Assessing the adequacy of internal controls involves a process of understanding, documenting, evaluating, and testing an organization's internal control system. This assessment should include product- or business-line reviews which, in turn, should start with an assessment of the line's organizational structure. Examiners should check for adequate separation of duties, especially between trading desk personnel and internal control and risk management functions, adequate oversight by a knowledgeable manager without day-to-day trading responsibilities, and the presence of separate reporting lines for risk management and internal control personnel on one side and for trading personnel on the other. Product-by-product reviews of management structure should supplement the overall assessment of the organizational structure of the trading and derivatives areas.

Examiners are expected to conduct in-depth reviews of the internal controls of key activities. For example, for transaction recording and processing, examiners should evaluate written policies and procedures for recording trades, assess the trading area's adherence to policy, and analyze the transaction processing cycle, including settlement, to ensure the integrity and accuracy of the banking organization's records and management reports. Examiners should review the revaluation process in order to assess the adequacy of written policies and procedures for revaluing positions and for creating any associated revaluation reserves. Examiners should review compliance with revaluation policies and procedures, the frequency of revaluation, and the independence and quality of the sources of revaluation prices, especially for instruments traded in illiquid markets. All significant internal controls associated with the management of

market risk, such as position versus limit reports and limit coverage approval policies and procedures, should also be reviewed. Examiners should also review the credit approval process to ensure that the risks of specific products are adequately captured and that credit approval procedures are followed for all transactions.

An important step in the process of reviewing internal controls is the examiner's appraisal of the frequency, scope, and findings of independent internal and external auditors and the ability of those auditors to review the banking organization's trading and derivatives activities. Internal auditors should audit and test the risk management process and internal controls on a periodic basis, with the frequency based on a careful risk assessment. The depth and frequency of internal audits should be increased if weaknesses and significant issues are discovered or if significant changes have been made to product lines, modeling methodologies, the risk oversight process, internal controls, or the overall risk profile of the organization.

In reviewing the risk management functions in particular, internal auditors should thoroughly evaluate the effectiveness of internal controls relevant to measuring, reporting, and limiting risks. Internal auditors should also evaluate compliance with risk limits and the reliability and timeliness of information reported to the banking organization's senior management and board of directors. Internal auditors are also expected to evaluate the independence and overall effectiveness of the banking organization's risk management functions.

The level of confidence that examiners place in the banking organization's audit programs, the nature of the audit findings, and management's response to those findings will influence the scope of the current examination of trading and derivatives activities. Even when the audit process and findings are satisfactory, examiners should document, evaluate, and test critical internal controls.

Similar to the focus of internal auditors, examiners should pay special attention to significant changes in product lines, risk measurement methodologies, limits, and internal controls that have occurred since the last examination. Meaningful changes in earnings from trading or derivatives activities, or in the size of positions or the value at risk associated with these activities, should also receive emphasis during the inspection or examination.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2007, this section was revised to delete a reference to SR-95-17 that was superseded by SR-98-12, or the former section 2126.0. A reference to the previous 1992 Supervisory Policy Statement on Securities Activities is also deleted.

2126.1.0 SOUND RISK-MANAGEMENT PRACTICES FOR PORTFOLIO INVESTMENT

On April 23, 1998, the Federal Financial Institutions Examination Council (FFIEC) issued a Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities that became effective on May 25, 1998. The statement was adopted by the Board of Governors and provides guidance on sound practices for managing the risks of investment activities. The guidance focuses on risk-management practices of state member banks and Edge corporations. The basic principles also apply to bank holding companies, which should manage and control risk exposures on a consolidated basis, recognizing the legal distinctions and potential obstacles to cash movements among subsidiaries. The statement's risk-management principles should also be incorporated into the policies of U.S. branches and agencies of foreign banks.¹

The statement's principles set forth sound risk-management practices that are relevant to most portfolio-management endeavors. The statement places greater emphasis on a risk-focused approach to supervision. Instruments held for end-user reasons are considered, taking into consideration a variety of factors such as management's ability to manage and measure risk within the institution's holdings and the impact of those holdings on aggregate portfolio risk.

The statement focuses on managing the market, credit, liquidity, operational, and legal risks of investment and end-user activities. When managing the interest-rate-risk component of market risk, institutions are informed of the

merits of developing internal policies that specify the type of pre-acquisition analysis (stress testing) that is consistent with the scope, sophistication, and complexity of their investment securities and end-user derivative holdings. Such analyses should be conducted for certain types of instruments, including those that have complex or potentially volatile risk profiles. Institutions are advised to periodically monitor the price sensitivity of their portfolios, ensuring that they meet the established limits of the board of directors. Institutions are further advised to fully assess the creditworthiness of their counterparties, including brokers and issuers. Institutions are to ensure that they take proper account of the liquidity of the instruments held. (See SR-98-12.)

2126.1.1 SUPERVISORY POLICY STATEMENT ON INVESTMENT SECURITIES AND END-USER DERIVATIVES ACTIVITIES

2126.1.1.1 Purpose

This policy statement (statement) provides guidance to financial institutions (institutions) on sound practices for managing the risks of investment securities and end-user derivatives activities.² The FFIEC agencies—the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, the Office of Thrift Supervision, and the National Credit Union Administration—believe that effective management of the risks associated with securities and derivative instruments represents an essential component of safe and sound practices. This guidance describes the practices that a prudent manager normally would follow and is not intended to be a checklist. Management should establish practices and maintain documentation appropriate to the institution's individual circumstances, consistent with this statement.

2126.1.1.2 Scope

This guidance applies to all securities in *held-to-*

1. Appropriate adaptations should be made to reflect the fact that (1) those offices are an integral part of a foreign bank that must also manage its consolidated risks and recognize possible obstacles to cash movement among branches and (2) the foreign bank is subject to overall supervision by its home-country supervisory authority.

2. The 1998 statement does not supersede any other requirements of the respective agencies' statutory rules, regulations, policies, or supervisory guidance.

maturity and *available-for-sale* accounts as defined in the Statement of Financial Accounting Standards No.115 (FAS 115), certificates of deposit held for investment purposes, and end-user derivative contracts not held in trading accounts. This guidance covers all securities used for investment purposes, including money market instruments, fixed-rate and floating-rate notes and bonds, structured notes, mortgage pass-through and other asset-backed securities, and mortgage-derivative products. Similarly, this guidance covers all end-user derivative instruments used for nontrading purposes, such as swaps, futures, and options.³ This statement applies to all federally insured commercial banks, savings banks, savings associations, and federally chartered credit unions.

As a matter of sound practice, institutions should have programs to manage the market, credit, liquidity, legal, operational, and other risks of investment securities and end-user derivatives activities (investment activities). While risk-management programs will differ among institutions, there are certain elements that are fundamental to all sound risk-management programs. These elements include board and senior management oversight and a comprehensive risk-management process that effectively identifies, measures, monitors, and controls risk. This statement describes sound principles and practices for managing and controlling the risks associated with investment activities.

Institutions should fully understand and effectively manage the risks inherent in their investment activities. *Failure to understand and adequately manage the risks in these areas constitutes an unsafe and unsound practice.*

2126.1.1.3 Board and Senior Management Oversight

Board of director and senior management oversight is an integral part of an effective risk-management program. The board of directors is responsible for approving major policies for conducting investment activities, including the establishment of risk limits. The board should ensure that management has the requisite skills to manage the risks associated with such activities.

3. Natural-person federal credit unions are not permitted to purchase nonresidential mortgage asset-backed securities and may participate in derivative programs only if authorized by the National Credit Union Administration.

To properly discharge its oversight responsibilities, the board should review portfolio activity and risk levels, and require management to demonstrate compliance with approved risk limits. Boards should have an adequate understanding of investment activities. Boards that do not should obtain professional advice to enhance its understanding of investment-activity oversight, so as to enable it to meet its responsibilities under this statement.

Senior management is responsible for the daily management of an institution's investments. Management should establish and enforce policies and procedures for conducting investment activities. Senior management should have an understanding of the nature and level of various risks involved in the institution's investments and how such risks fit within the institution's overall business strategies. Management should ensure that the risk-management process is commensurate with the size, scope, and complexity of the institution's holdings. Management should also ensure that the responsibilities for managing investment activities are properly segregated to maintain operational integrity. Institutions with significant investment activities should ensure that back-office, settlement, and transaction-reconciliation responsibilities are conducted and managed by personnel who are independent of those initiating risk-taking positions.

2126.1.1.4 Risk-Management Process

An effective risk-management process for investment activities includes (1) policies, procedures, and limits; (2) the identification, measurement, and reporting of risk exposures; and (3) a system of internal controls.

2126.1.1.4.1 Policies, Procedures, and Limits

Investment policies, procedures, and limits provide the structure to effectively manage investment activities. Policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and risk tolerance. Policies should identify relevant investment objectives, constraints, and guidelines for the acquisition and ongoing management of securities and derivative instruments. Potential investment objectives include generating earnings, providing liquidity, hedging risk exposures, taking risk positions, modifying and managing risk profiles, managing tax liabilities, and meeting pledging requirements, if applica-

ble. Policies should also identify the risk characteristics of permissible investments and should delineate clear lines of responsibility and authority for investment activities.

An institution's management should understand the risks and cash-flow characteristics of its investments. This is particularly important for products that have unusual, leveraged, or highly variable cash flows. An institution should not acquire a material position in an instrument until senior management and all relevant personnel understand and can manage the risks associated with the product.

An institution's investment activities should be fully integrated into any institution-wide risk limits. In so doing, some institutions rely only on the institution-wide limits, while others may apply limits at the investment portfolio, sub-portfolio, or individual instrument level.

The board and senior management should review, at least annually, the appropriateness of its investment strategies, policies, procedures, and limits.

2126.1.1.4.2 Risk Identification, Measurement, and Reporting

Institutions should ensure that they identify and measure the risks associated with individual transactions prior to acquisition and periodically after purchase. This can be done at the institutional, portfolio, or individual-instrument level. Prudent management of investment activities entails examination of the risk profile of a particular investment in light of its impact on the risk profile of the institution. To the extent practicable, institutions should measure exposures to each type of risk, and these measurements should be aggregated and integrated with similar exposures arising from other business activities to obtain the institution's overall risk profile.

In measuring risks, institutions should conduct their own in-house pre-acquisition analyses, or to the extent possible, make use of specific third-party analyses that are independent of the seller or counterparty. Irrespective of any responsibility, legal or otherwise, assumed by a dealer, counterparty, or financial advisor regarding a transaction, the acquiring institution is ultimately responsible for the appropriate personnel understanding and managing the risks of the transaction.

Reports to the board of directors and senior management should summarize the risks related to the institution's investment activities and should address compliance with the investment policy's objectives, constraints, and legal

requirements, including any exceptions to established policies, procedures, and limits. Reports to management should generally reflect more detail than reports to the board of the institution. Reporting should be frequent enough to provide timely and adequate information to judge the changing nature of the institution's risk profile and to evaluate compliance with stated policy objectives and constraints.

2126.1.1.4.3 Internal Controls

An institution's internal control structure is critical to the safe and sound functioning of the organization generally and the management of investment activities in particular. A system of internal controls promotes efficient operations; reliable financial and regulatory reporting; and compliance with relevant laws, regulations, and institutional policies. An effective system of internal controls includes enforcing official lines of authority, maintaining appropriate separation of duties, and conducting independent reviews of investment activities.

For institutions with significant investment activities, internal and external audits are integral to the implementation of a risk-management process to control risks in investment activities. An institution should conduct periodic independent reviews of its risk-management program to ensure its integrity, accuracy, and reasonableness. Items that should be reviewed include—

1. compliance with and the appropriateness of investment policies, procedures, and limits;
2. the appropriateness of the institution's risk-measurement system given the nature, scope, and complexity of its activities; and
3. the timeliness, integrity, and usefulness of reports to the board of directors and senior management.

The review should note exceptions to policies, procedures, and limits and suggest corrective actions. The findings of such reviews should be reported to the board and corrective actions taken on a timely basis.

The accounting systems and procedures used for public and regulatory reporting purposes are critically important to the evaluation of an organization's risk profile and the assessment of its financial condition and capital adequacy. Accordingly, an institution's policies should provide clear guidelines regarding the reporting

treatment for all securities and derivatives holdings. This treatment should be consistent with the organization's business objectives, generally accepted accounting principles (GAAP), and regulatory reporting standards.

2126.1.1.5 Risks of Investment Activities

The following discussion identifies particular sound practices for managing the specific risks involved in investment activities. In addition to these sound practices, institutions should follow any specific guidance or requirements from their primary supervisor related to these activities.

2126.1.1.5.1 Market Risk

Market risk is the risk to an institution's financial condition resulting from adverse changes in the value of its holdings arising from movements in interest rates, foreign-exchange rates, equity prices, or commodity prices. An institution's exposure to market risk can be measured by assessing the effect of changing rates and prices on either the earnings or economic value of an individual instrument, a portfolio, or the entire institution. For most institutions, the most significant market risk of investment activities is interest-rate risk.

Investment activities may represent a significant component of an institution's overall interest-rate-risk profile. It is a sound practice for institutions to manage interest-rate risk on an institution-wide basis. This sound practice includes monitoring the price sensitivity of the institution's investment portfolio (changes in the investment portfolio's value over different interest-rate/yield curve scenarios). Consistent with agency guidance, institutions should specify institution-wide interest-rate-risk limits that appropriately account for these activities and the strength of the institution's capital position. These limits are generally established for economic value or earnings exposures. Institutions may find it useful to establish price-sensitivity limits on their investment portfolio or on individual securities. These sub-institution limits, if established, should also be consistent with agency guidance.

It is a sound practice for an institution's management to fully understand the market risks associated with investment securities and derivative instruments prior to acquisition and

on an ongoing basis. Accordingly, institutions should have appropriate policies to ensure such understanding. In particular, institutions should have policies that specify the types of market-risk analyses that should be conducted for various types or classes of instruments, including that conducted prior to their acquisition (pre-purchase analysis) and on an ongoing basis. Policies should also specify any required documentation needed to verify the analysis.

It is expected that the substance and form of such analyses will vary with the type of instrument. Not all investment instruments may need to be subjected to a pre-purchase analysis. Relatively simple or standardized instruments, the risks of which are well known to the institution, would likely require no or significantly less analysis than would more volatile, complex instruments.⁴

For relatively more complex instruments, less familiar instruments, and potentially volatile instruments, institutions should fully address pre-purchase analyses in their policies. Price-sensitivity analysis is an effective way to perform the pre-purchase analysis of individual instruments. For example, a pre-purchase analysis should show the impact of an immediate parallel shift in the yield curve of plus and minus 100, 200, and 300 basis points. Where appropriate, such analysis should encompass a wider range of scenarios, including nonparallel changes in the yield curve. A comprehensive analysis may also take into account other relevant factors, such as changes in interest-rate volatility and changes in credit spreads.

When the incremental effect of an investment position is likely to have a significant effect on the risk profile of the institution, it is a sound practice to analyze the effect of such a position on the overall financial condition of the institution.

Accurately measuring an institution's market risk requires timely information about the current carrying and market values of its investments. Accordingly, institutions should have market-risk-measurement systems commensurate with the size and nature of these investments. Institutions with significant holdings of highly complex instruments should ensure that they have the means to value their positions. Institutions employing internal models should have adequate procedures to validate the models and to periodically review all elements of the modeling process, including its assumptions and

4. Federal credit unions must comply with the investment-monitoring requirements of 12 C.F.R. 703.90. See 62 Fed. Reg. 32,989 (June 18, 1997).

risk-measurement techniques. Managements relying on third parties for market-risk-measurement systems and analyses should ensure that they fully understand the assumptions and techniques used.

Institutions should provide reports to their boards on the market-risk exposures of their investments on a regular basis. To do so, the institution may report the market-risk exposure of the whole institution. Alternatively, reports should contain evaluations that assess trends in aggregate market-risk exposure and the performance of portfolios in terms of established objectives and risk constraints. They also should identify compliance with board-approved limits and identify any exceptions to established standards. Institutions should have mechanisms to detect and adequately address exceptions to limits and guidelines. Management reports on market risk should appropriately address potential exposures to yield curve changes and other factors pertinent to the institution's holdings.

2126.1.1.5.2 Credit Risk

Broadly defined, credit risk is the risk that an issuer or counterparty will fail to perform on an obligation to the institution. For many financial institutions, credit risk in the investment portfolio may be low relative to other areas, such as lending. However, this risk, as with any other risk, should be effectively identified, measured, monitored, and controlled.

An institution should not acquire investments or enter into derivative contracts without assessing the creditworthiness of the issuer or counterparty. The credit risk arising from these positions should be incorporated into the overall credit-risk profile of the institution as comprehensively as practicable. Institutions are legally required to meet certain quality standards (i.e., investment grade) for security purchases. Many institutions maintain and update ratings reports from one of the major rating services. For non-rated securities, institutions should establish guidelines to ensure that the securities meet legal requirements and that the institution fully understands the risk involved. Institutions should establish limits on individual counterparty exposures. Policies should also provide credit-risk and concentration limits. Such limits may define concentrations relating to a single or related issuer or counterparty, a geographical area, or obligations with similar characteristics.

In managing credit risk, institutions should consider settlement and presettlement credit risk. These risks are the possibility that a coun-

terparty will fail to honor its obligation at or before the time of settlement. The selection of dealers, investment bankers, and brokers is particularly important in effectively managing these risks. The approval process should include a review of each firm's financial statements and an evaluation of its ability to honor its commitments. An inquiry into the general reputation of the dealer is also appropriate. This includes review of information from state or federal securities regulators and industry self-regulatory organizations such as the National Association of Securities Dealers concerning any formal enforcement actions against the dealer, its affiliates, or associated personnel.

The board of directors is responsible for supervision and oversight of investment portfolio and end-user derivatives activities, including the approval and periodic review of policies that govern relationships with securities dealers.

Sound credit-risk management requires that credit limits be developed by personnel who are as independent as practicable of the acquisition function. In authorizing issuer and counterparty credit lines, these personnel should use standards that are consistent with those used for other activities conducted within the institution and with the organization's overall policies and consolidated exposures.

2126.1.1.5.3 Liquidity Risk

Liquidity risk is the risk that an institution cannot easily sell, unwind, or offset a particular position at a fair price because of inadequate market depth. In specifying permissible instruments for accomplishing established objectives, institutions should ensure that they take into account the liquidity of the market for those instruments and the effect that such characteristics have on achieving their objectives. The liquidity of certain types of instruments may make them inappropriate for certain objectives. Institutions should ensure that they consider the effects that market risk can have on the liquidity of different types of instruments under various scenarios. Accordingly, institutions should articulate clearly the liquidity characteristics of instruments to be used in accomplishing institutional objectives.

Complex and illiquid instruments can often involve greater risk than actively traded, more liquid securities. Oftentimes, this higher potential risk arising from illiquidity is not captured

by standardized financial modeling techniques. Such risk is particularly acute for instruments that are highly leveraged or that are designed to benefit from specific, narrowly defined market shifts. If market prices or rates do not move as expected, the demand for such instruments can evaporate, decreasing the market value of the instrument below the modeled value.

2126.1.1.5.4 Operational (Transaction) Risk

Operational (transaction) risk is the risk that deficiencies in information systems or internal controls will result in unexpected loss. Sources of operating risk include inadequate procedures, human error, system failure, or fraud. Inaccurately assessing or controlling operating risks is one of the more likely sources of problems facing institutions involved in investment activities.

Effective internal controls are the first line of defense in controlling the operating risks involved in an institution's investment activities. Of particular importance are internal controls that ensure the separation of duties and supervision of persons executing transactions from those responsible for processing contracts, confirming transactions, controlling various clearing accounts, preparing or posting the accounting entries, approving the accounting methodology or entries, and performing revaluations.

Consistent with the operational support of other activities within the financial institution, securities operations should be as independent as practicable from business units. Adequate resources should be devoted, such that systems and capacity are commensurate with the size and complexity of the institution's investment activities. Effective risk management should also include, at least, the following:

1. *Valuation.* Procedures should ensure independent portfolio pricing. For thinly traded or illiquid securities, completely independent pricing may be difficult to obtain. In such cases, operational units may need to use prices provided by the portfolio manager. For unique instruments where the pricing is being provided by a single source (e.g., the

dealer providing the instrument), the institution should review and understand the assumptions used to price the instrument.

2. *Personnel.* The increasingly complex nature of securities available in the marketplace makes it important that operational personnel have strong technical skills. This will enable them to better understand the complex financial structures of some investment instruments.
3. *Documentation.* Institutions should clearly define documentation requirements for securities transactions, saving and safeguarding important documents, as well as maintaining possession and control of instruments purchased.

An institution's policies should also provide guidelines for conflicts of interest for employees who are directly involved in purchasing and selling securities for the institution from securities dealers. These guidelines should ensure that all directors, officers, and employees act in the best interest of the institution. The board may wish to adopt policies prohibiting these employees from engaging in personal securities transactions with these same securities firms without specific prior board approval. The board may also wish to adopt a policy applicable to directors, officers, and employees restricting or prohibiting the receipt of gifts, gratuities, or travel expenses from approved securities dealer firms and their representatives.

2126.1.1.5.5 Legal Risk

Legal risk is the risk that contracts are not legally enforceable or documented correctly. Institutions should adequately evaluate the enforceability of its agreements before individual transactions are consummated. Institutions should also ensure that the counterparty has authority to enter into the transaction and that the terms of the agreement are legally enforceable. Institutions should further ascertain that netting agreements are adequately documented, executed properly, and are enforceable in all relevant jurisdictions. Institutions should have knowledge of relevant tax laws and interpretations governing the use of these instruments.

Bank holding companies should directly manage and control their aggregate risk exposures on a consolidated basis and, if appropriate, for individual subsidiaries, in view of the distinct legal existence of various subsidiaries and possible obstacles to moving cash, other assets, and contractual agreements among subsidiaries.¹ See SR-99-3.

2126.3.1 FUNDAMENTAL ELEMENTS OF COUNTERPARTY CREDIT RISK MANAGEMENT

When conducting bank holding company inspections and supervisory contacts, and when monitoring trading and derivatives activities, supervisors and examiners should fully evaluate the integrity of certain key elements of a banking organization's (BO) counterparty credit risk management process, such as the following:

1. The BO's assessment of counterparty creditworthiness, both initially and on an ongoing basis. A counterparty's creditworthiness can be evidenced by its capital strength, leverage, any on- and off-balance-sheet risk factors, and contingencies. Creditworthiness can also be evidenced by the counterparty's liquidity, operating results, reputation, and ability to understand and manage the risks inherent in its line of business, as well as the risks involved in the particular products and transactions that define a particular customer relationship.
2. The standards, methodologies, and techniques used in measuring counterparty-credit-risk exposures on an individual instrument, counterparty, and portfolio basis.
3. The use and management of credit enhancements to mitigate counterparty credit risks, including collateral arrangements and collateral-management systems, contractual downgrades or material-change triggers, and contractual "option-to-terminate" or close-out provisions.

4. The risk-limit and -monitoring systems that involve (1) setting meaningful limits on counterparty credit risk, (2) monitoring exposures against those limits, and (3) initiating meaningful risk assessments and risk-controlling actions in the event that exposures exceed limits.

The confluence of competitive pressures, pursuit of earnings, and overreliance on customer reputation can lead to substantive lapses in fundamental risk-management principles regarding counterparty risk assessment, exposure monitoring, and the management of credit-risk limits. Policies governing these activities may be unduly general so as to compromise their usefulness in managing the risks involved with particular types of counterparties. Practices may not conform to the stated policies or their intent. Situations may also exist where internal controls, including documentation and independent review, may be inadequate or lack rigor. For some larger BOs, regimes for measuring and monitoring counterparty-credit-risk exposure may be effective in more traditional areas of credit extension, but may need enhancements when used in trading and derivatives activities.

2126.3.2 TARGETING SUPERVISORY RESOURCES

When risk focusing their supervisory initiatives, examiners should continue to target those activities and areas with significant growth and above-normal profitability profiles—especially in trading and derivatives activities where the press of business and competitive pressures may invite a BO to offer new product lines before the approval of counterparties and the necessary risk-management infrastructure or procedures are fully in place. Supervisors and examiners should encourage a BO to adopt growth, profitability, and size criteria for their audit and independent risk-management functions to use in targeting their reviews.

2126.3.3 ASSESSMENT OF COUNTERPARTY CREDITWORTHINESS

Supervisors and examiners should increase their

1. These basic principles are also to be employed in the supervision of U.S. branches and agencies of foreign banks, with appropriate adaptations to reflect that (1) those offices are an integral part of a foreign bank that should be managing its risks on a consolidated basis and recognizing possible obstacles to cash movements among branches, and (2) the foreign bank is subject to overall supervision by its home-country authorities.

focus on the appropriateness, specificity, and rigor of the policies, procedures, and internal controls that a BO currently uses to assess the counterparty credit risks arising from its trading and derivatives activities. BOs should have extensive written policies covering their assessment of counterparty creditworthiness for both the initial due-diligence process (that is, before conducting business with a customer) and for ongoing monitoring. Examiners should focus particular attention on how such policies are structured and implemented. Broadly structured, general policies that apply to all types of counterparties may prove inadequate for directing staff in the proper review of the risks posed by particular types of counterparties. For example, although most policies call for the assessment and monitoring of the capital strength and leverage of customers, the assessment of hedge-fund counterparties should not rely exclusively on simple balance-sheet measures and traditional assessments of financial condition. This information may be insufficient for those counterparties whose off-balance-sheet positions are a source of significant leverage and whose risk profiles are narrowly based on concentrated business lines (such as with hedge funds and similar institutional investors). General policies calling for periodic counterparty credit reviews over significant intervals (such as annually) are another example of broad policies that may compromise the integrity of the assessment of individual counterparties or types of counterparties—a counterparty's risk profile can change significantly over much shorter time horizons.

Credit-risk-assessment policies should also properly define the types of analyses to be conducted for particular types of counterparties based on the nature of their risk profiles. Stress testing and scenario analysis may be needed, in addition to customizing fundamental analyses based on industry and business-line characteristics. Customized analyses are particularly important when a counterparty's creditworthiness may be adversely affected by short-term fluctuations in financial markets, especially when potential credit exposure to a counterparty increases at the same time the counterparty's credit quality deteriorates.

Examiners should continue to pay special attention to areas where banking organization practices may not conform to stated policies. Such supervisory efforts may be especially difficult when the BO's policies are not specific

enough for it to properly focus its counterparty risk assessments. Therefore, examiners must ensure that the banking organization's policies sufficiently address the risk profiles of particular types of counterparties and instruments. The policies should specify (1) the types of counterparties that may require special consideration; (2) the types and frequency of information to be obtained from such counterparties; (3) the types and frequency of analyses to be conducted, including the need for and type of any stress-testing analysis; and (4) how such information and analyses appropriately address the risk profile of the particular type of counterparty. This specificity in credit-assessment policies is particularly important when limited transparency may hinder market discipline on the risk-taking activities of counterparties—as may be the case with hedge funds.

Examiners should also place increasing emphasis on ensuring that a BO's existing practice conforms both with its stated objectives and the intent of its established policies. For example, some BOs may not obtain and evaluate all the information on the financial strength, condition, and liquidity of some types of counterparties that may be required by their own policies. In highly competitive and fast-moving transaction areas, organizations should be sufficiently rigorous in conducting the analyses specified in their policies, such as the review of a counterparty's ability to manage the risks of its business.

Necessary internal controls for ensuring that practices conform with stated policies include actively enforced documentation standards and periodic independent reviews by internal auditors or other risk-control units, particularly for business lines, products, and exposures to particular groups of counterparties and individual customers that exhibit significant growth or above-normal profitability. Using targeted inspections and reviews, examiners should evaluate the integrity of a BO's internal controls. Examiners should thus conduct their own transaction testing of such situations. This testing should include robust sampling of transactions with major counterparties in the targeted area, as well as sufficient stratification to ensure that practices involving smaller relationships also adhere to stated policies.

2126.3.4 CREDIT-RISK-EXPOSURE MEASUREMENT

Financial market turbulence emphasizes the important interrelationships between market

movements and the credit-risk exposures involved in derivatives activities. Accordingly, supervisors and examiners should be alert to situations where a BO may need to be more diligent in conducting current computations of the loan equivalents and potential future exposures (PFE) that are used to measure, monitor, and control its derivatives counterparty credit exposure.

Most BOs fully recognize that the credit risk of derivatives positions includes both the current replacement cost of a contract as well as the contract's PFE. PFEs are generally calculated using statistical techniques to estimate the worst potential loss over a specified time horizon at some specified confidence interval (for example, 95 percent, 97.5 percent, and 99 percent), which is generally derived in some manner from historically observed market fluctuations. Together with the current replacement cost, such PFEs are used to convert derivatives contracts to "loan equivalents" for aggregating credit exposures across products and instruments.

The time horizon used to calculate PFEs can vary depending on the banking organization's risk tolerance, collateral protection, and ability to terminate its credit exposure. Some BOs may use a time horizon equal to the life of the respective instrument. While such a time horizon may be appropriate for unsecured positions, for collateralized exposures, the use of lifetime, worst-case-estimate PFEs may be ineffective to measure the true nature of counterparty risk exposure. While life-of-contract PFE measures provide an objective and conservative long-term exposure estimate, they bear little relationship to the actual credit exposures typically incurred in the case of collateralized relationships. In such cases, a banking organization's actual credit exposure is the PFE from the time a counterparty fails to meet a collateral call until the time the bank liquidates its collateral and closes out the derivative contract—a period which is typically much shorter than the contract's life. The lack of realism in conservative measurement can cause managers and traders to discount them and may result in inappropriate limits being set, thereby compromising the entire risk-management process.

More realistic measures of collateralized credit-risk exposures should also take into account the shorter time horizons over which action can be taken to mitigate losses in times of market stress. These measures should incorporate estimates of collateral-recovery rates given the potential market liquidity impacts of stress events on collateral values. Some BOs already do stress tests, calculating measures that assess

the worst-case value of positions over a time horizon of one or two weeks—their estimate of a reasonable liquidation period in times of stress. They also perform scenario analyses of counterparty credit exposures. Stress testing and scenario analyses should evaluate the impact of large market moves on the credit exposure to individual counterparties, and they should assess the implications inherent in liquidating positions under such conditions. Analyses should consider the effects of market liquidity on the value of positions and any related collateral. The use of meaningful scenario analyses is particularly important since stress tests derived from simple applications of higher confidence intervals or longer time horizons to PFE, value-at-risk, and other measures may not adequately capture the market and exposure dynamics under turbulent market conditions, particularly as they relate to the interaction between market, credit, and liquidity risk.

The results of stress testing and scenario analyses should be incorporated into senior management reports. Such reports should provide sufficient information to ensure an adequate understanding of the nature of the exposure and the analyses conducted. Information should also be sufficient to trigger risk-controlling actions where necessary.

Other BOs are moving to build the capability of estimating portfolio-based PFEs by any one of several different time horizons or buckets, depending on the liquidity and breadth of the underlying instrument or risk factor. Based on management's opinion of the appropriate work-out timeframe, different time horizons can be used for different counterparties, transactions, or collateral types to more precisely define exposures. Supervisors and examiners should be alert to situations where collateralized exposures may be inaccurately estimated, and should encourage management at these BOs to enhance their exposure-measurement systems accordingly.

Supervisors should also be cognizant of the manner in which the credit exposures are aggregated for individual counterparties. Some BOs may take a purely transactional approach to aggregation and *not incorporate the netting of long and short derivatives contracts*, even when legally enforceable bilateral netting agreements are available. In such cases, *simple sum estimates of positive exposures may seriously overestimate true credit exposure*, and examiners should monitor and encourage a BO's movement toward more realistic measures of counter-

party exposure. Other BOs may take a portfolio approach, in which information systems allow and incorporate netting (both within and across products, business lines, or risk factors) and portfolio correlation effects to construct more comprehensive counterparty exposure measures. In such cases, supervisors should ensure that a BO has adequate internal controls governing exposure estimation, including robust model-review processes and data-integrity checks.

When stratifying samples and selecting the counterparties and transactions to use for their targeted testing of practices and internal controls, supervisors and examiners should incorporate measures of potential future exposure regardless of the collateralization of current market-value exposures. As recent events have shown, meaningful counterparty credit risks that surface during periods of stress can go undetected when too much emphasis is placed on collateralization of current market values and only unsecured current market exposures are used for targeting transaction testing.

2126.3.5 CREDIT ENHANCEMENTS

BOs continue to rely increasingly on different types of credit enhancements to mitigate counterparty credit risks. These enhancements include the use of collateral arrangements, contractual downgrades or material-change triggers that enable the alteration of collateral or margining arrangements, or the activation of contractual “option to terminate” or closeout provisions.

Collateralization of exposures has become an industry standard for many types of counterparties. Collateralization mitigates but does not eliminate credit risks. BOs therefore should ensure that overreliance on collateral does not compromise other elements of sound counterparty credit-risk management, such as the due-diligence process. Clear policies should govern the determination of loss thresholds and margining requirements for derivatives counterparties of BOs. Such policies should not be so broad that they compromise the risk-reducing nature of collateral agreements with specific types of counterparties. Policies governing collateral arrangements should specifically define those cases in which initial and variation margin is required, and they should explicitly identify situations in which the lack of transparency, business-line risk profiles, and other counter-

party characteristics merit special treatment—as may be the case with some highly leveraged counterparties such as hedge funds. Where consistent with the risk profile of the counterparty and instruments involved, policies should specify when margining requirements based on estimates of potential future exposures might be warranted.

Adequate policies should also govern the use of material-change triggers and closeout provisions, which should take into account counterparty-specific situations and risk profiles. For example, closeout provisions based on annual events or material-change triggers based on long-term performance may prove ineffective for counterparties whose risk profiles can change rapidly. Also, such material-change triggers, closeout provisions, and related covenants should be designed to adequately protect against deterioration in a counterparty’s creditworthiness. They should ensure that a BO is made aware of adverse financial developments on a timely basis and should facilitate action as counterparty risk increases—well in advance of the time when termination of a relationship is appropriate.

Internal assessments of potential risk exposures sometimes dictate loss thresholds, margining requirements, and closeout provisions with some counterparties. Insufficient internal controls may unduly expose certain BOs to these as well as other types of trading and derivatives counterparties. When evaluating the management of collateral arrangements and other credit enhancements, examiners should not only assess the adequacy of a banking organization’s policies but should also determine whether internal controls are sufficient to ensure that practices comply with these policies. Examiners should identify the types of credit enhancements and contractual covenants that are being used when reviewing areas of counterparty risk management, and then determine whether the banking organization has sufficiently assessed the adequacy of these enhancements and covenants relative to the risk profile of the counterparty.

2126.3.6 CREDIT-RISK-EXPOSURE LIMIT-SETTING AND MONITORING SYSTEMS

Exposure-monitoring and limit systems are critical to the effective management of counterparty credit risk. Examiners should focus special attention on the policies, practices, and internal controls employed within such systems at large, complex BOs. An effective exposure-

monitoring system consists of (1) establishing meaningful limits on the risk exposures a BO is willing to take, (2) independent, ongoing monitoring of exposures against such limits, and (3) adequate controls to ensure that meaningful risk-controlling action takes place when limits are exceeded. An effective exposure-monitoring and limit process depends on meaningful exposure-measurement methodologies, so supervisors should closely evaluate measurement methodologies, especially for the estimation of PFEs. Inaccurate measurement can easily compromise well-structured policies and procedures. Such situations can lead to limits driven primarily by customer demand and used only to define and monitor customer facilities, rather than limits that serve as strict levels defined by credit management and that initiate risk-controlling actions.

Supervisors and examiners should also assess the procedures used for controlling credit-risk exposures when they become large, when a counterparty's credit standing weakens, or when the market comes under stress. Management should demonstrate its clear ability to reduce large positions. Such actions can include "capping" current exposures, curtailing new business, assigning transactions to another counterparty (where feasible), and restructuring the transaction to limit potential exposure or make it less sensitive to market volatility. BOs can also use various credit-enhancement tools to manage exposures that have become unduly large or highly sensitive to market volatility.

2126.3.7 INSPECTION OBJECTIVES

1. To determine if sufficient resources are devoted and adequate attention is given to the management of the risks involved in growing, highly profitable, or potentially high-risk activities and product lines.
2. To ascertain if the banking organization's internal audit and independent risk-management functions adequately focus on growth, profitability, and risk criteria when targeting their reviews.
3. To determine if there is an appropriate balance among all elements of credit-risk management. This balance includes both qualitative and quantitative assessments of counterparty creditworthiness; measurement and evaluation of on- and off-balance sheet exposures, including potential future exposure; adequate stress testing; reliance on collateral and other credit enhancements; and the monitoring of exposures against meaningful limits.
4. To ascertain whether the banking organization employs policies that are sufficiently calibrated to the risk profiles of particular types of counterparties and instruments, which ensures adequate credit-risk assessment, exposure measurement, limit setting, and use of credit enhancements.
5. To ensure that the banking organization's actual business practices conform with their stated policies and the intent of these policies.
6. To establish if the banking organization is moving in a timely fashion to enhance its measurement of counterparty credit-risk exposures, including refining potential future exposure measures and establishing stress-testing methodologies to better incorporate the interaction of market and credit risks.
7. To accomplish the above inspection objectives by using sufficient, targeted transaction testing on those activities, business lines, and products experiencing significant growth, above-normal profitability, or large potential future exposures.

2126.3.8 INSPECTION PROCEDURES

1. Give increased focus to the adequacy, appropriateness, specificity, and rigor of the policies, procedures, and internal controls that a BO currently uses to assess the counterparty credit risks arising from its trading and derivatives activities.
 - a. Determine if sufficient written policies cover the assessment of counterparty creditworthiness for the initial due-diligence process (that is, before conducting business with a customer) and for ongoing monitoring.
 - b. Give particular attention to how such policies are structured, their adequacy, and how they are implemented.
2. Focus special attention on areas where a BO's practices may not conform to its stated policies.
 - a. Determine if the banking organization's policies sufficiently address the risk profiles of its particular types of counterparties and instruments.
 - b. Ascertain whether existing practices conform to the stated objectives and the intent of the organization's established policies.

3. Evaluate the banking organization's documentation standards.
4. Determine whether the internal reviews are adequately conducted for business lines, products, and exposures to particular groups of counterparties and individual customers that exhibit significant growth or above-normal profitability.
5. Evaluate the integrity of the internal controls that the banking organization uses to assess its own transaction testing during internal reviews.
6. Conduct independent targeted reviews of the internal controls.
 - a. Use robust sampling when testing transactions of major counterparties within a targeted area.
 - b. Employ sufficient stratification to ensure that practices involving smaller relationships also adhere to stated policies.
 - c. Be alert to situations whereby the current computations of loan equivalents and potential exposures—that are used to measure, monitor, and control derivatives counterparty credit exposures—could be deliberately enhanced.
7. Determine if the banking organization needs to develop more meaningful measures of credit-risk exposures, such as using stress testing and scenario analyses, under volatile market conditions.

WHAT NEW IN THIS REVISED SECTION

Effective July 2006, footnote 1 was revised to include a reference to SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations."

2127.0.1 ASSESSING THE MANAGEMENT AND INTERNAL CONTROLS OVER INTEREST-RATE RISK

Interest-rate risk (IRR) is the exposure of a banking organization's financial condition to adverse movements in interest rates. Accepting this risk can be an important source of profitability and shareholder value. However, excessive levels of IRR can pose a significant threat to a bank's or bank holding company's earnings and capital base. Accordingly, effective risk management that maintains IRR at prudent levels is essential to the organization's safety and soundness.

Evaluating a bank holding company's exposure to changes in interest rates is an important element of any full-scope inspection and may be the sole topic for specialized or targeted inspections. This evaluation includes assessing both the adequacy of the management process used to control IRR and the organization's quantitative level of exposure. When assessing the IRR management process, examiners should ensure that appropriate policies, procedures, management information systems, and internal controls are in place to maintain IRR at prudent levels with consistency and continuity. Evaluating the quantitative level of IRR exposure requires examiners to assess the existing and potential future effects of changes in interest rates on a bank holding company's consolidated financial condition, including its capital adequacy; earnings; liquidity; and, where appropriate, asset quality. To ensure that these assessments are both effective and efficient, examiner resources must be appropriately targeted at those elements of an organization's IRR that pose the greatest threat to its financial condition. This targeting requires an inspection process built on a well-focused assessment of IRR exposure before the on-site engagement, a clearly defined inspection scope, and a comprehensive program for following up on inspection findings and ongoing monitoring.

2127.0.2 JOINT AGENCY POLICY STATEMENT: INTEREST-RATE RISK

The Board, together with the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation, adopted a Joint Agency Policy Statement on Interest-Rate Risk, effective June 26, 1996. (See SR-96-13.) It provides guidance to examiners and bankers on sound practices for managing interest-rate risk, which will form the basis for ongoing evaluation of the adequacy of interest-rate risk management at supervised institutions.

The policy statement outlines fundamental elements of sound management that have been identified in prior Federal Reserve guidance and discusses the importance of these elements in the context of managing interest-rate risk.¹ Specifically, the guidance emphasizes the need for active board and senior management oversight and a comprehensive risk-management process that effectively identifies, measures, and controls interest-rate risk.

Although the guidance targets interest-rate risk management at commercial banks and Edge Act corporations, the basic principles presented in the policy statement are to be applied to bank holding companies. Bank holding companies should manage and control aggregate risk exposure on a consolidated basis by recognizing legal distinctions and possible obstacles to cash movements among subsidiaries. The assessment of interest-rate risk management made by examiners in accordance with the 1996 Joint Policy Statement will be incorporated into a bank holding company's overall risk-management rating. Bank holding company examiners should refer to section 4090.1 of the *Commercial Bank Examination Manual* for more detailed inspection guidance on the joint policy statement on interest-rate risk.

1. Guidance to examiners identifying fundamental elements of sound risk management includes SR-00-14, "Enhancements to the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations"; SR-96-14 (see section 2124.0), "Risk-Focused Safety and Soundness Examinations and Inspections"; SR-96-13, "Joint Policy Statement on Interest-Rate Risk"; SR-96-10, "Risk-Focused Fiduciary Examinations"; SR-95-51 (see section 4070.1), "Rating the Adequacy of Risk-Management Processes and Internal Controls at State Member Banks and Bank Holding Companies"; and SR-93-69 (see section 2125.0), "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations."

This section discusses supervisory policy with regard to structured notes and their increased use by banking organizations. Examiners should be mindful of these instruments, whether they are used in the banking organization's trading, investment, or trust activities. Some of these instruments can expose investors to significant losses as interest rates, foreign-exchange rates, and other market indices change. Consequently, during examinations or inspections, examiners need to ensure that banks and bank holding companies that hold structured notes do so according to their own investment policies and procedures and with a full understanding of the risks and price sensitivity of these instruments under a broad range of market conditions.

Structured notes, many of which are issued by U.S. government agencies, government-sponsored entities, and other organizations with high credit ratings, are debt securities whose cash flows are dependent on one or more indices in ways that create risk characteristics of forwards or options. They tend to have medium-term maturities and reflect a wide variety of cash-flow characteristics that can be tailored to the needs of individual investors.

As such, these notes may offer certain advantages over other financial instruments used to manage market risk. In particular, they may reduce counterparty credit risk, offer operating efficiencies and lower transaction costs, require fewer transactions, and more specifically address an institution's risk exposures. Risk to principal is typically small. Accordingly, when structured notes are analyzed and managed properly, they can be acceptable investments and trading products for banks.

However, structured notes can also have characteristics that cause them to be inappropriate holdings for many banking organizations, including depository institutions. They can have substantial price sensitivity; they can be complex and difficult to evaluate; and they may also reflect high amounts of leverage relative to fixed-income instruments with comparable face values. Their customized features and embedded options may also make them difficult to price and can reduce their liquidity. Consequently, banking organizations considering the purchase of structured notes should determine whether these factors are compatible with their investment horizons and with their overall portfolio strategies.

There are a wide variety of structured notes, with names such as single- or multi-index floaters, inverse floaters, index-amortizing notes,

step-up bonds, and range bonds. These simple, though sometimes cryptic, labels can belie the potential complexity of these notes and their possibly volatile and unpredictable cash flows, which can involve both principal and interest payments. Some notes employ "trigger levels" at which cash flows can change significantly, or caps or floors, which can also substantially affect their price behavior.

The critical factor for examiners to consider is the ability of management to understand the risks inherent in these instruments and to satisfactorily manage the market risks of their institution. Therefore, examiners should evaluate the appropriateness of these securities institution by institution, with a knowledge of management's expertise in evaluating such instruments, the quality of the relevant information systems, and the nature of its overall exposure to market risk. This evaluation may include a review of the stress-test capabilities. Failure of management to adequately understand the dimensions of the risks in these and similar financial products can constitute an unsafe and unsound practice for banking organizations.

When making investment decisions, some banking organizations may focus only on the low credit risk and favorable yields of structured notes and either overlook or underestimate their market and liquidity risks. Consequently, where these notes are material, examiners should discuss their role in the organization's risk-management process and assess management's recognition of their potential volatility.

The risks inherent in such complex instruments and relevant risk-management standards have been addressed in a variety of previously issued supervisory guidance, including SR-letters and supervisory manuals. This guidance includes SR-90-16, standards for investing in asset-backed securities (see section 2128.02); SR-93-69 (see section 2125.0) and SR-95-17 (see section 2126.0), examination guidance for reviewing trading and nontrading activities (SR-95-17 deals with securities and derivative contracts used in nontrading activities); and the *Trading and Capital-Markets Activities Manual*. Although these documents may not specifically cite structured notes, they all help to highlight the following important supervisory and risk-management practices that are relevant to these instruments:

1. the importance of policies, approved by the board of directors, that address the goals and objectives expected to be achieved with such products and that set limits on the amount of funds that may be committed to them
2. the need for management to fully understand the risks these instruments can present, including their potentially reduced liquidity in secondary markets and the price volatility that any embedded options, leveraging, or other characteristics can create
3. the need for adequate information systems and internal controls for managing the risks under changing market conditions
4. the importance of clear lines of authority for making investment decisions and for evaluating and managing the institution's securities activities that involve such instruments

For additional information, see SR-97-21 and SR-91-4. See also sections 3010.3 and 4040.1 of the *Trading and Capital-Markets Activities Manual* for more detailed guidance.

Banking organizations have long been involved with asset-backed securities (ABS), both as investors in such securities and as major participants in the securitization process. In recent years, banking organizations have stepped up their involvement by increasing their participation in the long-established market for securities backed by residential mortgage loans and by expanding their securitizing activities to other types of assets, including credit card receivables, automobile loans, boat loans, commercial real estate loans, student loans, nonperforming loans, and lease receivables.

While the objectives of securitization may vary from one depository institution to another, there are essentially five benefits that can be derived from securitization transactions. First, the sale of assets may reduce regulatory costs. The removal of an asset from an institution's books reduces capital requirements and reserve requirements on deposits funding the asset. Second, securitization provides originators with an additional source of funding and liquidity. The process of securitization is basically taking an illiquid asset and converting it into a security with greater marketability. Securitized issues often carry a higher credit rating than that which the banking organization itself could normally obtain and, consequently, may provide a cheaper form of funding. Third, securitization may be used to reduce interest-rate risk by improving the banking organization's asset-liability mix. This is especially true if the banking organization has a large investment in fixed-rate, low-yield assets. Fourth, by removing assets, the banking organization enhances its return on equity and assets. Finally, the ability to sell these securities worldwide diversifies the banking organization's funding base, thereby reducing dependence on local economies.

It is appropriate for banking organizations to engage in securitization activities and to invest in ABS, if they do so prudently. Nonetheless, these activities can significantly affect their overall risk exposure. It is therefore of great importance, particularly given the growth and expansion of such activities, for examiners to be fully informed about the fundamentals of the securitization process, various risks that securitization and investing in ABS can create for banking organizations, and procedures that should be followed in examining banks and inspecting bank holding companies to effectively assess their exposure to risk and their management of that exposure.

To provide examiners with the information and guidance they need on asset securitization, the following guidance was developed for System use. The mechanics of securitization and related accounting issues are discussed, and inspection guidelines, objectives, and procedures are provided.¹

2128.02.1 OVERVIEW OF ASSET SECURITIZATION

Over the past decade, the number of banks and bank holding companies (hereafter referred to as banking organizations) that have issued securities backed by their assets and that have acquired asset-backed securities as investments has increased markedly. The reason for this increase is that securitization activities can yield significant financial and operational benefits for banking organizations.

In its simplest form, asset securitization involves the selling of assets. The process first segregates generally illiquid assets into pools and transforms them into capital-market instruments. The payment of principal and interest on these instruments depends on the cash flows from the assets in the pool that underlies the new securities. The new securities may have denominations, cash flows, and other features that differ from the pooled assets, which make them more attractive to investors.

The federal government encouraged the securitization of residential mortgages. In 1970, the Government National Mortgage Association (Ginnie Mae or GNMA) created the first publicly traded mortgage-backed security. Soon, the Federal National Mortgage Association (Fannie Mae) and the Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac), both government-sponsored agencies, also developed mortgage-backed securities. The guarantees that these government or government-sponsored entities provide, which assure investors of the payment of principal and interest, have greatly facilitated the securitization of mortgage assets.

1. The Federal Reserve System has developed the following three-volume set that contains educational material on the process of asset securitization and provides examination guidelines (see SR-90-16):

- An Introduction to Asset Securitization
- Accounting Issues Relating to Asset Securitization
- Examination Guidelines for Asset Securitization

2128.02.2 SECURITIZATION PROCESS

The asset-securitization process, as depicted in figure 1, begins with the segregation of loans or leases into pools that are relatively homogeneous with respect to credit, maturity, and interest-rate risks. These pools of assets are then transferred to a trust or other entity known as an issuer because it issues the securities or ownership interests that are acquired by investors. These asset-backed securities may take the form of debt, certificates of beneficial ownership, or other instruments. The issuer is typically protected from bankruptcy by various structural and legal arrangements. A sponsor that provides the assets to be securitized owns or otherwise establishes the issuer.

Traditional lending activities are generally funded by deposits or other liabilities, and both the assets and related liabilities are reflected on the balance sheet. Deposit liabilities must generally increase to fund additional loans. In contrast, the securitization process generally does not increase on-balance-sheet liabilities in proportion to the volume of loans or other assets securitized. As discussed more fully below, when banking organizations securitize their assets and these transactions are treated as sales under Statement of Financial Accounting Standards No. 140 (FAS 140), both the assets and

the related asset-backed securities (i.e., liabilities) are removed from the balance sheet. The cash proceeds from the securitization transactions are generally used to originate or acquire additional loans or other assets for securitization, and the process is repeated. Thus, for the same volume of loan originations, securitization results in lower assets and liabilities, compared with traditional lending activities.

