Red Flags Rules are substantially the same.

4. For purposes of the rule, the term "financial institution" means a "State or National bank, a State or Federal savings and loan association, a mutual savings bank . . . or any other person that, directly or indirectly, holds a transaction account . . . belonging to a consumer."

5. Under section 111 of the FACT Act, the term "creditor" means any person (a natural person, a corporation, government or governmental subdivision, trust, estate, partnership, cooperative, or association) who regularly extends, renews, or continues credit; any person who regularly arranges for the extension, renewal, or continuation of credit; or any assignee or original creditor who participates in the decision to extend, renew, or continue credit.

6. The FTC subsequently granted a six-month delay of enforcement of its Red Flags Rule until May 1, 2009.

(See www2.ftc.gov/opa/2008/10/redflags.shtm.) This delay in enforcement is limited to the Identity Theft Red Flags Rule (16 CFR 681.1), and does not extend to the rule regarding changes of address applicable to card issuers (16 C.F.R. 681.2).

2124.5.1.2 Elements of the Program

The elements of the actual Program will vary depending on the size and complexity of the financial institution or creditor. A financial institution or creditor that determines that it is required to establish and maintain an Identity Theft Prevention Program must (1) identify relevant Red Flags for its covered accounts, (2) detect the Red Flags that have been incorporated into its Program, and (3) respond appropriately to the detected Red Flags. The Red Flags are patterns, practices, or specific activities that indicate the possible existence of identity theft or the potential to lead to identity theft. A financial institution or creditor must ensure (1) that its Program is updated periodically to address the changing risks associated with its customers and their accounts and (2) the safety and soundness of the financial institution or creditor from identity theft.

2124.5.1.3 Guidelines

Each financial institution or creditor that is required to implement a written Program must consider the Guidelines for Identity Theft Detection, Prevention, and Mitigation (16 C.F.R. 681, appendix A of the rule) (the Guidelines) and include those guidelines that are appropriate in its Program. Section I of the Guidelines, “The Program,” discusses a Program’s design that may include, as appropriate, existing policies, procedures, and arrangements that control foreseeable risks to the institution’s customers or to the safety and soundness of the financial institution or creditor from identity theft.

2124.5.1.3.1 Identification of Red Flags

A financial institution or creditor should incorporate relevant Red Flags into the Program from sources such as (1) incidents of identity theft that it has experienced, (2) methods of identity theft that have been identified as reflecting changes in identity theft risks, and (3) applicable supervisory guidance.

2124.5.1.3.2 Categories of Red Flags

Section II of the Guidelines, “Categories of Red Flags,” provides some guidance in identifying

relevant Red Flags.⁷ A financial institution or creditor should include, as appropriate,

1. alerts, notifications, or other warnings received from consumer reporting agencies or service providers, such as fraud detection services;
2. the presentation of suspicious documents;
3. the presentation of suspicious personal identifying information, such as a suspicious address change;
4. the unusual use of, or other suspicious activity related to, a covered account; and
5. notices received from customers, victims of identity theft, law enforcement authorities, or other persons regarding possible identity theft in connection with covered accounts held by the financial institution or creditor.

The above categories do not represent a comprehensive list of all types of Red Flags that may indicate the possibility of identity theft. Institutions must also consider specific business lines and any previous exposures to identity theft. No specific Red Flag is mandatory for all financial institutions or creditors. Rather, the Program should follow the risk-based, nonprescriptive approach regarding the identification of Red Flags.

2124.5.1.3.3 Detect the Program’s Red Flags

In accordance with Section III of the Guidelines, each financial institution or creditor’s Program should address the detection of Red Flags in connection with the opening of covered accounts and existing covered accounts. A financial institution or creditor is required to detect, prevent, and mitigate identity theft in connection with such accounts. The policies and procedures regarding opening a covered account subject to the Program should explain how an institution could identify information about, and verify the identity of, a person opening an account.⁸ In the case of existing covered accounts, institutions could authenticate customers, monitor transactions, and verify the validity of change of address requests.

⁷ Examples of Red Flags from each of these categories are appended as supplement A to appendix A.

⁸ See 31 U.S.C. 5318(l) and 31 C.F.R. 103.121.