Each issue of asset-backed securities has a servicer responsible for collecting interest and principal payments on the loans or leases in the underlying pool of assets and for transmitting these funds to investors (or a trustee representing them). A trustee monitors the activities of servicers to ensure that they properly fulfill their role.

An investment banking firm or other organization generally serves as an underwriter for asset-backed securities. In addition, for asset-backed issues that are publicly offered, a credit rating agency will analyze the policies and operations of the originator and servicer, as well as the structure, underlying pool of assets, expected cash flows, and other attributes of such securities. Before assigning a rating to the issue, the rating agency will also assess the extent of loss protection provided to investors by the credit enhancements associated with the issue.

Figure 1
Pass-through, asset-backed securities: structure and cash flows

The structure of an asset-backed security and the terms of the investors' interest in the collateral can vary widely, depending on the type of collateral, the desires of investors, and the use of credit enhancements. Securitizations typically carve up the risk of credit losses from the underlying assets and distribute it to different parties. The "first-dollar," or most subordinate, loss position is first to absorb losses, and the most senior investor position is last to absorb losses; there may also be one or more loss positions in between ("second-dollar" loss positions). Each loss position functions as a credit enhancement for the more senior positions in the structure. In other words, when ABS reallocate the risks in the underlying collateral (particularly credit risk), the risks are moved into security tranches that match the desires of investors. For example, senior-subordinated security structures give holders of senior tranches greater credit-risk protection—albeit at lower yields—than holders of subordinated tranches. Under this structure, at least two classes of asset-backed securities, a senior and a junior or subordinated class, are issued in connection with the same pool of collateral. The senior class is structured so that it has a priority claim on the cash flows from the underlying pool of assets. The subordinated class must absorb credit losses on the collateral before losses can be charged to the senior portion. Because the senior class has this priority claim, cash flows from the underlying pool of assets must first satisfy the requirements of the senior class. Only after these requirements have been met will the cash flows be directed to service the subordinated class.

2128.02.3 CREDIT ENHANCEMENT

A guarantor may also be involved to see that investors receive principal and interest payments on a timely basis, even if the servicer does not collect these payments from the obligors. Many issues of mortgage-backed securities are either directly guaranteed by GNMA, a government agency backed by the full faith and credit of the U.S. government, or are guaranteed by Fannie Mae or Freddie Mac, which are government-sponsored agencies that are perceived by the credit markets to have the implicit support of the federal government. Privately issued mortgage-backed securities and other types of asset-backed securities generally depend on some form of credit enhancement provided by the originator or third party to insulate the investor from some or all of any credit losses. Usually, credit enhancement is

provided for several multiples of the historical losses experienced on the particular asset backing the security.

One form of credit enhancement is the recourse provision, or guarantee, that requires the originator to cover any losses up to an amount contractually agreed upon. Some asset-backed securities, such as those backed by credit card receivables, typically use a "spread account," which is actually an escrow account. The funds in this account are derived from a portion of the spread between the interest earned on the assets in the underlying pool and the lower interest paid on securities issued by the trust. The amounts that accumulate in the account are used to cover credit losses in the underlying asset pool up to several multiples of historical losses on the particular asset collateralizing the securities.

Overcollateralization, another form of credit enhancement covering a predetermined amount of potential credit losses, occurs when the value of the underlying assets exceeds the face value of the securities. Other forms of credit enhancement include standby letters of credit, collateral or pool insurance, or surety bonds from third parties. The sponsor of the asset securitization may provide a portion of the total credit enhancement internally, as part of the securitization structure, through the use of excess spread accounts, overcollateralization, retained subordinated interests, or other similar on-balance-sheet assets. When these or other on-balance-sheet internal enhancements are provided, the enhancements are "residual interests" and are a form of recourse.² Residual interests (or residuals) represent claims on any cash flow after all obligations to investors and any related expenses have been met. Such excess cash flows may arise as a result of overcollateralization or from reinvestment income. Residuals can be retained by sponsors or purchased by investors in the form of securities.

A seller may also arrange for a third party to provide credit enhancement in an asset securitization. If the third-party enhancement is provided by another banking organization, it assumes some portion of the assets' credit risk. All forms of third-party enhancements, that is, all arrangements in which a banking organization assumes credit risk from third-party assets

2. Under the Federal Reserve's capital adequacy guidelines, purchased credit-enhancing interest-only strips are also considered "residual interests."

or other claims that it has not transferred, are referred to as “direct-credit substitutes.” The economic substance of a banking organization’s credit risk from providing a direct-credit substitute can be identical to its credit risk from retaining recourse on assets it has transferred. Many asset securitizations use a combination of recourse and third-party enhancements to protect investors from credit risk. When third-party enhancements are not provided, the selling banking organization ordinarily retains virtually all of the credit risk on the assets transferred.

2128.02.4 STRUCTURE OF ASSET-BACKED SECURITIES

Asset securitization involves different kinds of capital-market instruments. These instruments may be structured as “pass-throughs” or “pay-throughs.” Under a pass-through structure, the cash flows from the underlying pool of assets are passed through to investors on a pro rata basis. This type of security is typically a single-class instrument such as a GNMA pass-through. The pay-through structure, with multiple classes, combines the cash flows from the underlying pool of assets and reallocates them to two or more issues of securities that have different cash-flow characteristics and maturities. An example is the collateralized mortgage obligation (CMO), which has a series of bond classes, each with its own specified coupon and stated maturity. In most cases, the assets that make up the CMO collateral pools are pass-through securities. Scheduled principal payments, and any prepayments, from the underlying collateral go first to the earliest maturing class of bonds. This first class of bonds must be retired before the principal cash flows are used to retire the later bond classes. The development of the pay-through structure resulted from the desire to broaden the marketability of these securities to investors who were interested in maturities other than those generally associated with pass-through securities.

Multiple-class asset-backed securities may also be issued as derivative instruments such as “stripped” securities. Investors in each class of a stripped security will receive a different portion of the principal and interest cash flows from the underlying pool of assets. In their purest form, stripped securities may be issued as *interest-only (IO) strips*, for which the investor receives 100 percent of the interest from the

underlying pool of assets, and as *principal-only (PO) strips*, for which the investor receives all of the principal.

In addition to these securities, other types of financial instruments may arise as a result of asset securitization. One such instrument is loan-servicing rights that are created when organizations purchase the right to act as servicers for pools of loans. The cost of these purchased servicing rights may be recorded as an intangible asset when certain criteria are met. Another financial instrument, excess-servicing-fee receivables, generally arise when the present value of any additional cash flows from the underlying assets that a servicer expects to receive exceeds standard normal servicing fees.

2128.02.5 SUPERVISORY CONSIDERATIONS REGARDING ASSET SECURITIZATION

Although banking organizations clearly benefit from engaging in securitization activities and investing in asset-backed securities, these activities, if not conducted prudently, can increase a banking organization’s overall risk profile. For the most part, the risks that banking organizations encounter in the securitization process are identical to those that they face in traditional lending transactions. These involve credit risk, concentration risk, and interest-rate risk—including prepayment risk, operational risk, liquidity risk, and funding risk. However, since the securitization process separates the traditional lending function into several limited roles such as originator, servicer, credit enhancer, trustee, and investor, the types of risks that a banking organization will encounter will differ depending on the role it assumes.

Investors who invest in asset-backed securities, like investors who invest directly in the underlying assets, will be exposed to credit risk, that is, the risk that obligors will default on principal and interest payments. Investors are also subject to the risk that the various parties in the securitization structure, for example, the servicer or trustee, will be unable to fulfill their contractual obligations. Moreover, investors may be susceptible to concentrations of risks across various asset-backed security issues through overexposure to an organization performing various roles in the securitization process or as a result of geographic concentrations within the pool of assets providing the cash flows for an individual issue. Also, because the secondary markets for certain asset-backed securities are thin, investors may encounter

greater-than-anticipated difficulties when seeking to sell their securities. Furthermore, certain derivative instruments, such as stripped asset-backed securities and residuals, may be extremely sensitive to interest rates and exhibit a high degree of price volatility. Therefore, these instruments may dramatically affect the risk exposure of investors unless they are used in a properly structured hedging strategy.

Banking organizations that issue asset-backed securities may be subject to pressures to sell only their best assets, thus reducing the quality of their own loan portfolios. On the other hand, some banking organizations may feel pressures to relax their credit standards because they can sell assets with higher risk than they would normally want to retain for their own portfolios.

Banking organizations that service securitization issues must ensure that their policies, operations, and systems will not permit breakdowns that may lead to defaults. Issuers and servicers may face pressures to provide “moral recourse” by repurchasing securities backed by loans or leases that they have originated and that have deteriorated and have become nonperforming. Funding risk may also be a problem for issuers when market aberrations do not permit the issuance of asset-backed securities that are in the securitization pipeline.

Asset-securitization transactions are frequently structured to obtain certain accounting treatments, which, in turn, affect reported measures of profitability and capital adequacy. In transferring assets into a pool to serve as collateral for asset-backed securities, a key question is whether the transfer should be treated as a sale of the assets or as a collateralized borrowing, that is, as a financing transaction secured by assets. Sales treatment results in the removal of the assets from the banking organization’s balance sheet, thus reducing total assets relative to earnings and capital, and thereby producing higher performance and capital ratios. Treatment of these transactions as financings, however, means that the assets in the pool remain on the balance sheet and are subject to capital requirements and the related liabilities to reserve requirements.³

2128.02.6 POLICY STATEMENT ON INVESTMENT SECURITIES AND END-USER DERIVATIVES ACTIVITIES

On April 23, 1998, the FFIEC issued a Statement on Investment Securities and End-User Derivatives Activities, effective May 25, 1998. The statement was adopted by the Board of Governors and the other federal financial institutions regulatory agencies. It provides guidance on sound practices for managing the risks of investment activities, focusing on sound risk-management practices that should be used by state member banks and Edge corporations. The basic principles also apply to bank holding companies, which should manage and control risk exposures on a consolidated basis, giving recognition to the legal distinctions and potential obstacles to cash movements among subsidiaries.

The statement’s principles set forth risk-management practices that are relevant to most portfolio-management endeavors. The statement places greater emphasis on a risk-focused approach to supervision. Instruments held for end-user reasons are considered, taking into consideration a variety of factors such as management’s ability to manage and measure risk within the institution’s holdings and the impact of those holdings on aggregate portfolio risk. (See section 2126.1 and SR-98-12.⁴)

2128.02.6.1 Mortgage-Derivative Products

Mortgage-derivative products include instruments such as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), stripped mortgage-backed securities, and CMO and REMIC residuals. Supervisory concerns about these instruments arise from their extreme sensitivity to interest rates and the resulting price volatility. This price volatility is caused in part by the uncertain cash flows that result from changes in the prepayment rates of the underlying mortgages. A banking organization that purchases such high-risk mortgage-derivative securities needs to understand and effectively manage the associated

3. Note, however, that the Federal Reserve’s Regulation D defines what constitutes a reservable liability of a depository institution. Thus, although a given transaction may qualify as an asset sale for call report purposes, it nevertheless could result in a reservable liability under Regulation D.

4. The supervisory policy statement on Investment Securities and End-User Derivatives Activities is in the *Federal Reserve Regulatory Service* at 3–1562.

risks. The levels of activity in such products should reasonably be related to the banking organization's capital, capacity to absorb losses, and level of in-house management sophistication and expertise. Appropriate managerial and financial controls need to be in place, and the banking organization must analyze, monitor, and prudently adjust its holdings of high-risk mortgage securities in an environment of changing price and maturity expectations.

Before a banking organization takes a position in any high-risk mortgage security, management should conduct an analysis to ensure that the position will reduce the institution's overall interest-rate risk. It should also consider the liquidity and price volatility of these products before their purchase.

CMOs and REMICs were developed in response to investors' concerns about the uncertainty of cash flows associated with the prepayment option of the underlying mortgagor. These securities can be collateralized directly by mortgages, but more often they are collateralized by mortgage-backed securities issued or guaranteed by GNMA, Fannie Mae, or Freddie Mac and held in trust for investors. The cash flow from the underlying mortgages is segmented and paid in accordance with a predetermined priority to investors holding various tranches. By allocating the principal and interest cash flows from the underlying collateral among the separate CMO tranches, different classes of bonds are created, each with its own stated maturity, estimated average life, coupon rate, and prepayment characteristics. It is essential to understand the coupon rates of the underlying mortgages of the CMO or REMIC in order to assess the prepayment sensitivity of the CMO tranches.

Stripped mortgage-backed securities consist of two classes of securities, with each class receiving a different portion of the monthly interest and principal cash flows from the underlying mortgage-backed securities (MBS). A stripped mortgage-backed security, in its purest form, is converted into an interest-only (IO) strip, in which the investor receives all of the interest cash flows and none of the principal. An investor owning a principal-only (PO) strip receives all of the principal cash flows and none of the interest. IOs and POs have highly volatile price characteristics based, in part, on the prepayment variability of the underlying mortgages. Generally, POs increase in value when interest rates decline, in part because prepay-

ments shorten the maturity of mortgages. In contrast, IOs and residuals tend to increase in value when interest rates rise because prepayments decline, maturities lengthen, and more interest is collected on the underlying mortgages.

When purchasing an IO, PO, or residual, without offsetting hedges, the investor may be speculating on future interest-rate movements and how these movements will affect the prepayment of the underlying collateral. Furthermore, stripped mortgage-backed securities that do not have a government agency's or a government-sponsored agency's guarantee of principal and interest have an added element of credit risk. The policy statement discusses the appropriateness of these instruments for depository institutions and the prudential measures that a depository institution should take to protect itself from undue risk when investing in them.

Residuals represent claims on any cash flows from a CMO issue or other asset-backed security remaining after the payments to the holders of the other classes have been made and after trust-administration expenses are met. The economic value of a residual is a function of the present value of the anticipated cash flows.

2128.02.7 RISK-BASED CAPITAL PROVISIONS AFFECTING ASSET SECURITIZATION

The risk-based capital framework has three main features that will affect the asset-securitization activities of banking organizations. First, the framework assigns risk weights to loans, asset-backed securities, and other assets related to securitization. Second, bank holding companies that transfer assets with recourse to the seller as part of the securitization process are required to hold capital against their off-balance-sheet credit exposures. Third, banking organizations that provide credit enhancement to asset-securitization issues through standby letters of credit or by other means will have to hold capital against the related off-balance-sheet credit exposure.

2128.02.7.1 Assigning Risk Weights

The risk weights assigned to an asset-backed security depend on the issuer and whether the assets that make up the collateral pool are mortgage-related assets. Asset-backed securities issued by a trust or a single-purpose corporation

and backed by nonmortgage assets are to be assigned a risk weight of 100 percent.

Securities guaranteed by U.S. government agencies and those issued by U.S. government-sponsored agencies are assigned risk weights of 0 and 20 percent, respectively, because of the low degree of credit risk. Accordingly, mortgage pass-through securities guaranteed by GNMA are placed in the risk category of 0 percent. In addition, securities such as participation certificates and CMOs issued by Fannie Mae or Freddie Mac are assigned a 20 percent risk weight.

However, several types of securities issued by Fannie Mae and Freddie Mac are excluded from the lower risk weight and slotted in the 100 percent risk category. Residual interests (for example, CMO residuals) and subordinated classes of pass-through securities or CMOs that absorb more than their pro rata share of loss are assigned to the 100 percent risk-weight category. Furthermore, all stripped mortgage-backed securities, including IOs, POs, and similar instruments, are assigned to the 100 percent risk-weight category because of their extreme price volatility and market risk.

A privately issued, mortgage-backed security that meets the criteria listed below is considered as a direct or indirect holding of the underlying mortgage-related assets and is assigned to the same risk category as those assets (for example, U.S. government agency securities, U.S. government-sponsored agency securities, FHA- and VA-guaranteed mortgages, and conventional mortgages). However, under no circumstances will a privately issued mortgage-backed security be assigned to the 0 percent risk category. Therefore, private issues that are backed by GNMA securities will be assigned to the 20 percent risk category as opposed to the 0 percent category appropriate to the underlying GNMA securities. The criteria that a privately issued mortgage-backed security must meet to be assigned the same risk weight as the underlying assets are as follows:

1. The underlying assets are held by an independent trustee, and the trustee has a first-priority, perfected security interest in the underlying assets on behalf of the holders of the security.
2. The holder of the security has an undivided pro rata ownership interest in the underlying mortgage assets, or the trust or single-purpose entity (or conduit) that issues the security has no liabilities unrelated to the issued securities.

3. The cash flow from the underlying assets of the security in all cases fully meets the cash-flow requirements of the security without undue reliance on any reinvestment income.
4. No material reinvestment risk is associated with any funds awaiting distribution to the holders of the security.

Those privately issued mortgage-backed securities that do not meet the above criteria are to be assigned to the 100 percent risk category.

If the underlying pool of mortgage-related assets is composed of more than one type of asset, then the entire class of mortgage-backed securities is assigned to the category appropriate to the highest risk-weighted asset in the asset pool. For example, if the security is backed by a pool consisting of U.S. government-sponsored agency securities (for example, Freddie Mac participation certificates) that qualify for a 20 percent risk weight and conventional mortgage loans that qualify for the 50 percent risk category, then it would receive the 50 percent risk weight.

As previously mentioned, bank holding companies report their activities in accordance with generally accepted accounting principles (GAAP), which permits asset-securitization transactions to be treated as sales when certain criteria are met, even when there is recourse to the seller. With the advent of risk-based capital, bank holding companies are required to hold capital against the off-balance-sheet credit exposure arising from the contingent liability associated with the recourse provisions. This exposure is considered a direct-credit substitute that would be converted at 100 percent to an on-balance-sheet credit-equivalent amount for appropriate risk weighting.

The risk-based capital treatment for asset securitizations, as discussed in detail in section 4060.3, uses, in general, a multilevel, ratings-based approach (effective January 1, 2002) to assess the capital requirements on recourse obligations, residual interests (except credit-enhancing I/O strips), direct-credit substitutes, and senior and subordinated securities in asset securitizations, based on their relative exposure to credit risk. Credit ratings from rating agencies are used to measure relative exposure to credit risk and to determine the associated risk-based capital requirement. The Federal Reserve is relying on these credit ratings to make determinations of credit quality for the regulatory

treatment for loss positions that represent different gradations of risk, the same as investors and other market participants. Residual interests, however, are subject to (1) a dollar-for-dollar capital charge and (2) a 25 percent of tier 1 capital concentration limit on a subset of residual interests, credit-enhancing I/O strips.

2128.02.7.2 Recourse Obligations

For regulatory purposes, recourse is generally defined as an arrangement in which a banking organization retains the risk of credit loss in connection with an asset transfer, if the risk of credit loss exceeds a pro rata share of its claim on the assets. In addition to broad contractual language that may require the seller to support a securitization, recourse can arise from retained interests, retained subordinated security interests, the funding of cash-collateral accounts, or other forms of credit enhancements that place a bank holding company's earnings and capital at risk. These enhancements should generally be aggregated to determine the extent of a bank holding company's support of securitized assets. Although an asset securitization qualifies for sales treatment under GAAP, the underlying assets may still be subject to regulatory risk-based capital requirements. Assets sold with recourse should generally be risk-weighted as if they had not been sold.

2128.02.7.2.1 Residuals

For residuals, the risk-based capital treatment is harmonized with the broader capital treatment for recourse and direct-credit substitutes. The capital treatment matches the use of the ratings to the relative risk of loss in asset securitizations. Highly rated investment-grade positions in securitizations receive a favorable (less than 100 percent) risk weight. Below-investment-grade or unrated positions in securitizations receive a less favorable risk weight (generally greater than a 100 percent risk weight). Therefore, if the external rating provided to such a residual interest is investment grade or no more than one category below investment grade, that residual interest is afforded more favorable capital treatment than the dollar-for-dollar capital requirement otherwise required for residuals.

2128.02.7.2.2 Credit-Equivalent Amounts and Risk Weights of Recourse Obligations and Direct-Credit Substitutes

The credit-equivalent amount for a recourse obligation or direct-credit substitute is the full amount of the credit-enhanced assets for which the bank holding company directly or indirectly retains or assumes credit risk, multiplied by a 100 percent conversion factor. A bank holding company that extends a partial direct-credit substitute, for example, a financial standby letter of credit that absorbs the first 10 percent of loss on a transaction, must maintain capital against the full amount of the assets being supported.

To determine the bank holding company's risk-weighted assets for an off-balance-sheet recourse obligation, a third-party direct-credit substitute, or a letter of credit, the credit-equivalent amount is assigned to the risk category appropriate to the obligor in the underlying transaction, after considering any associated guarantees or collateral. For a direct-credit substitute that is an on-balance-sheet asset, for example, a purchased subordinated security, a bank holding company must calculate risk-weighted assets using the amount of the direct-credit substitute and the full amount of the assets it supports, that is, all the more senior positions in the structure. This treatment is subject to the low-level-exposure rule discussed below.

If a bank holding company has no claim on a transferred asset, then the retention of any risk of credit loss is recourse. A recourse obligation typically arises when a bank holding company transfers assets and retains an explicit obligation to repurchase the assets or absorb losses—because of a default on the payment of principal or interest or because of any other deficiency in the performance of the underlying obligor or some other party. Recourse may also exist implicitly if a bank holding company provides credit enhancement beyond any contractual obligation to support assets it has sold. The following are examples of recourse arrangements:

1. credit-enhancing representations and warranties made on the transferred assets
2. loan-servicing assets retained under an agreement that requires the bank holding company to be responsible for credit losses associated with the loans being serviced (mortgage-servicer cash advances that meet the conditions of section III.B.3.a.viii. of the capital adequacy guidelines (12 CFR 225, appendix A) are not recourse arrangements
3. retained subordinated interests that absorb more than their pro rata share of losses from

- the underlying assets
4. assets sold under an agreement to repurchase, if the assets are not already included on the balance sheet
 5. loan strips sold without contractual recourse when the maturity of the transferred loan is shorter than the maturity of the commitment under which the loan is drawn
 6. credit derivatives issued that absorb more than the bank holding company's pro rata share of losses from the transferred assets
 7. clean-up calls that, at inception, are greater than 10 percent of the balance of the original pool of transferred loans (Clean-up calls that are 10 percent or less of the original pool balance and that are exercisable at the option of the bank holding company are not recourse arrangements.)

2128.02.7.2.3 Low-Level-Recourse Treatment

Securitization transactions involving recourse may be eligible for "low-level-recourse" treatment. A bank holding company that contractually limits its maximum off-balance-sheet recourse obligation or direct-credit substitute (except credit-enhancing I/O strips) to an amount less than the effective risk-based capital requirement for the enhanced assets is required to hold risk-based capital equal to the maximum contractual exposure,⁵ less any recourse liability established in accordance with GAAP. The low-level-recourse capital treatment thus applies to transactions accounted for as sales under GAAP. The low-level-exposure rule provides that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a bank holding company is contractually liable, less any recourse liability account established in accordance with GAAP. The limitation does not apply when the bank holding company provides credit enhancement beyond any contractual obligation to support assets it has sold. The low-level capital treatment applies to low-level-recourse transactions involving all types of assets, including commercial loans and residential mortgages.

Low-level-recourse transactions can arise when a bank holding company sells or securitizes assets and uses contractual cash flows, such as spread accounts and I/O strips receiv-

ables, as a credit enhancement for the sold or securitized assets. A spread account is an escrow account that a bank holding company typically establishes to absorb losses on receivables it has sold in a securitization, thereby providing credit enhancement to investors in the securities backed by the receivables, for example, credit card receivables. As defined in paragraph 14 of FAS 140, an I/O strip receivable is the contractual right to receive some or all of the interest due on a bond, a mortgage loan, or other interest-bearing financial assets. I/O strips are to be measured at fair value with gains or losses recognized either in earnings (if classified as trading) or a separate component of shareholders' equity (if classified as available-for-sale).

Paragraph 14 of FAS 140 states that I/O strips, retained interests in securitizations, loans, other receivables, or other financial assets that can contractually be prepaid or otherwise settled in such a way that the holder would not recover substantially all of its recorded investment (except for instruments that are within the scope of Statement of Financial Accounting Standards No. 133 (FAS 133), "Accounting for Derivative Instruments and Hedging Activities") shall be subsequently measured like investments in debt securities classified as available-for-sale or trading under Statement of Financial Accounting Standards No. 115 (FAS 115), "Accounting for Certain Investments in Debt and Equity Securities." Retained interests that lack objectively verifiable support or that fail to meet the supervisory standards (discussed previously in this section) will be classified as loss and disallowed as assets of the bank holding company for regulatory capital purposes.

2128.02.7.2.4 Standby Letters of Credit

Bank holding companies that issue standby letters of credit as credit enhancements for ABS issues must hold capital against these contingent liabilities under the risk-based capital guidelines. According to the guidelines, financial standby letters of credit are direct-credit substitutes. A direct-credit substitute is an arrangement in which a bank holding company assumes, in form or substance, credit risk associated with an on- or off-balance-sheet credit exposure that it did not previously own (a third-party asset), and the risk assumed by the bank holding company exceeds the pro rata share of its interest in the third-party asset. If the

5. For example, the effective risk-based capital requirement generally would be 4 percent for residential mortgages and 8 percent for commercial loans.

bank holding company has no claim on the third-party asset, then its assumption of *any* credit risk with respect to the third-party asset is a direct-credit substitute. Direct-credit substitutes are converted in their entirety to credit-equivalent amounts. The credit-equivalent amounts are then risk-weighted according to their credit rating, like other direct-credit substitutes, and the risk weight for the corresponding credit rating.

2128.02.8 CONCENTRATION LIMITS IMPOSED ON RESIDUAL INTERESTS

The creation of a residual interest (the debit) typically results in an offsetting “gain on sale” (the credit), and thus the generation of an asset. Banking organizations that securitize high-yielding assets with long durations may create a residual-interest asset value that exceeds the risk-based capital charge that would be in place if it had not sold the assets. Serious problems can arise for those banking organizations that distribute earnings too generously, only to be faced later with a downward valuation and charge-off of part or all of the residual interests.

Under the Federal Reserve’s capital adequacy guidelines, there is a dollar-for-dollar capital charge on residual interests and a concentration limit on a subset of residual interests, credit-enhancing I/O strips. These strips include any on-balance-sheet assets that represent a contractual right to receive some or all of the interest due on transferred assets, after taking into account trustee and other administrative expenses, interest payments to investors, servicing fees, reimbursements to investors for losses attributable to beneficial interests they hold, and reinvestment income and ancillary revenues (for example, late fees) on the transferred assets. Credit-enhancing I/O strips expose the bank holding company to more than its pro rata share of credit risk and are limited to 25 percent of tier 1 capital, whether they are retained or purchased. Any amount of credit-enhancing I/O strips that exceeds the 25 percent limit will be deducted from tier 1 capital and assets. An example of the concentration calculation required for bank holding companies that hold credit-enhancing I/O strips is described below.

A bank holding company has purchased and retained on its balance sheet credit-enhancing I/O strips with a face amount of \$100, and it has tier 1 capital of \$320 (before any disallowed

servicing assets, disallowed purchased credit-card relationships, disallowed credit-enhancing I/O strips, disallowed deferred tax assets, and amounts of nonfinancial equity investments required to be deducted). To determine the amount of credit-enhancing I/O strips that fall within the concentration limit, the bank holding company would multiply the tier 1 capital of \$320 by 25 percent, which is \$80. The amount of credit-enhancing I/O strips that exceeds the concentration limit, in this case \$20, is deducted from tier 1 capital for risk-based and leverage capital calculations and from assets. Credit-enhancing I/O strips that are not deducted from tier 1 capital (that is, the remaining \$80 in the above example), along with all other residual interests not subject to the concentration limit, are subject to a dollar-for-dollar capital requirement. Banks are not required to hold capital for more than 100 percent of the amount of the residual interest. Credit-enhancing I/O strips are not aggregated with any servicing assets or purchased credit-card relationships for purposes of calculating the 25 percent concentration limit.

Continuing the above illustration for credit-enhancing I/O strips, once a bank holding company deducts the \$20 in disallowed credit-enhancing I/O strips, it must hold \$80 in total capital for the \$80 that represents the credit-enhancing I/O strips not deducted from tier 1 capital. The \$20 deducted from tier 1 capital, plus the \$80 in total risk-based capital required under the dollar-for-dollar treatment, equals \$100, the face amount of the credit-enhancing I/O strips. Bank holding companies may apply a net-of-tax approach to any credit-enhancing I/O strips that have been deducted from tier 1 capital, as well as to the remaining residual interests subject to the dollar-for-dollar treatment. A bank holding company is permitted, but not required, to net the deferred tax liabilities recorded on its balance sheet, if any, that are associated with the residual interests. This netting of the deferred tax liabilities may result in a bank holding company’s holding less than 100 percent capital against residual interests.

Normally, a sponsor will eventually receive any excess cash flow remaining from securitizations after investor interests have been met. As previously stated, residual interests are vulnerable to sudden and sizeable write-downs that can hinder a bank holding company’s access to the capital markets; damage its reputation in the marketplace; and, in some cases, threaten its solvency. A bank holding company’s board of directors and management are expected to develop and implement policies that limit the amount of residual interests that may be carried

as a percentage of total equity capital, based on the results of their valuation and modeling processes. Well-constructed internal limits also lessen the incentives for its personnel to engage in activities designed to generate near-term “paper profits” that may be at the expense of the bank holding company’s long-term financial position and reputation.

2128.02.9 INSPECTION OBJECTIVES

1. To determine that securitization activities are integrated into the overall strategic objectives of the organization.
2. To determine that sources of credit risk are understood, properly analyzed, and managed, without excessive reliance on credit ratings by outside agencies.
3. To determine that credit, operational, and other risks are recognized and addressed through appropriate policies, procedures, management reports, and other controls.
4. To determine that liquidity and market risks are recognized and that the organization is not excessively dependent on securitization as a substitute for funding or as a source of income.
5. To determine that steps have been taken to minimize the potential for conflicts of interest from securitization.
6. To determine that possible sources of structural failure in securitization transactions are recognized and that the organization has adopted measures to minimize the impact of such failures if they occur.
7. To determine that the organization is aware of the legal risks and uncertainty regarding various aspects of securitization.
8. To determine that concentrations of exposure in the underlying asset pools, in the asset-backed securities portfolio, or in the structural elements of securitization transactions are avoided.
9. To determine that all sources of risk are evaluated at the inception of each securitization activity and are monitored on an ongoing basis.

2128.02.10 INSPECTION PROCEDURES

1. Review the parent company’s policies and procedures to ensure that its banking and nonbanking subsidiaries follow prudent standards of credit assessment and approval

for all securitization exposure. Procedures should include thorough and independent credit assessment of each loan or pool for which the banking organization has assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure. If a banking organization invests in asset-backed securities, determine whether there is sole reliance on conclusions of external rating services when evaluating the securities.

2. Determine that rigorous credit standards are applied regardless of the role the organization plays in the securitization process, for example, servicer, credit enhancer, or investor.
3. Determine that major policies and procedures, including internal credit-review and -approval procedures and in-house exposure limits, are reviewed periodically and approved by the bank holding company’s board of directors.
4. Determine that the banking organization uses effective risk-management measures and that those measures are commensurate with the nature and volume of its securitization activities. Verify that the banking organization effectively manages the operational risk associated with credit-enhancing representations and warranties as part of its overall risk-management strategy.
5. If the banking organization uses computer software to apply the ratings-based approach to its unrated direct-credit substitutes in asset-backed commercial paper programs, determine that the software produces credit assessments that credibly and reliably correspond with the ratings of traded positions by the rating agencies.
6. Determine whether adequate procedures for evaluating the organization’s internal-control procedures and the financial strength of the other institutions involved in the securitization process are in place.
7. Obtain the documentation outlining the remedies available to provide credit enhancement in the event of a default. Both originators and purchasers of securitized assets should have prospectuses on the issue. (Obtaining a copy of the prospectus can be an invaluable source of information on credit enhancement, default provisions, subordination agreements, etc.)
8. Ensure that, regardless of the role a banking

- organization plays in securitization, the documentation for an asset-backed security clearly specifies the limitations of the banking organization's legal responsibility to assume losses.
9. Verify whether the banking organization, acting as originator, packager, or underwriter, has written policies addressing the repurchase of assets and other reimbursement to investors in the event that a defaulted package results in losses exceeding any contractual credit enhancement. The repurchase of defaulted assets or pools in contradiction of the underlying agreement in effect sets a standard by which a banking organization could be found legally liable for all "sold" assets. Review and report any situations in which the organization has repurchased or otherwise reimbursed investors for poor-quality assets.
 10. Classify adverse credit risk associated with the securitization of assets when analyzing the adequacy of an organization's capital or reserve levels.
 11. Aggregate securitization exposures with all loans, extensions of credit, debt and equity securities, legally binding financial guarantees and commitments, and with any other investments involving the same obligor, when determining compliance with internal credit-exposure limits.
 12. Review securitized assets for industrial or geographic concentrations. Excessive exposures to an industry or region among the underlying assets should be noted in the review of the loan portfolio.
 13. Ensure that, in addition to policies limiting direct-credit exposure, a banking organization has developed exposure limits with respect to particular originators, credit enhancers, trustees, and servicers.
 14. Review the policies of the banking organization engaged in underwriting with regard to situations in which it cannot sell underwritten asset-backed securities. Credit review, funding capabilities, and approval limits should allow the banking organization to purchase and hold unsold securities. All potential credit exposure should be within legal lending limits.
 15. Ensure that internal systems and controls adequately track the performance and condition of internal exposures and adequately monitor the organization's compliance with internal procedures and limits. In addition, adequate audit trails and internal audit coverage should be provided.
 16. Determine that management information systems provide—
 - a. a listing of all securitizations in which the organization is involved;
 - b. a listing of industry and geographic concentration;
 - c. information on total exposure to specific originators, servicers, credit enhancers, trustees, or underwriters;
 - d. information regarding portfolio aging and performance relative to expectations; and
 - e. periodic and timely information to senior management and directors on the organization's involvement in and credit exposure arising from securitization.
 17. Ensure that internal auditors examine all facets of securitization regularly.
 18. Review policies and procedures for compliance with applicable state lending limits and federal law, such as section 5136 of the Revised Code. These requirements must be analyzed to determine whether a particular asset-backed security issue is considered a single investment or a loan to each of the creditors underlying the pool. Collateralized mortgage obligations may be exempt from this limitation if they are issued or guaranteed by an agency or instrumentality of the U.S. government.
 19. Determine whether the underwriting of asset-backed securities of affiliates is—
 - a. rated by an unaffiliated, nationally recognized statistical rating organization or
 - b. issued or guaranteed by Fannie Mae, Freddie Mac, or GNMA, or represents interests in such obligations.
 20. If the parent organization or any of its banking and nonbanking subsidiaries invest in high-risk mortgage-derivative securities, determine whether management effectively manages the associated risks commensurate with the level of activity.
 - a. Determine whether the level of activity is reasonably related to the level of capital, the organization's ability to absorb losses, and the level of in-house management sophistication and expertise.
 - b. Ascertain whether the appropriate managerial and financial controls are required to be in place, and whether the parent organization analyzes, monitors, and prudently adjusts holdings of such high-risk securities when an environment of changing price and maturity expectations exists. In that regard, determine to

what extent the organization considers the liquidity and price volatility of the high-risk mortgage-derivative products before their acquisition.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2007, this section has been revised to incorporate the August 4, 2005, Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper (ABCP) Liquidity Facilities and the Resulting Risk-Based Capital Treatment. The guidance clarifies the application of the asset-quality test for determining the eligibility or ineligibility of an ABCP liquidity facility and the resulting risk-based capital treatment of such a facility for banks. The guidance also re-emphasizes that the primary function of an eligible ABCP liquidity facility should be to provide liquidity—not credit enhancement. (See SR-05-13.)

2128.03.1 CREDIT-SUPPORTED AND ASSET-BACKED COMMERCIAL PAPER AS AN ALTERNATIVE FUNDING SOURCE

The issuance of commercial paper provides an alternative to bank borrowing for large corporations (nonfinancial and financial) and municipalities. Generally, commercial paper issuers are those with high credit ratings. In recent years, however, some corporations with lower credit ratings have been able to issue commercial paper by obtaining credit enhancements¹ (credit support from a firm with a high credit rating) or other high-quality asset collateral (asset-backed commercial paper) to allow them to enter the market as issuers. An example of credit-supported commercial paper is one supported by a letter of credit (LOC), the terms of which specify that the bank issuing the LOC guarantees that the bank will pay off the commercial paper if the issuer fails to pay off the commercial paper upon maturity.² A credit enhancement could also consist of a surety bond from an insurance company.

2128.03.2 COMMERCIAL BANK INVOLVEMENT IN CREDIT-ENHANCED AND ASSET-BACKED COMMERCIAL PAPER

A number of commercial banks have become involved in credit-enhanced and asset-backed

commercial paper programs. These securitization programs enable banks to help arrange short-term financing support for their customers without having to extend credit directly. This arrangement provides borrowers with an alternative source of funding and allows banks to earn fee income for managing the programs. Fees are earned for providing credit and liquidity enhancements to these programs.

Involvement in credit-enhanced and asset-backed commercial paper programs, however, can have potentially significant implications for organizations' credit- and liquidity-risk exposure. Therefore, examiners need to be fully informed on the fundamentals of these programs, on the risks associated with these programs, and on the examination and inspection procedures for banking organizations engaged in this activity.

Asset-backed commercial paper programs have been in existence since the early 1980s and have grown substantially over the last few years. These programs use a special-purpose entity (SPE) to acquire receivables generally originated either by corporations or sometimes by the advising bank itself.³ The SPEs, which are owned by third parties,⁴ fund their acquisitions of receivables by issuing commercial paper that is to be repaid from the cash flow of the receivables.

Bank involvement in an asset-backed commercial paper program can range from advising the program to advising and providing all of the required credit and liquidity enhancements in support of the SPE's commercial paper. Typically, the advising bank or an affiliate performs a review to determine if the receivables of potential program participants (that is, corporate sellers) are eligible for purchase by the SPE. The scope of the review is similar to that used in structuring securitizations collateralized by credit card receivables or automobile-secured loans.

Once the bank (or its affiliate) determines that

1. This paper is usually called *credit-supported commercial paper*.

2. This arrangement is usually referred to as *LOC paper*.

3. To date, the type of receivables that have been included in the programs are trade receivables, installment sales contracts, financing leases, and noncancelable portions of operating leases and credit card receivables.

4. Employees of an investment banking firm or some other third party generally own the equity of the SPE. The advising bank can specifically avoid owning the stock if it does not want to raise the issue of whether it must consolidate the SPE for accounting purposes.

a receivables portfolio has an acceptable credit-risk profile, it approves the purchase of the portfolio at a discounted price by the SPE. The bank or its affiliate may also act as the operating agent for the SPE, which entails structuring the sale of receivable pools to the SPE and then overseeing the performance of the pools on an ongoing basis.

The SPE pays for the receivables by issuing commercial paper in an amount equal to the discounted price paid for the receivables. The difference between the face value of the receivables and the discounted price paid provides, as discussed below, the first level of credit protection for the commercial paper. The individual companies selling their receivables traditionally act as the servicer for receivables sold to an SPE; that is, they are responsible for collecting principal and interest payments from the obligors and passing these funds on to the SPE on a periodic basis. The SPE then distributes the proceeds to the holders of the commercial paper.

Asset-backed commercial paper programs typically have several levels of credit enhancement cushioning the commercial paper purchaser from potential loss. As noted above, the first level of loss protection is provided by the difference between the face value of the receivables purchased and the discounted price paid for them, known as “holdback” or “overcollateralization.” In some cases, the terms of the sale also give the SPE recourse back to the seller if there are defaults on the receivables. The amount of overcollateralization and recourse varies from pool to pool and depends, in part, on the quality of the receivables in the pool and the desired credit rating for the paper to be issued. Usually, the level of credit protection provided by overcollateralization is specified in terms of some multiple of historical loss experience for similar assets.

In addition to overcollateralization and recourse, secondary credit enhancements are also customarily provided. Secondary credit enhancements include letters of credit, surety bonds, or other backup facilities that obligate a third party to purchase pools of receivables from the SPE at a specified price. In addition to credit enhancements, the programs generally have liquidity enhancements to ensure that the SPE can meet maturing-paper obligations.

The rating agencies typically require an SPE's commercial paper to have secondary enhancements aggregating 100 percent of the amount outstanding in order to receive the high-

est credit rating. These enhancements are generally structured in one of two ways. In the first, a commercial bank enters into a single agreement under which it is unconditionally obligated to provide funding for all or any portion of maturing commercial paper that an SPE cannot pay from other sources. The obligation to fund may be triggered by credit losses, a liquidity shortfall, or both. In the second, two separate agreements that jointly cover 100 percent of an SPE's outstanding commercial paper are established.

The first agreement, typically an irrevocable letter of credit, is primarily intended to absorb credit losses that exceed the first tier of credit enhancement for the commercial paper. The second arrangement is a “liquidity” facility that may or may not provide credit support. This second structure will often have a letter of credit equaling 10 percent to 15 percent of outstandings, with the liquidity facility covering the remaining 90 to 85 percent.

2128.03.3 RISK-BASED CAPITAL EXCLUSION OF ASSET-BACKED COMMERCIAL PAPER PROGRAM ASSETS AND RELATED MINORITY INTERESTS

An asset-backed commercial paper (ABCP) program typically is a program through which a banking organization provides funding to its corporate customers by sponsoring and administering a bankruptcy-remote special-purpose entity that purchases asset pools from, or extends loans to, those customers.⁵ The asset pools in an ABCP program might include, for example, trade receivables, consumer loans, or asset-backed securities. The ABCP program raises cash to provide funding to the banking organization's customers through the issuance of externally rated commercial paper into the market. Typically, the sponsoring banking organization provides liquidity and credit enhancements to the ABCP program. These enhancements aid the program in obtaining high credit ratings that facilitate the issuance of the commercial paper.⁶

5. The definition of *ABCP program* generally includes structured investment vehicles (entities that earn a spread by issuing commercial paper and medium-term notes and using the proceeds to purchase highly rated debt securities) and securities arbitrage programs.

6. A bank is considered the “sponsor of an ABCP program” if it establishes the program; approves the sellers permitted to participate in the program; approves the asset pools to be purchased by the program; or administers the program by monitoring the assets, arranging for debt placement, compiling monthly reports, or ensuring compliance

In January 2003, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 46, "Consolidation of Variable Interest Entities" (FIN 46), which was effective the first annual reporting period after June 15, 2003. FIN 46 required, for the first time, the consolidation of variable interest entities (VIEs) onto the balance sheets of companies deemed to be the primary beneficiaries of those entities. FASB revised FIN 46 in December 2003 as FIN 46-R (effective for publicly owned banking organizations by March 31, 2004). FIN 46-R requires the consolidation of many ABCP programs onto the balance sheets of banking organizations. Banking organizations that are required to consolidate ABCP program assets must include all of the program assets (mostly receivables and securities) and liabilities (mainly commercial paper) on their balance sheets for purposes of the Consolidated Financial Statements for Bank Holding Companies (FR Y-9C Report) or the bank Reports of Condition and Income (Call Reports).

Sponsoring banking organizations generally face limited risk exposure to ABCP programs. This risk is usually confined to the credit enhancements and liquidity-facility arrangements that sponsoring banking organizations provide to these programs. In addition, operational controls and structural provisions, along with overcollateralization or other credit enhancements provided by the companies that sell assets into ABCP programs, mitigate the risks to which sponsoring banking organizations are exposed. Because of the limited risks, the agencies⁷ adopted a July 17, 2004 (effective September 30, 2004) revised rule that permits sponsoring banking organizations to exclude from risk-weighted assets (for purposes of calculating the risk-based capital ratios) ABCP program assets that require consolidation under FIN 46-R, subject to certain requirements.

Under the Board's risk-based capital rule, a banking organization that must consolidate an ABCP program that is defined as a variable interest entity under GAAP may exclude the consolidated ABCP program assets from risk-weighted assets provided that the banking organization is the sponsor of the ABCP program. If a banking organization excludes such consolidated ABCP program assets, the banking organization must assess the appropriate risk-based

capital charge against any exposures of the banking organization arising in connection with such ABCP programs, including direct-credit substitutes, recourse obligations, residual interests, liquidity facilities, and loans, in accordance with sections III.B.5., III.C. and III.D. (12 C.F.R. 225, appendix A) of the risk-based capital rule. When calculating the banking organization's tier 1 and total capital, any associated minority interests must also be excluded from tier 1 capital. As a result of FIN 46-R, banking organizations are to include all assets of consolidated ABCP programs as part of their on-balance-sheet assets.

A banking organization is able to exclude ABCP program assets from its risk-weighted asset base only with respect to those programs for which it is the sponsor and that meet the rule's definition of an *ABCP program*. An ABCP program is defined as a program that primarily issues (that is, more than 50 percent) externally rated commercial paper backed by assets or other exposures held in a bankruptcy-remote, special-purpose entity. Thus, a banking organization sponsoring a program issuing ABCP that does not meet the rule's definition of an ABCP program must continue to include the program's assets in the institution's risk-weighted asset base.

2128.03.3.1 Liquidity Facilities Supporting ABCP

Liquidity facilities supporting ABCP often take the form of commitments to lend to, or to purchase assets from, the ABCP programs in the event that funds are needed to repay maturing commercial paper. Typically, this need for liquidity is due to a timing mismatch between cash collections on the underlying assets in the program and scheduled repayments of the commercial paper issued by the program.

A banking organization that provides liquidity facilities to ABCP is exposed to credit risk regardless of the term of the liquidity facilities. For example, an ABCP program may require a liquidity facility to purchase assets from the program at the first sign of deterioration in the credit quality of an asset pool, thereby removing such assets from the program. In such an event, a draw on the liquidity facility exposes the banking organization to credit risk.

Short-term commitments with an original maturity of one year or less expose banking

with the program documents and with the program's credit and investment policy.

7. The Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

organizations to a lower degree of credit risk than longer-term commitments. This difference in the degree of credit risk is reflected in the risk-based capital requirement for the different types of exposures through liquidity facilities. The Board's risk-based capital guidelines impose a 10 percent credit-conversion factor on unused portions of eligible short-term liquidity facilities supporting ABCP. A 50 percent credit-conversion factor applies to eligible ABCP liquidity facilities having a maturity of greater than one year. To be an eligible ABCP liquidity facility and qualify for the 10 or 50 percent credit-conversion factor, the facility must be subject to an asset-quality test at the time of inception that does not permit funding against (1) assets that are 90 days or more past due, (2) assets that are in default, and (3) assets or exposures that are externally rated below investment grade at the time of funding if the assets or exposures were externally rated at the inception of the facility. However, a liquidity facility may also be an eligible liquidity facility if it funds against assets that are guaranteed—either conditionally or unconditionally—by the U.S. government, U.S. government agencies, or by an OECD central government, regardless of whether the assets are 90 days past due, in default, or externally rated investment grade.

The 10 or 50 percent credit-conversion factor applies regardless of whether the structure issuing the ABCP meets the rule's definition of an ABCP program. For example, a capital charge would apply to an eligible short-term liquidity facility that provides liquidity support to ABCP when the ABCP constitutes less than 50 percent of the securities issued by the program, thus causing the issuing structure not to meet the rule's definition of an ABCP program. However, if a banking organization (1) does not meet this definition and must include the program's assets in its risk-weighted asset base or (2) otherwise chooses to include the program's assets in risk-weighted assets, then no risk-based capital requirement will be assessed against any liquidity facilities provided by the banking organization that supports the program's ABCP. Ineligible liquidity facilities will be treated as recourse obligations or direct-credit substitutes for the purposes of the Board's risk-based capital guidelines.

The resulting credit-equivalent amount would then be risk-weighted according to the underlying assets or the obligor, after considering any collateral or guarantees, or external credit rat-

ings, if applicable. For example, if an eligible short-term liquidity facility providing liquidity support to ABCP covered an asset-backed security (ABS) externally rated AAA, then the notional amount of the liquidity facility would be converted at 10 percent to an on-balance-sheet credit-equivalent amount and assigned to the 20 percent risk-weight category appropriate for AAA-rated ABS.⁸

2128.03.3.2 Overlapping Exposures to an ABCP Program

A banking organization may have multiple overlapping exposures to a single ABCP program (for example, both a program-wide credit enhancement and multiple pool-specific liquidity facilities to an ABCP program that is not consolidated for risk-based capital purposes). A banking organization must hold risk-based capital only once against the assets covered by the overlapping exposures. Where the overlapping exposures are subject to different risk-based capital requirements, the banking organization must apply the risk-based capital treatment that results in the highest capital charge to the overlapping portion of the exposures.

For example, assume a banking organization provides a program-wide credit enhancement that would absorb 10 percent of the losses in all of the underlying asset pools in an ABCP program and also provides pool-specific liquidity facilities that cover 100 percent of each of the underlying asset pools. The banking organization would be required to hold capital against 10 percent of the underlying asset pools because it is providing the program-wide credit enhancement. The banking organization would also be required to hold capital against 90 percent of the liquidity facilities it is providing to each of the underlying asset pools. For risk-based capital purposes, the banking organization would not be required to hold capital against any credit enhancements or liquidity facilities that comprise the same program assets.

If different banking organizations have overlapping exposures to an ABCP program, however, each organization must hold capital against the entire maximum amount of its exposure. As a result, while duplication of capital charges will not occur for individual banking organizations, some systemic duplication may occur where multiple banking organizations have overlapping exposures to the same ABCP program.

8. See section III.B.3.c. of the guidelines (12 C.F.R. 225, appendix A).

2128.03.3.3 Asset-Quality Test

In order for a liquidity facility, either short- or long-term, that supports ABCP *not* to be considered a recourse obligation or a direct-credit substitute, it must meet the rule's risk-based capital definition of an *eligible ABCP liquidity facility*. An eligible ABCP liquidity facility must meet a reasonable asset-quality test that, among other things, precludes funding assets that are 90 days or more past due or in default. When assets are 90 days or more past due, they typically have deteriorated to the point where there is an extremely high probability of default. Assets that are 90 days past due, for example, often must be placed on nonaccrual status in accordance with the agencies' Uniform Retail Credit Classification and Account Management Policy.⁹ Further, they generally must also be classified Substandard under that policy.

In addition to the above, if the assets covered by the liquidity facility are initially externally rated (at the time the facility is provided) the facility can be used to fund only those assets that are externally rated investment grade at the time of funding. The practice of purchasing assets that are externally rated below investment grade out of an ABCP program is considered to be the equivalent of providing credit protection to the commercial paper investors. Thus, liquidity facilities permitting purchases of below-investment-grade securities will be considered either recourse obligations or direct-credit substitutes.

However, neither the "90-days-past-due" limitation nor the "investment grade" limitation apply to the asset-quality test with respect to assets that are conditionally or unconditionally guaranteed by the U.S. government or its agencies or by another OECD central government.

An ABCP liquidity facility is considered to be in compliance with the requirement for an asset-quality test if (1) the liquidity provider has access to certain types of acceptable credit enhancements and (2) the notional amount of such credit enhancements available to the liquidity facility provider exceeds the amount of underlying assets that are 90 days or more past due, defaulted, or below investment grade for which the liquidity provider may be obligated to fund under the facility. In this circumstance, the liquidity facility may be considered "eligible" for purposes of the risk-based capital rule because the provider of the credit enhancement generally bears the credit risk of the assets that are 90 days or more past due, in default, or

below investment grade rather than the banking organization providing liquidity.¹⁰

The following forms of credit enhancements are generally acceptable for purposes of satisfying the asset quality test:

- "funded" credit enhancements that the banking organization may access to cover delinquent, defaulted, or below-investment-grade assets, such as overcollateralization, cash reserves, subordinated securities, and funded spread accounts;
- surety bonds and letters of credit issued by a third party with a nationally recognized statistical rating organization rating of single A or higher that the banking organization may access to cover delinquent, defaulted, or below-investment-grade assets, provided that the surety bond or letter of credit is irrevocable and legally enforceable; and
- one month's worth of excess spread that the banking organization may access to cover delinquent, defaulted, or below-investment-grade assets if the following conditions are met: (1) excess spread is contractually required to be trapped when it falls below 4.5 percent (measured on an annualized basis) and (2) there is no material adverse change in the banking organization's ABCP underwriting standards. The amount of available excess spread may be calculated as the average of the current month's and the two previous months' excess spread.

Recourse directly to the seller, other than the funded credit enhancements enumerated above, regardless of the seller's external credit rating, is not an acceptable form of credit enhancement for purposes of satisfying the asset quality test. Seller recourse—for example, a seller's agreement to buy back nonperforming or defaulted loans or downgraded securities—may expose the liquidity provider to an increased level of credit risk. A decline in the performance of assets sold to an ABCP conduit may signal impending difficulties for the seller.

If the amount of acceptable credit enhancement associated with the pool of assets is less than the current amount of assets that are 90 days or more past due, in default, or below investment grade that the liquidity facility pro-

10. See SR-05-13 and its attachment, Interagency Guidance on the Eligibility of Asset-Backed Commercial Paper Liquidity Facilities and the Resulting Risk-Based Capital Treatment.

9. See 65 Fed. Reg. 36,904 (June 12, 2000).

vider may be obligated to fund against, the liquidity facility should be treated as recourse or a direct credit substitute. The full amount of assets supported by the liquidity facility would be subject to a 100 percent credit conversion factor.¹¹ The Federal Reserve Board reserves the right to deem an otherwise eligible liquidity facility to be, in substance, a direct credit substitute if a banking organization uses the liquidity facility to provide credit support.

The banking organization is responsible for demonstrating to the Federal Reserve Board whether acceptable credit enhancements cover the 90 days or more past due, defaulted, or below-investment-grade assets that the organization may be obligated to fund against in each seller's asset pool. If the banking organization cannot adequately demonstrate satisfaction of the conditions in the above-referenced inter-agency guidance, the Federal Reserve Board further reserves the right to determine that a credit enhancement is unacceptable for purposes of the requirement for an asset quality test and, therefore, it may deem the liquidity facility to be ineligible.

2128.03.3.4 Market Risk Capital Requirements for ABCP Programs

Any facility held in the trading book whose primary function, in form or in substance, is to provide liquidity to ABCP—even if the facility does not qualify as an eligible ABCP liquidity facility under the rule—will be subject to the banking-book risk-based capital requirements. Specifically, banking organizations are required to convert the notional amount of all trading-book positions that provide liquidity to ABCP to credit-equivalent amounts by applying the appropriate banking-book credit-conversion factors. For example, the full amount of all eligible ABCP liquidity facilities with an original maturity of one year or less will be subject to a 10 percent conversion factor, regardless of whether the facility is carried in the trading account or the banking book.

2128.03.4 BOARD-OF-DIRECTORS POLICIES PERTAINING TO CREDIT-ENHANCED OR ASSET-BACKED COMMERCIAL PAPER

A banking organization (that is, a bank or a bank holding company) participating in an asset-backed commercial paper program should ensure that such participation is clearly and logically integrated into its overall strategic objectives. Furthermore, management should ensure that the risks associated with the various roles that the institution may play in such programs are fully understood and that safeguards are in place to manage the risks properly.

Appropriate policies, procedures, and controls should be established by a banking organization before it participates in asset-backed commercial paper programs. Significant policies and procedures should be approved and reviewed periodically by the organization's board of directors. These policies and procedures should ensure that the organization follows prudent standards of credit assessment and approval regardless of the role an institution plays in an asset-backed commercial paper program. Such policies and procedures would be applicable to all pools of receivables to be purchased by the SPE as well as to the extension of any credit enhancements and liquidity facilities. Procedures should include an initial, thorough credit assessment of each pool for which the banking organization had assumed credit risk, followed by periodic credit reviews to monitor performance throughout the life of the exposure. Furthermore, the policies and procedures should outline the credit-approval process and establish in-house exposure limits, on a consolidated basis, with respect to particular industries or organizations, that is, companies from which the SPE purchased the receivables as well as the receivable obligors themselves. Controls should include well-developed management information systems and monitoring procedures.

Institutions should analyze the receivables pools underlying the commercial paper as well as the structure of the arrangement. This analysis should include a review of—

1. the characteristics, credit quality, and expected performance of the underlying receivables;
2. the banking organization's ability to meet its obligations under the securitization arrangement; and
3. the ability of the other participants in the arrangement to meet their obligations.

11. See 12 CFR 208, appendix A, section III.B.3.b.i.

Banking organizations providing credit enhancements and liquidity facilities should conduct a careful analysis of their funding capabilities to ensure that they will be able to meet their obligations under all foreseeable circumstances. The analysis should include a determination of the impact that fulfillment of these obligations would have on their interest-rate risk exposure, asset quality, liquidity position, and capital adequacy.

Examiners should carefully review the asset-backed commercial paper facilities provided by banking organizations to ensure that they are applying, for risk-based capital purposes, the proper conversion factors to their obligations supporting asset-backed commercial paper programs. In addition, examiners should determine whether the previously discussed policies are operative and that institutions are adequately managing their risk exposure. If not appropriate for the open section, a discussion of the size, effectiveness, and risks associated with asset-backed commercial paper programs should be included in the confidential section of the examination or inspection report. See SR-92-11.

2128.03.5 INSPECTION OBJECTIVES

1. To determine whether the banking organization (that is, a bank or a bank holding company) participating in an asset-backed commercial paper program has included this participation in its overall strategic objectives.
2. To determine whether management fully understands the risks associated with the banking organization's involvement in credit-enhancement and asset-backed commercial paper programs and whether appropriate safeguards are in place to properly manage those risks.
3. To ascertain that the appropriate policies, procedures, and controls have been established by the banking organization before participating in asset-backed commercial paper programs.
4. To verify whether existing managerial and internal controls include well-developed management information systems and monitoring procedures.
5. To determine whether the banking organization has conducted a careful analysis of its funding capabilities to ensure that it will be able to meet its obligations under all foreseeable circumstances.
6. To ensure that all asset-backed securities owned, any assets sold with recourse, retained interests, and variable interest entities (VIEs) (for example, asset-backed commercial paper [ABCP] programs, those that are defined as VIEs under generally accepted accounting principles) are properly accounted for on the banking organization's books and are correctly reported on its regulatory reports.
7. To determine that capital is commensurate with, and that there are accurate determinations of the risk weights for, the risk exposures arising from recourse obligations, direct-credit substitutes, asset- and mortgage-backed securities, ABCP programs and ABCP liquidity facilities, and other asset-securitization transactions.

2128.03.6 INSPECTION PROCEDURES

1. Review the minutes of board-of-directors or executive committee meetings. Establish whether the significant policies and procedures for credit-enhanced or asset-backed commercial paper have been approved and reviewed periodically by the organization's board of directors.
 - a. Determine whether the policies are operative and whether institutions are adequately managing their risk exposure.
 - b. Determine whether the policies and procedures are applicable to all pools of receivables to be purchased by the SPE as well as to the extension of any credit enhancements and liquidity facilities.
2. Determine if the organization follows prudent standards of credit assessment and approval.
 - a. Ascertain whether the procedures include an initial, thorough credit assessment of each pool for which the organization had assumed credit risk. The initial review should be followed by periodic credit reviews to monitor performance throughout the life of the exposure.
 - b. Determine if the policies and procedures outline the credit-approval process and establish in-house exposure limits, on a consolidated basis, with respect to particular industries or organizations, that is, companies from which the SPE purchased the receivables as well as the receivable obligors themselves.
 - c. Determine whether the organization analyzes the receivables pools underlying

- the commercial paper as well as analyzes the structure of the arrangement. Does the analysis include a review of—
- the characteristics, credit quality, and expected performance of the underlying receivables;
 - the ability of the banking organization to meet its obligations under the securitization arrangement; and
 - the ability of the other participants in the arrangement to meet their obligations?
3. Review the organization's funding obligations and commitments, and determine whether there is sufficient liquidity to satisfy those funding requirements. Include a determination of the impact that fulfillment of these obligations would have on their interest-rate risk exposure, asset quality, liquidity position, and capital adequacy.
 4. Review carefully the risk-based capital calculations for ABCP facilities to ensure that they are applying, for risk-based capital purposes, the proper conversion factors to their obligations supporting the asset-backed commercial paper programs.
 5. Determine if the banking organization consolidates, in accordance with GAAP (FASB's FIN 46-R, "Consolidation of Variable Interest Entities"), the assets of any ABCP program or other such program that it sponsors.
 - a. Determine if the banking organization's ABCP program met the definition of a sponsored ABCP program under the risk-based capital guidelines.
 - b. Verify that the assets of the banking organization's eligible ABCP program and any associated minority interest were excluded from the banking organization's calculation of its risk-based capital ratios.
 - c. Ascertain whether the liquidity facilities the banking organization extends to the ABCP program satisfy the risk-based capital requirements, including the appropriate asset-quality test, of an eligible ABCP program liquidity facility. (See 12 C.F.R. 225, appendix A, section III.B.3.a.iv.)
 - d. Determine whether the banking organization applied the correct credit-conversion factor to the eligible ABCP liquidity facilities when it determined the amount of risk-weighted assets for its risk-based capital ratios. (See 12 C.F.R. 225, appendix A, section III.D.)
 - e. Determine if all ineligible ABCP liquidity facilities were treated as either direct-credit substitutes or as recourse obligations, as required by the risk-based capital guidelines.
 - f. If the banking organization had multiple overlapping exposures, determine if the banking organization applied the risk-based capital treatment that resulted in the highest capital charge. (See 12 CFR 225, appendix A, section III.B.6.c.)
6. Include in the inspection report a discussion of the size, effectiveness, and risks associated with ABCP programs (include the discussion in the confidential section of the inspection report if not appropriate for the open section).

Implicit recourse arises when a bank holding company¹ provides credit support to one of more of its securitizations beyond its contractual obligation. Implicit recourse, like contractual recourse, exposes a bank holding company to the risk of loss arising from deterioration in the credit quality of the underlying assets of the securitization. Implicit recourse is of supervisory concern because it demonstrates that the securitizing bank holding company is reassuming risk associated with the securitized assets—risk that the bank holding company initially transferred to the marketplace. For risk-based capital purposes, bank holding companies deemed to be providing implicit recourse are generally required to hold capital against the entire outstanding amount of assets sold, as though the assets remained on the bank holding company's books.

Banking organizations have typically provided implicit recourse in situations where the originating banking organization perceived that the failure to provide this support, even though not contractually required, would damage its future access to the asset-backed securities market. An originating bank holding company can provide implicit recourse in a variety of ways. The ultimate determination as to whether implicit recourse exists depends on the facts. The following actions point to a finding of implicit recourse:

1. selling assets to a securitization trust or other special-purpose entity (SPE) at a discount from the price specified in the securitization documents, which is typically par value
2. purchasing assets from a trust or other SPE at an amount greater than fair value
3. exchanging performing assets for nonperforming assets in a trust or other SPE
4. funding credit enhancements² beyond contractual requirements

By providing implicit recourse, a bank holding company signals to the market that it still holds the risks inherent in the securitized assets,

1. The reference to implicit-recourse activities of bank holding companies is intended to include all of a bank holding company's domestic and foreign subsidiaries supervised by the Federal Reserve, as well as its federally insured depository institutions and other entities that are subject to this interpretation and guidance of the Federal Financial Institutions Examination Council (FFIEC).

2. Credit enhancements include retained subordinated interests, asset-purchase obligations, overcollateralization, cash-collateral accounts, spread accounts, and interest-only strips.

and, in effect, the risks have not been transferred. Accordingly, examiners must be attentive to bank holding companies that provide implicit support, given the risk these actions pose to a bank holding company's financial condition. Increased attention should be given to situations where a bank holding company is more likely to provide implicit support.

Particular attention should be paid to revolving securitizations, such as those used for credit card lines and home equity lines of credit, in which receivables generated by the lines are sold into the securitizations. These securitizations typically provide that, when certain performance criteria hit specified thresholds, no new receivables can be sold into the securitization, and the principal on the bonds issued will begin to pay out. These early-amortization events are intended to protect investors from further deterioration in the underlying asset pool. Once an early-amortization event has occurred, the bank holding company could have difficulties using securitization as a continuing source of funding and, at the same time, have to fund the new receivables generated by the lines of credit on its balance sheet. Thus, bank holding companies have an incentive to avoid early amortization by providing implicit support to the securitization.

Examiners should be alert for securitizations that are approaching early-amortization triggers, such as a decrease in the excess spread³ below a certain threshold or an increase in delinquencies beyond a certain rate. Providing implicit recourse can pose a degree of risk to a bank holding company's financial condition and to the integrity of its regulatory and public financial statements and reports. Examiners should review securitization documents (for example, pooling and servicing agreements) to ensure that the selling institution limits any post-sale support to that specified in the terms and conditions in the securitization documents. Examiners should also review a sample of receivables transferred between the seller and the trust to ensure that these transfers were conducted in accordance with the contractual terms of the securitization, particularly in cases where the overall credit quality of the securitized loans or receivables has deteriorated. While bank holding companies are not prohibited from provid-

3. Excess spread generally is defined as finance-charge collections minus certificate interest, servicing fees, and charge-offs allocated to the series.

ing implicit recourse, such support will generally result in higher capital requirements.

Examiners should recommend that prompt supervisory action be taken when implicit recourse is identified. To determine the appropriate action, examiners need to understand the bank holding company's reasons for providing support and the extent of the impact of this support on the bank holding company's earnings and capital. As with contractual recourse, actions involving noncontractual post-sale credit enhancement generally result in the requirement that the bank holding company hold risk-based capital against the entire outstanding amount of the securitized assets. The Federal Reserve may require the bank holding company to bring all assets in existing securitizations back on the balance sheet for risk-based capital purposes, as well as require the bank holding company to increase its minimum capital ratios. The Federal Reserve may prevent a bank holding company from removing assets from its risk-weighted asset base on future transactions until the bank holding company demonstrates its intent and ability to transfer risk to the marketplace. The Federal Reserve may consider other actions to ensure that the risks associated with implicit recourse are adequately reflected in the capital ratios. For example, supervisors may require the bank holding company to deduct residual interests from tier 1 capital as well as hold risk-based capital on the underlying assets. (See SR-02-15.)

The following examples illustrate post-sale actions that banking organizations may take with respect to assets they have securitized. These examples are intended to provide guidance on whether these actions would be considered implicit recourse for risk-based capital and other supervisory purposes. A key factor in each scenario and analysis is the potential risk of loss a bank holding company's earnings and capital may be exposed to as a result of its actions.

Account Removal: Example 1a

Facts. A bank holding company originates and services credit card receivables throughout the country. The bank holding company decides to divest those credit card accounts of customers who reside in specific geographic areas where the bank holding company lacks a significant market presence. To achieve the maximum sales price, the sale must include both the credit card relationships and the receivables. Because many

of the credit card receivables are securitized through a master-trust structure, the bank holding company needs to remove the receivables from the trust. The affected receivables are not experiencing any unusual performance problems. In that respect, the charge-off and delinquency ratios for the receivables to be removed from the trust are substantially similar to those for the trust as a whole.

The bank holding company enters into a contract to sell the specified credit card accounts before the receivables are removed from the trust. The terms of the transaction are arm's length, wherein the bank holding company will sell the receivables at market value. The bank holding company separately agrees to purchase the receivables from the trust at this same price. Therefore, no loss is incurred as a result of removing the receivables from the trust. The bank holding company will remove from the trust only those receivables that are due from customers located in the geographic areas where the bank holding company lacks a significant market presence, and it will remove all such receivables from the trust.

Analysis. The removal of the above-described receivables from the trust does not constitute implicit recourse for regulatory capital purposes. Supporting factors for this conclusion include the following:

1. The bank holding company's earnings and capital are not exposed to actual or potential risk of loss as a result of removing the receivables from the trust.
2. There is no indication that the receivables are removed from the trust because of performance concerns.
3. The bank holding company is removing the receivables from the trust for a legitimate business purpose other than to systematically improve the quality of the trust's assets. The legitimate business purpose is evidenced by the bank holding company's prearranged, arm's-length sale agreement that facilitates exiting the business in identified geographic locations.

Examiners should review the terms and conditions of the transaction to ensure that the market value of the receivables is documented and well supported before concluding that this transaction does not represent implicit recourse. Examiners should also ensure that the selling bank holding company has not provided the purchaser with any guarantees or credit enhancements on the sold receivables.

Account Removal: Example 1b

Facts. After the establishment of a master trust for a pool of credit card receivables, the receivables in the trust begin to experience adverse performance. A combination of lower-than-expected yields and higher-than-anticipated charge-offs on the pool causes spreads to compress significantly (although not to zero). The bank holding company's internally generated forecasts indicate that spreads will likely become negative in the near future. Management takes action to support the trust by purchasing the low-quality (delinquent) receivables from the trust at par, although their market value is less than par. The receivables purchased from the trust represent approximately one-third of the trust's total receivables. This action improves the overall performance of the trust and avoids a potential early-amortization event.

Analysis. The purchase of low-quality receivables from a trust at par constitutes implicit recourse for regulatory capital purposes. The purchase of low-quality receivables at an above-market price exposes the bank holding company's earnings and capital to potential future losses from assets that had previously been sold. Accordingly, the bank holding company is required to hold risk-based capital for the remaining assets in the trust as if they were retained on the balance sheet, as well as hold capital for the assets that were repurchased.

Additions of Future Assets or Receivables: Example 2a

Facts. Months after the issuance of credit card asset-backed securities, charge-offs and delinquencies on the underlying pool of receivables rise dramatically. A rating agency places the securities on watch for a potential rating downgrade. The securitization documents require the bank holding company to transfer new receivables to the securitization trust at par value. However, to maintain the rating on the securities, the bank holding company begins to sell replacement receivables into the trust at a discount from par value.

Analysis. The sale of receivables to the trust at a discount constitutes implicit recourse for regulatory capital purposes. The sale of assets at a discount from the price specified in the securitization documents, par value in this example, exposes the bank holding company's earnings and capital to future losses. The bank holding

company must hold regulatory capital against the outstanding assets in the trust.

Additions of Future Assets or Receivables: Example 2b

Facts. A bank holding company established a credit card master trust. The receivables from the accounts placed in the trust were, on average, of lesser quality than the receivables from certain affinity accounts retained on the bank holding company's balance sheet. Under the criteria for selecting the receivables to be transferred to the master trust, the bank holding company was prevented from including the better-performing affinity accounts in the initial pool of accounts because the affinity-relationship contract was expiring. The bank holding company and the affinity client subsequently revised the terms of their contract, enabling the affinity accounts to meet the selection criteria and be included in future securitization transactions. Later, rising charge-offs within the pool of receivables held by the trust caused spread compression in the trust. To improve the performance of the assets in the trust, the bank holding company begins to include the better-performing and now-eligible receivables from the affinity accounts among the receivables sold to the trust. This action improves the trust's performance, including its spread levels and charge-off ratios. However, the replacement assets were sold at par in accordance with the terms of the trust agreement, so no current or future charge to the bank holding company's earnings or capital will result from these asset sales. As another result of this action, the performance of the trust's assets closely tracks the credit card receivables that remain on the bank holding company's balance sheet.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. The bank holding company did not incur any additional risk to earnings or capital after the affinity accounts met the selection criteria for replacement assets and after the associated receivables were among the receivables sold to the trust. The replacement assets were sold at par in accordance with the terms of the trust agreement, so no future charge to earnings or capital will result from these asset sales. The sale of replacement assets into a master-trust structure is part of normal trust management.

In this example, the credit card receivables that remain on the bank holding company's balance sheet closely track the performance of the trust's assets. Nevertheless, examiners should ascertain whether a securitizing bank holding company sells disproportionately higher-quality assets into securitizations while retaining comparatively lower-quality assets on its books. If a bank holding company engages in this practice, examiners should consider its effect on the bank holding company's capital adequacy.

Additions of Future Assets or Receivables: Example 2c

Facts. A bank holding company establishes a credit card master trust composed of receivables from accounts that were generally of lower quality than the receivables retained on the bank holding company's balance sheet. The difference in the two portfolios is primarily due to logistical and operational problems that prevent the bank holding company from including certain better-quality affinity accounts in the initial pool from which accounts were selected for securitization. Rising charge-offs and other factors later result in margin compression on the assets in the master trust, which causes some concern in the market regarding the stability of the outstanding asset-backed securities. A rating agency places several tranches of the securities on its watch list for a potential rating downgrade. In response to the margin compression, as part of the bank holding company's contractual obligations, spread accounts are increased for all classes by trapping excess spread in conformance with the terms and conditions of the securitization documents. To stabilize the quality of the receivables in the master trust, as well as to preclude a downgrade, the bank holding company takes several actions beyond its contractual obligations:

1. Affinity accounts are added to the pool of receivables eligible for inclusion in the trust. This change results in improved overall trust performance. However, these receivables are sold to the trust at par value, consistent with the terms of the securitization documents, so no current or future charge to the bank holding company's earnings or capital will result from these asset sales.
2. The charge-off policy for cardholders that

have filed for bankruptcy is changed from criteria that were more conservative than industry standards, the applicable Federal Reserve classification policy for bank holding companies, and the FFIEC Uniform Retail Credit Classification and Account Management Policy to criteria that conform to industry standards, the Federal Reserve's standards, and the FFIEC's policy.

3. Charged-off receivables held by the trust are sold to a third party. The funds generated by this sale, effectively accelerating the recovery on these receivables, improve the trust's spread performance.

Analysis. The actions described above do not constitute implicit recourse for regulatory capital purposes. None of the noncontractual actions result in a loss or expose the bank holding company's earnings or capital to the risk of loss. Because of the margin compression, the bank holding company is obligated to increase the spread accounts in conformance with the terms and conditions of the securitization documents. To the extent this results in an increase in the value of the subordinated spread accounts (residual interests) on the bank holding company's balance sheet, the bank holding company will need to hold additional capital on a dollar-for-dollar basis for the additional credit risk it retains. In contrast, if the bank holding company increased the spread accounts beyond its contractual obligation under the securitization documents, this action would be considered a form of implicit recourse. None of the other actions the bank holding company took would affect its earnings or capital:

1. Like other additions to credit card trusts, the additions of receivables from the new affinity accounts were made at par value, in accordance with the securitization documents. Therefore, the additions of receivables from the new affinity accounts would not affect the bank holding company's earnings or capital.
2. The trust's policy on the timing of charge-offs on accounts of cardholders who have filed for bankruptcy was changed to meet the less stringent standards of the industry and those required under the Federal Reserve's policy in order to improve trust performance, at least temporarily. Nonetheless, this would not affect the bank holding company's earnings or capital.
3. In accordance with the securitization documents, proceeds from recoveries on charged-off accounts are the property of the trust. These and other proceeds would continue to

be paid out in accordance with the pooling and servicing agreement. No impact on the bank holding company's earnings or capital would result.

Modification of Loan-Repayment Terms: Example 3

Facts. In performing the role of servicer for its securitization, a bank holding company is authorized under its pooling and servicing agreement to modify loan-repayment terms when it appears that this action will improve the likelihood of repayment on the loan. These actions are part of the bank holding company's process of working with customers who are delinquent or otherwise experiencing temporary financial difficulties. All of the modifications are consistent with the bank holding company's internal loan policy. However, in modifying the loan terms, the contractual maturity of some loans may be extended beyond the final maturity date of the most junior class of securities sold to investors. When this occurs, the bank holding company repurchases these loans from the securitization trust at par.

Analysis. The combination of the loan-term modification for securitized assets and the subsequent repurchase constitutes implicit recourse for regulatory capital purposes. While the modification of loan terms is permitted under the pooling and servicing agreement, the repurchase of modified loans with extended maturities at par exposes the bank holding company's earnings and capital to potential risk of loss.

Servicer's Payment of Deficiency Balances: Example 4

Facts. A wholly owned subsidiary of a bank holding company originates and services a portfolio of home equity loans. After liquidation of the collateral for a defaulted loan, the subsidiary makes the trust whole in terms of principal and interest if the proceeds from the collateral are not sufficient. However, there is no contractual commitment that requires the subsidiary to support the pool in this manner. The payments made to the trust to cover deficient balances on the defaulted loans are not recoverable under the terms of the pooling and servicing agreement.

Analysis. The subsidiary's action constitutes implicit recourse to the bank holding company for regulatory capital purposes. This action is

considered implicit recourse because it adversely affects the bank holding company's earnings and capital since the bank holding company absorbs losses on the loans resulting from the actions taken by its subsidiary. Further, no mechanism exists to provide for and ensure that the subsidiary will be reimbursed for the payments made to the trust. In addition, examiners will consider any servicer advance a credit enhancement if the servicer is not entitled to full reimbursement⁴ or if the reimbursement is subordinate to other claims.

Reimbursement of Credit Enhancer's Actual Losses: Example 5

Facts. A bank holding company sponsoring a securitization arranges for an unrelated third party to provide a first-loss credit enhancement, such as a financial standby letter of credit, that will cover losses up to the first 10 percent of the securitized assets. The bank holding company agrees to pay a fixed amount as an annual premium for this credit enhancement. The third party initially covers actual losses that occur in the underlying asset pool in accordance with its contractual commitment under the letter of credit. Later, the bank holding company agrees not only to pay the credit enhancer the annual premium on the credit enhancement, but also to reimburse the credit enhancer for the losses it absorbed during the preceding year. This reimbursement for actual losses was not originally provided for in the contractual arrangement between the bank holding company and the credit-enhancement provider.

Analysis. The bank holding company's subsequent reimbursement of the credit-enhancement provider's losses constitutes implicit recourse because the bank holding company's reimbursement of losses went beyond its contractual obligations. Furthermore, the Federal Reserve would consider any requirement contained in the original credit-enhancement contract that obligates the bank holding company to reimburse the credit-enhancement provider for its losses to be a recourse arrangement.

4. A servicer advance will also be considered a form of credit enhancement if, for any one loan, nonreimbursable advances are not contractually limited to an insignificant amount of that loan's outstanding principal.

2128.04.1 INSPECTION OBJECTIVES

1. To identify asset-securitization transactions in which the bank holding company has provided implicit recourse.
2. To ascertain whether implicit recourse provided to asset-securitization transactions may be detrimental to the bank holding company's earnings performance, capital adequacy, and financial condition.
3. To initiate quick supervisory action, which may include increased minimum-capital requirements, when implicit recourse is identified.

2128.04.2 INSPECTION PROCEDURES

1. Be attentive to situations in which the bank holding company may have provided implicit support to an asset-securitization transaction.
2. Be alert for securitizations that are approaching early-amortization triggers, such as a decrease in the excess spread below a certain threshold or an increase in delinquencies beyond a certain rate.
3. Review securitization documents to ensure that the selling institution limits any post-sale support to that specified in the terms and conditions in the securitization documents.
4. Review a sample of receivables transferred between the seller and the trust to ensure that the transfers were conducted in accordance with the contractual terms of the securitization, particularly in cases where the overall credit quality of the securitized loans or receivables has deteriorated.
5. Review the terms and conditions of the securitization transactions reviewed to ensure that the market value of the receivables is documented and well supported.
6. Ascertain that the selling bank holding company has not provided a purchaser with any guarantees or credit enhancements on the sold receivables.
7. Ascertain whether a securitizing bank holding company sells disproportionately higher-quality assets into securitizations while retaining comparatively lower-quality assets on its books. Evaluate the effect of this practice on the bank holding company's earnings and capital adequacy.
8. Provide appropriate written documentation and recommend that prompt supervisory action be taken when implicit recourse is identified.

A bank holding company's board of directors and senior management are responsible for initiating policies and procedures, and for monitoring processes and internal controls, that will provide reasonable assurance that the bank holding company's contracts and commitments do not include detrimental covenants that affect its safety and soundness. When examiners review a bank holding company's securitization contracts and related documentation, they should be alert to any covenants that use adverse supervisory actions or the breach of supervisory thresholds as triggers for early-amortization events or the transfer of servicing. Examples of such supervisory actions can include a downgrade in the banking organization's RFI/C(D) or CAMELS rating, an enforcement action, or a downgrade in a depository institution's prompt-corrective-action capital category. The inclusion of supervisory-linked covenants in securitization documents is considered to be an "unsafe and unsound banking practice" that undermines the objective of supervisory actions and thresholds. An early amortization or transfer of servicing triggered by such events can create or exacerbate liquidity and earnings problems for a bank holding company that may lead to further deterioration in its financial condition.

Covenants that contain triggers tied, directly or indirectly, to supervisory actions or thresholds can also result in the early amortization of a securitization at a time when the sponsoring organization's ability to access other funding sources is limited. If an early-amortization event occurs, investors may lose confidence in the stability of the sponsoring organization's asset-backed securities, thus limiting its ability to raise new funds through securitization. At the same time, the organization must fund new receivables on the balance sheet, potentially resulting in liquidity problems. Moreover, the existence of a supervisory-linked trigger potentially could inhibit supervisors from taking action intended to address problems at a troubled organization because the action could trigger an event that worsens its condition or causes its failure.

The Federal Reserve is concerned that covenants related to supervisory actions may obligate a bank holding company's management to disclose confidential information, such as RFI/C(D) or CAMELS ratings. Disclosure of such information by a banking organization's directors, officers, employees, attorneys, or independent auditors, without explicit authorization by its primary regulator, violates supervi-

sory information disclosure rules and policies and may result in follow-up supervisory action.

Because of the supervisory concerns about covenants that are linked to supervisory actions, a federal bank interagency advisory was issued on May 23, 2002. (See SR-02-14.) The advisory emphasizes that a banking organization's management and board of directors should ensure that covenants related to supervisory actions or thresholds are not included in securitization documents. Covenants that provide for the early termination of the transaction or compel the transfer of servicing due, directly or indirectly, to the occurrence of a supervisory action or event will be criticized, under appropriate circumstances, as an unsafe and unsound banking practice. The Federal Reserve (and other supervisors) may also take other supervisory actions, such as requiring additional capital or denying capital relief for risk-based capital calculations, regardless of the treatment under generally accepted accounting principles (GAAP).

Examiners should consider the potential impact of such covenants in existing transactions when evaluating both the overall condition of the bank holding company and the specific component ratings of capital, liquidity, and management. Early-amortization triggers will specifically be considered in the context of the bank holding company's overall liquidity position and contingency funding plan. For organizations with limited access to other funding sources or a significant reliance on securitization, the existence of these triggers presents a greater degree of supervisory concern. Any bank holding company that uses securitization as a funding source should have a viable contingency funding plan in the event it can no longer access the securitization market. Examiners should encourage bank holding company management to amend, modify, or remove covenants linked to supervisory actions from existing transactions. Any impediments a bank holding company may have to taking such actions should be documented and discussed with the appropriate supervisory staff of its responsible Reserve Bank.

2128.05.1 INSPECTION OBJECTIVES

1. During the review of securitization activities and contracts, to be alert to securitization

- documents containing covenants that have triggers tied, directly or indirectly, to supervisory actions or thresholds.
2. Under appropriate circumstances, to criticize as an unsafe and unsound banking practice the inclusion of covenants in a securitization-transaction document when the covenants provide for the early termination of the transaction or compel the transfer of servicing due, directly or indirectly, to the occurrence of a supervisory action or event.
 3. To determine if the bank holding company has a viable contingency funding plan that it can use if it can no longer access the securitization market.
 3. If the bank holding company uses securitization as a funding source, determine its overall liquidity position and whether it has an adequate and viable contingency funding plan that can be used if the bank holding company can no longer access the securitization market.
 4. Determine the potential impact of any early-amortization triggers or transfer of servicing within the asset-securitization contracts (any covenants that use adverse supervisory actions or the crossing of supervisory thresholds as triggers for early-amortization events or the transfer of servicing).
 5. Encourage bank holding company management to amend, modify, or remove from existing transactions any securitization covenants linked to supervisory actions.

2128.05.2 INSPECTION PROCEDURES

1. Review a sample of the bank holding company's securitization contracts and related documentation.
2. Evaluate the overall condition of the bank holding company, as well as the specific component ratings of capital, liquidity, and management.
6. Report to and consult with Reserve Bank supervisory staff on any impediments the directors and senior management of the bank holding company have to amending, modifying, or removing any such detrimental securitization covenants.

WHAT'S NEW IN THIS REVISED SECTION

This section has been revised to replace, as appropriate, the references to FAS 125 with either FAS 140 or FAS 157. The Financial Accounting Standards Board (FASB), issued in September 2000, FAS 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (a replacement of FAS No. 125)." FAS 157, "Fair Value Measurements," was issued in September 2006 and was made effective on November 15, 2007.

2128.06.05 RETAINED INTERESTS FROM SECURITIZATION ACTIVITIES

Securitization activities present unique and sometimes complex risks that require the attention of senior management and the board of directors. Retained interests from securitization activities, including interest-only strips receivable, arise when a banking organization (BO) keeps an interest in the assets sold to a securitization vehicle that, in turn, issues bonds to investors.¹

The methods and models BOs use to value retained interests and the difficulties in managing exposure to these volatile assets can raise supervisory concerns. Under generally accepted accounting principles (GAAP), a BO recognizes an immediate gain (or loss) on the sale of assets, in part, by recording its retained interest at fair value. The valuation of the retained interest is based on the present value of future cash flows in excess of the amounts needed to service the bonds and cover credit losses and other fees of the securitization vehicle.²

Determinations of fair value should be based on reasonable assumptions about factors such as discount rates, projected credit losses, and prepayment rates. Bank supervisors expect retained interests to be supported by verifiable documentation of fair value in accordance with GAAP. In the absence of such support, the retained inter-

ests, for regulatory reporting purposes, should not be carried as assets on a BO's books, but should be charged off. Other supervisory concerns include failure to recognize and hold sufficient capital against recourse obligations generated by securitizations, and the absence of an adequate independent audit function.

The supervisory guidance focuses on and incorporates important fundamental concepts of risk-management and risk-focused supervision: active oversight by senior management and the board of directors, the use of effective policies and limits, accurate and independent procedures to measure and assess risk, and the maintenance of strong internal controls.³ The guidance stresses sound risk-management, modeling, valuation, and disclosure practices for asset securitization; complements previous supervisory guidance issued on this subject; and supplements existing policy statements and examination-inspection procedures.⁴ Emphasis is placed on the expectation that a BO's securitization-related retained interest must be supported by documentation of the interest's fair value, using reasonable valuation assumptions that can be objectively verified. Retained interests that lack such objectively verifiable support or that fail to meet these supervisory standards will be classified as loss and disallowed for inclusion as assets of the BO for regulatory capital purposes. See SR-99-37 and the more complete text of its referenced interagency guidance on the risk management and valuation of retained interests arising from asset securitization activities. See also SR-03-4 and its attachment and section 3071.0.

Examiners will review a BO's valuation of retained interests and the concentration of these assets relative to capital. Consistent with existing supervisory authority, BOs may be required, on a case-by-case basis, to hold additional capital commensurate with their risk exposures.⁵ An

1. The term "banking organization" (BO) refers to any federally supervised banking organization. This includes federally insured, federally chartered financial institutions that are supervised by a federal bank or savings association supervisory authority, as well as bank holding companies and their nonbank subsidiaries.

2. See Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standard No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities (a replacement of FASB Statement No. 125)."

3. See SR-96-14, "Risk-Focused Safety-and-Soundness Examinations and Inspections" (section 2124.0 of this manual), and SR-95-51, "Rating the Adequacy of Risk-Management Processes and Internal Controls at State Member Banks and Bank Holding Companies" (section 4070.1 of this manual).

4. See SR-97-21, "Risk Management and Capital Adequacy of Exposures Arising from Secondary-Market Credit Activities," and SR-96-30, "Risk-Based Capital Treatment for Spread Accounts That Provide Credit Enhancement for Securitized Receivables."

5. For instance, a BO has high concentrations of retained

excessive dependence on securitizations for day-to-day core funding can present significant liquidity problems during times of market turbulence or if there are difficulties specific to the BO.

2128.06.1 ASSET SECURITIZATION

Asset securitization typically involves the transfer of on-balance-sheet assets to a third party or trust. In turn, the third party or trust issues certificates or notes to investors. The cash flow from the transferred assets supports repayment of the certificates or notes. BOs use asset securitization to access alternative funding sources, manage concentrations, improve financial-performance ratios, and more efficiently meet customer needs. Assets typically securitized include credit card receivables, automobile receivable paper, commercial and residential first mortgages, commercial loans, home equity loans, and student loans.

Senior management and directors must have the requisite knowledge of the effect of securitization on the BO's risk profile and must be fully aware of the accounting, legal, and risk-based capital nuances of this activity. BOs must fully and accurately distinguish and measure the risks that are transferred versus those retained, and must adequately manage the retained portion. It is essential that BOs engaging in securitization activities have appropriate front- and back-office staffing, internal and external accounting and legal support, audit or independent review coverage, information systems capacity, and oversight mechanisms to execute, record, and administer these transactions correctly.

Appropriate valuation and modeling methodologies must be used. They must be able to determine the initial and ongoing value of retained interests. Accounting rules provide a method to recognize an immediate gain (or loss) on the sale, in part, through booking a "retained interest." The carrying value, however, of that interest must be fully documented, based on reasonable assumptions, and regularly analyzed for any subsequent impairment in value. The best evidence of fair value is a quoted market price in an active market. When quoted market prices are not available, accounting rules allow fair value to be estimated. This estimate must be

based on the "best information available in the circumstances."⁶ An estimate of fair value must be supported by reasonable and current assumptions. If a best estimate of fair value is not practicable, the asset is to be recorded at zero in financial and regulatory reports. (See FAS 140, para. 71.)

Unforeseen market events that affect the discount rate or performance of receivables supporting a retained interest can swiftly and dramatically alter its value. Without appropriate internal controls and independent oversight, a BO that securitizes assets may inappropriately generate "paper profits" or mask actual losses through flawed loss assumptions, inaccurate prepayment rates, and inappropriate discount rates. Liberal and unsubstantiated assumptions can result in material inaccuracies in financial statements; substantial write-downs of retained interests; and, if retained interests represent an excessive concentration of the sponsoring BO's capital, the BO's demise. BO managers and directors need to ensure the following:

1. Independent risk-management processes are in place to monitor securitization-pool performance on an aggregate and individual transaction level. An effective risk-management function includes appropriate information systems to monitor securitization activities.
2. Appropriate valuation assumptions and modeling methodologies are used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis.
3. Audit or internal review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets the BO retains. The findings of such reviews should be reported directly to the board or an appropriate board committee.
4. Accurate and timely risk-based capital calculations are maintained, including recognition and reporting of any recourse obligation resulting from securitization activity.
5. Internal limits are in place to govern the maximum amount of retained interests as a percentage of total equity capital.
6. A realistic liquidity plan is in place for the BO in case of market disruptions.

interests relative to its capital or is otherwise at risk from impairment of these assets.

6. See FAS 157, "Fair Value Measurements."

2128.06.2 INDEPENDENT RISK-MANAGEMENT FUNCTION

BOs engaged in securitizations should have an independent risk-management function commensurate with the complexity and volume of their securitizations and their overall risk exposures. The risk-management function should ensure that securitization policies and operating procedures, including clearly articulated risk limits, are in place and appropriate for the BO's circumstances. A sound asset securitization policy should include or address, at a minimum—

1. a written and consistently applied accounting methodology;
2. regulatory reporting requirements;
3. valuation methods, including FAS 157 valuation assumptions, and procedures to formally approve changes to those assumptions;
4. a management reporting process; and
5. exposure limits and requirements for both aggregate and individual transaction monitoring.

It is essential that the risk-management function monitor origination, collection, and default-management practices. This includes regular evaluations of the quality of underwriting, soundness of the appraisal process, effectiveness of collections activities, ability of the default-management staff to resolve severely delinquent loans in a timely and efficient manner, and the appropriateness of loss-recognition practices. Because the securitization of assets can result in the current recognition of *anticipated income*, the risk-management function should pay particular attention to the types, volumes, and risks of assets being originated, transferred, and serviced. Senior management and the risk-management staff must be alert to any pressures on line managers to originate abnormally large volumes or higher-risk assets to sustain ongoing income needs. Such pressures can lead to a compromise of credit-underwriting standards. This may accelerate credit losses in future periods, impair the value of retained interests, and potentially lead to funding problems.

The risk-management function should also ensure that appropriate management information systems (MIS) exist to monitor securitization activities. Reporting and documentation methods must support the initial valuation of retained interests and ongoing impairment analyses of these assets. Pool-performance information will help well-managed BOs ensure, on a qualitative basis, that a sufficient amount of economic capital is being held to

cover the various risks inherent in securitization transactions. The absence of quality MIS will hinder management's ability to monitor specific pool performance and securitization activities.

At a minimum, MIS reports should address the following:

1. *Securitization summaries for each transaction.* The summary should include relevant transaction terms such as collateral type, facility amount, maturity, credit-enhancement and subordination features, financial covenants (termination events and spread-account capture “triggers”), right of repurchase, and counterparty exposures. Management should ensure that the summaries for each transaction are distributed to all personnel associated with securitization activities.
2. *Performance reports by portfolio and specific product type.* Performance factors include gross portfolio yield, default rates and loss severity, delinquencies, prepayments or payments, and excess spread amounts. The reports should reflect the performance of assets, both on an individual-pool basis and total managed assets. These reports should segregate specific products and different marketing campaigns.
3. *Vintage analysis for each pool using monthly data.* Vintage analysis will help management understand historical performance trends and their implications for future default rates, prepayments, and delinquencies, and therefore retained interest values. Management can use these reports to compare historical performance trends with underwriting standards, including the use of a validated credit-scoring model, to ensure loan pricing is consistent with risk levels. Vintage analysis also helps in the comparison of deal performance at periodic intervals and validates retained-interest valuation assumptions.
4. *Static-pool cash-collection analysis.* A static-pool cash-collection analysis involves reviewing monthly cash receipts relative to the principal balance of the pool to determine the cash yield on the portfolio, comparing the cash yield to the accrual yield, and tracking monthly changes. Management should compare monthly the timing and amount of cash flows received from the trust with those projected as part of the FAS 157 retained-interest valuation analysis. Some master-trust

structures allow excess cash flow to be shared between series or pools. For revolving-asset trusts with this master-trust structure, management should perform a cash-collection analysis for each master-trust structure. These analyses are essential in assessing the actual performance of the portfolio in terms of default and prepayment rates. If cash receipts are less than those assumed in the original valuation of the retained interest, this analysis will provide management and the board with an early warning of possible problems with collections or extension practices, and impairment of the retained interest.

5. *Sensitivity analysis.* A sensitivity analysis measures the effect of changes in default rates, prepayment or payment rates, and discount rates to assist management in establishing and validating the carrying value of the retained interest. Stress tests should be performed at least quarterly. Analyses should consider potential adverse trends and determine “best,” “probable,” and “worst case” scenarios for each event. Other factors that need to be considered are the impact of increased defaults on collections staffing, the timing of cash flows, spread-account capture triggers, overcollateralization triggers, and early-amortization triggers. An increase in defaults can result in higher-than-expected costs and a delay in cash flows, thus decreasing the value of the retained interests. Management should periodically quantify and document the potential impact to both earnings and capital, and report the results to the board of directors. Management should incorporate this analysis into their overall interest-rate risk measurement system.⁷ Examiners will review the BO-conducted analysis and the volatility associated with retained interests when assessing the Sensitivity to Market Risk component rating (the “S” in the CAMELS rating system for banks or the “M” for the BHC rating system⁸).
6. *Statement of covenant compliance.* Ongoing compliance with deal-performance triggers as defined by the pooling and servicing agreements should be affirmed at least

monthly. Performance triggers include early amortization, spread capture, changes to overcollateralization requirements, and events that would result in servicer removal.

2128.06.3 VALUATION AND MODELING PROCESSES

The method and key assumptions used to value the retained interests and servicing assets or liabilities must be reasonable and fully documented. The key assumptions in all valuation analyses include prepayment or payment rates, default rates, loss-severity factors, and discount rates. BOs are expected to take a logical appropriate approach when developing securitization assumptions and capitalizing future income flows. It is important that management quantifies the assumptions at least quarterly on a pool-by-pool basis and maintains supporting documentation for all changes to the assumptions as part of the valuation. Policies should define the acceptable reasons for changing assumptions and require appropriate management approval.

An exception to this pool-by-pool valuation analysis may be applied to revolving-asset trusts if the master-trust structure allows excess cash flows to be shared between series. In a master trust, each certificate of each series represents an undivided interest in all of the receivables in the trust. Therefore, valuations are appropriate at the master-trust level.

To determine the value of the retained interest at inception, and make appropriate adjustments going forward, the BO must implement a reasonable modeling process to comply with FAS 157. Management is expected to employ appropriate valuation assumptions and projections, and to maintain verifiable objective documentation of the fair value of the retained interest. Senior management is responsible for ensuring that the valuation model accurately reflects the cash flows according to the terms of the securitization’s structure. For example, the model should account for any cash collateral or overcollateralization triggers, trust fees, and insurance payments if appropriate. The board and management are accountable for the model builders’ possessing the necessary expertise and technical proficiency to perform the modeling process. Senior management should ensure that internal controls are in place to provide for the ongoing integrity of MIS associated with securitization activities.

As part of the modeling process, the risk-management function should ensure that peri-

7. The Joint Agency Policy Statement on Interest-Rate Risk (see SR-96-13 and section 2127.0) advises institutions with a high level of exposure to interest-rate risk relative to capital that they will be directed to take corrective action. See also SR-99-18 and Section 4060.7

8. See sections 4070.0 and 4070.1.

odic validations are performed to reduce vulnerability to model risk. Validation of the model includes testing the internal logic, ensuring empirical support for the model assumptions, and back-testing the models using actual cash flows on a pool-by-pool basis. The validation process should be documented to support conclusions. Senior management should ensure the validation process is independent from line management and from the modeling process. The audit scope should include procedures to ensure that the modeling process and validation mechanisms are both appropriate for the BO's circumstances and executed consistent with its asset securitization policy.

2128.06.4 USE OF OUTSIDE PARTIES

Third parties are often engaged to provide professional guidance and support regarding a BO's securitization activities, transactions, and valuing of retained interests. The use of outside resources does not relieve directors of their oversight responsibility, or relieve senior management of its responsibilities to provide supervision, monitoring, and oversight of securitization activities, particularly the management of the risks associated with retained interests. Management is expected to have the experience, knowledge, and abilities to discharge its duties and understand the nature and extent of the risks retained interests present, and to have the policies and procedures necessary to implement an effective risk-management system to control such risks. Management must have a full understanding of the valuation techniques employed, including the basis and reasonableness of underlying assumptions and projections.

2128.06.5 INTERNAL CONTROLS

Effective internal controls are essential to a BO's management of the risks associated with securitization. When properly designed and consistently enforced, a sound system of internal controls will help management safeguard the BO's resources; ensure that financial information and reports are reliable; and comply with contractual obligations, including securitization covenants. It will also reduce the possibility of significant errors and irregularities, and assist in their timely detection. Internal controls typically (1) limit authorities; (2) safeguard access to and use of records; (3) separate and rotate duties; and (4) ensure both regular and unscheduled reviews, including testing.

Operational and managerial standards have been established for internal control and information systems.⁹ A system of internal controls should be maintained that is appropriate to the BO's size and the nature, scope, and risk of its activities.¹⁰

2128.06.6 AUDIT FUNCTION OR INTERNAL REVIEW

A BO's board of directors is responsible for ensuring that its audit staff or independent review function is competent regarding securitization activities. The audit function should perform periodic reviews of securitization activities, including transaction testing and verification, and report all findings to the board or appropriate board committee. The audit function also may be useful to senior management in identifying and measuring risk related to securitization activities. Principal audit targets should include compliance with securitization policies, operating and accounting procedures (FAS 140), deal covenants, and the accuracy of MIS and regulatory reports. The audit function also should confirm that the BO's regulatory reporting process is designed and managed to facilitate timely and accurate report filing. Furthermore, when a third party services loans, the auditors should perform an independent verification of the existence of the loans to ensure that balances reconcile to internal records.

2128.06.7 REGULATORY REPORTING OF RETAINED INTERESTS

The securitization and subsequent removal of assets from a BO's balance sheet requires additional reporting as part of the regulatory reporting process. Common regulatory reporting errors stemming from securitization activities may include—

9. See the safety-and-soundness standards for national banks at 12 CFR 30 (OCC), and for savings associations at 12 CFR 570 (OTS).

10. BOs that are subject to the requirements of FDIC regulation 12 CFR 363 should include an assessment of the effectiveness of internal controls over their asset securitization activities as part of management's report on the overall effectiveness of the system of internal controls over financial reporting. This assessment implicitly includes the internal controls over financial information that is included in regulatory reports.