2124.5.1.3.4 *Respond Appropriately to any Detected Red Flags*

A financial institution or creditor should consider precursors to identity theft to stop identity theft before it occurs. Section IV of the Guidelines, “Prevention and Mitigation,” states that an institution’s procedures should provide for appropriate responses to Red Flags that it has detected that are commensurate with the degree of risk posed. When determining an appropriate response, the institution should consider aggravating factors that may heighten its risk of identity theft. Such factors may include (1) a data security incident that results in unauthorized disclosures of nonpublic personal information, (2) records the institution holds or that are held by another creditor or third party, or (3) notice that the institution’s customer has provided information related to its covered account to someone fraudulently claiming to represent the institution or to a fraudulent website. Appropriate responses may include the following: (1) monitoring a covered account for evidence of identity theft; (2) contacting the customer; (3) changing any passwords, security codes, or other security devices that permit access to a secured account; (4) reopening a covered account with a new account number; (5) not opening a new covered account; (6) closing an existing covered account; (7) not attempting to collect on a covered account or not selling a covered account to a debt collector; (8) notifying law enforcement; or (9) determining that no response is warranted under the particular circumstances.

2124.5.1.3.5 *Periodically Updating the Program’s Relevant Red Flags*

Section V of the Guidelines, “Updating the Program,” states that a financial institution or creditor should periodically update its Program (including its relevant Red Flags) to reflect any changes in risks to its customers or to the safety and soundness of the institution from identity theft, based on (but not limited to) factors such as

1. the experiences of the institution with identity theft,
2. changes in methods of identity theft,
3. changes in methods to detect, prevent, and mitigate identity theft,
4. changes in the types of accounts that the institution offers or maintains, and
5. changes in the institution’s structure,

including its mergers, acquisitions, joint ventures, and any business arrangements, such as alliances and service provider arrangements.

2124.5.1.4 Administration of Program

A financial institution or creditor that is required to implement a Program must provide for the continued oversight and administration of its Program. The following are the steps that are needed in the administration of a Red Flags Program:

1. *Obtain approval from either the institution’s board of directors or any appropriate committee of the board of directors of the initial written Program;*
2. *Involve either the board of directors, a designated committee of the board of directors, or a designated senior-management-level employee in the oversight, development, implementation, and administration of the Program.*⁹ This includes
 - assigning specific responsibility for the Program’s implementation,
 - reviewing reports prepared by staff regarding the institution’s compliance (the reports should be prepared at least annually), and
 - reviewing material changes to the Program as necessary to address changing identity theft risks.
3. *Train staff.* The financial institution or creditor must train relevant staff to effectively implement and monitor the Program. Training should be provided as changes are made to the financial institution or creditor’s Program based on its periodic risk assessment.
4. *Exercise appropriate and effective oversight of service provider arrangements.* Section VI of the Guidelines, “Methods for Administering the Program,” indicates a financial institution or creditor is ultimately responsible for complying with the rules and guidelines for outsourcing an activity to a third-party

9. BHC subsidiaries can use the security program developed at the holding company level. However, if subsidiary institutions choose to use a security program developed at the holding company level, the board of directors or an appropriate committee at each subsidiary institution must conduct an independent review to ensure that the program is suitable and complies with the requirements prescribed by its primary regulator.

service provider. Whenever a financial institution or creditor engages a service provider to perform an activity in connection with one or more covered accounts, the institution should ensure that the activity of the service provider is conducted in accordance with reasonable policies and procedures designed to detect, prevent, and mitigate the risk of identity theft. With regard to the institution's oversight of its Program, periodic reports from service providers are to be issued on the Program's development, implementation, and administration.