1. failure to include off-balance-sheet assets subject to recourse treatment when calculating risk-based capital ratios;
2. failure to recognize retained interests and retained subordinate security interests as a form of credit enhancement;
3. failure to report loans sold with recourse in the appropriate section of the regulatory report; and
4. overvaluing retained interests.

A BO's directors and senior management are responsible for the accuracy of its regulatory reports. Because of the complexities associated with securitization accounting and risk-based capital treatment, attention should be directed to ensuring that personnel who prepare these reports maintain current knowledge of reporting rules and associated interpretations. This often will require ongoing support by qualified accounting and legal personnel.

2128.06.8 MARKET DISCIPLINE AND DISCLOSURES

Transparency through public disclosure is crucial to effective market discipline and can reinforce supervisory efforts to promote high standards in risk management. Timely and adequate information on the BO's asset securitization activities should be disclosed. The information in the disclosures should be comprehensive; however, the amount of disclosure that is appropriate will depend on the volume of securitizations and complexity of the BO. Well-informed investors, depositors, creditors, and other counterparties can provide a BO with strong incentives for maintaining sound risk-management systems and internal controls. Adequate disclosure allows market participants to better understand the BO's financial condition and apply market discipline, creating incentives to reduce inappropriate risk taking or inadequate risk-management practices. Examples of sound disclosures include—

1. accounting policies for measuring retained interests, including a discussion of the impact of key assumptions on the recorded value;
2. the process and methodology used to adjust the value of retained interests for changes in key assumptions;
3. risk characteristics, both quantitative and

- qualitative, of the underlying securitized assets;
4. the role of retained interests as credit enhancements to special-purpose entities and other securitization vehicles, including a discussion of techniques used for measuring credit risk; and
5. sensitivity analyses or stress-testing conducted by the BO, showing the effect of changes in key assumptions on the fair value of retained interests.

2128.06.9 RISK-BASED CAPITAL FOR RECOURSE AND LOW-LEVEL-RECOURSE TRANSACTIONS

For regulatory purposes, recourse is generally defined as an arrangement in which an institution retains the risk of credit loss in connection with an asset transfer, if the risk of credit loss exceeds a pro rata share of its claim on the assets.¹¹ In addition to broad contractual language that may require the seller to support a securitization, recourse can arise from retained interests, retained subordinated security interests, the funding of cash-collateral accounts, or other forms of credit enhancements that place a BO's earnings and capital at risk. These enhancements should generally be *aggregated* to determine the extent of a BO's support of securitized assets. Although an asset securitization qualifies for sales treatment under GAAP, the underlying assets may still be subject to regulatory risk-based capital requirements. Assets sold with recourse should generally be risk-weighted as if they had not been sold.

Securitization transactions involving recourse may be eligible for "low-level-recourse" treatment.¹² Risk-based capital standards provide that the dollar amount of risk-based capital required for assets transferred with recourse should not exceed the maximum dollar amount for which a BO is contractually liable. The low-level-recourse treatment applies to transactions accounted for as sales under GAAP in which a BO contractually limits its recourse exposure to less than the full risk-based capital requirements for the assets transferred. Under the low-level-recourse principle, the BO holds capital on approximately a dollar-for-dollar

11. See the risk-based capital treatment for sales with recourse at 12 CFR 3, appendix A, section (3)(b)(1)(iii) (OCC), and 12 CFR 567.6(a)(2)(i)(c) (OTS). For a further explanation of recourse, see the glossary of the Call Report instructions, "Sales of Assets for Risk-Based Capital Purposes."

12. See 60 *Fed. Reg.* 8177, February 13, 1995 (FRB).

basis up to the amount of the aggregate credit enhancements.

If a BO does not contractually limit the maximum amount of its recourse obligation, or if the amount of credit enhancement is greater than the risk-based capital requirement that would exist if the assets were not sold, the low-level-recourse treatment does not apply. Instead, the BO must hold risk-based capital against the securitized assets as if those assets had not been sold. Retained interests that lack objectively verifiable support or that fail to meet the supervisory standards set forth in this section will be classified as loss and disallowed as assets of the BO for regulatory capital purposes.

2128.06.10 CONCENTRATION LIMITS IMPOSED ON RETAINED INTERESTS

The creation of a retained interest asset (the debit) typically also results in an offsetting “gain on sale” (the credit). BOs that securitize high-yielding assets with long durations may create a retained-interest asset value that exceeds the risk-based capital charge that would be in place if it had not sold the assets (under the existing risk-based capital guidelines, capital is not required for the amount over 8 percent of the securitized assets). Serious problems can arise for those BOs that distribute contrived earnings only later to be faced with a downward valuation and charge-off of part or all of the retained interests.

As an example, a BO could sell \$100 in subprime home-equity loans and book a retained interest of \$20 using inappropriate valuation assumptions. Under the current capital rules, the BO is required to hold approximately \$8 in capital. This \$8 is the current capital requirement if the loans were never removed from the balance sheet (8 percent of \$100 = \$8). However, the institution is still exposed to substantially all the credit risk, plus the additional risk to earnings and capital from the volatility of the retained interest. If the value of the retained interest decreases to \$10 due to the inappropriate assumptions or changes in market conditions, the \$8 in capital is insufficient to cover the entire loss.

Normally, the sponsor will eventually receive any excess cash flow remaining from securitizations after investor interests have been met. However, recent experience has shown that retained interests are vulnerable to sudden and sizeable write-downs that can hinder a BO’s access to the capital markets; damage its reputation in the marketplace; and, in some cases,

threaten its solvency. A BO’s board of directors and management is expected to develop and implement policies that limit the amount of retained interests that may be carried as a percentage of total equity capital, based on the results of their valuation and modeling processes. Well-constructed internal limits also lessen the incentives for a BO’s personnel to engage in activities designed to generate near-term “paper profits” that may be at the expense of its long-term financial position and reputation.

2128.06.11 INSPECTION OBJECTIVES

1. To determine whether the BO’s retained interests from asset securitization are properly documented, valued, and accounted for.
2. To verify that the amount of those retained interests not supported by adequate documentation has been charged off for regulatory reporting purposes and that the involved assets are not used for risk-based calculation purposes.
3. To ascertain the existence of sound risk modeling, management information systems (MIS), and disclosure practices for asset securitization.
4. To obtain assurances that the board of directors and management oversee sound policies and internal controls concerning the recording and valuation of retained interests derived from asset securitization activities.
5. To determine if liquidity problems may arise as the result of an overdependence on asset securitization activities for day-to-day core funding.
6. To determine that sufficient capital is held commensurate with the risk exposures arising from recourse obligations generated by asset securitizations.
7. To determine whether there is an independent audit function that is capable of evaluating retained interests involving asset securitization activities.

2128.06.12 INSPECTION PROCEDURES

1. Determine the existence of independent risk-management processes and MIS, and whether they are being used to monitor securitization-pool performance on an aggre-

- gate and individual transaction level.
2. Review the MIS reports and determine whether the reports provide—
 - a. securitization summaries for each transaction;
 - b. performance reports by portfolio and specific product type;
 - c. vintage analysis for each pool using monthly data;
 - d. static-pool cash-collection analysis;
 - e. sensitivity analysis; and
 - f. a statement of covenant compliance.
 3. Review the BO's valuation assumptions and modeling methodologies, and determine if they are appropriate and are being used to establish, evaluate, and adjust the carrying value of retained interests on a regular and timely basis.
 4. Determine if audit or internal review staffs periodically review data integrity, model algorithms, key underlying assumptions, and the appropriateness of the valuation and modeling process for the securitized assets that the BO retains.
 5. Review the risk-based capital calculations, and determine if they include recognition and reporting of any recourse obligation resulting from securitization activities.
 6. Ascertain that internal limits govern the amount of retained interests held as a percentage of total equity capital.
 7. Establish that an adequate liquidity contingency plan is in place and that it will be used in the event of market disruptions. Determine further whether liquidity problems may arise as the result of an overdependence on asset securitization activities for day-to-day core funding.
 8. Determine whether consistent, conservative accounting practices are in place that satisfy the reporting requirements of regulatory supervisors, GAAP reporting requirements, and valuation assumptions and methods. Ascertain that adequate disclosures of asset securitization activities are made commensurate with the volume of securitizations and the complexities of the BO.
 9. Establish that risk-exposure limits and requirements exist and are adhered to on an aggregate and individual transaction basis.

Subprime lending presents unique and significantly greater risk to banking organizations (BOs) associated with the activity,¹ raising issues about how well they are prepared to manage and control those risks. Subprime-lending institutions need strong risk-management practices and internal controls, as well as board-approved policies and procedures that appropriately identify, measure, monitor, and control all associated risks. BOs considering or engaging in this type of lending should recognize the additional risks inherent in this activity and determine if these risks are acceptable and controllable, given their organization's financial condition, asset size, level of capital support, and staff size.

In response to concerns about subprime lending, the statement Interagency Guidance on Subprime Lending was issued on March 1, 1999.² The statement's objective is to increase awareness among examiners and financial institutions of some of the pitfalls and hazards of this type of lending. (See SR-99-06.) Additional interagency examination guidance was issued on January 31, 2001, to further strengthen the supervision of certain institutions, primarily those institutions having subprime-lending programs with an aggregate credit exposure equaling or exceeding 25 percent of their tier 1 capital.³ (See SR-01-04.) The aggregate credit exposure includes principal outstanding and committed, accrued and unpaid interest, and any retained residual interests⁴ relating to securitized subprime loans. The Federal Reserve may also apply the additional guidelines to certain smaller subprime portfolios, such as those experiencing rapid growth or adverse performance trends, those administered by inexperienced

management, and those with inadequate or weak controls. The subprime-lending policy statements are directed primarily to insured depository institutions and their subsidiaries. As such, the guidance applies to bank holding companies with regard to their oversight and supervision of insured depository institutions. Bank holding companies should also consider the statements' guidance as they supervise the lending activities of their nonbanking subsidiaries. Bank holding company examiners should consider this guidance in conjunction with the loan-administration and lending-standards inspection guidance in section 2010.2 and with the guidance for asset securitization in section 2128.02. The interagency subprime-lending policy statements are described below.

2128.08.1 INTERAGENCY GUIDANCE ON SUBPRIME LENDING

Insured depository institutions traditionally avoided lending to customers with poor credit histories because of the higher risk of default and resulting loan losses. However, some lenders⁵ extend their risk-selection standards to attract lower-credit-quality accounts. Moreover, previous turmoil in the equity and asset-backed securities markets has caused some nonbank subprime specialists to exit the market, which created increased opportunities for financial institutions to enter, or expand their participation in, the subprime-lending business.

The term "subprime lending" is defined for this statement as extending credit to borrowers who exhibit characteristics indicating a significantly higher risk of default than traditional bank lending customers.⁶ Subprime borrowers represent a broad spectrum of debtors, ranging from those who have repayment problems because of an adverse event, such as job loss or medical emergency, to those who persistently mismanage their finances and debt obligations. Subprime borrowers typically have weakened credit histories that include payment delinquencies and possibly more severe problems, such as charge-offs, judgments, and bankruptcies. They

1. The term "banking organizations" refers to bank holding companies and their banking and nonbanking subsidiaries.

2. The statement was adopted and issued by the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

3. The March 1999 and January 2001 subprime-lending interagency guidance is consolidated within this section. To focus on the supervisory guidance that applies primarily to institutions having subprime-lending programs equaling or exceeding 25 percent of tier 1 capital, see the January 2001 release specifically. The March 1999 interagency supervisory guidance applies to all institutions that engage in subprime lending.

4. Residual interests are on-balance-sheet assets that represent interests (including beneficial interests) in transferred financial assets retained by a seller (or transferor) after a securitization or other transfer of financial assets. They are structured to absorb more than a pro rata share of credit loss related to the transferred assets through subordination provisions or other credit-enhancement techniques.

5. The terms "lenders," "financial institutions," and "institutions" refer to insured depository institutions and their subsidiaries.

6. For purposes of this statement, loans to customers who are not subprime borrowers are referred to as "prime."

may also display reduced repayment capacity as measured by credit scores, debt-to-income ratios, or other criteria that may encompass borrowers with incomplete credit histories. Generally, subprime borrowers will display a range of one or more credit-risk characteristics, such as—

1. two or more 30-day delinquencies in the last 12 months, or one or more 60-day delinquencies in the last 24 months;
2. judgment, foreclosure, repossession, or charge-off in the prior 24 months;
3. bankruptcy in the last five years;
4. relatively high default probability as evidenced by, for example, a credit bureau risk score (FICO) of 660 or below (depending on the product or collateral), or by other bureau or proprietary scores with an equivalent default-probability likelihood; or
5. debt-service-to-income ratio of 50 percent or greater, or an otherwise limited ability to cover family living expenses after deducting total monthly debt-service requirements from monthly income.

Subprime loans are loans to borrowers displaying one or more of these characteristics at the time of origination or purchase.

This guidance applies to direct extensions of credit; the purchase of subprime loans from other lenders, including delinquent or credit-impaired loans purchased at a discount; the purchase of subprime automobile or other financing “paper” from lenders or dealers; and the purchase of loan companies that originate subprime loans. Subprime lending does not include loans to borrowers who have had minor, temporary credit difficulties but are now current. Also, the subprime-lending guidance does not generally apply to prime loans that develop credit problems after acquisition; loans initially extended in subprime programs that are later upgraded, as a result of their performance, to programs targeted to prime borrowers; and community development loans as defined in the Community Reinvestment Act (CRA) regulations that may have some higher risk characteristics, but are otherwise mitigated by guarantees from government programs, private credit enhancements, or other appropriate risk-mitigation techniques.

Subprime loans command higher interest rates and loan fees than those offered to standard-risk borrowers. Subprime loans can be

profitable, provided the price charged by the lender is sufficient to cover higher loan-loss rates and overhead costs related to underwriting, servicing, and collecting the loans. The ability to securitize and sell subprime portfolios at a profit while retaining the servicing rights has made subprime lending attractive to a larger number of institutions, further increasing the number of subprime lenders and loans. Some financial institutions have experienced losses attributable to ill-advised or poorly structured subprime-lending programs. The losses have attracted greater supervisory attention to subprime lending and the ability of an insured depository institution to manage the unique risks associated with this activity.

Institutions should recognize the additional risks inherent in subprime lending and determine if these risks are acceptable and controllable given the institution’s staff, financial condition, size, and level of capital support. Institutions that engage in a small volume of subprime lending should have systems in place commensurate with their level of risk.

2128.08.1.1 Risk Management

The following items are essential components of a well-structured risk-management program for subprime lenders:

1. *Planning and strategy.* Before engaging in subprime lending, the board and management should ensure that proposed activities are consistent with the institution’s overall business strategy and risk tolerances, and that all involved parties have properly acknowledged and addressed critical business risk issues. These issues include the costs associated with attracting and retaining qualified personnel, investments in the technology necessary to manage a more complex portfolio, a clear solicitation and origination strategy that allows for after-the-fact assessment of underwriting performance, and the establishment of appropriate feedback and control systems. The risk-assessment process should extend beyond credit risk and appropriately incorporate operating, compliance, and legal risks. Finally, the planning process should set clear objectives for performance, including the identification and segmentation of target markets or customers, as well as set performance expectations and benchmarks for each segment and the portfolio as a whole. Institutions establishing a subprime-lending program should proceed slowly and

- cautiously into this activity to minimize the impact of unforeseen personnel, technology, or internal-control problems and to determine if favorable initial profitability estimates are realistic and sustainable.
2. *Staff expertise.* Subprime lending requires specialized knowledge and skills that many financial institutions may not possess. Marketing, account-origination, and collections strategies and techniques often differ from those employed for prime credit; thus, it may not be sufficient to have the same lending staff responsible for both subprime loans and other loans. Additionally, servicing and collecting subprime loans can be very labor intensive. If necessary, the institution should implement programs to train staff. The board should ensure that staff possess sufficient expertise to appropriately manage the risks in subprime lending and that staffing levels are adequate for the planned volume of subprime activity. The experience, or seasoning, of staff and loans should be taken into account as performance is assessed over time.
 3. *Lending policy.* A subprime-lending policy should be appropriate to the size and complexity of the institution's operations and should clearly state the goals of the subprime-lending program. While not exhaustive, the following lending standards should be addressed in any subprime-lending policy:
 - a. types of products offered as well as those that are not authorized
 - b. portfolio targets and limits for each credit grade or class
 - c. lending and investment authority clearly stated for individual officers, supervisors, and loan committees
 - d. a framework for pricing decisions and profitability analysis that considers all costs associated with the loan, including origination costs, administrative or servicing costs, expected charge-offs, and capital
 - e. evaluation of collateral and appraisal standards
 - f. well-defined and specific underwriting parameters (that is, acceptable loan term, debt-to-income ratios, and loan-to-collateral-value ratios for each credit grade and a minimum acceptable credit score) that are consistent with any applicable supervisory guidelines⁷
 - g. procedures for separate tracking and monitoring of loans approved as exceptions to stated policy guidelines
 - h. credit-file documentation requirements, such as applications, offering sheets, loan and collateral documents, financial statements, credit reports, and credit memoranda to support the loan decision
 - i. a correspondent/broker/dealer approval process, including measures to ensure that loans originated through this process meet the institution's lending standards
- If the institution elects to use credit scoring (including applications scoring) for approvals or pricing, the scoring model should be based on a development population that captures the behavioral and credit characteristics of the subprime population targeted for the products offered. Because of the significant variance in characteristics between the subprime and prime populations, institutions should not rely on models developed solely for products offered to prime borrowers. Further, the model should be reviewed frequently and updated as necessary to ensure that assumptions remain valid.
4. *Purchase evaluation.* As they evaluate expected profits, institutions that purchase subprime loans from other lenders or dealers must give due consideration to the cost of servicing these assets and to the loan losses that may be experienced. For instance, some lenders who sell subprime loans charge borrowers high up-front fees, which are usually financed into the loan. This provides an incentive for originators to produce a high volume of loans with little emphasis on quality, to the detriment of a potential purchaser. Further, subprime loans, especially those purchased from outside the institution's lending area, are at special risk for fraud or misrepresentation (that is, the quality of the loan may be less than the loan documents indicate).

Institutions should perform a thorough due-diligence review before committing to purchase subprime loans. Institutions should not accept loans from originators that do not meet their underwriting criteria, and they should regularly review loans offered to ensure that loans purchased continue to meet

Guidelines for Real Estate Lending Policies, which establish supervisory loan-to-value (LTV) limits on various types of real estate loans and impose limits on an institution's aggregate investment in loans that exceed the supervisory LTV limits. (See 12 C.F.R. 208, appendix C.)

7. Extensions of credit secured by real estate, whether the credit is subprime or otherwise, are subject to the Interagency

those criteria. Deterioration in the quality of purchased loans or in the portfolio's actual performance versus expectations requires a thorough reevaluation of the lenders or dealers who originated or sold the loans, as well as a reevaluation of the institution's criteria for underwriting loans and selecting dealers and lenders. Any such deterioration may also highlight the need to modify or terminate the correspondent relationship or to adjust underwriting and dealer or lender selection criteria.

5. *Loan-administration procedures.* After the loan is made or purchased, loan-administration procedures should provide for the diligent monitoring of loan performance and establish sound collection efforts. To minimize loan losses, successful subprime lenders have historically employed stronger collection efforts, such as calling delinquent borrowers frequently, investing in technology (for example, using automatic dialing for follow-up telephone calls on delinquent accounts), assigning more experienced collection personnel to seriously delinquent accounts, moving quickly to foreclose or repossess collateral, and allowing few loan extensions. This aspect of subprime lending is very labor intensive but critical to the program's success. To a large extent, the cost of such efforts can be a tradeoff with future loss expectations, when an institution analyzes the profitability of subprime lending and assesses its appetite to expand or continue this line of business. Subprime-loan-administration procedures should be in writing and at a minimum should detail—
 - a. billing and statement procedures;
 - b. collection procedures;
 - c. content, format, and frequency of management reports;
 - d. asset-classification criteria;
 - e. methodology to evaluate the adequacy of the allowance for loan and lease losses (ALLL);
 - f. criteria for allowing loan extensions, deferrals, and re-aging;
 - g. foreclosure and repossession policies and procedures; and
 - h. loss-recognition policies and procedures.
6. *Loan review and monitoring.* Once an institution books the loans, designated staff must perform an ongoing analysis of subprime loans, not only on an aggregate basis but also for subportfolios. Information systems should be in place to segment and stratify the

institution's portfolio (for example, by originator, loan-to-value, debt-to-income ratios, or credit scores), and assigned staff should produce reports that management can use to evaluate the performance of subprime loans. The review process should focus on whether performance meets expectations. Institutions then need to consider the source and characteristics of loans that do not meet expectations and make changes in their underwriting policies and loan-administration procedures to restore performance to acceptable levels.

When evaluating actual performance against expectations, it is particularly important that management review credit scoring, pricing, and ALLL-adequacy models. Models driven by the volume and severity of historical losses experienced during an economic expansion may have little relevance in an economic slowdown, particularly in the subprime market. Management should ensure that models used to estimate credit losses or to set pricing allow for fluctuations in the economic cycle and are adjusted to account for other unexpected events.

7. *Consumer protection.* Institutions that originate or purchase subprime loans must take special care to avoid violating fair lending and consumer protection laws and regulations. Higher fees and interest rates combined with compensation incentives can foster predatory pricing or discriminatory "steering" of borrowers to subprime products for reasons other than the borrower's underlying creditworthiness. An adequate compliance-management program must identify, monitor, and control the consumer protection hazards associated with subprime lending.

Subprime mortgage lending may trigger the special protections of the Home Ownership and Equity Protection Act of 1994, subtitle B of title I of the Riegle Community Development and Regulatory Improvement Act of 1994. This act amended the Truth in Lending Act to provide certain consumer protections in transactions involving a class of nonpurchase, closed-end home mortgage loans. Institutions engaging in this type of lending must also be thoroughly familiar with the obligations set forth in Regulation Z (12 C.F.R. 226.32), Regulation X, and the Real Estate Settlement Procedures Act (RESPA) (12 U.S.C. 2601) and should adopt policies and implement practices that ensure compliance.

The Equal Credit Opportunity Act makes it unlawful for a creditor to discriminate

against an applicant on a prohibited basis regarding any aspect of a credit transaction. Similarly, the Fair Housing Act prohibits discrimination in connection with residential real estate-related transactions. Loan officers and brokers must treat all similarly situated applicants equally and without regard to any prohibited-basis characteristic (for example, race, sex, or age). This is especially important with respect to how loan officers or brokers assist customers in preparing their applications or otherwise help them to qualify for loan approval.

8. *Securitization and sale.* To increase their loan-production and -servicing income, some subprime lenders originate loans and then securitize and sell them in the asset-backed securities market. Strong demand from investors and favorable accounting rules often allow securitization pools to be sold at a gain, providing further incentive for lenders to expand their subprime-lending program. However, the securitization of subprime loans carries inherent risks, including interim credit risk and liquidity risk, that are potentially greater than those for securitizing prime loans. Accounting for the sale of subprime pools requires assumptions that can be difficult to quantify, and erroneous assumptions could lead to the significant overstatement of an institution's assets. Moreover, the practice of providing support and substituting performing loans for nonperforming loans to maintain the desired level of performance on securitized pools has the effect of masking credit-quality problems.

Institutions should recognize the volatility of the secondary market for subprime loans and the significant liquidity risk incurred when originating a large volume of loans intended for securitization and sale. Investors can quickly lose their appetite for risk in an economic downturn or when financial markets become volatile. As a result, institutions that have originated, but have not yet sold, pools of subprime loans may be forced to sell the pools at deep discounts. If an institution lacks adequate personnel, risk-management procedures, or capital support to hold subprime loans originally intended for sale, these loans may strain an institution's liquidity, asset quality, earnings, and capital. Consequently, institutions actively involved in the securitization and sale of subprime loans should develop a contingency plan that addresses back-up purchasers of the securities or the attendant servicing functions,

alternate funding sources, and measures for raising additional capital.

Institutions should refer to the Statement of Financial Accounting Standards No. 140 (FAS 140), "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities," for guidance on accounting for these transactions. If a securitization transaction meets FAS 140 sale or servicing criteria, the seller must recognize any gain or loss on the sale of the pool immediately and carry any retained interests in the assets sold (including servicing rights/obligations and interest-only strips) at fair value. Management should ensure that the key assumptions used to value these retained interests are reasonable and well supported, both for the initial valuation and for subsequent quarterly revaluations. In particular, management should consider the appropriate discount rates, credit-loss rates, and prepayment rates associated with subprime pools when valuing these assets. Since the relative importance of each assumption varies with the underlying characteristics of the product types, management should segment securitized assets by specific pool, as well as by predominant risk and cash-flow characteristics, when making the underlying valuation assumptions. In all cases, however, institutions should take a conservative approach when developing securitization assumptions and capitalizing expected future income from subprime lending pools. Institutions should also consult with their auditors as necessary to ensure their accounting for securitizations is accurate.

9. *Reevaluation.* Institutions should periodically evaluate whether the subprime-lending program has met profitability, risk, and performance goals. Whenever the program falls short of original objectives, an analysis should be performed to determine the cause, and the program should be modified appropriately. If the program falls far short of the institution's expectations, management should consider terminating it. Questions that management and the board need to ask may include the following:
 - a. Have cost and profit projections been met?
 - b. Have projected loss estimates been accurate?
 - c. Has the institution been called upon to provide support to enhance the quality

and performance of loan pools it has securitized?

- d. Were the risks inherent in subprime lending properly identified, measured, monitored, and controlled?
- e. Has the program met the credit needs of the community that it was designed to address?

2128.08.1.2 Examination Review and Analysis

The following supervisory guidance (up to the inspection objectives) applies only to the examination of a bank holding company's federally insured subsidiary banks that have subprime-lending programs equaling or exceeding 25 percent of tier 1 capital and to those insured banks that have other designated subprime programs referenced in SR-01-4.

The heightened risk levels and potential volatility in delinquency and loss rates posed by subprime-lending programs warrant examiners' increased ongoing attention. The risks inherent in subprime-lending programs call for frequent reviews. There are generally two levels of review appropriate for subprime activities:

1. *Portfolio-level reviews* include assessments of underwriting standards, marketing practices, pricing, management information and control systems (quality control, audit and loan review, vendor management, compliance), portfolio performance, and the appropriate application of regulatory and internal allowance and capital policies.
2. *Transaction-level testing* includes the testing of individual loans for compliance with underwriting and loan-administration guidelines; the appropriate treatment of loans under delinquency, re-aging, and cure programs; and the appropriate application of regulatory and internal allowance and capital policies.

Examiners should perform a portfolio-level review and some transaction testing at each institution engaged in subprime lending, during each regularly scheduled examination cycle. The Federal Reserve will perform regular off-site supervisory monitoring and may require subprime lenders to supply supplementary information about their subprime portfolios between examinations. The examiner's findings from

transaction-level testing and portfolio-level reviews should be incorporated into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.

2128.08.1.2.1 Transaction-Level Testing

Subprime-loan portfolios contain elevated risks, and actual subprime-lending practices often can deviate from stated policy and procedural guidance. Therefore, examiners should supplement the portfolio-level examination procedures with transaction-level testing to determine whether—

1. individual loans adhere to existing policy, underwriting, risk-selection, and pricing standards;
2. individual loans and portfolios are classified in accordance with the subprime-lending guidelines described in this section, or in other Federal Reserve credit-extending supervisory guidance;
3. management, board, and regulatory reporting is accurate and timely;
4. existing loans conform to specified account-management standards (such as over-limits, line increases, reductions, cancellations, re-scoring, or collections);
5. key risk controls and control processes are adequate and functioning as intended;
6. roll rates and other loss-forecasting methods used to determine ALLL levels are accurate and reliable; and
7. lending practices exist that may appear unsafe, unsound, or abusive and unfair.

2128.08.1.3 Adequacy of the ALLL

Examiners should assess the adequacy of the ALLL to ensure that the portion allocated to the subprime portfolio is sufficient to absorb estimated credit losses for this portfolio. Consistent with interagency policy,⁸ the term "estimated credit losses" means an estimate of the amount that is not likely to be collected; that is, net charge-offs that are likely to be realized given the facts and circumstances as of the evaluation date.⁹ These estimated losses should meet the

8. The Interagency Policy Statement on the Allowance for Loan and Lease Losses was issued December 21, 1993, and the ALLL methodologies and documentation standards were issued July 2, 2001.

9. Estimates of credit losses should include accrued interest and other accrued fees (for example, uncollected credit card fees or uncollected late fees) that have been added to the

criteria for accrual of loss contingency, as set forth under generally accepted accounting principles (GAAP), consistent with supervisory ALLL policy.

2128.08.1.3.1 New Entrants to the Business

In some instances, an institution (for example, a newly chartered institution or an existing institution entering the subprime-lending business) may not have sufficient previous loss experience to estimate an allowance for subprime-lending activities. In such cases, industry statistics or another institution's loss data for similar loans may be a better starting point to determine the ALLL than the institution's own data for developing loss rates. When an institution uses loss rates developed from industry statistics or from other institutions to determine its ALLL, it should demonstrate and document that the attributes of the loans in its portfolio or portfolio segment are similar to those in the other institution's (or industry's) portfolio.

2128.08.1.3.2 Pools of Subprime Loans—Not Classified

The ALLL required for subprime loans should be sufficient to absorb at least all estimated credit losses on outstanding balances over the current operating cycle, typically 12 months. The board of directors and management are expected to ensure that the institution's process for determining an adequate level for the ALLL is based on a comprehensive and adequately documented analysis of all significant factors. The consideration factors should include historical loss experience, ratio analysis, peer-group analysis, and other quantitative analysis as a basis for the reasonableness of the ALLL. To the extent that the historical net charge-off rate is used to estimate expected credit losses, it should be adjusted for changes in trends, conditions, and other relevant factors, including business volume, underwriting, risk selection,

loan balances and, as a result, that are reported as part of the institution's loans on the balance sheet. An institution may include these types of estimated losses in either the ALLL or a separate valuation allowance, which would be netted against the aggregated loan balance for regulatory reporting purposes. When accrued interest and other accrued fees are not added to the loan balances and are not reported as part of loans on the balance sheet, the collectibility of these accrued amounts should nevertheless be evaluated to ensure that the institution's income is not overstated.

account-management practices, and current economic or business conditions that may alter such experience. The allowance should represent a prudent, conservative estimate of losses that allows a reasonable margin for imprecision. Institutions should clearly document loss estimates and the allowance methodology in writing. This documentation should describe the analytical process used, including—

1. portfolio-segmentation methods applied;
2. loss-forecasting techniques and assumptions employed;
3. definitions of terms used in ratios and model computations;
4. relevance of the baseline loss information used;
5. rationale for adjustments to historical experience; and
6. a reconciliation of forecasted loss rates to actual loss rates, with significant variances explained.

2128.08.1.4 Classification Guidelines for Subprime Lending

Well-managed subprime lenders should recognize the heightened loss characteristics in their portfolios and internally classify their delinquent accounts well before the time frames outlined in the retail classification policy issued by the Federal Financial Institutions Examination Council (FFIEC) on June 12, 2000. Examiners should classify subprime loans and portfolios in accordance with the guidelines in this section and other applicable Federal Reserve supervisory guidelines. Classified loans are loans that are not protected adequately by the current sound worth and paying capacity of the borrower or the collateral pledged. As such, full liquidation of the debt may be in jeopardy. Pools of classified subprime loans (to include, at a minimum, all loans past due 90 days or more) should be reviewed for impairment, and an adequate allowance should be established consistent with existing interagency policy.

2128.08.1.4.1 Individual Loans

Examiners should not automatically classify or place loans in special mention merely because they are subprime. Rather, classifications should

reflect the borrower's capacity and willingness to repay and the adequacy of collateral pledged. Loans to borrowers that do not have the capacity to service their loans generally will be classified substandard. When repayment capacity is insufficient to support the orderly liquidation of the debt, and the collateral pledged is insufficient to mitigate risk of loss, then a more severe classification and nonaccrual is warranted. Subprime loans that are past due 90 days or more should be classified at least substandard based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay. A more stringent classification approach may be appropriate based on the historical loss experience of a particular institution. Classification of other subprime loans as doubtful or loss will be based on examiners' analysis of the borrower's capacity to repay, and on the quality of institution underwriting and account-management practices as evidenced in the loan file or by other documentation.

In some cases, the repayment of principal, interest, and fees on some subprime loans may be overly dependent on collateral pledged. This occurs when the risk of default is so high that an abundance of collateral is taken to mitigate risk of loss in the event of default. From a safety-and-soundness perspective, institutions should be discouraged from lending solely on the basis of collateral pledged. Such loans will generally be classified substandard. Further, when the borrower does not demonstrate the capacity to service the loan from sources other than collateral pledged, the loan may be placed on nonaccrual.

2128.08.1.4.2 *Portfolios*

When the portfolio review or loan sample indicates serious concerns with credit-risk selection practices, underwriting standards, or loan quality, examiners should consider classifying or criticizing the entire portfolio or segments of the portfolio. Such a decision may be appropriate in cases where risk is inordinately high or delinquency reports reflect performance problems. Some subprime-lending portfolios may pose very high risk. These may include portfolios of unsecured loans or secured, high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame. Most such portfolios should be classified at least substandard.

2128.08.1.5 Required Documentation for Cure Programs

Cure programs, including such practices as re-aging, extensions, renewals, rewrites, or other types of account restructuring, are subject to the standards outlined in the retail classification policy. In accordance with that policy, cure programs should be used only when the institution has substantiated the customer's renewed willingness and ability to repay. Examiners will expect institutions to maintain documentation supporting their analysis of the customer's renewed ability and willingness to repay the loan at the time it is extended, renewed, or deferred. When the institution cannot demonstrate both the willingness and ability of the customer to repay, the loan should not be renewed, extended, deferred, or rewritten, and the loan should be moved back to its pre-cure delinquency status. Documentation should include one or more of the following:

1. a new verification of employment
2. a recomputed debt-to-income ratio indicating sufficient improvement in the borrower's financial condition to support orderly repayment
3. a refreshed credit score or updated bureau report
4. a file memo evidencing discussion with the customer

When documentation of the customer's renewed willingness and ability to repay the loan is absent or deficient, management practices should be criticized.

2128.08.1.6 Predatory or Abusive Lending Practices

The term "subprime" is often misused to refer to certain predatory or abusive lending practices. Lending practices can be designed to responsibly provide service to customers and enhance credit access for borrowers with special credit needs. Subprime lending that is appropriately underwritten, priced, and administered can serve these goals.

Some forms of subprime lending may be abusive or predatory, however. Lending practices may be designed to transfer wealth from the borrower to the lender or loan originator without a commensurate exchange of value. This is sometimes accomplished when the lender structures a loan to a borrower who has little or no ability to repay the loan from sources other than

the collateral pledged. When default occurs, the lender forecloses or otherwise takes possession of the borrower's property (generally the borrower's home or automobile). In other cases, the lender may use the threat of foreclosure or repossession to induce duress on the borrower for payment. Typically, predatory lending involves at least one, and perhaps all three, of the following elements:

1. making unaffordable loans based on the assets of the borrower rather than on the borrower's ability to repay an obligation
2. inducing a borrower to refinance a loan repeatedly in order to charge high points and fees each time the loan is refinanced (that is, "loan flipping")
3. engaging in fraud or deception to conceal the true nature of the loan obligation or ancillary products from an unsuspecting or unsophisticated borrower

Loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound. Such lending practices should be criticized in the examination report as imprudent. Further, examiners should refer any loans with the aforementioned characteristics to Federal Reserve consumer compliance/fair lending specialists for additional review.

2128.08.1.7 Capitalization

The Federal Reserve's minimum capital requirements generally apply to portfolios that exhibit substantially lower risk profiles than those that exist in subprime-loan programs. Therefore, these requirements may not be sufficient to reflect the risks associated with subprime portfolios.

Subprime-lending activities can present a greater-than-normal risk for financial institutions and the deposit insurance funds; therefore, the level of capital institutions need to support this activity should be commensurate with the additional risks incurred. Each subprime lender is responsible for quantifying the amount of capital needed to offset the additional risk in subprime-lending activities and for fully documenting the methodology and analysis supporting the amount specified.

The amount of additional capital necessary will vary according to the volume and type of subprime activities conducted and the adequacy of the institution's risk-management program.

An institution's overall capital adequacy will be evaluated on a case-by-case basis through on-site examinations and off-site monitoring procedures, considering, among other factors, the institution's own documented analysis of the capital needed to support subprime lending. Institutions that are determined to have insufficient capital must correct the deficiency within a reasonable time frame or be subject to supervisory action. In light of the higher risks associated with this type of lending, higher minimum-capital requirements may be imposed on institutions engaging in subprime lending.

The sophistication of this analysis should be commensurate with the size, concentration level, and relative risk of the institution's subprime-lending activities and should consider the following elements:

1. portfolio-growth rates
2. trends in the level and volatility of expected losses
3. the level of subprime-loan losses incurred over one or more economic downturns, if such data or analyses are available
4. the impact of planned underwriting or marketing changes on the credit characteristics of the portfolio, including the relative levels of risk of default, loss in the event of default, and the level of classified assets
5. any deterioration in the average credit quality over time due to adverse selection or retention
6. the amount, quality, and liquidity of collateral securing the individual loans
7. any asset, income, or funding-source concentrations
8. the degree of concentration of subprime credits
9. the extent to which current capitalization consists of residual assets or other potentially volatile components
10. the degree of legal or reputation risk associated with the subprime business lines pursued
11. the amount of capital necessary to support the institution's other risks and activities

Given the higher risk inherent in subprime-lending programs, examiners should reasonably expect, as a starting point, that an institution would hold capital against such portfolios in an amount that is *one and one-half to three times greater* than what is appropriate for non-subprime assets of a similar type. Refinements

should depend on the factors analyzed above, with particular emphasis on the trends in the level and volatility of loss rates, and on the amount, quality, and liquidity of collateral securing the loans. Institutions should have capital ratios that are well above the averages for their traditional peer groups or other similarly situated institutions that are not engaged in subprime lending.

Some subprime asset pools warrant increased supervisory scrutiny and monitoring, but not necessarily additional capital. For example, well-secured loans to borrowers who are slightly below what is considered prime quality may entail minimal additional risks compared with prime loans, and they may not require additional capital if adequate controls are in place to address the additional risks. On the other hand, institutions that underwrite higher-risk subprime pools, such as unsecured loans or high loan-to-value second mortgages, may need significantly higher levels of capital, perhaps as high as 100 percent of the loans outstanding, depending on the level and volatility of risk.

2128.08.1.7.1 Stress Testing

An institution's capital adequacy analysis should include stress testing as a tool for estimating unexpected losses in its subprime-lending pools. Institutions should project the performance of their subprime-loan pools under conservative stress-test scenarios, including an estimation of the portfolio's susceptibility to deteriorating economic, market, and business conditions. Portfolio stress testing should include "shock" testing of basic assumptions, such as delinquency rates, loss rates, and recovery rates on collateral. Stress tests should also consider other potentially adverse scenarios, such as changing attrition or prepayment rates; changing utilization rates for revolving products; changes in credit score distribution; and changes in the capital-market demand for whole loans or asset-backed securities supported by subprime loans. These are representative examples; actual factors will vary by product, market segment, and the size and complexity of the portfolio relative to the institution's overall operations. Whether stress tests are performed manually, or through automated modeling techniques, it is expected that—

1. the process is clearly documented, rational,

- and easily understood by the institution's board and senior management;
2. the inputs are reliable and relate directly to the subject portfolios (for example, baseline loss history or default probabilities should reflect each segment of the institution's portfolio and not just a blend of prime and subprime borrowers);
3. assumptions are well documented and conservative; and
4. any models are subject to a comprehensive validation process.

The results of the stress-test exercises should be a documented factor in the analysis and determination of capital adequacy for the subprime portfolios.

Institutions that engage in subprime-lending programs without adequate procedures to estimate and document the level of capital necessary to support their activities should be criticized. Where capital is deemed inadequate to support the risk in subprime-lending activities, examiners should consult with their Reserve Bank supervisory official to determine the appropriate course of action. Such actions may include requiring additional capital in accordance with the Federal Reserve's capital adequacy rules or requiring the institution to submit an acceptable capital plan in accordance with safety-and-soundness guidelines.

2128.08.1.8 Subprime-Lending Examiner Responsibilities

Using the interagency guidance and any supplemental Federal Reserve guidelines, examiners should assess carefully management's ability to administer the higher risk in subprime portfolios. The examiner should judge management's ability to manage the risk involved in the subprime-lending program, in particular, the quality of the risk-management and control processes in place, and more importantly, the extent to which management is adhering to those processes. When examiners determine that risk-management practices are deficient, they should criticize management and initiate corrective action. Such actions may include formal or informal enforcement actions or a plan to achieve adequate capitalization. When a primary supervisor determines that an institution's risk-management practices are materially deficient, the primary supervisor may instruct the institution to discontinue its subprime-lending programs.

2128.08.1.9 Appendix—Questions and Answers for Examiners Regarding the Expanded Guidance for Subprime-Lending Programs

To assist examiners who review subprime-lending activities, the following questions and answers were developed to provide additional guidance on the expanded interagency guidance that was issued on January 31, 2001.

2128.08.1.9.1 Applicability of the Guidance

Question 1: Does the guidance apply to all institutions?

No. The guidance will not affect the vast majority of insured institutions engaged in traditional consumer lending. The guidance applies to institutions that systematically target the subprime market through programs that employ tailored marketing, underwriting standards, and risk selection.

The guidance does not address traditional consumer lending that has historically been the mainstay of community banking. It does not apply to institutions extending credit to subprime borrowers as part of their standard community-lending process, or making loans to subprime borrowers as an occasional exception to a prime-lending program, even if the aggregate of these loans totals more than 25 percent of tier 1 capital. Such institutions continue to be subject to the normal supervisory process.

Institutions engaging in subprime-lending programs generally have knowingly and purposefully focused on the subprime-lending markets through planned business strategies, tailored products, and explicit borrower targeting. In instances where significant exposures to subprime borrowers are identified, examiners should consider the institution's marketing program, loan products, pricing, underwriting standards and practices, and portfolio performance to determine if the institution has a program that warrants the supervision and safeguards outlined in the guidance.

Question 2: Does the guidance apply when an institution offers a product that attracts a disproportionate number of subprime borrowers, but which the institution does not explicitly identify as subprime?

A subprime program commonly features products specifically tailored to borrowers with

weakened credit histories. Such products often differ substantially in pricing and terms from products offered to prime borrowers, and they usually have separate and distinctly different underwriting standards. An institution offering a product that attracts a disproportionate number of borrowers with weakened credit histories likely has a subprime program whether or not the activity is called a subprime program. The guidance will apply to these programs when the resultant aggregate credit exposure is at least 25 percent of the institution's tier 1 capital.

Institutions with significant programs are expected to have the necessary risk-management and internal-control systems in place to properly identify, measure, monitor, and control the inherent risks in their subprime portfolios. Risk management and controls for these programs typically involve enhanced performance monitoring, intensive collection activities, and other loss-mitigation strategies. If an institution systematically targets the subprime market but does not segregate these loans from its prime portfolio, it is doubtful that the institution has the necessary risk-management and control systems in place to safely engage in the activity.

2128.08.1.9.2 Subprime Characteristics

Question 3: Why does the Expanded Guidance for Subprime Lending Programs use a credit bureau risk score (FICO) of 660 as a cutoff point for subprime lending?

The guidance does not use credit scores, or any other single risk factor, as a definitive cutoff point for subprime lending. The characteristics listed are not explicit, bright-line definitions. The range of credit characteristics used to describe subprime borrowers is intended to help examiners identify lenders that are engaged in subprime-lending programs. These characteristics describe borrowers with varying, but significantly higher, probabilities of default than prime borrowers. The guidance states that "this list is illustrative rather than exhaustive and is not meant to define specific parameters for all borrowers."

A credit bureau score of 660 (FICO) is used only as an example to illustrate a credit score that generally indicates a higher default probability. The guidance indicates the probability of default, as evidenced by the credit score, will vary by product and collateral. The subprime

guidance lists several characteristics that denote a higher probability of default. Examiners are directed to use these characteristics as a starting point to expand their review of lending programs targeting subprime borrowers in accordance with risk-focused examination procedures. The severity of risk may vary significantly for the different characteristics listed, as well as for the type and quality of collateral. Examiners should take this into consideration when reviewing the portfolio and determining the adequacy of loan-loss reserves and capital.

The characteristics used in the guidance are well recognized in the investment and lending industries. A number of public debt rating agencies and financial institutions, including the government-sponsored enterprises (GSEs), use similar credit characteristics to differentiate risk among borrowers. Specific examples include the following:

1. Fitch defines a subprime borrower as "...one with a credit profile worse than that of a prime A quality borrower, whose credit report would typically reveal no recent mortgage delinquencies and whose credit profile would yield a credit score in the range above 680." Fitch's mortgage credit grade matrix lists the following credit-history elements for A- the highest subprime grade: one 30-day delinquency in the last 12 months on a mortgage debt; one 30-day delinquency in the last 24 months on installment debt, or two 30-day delinquencies in the last 24 months on revolving debt; bankruptcy in past five years; chargeoff or judgments exceeding \$500 in the past 24 months; and/or a debt-to-income ratio of 45 percent.¹⁰
2. Standard & Poor's subprime-mortgage underwriting guidelines define subprime A-characteristics as two or more 30-day delinquencies on mortgage and consumer credit, one 60-day delinquency on consumer credit, debt-to-income ratio of 45 percent, and no bankruptcy in the past five years. Standard & Poor's also "...considers subprime borrowers to have a FICO credit score of 659 or below."¹¹
3. Standard & Poor's has classified nonprime B auto securitization pools as having occa-

sional delinquencies and minor charge-offs on revolving debt, static pool net losses of 3.1 percent to 7.5 percent, and FICO credit scores ranging from 620–679.¹²

4. Freddie Mac has used the FICO score of 660 or below to designate higher-risk borrowers requiring more comprehensive review. Freddie Mac views a score in the 620–660 range as an indication that the "borrower's willingness to repay debt as agreed is uncertain." FICO scores below 620 are placed in the "cautious-review category," and Freddie Mac considers scores below 620 "as a strong indication that the borrower's credit reputation is not acceptable..."¹³

2128.08.1.9.3 Capital Guidance

Question 4: If an institution is engaged in subprime lending as described by the guidance, does the 1.5-to-3-times capital described in the guidance automatically apply?

No. The expanded interagency guidance on subprime lending is flexible examination guidance; the capital range does not automatically apply because the guidance is not a capital rule or regulation. Rather, the guidance describes an expectation that subprime lenders hold sufficient loan-loss reserves and capital to offset the additional risks that may exist in subprime activities. The agencies expect institutions to have methodologies and analyses in place to support and document the level of reserves and capital needed for the additional risks assumed. The higher the risk, the more reserves and capital needed to support the activity. Institutions with lower-risk subprime portfolios may not need additional reserves and capital. In addition, examiners are reminded that subprime lending is only one element in the evaluation of the institution's overall capital adequacy. If the analysis shows that the institution has adequate capital for all its assets and activities, including subprime lending, there is no additional capital requirement arising from the guidance.

Examiners are instructed not to unilaterally require additional reserves and capital based on the guidance. Any determination made by an examiner that an institution's reserves or capital are deficient will be discussed with the institu-

tion's management and with each agency's appropriate supervisory office before a final decision is made.

Question 5: Are the regulatory expectations for higher capital levels consistent with capital levels supporting subprime assets outside the insured banking industry?

Yes. The regulatory expectations of higher capital maintenance are consistent with expectations in the capital markets. The 1.5-to-3-times-capital multiple is risk based, for example, the level of additional capital varies by relative loan quality and is applied only to the subprime portfolio, not the institution's entire asset structure. This is consistent with the financial marketplace's assessment of relative risk in subprime assets outside the banking industry. For example, the amount of credit enhancement required for subprime securitization structures varies according to the level and volatility of perceived credit risk in the underlying assets. In addition, publicly traded subprime-finance companies (that are not currently suffering from adverse ratings) maintain equity-capital-to-managed-asset ratios that are 1.5 to as much as 6 times (depending on loan type and relative quality) those of finance companies that do not specialize in subprime loans.

2128.08.2 INSPECTION OBJECTIVES

1. To assess and evaluate the extent of subprime-lending activities; whether management has adequately planned for these activities; and whether management has developed and maintains board-approved policies and procedures, systems, and internal controls that identify, measure, monitor, and control the additional risks in a manner that is commensurate with the risks associated with the subprime-lending program.
2. To conduct portfolio-level reviews and transaction-level testing of the subprime-lending activities, assessing the quality and performance of the subprime-loan portfolios and subprime-lending program, including its profitability, delinquency, and potential and actual loss experience.
3. To assess the adequacy of the ALLL for the subprime-loan portfolio.

2128.08.3 INSPECTION PROCEDURES

1. Determine whether the subprime-lending activities are consistent with the bank hold

ing company's overall business strategy and risk tolerances, and that critical business risks have been identified and considered.

2. Assess whether the bank holding company has the financial capacity, including capital adequacy, to conduct the high-risk activity of subprime lending safely, without any undue concentrations of credit.
3. Ascertain if management has committed the necessary resources, including, in particular, technology and skilled personnel, to manage and control the risks associated with the volume and complexity of the bank holding company's subprime-lending programs.
4. Determine whether the bank holding company's contingency plans (including those of its banking and nonbanking subsidiaries) are adequate to address alternative funding sources, including back-up purchasers of any subprime loan-backed securities issued by the bank holding company or of the attendant servicing functions, and methods of raising additional capital during an economic downturn or when financial markets become volatile.
5. Determine if management has established adequate lending standards that are appropriate for the size and complexity of the bank holding company's operations, including those of its subsidiaries, and if management is maintaining proper controls over the program. (See in section 2128.08.1.1 for the lending standards that should be included in the subprime-loan program.)
6. Incorporate the results of the loan-administration portfolio-level and transaction-level testing reviews into the conclusions about overall asset quality, the adequacy of the ALLL and capital, and the adequacy of portfolio risk-management practices.
7. Review securitization transactions for compliance with FAS 140 and this guidance, including whether the bank holding company and its subsidiaries have provided any support to maintain the credit quality of loan pools they have securitized.
8. Evaluate the ALLL and regulatory capital allocated to support subprime-lending programs, including whether the total protection for subprime-asset programs and the levels for each component are adequate.
9. Ascertain that a sound risk-management program exists that includes the ability of

- management to determine and quantify appropriate levels for each component of the program.
10. Evaluate the bank holding company's documented analysis of the capital needed to support its subprime-lending activities. Ascertain whether the capital levels are risk sensitive, that is, does allocated capital reflect the level and variability of loss estimates within reasonably conservative parameters? Determine if there is a direct link between the expected loss rates used to determine the required ALLL and the unexpected loss estimates used to determine capital. Document and reference the bank holding company's overall subprime capital evaluation in the inspection comments and conclusions regarding capital adequacy.
 11. Analyze the performance of the subprime-lending program, including its profitability, delinquency, and loss experience.
 12. Consider management's response to adverse performance trends, such as higher-than-expected prepayments, delinquencies, charge-offs, customer complaints, and expenses.
 13. Determine if the bank holding company's subprime-lending program effectively manages the credit, market, liquidity, reputational, operational, and legal risks associated with subprime-lending operations.
 14. Classify loans of the parent bank holding company and its nonbank subsidiaries according to the following criteria:
 - a. Classify as substandard loans to borrowers that do not have the capacity to service their loans.
 - b. Classify as at least substandard subprime loans that are 90 days or more past due based on a reasonable presumption that their past-due status indicates an inadequate capacity or unwillingness to repay.
 - c. Consider classifying or criticizing the entire portfolio or segments of the portfolio when the portfolio review or loan sample indicates serious concerns with credit-risk-selection practices, underwriting standards, or loan quality.
 - d. Classify as substandard high-risk unsecured loan portfolios or secured high loan-to-value loans to borrowers who clearly exhibit inadequate capacity to repay the debt in a reasonable time frame.
 15. Report as unsafe and unsound imprudent loans to borrowers who do not demonstrate the capacity to repay the loan, as structured, from sources other than the pledged collateral.
 16. Carefully assess the ability of the parent bank holding company's board of directors and management to oversee and administer the higher risk in subprime portfolios, including those of its nonbank subsidiaries. If risk-management practices are deficient, criticize management and reach specific agreements with the board of directors and senior management to initiate corrective action.

Elevated-Risk Complex Structured Finance Activities (Risk Management and Internal Controls) Section 2128.09

When a financial institution participates in a complex structured finance transaction (CSFT), it bears the usual market, credit, and operational risks associated with the transaction.¹ In some circumstances, a financial institution may also face heightened legal or reputational risks due to its involvement in a CSFT. For example, a financial institution may face heightened legal or reputational risks if a customer's regulatory, tax, or accounting treatment for a CSFT, or disclosures to investors concerning the CSFT in the customer's public filings or financial statements, do not comply with applicable laws, regulations, or accounting principles.

The agencies have long expected financial institutions to develop and maintain robust control infrastructures that enable them to identify, evaluate, and address the risks associated with their business activities.² Financial institutions must also conduct their activities in accordance with applicable statutes and regulations. Therefore, financial institutions engaged in CSFTs are expected to have policies and procedures that are designed to allow the institution to effectively manage and address the full range of risks associated with its CSFT activities, including the elevated legal or reputational risks that may arise in connection with certain CSFTs. The agencies continue to believe that this is important.

This section sets forth the Interagency Statement on Sound Practices Concerning Elevated-Risk Complex Structured Finance Activities, issued January 11, 2007. The supervisory guidance addresses risk-management principles that should assist institutions to identify, evaluate, and manage the heightened legal and reputational risks that may arise from their involvement in CSFTs. The guidance is focused on those CSFTs that may present heightened levels of legal or reputational risk to the institution and are defined as "elevated-risk CSFTs." Such transactions are typically conducted by a limited number of large financial institutions.³ (See

SR-07-05 and 72 *Fed. Reg.* 1,372, January 11, 2007.)

2128.09.1 INTERAGENCY STATEMENT ON SOUND PRACTICES CONCERNING ELEVATED-RISK COMPLEX STRUCTURED FINANCE ACTIVITIES

Financial markets have grown rapidly over the past decade, and innovations in financial instruments have facilitated the structuring of cash flows and allocation of risk among creditors, borrowers, and investors in more efficient ways.

Financial derivatives for market and credit risk, asset-backed securities with customized cash-flow features, specialized financial conduits that manage pools of assets, and other types of structured finance transactions serve important business purposes, such as diversifying risks, allocating cash flows, and reducing cost of capital. As a result, structured finance transactions have become an essential part of U.S. and international capital markets. Financial institutions have played and continue to play an active and important role in the development of structured finance products and markets, including the market for the more complex variations of structured finance products.

When a financial institution participates in a complex structured finance transaction (CSFT), it bears the usual market, credit, and operational risks associated with the transaction. In some circumstances, a financial institution may also face heightened legal or reputational risks due to its involvement in a CSFT. For example, in some circumstances, a financial institution may face heightened legal or reputational risk if a customer's regulatory, tax, or accounting treatment for a CSFT, or disclosures to investors concerning the CSFT in the customer's public filings or financial statements, do not comply with applicable laws, regulations, or accounting principles. Indeed, in some instances, CSFTs have been used to misrepresent a customer's financial condition to investors, regulatory authorities, and others. In these situations, investors have been harmed and financial institutions have incurred significant legal and reputational exposure. In addition to legal risk, reputational

ity of financial institutions, including most small institutions.

1. The term *financial institutions* is not limited to federally insured depository institutions. It refers broadly to bank holding companies (other than foreign banks), national banks, state banks, federal and state savings associations, savings and loan holding companies, U.S. branches and agencies of foreign banks, and SEC-registered broker-dealers and investment advisors.

2. The agencies are the Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), the Office of Thrift Supervision (OTS), and the Securities and Exchange Commission (SEC).

3. The statement will not affect or apply to the vast major-

risk poses a significant threat to financial institutions because the nature of their business requires them to maintain the confidence of customers, creditors, and the general marketplace.

The agencies have long expected financial institutions to develop and maintain robust control infrastructures that enable them to identify, evaluate, and address the risks associated with their business activities. Financial institutions must also conduct their activities in accordance with applicable statutes and regulations.

2128.09.2 SCOPE AND PURPOSE OF STATEMENT

This statement was issued to describe the types of risk-management principles that the agencies believe may help a financial institution to identify CSFTs that may pose heightened legal or reputational risks to the institution and to evaluate, manage, and address these risks within the institution's internal control framework.⁴

Structured finance transactions encompass a broad array of products with varying levels of complexity. Most structured finance transactions, such as standard public mortgage-backed securities transactions, public securitizations of retail credit cards, asset-backed commercial paper conduit transactions, and hedging-type transactions involving "plain vanilla" derivatives and collateralized loan obligations, are familiar to participants in the financial markets, and these vehicles have a well-established track record. These transactions typically would not be considered CSFTs for the purpose of this statement.

Because this statement focuses on sound practices related to CSFTs that may create heightened legal or reputational risks—transactions that typically are conducted by a limited number of large financial institutions—it will not affect or apply to the vast majority of financial institutions, including most small insti-

tutions. As in all cases, a financial institution should tailor its internal controls so that they are appropriate in light of the nature, scope, complexity, and risks of its activities. Thus, for example, an institution that is actively involved in structuring and offering CSFTs that may create heightened legal or reputational risk for the institution should have a more formalized and detailed control framework than an institution that participates in these types of transactions less frequently. The internal controls and procedures discussed in this statement are not all inclusive, and, in appropriate circumstances, an institution may find that other controls, policies, or procedures are appropriate in light of its particular CSFT activities.

Because many of the core elements of an effective control infrastructure are the same regardless of the business line involved, this statement draws heavily on controls and procedures that the agencies previously have found to be effective in assisting a financial institution to manage and control risks and identifies ways in which these controls and procedures can be effectively applied to elevated-risk CSFTs. Although this statement highlights some of the most significant risks associated with elevated-risk CSFTs, it is not intended to present a full exposition of all risks associated with these transactions. Financial institutions are encouraged to refer to other supervisory guidance prepared by the agencies for further information concerning market, credit, operational, legal, and reputational risks, as well as internal audit and other appropriate internal controls.

This statement does not create any private rights of action and does not alter or expand the legal duties and obligations that a financial institution may have to a customer, its shareholders, or other third parties under applicable law. At the same time, adherence to the principles discussed in this statement would not necessarily insulate a financial institution from regulatory action or any liability the institution may have to third parties under applicable law.

2128.09.3 IDENTIFICATION AND REVIEW OF ELEVATED-RISK COMPLEX STRUCTURED FINANCE TRANSACTIONS

A financial institution that engages in CSFTs should maintain a set of formal, written, firm-wide policies and procedures that are designed to allow the institution to identify, evaluate, assess, document, and control the full range of credit, market, operational, legal, and reputa-

4. As used in this statement, the term *financial institution* or *institution* refers to state member banks and bank holding companies (other than foreign banking organizations) in the case of the FRB, national banks in the case of the OCC, federal and state savings associations and savings and loan holding companies in the case of the OTS, state nonmember banks in the case of the FDIC, and registered broker-dealers and investment advisors in the case of the SEC. The U.S. branches and agencies of foreign banks supervised by the FRB, the OCC, and the FDIC also are considered to be financial institutions for purposes of this statement.

tional risks associated with these transactions. These policies may be developed specifically for CSFTs or included in the set of broader policies governing the institution generally. A financial institution operating in foreign jurisdictions may tailor its policies and procedures as appropriate to account for, and comply with, the applicable laws, regulations, and standards of those jurisdictions.⁵

Financial institution's policies and procedures should establish a clear framework for the review and approval of individual CSFTs. These policies and procedures should set forth the responsibilities of the personnel involved in the origination, structuring, trading, review, approval, documentation, verification, and execution of CSFTs. Financial institutions may find it helpful to incorporate the review of new CSFTs into their existing new product policies. In this regard, a financial institution should define what constitutes a "new" complex structured finance product and establish a control process for the approval of such new products. In determining whether a CSFT is new, a financial institution may consider a variety of factors, including whether it contains structural or pricing variations from existing products; whether the product is targeted at a new class of customers; whether it is designed to address a new need of customers; whether it raises significant new legal, compliance, or regulatory issues; and whether it or the manner in which it would be offered would materially deviate from standard market practices. An institution's policies should require new complex structured finance products to receive the approval of all relevant control areas that are independent of the profit center before the product is offered to customers.

2128.09.3.1 Identifying Elevated-Risk CSFTs

As part of its transaction and new product approval controls, a financial institution should establish and maintain policies, procedures, and systems to identify elevated-risk CSFTs. Because of the potential risks they present to the institution, transactions or new products identi-

fied as elevated-risk CSFTs should be subject to heightened reviews during the institution's transaction or new product approval processes. Examples of transactions that an institution may determine warrant this additional scrutiny are those that (either individually or collectively) appear to the institution during the ordinary course of its transaction approval or new product approval process to—

1. lack economic substance or business purpose;
2. be designed or used primarily for questionable accounting, regulatory, or tax objectives, particularly when the transactions are executed at year end or at the end of a reporting period for the customer;
3. raise concerns that the client will report or disclose the transaction in its public filings or financial statements in a manner that is materially misleading or inconsistent with the substance of the transaction or applicable regulatory or accounting requirements;
4. involve circular transfers of risk (either between the financial institution and the customer or between the customer and other related parties) that lack economic substance or business purpose;
5. involve oral or undocumented agreements that, when taken into account, would have a material impact on the regulatory, tax, or accounting treatment of the related transaction, or the client's disclosure obligations;⁶
6. have material economic terms that are inconsistent with market norms (for example, deep "in the money" options or historic rate roll-overs); or
7. provide the financial institution with compensation that appears substantially disproportionate to the services provided or investment made by the financial institution or to the credit, market, or operational risk assumed by the institution.

The examples listed previously are provided for illustrative purposes only, and the policies and procedures established by financial institutions may differ in how they seek to identify elevated-risk CSFTs. The goal of each institu-

5. In the case of U.S. branches and agencies of foreign banks, these policies, including management, review, and approval requirements, should be coordinated with the foreign bank's group-wide policies developed in accordance with the rules of the foreign bank's home country supervisor and should be consistent with the foreign bank's overall corporate and management structure as well as its framework for risk management and internal controls.

6. This item is not intended to include traditional, non-binding "comfort" letters or assurances provided to financial institutions in the loan process where, for example, the parent of a loan customer states that the customer (that is, the parent's subsidiary) is an integral and important part of the parent's operations.

tion's policies and procedures, however, should remain the same: to identify those CSFTs that warrant additional scrutiny in the transaction or new product approval process due to concerns regarding legal or reputational risks.

Financial institutions that structure or market, act as an advisor to a customer regarding, or otherwise play a substantial role in a transaction may have more information concerning the customer's business purpose for the transaction and any special accounting, tax, or financial disclosure issues raised by the transaction than institutions that play a more limited role. Thus, the ability of a financial institution to identify the risks associated with an elevated-risk CSFT may differ depending on its role.

2128.09.3.2 Due-Diligence, Approval, and Documentation Process for Elevated-Risk CSFTs

Having developed a process to identify elevated-risk CSFTs, a financial institution should implement policies and procedures to conduct a heightened level of due diligence for these transactions. The financial institution should design these policies and procedures to allow personnel at an appropriate level to understand and evaluate the potential legal or reputational risks presented by the transaction to the institution and to manage and address any heightened legal or reputational risks ultimately found to exist with the transaction.

2128.09.3.2.1 *Due Diligence*

If a CSFT is identified as an elevated-risk CSFT, the institution should carefully evaluate and take appropriate steps to address the risks presented by the transaction with a particular focus on those issues identified as potentially creating heightened levels of legal or reputational risk for the institution. In general, a financial institution should conduct the level and amount of due diligence for an elevated-risk CSFT that is commensurate with the level of risks identified. A financial institution that structures or markets an elevated-risk CSFT to a customer, or that acts as an advisor to a customer or investors concerning an elevated-risk CSFT, may have additional responsibilities under the federal securities laws, the Internal Revenue Code, state fiduciary laws or other laws or regulations and, thus, may have

greater legal and reputational risk exposure with respect to an elevated-risk CSFT than a financial institution that acts only as a counterparty for the transaction. Accordingly, a financial institution may need to exercise a higher degree of care in conducting its due diligence when the institution structures or markets an elevated-risk CSFT or acts as an advisor concerning such a transaction than when the institution plays a more limited role in the transaction.

To appropriately understand and evaluate the potential legal and reputational risks associated with an elevated-risk CSFT that a financial institution has identified, the institution may find it useful or necessary to obtain additional information from the customer or to obtain specialized advice from qualified in-house or outside accounting, tax, legal, or other professionals. As with any transaction, an institution should obtain satisfactory responses to its material questions and concerns prior to consummation of a transaction.⁷

In conducting its due diligence for an elevated-risk CSFT, a financial institution should independently analyze the potential risks to the institution from both the transaction and the institution's overall relationship with the customer. Institutions should not conclude that a transaction identified as being an elevated-risk CSFT involves minimal or manageable risks solely because another financial institution will participate in the transaction or because of the size or sophistication of the customer or counterparty. Moreover, a financial institution should carefully consider whether it would be appropriate to rely on opinions or analyses prepared by or for the customer concerning any significant accounting, tax, or legal issues associated with an elevated-risk CSFT.

2128.09.3.2.2 *Approval Process*

A financial institution's policies and procedures should provide that CSFTs identified as having elevated legal or reputational risk are reviewed and approved by appropriate levels of control and management personnel. The designated approval process for such CSFTs should include representatives from the relevant business line(s) and/or client management, as well as from appropriate control areas that are independent of the business line(s) involved in the transaction. The personnel responsible for approving

7. Of course, financial institutions also should ensure that their own accounting for transactions complies with applicable accounting standards, consistently applied.

an elevated-risk CSFT on behalf of a financial institution should have sufficient experience, training, and stature within the organization to evaluate the legal and reputational risks, as well as the credit, market, and operational risks to the institution.

The institution's control framework should have procedures to deliver the necessary or appropriate information to the personnel responsible for reviewing or approving an elevated-risk CSFT to allow them to properly perform their duties. Such information may include, for example, the material terms of the transaction, a summary of the institution's relationship with the customer, and a discussion of the significant legal, reputational, credit, market, and operational risks presented by the transaction.

Some institutions have established a senior management committee that is designed to involve experienced business executives and senior representatives from all of the relevant control functions within the financial institution (including such groups as independent risk management, tax, accounting, policy, legal, compliance, and financial control) in the oversight and approval of those elevated-risk CSFTs that are identified by the institution's personnel as requiring senior management review and approval due to the potential risks associated with the transactions. While this type of management committee may not be appropriate for all financial institutions, a financial institution should establish processes that assist the institution in consistently managing the review and approval of elevated-risk CSFTs on a firmwide basis.⁸

If, after evaluating an elevated-risk CSFT, the financial institution determines that its participation in the CSFT would create significant legal or reputational risks for the institution, the institution should take appropriate steps to address those risks. Such actions may include declining to participate in the transaction or conditioning its participation upon the receipt of representations or assurances from the customer that reasonably address the heightened legal or reputational risks presented by the transaction. Any representations or assurances provided by a customer should be obtained before a transaction is executed and be received from, or approved by, an appropriate level of the customer's management. A financial institution should decline to participate in an elevated-risk CSFT if, after

conducting appropriate due diligence and taking appropriate steps to address the risks from the transaction, the institution determines that the transaction presents unacceptable risk to the institution or would result in a violation of applicable laws, regulations, or accounting principles.

2128.09.3.2.3 Documentation

The documentation that financial institutions use to support CSFTs is often highly customized for individual transactions and negotiated with the customer. Careful generation, collection, and retention of documents associated with elevated-risk CSFTs are important control mechanisms that may help an institution monitor and manage the legal, reputational, operational, market, and credit risks associated with the transactions. In addition, sound documentation practices may help reduce unwarranted exposure to the financial institution's reputation.

A financial institution should create and collect sufficient documentation to allow the institution to—

1. Document the material terms of the transaction,
2. Enforce the material obligations of the counterparties,
3. Confirm that the institution has provided the customer any disclosures concerning the transaction that the institution is otherwise required to provide, and
4. Verify that the institution's policies and procedures are being followed and allow the internal audit function to monitor compliance with those policies and procedures.

When an institution's policies and procedures require an elevated-risk CSFT to be submitted for approval to senior management, the institution should maintain the transaction-related documentation provided to senior management as well as other documentation, such as minutes of the relevant senior management committee, that reflect senior management's approval (or disapproval) of the transaction, any conditions imposed by senior management, and the factors considered in taking such action. The institution should retain documents created for elevated-risk CSFTs in accordance with its record retention policies and procedures as well as applicable statutes and regulations.

8. The control processes that a financial institution establishes for CSFTs should take account of, and be consistent with, any informational barriers established by the institution to manage potential conflicts of interest, insider trading, or other concerns.

2128.09.3.3 Other Risk-Management Principles for Elevated-Risk CSFTs

2128.09.3.3.1 *General Business Ethics*

The board and senior management of a financial institution also should establish a “tone at the top” through both actions and formalized policies that sends a strong message throughout the financial institution about the importance of compliance with the law and overall good business ethics. The board and senior management should strive to create a firm-wide corporate culture that is sensitive to ethical or legal issues as well as the potential risks to the financial institution that may arise from unethical or illegal behavior. This kind of culture coupled with appropriate procedures should reinforce business-line ownership of risk identification, and encourage personnel to move ethical or legal concerns regarding elevated-risk CSFTs to appropriate levels of management. In appropriate circumstances, financial institutions may also need to consider implementing mechanisms to protect personnel by permitting the confidential disclosure of concerns.⁹ As in other areas of financial institution management, compensation and incentive plans should be structured, in the context of elevated-risk CSFTs, so that they provide personnel with appropriate incentives to have due regard for the legal, ethical, and reputational risk interests of the institution.

2128.09.3.3.2 *Reporting*

A financial institution’s policies and procedures should provide for the appropriate levels of management and the board of directors to receive sufficient information and reports concerning the institution’s elevated-risk CSFTs to perform their oversight functions.

2128.09.3.3.3 *Monitoring Compliance with Internal Policies and Procedures*

The events of recent years evidence the need for an effective oversight and review program for

9. The agencies note that the Sarbanes-Oxley Act of 2002 requires companies listed on a national securities exchange or inter-dealer quotation system of a national securities association to establish procedures that enable employees to submit concerns regarding questionable accounting or auditing matters on a confidential, anonymous basis. (See 15 U.S.C. 78j-1(m).)

elevated-risk CSFTs. A financial institution’s program should provide for periodic independent reviews of its CSFT activities to verify and monitor that its policies and controls relating to elevated-risk CSFTs are being implemented effectively and that elevated-risk CSFTs are accurately identified and received proper approvals. These independent reviews should be performed by appropriately qualified audit, compliance, or other personnel in a manner consistent with the institution’s overall framework for compliance monitoring, which should include consideration of issues such as the independence of reviewing personnel from the business line. Such monitoring may include more frequent assessments of the risk arising from elevated-risk CSFTs, both individually and within the context of the overall customer relationship, and the results of this monitoring should be provided to an appropriate level of management in the financial institution.

2128.09.3.3.4 *Audit*

The internal audit department of any financial institution is integral to its defense against fraud, unauthorized risk taking, and damage to the financial institution’s reputation. The internal audit department of a financial institution should regularly audit the financial institution’s adherence to its own control procedures relating to elevated-risk CSFTs, and further assess the adequacy of its policies and procedures related to elevated-risk CSFTs. Internal audit should periodically validate that business lines and individual employees are complying with the financial institution’s standards for elevated-risk CSFTs and appropriately identifying any exceptions. This validation should include transaction testing for elevated-risk CSFTs.

2128.09.3.3.5 *Training*

An institution should identify relevant personnel who may need specialized training regarding CSFTs to be able to effectively perform their oversight and review responsibilities. Appropriate training on the financial institution’s policies and procedures for handling elevated-risk CSFTs is critical. Financial institution personnel involved in CSFTs should be familiar with the institution’s policies and procedures concerning elevated-risk CSFTs, including the processes established by the institution for identification and approval of elevated-risk CSFTs and new complex structured finance products and for the

elevation of concerns regarding transactions or products to appropriate levels of management. Financial institution personnel involved in CSFTs should be trained to identify and properly handle elevated-risk CSFTs that may result in a violation of law.

2128.09.4 CONCLUSION

Structured finance products have become an essential and important part of the U.S. and international capital markets, and financial institutions have played an important role in the development of structured finance markets. In

some instances, however, CSFTs have been used to misrepresent a customer's financial condition to investors and others, and financial institutions involved in these transactions have sustained significant legal and reputational harm. In light of the potential legal and reputational risks associated with CSFTs, a financial institution should have effective risk-management and internal control systems that are designed to allow the institution to identify elevated-risk CSFTs; to evaluate, manage, and address the risks arising from such transactions; and to conduct those activities in compliance with applicable law.

Banking organizations must establish and maintain sound risk-management policies and procedures and effective internal controls over their use of credit derivatives. Credit derivatives are off-balance-sheet financial instruments that are used to assume or lay off credit risk on loans and other assets, some only to a limited extent. They allow one party (the beneficiary) to transfer the credit risk of a “reference asset,” which it often actually owns, to another party (the guarantor).¹ This arrangement allows the guarantor party to assume the credit risk associated with the reference asset without directly purchasing it. Unlike traditional guarantee arrangements, credit-derivative transactions often are documented using master agreements developed by the International Swaps and Derivatives Association (ISDA) that are similar to those governing swaps or options. Since credit derivatives are privately negotiated financial contracts, they expose the user to credit risk as well as liquidity risk (thin secondary market for credit derivatives), operational risk (instruments used for speculation rather than hedging), counterparty risk (default), and legal risk (the contracts may be deemed illegal).

Banking organizations use credit-derivative instruments either as end-users, purchasing credit protection from or providing credit protection to third parties, or as dealers intermediating such protection. Credit derivatives are used to manage overall credit-risk exposure. A banking organization may use credit derivatives to mitigate its concentration to a particular borrower or industry without severing the customer relationship. In addition, organizations that are approaching established in-house limits on counterparty credit exposure could continue to originate loans to a particular industry, using credit derivatives to transfer the credit risk to a third party.

Banking organizations may also use credit derivatives to diversify their portfolios by assuming the associated credit exposures and revenue returns to different borrowers or industries without actually purchasing the underlying

assets. Nonbank companies may serve as counterparties to credit-derivative transactions with banks to gain access to the commercial bank loan market. Such entities may not lend or may not have the facilities or staff to adequately administer a loan portfolio.

Under some credit-derivative arrangements, a beneficiary may pay a fee to the guarantor in exchange for a guarantee against any loss that may occur, usually in excess of a prespecified amount, if the reference asset defaults (a “credit-default swap”). Alternatively, the beneficiary may pay the total return on a reference asset, including any appreciation in the asset’s price, to a guarantor in exchange for a spread over funding costs plus any depreciation in the value of the reference asset (a “total-rate-of-return swap”).

Credit derivatives and their market are likely to take on various forms, such as the market for put options on specific corporate bonds or loans. While the payoffs of these puts are expressed in terms of a strike price, rather than a default event, if the strike price is sufficiently high, credit risk effectively could be transferred from the buyer of the put to the writer of the put. See SR-96-17.

2129.0.1 SUPERVISORY AND EXAMINER GUIDANCE

In reviewing credit derivatives, examiners should consider the credit risk associated with the reference asset as the primary risk, as they do for loan participations or guarantees. A banking organization providing credit protection through a credit derivative may be as exposed to the credit risk of the reference asset as it would be if the asset were on its own balance sheet. Thus, for supervisory purposes, the exposure generally should be treated as if it were a letter of credit or other off-balance-sheet guarantee.² This treatment would apply, for example, in determining a banking organization’s overall credit exposure to a borrower for purposes of evaluating concentrations of credit. The overall exposure should include exposure it assumes

1. For purposes of this supervisory guidance, when the beneficiary owns the reference asset, it will be referred to as the “underlying” asset. However, in some cases, the reference asset and the underlying asset are not the same. For example, the credit-derivative contract may reference the performance of an ABC Company bond, while the beneficiary banking organization may actually own an ABC Company loan. The use of the term “guarantor” does not necessarily refer to a guarantor involving a suretyship contract. The transferred risk can be in a primary liability of the acquiring party that assumes the credit risk.

2. Credit derivatives that are based on a broad-based index, such as the Lehman Brothers Bond Index or the S&P 500 stock index, could be treated for capital and other supervisory purposes as a derivative contract. This determination should be made on a case-by-case basis.

by acting as a guarantor in a credit-derivative transaction where the borrower is the obligor of the reference asset.

Banking organizations providing credit protection through a credit derivative should hold capital and reserves against their exposure to the reference asset.³ This broad principle holds for all credit derivatives, except for credit-derivative contracts that incorporate periodic payments for depreciation or appreciation, including most total-rate-of-return swaps. For these transactions, the guarantor can deduct the amount of depreciation paid to the beneficiary from the notional amount of the contract in determining the amount of reference exposure subject to a capital charge.

In some cases (for example, total-rate-of-return swaps), the guarantor also is exposed to the credit risk of the counterparty, which for derivative contracts generally is measured as the replacement cost of the credit-derivative transaction plus an add-on for the potential future exposure of the derivative to market price changes. For banking organizations acting as dealers that have matching offsetting positions, the counterparty risk stemming from credit-derivative transactions could be the principal risk to which the dealer banks are exposed.

In reviewing a credit derivative entered into by a beneficiary banking organization, the examiner should review the organization's credit exposure to the guarantor, as well as to the reference asset—if the asset is actually owned by the beneficiary. The degree to which a credit derivative, unlike most other credit-guarantee arrangements, transfers the credit risk of an underlying asset from the beneficiary to the guarantor may be uncertain or limited. The degree of risk transference depends on the terms of the transaction. For example, some credit derivatives are structured so that a payout only occurs when a predefined event of default or a downgrade below a prespecified credit rating occurs.⁴ Others may require a payment only when a defined default event occurs *and* a predetermined materiality (or loss) threshold is exceeded. Default payments themselves may be based on an average of dealer prices for the reference asset during some period of time after

default using a prespecified sampling procedure or may be specified in advance as a set percentage of the notional amount of the reference asset. Finally, the term of many credit-derivative transactions is shorter than the maturity of the underlying asset and, thus, provides only temporary credit protection to the beneficiary.

Examiners must ascertain whether the amount of credit protection a beneficiary receives by entering into a credit derivative is sufficient to warrant treatment of the derivative as a guarantee for regulatory capital and other supervisory purposes. Those arrangements that provide virtually complete credit protection to the underlying asset will be considered effective guarantees for purposes of asset classification and risk-based capital calculations. On the other hand, if the amount of credit risk transferred by the beneficiary is severely limited or uncertain, then the limited credit protection provided by the derivative should not be taken into account for these purposes.

In this regard, examiners should carefully review credit-derivative transactions in which the reference asset is not identical to the asset actually owned by the beneficiary banking organization. For the derivative contract to be considered as providing effective credit protection, the examiner must review the arrangement and be satisfied that the reference asset is an appropriate proxy for the loan or other asset, whose credit exposure the banking organization intends to offset. To determine this, examiners should consider, among other factors, whether the reference asset and owned asset have the same obligor and seniority in bankruptcy and whether both contain mutual cross-default provisions.

A banking organization's management should not enter into credit-derivative transactions unless it has the ability to understand and manage the credit and other risks associated with these instruments in a safe and sound manner. Accordingly, examiners should determine the appropriateness of these instruments on an entity-by-entity basis, taking into account management's expertise in evaluating the instruments used; the adequacy of relevant policies, including position limits; and the quality of the banking organization's relevant information systems and internal controls.⁵

3. For guidance on risk-based capital treatment of credit derivatives, see section 4060.3.5.3.9.

4. It may also be necessary to review the credit documentation of the primary obligor to determine the degree of transferred risk.

5. For further guidance on examining the risk-management practices of banking organizations, including guidance on derivatives, that examiners may find helpful in reviewing an organization's management of its credit-derivative activity, see sections 2125.0, 2126.0, 2128.0, and 4070.1. See also the *Commercial Bank Examination Manual* and the *Trading and Capital-Markets Activities Manual*.

2129.0.2 TYPES OF CREDIT DERIVATIVES

The most widely used types of credit derivatives are credit-default swaps and total-rate-of-return (TROR) swaps.⁶ While the timing and structure of the cash flows associated with credit default and TROR swaps differ, the economic substance of both arrangements is that they seek to transfer the credit risk on the asset(s) referenced in the transaction.

6. Another less common form of credit derivative is the *credit-linked note*, which is an obligation that is based on a reference asset. Credit-linked notes are similar to structured notes with embedded credit derivatives. If there is a credit event, the repayment of the bond's principal is based on the price of the reference asset. A credit-linked note may be a combination of a regular bond and a credit option. The note can promise to make periodic interest payments and a large lump-sum payment when the bond matures. The credit option on the note may allow the issuer to reduce the note's payments if a primary financial indicator or variable deteriorates. When reviewing these transactions, examiners should consider the purchasing banking organization's exposure to the underlying reference asset as well as the exposure to the issuing entity.

2129.0.2.1 Credit-Default Swaps

The purpose of a credit-default swap is to provide protection against credit losses associated with a default on a specified reference asset. The swap purchaser (the beneficiary) "swaps" the credit risk with the provider of the swap (the guarantor). The transaction is very similar to a guarantee or financial standby letter of credit.

In a credit-default swap, illustrated in figure 1, the beneficiary (Bank A) agrees to pay to the guarantor (Bank B) a quarterly or annual fee, typically amounting to a certain number of basis points on the par value of the reference asset. In return, the guarantor agrees to pay the beneficiary an agreed-upon, market-based, post-default amount or a predetermined fixed percentage of the value of the reference asset if there is a default. The guarantor makes no payment until there is a default. A default is strictly defined in the contract to include, for example, bankruptcy, insolvency, or payment default, and the event of default itself must be publicly verifiable. The guarantor may not be obliged to

Figure 1
Credit-Default Swap Cash-Flow Diagram

make any payments to the beneficiary until a preestablished amount of loss has been exceeded in conjunction with a default event (called a materiality threshold).

The swap is terminated if the reference asset defaults before the maturity of the swap. The amount owed by the guarantor is the difference between the reference asset's initial principal (or notional) amount and the actual market value of the defaulted, reference asset. The methodology for establishing the post-default market value of the reference asset should be set out in the contract. Often, the market value of the defaulted reference asset may be determined by sampling dealer quotes. The guarantor may have the option to purchase the defaulted, underlying asset and pursue a workout with the borrower directly, an action it may take if it believes that the "true" value of the reference asset is higher than that determined by the swap-pricing mechanism. Alternatively, the swap may call for a fixed payment in the event of default, such as a percentage of the notional value of the reference asset.

2129.0.2.2 Total-Rate-of-Return Swaps

In a total-rate-of-return (TROR) swap, illustrated in figure 2, the beneficiary (Bank A) agrees to pay the guarantor (Bank B) the "total return" on the reference asset, which consists of all contractual payments, as well as any appreciation in the market value of the reference asset. To complete the swap arrangement, the guarantor agrees to pay LIBOR plus a spread and any depreciation to the beneficiary.⁷ Since it bears the risks and rewards of ownership over the term of the swap, the guarantor in a TROR swap could be viewed as having synthetic ownership of the reference asset.

At each payment-exchange date (including when the swap matures) or on default, at which-point the swap may terminate, any depreciation

7. The reference asset is often a floating-rate instrument, for example, a prime-based loan. Thus, if both sides of a TROR swap are based on floating rates, interest-rate risk is effectively eliminated with the exception of some basis risk.

Figure 2
Total-Rate-of-Return Swap Cash-Flow Diagram

or appreciation in the amortized value of the reference asset is calculated as the difference between the notional principal balance of the reference asset and the “dealer price.”⁸ The dealer price is generally determined either by referring to a market quotation source or by polling a group of dealers, and the price reflects changes in the credit profile of the reference obligor and reference asset.

If the dealer price is less than the notional amount of the contract (the hypothetical original price of the reference asset), then the guarantor must pay the difference to the beneficiary, absorbing any loss caused by a decline in the credit quality of the reference asset.⁹ Thus, a TROR swap differs from a standard direct credit substitute in that the guarantor is guaranteeing not only against default of the reference obligor, but also against a deterioration in that obligor’s credit quality, which can occur even if there is no default.

TROR swaps allow banking organizations to diversify credit risk and at the same time maintain confidentiality of their client’s financial records since the borrowing entity’s financial records are held by the originating lender. When the loans are sold, the records are transferred to the new acquiring lender. TROR swaps generally involve fewer administrative costs than those involved in a loan-sales transaction. Risk diversification can thus be achieved at a reduced cost.

2129.0.3 OTHER SUPERVISORY ISSUES

The decision to treat credit derivatives as guarantees could have significant supervisory implications for the way examiners treat concentration risk, classified assets, the adequacy of the allowance for loan and lease losses (ALLL),¹⁰ and transactions involving affiliates. Examples of how credit derivatives that effectively transfer credit risk could affect supervisory procedures are discussed below.

8. Depending on contract terms, a TROR swap may not terminate on default of the reference asset. Instead, payments would continue to be made on subsequent payment dates based on the reference asset’s post-default prices until the swap’s contractual maturity.

9. As in a credit-default swap, the guarantor may have the option of purchasing the underlying asset from the beneficiary at the dealer price and trying to collect from the borrower directly.

10. See sections 2010.7 and 2065.2.

2129.0.3.1 Credit Exposure

For internal purposes of managing credit risk, banking organizations are encouraged to develop policies to determine how credit-derivative activity will be used to manage credit exposures. For example, a banking organization’s internal credit policies may set forth situations in which it is appropriate to reduce credit exposure to an underlying obligor through credit-derivative transactions. Such policies need to address when credit exposure is effectively reduced and how all credit exposures will be monitored, including those resulting from credit-derivative activities.

2129.0.3.2 Concentrations of Credit

Concentrations of credit may be defined as—

- loans collateralized by a common security;
- loans to one borrower or related group of borrowers;
- loans that depend on a particular agricultural commodity;
- aggregate loans to major employers, their employees, and their major suppliers;
- loans within industry groups;
- out-of-territory loans;
- the aggregate amount of paper purchased from any one source; or
- those loans that often have been included in other homogeneous risk groupings.

Credit concentrations, by their nature, depend on common key factors, and when weaknesses develop, they have an adverse impact on each individual loan making up the concentration.¹¹ Generally, examiners should not consider a banking organization’s asset concentration to a particular borrower reduced because of the existence of a nongovernment guarantee on one of the borrower’s loans since the underlying concentration to the borrower still exists. However, examiners should consider how the banking organization manages the concentration, which could include the use of nongovernmental guarantees. Asset concentrations are to be listed in the confidential “Administrative and Other Matters” page D of the inspection report to highlight that the ultimate risk to the banking organization stems from these concentrations,

11. See sections 2010.2, 2010.7, and 2065.2.

although the associated credit risk may be mitigated by the existence of nongovernmental guarantees.

Any nongovernment guarantee will be included with other exposures to the guarantor to determine if there is an asset concentration with respect to the guarantor. Thus, the use of credit derivatives will increase the beneficiary's concentration exposure to the guarantor without reducing the concentration risk of the underlying borrower. Similarly, a guarantor banking organization's exposure to all reference assets will be included in its overall credit exposure to the reference obligor.

2129.0.3.3 Classification of Assets

The criteria used to classify assets are primarily based on their degree of risk and the likelihood of repayment, as well as on the potential effect of the assets on the bank's safety and soundness.¹² When evaluating the quality of a loan, examiners should review the overall financial condition of the borrower; the borrower's credit history; any secondary sources of repayment, such as guarantees; and other factors. The primary focus in the review of a loan's quality is the original source of payment. The assessment of the credit quality of a troubled loan, however, should take into account support provided by a "financially responsible guarantor."¹³

The protection that a credit derivative from a financially responsible guarantor provides on an underlying asset may be sufficient to preclude classification of the underlying asset or reduce the severity of classification. Sufficiency *depends on the extent of credit protection that is provided*. To be considered a guarantee for purposes of determining the classification of assets, a credit derivative must transfer the credit risk from the beneficiary to the financially responsible guarantor; the financially responsible guarantor must have *both* the financial capacity and willingness to provide support for the credit; the guarantee (the credit-derivative contract) must be legally enforceable; and the guarantee must provide support for repayment of the indebted-

ness, in whole or in part, during the remaining term of the underlying asset.

However, credit derivatives tend to have a shorter maturity than the underlying asset being protected. Furthermore, it is uncertain whether the credit derivative will be renewed once it matures. Thus, when determining whether to classify an underlying asset protected by a credit derivative, examiners need to consider the *term* of the credit derivative in relation to the maturity of the protected underlying asset, the probability that the protected underlying asset will default while the guarantee is in force, and whether the credit risk has actually been transferred. In general, the beneficiary banking organization continues to be exposed to the credit risk of the classified underlying asset when the maturity of the credit derivative is shorter than the underlying asset. Thus, in these situations of maturity mismatch, the examiner's presumption may be against a diminution of the severity of the underlying asset's classification.

For guarantor banking organizations, examiners should review the credit quality of individual reference assets in derivative contracts in the same manner as other credit instruments, such as standby letters of credit. Thus, examiners should evaluate a credit derivative in which a banking organization provides credit protection based on the overall financial condition and resources of the reference obligor; the obligor's credit history; and any secondary sources of repayment, such as collateral. As a rule, exposure from providing credit protection through a credit derivative should be classified if the reference asset is classified.¹⁴

2129.0.3.4 Transactions Involving Affiliates

Credit-derivative transactions can involve two or more legal entities (affiliates) within the same banking organization. Thus, transactions between or involving affiliates raise important supervisory issues, especially whether such arrangements are effective guarantees of affiliate obligations or transfers of assets and their related credit exposure between affiliates. Banking organizations should carefully consider existing supervisory guidance on interaffiliate

12. Loans that exhibit potential weaknesses are categorized as "substandard," while those with well-defined weaknesses and a distinct possibility of loss are either "doubtful" or "loss."

13. See section 5010.10 of this manual and section 2060.1 of the *Commercial Bank Examination Manual*.

14. A guarantor banking organization providing credit protection through the use of a credit derivative on a classified asset of a beneficiary bank may preclude classification of *its derivative contract* by laying off the risk exposure to another financially responsible guarantor. This could be accomplished through the use of a second offsetting credit-derivative transaction.

transactions before entering into credit-derivative arrangements involving affiliates, particularly when substantially the same objectives could be met using traditional guarantee instruments.

2129.0.4 INSPECTION OBJECTIVES

1. To determine if the banking organization is providing credit protection through a credit derivative.

2. To ascertain whether the banking organization has and maintains sound risk-management policies and procedures and effective internal controls over the use of credit derivatives.

3. To review and evaluate existing risk involving credit-derivative arrangements.

4. To ascertain whether adequate capital and reserves are held against exposures to reference assets, including whether risk-based capital computations have accounted for any additional risk resulting from derivative arrangements.

2129.0.5 INSPECTION PROCEDURES

1. Consider credit risk associated with reference assets as primary risks. Determine whether the credit-risk exposure is treated as if it was a letter of credit or other off-balance-sheet guarantee.

2. Review the organization's credit exposure to the guarantor, as well as to the reference asset. Determine if the asset is actually owned by the beneficiary.

3. Ascertain whether the amount of credit protection a beneficiary receives when entering into a credit derivative is sufficient to warrant treatment of the derivative as a guarantee for regulatory capital and other supervisory purposes.

4. Review credit-derivative transactions in which the reference asset is not identical to the asset actually owned by the beneficiary banking organization.

a. Ascertain if the reference asset is an appropriate proxy for loans or other assets

whose credit exposure the banking organization intends to offset.

b. Consider whether the reference asset and owned asset have the same obligor and seniority in bankruptcy and whether both contain mutual cross-default provisions.

5. Determine whether management has the ability to understand and manage the credit and other risks associated with credit derivatives in a safe and sound manner. Consider management's expertise in evaluating the instruments; the adequacy of relevant policies, including position limits; and the quality of the banking organization's relevant management information systems and internal controls.

6. Evaluate the management of a banking organization's asset concentration to a particular borrower, which could include the use of non-governmental guarantees on one or more of the borrower's loans. List the asset concentrations in the confidential "Administrative and Other Matters" page D of the inspection report.

7. Review the quality of loans and the overall financial condition of the borrower; the borrower's credit history; any secondary sources of repayment, such as financially responsible guarantors; and other factors.

8. When determining whether to classify an underlying asset protected by a credit derivative, compare the *term* of the credit derivative in relation to the maturity of the protected underlying asset, the probability that the protected underlying asset will default while the guarantee is in force, and whether the credit risk has actually been transferred.

9. For guarantor banking organizations, review the credit quality of individual reference assets in derivative contracts in the same manner as other credit instruments, such as standby letters of credit.

a. Evaluate a credit derivative in which a banking organization provides credit protection based on the overall financial condition and resources of the reference obligor; the obligor's credit history; and any secondary sources of repayment, such as collateral.

b. If the reference asset is classified, classify the exposure from providing credit protection through a credit derivative.

Banking organizations have substantially increased their secondary-market credit activities, such as loan syndications, loan sales and participations, credit derivatives, and asset securitizations, as well as the provision of credit enhancements and liquidity facilities to these types of transactions. These activities can enhance both credit availability and bank profitability, but managing the risks of these activities poses increasing challenges. The risks involved, while not new to banking, may be less obvious and more complex than the risks of traditional lending activities. Some secondary-market credit activities involve credit, liquidity, operational, legal, and reputational risks in concentrations and forms that may not be fully recognized by management or adequately incorporated in a banking organization's risk-management systems. In reviewing these activities, supervisors¹ and examiners should assess whether banking organizations fully understand and adequately manage the full range of the risks involved in secondary-market credit activities.

The heightened need for management attention to these risks is underscored by reports from examiners, surveys of senior lending officers, and discussions with trade and advisory groups. All of these individuals have indicated that competitive conditions over the past few years have encouraged an easing of credit terms and conditions in both commercial and consumer lending. In addition, indications are that some potential participants in loan syndications have found it necessary to make complex credit decisions within a much shorter time frame than has been customary. Although the recent easing may not be imprudent, the incentives and pressures to lower credit standards have increased as competition has intensified and borrowers have experienced generally favorable business and economic conditions. Supervisors and bank management alike should remain alert to the possibility that loan performance could deteriorate if certain sectors of the economy experience problems. The recent rise in consumer bankruptcies, credit card delinquencies, and credit charge-offs illustrates this concern. These types of developments could have significant implications for the risks associated with secondary-market credit activities.

This section identifies some of the important risks involved in several of the more common types of secondary-market credit activities.

Guidance is provided on sound practices, along with special considerations that supervisors should take into account in assessing the risk-management systems for these activities. A banking organization's failure to adequately understand the risks inherent in secondary-market credit activities and the failure to incorporate such risk within its risk-management systems and internal capital allocations may constitute an unsafe and unsound banking practice.

A fundamental principle is advanced in this guidance: Banking organizations should explicitly incorporate the full range of risks of their secondary-market credit activities into their overall risk-management systems.² In particular, supervisors and examiners should determine whether banking organizations are recognizing the risks of secondary-market credit activities by (1) adequately identifying, quantifying, and monitoring these risks; (2) clearly communicating the extent and depth of these risks in reports to senior management and the board of directors and in regulatory reports; (3) conducting ongoing stress testing to identify potential losses and liquidity needs under adverse circumstances; and (4) setting adequate minimum internal standards for allowances or liabilities for losses, capital, and contingency funding. Incorporating secondary-market credit activities into banking organizations' risk-management systems and internal capital adequacy allocations is particularly important. This guidance builds on, supports, and is fully consistent with existing guidance on risk management issued by the Federal Reserve.³

2. This guidance applies to the secondary-market credit activities conducted by state member banks, bank holding companies, Edge corporations, and U.S. branches and agencies of foreign banks. For this guidance, secondary-market credit activities include, but are not limited to, loan syndications, loan participations, loan sales and purchases, credit derivatives, asset securitizations, and both implied and direct credit enhancements that may support these or the related activities of the banking organization, its affiliates, or third parties. "Asset-securitization activities" refers to the issuance, underwriting, and servicing of asset-backed securities; the provision of credit or liquidity enhancements to securitized transactions; and investment in asset-backed securities.

3. For a more detailed discussion of risk management, see SR-04-18, "Bank Holding Company Rating System"; SR-03-4, "Risk Management and Valuation of Mortgage Servicing Assets Arising from Mortgage Banking Activities"; and SR-99-37, "Risk Management and Valuation of Retained Interests Arising from Securitization Activities"; SR-95-51

1. The term "supervisors" is intended to refer to Federal Reserve System staff.

Improvements in technology, greater standardization of lending products, and the use of credit enhancements have helped to increase dramatically the volume of loan syndications, loan sales, loan participations, asset securitizations, and credit guarantees undertaken by commercial banks, affiliates of bank holding companies, and some U.S. branches and agencies of foreign banks. In addition, the advent of credit derivatives permits banking organizations to trade credit risk, manage it in isolation from other types of risk, and maintain credit relationships while transferring the associated credit risk. Such developments have improved the availability of credit to businesses and consumers, allowed management to better tailor the mix of credit risk within loan and securities portfolios, and helped to improve overall bank profitability.

Certain credit and liquidity enhancements that banking organizations provide to facilitate various secondary-market credit activities can make the evaluation of their risks less straightforward than evaluating the risks involved in traditional on-balance-sheet banking activities. These enhancements, or guarantees, generally manifest themselves as recourse provisions; securitization structures that entail credit-linked early-amortization and collateral-replacement events; and direct-credit substitutes, such as letters of credit and subordinated interests that, in effect, provide credit support to secondary-market instruments and transactions.⁴

The transactions involving credit and liquidity enhancements tend to be complex and may expose the institutions extending them to hidden obligations that may not become evident until

the transactions have deteriorated. In substance, such activities move the credit risk off the balance sheet by shifting risks associated with traditional on-balance-sheet assets into off-balance-sheet contingent liabilities. Given the potential complexity and, in some cases, the indirect nature of these enhancements, the actual credit-risk exposure can be difficult to assess, especially in the context of traditional credit-risk limit, measurement, and reporting systems.

Moreover, many secondary-market credit activities involve new and compounded dimensions of reputational, liquidity, operational, and legal risks that are not readily identifiable and may be difficult to control. For example, recourse provisions and certain asset-backed security structures can give rise to significant reputational- and liquidity-risk exposures, and ongoing management of underlying collateral in securitization transactions can expose a banking organization to unique operating and legal risks.

For those banking organizations involved in providing credit enhancements in connection with loan sales and securitizations, and those banking organizations involved in credit derivatives and loan syndications, supervisors and examiners should assess whether the banking organization's systems and processes adequately identify, measure, monitor, and control *all* of the risks involved in the secondary-market credit activities. In particular, the risk-management systems employed should include the identification, measurement, and monitoring of these risks as well as an appropriate methodology for the internal allocation of capital and reserves. The stress testing conducted within the risk-measurement element of the management system should fully incorporate the risk exposures of these activities under various scenarios in order to identify their potential effect on a banking organization's liquidity, earnings, and capital adequacy. Moreover, management reports should adequately communicate to senior management and the board of directors the risks associated with these activities and the contingency plans that are in place to deal with adverse conditions. (See SR-97-21.)

2129.05.1 CREDIT RISKS IN SECONDARY-MARKET CREDIT ACTIVITIES

Banking organizations should be aware that the credit risk involved in many secondary-market credit activities may not always be obvious. For certain types of loan sales and securitization transactions, a banking organization may actu-

(as amended by SR-04-18), "Rating the Adequacy of Risk Management Processes and Internal Controls at State Member Banks and Bank Holding Companies"; SR-95-17, "Evaluating the Risk Management and Internal Controls of Securities and Derivative Contracts Used in Nontrading Activities"; SR-93-69, "Examining Risk Management and Internal Controls for Trading Activities of Banking Organizations"; and SR-90-16, "Implementation of Examination Guidelines for the Review of Asset Securitization Activities."