2124.5.2 INSPECTION OBJECTIVES

1. To determine if the BHC has developed, implemented, and maintained a written Program for new and existing accounts that are covered by the FACT Act and the Federal Trade Commission's rules on Fair Credit Reporting, section 681, Subpart A—Identity Theft Red Flags (16 C.F.R. 681, subpart A), which implements provisions of the FACT Act.
2. To make a determination of whether the Program is
 - a. designed to detect, prevent, and mitigate identity theft in connection with the opening of a new, or an existing, covered account and if the Program includes the detection of relevant "Red Flags" and
 - b. appropriate to the size and complexity of the "financial institution" or "creditor" and the nature and scope of its activities.
3. To ascertain whether the BHC assesses the validity of change of address notifications that it receives for the credit and debit cards that it has issued to customers.
2. Determine if the BHC has adequately developed and maintains a written Program that is designed to detect, prevent, and monitor transactions to mitigate identity theft in connection with the opening of certain new and existing accounts covered by the FACT Act.
3. Evaluate whether the Program includes reasonable policies and procedures to
 - a. identify and detect relevant Red Flags for the BHC's covered accounts and whether it incorporated those Red Flags into its Program,
 - b. respond appropriately to any detected Red Flags to prevent and mitigate identity theft, and
 - c. ensure that the Program is updated periodically to reflect changes in identity theft risks to the customers and the safety and soundness of the institution.
4. If a required Program has been established by the BHC, ascertain if it has provided for the Program's continued administration, including
 - a. involving the board of directors, an appropriate committee thereof, or a designated employee at the level of senior management in the continued oversight, development, implementation, and administration of the Program;
 - b. training staff, as necessary, to effectively implement the Program; and
 - c. appropriate and effective oversight of service provider arrangements.
5. If the BHC has established and maintains a required Program that applies to its covered accounts, determine if the Program includes the relevant and appropriate guidelines within the rule's appendix A (16 C.F.R. 681, appendix A).

2124.5.3 INSPECTION PROCEDURES

1. Verify that the BHC has determined initially, and periodically thereafter, whether it offers or maintains accounts covered by the FACT Act and section 681, Subpart A—Identity Theft Red Flags (16 C.F.R. 681, subpart A).

The review of risk management and internal controls is an essential element of the inspection or examination of trading activities. In view of the increasing importance of these activities to the overall risk profile and profitability of certain banking organizations,² this guidance highlights key considerations when inspecting or examining the risk management and internal controls of trading activities in both cash and derivative instruments.³

The principles set forth in this guidance apply to the risk management practices of bank holding companies, which should manage and control aggregate risk exposures on a consolidated basis while recognizing legal distinctions among subsidiaries. This guidance is specifically designed to target trading, market making, and customer accommodation activities in cash and derivative instruments at state member banks, branches and agencies of foreign banks, and Edge corporations. Many of the principles advanced can also be applied to banking organizations' use of derivatives as end-users. Examiners should assess management's application of this guidance to the holding company and to a banking organization's end-user derivative activities where appropriate, given the nature of the organization's activities and current accounting standards.

This examiner guidance is specifically provided for evaluating the following elements of an organization's risk management process for trading and derivatives activities:

- Board of directors and management oversight
- The measurement procedures, limit systems, and monitoring and review functions of the risk management process
- Internal controls and audit procedures

In assessing the adequacy of these elements at individual institutions, examiners should consider the nature and volume of a banking organization's activities and its overall approach toward managing the various types of risks

involved. As with the inspection of other activities, examiner judgment plays a key role in assessing the adequacy and necessary sophistication of a banking organization's risk management system for cash and derivative instrument trading and hedging activities.

Many of the managerial practices and examiner procedures contained in this guidance are fundamental and are generally accepted as sound banking practices for both trading and nontrading activities. However, other elements may be subject to change, as both supervisory and bank operating standards evolve in response to new technologies, financial innovations, and developments in market and business practices.

2125.0.1 OVERSIGHT OF THE RISK MANAGEMENT PROCESS

As is standard practice for most banking activities, banking organizations should maintain written policies and procedures that clearly outline the organization's risk management guidance for trading and derivative activities. At a minimum these policies should identify the risk tolerances of the board of directors and should clearly delineate lines of authority and responsibility for managing the risk of these activities. Individuals throughout the trading and derivatives areas should be fully aware of all policies and procedures that relate to their specific duties.

The board of directors, senior-level management, and members of independent risk management functions are all important participants in the risk management process. Examiners should ensure that these participants are aware of their responsibilities and that they adequately perform their appropriate role in managing the risk of trading and derivative activities.

2125.0.1.1 Board of Directors' Approval of Risk Management Policies

The board of directors should approve all significant policies relating to the management of risks throughout the organization. These policies, which should include those related to trading activities, should be consistent with the organization's broader business strategies, capital adequacy, expertise, and overall willingness

1. The following is the text of SR-93-69, adapted for this manual. Section numbers have been added for reference.

2. The term "banking organizations" refers to institutions or entities that are directly supervised by the Board of Governors of the Federal Reserve System, such as state member banks and bank holding companies, including the nonbank subsidiaries of the holding company.

3. In general terms, derivative instruments are bilateral contracts or agreements whose value derives from the value of one or more underlying assets, interest rates, exchange rates, commodities, or financial or commodity indexes.

to take risk. Accordingly, the board should be informed regularly of risk exposure and should regularly reevaluate significant risk management policies and procedures with special emphasis placed on those defining the institution's risk tolerance regarding these activities. The board of directors should also conduct and encourage discussions between its members and senior management, as well as between senior management and others in the organization, regarding its risk management process and risk exposure.

2125.0.1.2 Senior Management's Risk Management Responsibilities

Senior management is responsible for ensuring that there are adequate policies and procedures for conducting trading operations on both a long-range and day-to-day basis. This responsibility includes ensuring that there are clear delineations of lines of responsibility for managing risk, adequate systems for measuring risk, appropriately structured limits on risk taking, effective internal controls, and a comprehensive risk-reporting process.

Senior management should regularly evaluate the procedures in place to manage risk to ensure that those procedures are appropriate and sound. Senior management should also foster and participate in active discussions with the board, with staff of risk management functions, and with traders regarding procedures for measuring and managing risk. Management must also ensure that trading and derivative activities are allocated sufficient resources and staff to manage and control risks.

2125.0.1.3 Independent Risk Management Functions

The process of measuring, monitoring, and controlling risk consistent with the established policies and procedures should be managed independently of individuals conducting trading activities, up through senior levels of the institution. An independent system for reporting exposures to both senior-level management and to the board of directors is an important element of this process.

Banking organizations should have highly qualified personnel throughout their trading and derivatives areas, including their risk management and internal control functions. The person-

nel staffing independent risk management functions should have a complete understanding of the risks associated with all traded on- and off-balance-sheet instruments. Accordingly, compensation policies for these individuals should be adequate to attract and retain personnel qualified to judge these risks. As a matter of general policy, compensation policies, especially in the risk management, control, and senior management functions, should be structured in a way that avoids the potential incentives for excessive risk taking that can occur if, for example, salaries are tied too closely to the profitability of trading or derivatives activities.

2125.0.2 THE RISK MANAGEMENT PROCESS

The primary components of a sound risk management process are a comprehensive risk measurement approach; a detailed structure of limits, guidelines, and other parameters used to govern risk taking; and a strong management information system for monitoring and reporting risks. These components are fundamental to both trading and nontrading activities alike. Moreover, the underlying risks associated with these activities, such as credit, market, liquidity, and operating risk, are not new to banking organizations, although their measurement and management can be somewhat more complex. Accordingly, the process of risk management for trading activities should be integrated into the organization's overall risk management system to the fullest extent possible using a conceptual framework common to its other activities. Such a common framework enables the organization to manage its consolidated risk exposure more effectively, especially since the various individual risks involved in trading activities can, at times, be interconnected and can often transcend specific markets.

As is the case with all risk-bearing activities, the risk exposures a banking organization assumes in its trading and derivatives activities should be fully supported by an adequate capital position. Banking organizations should ensure that their capital positions are sufficiently strong to support all trading and derivatives risks on a fully consolidated basis and that adequate capital is maintained in all affiliated entities engaged in these activities.

2125.0.2.1 Risk Measurement Systems

A banking organization's system for measuring

the various risks of trading and derivatives activities should be both comprehensive and accurate. Risks should be measured and aggregated across trading and nontrading activities on an organizationwide basis to the fullest extent possible.