4. Examiners should also review SR-96-30, "Risk-Based Capital Treatment for Spread Accounts that Provide Credit Enhancement for Securitized Receivables." In addition, banking organizations have retained the risk of loss, that is, recourse, on sales and securitizations of assets when, in accordance with generally accepted accounting principles, they record on their balance sheets interest-only strips receivables or other assets that serve as credit enhancements. For more information, see Statement of Financial Accounting Standards No. 140, "Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities," and the instructions to the Reports of Condition and Income.

ally be exposed to essentially the same credit risk as it is in traditional lending activities, even though a particular transaction may, superficially, appear to have isolated the banking organization from any risk exposure. In such cases, removing an asset from the balance sheet may not result in a commensurate reduction in credit risk. Transactions that can give rise to this risk include loan sales with recourse; credit derivatives; direct-credit substitutes, such as letters of credit; liquidity facilities extended to securitization programs; and certain asset-securitization structures, such as the structure typically used to securitize credit card receivables.

2129.05.1.1 Loan Syndications

Recently, the underwriting standards of some syndications have been relaxed through the easing or elimination of certain covenants or the use of interest-only arrangements. Bank management should continually review syndication underwriting standards and pricing practices to ensure that they remain consistent over time with (1) the degree of risk associated with the activity and (2) the potential for unexpected economic developments to adversely affect borrower creditworthiness.

In some cases, potential participants in loan syndications have felt it necessary to make decisions to commit to the syndication within a shorter period of time than is customary. Supervisors and examiners should determine whether syndicate participants are performing their own independent credit analysis of the syndicated credit and should make sure participants are not placing undue reliance on the analysis of the lead underwriter or on commercial-loan credit ratings. Banking organizations should not feel pressured to make an irrevocable commitment to participate in a syndication until such an analysis is complete.

2129.05.1.2 Credit Derivatives

Credit derivatives are generally off-balance-sheet financial instruments⁵ that are used by banking organizations to assume or mitigate the credit risk of loans and other assets.⁶ Banking

organizations are increasingly employing these instruments, either as end-users, purchasing credit protection from—or providing credit protection to—third parties, or as dealers intermediating such protection. In reviewing credit derivatives, supervisors should consider the credit risk associated with the reference asset, as well as general market risk and the risk of the counterparty to the contract.

With respect to credit-derivative transactions in which banking organizations are mitigating the credit risk of their assets, supervisors and examiners should carefully review those situations in which the reference assets are not identical to the assets actually owned by the institutions. Supervisors should consider whether the reference asset is an appropriate proxy for the loan or the other asset whose credit exposure the banking organization intends to offset.

2129.05.1.3 Recourse Obligations, Direct-Credit Substitutes, and Liquidity Facilities

2129.05.1.3.1 Recourse Obligations

Partial, first-loss recourse obligations retained when selling assets, as well as the extension of partial credit enhancements (for example, 10 percent letters of credit), can be a source of concentrated credit risk by exposing institutions to the full amount of expected losses on the protected assets. For instance, the credit risk associated with whole loans or pools of assets that are sold to secondary-market investors can often be concentrated within the partial, first-loss recourse obligations retained by the banking organizations selling and securitizing the assets. In these situations, even though institutions may have reduced their exposure to catastrophic loss on the assets sold, they generally retain the same credit-risk exposure they would if they continued to hold the assets on their balance sheets.

2129.05.1.3.2 Direct-Credit Substitutes

Institutions also assume concentrated credit risk through the extension of partial direct-credit substitutes, such as the purchase of subordinated interests and the extension of letters of credit. For example, banking organizations that sponsor certain asset-backed commercial paper programs, or so-called remote-origination conduits, can be exposed to high degrees of credit risk

5. Credit-linked notes are on-balance-sheet instruments.

6. See SR-96-17, "Supervisory Guidance for Credit Derivatives," for a discussion of supervisory issues regarding credit derivatives, including the risk-based capital treatment of credit derivatives held in the banking book. SR-97-18, "Application of Market Risk Capital Requirements to Credit Derivatives," provides guidance on the risk-based capital treatment of credit derivatives held in the trading book.

even though it may seem that their notional exposure is minimal. Such a remote origination conduit lends directly to corporate customers referred to it by the sponsoring banking organization that used to lend directly to these same borrowers. The conduit funds this lending activity by issuing commercial paper that, in turn, is guaranteed by the sponsoring banking organization. The net result is that the sponsoring institution has much the same credit-risk exposure through this guarantee as it would if it had made the loans directly and held them on its books. However, this credit extension is an off-balance-sheet transaction, and the associated risks may not be fully reflected in the institution's risk-management system.

2129.05.1.3.3 Liquidity Facilities

Banking organizations that extend liquidity facilities to securitized transactions, particularly asset-backed commercial paper programs, may be exposed to high degrees of credit risk that may be subtly embedded within the facilities' provisions. Liquidity facilities are commitments to extend short-term credit to cover temporary shortfalls in cash flow. While all commitments embody some degree of credit risk, certain commitments extended to asset-backed commercial paper programs to provide liquidity may subject the extending institution to the credit risk of the underlying asset pool, often trade receivables, or to the credit risk of a specific company using the program for funding. Often the stated purpose of such liquidity facilities is to provide funds to the program to retire maturing commercial paper when a mismatch occurs in the maturities of the underlying receivables and the commercial paper, or when a disruption occurs in the commercial paper market. However, depending on the provisions of the facility—such as whether the facility covers dilution of the underlying receivable pool—credit risk can be shifted from the program's explicit credit enhancements to the liquidity facility.⁷ Such provisions may enable certain programs to fund riskier assets and yet maintain the credit rating on the program's commercial paper without increasing the program's credit-enhancement levels.

7. Dilution essentially occurs when the receivables in the underlying asset pool—before collection—are no longer viable financial obligations of the customer. For example, dilution can arise from returns of consumer goods or unsold merchandise by retailers to manufacturers or distributors.

2129.05.1.4 Asset-Securitization Structures

The structure of various securitization transactions can result in an institution's retaining the underlying credit risk in a sold pool of assets. An example of this contingent credit-risk retention is credit card securitizations in which the securitizing organization explicitly sells the credit card receivables to a master trust but, in substance, retains the majority of the economic risk of loss associated with the assets—because of the credit protection provided to investors by the excess yield, spread accounts, and structural provisions of the securitization. Excess yield provides the first level of credit protection that can be drawn upon to cover cash shortfalls between the principal and coupon owed to investors and the investors' pro rata share of the master trust's net cash flows. The excess yield is equal to the difference between the overall yield on the underlying credit card portfolio and the master trust's operating expenses.⁸ The second level of credit protection is provided by the spread account, which is essentially a reserve funded initially from the excess yield.

The structural provisions of credit card securitizations generally provide credit protection to investors through the triggering of early-amortization events. Such an event usually is triggered when the underlying pool of credit card receivables deteriorates beyond a certain point and requires that the outstanding credit card securities begin amortizing early to pay off investors before the prior credit enhancements are exhausted. As the early amortization accelerates the redemption of principal (paydown) on the security, the credit card accounts that were assigned to the master credit card trust return to the securitizing institution more quickly than had originally been anticipated, thus exposing the institution to liquidity pressures and any further credit losses on the returned accounts.

2129.05.2 REPUTATIONAL RISKS

The secondary-market credit activities of many institutions may expose them to significant reputational risks. Loan-syndication underwriting

8. The monthly excess yield is the difference between the overall yield on the underlying credit card portfolio and the master trust's operating expenses. It is calculated by subtracting from the gross portfolio yield the (1) coupon paid to investors; (2) charge-offs for that month; and (3) servicing fee, usually 200 basis points paid to the banking organization sponsoring the securitization.

may present significant reputational-risk exposure to lead underwriters because syndicate participants may seek to hold the lead underwriter responsible for actual or perceived inadequacies in the loan's underwriting, even though participants are responsible for conducting an independent due-diligence evaluation of each credit. Such risk may be compounded by the rapid growth of new investors in this market, usually nonbanks that may not have previously endured a downturn in the loan market.

There is the possibility that pressure may be brought to bear on the lead participant to repurchase portions of the syndication if the credit deteriorates in order to protect its reputation in the market, even though the syndication was sold without recourse. In addition, the deterioration of the syndicated credit exposes the lead organization to possible litigation, as well as increased operational and credit risk. One way to mitigate reputational risk in syndications is for banking organizations to know their customers and to determine whether syndication customers are in a position to conduct their own evaluation of the credit risks involved in the transaction.

Asset-securitization programs can also be a source of increasing reputational risk. Often, banking organizations sponsoring the issuance of asset-backed securities act as servicer, administrator, or liquidity provider in the securitization transaction. It is imperative that these institutions are aware of the potential losses and risk exposure associated with reputational risk. The securitization of assets whose performance has deteriorated may result in a negative market reaction that could increase the spreads on an institution's subsequent issuances. In order to avoid a possible increase in their funding costs, institutions have supported their securitization transactions by improving the performance of the securitized asset pool. This has been accomplished, for example, by selling discounted receivables or adding higher-quality assets to the securitized asset pool. Thus, an institution's voluntary support of its securitization in order to protect its reputation can adversely affect the sponsoring or issuing organization's earnings and capital.

Such methods of improving the credit quality of securitized asset pools have been used by banking organizations in providing voluntary support to their securitizations, especially for credit card master trusts. These actions generally are taken to avoid either a rating downgrade or an early amortization of the outstanding asset-backed securities.

2129.05.3 LIQUIDITY RISKS

The existence of recourse provisions in asset sales, the extension of liquidity facilities to securitization programs, and the early-amortization triggers of certain asset-securitization transactions can involve significant liquidity risk to institutions engaged in these secondary-market credit activities. Institutions should ensure that their liquidity contingency plans fully incorporate the potential risk posed by their secondary-market credit activities. With the issuance of new asset-backed securities, the issuing banking organization should determine the potential effect on its liquidity at the inception of each transaction and throughout the life of the securities to better ascertain its future funding needs.

An institution's contingency plans should consider the need to obtain replacement funding and specify the possible alternative funding sources, in the event of the amortization of outstanding asset-backed securities. This is particularly important for securitizations with revolving receivables, such as credit cards, when an early amortization of the asset-backed securities could unexpectedly return the outstanding balances of the securitized accounts to the issuing institution's balance sheet. An early amortization of a banking organization's asset-backed securities could impede its ability to fund itself—either through reissuance or other borrowings—since the institution's reputation with investors and lenders may be adversely affected.

2129.05.4 INCORPORATING THE RISKS OF SECONDARY-MARKET CREDIT ACTIVITIES INTO RISK MANAGEMENT

Supervisors should verify that an institution incorporates the risks involved in its secondary-market credit activities in its overall risk-management system. The system should entail (1) inclusion of risk exposures in reports to the institution's senior management and board to ensure proper management oversight; (2) adoption of appropriate policies, procedures, and guidelines to manage the risks involved; (3) appropriate measurement and monitoring of risks; and (4) assurance of appropriate internal controls to verify the integrity of the management process with respect to these activities. The formality and sophistication with which the

risks of these activities are incorporated into an institution's risk-management system should be commensurate with the nature and volume of its secondary-market credit activities. Institutions with significant activities in this area are expected to have more elaborate and formal approaches to manage the risk of their secondary-market credit activities.

2129.05.4.1 Board of Directors and Senior Management Responsibilities

Both the board of directors and senior management are responsible for ensuring that they fully understand the degree to which the organization is exposed to the credit, market, liquidity, operational, legal, and reputational risks involved in the institution's secondary-market credit activities. They are also responsible for ensuring that the formality and sophistication of the techniques used to manage these risks are commensurate with the level of the organization's activities. The board should approve all significant policies relating to the management of risk arising from secondary-market credit activities and should ensure that the risk exposures are fully incorporated in board reports and risk-management reviews.

Senior management is responsible for ensuring that the risks arising from secondary-market credit activities are adequately managed on both a short-term and long-run basis. Management should ensure that there are adequate policies and procedures in place for incorporating the risk of these activities into the overall risk-management process of the institution. Such policies should ensure that the economic substance of the risk exposures generated by these activities is fully recognized and appropriately managed. In addition, banking organizations involved in securitization activities should have appropriate policies, procedures, and controls with respect to underwriting asset-backed securities; funding the possible return of revolving receivables (for example, credit card receivables and home equity lines); and establishing limits on exposures to individual institutions, types of collateral, and geographic and industrial concentrations. Lead banking organizations in loan syndications should have policies and procedures in place that address whether or in what situations portions of syndications may be repurchased. Furthermore, banking organizations participating in a loan syndication should

not place undue reliance on the credit analysis performed by the lead organization. Rather, the participant should have clearly defined policies and procedures to ensure that it performs its own due diligence in analyzing the risks inherent in the transaction.

2129.05.4.2 Management Information and Risk-Measurement Systems

An institution's management information and risk-measurement systems should fully incorporate the risks involved in its secondary-market credit activities. Banking organizations must be able to identify credit exposures from all secondary-market credit activities and be able to measure, quantify, and control those exposures on a fully consolidated basis. The economic substance of the credit exposures of secondary-market credit activities should be fully incorporated into the institution's efforts to quantify its credit risk, including efforts to establish more-formal grading of credits to allow for statistical estimation of loss-probability distributions. Secondary-market credit activities should also be included in any aggregations of credit risk by borrower, industry, or economic sector.

It is particularly important that an institution's information systems can identify and segregate those credit exposures arising from the institution's loan-sale and securitization activities. Such exposures include the sold portions of participations and syndications, exposures arising from the extension of credit-enhancement and liquidity facilities, the effects of an early-amortization event, and the investment in asset-backed securities. The management reports should provide the board and senior management with timely and sufficient information to monitor the institution's exposure limits and overall risk profile.

2129.05.4.3 System of Internal Controls

One of management's most important responsibilities is establishing and maintaining an effective system of internal controls that, among other things, enforces the official lines of authority and the appropriate separation of duties in managing the risks of the institution. These internal controls must be suitable for the type and level of risks given the nature and scope of the institution's activities. Moreover, these internal controls should provide reasonable assurance of reliable financial reporting (in published financial reports and regulatory reports), includ-

ing adequate allowances or liabilities for expected losses.

2129.05.5 STRESS TESTING

The use of stress testing, including consideration of multiple market events that could affect a banking organization's credit exposures and securitization activities, is another important element of risk management. Stress testing involves identifying possible events or changes in market behavior that could have unfavorable effects on the institution and assessing the organization's ability to withstand them. Stress testing should not only consider the probability of adverse events, but also likely worst-case scenarios. Such an analysis should be done on a consolidated basis and consider, for instance, the effect of higher-than-expected levels of delinquencies and defaults, as well as the consequences of early-amortization events with respect to credit card securities that could raise concerns regarding the institution's capital adequacy and its liquidity and funding capabilities. Stress-test analyses should also include contingency plans regarding the actions management might take, given certain situations.

2129.05.6 CAPITAL ADEQUACY

As they do with all risk-bearing activities, institutions should fully support the risk exposures of their secondary-market credit activities with adequate capital. Banking organizations should ensure that their capital positions are sufficiently strong to support *all* of the risks associated with these activities on a fully consolidated basis and should maintain adequate capital in all affiliated entities engaged in these activities. The Federal Reserve's risk-based capital guidelines establish *minimum* capital ratios, and those banking organizations exposed to high or above-average degrees of risk are therefore expected to operate significantly above the minimum capital standards.

When evaluating capital adequacy, supervisors should ensure that banking organizations that sell assets with recourse, assume or mitigate credit risk through the use of credit derivatives, and provide direct-credit substitutes and liquidity facilities to securitization programs are (1) accurately identifying and measuring these exposures and (2) maintaining capital at aggregate levels sufficient to support the associated credit, market, liquidity, reputational, operational, and legal risks.

Supervisors and examiners should review the substance of secondary-market transactions when assessing underlying risk exposures. For example, partial, first-loss direct-credit substitutes providing credit protection to a securitization transaction can, in substance, involve much the same credit risk as that involved in holding the entire asset pool on the institution's balance sheet. Supervisors and examiners should ensure that banking organizations have implemented reasonable methods for allocating capital against the economic substance of credit exposures arising from early-amortization events and liquidity facilities associated with securitized transactions. Such facilities are usually structured as short-term commitments to avoid a risk-based capital requirement, even though the inherent credit risk may be approaching that of a guarantee.⁹

If, in the supervisor's judgment, an institution's capital level is not sufficient to provide protection against potential losses from such credit exposures, this deficiency should be reflected in the banking organization's CAMELS or RF/C(D) ratings. Furthermore, supervisors and examiners should discuss the capital deficiency with the institution's management and, if necessary, its board of directors. Such an institution will be expected to develop and implement a plan for strengthening the organization's overall capital adequacy to levels deemed appropriate given all the risks to which it is exposed.

2129.05.7 INSPECTION OBJECTIVES

1. To determine whether there are risk-management systems and whether they accurately identify all the risk exposures stemming from secondary-market activities.
2. To evaluate secondary-market credit activities and to determine if there has been a

⁹ For further guidance on distinguishing, for risk-based capital purposes, whether a facility is a short-term commitment or a direct-credit substitute, see SR-92-11, "Asset-Backed Commercial Paper Programs." Essentially, facilities that provide liquidity, but which also provide credit protection to secondary-market investors, are to be treated as direct-credit substitutes for purposes of risk-based capital. See section 2128.03 for a discussion of the limited risk-based capital risk-weighted assets exclusion of an asset-backed commercial paper (ABCP) program when the banking organization is the sponsor and must consolidate under GAAP its ABCP program that is defined as a variable interest entity. The amendment was approved by the Board on July 17, 2004 (effective September 30, 2004).

lowering of credit standards that could cause the institution's financial condition to deteriorate during less-favorable business and economic conditions.

3. To establish whether the institution's management system performs stress testing to evaluate the risk exposures of secondary-market credit activities under various scenarios and to evaluate the potential effect of the activities on the institution's liquidity, earnings, and capital adequacy.
4. To review the substance of the institution's secondary-market transactions, when assessing underlying risk exposures.
5. To ascertain whether liquidity contingency plans exist and to determine whether they fully incorporate the potential risk posed by secondary-market credit activities, including the need to obtain replacement funding.
6. To determine whether the board of directors is fully informed of the risks involved in secondary-market activities and whether it approves policies, controls, and procedures to control exposures arising from credit, liquidity, operational, legal, reputational, and other risks.
7. To determine whether the institution has a sufficiently strong capital position to support *all* the risk associated with secondary-market credit activities and that it has a capital plan for strengthening its overall capital adequacy position.
8. To ascertain whether there is an effective system of internal controls—focused on lines of authority and the separation of duties—to monitor and contain the risks associated with secondary-market activities.

2129.05.8 INSPECTION PROCEDURES

1. Determine whether the institution's senior management is recognizing the risk involved in secondary-market credit activities by—
 - a. determining if there is adequate identifying, quantifying, and monitoring of risk;
 - b. clearly communicating the extent and depth of those risks in discussions, presentations, and inspection reports that are delivered to the board of directors and senior officials of the institution;
 - c. presenting to the board of directors, for its approval, all significant policies relating to the risk management of secondary-market activities and the conditions under which a loan syndication can be purchased;
- d. determining whether management is conducting ongoing stress testing to identify potential losses and liquidity needs under adverse and worst-case scenarios; and
- e. making certain that senior management is setting adequate minimum internal standards for allowances or liabilities for losses, capital, and contingency funding.
2. Assess whether the institution's systems and processes adequately identify, measure, monitor, and control all of the risks involved in the institution's secondary-market credit activities.
3. Determine whether the various risks associated with secondary-market activities are incorporated into contingency plans, including replacement funding plans and identified alternative funding sources, to lessen the impact of those risks.
4. Establish whether there is an adequate and effective system of internal controls that enforces official lines of authority and the appropriate separation of duties in managing the risks associated with secondary-market activities.
5. Review loan-syndication contract agreements, underwriting documentation, and relevant correspondence with loan-syndication contractual parties to establish whether—
 - a. the bank holding company's management has performed adequate credit investigations and evaluations of the syndicate loans, the syndicate participants, and the extent of the BHC's credit-risk exposures;
 - b. the syndication customers are in a position to conduct their own investigations and evaluation of the credit risks involved in the transaction; and
 - c. undue reliance is placed on the lead underwriter, the participants, or on their commercial-loan credit ratings.
6. For credit derivatives—
 - a. analyze the credit risk associated with the reference asset, the general market risk, and the counterparty risk; and
 - b. determine, for those reference assets that are not identical assets actually owned, whether the reference asset is an appropriate proxy for the loan or other assets whose credit exposure is to be offset.
7. Review the substance of secondary-market transactions, when evaluating and analyzing underlying risk exposures.
8. Evaluate and determine that there are reasonable methods for internally allocating capital

against the economic substance of credit exposures that arise from amortization events and liquidity facilities associated with securitized transactions.

9. Incorporate the evaluation of potential risks and losses from credit exposures, including management deficiencies, into the institution's supervisory ratings.

2130.0.1 INTRODUCTION

Effective March 1, 1983, the Board issued an amended bank holding company policy statement entitled “Futures, Forward and Options on U.S. Government and Agency Securities and Money Market Instruments.” Bank holding companies are now required to furnish written notification to their District Federal Reserve Banks within 10 days after financial contract activities are begun by the parent or a nonbank subsidiary. The policy is consistent with the joint policy statement previously issued by the three federal bank regulators with regard to banks participating in financial contracts, and reflects the Board’s judgment that bank holding companies, as sources of strength for their subsidiary banks, should not take speculative positions in such activities.

If a bank holding company or nonbank subsidiary is taking or intends to take positions in financial contracts, that company’s board of directors should approve written policies and establish appropriate limitations to ensure that the activity is conducted in a safe and sound manner. Also, appropriate internal control and audit procedures should be in place to monitor the activity. The following discussion and inspection procedures apply to futures contract activity generally, but are intended to focus specifically on financial futures contracts. For a discussion of currency futures and options and the examination procedures for those instruments, see sections F and G in the Merchant and Investment Bank Examination Manual.

Information, instructions, and inspection procedures have been provided for verifying compliance with the Board’s policy statement. It is intended that the policy statement will ensure that contract activities are conducted in accordance with safe and sound banking practices. The task of evaluating BHC contract activities is the responsibility of System examiners. The following information and inspection procedures are intended to serve as a guide for Federal Reserve Bank staff in that effort.

2130.0.2 DEFINITIONS

Basis—Basis is defined as the difference between the futures contract price and the cash market price of the same underlying security, money market instrument, or commodity.

Call Option—A contract that gives the buyer (holder) the right, but not the obligation to buy

(call), a specified quantity of an underlying security, money market instrument or commodity at or before the stated expiration of the contract. At expiration, if the value of the option increases, the holder will exercise the option or close it at a profit. If the value of the option does not increase, the holder would probably let the option expire (or close it out at a profit) and, consequently, will lose the cost (premium paid) of (for) the option. Alternatively, the option may be sold prior to expiration.

Clearing Corporation—A corporation organized to function as the clearing house for an exchange. The clearing house registers, monitors, matches and guarantees trades on a futures market, and carries out financial settlement of futures transactions. The clearing house acts as the central counterparty to all trades executed on the exchange. It substitutes as a seller to all buyers and as a buyer to all sellers. In addition, the clearing corporation serves to insure that all contracts will be honored in the event of a counterparty default.

Clearing Member—A member firm of the clearing house or corporation. Membership in clearing associations or corporations is restricted to members of the respective commodity exchanges, but not all exchange members are clearing house members. All trades of a non-clearing member must be registered with, and eventually settled through, a clearing member.

Commodities Futures Trading Commission—The CFTC is a federal regulatory agency charged with regulation of futures trading in all commodities. It has broad regulatory authority over futures trading. It must approve all future contracts traded on U.S. commodity exchanges, ensure that the exchanges enforce their own rules (which it must review and approve), and direct an exchange to take any action needed to maintain orderly markets whenever it believes that an “emergency” exists.

Contract Activities—This term is used in this manual to refer to banking organization participation in the futures, forward, standby contract, or options markets to purchase and sell U.S. government and agency securities or money market instruments, foreign currencies and other financial instruments.

Convergence—The process by which the futures market price and the cash market price of a financial instrument or commodity converge as the futures contract approaches expiration.

Covered Call Options—This term refers to the issuance or sale of a call option where the option seller owns the underlying deliverable security or financial instrument.

Cross Hedging—The process of hedging a “cash” or derivative instrument position with another cash or derivative instrument that has significantly different characteristics. For example, an investor who wants to hedge the sales price of long-term corporate bonds might hedge by establishing a short position in a treasury bond or treasury bond futures contract, but since the corporate bonds cannot be delivered to satisfy the contract, the hedge would be a cross hedge. To be successful, the price movements of the hedged instrument must be highly correlated to that of the position being hedged.

Difference Check—A difference check is sent by the party which recognizes a loss when a forward contract is closed out by the execution of an offsetting forward contract pursuant to a pair-off clause. In essence, the difference check represents a net cash settlement on offsetting transactions between the same two parties and replaces a physical delivery and redelivery of the underlying securities pursuant to offsetting contracts.

Financial Contract—This term is used in the manual to refer to financial futures, forward, standby contracts, and options to purchase and sell U.S. government and agency securities, money market instruments, foreign currency futures and other financial instruments.

Firm Forward Contract—This term is used to describe a forward contract under which delivery of a security is mandatory. See “Standby Contract” for a discussion of optional delivery forward contracts.

Forward Contracts—Over-the-counter contracts for forward placement or delayed delivery of securities in which one party agrees to purchase and another to sell a specified security at a specified price for future delivery. Contracts specifying settlement in excess of 30 days following trade date shall be deemed to be forward contracts. Forward contracts are usually non-standardized and are not traded on organized exchanges, generally have no required margin payments, and can only be terminated by agreement of both parties to the transaction. The term also applies to derivative contracts such as swaps, caps, and collars.

Futures Contracts—Standardized contracts traded on organized commodity exchanges to purchase or sell a specified financial instrument

or commodity on a future date at a specified price. While futures contracts traditionally specified a deliverable instrument, newer contracts have been developed that are based on various indexes. Futures contracts based on indexes settle in cash and never result in delivery of an underlying instrument; some traditional contracts that formerly specified delivery of an underlying instrument have been redesigned to specify cash settlement. New financial futures contracts are continually being proposed and adopted for trading on various exchanges.

Futures Commission Merchant (FCM)—An FCM functions like a broker in securities. An FCM must register with the Commodities Futures Trading Commission (CFTC) in order to be eligible to solicit or accept orders to buy or sell futures contracts. The services provided by an FCM include a communications system for transmittal of orders, and may include research services, trading strategy suggestions, trade execution, and recordkeeping services.

Financial Futures Contracts—Standardized contracts traded on organized exchanges to purchase or sell a specified security, money market instrument, or foreign currency on a future date at a specified price on a specified date. Futures contracts on GNMA mortgage-backed securities and Treasury bills were the first interest rate futures contracts. Other financial futures contracts have been developed, including contracts on Eurodollars, currencies, and Euro-Rate differentials. It is anticipated that new and similar financial futures contracts will continue to be proposed and adopted for trading on various exchanges.

Futures Exchange—Under the Commodities Exchange Act (CEA), a “board of trade” designated by the Commodity Futures Trading Commission as a contract market. Trading occurs on the floor of the exchange and is conducted by open auction in designated trading areas.

GNMA or Ginnie Mae—Either term is used to refer to the Government National Mortgage Association. Ginnie Mae is a government corporation within the U.S. Department of Housing and Urban Development. In creating GNMA, Congress authorized it to grant a full faith and credit guaranty of the U.S. government to mortgage-backed securities issued by private sector organizations.

Hedge—The process of entering transactions that will protect against loss through compensatory price movement. A hedge transaction is one which reduces the organization’s overall level of risk.

Initial Futures Margin—In the futures market, a deposit held by an FCM on behalf of a

client against which daily gains and losses on futures positions are added or subtracted. A futures margin represents a good-faith deposit or performance bond to guarantee a participant's performance of contractual obligations.

Interest Rate Cap—A multi-period interest rate option for which the buyer pays the seller a fee to receive, at predetermined future times, the excess, if any, of a specified floating interest rate index above a specified fixed per annum rate (cap or strike rate). Caps can be sold separately or may be packaged with an interest rate swap.

Interest Rate Collar—the combination, in single contract, of a simultaneous sale of a cap and the purchase of a floor, or, a purchase of a cap and sale of a floor. The buyer of the collar is a buyer of a cap and the seller of a floor. By selling the floor, the collar buyer gives up the possibility of benefiting from a decline in interest rates below the strike rate in the floor component. On the other hand, the fee earned in selling the floor lowers the cost of protection against interest rate reversal.

Interest Rate Floor—is the reverse of an interest rate cap. The buyer pays a premium to obtain protection against a decline in interest rates below a specified level.

Long Contract—A financial contract to buy securities or money market instruments at a specified price on a specific future date.

Long Hedge—The long hedge, also called the *anticipatory hedge* is the process by which a market participant protects a cash or risk position by buying a futures or forward contract, i.e. taking a long financial contract position.

Maintenance Margin—Maintenance margin is the minimum level to which an equity position can decline as a result of a price decline before additional margin is required. In other words, it is the minimum margin which a customer must keep on deposit with a member at all times. Each futures contract has specified maintenance margin levels. A margin call is issued when a customer's initial margin balance falls below the maintenance margin level specified by the exchange. Maintenance margin must be satisfied by the deposit of cash or agreed upon cash equivalents. The amount of cash required is that amount which is sufficient to restore the account balance to the initial margin level.

Mandatory Delivery—See "Firm Forward Contract."

Mark-to-market—The process by which the carrying value (market value or fair value) of a financial instrument is revalued, and which is recognized as the generally accepted accounting principle for determining profit or loss on secu-

rities positions in proprietary trading and investment accounts. Futures positions are typically marked-to-market at the end of each trading session.

Naked Call Option—Refers to the issuance or sale of a call option where the option seller does not own the underlying deliverable security or instrument.

Open Interest—Refers to the number of futures contracts outstanding for a given delivery month in an individual futures contracts. The mechanics of futures trading require that for every open long futures contract there is an open short futures contract. For example, an open interest of 10,000 futures contracts means that there are 10,000 long contract holders and 10,000 short contract holders.

Options Contracts—Option contracts require that the buyer of the option pay the seller (or writer) of the option a premium for the right, but not the obligation, to exercise an option to buy (call option) or sell (put option) the instrument underlying the option at a stated price (strike or exercise price) on a stated date (European style option) or at any time before or on the stated expiration date (American style option). There are also exchange traded options contracts: (1) put and call options on futures contracts that are traded on commodities exchanges; and (2) put and call options that specify delivery of securities or money market instruments (or that are cash settled) that are traded on securities exchanges. The key economic distinction between options on futures and options on securities, is that the party who exercises an option on a futures contract receives a long or short futures position rather than accepting or making delivery of the underlying security or financial instrument.

Pair-Off Clause—A pair-off clause specifies that if the same two parties to a forward contract trade should subsequently execute an offsetting trade (e.g. a long contract against an outstanding short contract), settlement can be effected by one party sending the other party a difference check rather than having physical delivery and redelivery of securities.

Par Cap—This term refers to a provision in the contract of sale for Ginnie Mae mortgage-backed securities which restricts delivery only to pools which bear an interest rate sufficiently high so that the securities would trade at or below par when computed based on the agreed to yield.

Put Option—An option contract which gives

the holder the right, but not the obligation, to sell (put) a specified quantity of a financial instrument (money market) or commodity at a specified price on or before the stated expiration date of the contract. If price of the underlying instrument occurs, the purchaser will exercise or sell the option. If a decline in price of the underlying instrument does not occur, the option purchaser will let it expire and will lose only the cost (premium paid) of (for) the option.

Round Turn—Commissions for executing futures transactions are charged on a round turn basis. A round turn constitutes opening a futures position and closing it out with an offsetting contract, i.e. executing a short contract and closing out the position with a long contract or vice-versa.

Short Contract—A financial contract to sell securities or money market instruments at a specified price on a specified future date.

Short Hedge—The process by which a customer protects a cash or risk position by selling a futures or forward contract, i.e. taking a short financial contract position. The purpose of the short hedge is to lock in a selling price.

Standby Contract—Optional delivery forward contracts on U.S. government and agency securities arranged between securities dealers and customers that do not involve trading on organized exchanges. The buyer of a standby contract (put option) acquires, upon paying a fee, the right to sell securities to the other party at a stated price at a future time. The seller of a standby (the issuer) receives the fee, and must stand ready to buy the securities at the other party's option. See the fuller discussion of Standby Contracts under 2130.0.3.1.2)

TBA (To Be Announced) Trading—TBA is the abbreviation used in trading Ginnie Mae securities for forward delivery when the pool number of securities bought or sold is “to be announced” at a later date.

Variation Margin—is when, in very volatile markets, additional funds are required to be deposited to bring the account back to its initial margin level, while trading is in progress. Variation margin requires that the needed funds be deposited within the hour, or when reasonably possible. If the customer does not satisfy the variation or maintenance margin call(s), the futures position is closed. Unlike initial margin, variation margin must be in cash. Also refer to “Maintenance Margin”.

Weighted Hedge—a hedge that is used to compensate for a greater decline in the dollar

value of a cash bond as compared to a price decline of an accessible T-bond futures contract.

Yield Maintenance Contract—This is a forward contract written with terms which maintain the yield at a fixed rate until the delivery date. Such a contract permits the holder of a short forward contract to deliver a different coupon security at a comparable yield.

2130.0.3 FINANCIAL CONTRACT TRANSACTIONS

Futures, forward and options contracts are merely other tools for use in asset-liability management. These contracts are neither inherently a panacea nor a speculative vehicle for use by banks and bank holding companies. Rather, the benefit or harm resulting from engaging in financial contract activities results from the manner in which contracts are used. Proper utilization of financial contracts can reduce the risks of interest or exchange rate fluctuations. On the other hand, financial contracts can serve as leverage vehicles for speculation on rate movements.

2130.0.3.1 Markets and Contract Trading

Forward contract (OTC) trading of Government National Mortgage Association (“GNMA”) or “Ginnie Mae” Mortgage-Backed Securities preceded exchange trading of GNMA futures contracts in 1975.

2130.0.3.1.1 Forward Contracts

Forward contracts are executed solely in an over-the-counter market. The party executing a contract to acquire securities on a specified future date is deemed to have a “long” forward contract; and the party agreeing to deliver securities on a future date is described as a party holding a “short” forward contract. Each contract is unique in that its terms are arrived at after negotiation between the parties.

For purposes of illustrating a forward contract, assume that SMC Corporation is an originator of government guaranteed mortgages and issuer of GNMA securities. SMC Corporation has a proven ability to manage and predict the volume of its loan originations over a time horizon of three to four months. To assure a profit or prevent a loss on current loan originations, SMC Corporation may enter binding over-the-counter commitments to deliver 75% of its

mortgage production which will be converted into GNMA securities three months in the future. If SMC agrees to sell \$3 million of GNMA securities (11% coupon) to the WP Securities Firm at par in three months, SMC Corporation is considered to have entered a “short” (commitment to sell) forward contract. Conversely, WP has entered a “long” (commitment to buy) forward contract. The two parties to the transaction are both now obligated to honor the terms of the contract in three months, unless the contract is terminated by mutual agreement.

It should be noted that executing a “short” forward contract is not the same as executing the short sale of a security. Generally, a short sale of a security is understood to represent the speculative sale of a security which is not owned by the seller. The short seller either purchases the security prior to settlement date or borrows the security to make delivery; however, a “short” forward contract merely connotes the side of the contract required to make delivery on a future date. Short forward contracts should not be considered inherently speculative, but must be considered in light of the facts surrounding the contract.

Forward trading can be done on a mandatory delivery (sometimes referred to as “firm forward” contracts) basis or on an optional delivery basis (“standby” contract). With respect to a “mandatory” trade, the contract can also be written with a “pair-off” clause. A pair-off clause specifies that if the same two parties to a trade should subsequently execute an off-setting trade (e.g., the banking organization executes a long contract against an outstanding short contract), settlement can be effected by one party sending the other party a “difference check” rather than having a physical delivery and redelivery of securities.

When a forward contract is executed by a dealer, a confirmation letter or contract is sent to the other party to the transaction. The contract will disclose pertinent data about the trade, such as the size of the trade, coupon rate, the date upon which final delivery instructions will be issued, and the yield at which the trade was effected. In addition, the contract letter will specify whether it is permissible for the “short” side of the trade to deliver a different coupon security at a comparable yield (“yield maintenance contract”) if the coupon specified in the contract is not available for delivery. Contracts which prohibit the delivery of securities requiring a premium over par are considered to have a “par cap.” The initial contract letter generally does not specify which specific securities (e.g.,

GNMA mortgage-backed securities identified by a pool number) will be delivered. Instead, such contracts generally identify the deliverable securities as having been traded on a “TBA” basis (“to be announced”). Prior to settlement, the dealer holding the short contract will send a final confirmation to the other party specifying the actual securities to be delivered, accrued interest, dollar price, settlement date, coupon rate, and the method of payment.

Forward contracts are not typically marked-to-market. Both parties in a forward contract are exposed to credit risk, since either party can default on its obligation.

2130.0.3.1.2 Standby Contracts

Standby contracts are “put options” that trade over-the-counter, with initial and final confirmation procedures that are quite similar to those on forward transactions. Standby contracts were developed to allow GNMA issuers to hedge their production of securities, especially in instances where mortgage bankers have extended loan commitments in connection with the construction of new subdivisions. When a mortgage banker agrees to finance a subdivision with conventional and government guaranteed mortgages it is difficult to predict the actual number of FHA and VA guaranteed loans which will be originated. Hence, it is risky for a GNMA issuer to enter mandatory forward contracts to deliver the entire estimated amount of loans eligible to be pooled as GNMA securities. By entering an option contract and paying a fee for the option to “put” securities to another party, a GNMA issuer or securities dealer obtains downside market protection, but remains free to obtain the benefits of market appreciation since it can “walk away” from the option contract. In addition to the flexibility of walking away and selling securities at the prevailing market price when GNMA prices are rising, a GNMA issuer avoids the potential risk of purchasing mortgages or GNMA securities to cover short forward contracts in the event that production of GNMA securities falls below anticipated levels.

When a securities dealer sells a standby contract granting a GNMA issuer the right “to put” securities to it, the dealer, in turn, will attempt to purchase a matching standby contract from an investor because the dealer does not want to shoulder all of the downside market risk. There

is also potential for securities firms to deal in standby contracts having no relationship to the issuance of GNMA securities.

Some illustrations of standby contracts follow. They are intended to illustrate the mechanics of a standby contract when a banking organization has sold or issued a standby contract granting the contra party the option to “put” GNMA securities to the banking organization.

Assumptions

1. Fee paid to banking organization = 1% of contract value
2. Contract delivery price = 98
3. Coupon = 12%

Situation 1

On contract exercise date: Market Price = 100. Therefore, the dealer would sell securities at market rather than put them to the bank.

<i>Dealer</i>		<i>Banking organization</i>	
Sale price	100	Purchase price	N/A
Fee paid	<u>(1)</u>	Fee Received	<u>1</u>
	99		1
<i>Result:</i> Dealer sacrificed 1% to insure sale price.		<i>Result:</i> Banking organization earned 1% fee for “standing by.”	

Situation 2

On contract exercise date: Market price = 95.

Therefore, dealer would deliver securities pursuant to the standby contract.

<i>Dealer</i>		<i>Banking organization</i>	
Sale price	98	Purchase price	98
Market price	<u>95</u>	Market price	<u>95</u>
Contract gain	3	Contract loss	(3)
Fee paid	<u>(1)</u>	Fee received	<u>1</u>
Actual gain	2	Actual loss	(2)
<i>Result:</i> Dealer paid 1% fee to avoid 3 point market loss.		<i>Result:</i> Banking organization received 1% fee to compensate for purchasing securities 3 points above market.	

2130.0.3.1.3 Futures Contracts

Futures Contract transactions involve three types of participants: customers—the buyers or sellers of contracts, brokers, and a futures exchange. As in the forward markets, a buyer (party committed to take delivery of securities specified in the futures contract) of a futures contract has a “long” contract and the seller (party committed to deliver the underlying securities)

has a “short” contract. If a customer desires to purchase (sell) a futures contract, the broker—possibly a member of a clearing house of an exchange—will take the order to the exchange floor and purchase (sell) a contract sold (bought) by another customer (through another broker).¹ All futures transactions are made

1. Brokers in commodities are required to register as futures commission merchants (“FCMs”) with the Commodities Futures Trading Commission (“CFTC”) in order to be eligible to solicit or accept orders to buy or sell futures contracts.

through and carried on the books of clearing house member brokers, who are treated by the exchange as their own customers. Hence, there are always an equal number of long and short contracts outstanding, referred to as the “open interest,” since the auction process requires a buyer and seller for every contract.

All futures contracts are obligations of an exchange’s clearing association or corporation, i.e. the clearing association is on the opposite side of each long and short contract; and all transactions are guaranteed within the resources of the exchange’s clearing association (on most futures exchanges a small fee is collected on each transaction and placed into an insurance fund). Should an FCM default on a futures contract, the association pays the costs of completing the contract.

2130.0.4 MARGIN REQUIREMENTS

In order to insure the integrity of futures markets, the clearing house requires that member brokers (clearing house members) deposit initial margin in connection with new futures positions carried for the firm, other brokers or FCMs for whom the clearing house member clears transactions, and public customers. The clearing house members in turn require their customers—whether they are other FCMs or public customers—to deposit margin.² The FCMs generally require that public customers meet initial margin requirements by depositing cash, pledging government securities, or obtaining irrevocable standby letters of credit from substantial commercial banking organizations. Daily maintenance margin or variation margin calls (deposits of cash required to keep a certain minimum balance in the margin account) based upon each day’s closing futures prices are calculated pursuant to rules of the various futures exchanges, and clearing house members are required to meet daily variation margin calls on positions carried for customers and the firm. In turn, the

2. In general, the futures exchanges set different initial margin requirements based upon the types of activity engaged in by the customer. Margin requirements are higher for customer contracts characterized as “speculative” than for those contracts deemed to be “hedge” positions. The commodities industry traditionally defines someone with a business need for using the futures market as a hedger; others are defined as speculators. Therefore, in instances where there are different initial hedge and speculative margin requirements, it is assumed that banking organizations will only be required to meet margin required for hedgers.

FCMs require customers to reimburse them for posting additional margin.

Once a customer has executed a futures contract to make or accept delivery of securities in the future it is obligated to fulfill the terms of the contract. A futures contract cannot be resold over-the-counter because futures contracts are not transferable. However, a customer may terminate its obligation under a futures contract either by making or accepting delivery of the securities as specified by the contract, or by executing an offsetting futures contract (long contract to cancel a short contract or vice-versa) with the same broker to cancel the original contract on the same exchange. The overwhelming majority of futures contracts are closed out by the execution of an offsetting contract prior to expiration.

The key to understanding futures transactions is the fact that futures contract prices on U.S. government and agency securities move in the same manner as bond prices; e.g. rising interest rates result in falling futures prices and falling interest rates result in rising futures prices. Hence, the purchase of a futures contract (“long” futures contract) at a price of 98 will result in a loss if future market participants perceive rising interest rates in the month of contract expiration and act accordingly; then the offsetting of a futures contract (executing a “short” futures contract) would have to be at a lower price; e.g. 96. As in the case of any commercial transaction, the participant has a loss if the sale price is lower than the purchase price, or a gain if the sale price is higher than the purchase price.

2130.0.4.1 Variation Margin Calls

Variation margin calls for each contract and expiration month are based upon the closing futures exchange price. If there is a change from the previous day’s closing prices, the long contract holders will be required to post additional margin which will be passed through via the clearing house process to short contract holders or vice-versa. Subsequent to the computation of variation margin calls, the clearing house member brokers are required to post variation margin on behalf of the clearing firm and its customer accounts prior to commencement of the next day’s trading. Then, the clearing brokers call their FCM and public customers requesting more margin to bring the accounts up to the

required maintenance margin level.³ Of course, if a futures position has a gain at the end of the day, the clearing firm receives a deposit in its margin account. The firm, in turn, increases the margin account balances of customers holding contracts with gains.

For illustrative purposes, we will again assume that a customer purchased a futures contract (long contract, face value \$100,000) at a price of 98. If the next closing futures price is 97, the customer will have suffered a one point margin loss (if the customer chose to offset the long contract with a short contract, the transaction would be closed out at a one point loss). Conversely, the party with a short contract executed at 98 would receive a one point margin payment to his account.

Assuming that the initial margin requirement is \$1,500 and the variation margin requirement is \$1,000, the following summarizes the steps followed in administering a customer's (long position) margin account in connection with the previously described transaction.

<i>Transaction</i>	<i>Margin Account Balance</i>
1. Deposit initial margin	\$1,500
2. Purchase \$100,000 contract @ 98	500
3. Day 1—Closing futures price 97 (Reduction of \$1,000 in margin account to reimburse broker for posting margin with clearing corporation).	
4. FCM calls customer to request \$1,000 to bring account up to required initial margin level.	
5. Reimbursement to FCM of \$1,000	1,500

It is important to note that once the margin account balance falls below the variation margin level, the customer is required to deposit additional funds to replenish the account balance to

3. It should be noted that public customers generally have more time to meet maintenance margin calls than do FCMs. However, if a customer fails to meet a variation margin call within three days, the FCM must take a charge against its net capital if it fails to close out the customer's contract (17 C.F.R. 1.17(c)5(viii)).

the initial margin level. If there is a drop in the value of the contract which places the margin account balance below the initial margin level but above the variation margin level, the customer is not required to deposit additional margin monies. Alternatively, if there is a positive flow of margin monies the customer is free to withdraw any amount which exceeds the initial margin requirement.

The entire marking-to-the-market process is repeated at the close of the next business day using a comparison of the previous day's closing price (97) to the current closing price. (The preceding example is simplified because it implies that the customer deposits promptly the required margin. In reality, margin is not always deposited so quickly.)

In summary, futures trading is a "zero sum game" because of the equal number of long and short contracts outstanding, and the variation margin payments reflect this fact, i.e. for every long contract holder posting variation margin, there is a short contract holder receiving margin.

2130.0.5 THE DELIVERY PROCESS

Futures contracts are defined as "standardized contracts traded on organized exchanges to purchase or sell a specified financial instrument or physical commodity on a future date at a specified price." Even when a participant keeps a contract open for delivery, the "specified price" (which corresponds to a specified yield) is actually obtained through a combination of past futures market gains or losses (incurred through the daily mark to market process) and the current futures market price. For invoicing purposes, the actual delivery price is based upon a closing futures market "settlement price" on a date designated by the exchange. In addition, the final calculation of a delivery price on a bond contract will typically involve an adjustment reflecting the fact that the coupon issue to be delivered against the contract grade (8 percent) futures contract is not an 8 percent bond. For example, when current U.S. treasury bond coupons are 12 percent it is highly unlikely that a party with a short futures position would deliver a bond with an 8 percent coupon.

2130.0.6 MECHANICS AND OPERATION OF FUTURES EXCHANGES

Certain technical factors should be noted with

respect to futures markets. First, futures markets are not totally free markets. Rules of the exchanges put artificial constraints—daily price movement limits—upon the amount of daily market movement allowed in given types of futures contracts. For example, government securities prices in the cash market will move as far as the market participants deem necessary to reflect the “market” for those securities, while the futures market specifying delivery of the underlying security will be constrained from having the same potential unlimited market movement. There have been instances where persons desiring to close out a futures contract by executing an offsetting contract have been unable to do so for one or more days until the exchange’s daily trading limits allowed futures prices to “ratchet” up or down to the level that reflected the true “market” price as perceived by hedgers, speculators, and arbitragers.

Although the preceding illustrates the basic nature of futures price movements, do not assume that futures and cash market prices always move in the same direction at the same velocity. Futures prices by definition predict future events, e.g., a market participant can buy a futures contract to take delivery of a three month Treasury bill two years in the future.⁴ In such an instance, the holder of a long T-bill futures contract agrees to the future purchase of a government security which has not yet been issued. There is no reason to assume that a contract with a distant maturity will move in the same manner as the cash market for a three month Treasury bill. In addition, there is a relationship between the cash market price of an existing security and the price of that security in the futures market which is called the basis. The basis can vary significantly over the life of a given futures contract. In the contract delivery month, the futures market price will converge towards the cash market price (the basis approaches zero), adjusted for technical factors that reflect the costs of processing and delivering securities. If the futures market price did not converge towards the cash market price in the delivery month, the arbitragers would take offsetting futures and cash market positions to arbitrage away any profitable discrepancies between the two markets.

2130.0.7 COMPARISON OF FUTURES, FORWARD, AND STANDBY CONTRACTS

Excluding the fact that futures contracts are traded on organized exchanges, there are many similarities between contracts. Conceptually, the contracts are interchangeable; each type of contract can be utilized for hedging, speculating, or arbitrage strategies, but none of the contracts are transferable to third parties. While engaging in contract activities allows the participants to either assume or shift the risks of interest rate changes associated with the security deliverable under the contract, such contracts fail to provide the other benefits of owning the underlying security. Specifically, financial contracts do not pay interest, do not have a U.S. government guaranty of payment of principal at maturity, and cannot be pledged to secure public deposits or be used as collateral for repurchase agreements. The forward markets are perceived to be delivery markets wherein there is a high percentage of delivery of the underlying security.

As in the case of other futures markets, the financial futures markets were not designed to be delivery markets. Nevertheless, there have been a number of instances when a relatively high percentage of financial futures contracts have resulted in delivery. Some persons suggest tax reasons and the deliverable supply of securities as two factors that have contributed to the much higher delivery of securities than delivery of physical commodities. It is, of course, also easier and cheaper to make delivery of securities rather than railroad carloads of grain.

Trading units on futures exchanges are standardized. The standardized trading unit in a physical commodity which may be a railroad car of grain; the typical trading unit in a government or agency security futures contract may be \$100,000 or \$1 million par principal at a coupon rate (on coupon issues) fixed by the exchange. On the other hand, forward and standby contracts are not traded in standardized units with given contract maturity months. Instead, forward and standby contracts are custom made to suit the needs of the two parties to the transaction.

While all contract holders are involved with market risks, the holders of forward and standby contracts are especially prone to credit risk. Unlike futures contracts where the mechanics of exchange trading provide for the futures exchange clearing association to guaranty perfor-

4. All financial futures contracts have a number of contract expiration months extending into the future. As the near term contract expires, a contract with a more distant expiration date is added.

mance of each contract, forward and standby contracts are only as good as the entity on the other side of the contract. Anyone who reads the financial press should be aware that prior to the passage of the Government Securities Act of 1986, there were a number of defaults involving forward and standby contracts. In an effort to bring increased integrity into the unregulated forward contract markets, there has been a trend by some of the major securities dealers to require the posting of margin in connection with forward contract trading. There are no uniform margin requirements governing all aspects of forward contract trading, nor is there a uniform application of margin requirements by dealers requiring "house" margin (or internal margin requirements established and enforced by individual securities dealers). GNMA has established limited margin requirements (24 C.F.R. 390.52), as described below.

2130.0.8 OPTION CONTRACTS

Subsequent to the Board's initial adoption of a policy statement governing futures, forward, and standby contracts, trading of interest rate options began on organized futures and securities exchanges. Proponents of exchange traded options argue that such instruments are attractive to users because they permit the user to obtain down side price risk protection, yet benefit from favorable price movement. In contrast, futures and forward contracts allow the user to lock in a specific price, but the user must forgo future participation if the market should experience an upward price movement. Furthermore, the purchaser of an option pays a one time premium for this protection and is spared the contingent liabilities associated with futures margin calls.

An option is a contract that gives the buyer, or holder, the right, but not the obligation, to buy or sell a specified financial instrument at a fixed price, called the exercise or strike price, before or at a certain future date. Some options, however do not provide for the delivery of the underlying financial instrument and, instead, are cash settled. Moreover, in some cases, the underlying financial instrument is an index. Options that can be exercised before or at the expiration date are referred to as American options; if an option can be exercised only on the expiration date, it is termed a European option.

There are two basic types of options: calls and puts. The *call option* is any option which obligates the writer to deliver to the buyer at a set price (exercise or strike price) within a specified time limit the underlying financial instrument. When the market price of the underlying instrument is above the exercise (strike) price of the call, the call option is "in-the-money." Conversely, when the market price of the underlying financial instrument is below the exercise (strike) price of the call option, the call is "out-of-the-money." When the market price of the underlying instrument is equal to the strike price, the option is "at-the-money." At expiration, the buyer will exercise the option if it is "in-the-money" or let it expire unexercised if it is out-of-the-money. An out-of-the-money call option has no value at expiration, since buyers will not purchase the underlying instrument at a price above the current market price. Prior to expiration, the value of an "in-the-money" call option is at least equal to the market value of the underlying instrument minus the strike price. The ownership of a call provides significant leverage, but raises the breakeven price relative to ownership of the underlying instrument. Holding the call limits the amount of potential loss and offers unlimited potential for gains.

A *put option* gives the buyer the right, but not the obligation, to *sell* the underlying instrument at a specified price (exercise or strike price), before or at expiration. When the market price of the underlying instrument is below the strike price of the put option, the put is "in-the-money," and a put option is out-of-the-money when the market price of the underlying financial instrument is above the strike price of the put option. Ownership of a put option offers leveraged profitability if the market value of the underlying instrument declines.

Some portfolio managers commonly employ "covered" call writing strategies to gain fee income from options written on securities held in the portfolio. If an option position is covered, the seller owns the underlying financial instrument or commodity or has a futures position. For example, an option position would be "covered" if a seller owns cash market U.S. Treasury bonds or holds a long position on a Treasury bond futures contract. Writing "covered calls" has only limited potential for gain. Writing "covered calls" is not a proper strategy for a market that could rise or fall by substantial amounts. It is generally used in a flat market environment.

Referring to the above example, if a seller holds neither the cash market U.S. Treasury Bonds or was not long on the Treasury bond

futures contract, the writer would have an uncovered or “naked” position. In such instances, margin would be required (by the exchange, if an exchange traded option—not the case for an OTC option) since the seller would be obligated to satisfy the terms of the option contract if the option buyer exercises the contract. The risk potential for loss in writing “naked calls” (calls against which there are no securities held in portfolio) is great since the party required to deliver must purchase the required securities at current market prices. Naked “covered call” writing is generally viewed to be speculative since the risks are theoretically unlimited, particularly if it is done solely to generate fee income.

Options are purchased and traded either on organized exchanges or in the over-the-counter (OTC) market. Option contracts follow three-month expiration cycles (example: March/June/September/December). The option contracts expire on the Saturday following the third Friday in the expiration month. Thus, options are considered as “wasting assets” because they have a limited life since they expire on a certain day, even though it may be weeks, months, or years from now. The expiration date is the last day the option can be exercised. After that date the option is worthless.

Option premium valuation. The price (value) of an option premium is determined competitively by open outcry auction on the trading floor of the exchange. The premium value is affected by the inflow of buy and sell orders reaching the exchange floor. The buyer of the option pays the premium in cash to the seller of the option which is credited to the seller’s account. Several factors affect the value of an option premium, as discussed below. The option premium consists of two parts, “intrinsic value” and “time value.” *The intrinsic value* is the gross profit that would be realized upon immediate exercise of the option. Stated another way, it is the amount by which the option is in-the-money. It is the higher of: the value of an option if it is exercised today; or zero. For “in-the-money” *call* options, it is the difference between the price of the underlying financial instrument, and the exercise (strike) price of the option. For “in-the-money” *put* options, it is the difference of the exercise (strike) price of the put option and the price of the underlying financial instrument. The intrinsic value is zero for “at-the-money” or “out-of-the-money” options. The *time value* derives from the chance that an option will gain intrinsic value in the future or that its intrinsic value will increase before maturity of the contract. Time value is determined by

subtracting intrinsic value from the option premium. For example,

Time value = Option premium – Intrinsic values

Time value = 5–10/64 – 4.00

Time value = 1.15384

The option premium is affected by several other factors. One factor involves the comparison of the underlying futures price versus the strike price of the option. An option’s price is increased the more that it is in-the-money. A second factor is volatility. Volatile prices of the underlying financial instrument can help stimulate demand for the options, thus increasing the premium. A third factor that affects the premium of an option is the time until expiration. Option premiums are subject to greater price fluctuations because the underlying value of the futures contract changes more with a longer time period. Other factors that affect the option premium are the strike rate(s) and the domestic and foreign (if applicable) interest rates.

An exchange-traded option is often referred to as a “standardized” option, reflecting the fact that the terms of the contract are uniform with respect to the underlying instrument, amounts, exercise prices, and expiration dates. OTC options are characterized by terms and conditions which are unique to each transaction. Large financial institutions are often dealers in customized interest rate or foreign exchange options. For example, a banking organization might write a “cap,” or series of put option on pounds sterling to protect the dollar value of a sterling denominated receivable due in one year. In this case, an option can be tailored to fit the exact needs of the buyer.

Like futures contracts, contract performance on exchange-traded options is guaranteed by the clearing corporation which interposes itself as a central counterparty to all transactions. It substitutes itself as a seller to all buyers and as a buyer to all sellers. Standardization combined with the clearing corporation’s guarantee facilitates trading and helps to insure liquidity in the market. The buyer or seller of an exchange-traded option may always close out an open position by entering into an offsetting transaction, with the same strike price and expiration date, and for the same amount. Indeed, most exchange-traded options are liquidated prior to maturity with an offsetting transaction, rather than by exercising

the option in order to buy or sell the underlying instrument.

Buyers of exchange-traded options are not required to post funds to a margin account because their risk is limited to the premium paid for the option. However, writers (sellers) of options are required to maintain margin accounts because they face substantial amounts of risk. The amount of the margin varies depending upon the volatility in the price of the option. As the option moves closer and closer to being in-the-money, the writer is required to deposit more and more into his margin account, in order to guarantee his performance should the option eventually be exercised.

Options on futures contracts provide the holder with the right to purchase (call) or sell (put) a specified futures contract at the option's strike price. The difference between the strike price on the option and the quote on the futures contract represents the intrinsic value of the option. Options on futures contracts differ from traditional options in one key way: the party who exercises an option on a futures contract receives a long or short futures position (depending on whether he is exercising a call or put option) rather than accepting or making delivery of the underlying security or financial instrument. When the holder of a call option on a futures contract exercises the option and the futures contract is delivered, the option writer must pay the option holder the difference between the futures contract's current value and the strike price of the exercised call. The buyer takes on a long position, and the writer a short position in the futures contract. When a futures put option is exercised, the holder takes on a short futures position, and the writer a long position. The writer of the put pays the holder the difference between the current price of the futures contract and the strike price of the put option. The resultant futures position, like any other futures position, is subject to a daily marked-to-market valuation. In order to liquidate the futures position, both the buyer and the seller must undertake offsetting futures transactions.

2130.0.8.1 Other Option Contracts

2130.0.8.1.1 Stock Index Options

A stock index option is a call or a put that is based on a stock market index such as the S & P

500. As opposed to a regular call or put option on equity securities where there must be a sale and delivery of shares of stock, there is no delivery of the underlying instrument when an index option is exercised. Rather, settlement is in cash.

2130.0.8.1.2 Foreign Currency Options

The right to buy (call) or sell (put) a quantity of a foreign currency for a specified amount of the domestic currency is a foreign currency option. The size of the contract is standard for each currency. The contracts are quoted in cents per unit of foreign currency. As an example, one call option for the British pound is 12,500 pounds.

2130.0.8.2 Caps, Floors, and Collars

Caps, floors, and collars provide risk protection against floating interest rates. The market for these products is an outgrowth of the OTC market in fixed income (bond) options.

An interest rate cap contract pays the buyer cash if the short term interest index rises above the strike rate in the contract in exchange for a fee. In combination with a floating rate obligation, it effectively sets a maximum level on interest rate payments. If market rates are below the cap rate, no payments are made under the cap agreement. Thus, the buyer of a cap is able to place a ceiling on his floating rate borrowing costs without having to forego potential gains from any decline in market rates.

Cap agreements typically range in maturity from 6 months to as long as 12 years, with reset dates or frequencies that are usually monthly, quarterly, or semiannual. The London Interbank Offered Rate (LIBOR) is the most widely used reference rate for caps, floors, and collars. Other indexes used as reference rates are commercial paper rates, the prime interest rate, Treasury bill rates, and certain tax-exempt rates. Cap fees depend upon the cap level, the maturity of the agreement, the volatility of the index used as the reference rate, and market conditions. The higher the cap rate, the lower the premium. The fee is usually paid up front, but can be amortized.

An interest rate floor agreement is used to protect the overall desired rate of return associated with a floating-rate asset. In accordance with the agreement, the seller receives a fee for

the floor agreement from the holder of the underlying asset. When interest rates fall, the holder of the floor contract is protected by the agreement, which specifies the fixed per annum rate (floor rate) that will be retained on those assets, at specified times during the life of the agreement, even though floating interest rates may decline further.

An interest rate collar is a variation of a cap-only agreement. Under this arrangement the seller of the collar, for a fee, agrees to limit the buyer's floating rate of interest within one agreement by a simultaneous sale of a cap and purchase of a floor, or purchase of a cap and sale of a floor. When the reference rate is above the cap rate the seller makes payments to the buyer sufficient to return the buyer's floating rate interest cost to the cap rate. Conversely, the buyer makes payments to the collar provider to bring its rate back to the floor whenever the reference rate falls below the floor rate. In effect, under a collar agreement the buyer is selling a string of call options (the floor) back to the provider of the cap. The premium received from selling the floor reduces the overall cost of the cap to the buyer of the collar. Thus, the premium for a floor/ceiling, or collar, agreement, is lower than for a cap-only agreement with the cap at the same level. This is because the floor sold to the provider of the collar has a certain value, which is passed along to the buyer in the form of a lower premium.

The disadvantage to collars, of course, is that they limit the buyer's ability to profit from declines in market rates below the specified floor. Clearly, one's interest rate expectations play an important role in determining whether or not to use a collar agreement. It should also be noted that collar agreements involve credit risk on both sides of the agreement, similar to the credit risk considerations found in interest rate swap agreements. The buyer of the collar is exposed to the risk that the provider may default on payments due under the cap agreement; and the provider of the collar is exposed to the risk that the buyer may default on payments due under the floor agreement.

2130.0.9 REGULATORY FRAMEWORK

GNMA has adopted limited margin requirements. Specifically, the GNMA margin requirements (12 C.F.R. 390.52) require marking-to-market and the posting of maintenance

margin.⁵ However, the GNMA margin requirements exclude the majority of GNMA forward contracts and only pertain to contracts involving GNMA issuers with other parties.⁶

The Commodities Futures Trading Commission ("CFTC") is the agency authorized by Congress to supervise the trading of "commodities," including financial futures. Exchanges which trade commodities must register with the CFTC. In addition, the various futures exchanges must receive CFTC approval before they can begin trading a new futures instrument. Brokers and dealers who execute futures contracts for customers must register as Futures Commission Merchants ("FCM") with the CFTC. There are also CFTC registration requirements pertaining to firms engaging in commodities activities similar to an investment advisor or mutual fund in the securities markets. Finally, the surveillance activities of the various futures exchange examiners are subject to oversight by the CFTC.

With the exception of reporting requirements concerning persons or entities with large futures positions, the CFTC's jurisdiction generally does not extend to financial institutions. Rather, the federal and state banking agencies, state insurance commissions, and the Office of Thrift Supervision are responsible for supervising regulated entities' future activities, if permitted, under statute or regulation.

2130.0.10 EXAMPLES OF CONTRACT STRATEGIES

For purposes of reporting large positions to the CFTC a market participant defines its future activities as "speculative" or as "hedging." Basically, CFTC rules consider a participant to be a hedger if certain facets of such person's business can be hedged in the futures markets; persons who do not have a business need for participating are deemed to be speculators. It is anticipated that bank holding companies characterize their contract activities as "hedging", or possibly as arbitrage between various markets.

5. Initial margin requirements necessitate the pledging of something of value prior to initiation of a transaction. Depositing maintenance margin refers to pledging something of value in reaction to market movements; e.g. depositing cash representing the difference between a forward contract price and its current market value.

6. See SR-625 dated July 23, 1980.

Examiners must scrutinize contract positions for purposes of evaluating risk.

The Board policy statement concerning bank holding companies⁷ states:

“. . . the Board believes that any positions that bank holding companies or their nonbank subsidiaries take in financial contracts should reduce risk exposure, that is, not be speculative.” It should be noted, however, that a more liberal interpretation of the policy statement has been permitted for dealer subsidiaries. For example, in a government securities dealer subsidiary, it is permissible to use related financial contracts as a substitute trading instrument for cash market instruments. Thus, the use of financial contracts is not limited solely to reducing the risk of dealing activities.

Some examples of contract strategies are provided which reduce risk when viewed in isolation. A definition of a financial hedge is:

“to enter transactions that will protect against loss through a compensatory price movement.”

In looking at a hedge transaction in isolation, there should be certain elements present to make a hedge workable:

1. The interest rate futures or forward contract utilized should have a high positive correlation (prices that tend to move in the same direction with similar magnitude) with the cash position being hedged. In other words, the futures or forward position taken should be structured so that an upward price movement in the contract offsets a downward price movement in the cash or risk position being hedged, and vice versa.

2. The type (e.g. T-bill, T-bond, etc.) and size of the contract position⁸ taken should have a proportionate relationship to the cash or risk position being hedged, so that futures gains

(losses) will approximately offset any losses (gains) on the hedged position.

3. The contract position taken should have a life which is equal to or greater than the end of the period during which the hedge will be outstanding. For example, if interest rate protection was deemed necessary for a six-month time span, it would not ordinarily be wise to enter a contract expiring in three months.

2130.0.10.1 The Mortgage Banking Price Hedge

Assume that a mortgage banking subsidiary agrees in June to originate mortgages at a fixed yield in the following October. Unless the loan originator has a forward commitment to sell the loans to a permanent investor(s), it is exposed to a decline in the principal value of mortgages due to a rise in interest rates between the commitment date and ultimate sale of the loans. An example of a traditional “short hedge” would be the sale of futures contracts in an attempt to reduce the risk of price fluctuation and insure a profitable sale of the loans. However, in following this strategy the mortgage originator also chooses to forfeit its ability to reap a profit if interest rates should fall.

If interest rates increased, the loss on the sale of mortgages or a pool of mortgage-backed securities will probably be largely offset by a gain on the futures transaction; see example below. If interest rates fall, the mortgage originator would gain on the resale of mortgages but lose on the futures market transaction. Hence, in a true hedge, the hedger’s earnings are relatively unaffected by a change in market interest rates in either direction.

Generally accepted accounting principles applicable to mortgage activity require that mortgages held for resale be periodically revalued to the lower of cost or market (Financial Accounting Standards Board Statement No. 65, “Accounting for Certain Mortgage Banking Activities”). Unrealized gains and losses on outstanding futures contracts are matched against related mortgages or mortgage commitments when the inventory is revalued to the lower of cost or market; i.e. the lower of cost or market valuation is based upon a net figure including unrealized related futures gains and losses.

2130.0.10.2 Basis

Basis is the difference between the cash (spot) price of a security (or commodity) and its futures price. In other words:

7. The Board’s policy statement on engaging in futures, forwards, and option contracts.

8. Futures market participants engage in a practice, sometimes known as “factorweighting” or “overhedging,” to determine the appropriate number of futures contracts necessary to have the proper amount of compensatory price movement against a hedged cash or risk position. For example, it would require 10 mortgaged-backed futures contracts (8% coupon, \$100,000 face value) to hedge an inventory of \$1,000,000 mortgage-backed (8% coupon) securities. Alternatively, 14 mortgage-backed futures contracts would be required to hedge a \$1 million inventory of mortgage-backed securities with a 13½% coupon. Overhedging or factor weighting is necessary in hedging securities with higher coupons than those specified in futures contracts (currently 8% on bond futures) because higher coupon securities move more in price for a given change in yield than lower coupons.

$$\text{Basis} = \text{Spot price} - \text{Future price}$$

For short-term and intermediate futures contracts, the futures price is the quoted futures price times an appropriate conversion factor. For short-term futures contracts the quoted futures price is 100 less the annualized futures interest rate. The invoice price must be determined using yield-to-price conventions for the financial instrument involved.

Basis may be expressed in terms of prices. Due to the complexities involved in determining the futures price, it is thus better to redefine price basis using actual futures delivery prices rather than quoted futures prices. Thus, the price basis for fixed income securities should be redefined as:

$$\begin{aligned} \text{Price Basis} &= \text{Spot price} \\ &\quad - \text{Futures delivery price.} \end{aligned}$$

Basis may also be expressed in terms of interest rates. The *rate basis* is defined as:

$$\text{Rate basis} = \text{Spot rate} - \text{Futures rate}$$

The spot rate refers to the current rate on the instrument that can be held and delivered on the contract. The futures rate represents the interest rate that corresponds to the futures delivery price of the deliverable instrument.

The rate basis is useful in analyzing hedges of short-term instruments since it nets out all effects resulting from aging. For example, if a one year T-bill has a rate of 9 percent with a price of 85, and a 3-month T-bill has a rate of 9 percent and a price of 94, the price basis would be -9 . If a cash security ages, it does not necessarily mean that a change in the rate basis has taken place.

2130.0.10.3 Trading Account Short Hedge

Another example of a short hedge pertains to securities dealers that maintain bond trading accounts. While bonds are held “long” (actually owned by the dealer) in trading accounts, dealers are subject to two risks. First, there is the risk that the cost can change regardless of whether the funds are generated through repurchase agreement financing or the dealer’s other funding sources. When there is an inverted yield curve (short-term interest rates are higher than long-term rates), trading portfolio bonds in inventory yield less than the cost of funds required to carry them. Second, there is the risk that bond market interest rates will rise, thus forcing the dollar price of bonds down.

2130.0.10.3.1 Example 1: A Perfect Short Hedge¹

<i>Month</i>	<i>Cash Market</i>	<i>Futures Market</i>
June	Mortgage department makes commitment to a builder to originate \$1 million of mortgages (based on current GNMA 8’s cash price) at 98-28/32 for \$988,750	Sells 10 December mortgage-backed futures at 96-8/32 for \$962,500 to yield 8.59 percent
October	Mortgage department originates then <i>sells</i> \$1 million of pooled mortgages to investors at a price of 95-20/32, for \$956,250	Buys 10 December mortgage-backed futures at 93, for \$930,000 to yield 8.95 percent
	Loss: \$32,500	Gain: \$32,500

1. The effects of margin and brokerage costs on the transaction are not considered. It should be noted that “perfect hedges” generally do not occur.

The following example pertains to a bond trading account. Assume that the dealer purchases Treasury bonds on October 4 and simultaneously sells a similar amount of Treasury bond futures contracts. The illustration ignores com-

mission charges and uses futures contracts maturing in March 19x9 because the dealer’s

technical analysis discovered an advantage in using the March 19x9, rather than the previous December contract as a hedge. (At that time the

previous December contract was the next available contract still trading.)

<i>Cash Market</i>		<i>Futures Market</i>	
10/04/1998	Purchase \$5MM T-bonds maturing Aug. 2005, 8% coupon at 87- ¹⁰ / ₃₂ : Principal = \$4,365,625	Sell \$5MM T-bonds futures contracts expiring Mar. 1999 at 86- ²¹ / ₃₂ : Contract value = \$4,332,813	
10/23/1998	Sell \$5MM T-bonds at 79.0: Principal = 3,950,000 Cash loss = (\$415,625)	Buy \$5MM T-bond futures Mar. 1999 at 79- ¹ / ₃₂ : Contract value = 3,951,563 Futures gain = \$381,250	

Although the hedge did not prevent the dealer's trading account from losing money, it limited the loss to \$34,375 instead of \$415,625.

It is worth noting that the preceding example also illustrates some of the dangers of using interest rate futures contracts. Although the futures market proved useful to the trading department, a futures contract could have serious consequences for a dealer using an alleged "long hedge to lock-in an attractive yield."

2130.0.10.4 Long Hedge

In certain areas of the country, financial institutions desiring to hold public deposits are required to bid competitively for deposits. The case discussed below pertains to a situation where the competitive bids must be tendered one calendar quarter in advance of receiving the deposit. In this example, the asset side of the balance sheet is not discussed since it is assumed that a banking organization paying the prevailing one-year C.D. interest rate can utilize the funds at a profitable spread.

In this type of situation the bidding institutions are generally vulnerable to falling interest rates; one can safely assume that an institution selected to hold public deposits would not be dismayed to learn subsequently that interest rates had risen and it had locked-in a funding source at or below market rates. However, the funds will not be received for another 3 months. Thus, there is the possibility that interest rates could drop in the interim, leaving a reduced or possibly negative net interest margin when the funds are deposited.

There are a number of approaches available to attempt to ensure that future time deposits can be obtained without paying higher than market interest rates. One method is forecasting the appropriate interest rate to be paid on a given time deposit three months in the future. However, forecasting has become increasingly difficult to do with accuracy in the recent periods of fluctuating interest rates. An alternative approach would be to quote the current C.D. rate (adjusted slightly for competitive factors) with an intent to hedge in the futures market if the banking organization's interest rate bid is accepted. Upon receiving notification that its deposit bid has been accepted, the institution can then purchase an appropriate number of futures contracts to insure a profitable investment spread three months hence when it actually receives the deposit.

The following example on June 1, 19x0; the facts are as follows:

Size of public deposits offered	\$10 million
Date of deposit	September 2, 19x0
Term	1 year
Current C.D. rate	8 ¹ / ₄ %

For purposes of this illustration, assume that a bid was submitted to pay 8¹/₄% for one year on \$10 million. The bids were due June 1 and notification was given June 2 of the intention to provide the funds on September 2; and the banking organization decided to purchase futures contracts on June 2.

A Treasury bill futures contract, expiring in 3 months, is selected as the hedging vehicle because it reflects price movement of an instrument with a comparable maturity to one-year

C.D., and there was no C.D. futures contract trading. For purposes of this illustration, it is assumed that the contract offers sufficient liquidity to enable the banking organization to readily offset its open futures position when necessary. Using the bill contract is an example of “cross hedging” which is defined as the buying or selling of an interest rate futures contract to protect the value of a cash position of a similar,

but not identical, instrument. This type of hedging is a measured risk since the outcome of such a transaction is a function of the price correlation of the instruments being hedged. At any given moment it is conceivable that a negative correlation could exist between two unlike instruments despite the presence of a strong correlation over an extended time period.

<i>Date</i>	<i>C.D. Rate</i>	<i>Transactions</i>	<i>T-bill</i>	<i>Futures</i> ¹
June 2, 19x0	8.25%	Purchase 40 Contracts	91.84	8.16%
Sept. 2, 19x0	11.00%	Sell 40 Contracts	90.05	9.95%

1. The size of the trading unit is based upon U.S. T-bills having a face value at maturity of \$250,000 (40 × 250M = 10MM). Prices are quoted in terms of an index representing

the difference between the actual T-bill yield and 100.00. Every one basis point movement on a contract is equal to \$25.00 per contract.

2130.0.10.4.1 Evaluation of the Hedge

Total interest (not compounded) to be paid (8¼%)	\$ 825,000
Alternative C.D. interest (not compounded) at current rate (11%)	<u>1,100,000</u>
Difference	275,000
Futures trading loss*	<u>(179,000)</u>
Net difference	<u><u>\$ 96,000</u></u>

*Computation—Purchase price 91.84
 Sale price 90.05
 1.79 or 179 basis points
 (179 × \$25.00 × 40 contracts = \$179,000)

In retrospect, it would have been better if the banking organization would not have hedged. By agreeing to an interest rate on June 2, it obtained deposits on September 2 and will pay approximately \$275,000 less in interest payments to the municipality than is required on an ordinary C.D.(s) issued on September 2. The \$179,000 futures trading loss, of course, reduced the windfall interest income due the banking organization. A net interest income spread of approximately \$96,000, instead of a \$275,000, demonstrates two principles: 1) cross hedging can cause unexpected results; and 2) it is quite difficult to find perfect hedges in the real world. The hedge was structured so that a cash gain was offset by a futures loss—incorporating the offsetting principles of a hedge transaction. If the general level of interest rates had fallen, a futures gain should have occurred to offset the higher (relative to prevailing market rates) cost of funds obtained on September 2.

2130.0.10.5 Using Options to Create an Interest Rate Floor

Assume that on September 28th it is decided to rollover a \$1,000,000 investment in 13-week Treasury bills on November 28, which also happens to be the expiration date for call options on the December Treasury bill futures contract. The banking organization, concerned that interest rates will fall between September 28 and the rollover date, wishes to hedge the rollover of its investment. The portfolio manager can set a minimum yield on the rollover investment by either buying a Treasury bill future call option, or by buying a Treasury bill futures contract. Further assume that the December Treasury bill futures contract can be bought for a price of 93.70 which implies a discount yield of 6.30 percent. Treasury bill futures call options with a strike price of 93.75, implying a discount yield of 6.25 percent, sell for a premium of 20 basis points, or \$600 (20 basis points × \$25/basis point = \$500).

If the banking organization could actually buy a Treasury bill futures contract that expired on exactly November 28, then there would be a perfect hedge since the rate of return on the bills would be explicitly fixed by the futures hedging strategy. However, the closest maturing Treasury bill futures contract expires in December, several weeks after the rollover date for the banking organization’s investment. Uncertainty over the actual discount yield of the Treasury bills on the rollover date and the yield produced

by the hedge is known as “basis risk,” the risk that the yield on the hedge may differ from the expected yield on the hedged item. For purposes of this example, assume that the yield on the futures contract equals the actual discount yield on the 13-week Treasury bills at the rollover date. Thus, the futures hedge in this example will provide an effective discount yield of 6.30 percent on the rollover of the 13-week Treasury bill investment.

Assume that rates fall after September 28 and that the discount yield on Treasury bill futures contracts declines from 6.30 percent to 6.00 percent at the November 28 expiration date of the December Treasury bill futures options contract. The option to buy the Treasury bill futures will be exercised since the strike price of 93.75 is below the market price of 94.00 for the underlying futures contract, yielding a profit of 25 basis points or \$625 (25 basis points \times \$25/basis point). The profit must be offset by the 20 basis point cost of the option, which reduces the net profit to 5 basis points. The effective hedged discount yield is 6.05 percent (6.00 percent on the 13-week Treasury bills—assuming no basis risk—plus the 5 basis point profit from the hedge). The option hedge produces a yield that is 5 basis points higher than the unhedged yield, but 25 basis points lower than the 6.30 percent yield that would have resulted from hedging with futures.

Although the option hedge resulted in a lower effective yield than the futures hedge, it set an absolute floor on the investment. This is because any decline in the discount yield of the Treasury bills below 6.05 percent would be offset dollar for dollar by the additional profits from the hedge. The real advantage of the option hedge is that, although it establishes a floor that is lower than the rate fixed by the futures hedge, it allows the hedger to participate in any increase in interest rates above the cost of the call premium. For example, if interest rates increased such that the price on the December Treasury bill futures contract on November 28 falls to 93.00, implying a discount yield of 7.00 percent, the option would expire unexercised since the strike price is above the price of the underlying futures contract. Again, assuming that the spot price for the 13-week Treasury bills is equal to the futures price, the effective discount yield is 6.80 percent (7.00 percent minus the 20 basis point call option premium), 50 basis points higher than the yield that would have been provided by the futures hedge.

2130.0.10.6 Hedging a Borrowing with an Interest Rate Cap

In order to limit a borrower’s interest rate risk, sophisticated banking institutions may offer cap agreements as part of a loan package to their clients. While such an arrangement provides some comfort that the borrower’s ability to repay will not be jeopardized by a sharp increase in interest rates, it obviously transfers that interest rate risk back to the lender. Nevertheless, many banking institutions feel they are better able to manage that risk than are some of their clients. Cap agreements have also been utilized to cap the rate on issued liabilities. For example, an institution might be able to issue medium-term floating rate notes at 3-month LIBOR plus an eighth of a percent. Alternatively, that institution could issue a capped floating rate note at 3-month LIBOR plus three-eighths of a percent. By subsequently selling the cap separately back into the market the institution could, achieve sub-LIBOR funding, depending on the proceeds from the sale of the cap.

A cap agreement is typically specified by following terms: notional principal amount; maturity; underlying index, frequency of reset, strike level. As an illustration, a cap agreement might have the following terms:

Notional Principal Amount	\$10,000,000
Maturity	2 Years
Underlying Index	3-month LIBOR
Rate Fixing	quarterly
Payment	quarterly, in arrears, on an actual/360-day basis
Cap Level	9%
Up Front Fee	1.11% of par (\$111,000)

Under the terms of this agreement, if at any of the quarterly rate fixing dates 3-month LIBOR exceeds the cap level then the seller of the cap would pay the buyer an amount equal to the difference between the two rates. For example, if at a reset date LIBOR was set at 10 percent, the payment would be:

$$\begin{aligned}
 &10\%(90/360 \times \$10,000,000) \\
 &- \\
 &9\%(90/360 \times \$10,000,000) \\
 &= \\
 &\$25,000
 \end{aligned}$$

Thus, the writer of the cap would pay the buyer \$25,000. If 3-month LIBOR for the quarter were set at or below the cap level of 9 percent, no payment would be made.

2130.0.11 ASSET-LIABILITY MANAGEMENT

Financial contracts can be used as a tool in an overall asset-liability management strategy. In order to use financial contracts in this context, a BHC or nonbank subsidiary must first identify where interest-rate exposure lies as indicated by mismatches between asset and liability structures. In those instances where the BHC or nonbank subsidiary has variable-rate assets and variable-rate liabilities with comparable maturities, there is, in theory, no need to hedge with financial contracts since that portion of the asset-liability structure is already hedged. The same holds true for fixed-rate assets and liabilities (yielding a positive interest-rate margin) of comparable maturities. Once a BHC or nonbank subsidiary has identified the undesired mismatches in assets and liabilities, financial contracts can be used to hedge against the identifiable mismatch—for example, long positions in contracts can be used as a hedge against funding interest-sensitive assets with fixed-rate sources of funds, and short positions in contracts can be used as a hedge against funding fixed-rate assets with interest-sensitive liabilities.

BHCs or nonbank subsidiaries that choose to employ financial contracts as a tool in their general asset-liability management program and properly use financial contracts are striving towards worthwhile goals. The discipline of identifying mismatches between assets and liabilities tends to focus the practitioner's attention on the entire balance sheet. Examiners should be aware that marketing efforts on behalf of the futures exchanges have attempted to focus upon just one side of the balance sheet by "pairing" a futures contract with an asset or a liability. In considering financial-contract activities, examiners need to remember that financial-contract activities must be evaluated in light of both sides of a balance sheet.

One final point should be made with respect to "hedging" based upon pairing a futures contract against a portfolio security. Since this type of "hedging" can be done while considering only the asset side of the balance sheet, it is possible that such a strategy could increase interest-rate risk rather than reduce it. For example, assume (unrealistically) that there is a perfect balance between variable-rate assets and liabilities, and the firm is evaluating fixed-rate assets and liabilities. Management determines that there is a perfect balance between fixed-rate assets and liabilities and then isolates the last fixed-rate asset and liability. Make the further assumption that the organization holds a six-month note yielding 12 percent which is financed by funds maturing in six months which costs the organization 10.5 percent. By executing a short futures contract "paired" against the six-month note, the organization would move from an overall "hedged" position to an "unhedged" position. In other words, the futures contract would move the organization from an overall neutral position and expose the organization to interest-rate risk.

It should be evident why it is more productive to consider the "big picture" in inspections rather than focusing upon individual or "paired" (futures against each position) transactions. The most meaningful approach is to evaluate hedging strategies and open financial contract positions in light of its business needs, operations, and asset-liability mix.

2130.0.12 INSPECTION OBJECTIVES

1. To determine the purpose of financial-contract positions. Any positions that bank holding companies or their nonbank subsidiaries (except certain authorized dealer subsidiaries) take in financial contracts should reduce risk exposure, that is, not be speculative.
2. To determine whether prudent written policies, appropriate limitations, and internal controls and audit programs have been established and whether management information systems are sufficiently adequate to monitor risks associated with contracts involving futures, forwards, and options (including caps, floors, and collars).
3. To determine whether policy objectives concerning the relationship of subsidiary banking organizations and the parent bank hold-

ing company specify that each banking organization in a holding company system must be treated as a separate entity.

4. To determine reporting compliance in accordance with the Board's bank holding company policy statements. See section 2130.0.17 for the appropriate cites.

2130.0.13 INSPECTION PROCEDURES

The term "banking organization" is used generally to refer to a bank holding company, the parent company, or nonbank subsidiary.

1. Determine if the banking organization's financial-contract activities are related to the basic business of banking.

Consider whether the financial-contract activities are closely related to the basic business of banking; that is, taking deposits, making and funding loans, providing services to customers, and operating at a profit for shareholders without taking undue risks. Taking financial-contract positions solely to profit upon interest-rate forecasts is considered to be an unsafe and unsound practice. Profitability of contract activities is not the criterion for evaluating such activities. It is quite probable that a bona fide hedge strategy could result in a contract loss which would be offset by increased interest earnings or a higher price for an asset sold, for example, a pool of mortgages. Criticize contracts placed solely to profit upon interest-rate movements. Verify that contract activities are conducted in accordance with the Board's policy statement. Where contract positions are of excessive size and could jeopardize the financial health of the entity under examination, the gains or losses realized because of financial-contract activities should be criticized.

2. Ascertain whether policy objectives highlight the circumstances under which financial contracts should be used.

Determine whether management and operating personnel have received sufficient guidance. Carefully constructed policy objectives should be formulated with the knowledge that although proper utilization of financial contracts limits loss potential, such utilization also limits potentials for gains. Policy objectives should be formulated to limit required resources (margin monies, commis-

sions, and personnel to execute, monitor, and audit contract activities). A well-constructed policy should be designed to preclude various operating areas of a banking organization from taking offsetting financial contract positions. Finally, there should be established benchmarks for determining whether financial contracts are meeting desired objectives.

3. Determine if policy objectives concerning the relationship of subsidiary banking organizations and the parent bank holding company comply with the Board's directives.

Each banking organization in a holding company system must be treated as a separate entity. The policy statement accommodates centralized holding companies in that the holding companies are free to provide guidance to subsidiary banking organizations and execute contracts as agent on behalf of the banking organization, provided that each banking organization maintains responsibility for financial contract transactions executed on its behalf. Accordingly, a holding company that has centralized management could, and perhaps should, consider the interest-rate exposure of its subsidiary banks on a consolidated basis in determining whether future contracts can usefully be employed to reduce that exposure, but any future contracts that are executed must be recorded on the books and records of a subsidiary bank that will directly benefit from such contracts.

The question concerning the relationship of a subsidiary bank to its holding company may also lead one to consider the relationship of a subsidiary bank with its correspondent bank or broker. One might also query to what extent may less sophisticated institutions rely upon brokers and/or correspondent banking organizations for advice in this area?

Less sophisticated institutions can place only limited reliance on others for advice in this area. The bank holding company policy statement⁹ emphasizes that responsibility for financial-contract activities rests solely with management. Additional information on securities transactions and the selections of securities dealers can be found in section 2126.1.

4. Ascertain whether policy objectives and/or position limits require prudence on the part of authorized personnel entering into these new activities. If discretion is left to senior

9. The Board's policy statement on engaging in futures, forwards, and option contracts.

managers, determine whether management has issued instructions to ensure that the level of financial-contract activity is prudent relative to the capabilities of persons authorized to execute and monitor contracts.

A new activity such as financial contracts should, as a general rule, be entered slowly. In developing expertise, management should mandate a low level of activity until persons authorized to execute contracts gain sufficient expertise or until new personnel are employed that have sufficient training and experience to engage in financial-contract activities on a larger scale. Senior management must develop the expertise to understand and evaluate techniques and strategies employed to ensure that an experienced professional does not engage in improper or imprudent activities.

5. If a banking organization uses financial contracts as part of its overall asset-liability management strategy, determine whether the organization developed an adequate system for evaluating its interest-rate risk.

Without a system for identifying and measuring interest-rate risk, it is impossible to engage in hedging activity in an informed and meaningful manner. Failure to identify the mismatches in the organization's asset-liability mix would make it difficult to select the proper number and types of financial contracts—for example, bond or bill financial contracts—to provide an appropriate amount of interest-rate-risk protection. Evaluate whether the organization's interest-rate-risk measurement techniques appear reasonable to determine whether the financial contracts employed were successful in providing the proper amount of futures gains (losses) to cover the hedged risk position.

6. Determine if the recordkeeping system is sufficiently detailed to permit personnel to document and describe in detail how financial-contract positions taken have contributed to the attainment of the banking organization's stated objectives.

There is no universal, adequate recordkeeping system for this purpose. Examiners must evaluate each individual system relative to the organization's stated objectives and activities. If the recordkeeping system cannot be used to illustrate how financial contracts contributed to the attainment of the banking organization's stated objectives, the recordkeeping system is inadequate. BHCs with inadequate recordkeeping systems should be instructed to make appropriate modifications.

7. Ascertain whether the banking organization's board of directors has established written limitations with respect to financial-contract positions.

NOTE: The bank holding company policy statement requires that the board of directors establish written policies and position limitations in connection with financial-contract activities. If a committee has been delegated similar responsibilities within the organization, and a committee makes the decision, its recommendation should be ratified by the board of directors.

8. If there is the potential to exceed the above limitations in certain instances, determine whether there are firm, written procedures in place concerning the authorizations necessary to exceed limits.
9. Determine whether the board of directors, a duly authorized committee thereof, or internal auditors review at least monthly financial-contract positions to ascertain conformance with limitations. (See item (b) of the bank holding company policy statement.)
10. Determine if the banking organization maintains general-ledger memorandum accounts or commitment registers to adequately identify and control all financial-contract commitments to make or take delivery of securities or money market instruments.
11. Determine if the banking organization issues or writes option contracts expiring in excess of 150 days which give the other party to the contract the option to deliver securities to it.

Examiners should review the facts surrounding standby contracts issued by holding companies. Examiners should also review accounting entries connected with bank holding company standby contracts to determine whether standbys were issued to earn fee income "up front" and exploit the lack of generally accepted accounting principles.

12. Determine whether financial-contract positions are properly disclosed in notes to the statements of financial condition and income and that the contract positions have been properly reported on FR Y-9C, Schedule HC-F, "Off-Balance-Sheet Items."
13. Determine whether the banking organization has implemented a system for monitoring credit-risk exposure associated with

various customers and dealers with whom operating personnel are authorized to transact business.

All financial-contract trading involves market risks. However, forward and OTC options trading, as well as swap activities, also involve credit risk. The key concern is whether the contra party to a transaction will be ready, willing, and able to perform on contract settlement and payment dates. While maintaining control over credit-risk exposure should ensure that a financial organization will not enter excessive (relative to the financial condition of the contra party) forward or standby contracts, monitoring such exposure may not prevent default in all instances.

14. Ascertain whether the banking organization has implemented internal controls and internal audit programs to ensure adherence to written policies and prevent unauthorized trading and other abuses.
15. Determine if the Reserve Bank was notified at the inception of bank holding company futures, forward, and option activities as required by paragraph (f) of the holding company policy statement (*Federal Reserve Regulatory Service* 4–830).
16. Determine if the personnel engaged in financial-contract activities have sufficient knowledge and understanding of the markets to perform those functions.

2130.0.13.1 Evaluating the Risks of Contract Activities

Evaluating the organization's stated objectives and their effects on overall risk is a difficult task involving legitimate cause for concern because of the high degree of leverage involved in contract activities. Although there is an emerging trend towards dealers requiring margin on forward trades, forward contract transactions generally have not required margin deposits, and thus, grant users unlimited leverage. Although the amount of margin required for futures trades is extremely small (for example, \$1,500 initial margin to take a \$1 million futures position), the rules of the exchanges do require a daily mark to market and a requirement that members of the futures exchanges meet maintenance margin calls on behalf of their customers. Customers, of course, are generally required to promptly reimburse brokers for margin posted on their behalf. Nevertheless, engaging in contract activities

requires market participants to assume the market risks of either owning securities or "shorting" securities. Issuing (or selling) standby contracts granting the other party to the contract the option to deliver securities is a practice which results in the issuer functioning as an insurer against downside market risk for the other party; in essence, the party receiving the standby fee assumes all of the interest-rate risks of security ownership, but receives none of the benefits.

2130.0.13.2 Reviewing Financial-Contract Positions

The preceding questions were designed to focus the examiner's attention on a bank holding company's stated objectives for engaging in financial contract activities and the manner in which such activities are conducted. It is also vital to review position records with respect to financial contracts or, if necessary, prepare a schedule grouping similar contracts by maturity. Once the various positions have been scheduled it will be possible to evaluate the risk of contract positions relative to the organization under inspection.

2130.0.13.3 Factors to Consider in Evaluating Overall Risk

To determine whether contract positions are reasonable, an examiner must evaluate positions in light of certain key factors: the size of the organization, its capital structure, its business needs, and its capacity to fulfill its obligations. For example, open contracts to purchase \$7 million of GNMA securities would be viewed differently in a BHC with \$24 million of assets than in a BHC with \$1 billion of assets.

There is no guaranty that financial contract prices and cash market prices will move in the same direction at the same velocity; however, contract prices and cash market prices ultimately move towards price convergence in the delivery month. Keeping this fact in mind, the risk evaluating process can be simplified by thinking of the securities underlying the various contracts as a frame of reference. For example, if a BHC holds "long" futures contracts on \$10 million (par value) of Treasury bonds the examiner should first evaluate the effect (excluding tangible benefits of ownership, e.g., interest income, pledging, etc.) on the organization of holding \$10 million of bonds in its portfolio and the resultant appreciation or depreciation if interest rates rise or fall by a given amount. A "short" contract of \$10 million Treasury bonds would be evaluated as if the banking

organization had executed a short sale for \$10 million. In addition, the examiner would have to consider the positive or negative flow of funds received or disbursed as margin to reflect daily contract gains and losses. While commissions on futures contracts are not a major factor in hedging transactions, they also should be considered in this evaluation. Typically, commissions are charged on a “round turn” basis—meaning that commissions are charged based upon an assumption that each futures contract will be offset prior to maturity. Since each contract will have to be offset, or securities bought or delivered, it should be determined whether funds will be available to offset contracts or fund delivery. In the case of certain short contracts, a determination must be made as to whether deliverable securities are held or committed for purchase by the banking organization.

2130.0.13.4 Contract Liquidity

In addition to looking at the “big picture,” examiners should consider a position in a given contract maturity month relative to the volume of contracts outstanding. For example, in futures trading there is generally a greater open interest in the next contract maturity month and perhaps the following one or two contract maturity months. As one moves away from the near term contracts, there is generally less trading and less “open interest” in the more distant contracts. “Open interest” or the amount of contracts outstanding is reported in financial newspapers and other publications. Generally, the contracts with the largest open interest and daily trading volume are considered to be the most liquid.

To illustrate the concept discussed above, one should consider the following example. A “red flag” should be apparent if a contract review discloses that the organization has taken a sizeable position in a contract expiring in two years. When the examiner checks financial newspapers and other publications, he or she may discover that the BHC’s position represents 20 percent of the open interest in that contract. Such a situation would clearly be unsafe and unsound because the relatively huge position coupled with the typically less liquid conditions in distant contracts makes it highly unlikely that the BHC could quickly close out its position if necessary. In addition, one should also question why the distant maturity was chosen since there is no immediate reason to expect a close correlation to the cash market for the underlying security.

With respect to forward contracts, there is an active forward market for GNMA securities specifying delivery of the underlying securities up to four or five months in the future. If a banking organization is executing contracts for more distant maturities, management should be queried as to why it is necessary to trade outside the normal trading cycle.

2130.0.13.5 Relationship to Banking Activities

In evaluating contract activities, examiners should verify that contract strategies are carried to fruition in connection with their relationship to overall objectives. Examiners may find it useful to recommend additional recordkeeping in borderline cases when they encounter situations where financial-contract positions are closed out frequently during the hedge period, but not frequently enough to be considered trading rather than hedging activities. Examiners should suggest proper documentation with regard to financial contracts executed and any additional recordkeeping as needed. Specifically, users could be requested to establish written criteria specifying what circumstances will trigger the closing of such contracts. Then users would be judged by how well they adhered to the criteria as well as whether the plan reduced risk. Hopefully, such recordkeeping would give users the latitude to close out a financial-contract position working against them (as determined by some prearranged benchmark), yet still require sufficient discipline to prevent users from selectively executing financial contracts merely to profit upon interest-rate forecasts.

The preceding discussion should reinforce the fact that the actual utilization of financial contracts is not a clear-cut issue in terms of hedging versus speculation. However, certain key concepts should be kept in mind. First, a decision to hedge with futures or forward contracts involves making a decision that one is content to lock in an effective cost of funds, a sale price of a specific asset, etc. However, the decision to hedge which gives downside protection also means forfeiting the benefits which would result from a favorable market movement. Thus, in evaluating hedge strategies, the organization should be judged as to whether it maintained hedge positions long enough to accomplish its objectives.

Caution should be employed in performing the analysis of financial contracts used to obtain targeted effective interest rates. Examiners should not evaluate transactions solely on a “paired” basis, that is, looking at paired cash market and financial-contract positions and forgetting about financial-contract positions relative to the organization’s entire balance sheet, nor should examiners fail to review the overall nature of financial-contract activities. For example, individual opening and closing of financial contracts could appear reasonable, but the aggregate activities may be indicative of an organization that is in reality operating a futures trading account solely to profit on interest-rate expectations.

2130.0.13.6 Parties Executing or Taking the Contra Side of a Financial Contract

In addition to monitoring contra-party credit risk, serious efforts should be made to ensure that the banking organization carefully scrutinizes the selection of brokers and dealers. In the case of futures contracts, the Commodity Exchange Act requires that an entity functioning as a futures commission merchant be registered with the CFTC. However, not every FCM may be a member of a commodities exchange. Members of an exchange are given additional supervision by the exchange, while nonmembers are subject to audit by the National Futures Association. In selecting any broker or dealer, an organization should give careful consideration to its reputation, financial viability, and length of time in business. If an organization intends to deal with a newly established FCM or broker-dealer, special efforts should be made to verify the reputation and integrity of its principals. (For additional discussion, see *Federal Reserve Regulatory Service* 3–1562). Although such measures cannot ensure that problems will not subsequently develop with an FCM or broker-dealer, some careful forethought can tend to ensure that relationships will not be developed with persons or firms who had serious problems in the past.

2130.0.14 ACCOUNTING FOR FUTURES CONTRACTS

All futures contracts, except for foreign-currency futures contracts, shall be reported in

the Consolidated Financial Statements for Bank Holding Companies in accordance with Financial Accounting Standards Board (FASB) Statement No. 80, “Accounting for Futures Contracts.” Foreign-currency futures contracts shall be reported in accordance with the guidance in FASB Statement No. 52, “Foreign Currency Translation.”

2130.0.14.1 Performance Bonds under Futures Contracts

When the reporting banking organization, as either buyer or seller of futures contracts, has posted a performance bond in the form of a margin account deposited with a broker or exchange, the current balance (as of the report date) of that margin account shall be reported in Other Assets. The balance in the margin account includes the following:

1. the original margin deposit, plus (less)
2. any additions (deductions) as a result of daily fluctuations in the market value of the related contracts (i.e., “variation margin”), plus
3. any additional deposits made to the account to meet margin calls or otherwise (i.e., “maintenance margin”), less
4. any withdrawals of excess balances from the account

When the performance bond takes the form of a pledge of assets with a broker rather than a margin account, the pledged assets shall be maintained on the books of the pledging banking organization and no other balance-sheet entry is made for the performance bond. In this case, gains and losses resulting from daily fluctuations in the market value of the related contracts are generally settled with the broker in cash. However, if the pledging banking organization also maintains a working balance with the broker against which recognized daily market gains and losses are posted, the working balance should be reported in Other Assets, and treated in the same manner as a margin account.

2130.0.14.2 Valuation of Open Positions

All open positions in futures contracts must be reviewed at least monthly (or more often, if material) and their current market values determined. The market value of a futures contract is to be based on published price quotations. These futures positions must be revalued at their cur-

rent market values on these valuation dates and any changes in these values reported in accordance with the guidance presented below for hedge or nonhedge contracts, as appropriate.

2130.0.14.3 Criteria for Hedge-Accounting Treatment

A futures contract shall be accounted for as a hedge when the following conditions are met:

1. The banking organization must have determined that the item or group of items to be hedged (that is, the identifiable assets, liabilities, firm commitments, or anticipated transactions) will expose it to price or interest-rate risk.
2. The futures contract must reduce the exposure to risk. This will be demonstrated if, at the inception of the hedge and *throughout the hedge period*, *high correlation* is expected to exist between the changes in the prices of both the contract and the hedged item or group of items.¹⁰ In other words, the banking organization must monitor the price movements of both the hedge contract and the hedged items to determine that it is probable that changes in the market value of the futures contract will offset the effects of price changes on the hedged items.
3. The futures contract must be designated in writing as a hedge by management at the inception of the hedge.