While examiners should not require the use of a single prescribed risk measurement approach for management purposes, they should evaluate the extent to which the organization's procedures enable management to assess exposures on a consolidated basis. Examiners should also evaluate whether the risk measures and the risk measurement process are sufficiently robust to accurately reflect the multiple types of risks facing the banking organization. Risk measurement standards should be understood by relevant personnel at all levels—from individual traders to the board of directors—and should provide a common framework for limiting and monitoring risk-taking activities.

The process of marking trading and derivatives positions to market is fundamental to measuring and reporting exposures accurately and on a timely basis. Banking organizations active in dealing in foreign exchange, derivatives, and other traded instruments should have the ability to monitor credit exposures, trading positions, and market movements at least daily. Some organizations should also have the capacity, or at least the goal, of monitoring their more actively traded products on a real-time basis.

Analyzing stress situations, including combinations of market events that could affect the banking organization, is also an important aspect of risk measurement. Sound risk measurement practices include identifying possible events or changes in market behavior that could have unfavorable effects on the organization and assessing its ability to withstand them. These analyses should consider not only the likelihood of adverse events, reflecting their probability, but also plausible "worst-case" scenarios. Ideally, such worst-case analysis should be conducted on an organizationwide basis by taking into account the effect of unusual price changes or the default of a large counterparty across both the derivatives and cash-trading portfolios and the loan and funding portfolios.

Such stress tests should not be limited to quantitative exercises that compute potential losses or gains. They should also include more qualitative analyses of the actions management might take under particular scenarios. Contingency plans outlining operating procedures and lines of communication, both formal and informal, are important products of such qualitative analyses.

2125.0.2.2 Limiting Risks

A sound system of integrated organizationwide limits and risk-taking guidelines is an essential component of the risk management process. Such a system should set boundaries for organizational risk-taking and should also ensure that positions that exceed certain predetermined levels receive prompt management attention, so that they can be either reduced or prudently addressed. The limit system should be consistent with the effectiveness of the organization's overall risk management process and with the adequacy of its capital position. An appropriate limit system should permit management to control exposures, to initiate discussion about opportunities and risks, and to monitor actual risk-taking against predetermined tolerances, as determined by the board of directors and senior management.

Global limits should be set for each major type of risk involved. These limits should be consistent with the banking organization's overall risk measurement approach and should be integrated to the fullest extent possible with organizationwide limits on those risks as they arise in all other activities of the firm. The limit system should provide the capability to allocate limits down to individual business units.

At times, especially when markets are volatile, traders may exceed their limits. While such exceptions may occur, they should be made known to senior management and approved only by authorized personnel. These positions should also prompt discussions between traders and management about the consolidated risk-taking activities of the firm or the trading unit. The seriousness of individual or continued limit exceptions depends in large part upon management's approach toward setting limits and on the actual size of individual and organizational limits relative to the organization's capacity to take risk. Banking organizations with relatively conservative limits may encounter more exceptions to those limits than do organizations where limits may be less restrictive. Ultimately, examiners should ensure that stated policies are enforced and that the level of exposure is managed prudently.

2125.0.2.3 Reporting

An accurate, informative, and timely management information system is essential to the pru-

dent operation of a trading or derivatives activity. Accordingly, the examiner's assessment of the quality of the management information system is an important factor in the overall evaluation of the risk management process. Examiners should determine the extent to which the risk management function monitors and reports its measures of trading risks to appropriate levels of senior management and to the board of directors. Exposures and profit and loss statements should be reported at least daily to managers who supervise but do not, themselves, conduct trading activities. More frequent reports should be made as market conditions dictate. Reports to other levels of senior management and the board may occur less frequently, but examiners should determine whether the frequency of reporting provides these individuals with adequate information to judge the changing nature of the organization's risk profile.

Examiners should ensure that the management information systems translate the measured risk from a technical and quantitative format to one that can be easily read and understood by senior managers and directors, who may not have specialized and technical knowledge of trading activities and derivative products. Risk exposures arising from various products within the trading function should be reported to senior managers and directors using a common conceptual framework for measuring and limiting risks.

2125.0.2.4 Management Evaluation and Review of the Risk Management Process

Management should ensure that the various components of an organization's risk management process are regularly reviewed and evaluated. This review should take into account changes in the activities of the organization and in the market environment, since the changes may have created exposures that require additional management and examiner attention. Any material changes to the risk management system should also be reviewed.

The independent risk management functions should regularly assess the methodologies, models, and assumptions used to measure risk and to limit exposures. Proper documentation of these elements of the risk measurement system is essential for conducting meaningful reviews. The review of limit structures should compare limits to actual exposures and should also con-

sider whether existing measures of exposure and limits are appropriate in view of the banking organization's past performance and current capital position.

The frequency and extent to which banking organizations should reevaluate their risk measurement methodologies and models depends, in part, on the specific risk exposures created by their trading activities, on the pace and nature of market changes, and on the pace of innovation with respect to measuring and managing risks. At a minimum, banking organizations with significant trading and derivative activities should review the underlying methodologies of their models at least annually—and more often as market conditions dictate—to ensure they are appropriate and consistent. Such internal evaluations may, in many cases, be supplemented by reviews by external auditors or other qualified outside parties, such as consultants who have expertise with highly technical models and risk management techniques. Assumptions should be evaluated on a continual basis.

Banking organizations should also have an effective process to evaluate and review the risks involved in products that are either new to the firm or new to the marketplace and of potential interest to the firm. In general, a banking organization should not trade a product until senior management and all relevant personnel (including those in risk management, internal control, legal, accounting, and auditing) understand the product and are able to integrate the product into the banking organization's risk measurement and control systems. Examiners should determine whether the banking organization has a formal process for reviewing new products and whether it introduces new products in a manner that adequately limits potential losses.

2125.0.2.5 Managing Specific Risks

The following discussions present examiner guidance for evaluating the specific components of a firm's risk management process in the context of each of the risks involved in trading cash and derivatives instruments.

2125.0.2.5.1 Credit Risk

Broadly defined, credit risk is the risk that a counterparty will fail to perform on an obligation to the banking organization. Banking organizations should evaluate both settlement and

presettlement credit risk at the customer level across all traded derivative and nonderivative products. On settlement day, the exposure to counterparty default may equal the full value of any cash flows or securities the banking organization is to receive. Prior to settlement, credit risk is measured as the sum of the replacement cost of the position, plus an estimate of the banking organization's potential future exposure from the instrument as a result of market changes. Replacement cost should be determined using current market prices or generally accepted approaches for estimating the present value of future payments required under each contract, given current market conditions.

Potential credit-risk exposure is measured more subjectively than current exposure and is primarily a function of the time remaining to maturity and the expected volatility of the price, rate, or index underlying the contract. It is often assessed through simulation analysis and option-valuation models, but can also be addressed by using "add-ons," such as those included in the risk-based capital standard. In either case, examiners should evaluate the reasonableness of the assumptions underlying the banking organization's risk measure and should also ensure that banking organizations that measure exposures using a portfolio approach do so in a prudent manner.

Master netting agreements and various credit enhancements, such as collateral or third-party guarantees, can be used by banking organizations to reduce their counterparty credit risk. In such cases, a banking organization's credit exposures should reflect these risk-reducing features only to the extent that the agreements and recourse provisions are legally enforceable in all relevant jurisdictions. This legal enforceability should extend to any insolvency proceedings of the counterparty. Banking organizations should be able to demonstrate that they have exercised due diligence in evaluating the enforceability of these contracts and that individual transactions have been executed in a manner that provides adequate protection.

Credit limits that consider both settlement and presettlement exposures should be established for all counterparties with whom the banking organization trades. As a matter of general policy, trading with a counterparty should not commence until a credit line has been approved. The structure of the credit-approval process may differ among organizations, reflecting the organizational and geographic structure of the organization and the specific needs of its trading activities. Nevertheless, in all cases, it is important that credit limits be determined by

personnel who are independent of the trading function, that these personnel use standards that are consistent with those used for nontrading activities, and that counterparty credit lines are consistent with the organization's policies and consolidated exposures.

Examiners should consider the extent to which credit limits are exceeded and whether exceptions were resolved according to the banking organization's adopted policies and procedures. Examiners should also evaluate whether the organization's reports adequately provide traders and credit officers with relevant, accurate, and timely information about the credit exposures and approved credit lines.

Trading activities that involve cash instruments often involve short-term exposures that are eliminated at settlement. However, in the case of derivative products traded in over-the-counter markets, the exposure can often exist for a period similar to that commonly associated with a loan from a banking organization. Given this potentially longer-term exposure and the complexity associated with some derivative instruments, banking organizations should consider not only the overall financial strength of the counterparty and its ability to perform on its obligation, but should also consider the counterparty's ability to understand and manage the risks inherent in the derivative product.

2125.0.2.5.2 Market Risk

Market risk is the risk to a banking organization's financial condition resulting from adverse movements in market prices. Accurately measuring a banking organization's market risk requires timely information about the current market values of its assets, liabilities, and off-balance-sheet positions. Although there are many types of market risks that can affect a portfolio's value, they can generally be described as those involving forward risk and those involving options. Forward risks arise from factors such as changing interest rates and currency exchange rates, the liquidity of markets for specific commodities or financial instruments, and local or world political and economic events. Market risks related to options include these factors as well as evolving perceptions of the volatility of price changes, the passage of time, and the interactive effect of other market risks. All of these sources of potential market risk can affect the value of the organiza-

tion and should be considered in the risk measurement process.

Market risk is increasingly measured by market participants using a value-at-risk approach, which measures the potential gain or loss in a position, portfolio, or organization that is associated with a price movement of a given probability over a specified time horizon. Banking organizations should revalue all trading portfolios and calculate their exposures at least daily. Although banking organizations may use risk measures other than value at risk, examiners should consider whether the measure used is sufficiently accurate and rigorous and whether it is adequately incorporated into the banking organization's risk management process.

Examiners should also ensure that the organization compares its estimated market-risk exposures with actual market-price behavior. In particular, the output of any market-risk models that require simulations or forecasts of future prices should be compared with actual prices. If the projected and actual results differ materially, the models should be modified, as appropriate.

Banking organizations should establish limits for market risk that relate to their risk measures and that are consistent with maximum exposures authorized by their senior management and board of directors. These limits should be allocated to business units and individual traders and be clearly understood by all relevant parties. Examiners should ensure that exceptions to limits are detected and adequately addressed by management. In practice, some limit systems may include additional elements such as stop-loss limits and trading guidelines that may play an important role in controlling risk at the trader and business-unit level; examiners should include them in their review of the limit system.

2125.0.2.5.3 *Liquidity Risk*

Banking organizations face two types of liquidity risk in their trading activities: those related to specific products or markets and those related to the general funding of the banking organization's trading activities. The former is the risk that a banking organization cannot easily unwind or offset a particular position at or near the previous market price because of inadequate market depth or because of disruptions in the marketplace. Funding-liquidity risk is the risk that the banking organization will be unable to meet its payment obligations on settlement

dates. Since neither type of liquidity risk is unique to trading activities, management should evaluate these risks in the broader context of the organization's overall liquidity. When establishing limits, organizations should be aware of the size, depth, and liquidity of the particular market and establish trading guidelines accordingly. Management should also give consideration to the potential problems associated with replacing contracts that terminate early in volatile or illiquid markets.

In developing guidelines for controlling the liquidity risks in trading activities, banking organizations should consider the possibility that they could lose access to one or more markets, either because of concerns about the banking organization's own creditworthiness, the creditworthiness of a major counterparty, or because of generally stressful market conditions. At such times, the banking organization may have less flexibility in managing its market-, credit-, and liquidity-risk exposures. Banking organizations that make markets in over-the-counter derivatives or that dynamically hedge their positions require constant access to financial markets, and that need may increase in times of market stress. The banking organization's liquidity plan should reflect the organization's ability to turn to alternative markets, such as futures or cash markets, or to provide sufficient collateral or other credit enhancements in order to continue trading under a broad range of scenarios.

Examiners should ensure that banking organizations that participate in over-the-counter derivative markets adequately consider the potential liquidity risks associated with the early termination of derivative contracts. Many forms of standardized contracts for derivative transactions allow counterparties to request collateral or to terminate their contracts early if the banking organization experiences an adverse credit event or a deterioration in its financial condition. In addition, under conditions of market stress, customers may ask for the early termination of some contracts within the context of the dealer's market-making activities. In such situations, a banking organization that owes money on derivative transactions may be required to deliver collateral or settle a contract early and possibly at a time when the banking organization may face other funding and liquidity pressures. Early terminations may also open up additional, unintended, market positions. Management and directors should be aware of these potential liquidity risks and should address them in the banking organization's liquidity plan and in the broader context of the

banking organization's liquidity management process. In their reviews, examiners should consider the extent to which such potential obligations could present liquidity risks to the banking organization.

2125.0.2.5.4 Operational Risk, Legal Risk, and Business Practices

Operating risk is the risk that deficiencies in information systems or internal controls will result in unexpected loss. Legal risk is the risk that contracts are not legally enforceable or documented correctly. Although operating and legal risks are difficult to quantify, they can often be evaluated by examining a series of plausible "worst-case" or "what-if" scenarios, such as a power loss, a doubling of transaction volume, a mistake found in the pricing software for collateral management, or an unenforceable contract. They can also be assessed through periodic reviews of procedures, documentation requirements, data processing systems, contingency plans, and other operating practices. Such reviews may help to reduce the likelihood of errors and breakdowns in controls, improve the control of risk and the effectiveness of the limit system, and prevent unsound marketing practices and the premature adoption of new products or lines of business. Considering the heavy reliance of trading activities on computerized systems, banking organizations should have plans that take into account potential problems with their normal processing procedures.

Banking organizations should also ensure that trades that are consummated orally are confirmed as soon as possible. Oral transactions conducted via telephone should be recorded on tape and subsequently supported by written documents. Examiners should ensure that the organization monitors the consistency between the terms of a transaction as they were orally agreed upon and the terms as they were subsequently confirmed.

Examiners should also consider the extent to which banking organizations evaluate and control operating risks through the use of internal audits, stress testing, contingency planning, and other managerial and analytical techniques. Banking organizations should also have approved policies that specify documentation requirements for trading activities and formal procedures for saving and safeguarding important documents that are consistent with legal requirements and internal policies. Relevant personnel should fully understand the requirements.

Legal risks should be limited and managed

through policies developed by the organization's legal counsel (typically in consultation with officers in the risk management process) that have been approved by the banking organization's senior management and board of directors. At a minimum, there should be guidelines and processes in place to ensure the enforceability of counterparty agreements. Examiners should determine whether a banking organization is adequately evaluating the enforceability of its agreements before individual transactions are consummated. Banking organizations should also ensure that the counterparty has sufficient authority to enter into the transaction and that the terms of the agreement are legally sound. Banking organizations should further ascertain that their netting agreements are adequately documented, that they have been executed properly, and that they are enforceable in all relevant jurisdictions. Banking organizations should have knowledge of relevant tax laws and interpretations governing the use of these instruments. Knowledge of these laws is necessary not only for the banking organization's marketing activities, but also for its own use of derivative products.

Sound business practices provide that banking organizations take steps to ascertain the character and financial sophistication of counterparties. This includes efforts to ensure that the counterparties understand the nature of and the risks inherent in the agreed transactions. Where the counterparties are unsophisticated, either generally or with respect to a particular type of transaction, banking organizations should take additional steps to ensure that counterparties are made aware of the risks attendant in the specific type of transaction. While counterparties are ultimately responsible for the transactions into which they choose to enter, where a banking organization recommends specific transactions for an unsophisticated counterparty, the banking organization should ensure that it has adequate information regarding its counterparty on which to base its recommendation.

2125.0.3 INTERNAL CONTROLS AND AUDITS

A review of internal controls has long been central to the Federal Reserve's examination and inspection of trading and derivatives activities. Policies and related procedures for the operation of these activities should be an exten-

sion of the organization's overall structure of internal controls and should be fully integrated into routine work-flows. Properly structured, a system of internal controls should promote effective and efficient operations, reliable financial and regulatory reporting, and compliance with relevant laws, regulations, and banking organization policies. In determining whether internal controls meet those objectives, examiners should consider the overall control environment of the organization; the process for identifying, analyzing, and managing risk; the adequacy of management information systems; and adherence to control activities such as approvals, confirmations, and reconciliations.