In order for a futures contract to qualify as a hedge of an anticipated transaction, the following two additional criteria must be met:

- a. The significant characteristics and expected terms of the anticipated transaction must be identified.
- b. The occurrence of the anticipated transaction must be probable.¹¹

2130.0.14.4 Gains and Losses from Monthly Contract Valuations of Futures Contracts That Qualify as Hedges

If the hedge criteria are met, the accounting for

the futures contract shall be related to the accounting for the hedged item so that changes in the market value of the futures contract are recognized in income when the effects of related changes in the price or interest rate of the hedged item are recognized. If a banking organization must include unrealized changes in the fair value of a hedged item in income, a change in the market value of the related futures contract shall be recognized in income when the change occurs. Otherwise, a change in the market value of a futures contract that qualifies as a hedge of an existing asset or liability shall be recognized as an adjustment of the carrying amount of the hedged item. A change in the market value of a futures contract that is a hedge of a firm commitment shall be included in the measurement of the transaction that satisfies the commitment. A change in the market value of a futures contract that is a hedge of an anticipated transaction shall be included in the measurement of the subsequent transaction.

Once the carrying amount of an asset or liability has been adjusted for the change in the market value of a futures contract, the adjustment must be recognized in income in the same manner as other components of the carrying amount of that asset or liability (for example, using the interest method). If the item being hedged is an interest-bearing financial instrument otherwise reported at amortized historical cost, then the changes in the market value of the hedge contract that have been reflected as adjustments in the carrying amount of the financial instrument shall be amortized as an adjustment of interest income or expense over the expected remaining life of the hedged item.

If a futures contract that has been accounted for as a hedge of an anticipated transaction is closed before the date of the related transaction, the accumulated change in value of the contract shall be carried forward (assuming high correlation continues to exist) and included in the measurement of the related transaction. When it becomes probable that the quantity of the anticipated transaction will be less than that originally hedged, a pro rata portion of the futures results that would have been included in the measurement of the transaction shall be recognized as a gain or loss.

When futures contracts that are hedges are terminated, the gain or loss on the terminated contracts must be deferred and amortized over the remaining life of the hedged item.

10. Generally, banking practice maintains that correlation in the changes in the market values of the futures contract and the hedged item must be at least 80 percent for the "high correlation" criteria in FASB Statement No. 80 to be met.

11. It will be particularly difficult to meet this criteria when an anticipated transaction is not expected to take place in the near future.

2130.0.14.5 Gains and Losses from Monthly Contract Valuations of Futures Contracts That Do Not Qualify as Hedges

For futures contracts that are not accounted for as hedges, the change that has occurred in the market value of open positions since the last call report date shall be reflected in current income, either as “other noninterest income” for net gains or “other noninterest expense” for net losses.

If high correlation ceases to exist, the banking organization should discontinue accounting for a futures contract as a hedge. When this occurs, the portion of the change in the market value of the contract that has not offset the market value changes of the hedged item, since the inception of the hedge, must be reflected in the Report of Income as “other noninterest income” or “other noninterest expense,” as appropriate. The contract should thereafter be accounted for as a nonhedge contract with subsequent changes in the contract’s market value reflected in current period income.

When futures contracts that are not hedges are terminated, the gain or loss on the terminated contract must be recognized currently in the Report of Income as “other noninterest income” or “other noninterest expense,” as appropriate.

There is the potential for holding companies and nonbank subsidiaries to follow the referenced accounting applications and break “hedges” with unrealized futures gains to recognize income, and maintain hedges with futures losses and adjust the carrying basis of the paired, that is, “hedged” asset. Examiners should look for patterns of taking gains and losses with a view to determining whether the opening and closing of contracts is consistent with the organization’s risk-reducing strategies.

2130.0.15 PREPARING INSPECTION REPORTS

Unsatisfactory comments pertaining to a bank holding company’s financial-contract activities should be noted on the “Examiner’s Comments,” “Policies and Supervision,” and “Analysis of Financial Factors” or other appropriate page depending on the severity of the comments within the bank holding company inspection report.

2130.0.16 INTERNAL CONTROLS AND INTERNAL AUDIT

The following is designed to illustrate desirable internal controls and internal audit procedures applicable to the organization’s activities in financial contracts. This illustration is not intended to serve as an absolute standard relating to contract activities, but is designed to supplement examiners’ knowledge relating to internal controls and internal audits in this context. In evaluating internal controls and audits, the examiner will need to evaluate the scope of futures, forward, and options activities to determine whether internal controls and audit procedures are adequate in relation to the volume and nature of the activities.

2130.0.16.1 Internal Controls

It is a management’s responsibility to minimize the risks inherent in financial-contract activities through the establishment of policies and procedures covering organizational structure, segregation of duties, operating and accounting system controls, and comprehensive management reporting. Formal written procedures should be in place in connection with purchases and sales, processing, accounting, clearance and safekeeping activities relating to these transactions. In general, these procedures should be designed to ensure that all financial contracts are properly recorded and that senior management is aware of the exposure and gains or losses resulting from these activities. Some examples of desirable controls follow:

1. Written documentation indicating what types of contracts are eligible for purchase by the organization, which individual persons are eligible to purchase and sell contracts, which individual persons are eligible to sign contracts or confirmations, and the names of firms or institutions with whom employees are authorized to conduct business.
2. Written position limitations for each type of contract established by the banking organization’s board of directors and written procedures for authorizing trades, if any, in excess of those limits.
3. A system to monitor the organization’s exposure with customers and those broker-dealers and institutions eligible to do business with it. To implement this, management must determine the amount of credit risk permissible with various parties and then institute surveillance procedures to ensure

- that such limits are not exceeded without written authorization from senior management.
4. Separation of duties and supervision to ensure that persons executing transactions are not involved in approving the accounting media and/or making accounting entries. Further, persons executing transactions should not have authority to sign incoming or outgoing confirmations or contracts, reconcile records, clear transactions, or control the disbursement of margin payments.
 5. A clearly defined flow of order tickets and confirmations. Confirmations generated should, preferably, be prenumbered. In addition to promptly recording all commitments in a daily written commitment ledger, the related documentation should be filed separately for purposes of audit and examination. The flow of confirmations and order tickets should be designed to verify accuracy and enable reconciliations throughout the system, for example, to ensure that a person could not execute unauthorized transactions and bypass part of the accounting system, and to enable the reconciliation of traders' position reports to those positions maintained by an operating unit.
 6. Procedures to route incoming confirmations to an operations unit separate from the trading unit. Confirmations received from brokers, dealers, or others should be compared to confirmations (or other control records) prepared by the banking organization to ensure that it will not accept or make delivery of securities, or remit margin payments, pursuant to contracts unless there is proper authorization and documentation.
 7. Procedures for promptly resolving fails to receive or fails to deliver securities on the date securities are due to be received or sent pursuant to contracts.
 8. Procedures for resolving customer complaints by someone other than the person who executed the contract.
 9. Procedures for verifying brokers' reports of margin deposits and contract positions (use an outside pricing source), and reconciling such reports to the records.
 10. Procedures for daily review of outstanding contracts and supervision of traders. In addition, there should be periodic reports to management reflecting the margin deposits and contract positions.
 11. Selecting and training competent personnel to follow the written policies and guidelines.

2130.0.16.2 Internal Audit

The scope and frequency of the internal audit program should be designed to review the internal control procedures and verify that the internal controls purported to be in effect are being followed. Further, the internal auditor should verify that there are no material inadequacies in the internal control procedures that would permit a person acting individually to perpetrate errors or irregularities involving the records of the organization or assets that would not be detected by the internal control procedures in time to prevent material loss or misstatement of the banking organization's financial statements or serious violation of applicable banking, bank holding company, or securities rules or regulations. Any weaknesses in internal control procedures should be reported to management, along with recommendations for corrective action. If internal auditors do not report to an audit committee, the person to whom they report should not be in a position to misappropriate assets. In addition, auditors should occasionally spot-check contract prices and mark-to-market adjustments.

2130.0.17 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Statement of policy concerning bank holding companies engaging in futures, forward, and options contracts on U.S. government and agency securities and money market instruments		225.142	4-830

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

Financial institutions, including bank holding company subsidiaries, are lending securities with increasing frequency, and, in some instances, a financial institution may lend its own investment or trading-account securities. Financial institutions lend customers' securities held in custody, safekeeping, trust, or pension accounts. Because the securities available for lending often greatly exceed the demand for them, inexperienced lenders may be tempted to ignore commonly recognized safeguards. Bankruptcies of broker-dealers have heightened regulatory sensitivity to the potential for problems in this area.

2140.0.1 SECURITIES-LENDING MARKET

Securities brokers and commercial banks are the primary borrowers of securities. They borrow securities to cover securities fails (securities sold but not available for delivery), short sales, and option and arbitrage positions. Securities lending, which used to involve principally corporate equities and debt obligations, increasingly involves loans of large blocks of U.S. government and federal-agency securities.

Securities lending is conducted through open-ended "loan" agreements, which may be terminated on short notice by the lender or borrower. Repurchase agreements are generally used by owners of securities as financing vehicles and, in certain respects, are closely analogous to securities lending. The objective of securities lending, however, is to receive a safe return in addition to the normal interest or dividends. Securities loans in industry practice are generally collateralized by U.S. government or federal-agency securities, cash, or letters of credit.¹ At the outset, each loan is collateralized at a predetermined margin. If the market value of the collateral falls below an acceptable level during the time a loan is outstanding, a margin call is made by the lender institution. If a loan becomes over-collateralized because of appreciation of collateral or market depreciation of a loaned security, the borrower usually has the opportunity to request the return of any excessive margin.

When a securities loan is terminated, the securities are returned to the lender and the collateral to the borrower. Fees received on

securities loans are divided between the lender and the customer account that owns the securities. In situations involving cash collateral, part of the interest earned on the temporary investment of cash is returned to the borrower, and the remainder is divided between the lender and the customer account that owns the securities.

2140.0.2 DEFINITIONS OF CAPACITY

Securities lending may be done in various capacities and with differing associated liabilities. It is important that all parties involved understand in what capacity the lender is acting. For the purposes of these guidelines, the relevant capacities are as follows:

1. *Principal.* A lender offering securities from its own account is acting as principal. A lender institution offering customers' securities on an undisclosed basis is also considered to be acting as principal.
2. *Agent.* A lender offering securities on behalf of a customer-owner is acting as an agent. For the lender to be considered a bona fide or "fully disclosed" agent, it must disclose the names of the borrowers to the customer-owners (or give notice that names are available upon request), and must disclose the names of the customer-owner to borrowers (or give notice that names are available upon request). In all cases, the agent's compensation for handling the transaction should be disclosed to the customer-owner. Undisclosed agency transactions, that is, "blind brokerage" transactions in which participants cannot determine the identity of the contra party, are treated as if the lender was the principal.
3. *Directed agent.* A lender which lends securities at the direction of the customer-owner is acting as a directed agent. The customer directs the lender in all aspects of the transaction, including to whom the securities are loaned, the terms of the transaction (rebate rate and maturity/call provisions on the loan), acceptable collateral, investment of any cash collateral, and collateral delivery.
4. *Fiduciary.* A lender which exercises *discretion* in offering securities on behalf of and for the benefit of customer-owners is acting as a fiduciary. For purposes of these guidelines,

1. Broker-dealers borrowing securities are subject to the restrictions of the Federal Reserve's Regulation T (12 C.F.R. 220.10), which specifies acceptable borrowing purposes.

the underlying relationship may be as agent, trustee, or custodian.

5. *Finder*: A finder brings together a borrower and a lender of securities for a fee. Finders do not take possession of the securities or collateral. Delivery of securities and collateral is direct between the borrower and the lender, and the finder does not become involved. The finder is simply a fully disclosed intermediary.

2140.0.3 GUIDELINES

All bank holding companies or their subsidiaries that participate in securities lending should establish written policies and procedures governing these activities. Other than commercial banks with trust departments, the bank holding company subsidiaries most likely to be engaged in securities lending are non-deposit-taking trust companies and certain discount brokers which provide custody services and make margin loans. At a minimum, policies and procedures should cover each of the topics in these guidelines.

2140.0.3.1 Recordkeeping

Before establishing a securities-lending program, a financial firm or institution must establish an adequate recordkeeping system. At a minimum, the system should produce daily reports showing which securities are available for lending, and which are currently lent, outstanding loans by borrower, outstanding loans by account, new loans, returns of loaned securities, and transactions by account. These records should be updated as often as necessary to ensure that the lender institution fully accounts for all outstanding loans, that adequate collateral is required and maintained, and that policies and concentration limits are being followed.

2140.0.3.2 Administrative Procedures

All securities lent and all securities standing as collateral must be marked to market daily. Procedures must ensure that any necessary calls for additional margin are made on a timely basis.

In addition, written procedures should outline how to choose the customer account that will be the source of lent securities when they are held

in more than one account. Possible methods include loan volume analysis, automated queue, a lottery, or some combination of these. Securities loans should be fairly allocated among all accounts participating in a securities-lending program.

Internal controls should include operating procedures designed to segregate duties and timely management reporting systems. Periodic internal audits should assess the accuracy of accounting records, the timeliness of management reports, and the lender's overall compliance with established policies and the firm's procedures.

2140.0.3.3 Credit Analysis and Approval of Borrowers

In spite of strict standards of collateralization, securities-lending activities involve risk of loss. Such risks may arise from malfeasance or failure of the borrowing firm or institution. Therefore, a duly established management or supervisory committee of the lender should formally approve, in advance, transactions with any borrower.

Credit and limit approvals should be based upon a credit analysis of the borrower. A review should be performed before establishing such a relationship and reviews should be conducted at regular intervals thereafter. Credit reviews should include an analysis of the borrower's financial statement, and should consider capitalization, management, earnings, business reputation, and any other factors that appear relevant. Analyses should be performed in an independent department of the lender, by persons who routinely perform credit analyses. Analyses performed solely by the person(s) managing the securities-lending program are not sufficient.

2140.0.3.4 Credit and Concentration Limits

After the initial credit analysis, management of the lender should establish an individual credit limit for the borrower. That limit should be based on the market value of the securities to be borrowed, and should take into account possible temporary (overnight) exposures resulting from a decline in collateral values or from occasional inadvertent delays in transferring collateral. Credit and concentration limits should take into account other extensions of credit by the lender to the same borrower or related interests.

Procedures should be established to ensure that credit and concentration limits are not exceeded without proper authorization from management.

2140.0.3.5 Collateral Management

Securities borrowers generally pledge and maintain collateral at a level equal to at least 100 percent of the value of the securities borrowed.² The minimum amount of excess collateral, or “margin,” acceptable to the lender should relate to price volatility of the loaned securities and the collateral (if other than cash).³ Generally, the minimum initial collateral on securities loans is at least 102 percent of the market value of the lent securities plus, for debt securities, any accrued interest.

Collateral must be maintained at the agreed margin. A daily “mark-to-market” or valuation procedure must be in place to ensure that calls for additional collateral are made on a timely basis. The valuation procedures should take into account the value of accrued interest on debt securities.

Securities should not be lent unless collateral has been received or will be received simultaneously with the loan. As a minimum step toward perfecting the lender’s interest, collateral should be delivered directly to the lender or an independent third-party trustee.

2140.0.3.6 Cash as Collateral

When cash is used as collateral, the lender is responsible for making it income productive. Lenders should establish written guidelines for selecting investments for cash collateral. Generally, a lender will invest cash collateral in repurchase agreements, master notes, a short-term investment fund (STIF), U.S. or Eurodollar certificates of deposit, commercial paper, or some other type of money market instrument. If the lender is acting in any capacity other than as principal, the written agreement authorizing the

2. Employee benefit plans subject to the Employee Retirement Income Security Act are specifically required to collateralize securities loans at a minimum of 100 percent of the market value of loaned securities (see section 2140.0.3.10 below).

3. The level of margin should be dictated by level of risk being underwritten by the securities lender. Factors to be considered in determining whether to require margin above the recommended minimum include the type of collateral, the maturity of collateral and lent securities, the term of the securities loan, and the costs which may be incurred when liquidating collateral and replacing loaned securities.

lending relationship should specify how cash collateral is to be invested.

Using cash collateral to pay for liabilities of the lender or its holding company would be an improper *conflict of interest* unless that strategy was specifically authorized in writing by the owner of the lent securities.

2140.0.3.7 Letters of Credit as Collateral

If a lender plans to accept letters of credit as collateral, it should establish guidelines for their use. Those guidelines should require a credit analysis of the banks issuing the letter of credit before securities are lent against that collateral. Analyses must be periodically updated and reevaluated. The lender should also establish concentration limits for the banks issuing letters of credit, and procedures should ensure they are not exceeded. In establishing concentration limits on letters of credit accepted as collateral, the lender’s total outstanding credit exposures from the issuing bank should be considered.

2140.0.3.8 Written Agreements

Securities should be lent only pursuant to a written agreement between the lender and the owner of the securities, specifically authorizing the institution to offer the securities for loan. The agreement should outline the lender’s authority to reinvest cash collateral (if any) and responsibilities with regard to custody and valuation of collateral. In addition, the agreement should detail the fee or compensation that will go to the owner of the securities in the form of a fee schedule or other specific provision. Other items which should be covered in the agreement have been discussed earlier in these guidelines.

A lender must also have written agreements with the parties who wish to borrow securities. These agreements should specify the duties and responsibilities of each party. A written agreement may detail acceptable types of collateral (including letters of credit); standards for collateral custody and control, collateral valuation and initial margin, accrued interest, marking to market, and margin calls; methods for transmitting coupon or dividend payments received if a security is on loan on a payment date; conditions which will trigger the termination of a loan (including events of default); and acceptable

methods of delivery for loaned securities and collateral.

2140.0.3.9 Use of Finders

Some lenders may use a finder to place securities, and some financial institutions may act as finders. A finder brings together a borrower and a lender for a fee. Finders should not take possession of securities or collateral. The delivery of securities loaned and collateral should be direct between the borrower and the lender. A finder should not be involved in the delivery process.

The finder should act only as a fully disclosed intermediary. The lender must always know the name and financial condition of the borrower of any securities it lends. If the lender does not have that information, it and its customers are exposed to unnecessary risks.

Written policies should be in place concerning the use of finders in a securities-lending program. These policies should cover circumstances in which a finder will be used, which party pays the fee (borrower or lender), and which finders the lender institution will use.

2140.0.3.10 Employee Benefit Plans

The Department of Labor has issued two class exemptions which deal with securities-lending programs for employee benefit plans covered by the Employee Retirement Income Security Act (ERISA): Prohibited Transaction Exemption 81-6 (46 FR 7527 (January 23, 1981) and correction (46 FR 10570 (February 3, 1981))), and Prohibited Transaction Exemption 82-63 (47 FR 14804 (April 6, 1982)). The exemptions authorize transactions which might otherwise constitute unintended "prohibited transactions" under ERISA. Any firm engaged in the lending of

securities for an employee benefit plan subject to ERISA should take all steps necessary to design and maintain its program to conform with these exemptions.

Prohibited Transaction Exemption 81-6 permits the lending of securities owned by employee benefit plans to persons who could be "parties in interest" with respect to such plans, provided certain conditions specified in the exemption are met. Under those conditions, neither the borrower nor an affiliate of the borrower can have discretionary control over the investment of plan assets, or offer investment advice concerning the assets, and the loan must be made pursuant to a written agreement. The exemption also establishes a minimum acceptable level for collateral based on the market value of the loaned securities.

Prohibited Transaction Exemption 82-63 permits compensation of a fiduciary for services rendered in connection with loans of plan assets that are securities. The exemption details certain conditions which must be met.

2140.0.3.11 Indemnification

Certain lenders offer participating accounts indemnification against losses in connection with securities-lending programs. Such indemnifications may cover a variety of occurrences including all financial loss, losses from a borrower default, or losses from collateral default. Lenders that offer such indemnification should obtain a legal opinion from counsel concerning the legality of their specific form of indemnification under federal and/or state law.

A lender which offers an indemnity to its customers may, in light of other related factors, be assuming the benefits and, more importantly, the liabilities of a principal. Therefore, lenders offering indemnification should also obtain written opinions from their accountants concerning the proper financial statement disclosure of their actual or contingent liabilities.

2140.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Securities Lending policy statement of the Federal Financial Institutions Examination Council, adopted by the Federal Reserve Board on May 6, 1985			3-1579.5	

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Depository institutions and others involved with the purchase of United States Government and Agency obligations under agreements to resell (reverse repurchase agreements),² have sometimes incurred significant losses. The most important factors causing these heavy losses have been inadequate credit risk management and the failure to exercise effective control over securities collateralizing the transactions.³

The following minimum guidelines address the need for managing credit risk exposure to counterparties under securities repurchase agreements and for controlling the securities in those transactions, and should be followed when entering into repurchase agreements with securities dealers and others.

Depository institutions and nonbank subsidiaries that actively engage in repurchase agreements are encouraged to have more comprehensive policies and controls to suit their particular circumstances. The examining staffs of the Federal Reserve should review written policies and procedures of dealers to determine their adequacy in light of these minimum guidelines and the scope of each subsidiary's operations.

2150.0.1 CREDIT POLICY GUIDELINES

The apparent safety of short-term repurchase agreements which are collateralized by highly liquid, U.S. Government and Federal agency obligations has contributed to an attitude of complacency. Some portfolio managers have underestimated the credit risk associated with the performance of the counterparty to the transactions, and have not taken adequate steps to

assure control of the securities covered by the agreement.

All firms that engage in securities repurchase agreement transactions should establish written credit policies and procedures governing these activities. At a minimum, those policies and procedures should cover the following:

Written policies should establish "know your counterparty" principles. Engaging in repurchase agreement transactions in volume and in large dollar amounts frequently requires the services of a counterparty who is a dealer in the underlying securities. Some firms which deal in the markets for U.S. Government and Federal agency securities are subsidiaries of, or related to, financially stronger and better known firms. However, these stronger firms may be independent of their U.S. Government securities subsidiaries and affiliates and may not be legally obligated to stand behind the transactions of related companies. Without an express guarantee, the stronger firm's financial position cannot be relied upon in assessing the creditworthiness of a counterparty.

It is important to know the legal entity that is the actual counterparty to each repurchase agreement transaction. Know about the actual counterparty's character, integrity of management, activities, and the financial markets in which it deals. Be particularly careful in conducting repurchase agreements with any firm that offers terms that are significantly more favorable than those currently prevailing in the market.

In certain situations firms may use, or serve as, brokers or finders in order to locate repurchase agreement counterparties or particular securities. When using or acting as this type of agent the names of each counterparty should be fully disclosed. Do not enter into undisclosed agency or "blind brokerage" repurchase transactions in which the counterparty's name is not disclosed.

2150.0.1.1 Dealings with Unregulated Securities Dealers

A dealer in U.S. Government and Federal agency obligations is not necessarily a Federally insured bank or thrift, or a broker/dealer registered with the Securities and Exchange Commission. Therefore, the dealer firm may not

1. A repurchase agreement is a transaction involving the sale of assets by one party to another, subject to an agreement by the seller to repurchase the assets at a specified date or in specified circumstances.

2. In order to avoid confusion among market participants who sometimes use the same term to describe different sides of the same transaction, the term "repurchase agreement" will be used in the balance of this statement to refer to both repurchase and reverse repurchase agreements. A repurchase agreement is one in which a party that owns securities acquires funds by transferring the securities to another party under an agreement to repurchase the securities at an agreed upon future date. A reverse repurchase (resale) agreement is one in which a party provides funds by acquiring securities pursuant to an agreement to resell them at an agreed upon future date.

3. Throughout this document repurchase agreements are generally discussed in terms of secured credit transactions. This usage should not be deemed to be based upon a legal determination.

be subject to any Federal regulatory oversight.

A firm doing business with an unregulated securities dealer should be certain that the dealer voluntarily complies with the Federal Reserve Bank of New York's minimum capital guideline, which currently calls for liquid capital to exceed measured risk by 20 percent (that is, the ratio of a dealer's liquid capital to risk of 1.2:1). This ratio can be calculated by a dealer using either the Securities and Exchange Commission's Net Capital Rule for Brokers and Dealers (Rule 15c31) or the Federal Reserve Bank of New York's Capital Adequacy Guidelines for United States Government Securities Dealers. To ensure that an unregulated dealer complies with either of those capital standards, it should certify its compliance with the capital standard and provide the following three forms of certification:

1. A letter of certification from the dealer that the dealer will adhere on a continuous basis to the capital adequacy standard;

2. Audited financial statements which demonstrate that as of the audit date the dealer was in compliance with the standard and the amount of liquid capital; and

3. A copy of a letter from the firm's certified public accountant stating that it found no material weaknesses in the dealer's internal systems and controls incident to adherence to the standard.⁴

Periodic evaluations of counterparty creditworthiness should be conducted by individuals who routinely make credit decisions and who are not involved in the execution of repurchase agreement transactions.

Prior to engaging in initial transactions with a new counterparty, obtain audited financial statements and regulatory filings (if any) from counterparties, and insist that similar information be provided on a periodic and timely basis in the future. Recent failures of government securities dealers have typically been foreshadowed by delays in producing these statements. Many firms are registered with the Securities and Exchange Commission as broker/dealers and have to file financial statements and should be willing to provide a copy of these filings.

The counterparty credit analysis should consider the financial statements of the entity that is to be the counterparty as well as those of any

related companies that could have an impact on the financial condition of the counterparty. When transacting business with a subsidiary, consolidated financial statements of a parent are not adequate. Repurchase agreements should not be entered into with any counterparty that is unwilling to provide complete and timely disclosure of its financial condition. As part of this analysis, the firm should make inquiry about the counterparty's general reputation and whether there have been any formal enforcement actions against the counterparty or its affiliates by State or Federal securities regulators.

Maximum position and temporary exposure limits for each approved counterparty should be established based upon credit analysis performed. Periodic reviews and updates of those limits are necessary.

Individual repurchase agreement counterparty limits should consider overall exposure to the same or related counterparty. Repurchase agreement counterparty limitations should include the overall permissible dollar positions in repurchase agreements, maximum repurchase agreement maturities and limits on temporary exposure that may result from decreases in collateral values or delays in receiving collateral.

2150.0.2 GUIDELINES FOR CONTROLLING REPURCHASE AGREEMENT COLLATERAL

Repurchase agreements can be a useful asset and liability management tool, but repurchase agreements can expose a firm to serious risks if they are not managed appropriately. It is possible to reduce repurchase agreement risk by negotiating written agreements with all repurchase agreement counterparties and custodian banks. Compliance with the terms of these written agreements should be monitored on a daily basis. If prudent management control requirements of repurchase agreements are too burdensome, other asset/liability management tools should be used.

The marketplace perceives repurchase agreement transactions as similar to lending transactions collateralized by highly liquid Government securities. However, experience has shown that the collateral securities will probably *not* serve as protection if the counterparty becomes insolvent or fails, and the purchasing firm does not have control over the securities. Ultimate responsibility for establishing adequate control procedures rests with management of the firm. Management should obtain a written legal opin-

4. This letter should be similar to that which must be given to the SEC by registered broker/dealers.

ion as to the adequacy of the procedures utilized to establish and protect the firm's interest in the underlying collateral.

A *written agreement* specific to a repurchase agreement transaction or master agreement governing all repurchase agreement transactions should be entered into with each counterparty. The written agreement should specify all the terms of the transaction and the duties of both the buyer and seller. Senior managers should consult legal counsel regarding the content of the repurchase and custodial agreements. The repurchase and custodial agreements should specify, but should not be limited to, the following:

- Acceptable types and maturities of collateral securities;
- Initial acceptable margin for collateral securities of various types and maturities
- Margin maintenance, call, default and sellout provisions;
- Rights to interest and principal payments;
- Rights to substitute collateral; and
- The persons authorized to transact business on behalf of the firm and its counterparty.

2150.0.2.1 Confirmations

Some repurchase agreement confirmations may contain terms that attempt to change the firm's rights in the transaction. The firm should obtain and compare written confirmations for each repurchase agreement transaction to be certain that the information on the confirmation is consistent with the terms of the agreement. The confirmation should identify specific collateral securities.

2150.0.2.2 Control of Securities

As a general rule, a firm should obtain possession or control of the underlying securities and take necessary steps to protect its interest in the securities. The legal steps necessary to protect its interest may vary with applicable facts and law and accordingly should be undertaken with the advice of counsel. Additional prudential management controls may include:

- delivery of either physical securities to, or in the case of book entry securities, making appropriate entries in the books of a third party custodian designated under a written custodial agreement which explicitly recognizes the

firm's interest in the securities as superior to that of any other person; or

- appropriate entries on the books of a third party custodian acting pursuant to a tripartite agreement with the firm and the counterparty, ensuring adequate segregation and identification of either physical or book-entry securities.

Where control of the underlying securities is not established, the firm may be regarded only as an unsecured general creditor of the insolvent counterparty. In such instance, *substantial losses are likely to be incurred*. Accordingly, a firm should not enter into a repurchase agreement without obtaining control of the securities unless all of the following minimum procedures are observed: (1) it is completely satisfied as to the creditworthiness of the counterparty; (2) the transaction is within credit limitations that have been pre-approved by the board of directors, or a committee of the board, for unsecured transactions with the counterparty; (3) periodic credit evaluations of the counterparty are conducted; and (4) the firm has ascertained that collateral segregation procedures of the counterparty are adequate. Unless prudential internal procedures of these types are instituted and observed, the firm may be cited for engaging in unsafe or unsound practices.

All receipts and deliveries of either physical or book-entry securities should be made according to written procedures, and third party deliveries should be confirmed in writing directly by the custodian. It is not acceptable to receive confirmation from the counterparty that the securities are segregated in a firm's name with a custodian; the firm should, however, obtain a copy of the advice of the counterparty to the custodian requesting transfer of the securities to the firm. Where securities are to be delivered, payment for securities should not be made until the securities are actually delivered to the firm or its agent. The custodial contract should provide that the custodian takes delivery of the securities subject to the exclusive direction of the firm.

Substitution of securities should not be allowed without the prior consent of the firm. The firm should give its consent before the delivery of the substitute securities to it or a third party custodian. Any substitution of securities should take into consideration the following discussion of "margin requirements."

2150.0.2.3 Margin Requirements

The amount paid under the repurchase agreement should be less than the market value of the securities, including the amount of any accrued interest, with the difference representing a predetermined margin. Factors to be considered in establishing an appropriate margin include the size and maturity of the repurchase transaction, the type and maturity of the underlying securities, and the creditworthiness of the counterparty. Margin requirements on U.S. Government and Federal agency obligations underlying repurchase agreements should allow for the anticipated price volatility of the security until the maturity of the repurchase agreement. Less marketable securities may require additional margin to compensate for less liquid market conditions. Written repurchase agreement policies and procedures should require daily mark-to-market of repurchase agreement securities to the bid side of the market. Repurchase agreements should provide for additional securities or cash to be placed with the firm or its custodian bank to maintain the margin within the predetermined level.

Margin calculations should also consider accrued interest on underlying securities and the anticipated amount of accrued interest over the term of the repurchase agreement, the date of interest payment and which party is entitled to receive the payment. In the case of pass-through securities, anticipated principal reductions should also be considered when determining margin adequacy.

Prudent management procedures should be followed in the administration of any repurchase agreement. Longer term repurchase agreements require management's daily attention to the effects of securities substitutions, margin maintenance requirements (including consideration of any coupon interest or principal payments) and possible changes in the financial condition of the counterparty. Engaging in open repurchase agreement transactions without maturity dates may be regarded as an unsafe and unsound practice unless the firm has retained rights to terminate the transaction quickly to protect itself against changed circumstances. Similarly, automatic renewal of short-term repurchase agreement transactions without reviewing collateral values and adjusting collateral margin may be regarded as an unsafe and unsound practice. If additional margin is not deposited when

required, the firm's rights to sell securities or otherwise liquidate the repurchase agreement should be exercised without hesitation.

2150.0.2.4 Overcollateralization

A firm should use current market values, including the amount of any accrued interest, to determine the price of securities that are sold under repurchase agreements. Counterparties should not be provided with excessive margin. Thus, the written repurchase agreement contract should provide that the counterparty must make additional payment or return securities if the margin exceeds agreed upon levels. When acquiring funds under repurchase agreements it is prudent business practice to keep at a reasonable margin the difference between the market value of the securities delivered to the counterparty and the amount borrowed. The excess market value of securities sold may be viewed as an unsecured loan to the counterparty subject to the unsecured lending limitations for the firm and should be treated accordingly for credit policy and control purposes.

2150.0.3 OPERATIONS

A firm's operational functions should be designed to regulate the custody and movement of securities and to adequately account for trading transactions. Because of the dollar volume and speed of trading activities, operational inefficiencies can quickly result in major problems.

In some cases, a firm may not receive or deliver a security by settlement date. When a firm fails to receive a security by the settlement date, a liability exists until the transaction is consummated or cancelled. When the security is not delivered to the contra-party by settlement date, a receivable exists until that "fail" is resolved. "Fails" to deliver for an extended time, or a substantial number of cancellations, are sometimes characteristic of poor operational control or questionable trading activities.

Fails should be controlled by prompt reporting and follow-up procedures. The use of multi-copy confirmation forms enables operational personnel to retain and file a copy by settlement date and should allow for prompt fail reporting and resolution.

2150.0.4 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Federal Financial Institutions Examination Council policy statement, adopted by the Federal Reserve Board on November 12, 1985, on repurchase agreements			3-1579	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Risk management is an important responsibility of any bank holding company. The objective of this responsibility is to determine and limit the extent of the holding company organization's vulnerability to uncontrollable variables. While all companies perform risk evaluation in some form and exercise some degree of control over its magnitude, the precise processes used differ considerably across organizations in terms of formality, extensiveness, and effectiveness. It should be recognized that many organizations have only an implicit risk evaluation process, and that it may be appropriate to recommend that this process be formalized. Ultimately, the board of directors of the parent company should be held accountable for the consolidated risk evaluation and control.

Risk management at any level involves two basic elements: evaluation and control. Risk evaluation involves three steps: determination of exposures; specification of uncontrollable variables that have an impact on each exposure; and quantification of the expected effect of each variable on exposure. After the extent of existing or potential risk is determined, decisions to limit or control risk are made. This procedure is ever present, since most transactions create exposure, and every exposure has some element of risk. The following two sections discuss the risk evaluation and the risk control processes in very broad terms in an attempt to provide a framework that can be applied to most organizations.

2160.0.1 RISK EVALUATION

The risk identification process begins with a determination of exposures that an institution has to the environment.

Exposure conceptually occurs in every transaction undertaken by a banking organization. Because of the magnitude of the list of potential exposures, institutions generally limit their efforts to extremely large exposures, to areas where losses appear likely, and to activities where the market is changing and new exposures are created. The size of an exposure generally is dependent on the size of a transaction. This is true both for transactions recorded on accounting balance sheets and for those which occur off balance sheet. Exposure is not necessarily determined by the likelihood of loss. For example, many holding company organizations have a large "exposure" in Treasury bills, but do not consider these transactions to be risky.

The list of exposures that banks commonly identify has increased dramatically in the past decade. Historically, the primary focus has been on the exposure of the loan portfolio centering on the financial security of each individual loan; recently industry and geographical exposure of loans has increased in importance. The exposure of fixed assets, such as buildings, to fires, floods and other problems also has been recognized. In more recent years, exposure of mismatched maturities of assets and liabilities to interest rate movements has increased in importance as interest-rate movements have sharply fluctuated. While this exposure had always existed, it had not been recognized as particularly dangerous until recently. Another example of an exposure that historically was considered safe is repurchase agreements backed by government securities. When Drysdale Government Securities, Inc. failed, several risks were brought to light—whether the instrument is a loan (that would be tied up in case of bankruptcy) or a sale and potential liability when serving as an agent of a government securities firm that fails. A particularly difficult area to evaluate is exposure to legal action. For example, a suit against a bank over lending terms and representations is difficult to anticipate and the exposure could be significant.

Numerous exposures exist that many holding company organizations may not recognize. For example, the Federal Reserve System encourages evaluation of wire transfer exposure. This exposure is very large and theoretically a breakdown on the framework or compromise of internal systems could result in major failures. Exposure from foreign exchange contracts also can be large, and may not always be recognized. Fraud and exposure of management to kidnapping continue to increase in importance. And finally, some major holding company organizations have found that dependence on short-term market funds creates a risky exposure. When access to a funding market may be suddenly withdrawn, the exposure of the entire funding process is an issue.

The second step of the risk identification process is specification of the variables that could affect an exposure and determination of what the impact would be.

This process is difficult, since any number of variables may influence an exposure. Furthermore, as the environment changes new variables

may appear relevant and the effects of variables may change. For example, the recent problems of public sector lending to foreign countries with loans denominated in dollars having floating interest rates during inflationary periods may not have been fully evaluated at the time of the lending process.

Determining influential variables is particularly difficult with new products. A historical examination cannot be made of these new products and questions may go unanswered regarding the stability of the new markets. For example, problems have occurred in hedging operations as underlying instruments did not move as expected, thus negating the hedging contract. Consequently, the hedge created an exposure rather than reducing an exposure.

The final step of the risk identification process is risk quantification.

Conceptually, this involves calculation of an expected loss of value related to variance of a particular environmental factor. This has two parts: (1) estimation of the probability that a given variance will occur; and (2) determination of the cost impact of each potential variance. Probabilities are often drawn up in general terms. In some cases historical records facilitate estimation of probabilities. Measurement of credit risk in an organization that specializes by industry or geography may be an example of this. In the most recent recession, however, many past records have proven not to be accurate predictors. In other situations, the holding company organization may evaluate the effect of a change but be unwilling to estimate probabilities of the change occurring. An example of this is managing asset and liability maturities. The effect of a change in interest rates on profits may be determined; but, in many cases, institutions will not derive probabilities on the direction and/or magnitude of interest rate movements.

The difficulty of quantifying costs and probabilities is exacerbated by emergence of new products and by environmental changes. With a new product, it is particularly difficult to determine the cost of a variance. For example, attention to interest rate risk has induced organizations to resort to hedging to reduce exposure. Innovative instruments are difficult to hedge, however, since the issuer may inaccurately gauge price movements. In this case, the exposure results not from price movements, but from inability to predict the relationship between market and price fluctuations. Furthermore, as

the environment changes, the effect of a variable on an exposure changes as does the cost and probability of the occurrence. For example, in the 1970's the impact of inflation on the banking system would have been very different without the concurrent economic downturn and the technological advances.

2160.0.2 RISK CONTROL

After management has identified and evaluated risk, they may decide the risk or cost of an action is sufficiently low (and management is confident all possible variables have been identified) that the holding company can take on the risk as it is; if not there are a number of options that can be used to control the risk. Attempts to control risk can be accomplished through a combination of three general techniques: purchase of insurance, limitation of exposure size, and reduction of the expected cost associated with a variance. The use of insurance to decrease the effect of a loss on the corporation is common for exposure to fire, theft, kidnapping, and internal fraud. Various types of loans are underwritten by third parties. The innovative use of insurance may prove to have various applications to risk control in the banking industry. As with other contracts, the financial strength and reputation of the counterparty (the insurer) are important, and the organization's method of selecting and monitoring underwriters should be evaluated.

Management generally limits the level of exposure in relationship to the size of assets, capital or earnings. In most situations, relating the level of exposure to capital would appear appropriate. Reduction of exposure will automatically reduce risk, assuming other variables remain constant. Constraints should be determined by line management at a seniority level commensurate with the degree of perceived risk. Depending on the degree of risk, there may be a need for the board of directors to approve the constraints.

The third method of reducing the potential loss to the corporation involves decreasing the probability of a variance occurring or decreasing the probable effect when a variance occurs. This is exemplified by the exposure to fire. Installation of fire alarms and other precautions could reduce the expected loss substantially. Similarly, hedging with financial futures is a method used to reduce the effect of interest rate movement on the profits of the holding company organization when the maturities of assets and liabilities are not equal.

The final option management has, after risk

has been evaluated, is simply not to participate in the activity if the risk is determined to be too high for the expected return.

The inspection procedures should include a broad-based evaluation of parent level risk management. Management's effectiveness in identifying risk, its willingness to accept risk, and its ability to control risk should be regularly evaluated. In an environment of rapid change and emerging financial instruments, there needs to be sufficient expertise to recognize the existence of "new" sources of risk concentration to evaluate the company's command of those sources.

2160.0.3 INSPECTION OBJECTIVES

1. To review the risk evaluation and control process.
2. To determine if management's system of identifying risks is effective, and if the parent company is adequately informed of risks throughout the organization.
3. To determine management's recognition of new risks that may arise from the changing environment.
4. To determine the reasonableness of the holding company's exposure-risk figures.
5. To assess the effect on the holding company's financial condition if the risk figures are realized.

6. To determine what actions are necessary to rebalance transactions of a holding company organization to a prudent level.

2160.0.4 INSPECTION PROCEDURES

1. Review the financial condition and the operations of the holding company organization to detect substantive exposure-risk situations.
2. Review management's policies, procedures, and practices in recognizing exposure-risk factors.
3. Determine awareness that all management levels need to be cognizant of exposures related to transactions of their respective operations.
4. Review the holding company's exposure-risk figures, or constraints placed on types of transactions.
5. Discuss with management the significance of exposure-risks facing the holding company and whether or not those risks are set at seemingly prudent levels.
6. Recommend that the organization address any areas where the holding company is perceived to have assumed an imprudent level of risk.

2170.0.1 INTRODUCTION

On April 10, 1985, the Board approved a supervisory policy, via the Federal Financial Institutions Examination Council, for supervising banking organizations that participate in the purchase and sale of loans guaranteed by the U.S. government. The policy reminds those organizations that premiums received in lieu of servicing fees, with respect to the selling and servicing entity, are to be amortized over the life of the loan; and that, with respect to the purchaser, the premiums paid over the face value of the note are not guaranteed and are not paid by the guaranteeing federal agency when the loans are prepaid or in default. The statement thus cautions against paying inappropriate or excessive premiums.

2170.0.2 RECOMMENDATIONS FOR ORIGINATING AND SELLING INSTITUTIONS

Examiners should review the extent and nature of activities in connection with the sale of government guaranteed loans. Lax or improper management of the selling institution's servicing responsibilities should be criticized. Out-of-trade area lending for the purpose of resale of any portion of U.S. government guaranteed loans should be carefully reviewed to ensure that the practice is conducted in a safe and sound manner.

All income, including servicing fees and premiums charged in lieu of servicing fees, associated with the sale of U.S. government guaranteed loans, should be recognized only as earned and amortized to appropriate income accounts over the life of the loan.

2170.0.3 RECOMMENDATIONS FOR PURCHASING INSTITUTIONS

Purchasers of U.S. government guaranteed loans should be aware that the purchase premiums are not guaranteed and are not paid by the guaranteeing Federal agency when the loans are prepaid. Because payment of premiums which do not reasonably relate to the yield on the loan can distort published financial reports by overstating the value of a banking organization's assets, it will generally be viewed as an unsafe and unsound practice to pay purchase premiums which result in a significant overstatement in the value of bank assets.

Many government guaranteed loans currently being originated and sold are variable rate. These variable rate loans normally should not trade at anything more than a modest premium or discount from par. Examiners will carefully review any loans being sold or purchased at significant premiums and will criticize any involvement with excessive premiums as an unsafe and unsound business practice. Excessive purchase premiums will be classified loss. The loans will be required to be revalued to the market value at the time of the acquisition and the excessive premiums will be charged against current earnings.

In addition, any unamortized loan premium on a government guaranteed loan must be immediately charged against income if the loan is prepaid, regardless of whether payment is received from the borrower or the guaranteeing agency.

2175.0.1 INTRODUCTION

Banking organizations have become increasingly involved in marketing third-party uninsured annuities to their retail customers either directly or through third-party companies. As annuity sales have grown, so have concerns that some methods used to sell these instruments could give purchasers the impression that the annuities are federally insured deposits or that they are obligations of a bank. In the event of default by an annuities underwriter, this impression could cause a loss of public confidence in a depository institution, leading to unexpected withdrawals and liquidity pressures. Moreover, a bank or bank holding company that advertises or markets annuities in a way viewed as misleading could potentially be held liable for losses sustained by annuity holders.

This manual section provides guidelines to examiners for reviewing the sale of uninsured annuities by bank holding companies and banks that have legal authority to act as agent in the sale of annuities. State member banks and bank holding companies should not market, sell, or issue uninsured annuities or allow third parties to market, sell, or issue uninsured annuities on depository-institution premises in a manner that conveys the impression or suggestion that such instruments are either (1) federally insured deposits or (2) obligations of or guaranteed by an insured depository institution. Consequently, state member banks should not sell these instruments at teller windows or other areas where retail deposits are routinely accepted.

2175.0.2 PERMISSIBILITY OF UNINSURED ANNUITY SALES

The legal status of annuities under the Bank Holding Company Act is somewhat uncertain at the present time. The Office of the Comptroller of the Currency has authorized national banks to act as agent in the sale of annuities on the basis that variable-rate annuities are securities and fixed-rate annuities are financial investment instruments.¹ These determinations, however,

have been challenged by insurance associations on the basis that annuities are insurance products and, therefore, may be sold by national banks only in a town of less than 5,000.²

State member banks generally have been permitted to engage in the brokerage of both variable- and fixed-rate annuities consistent with their general corporate powers. In order to engage in this activity without filing a formal application, staff has advised interested banks that the brokerage of annuities must be expressly authorized under state law (or by the state banking regulatory agency on a case-by-case basis) and constitute an activity incidental to the bank's banking activities.

The authority of state member banks to continue to engage in this activity, in the same manner and subject to the conditions discussed above, does not appear to depend on a resolution of the issues.³ State member banks have been permitted to engage in general insurance agency activities since 1937,⁴ and to engage in brokerage activities under the same limitations applicable to bank holding companies. In addition, the Board has determined that the nonbanking restrictions in the Bank Holding Company Act do not apply to the direct activities of banks owned by a bank holding company.⁵

The authority of bank holding companies to engage directly or through a nonbanking subsidiary in the sale of annuities has not yet been determined. In *Norwest Corporation*,⁶ the Board considered a proposal by a nonbanking affiliate to engage in the sale of variable- and fixed-rate annuities. The Board concluded that, under the specific facts of that case, it was unnecessary to reach the question of whether the sale of annuities is an insurance agency activity because *Norwest* is one of a small number of bank holding companies entitled to act as agent in the

sale of any type of insurance pursuant to Exemption G of the Garn Act.⁷

2175.0.3 CHARACTERISTICS OF ANNUITY INSTRUMENTS

An annuity is an investment from which a person receives periodic payments based on earlier payments made to the obligor. Annuities are commonly underwritten by insurance companies, then marketed and sold either directly or through third parties, such as banks. Insurance companies retain the actuarial and underwriting risks on these annuities.

Annuities may be either variable or fixed-rate. An investor in a variable annuity contract purchases a share in an investment portfolio and then receives payments that vary according to the performance of the portfolio. A purchaser of a fixed-rate annuity contract, in contrast, receives a fixed-rate payment or minimum level of payments. Annuity payments can usually be received monthly, quarterly, semi-annually, or annually.

Variable- and fixed-rate annuities may be purchased in a single lump sum ("single premium") or in periodic contributions ("flexible premium"). Minimum and maximum contributions to annuities vary among vendors. Some single-premium annuities have "bail-out" features which allow holders to withdraw all funds if the rate of return on the annuity contract falls below a specified rate.

The ability to take money out of an annuity prior to maturity varies by product, as does the imposition of a surrender penalty by the insurer when withdrawal occurs prior to maturity. When a penalty is imposed, the insurer generally calculates the penalty as a percentage of the annuity product's accumulated value. The penalty for withdrawal generally declines with the annu-

ity's age. Normally, funds may not be withdrawn prior to the first anniversary date of the annuity.⁸

Annuities sold at depository institutions often include rate guarantees over the life of the instrument. They also frequently mature in one, three, or five years, similar to maturity ranges on certificates of deposit.

Insurance companies arrange for the sale of annuities on the premises of depository institutions in different ways. Some insurance companies approach banks directly. At other times, wholesalers (who market the products of a number of different insurance companies) may approach a bank. Depending on state restrictions on insurance activities, sales might be conducted by bank employees, employees of bank subsidiary insurance agencies, or by third-party insurance agents leasing space on the bank's premises.

Sales commissions on annuities vary by the type of annuity. Commissions earned on single-premium products generally vary from 4 percent to 6 percent, but they decline sharply when the product sold includes a "bail-out" provision. Wholesalers may also give retailers a commission when the annuity is renewed, based on the accumulated value of the annuity. Commissions in some instances are paid on a variable basis, rising as the volume of sales increases.

2175.0.4 IMPROPER MARKETING PRACTICES

Banks have become involved in the sale of uninsured annuities through marketing programs designed to appeal specifically to their retail customers. It is important that these programs not employ marketing practices that could mislead the bank's customers. For example, the use in annuities advertisements of terms such as "CD," "deposit," and "interest plan" to imply that the instruments are insured deposits would be inappropriate. Also, advertisements that prominently display the bank's name and logo in a way that suggests the product is an obligation of the bank are similarly inappropriate. Disclosure that the annuities are not federally insured and are not obligations of the bank should be displayed prominently in annuity contracts and related documentation, on printed

7. The Garn Act amended section 4(c)(8) of the Bank Holding Company Act to prohibit generally bank holding companies from engaging in insurance activities as a principal, agent, or broker with certain exceptions. Under the express language of the Garn Act, the sale of insurance is not "closely related to banking" and is not permissible for a bank holding company unless it qualifies under one of the seven specified exceptions (Exemptions A-G) in the Garn Act. Exemption G applies to a limited number of bank holding companies that received approval from the Board prior to January 1, 1971, to conduct insurance agency activities. In order to utilize Exemption G or any other Garn Act exemptions that may be applicable, the bank holding company must file an application and would be subject to the proposed restrictions through the application process.

8. If an investor withdraws tax-deferred income from an annuity before the investor is 59½ years old, the IRS levies a tax penalty on the person equal to 10 percent of the amount of tax-deferred income withdrawn. This penalty may be avoided only if the person reinvests annuity proceeds in another tax-deferred investment within 60 days of the withdrawal.

advice, and verbally emphasized in telemarketing contacts. Finally, personnel selling uninsured annuities should be distinguishable from bank employees conducting normal retail deposit-taking operations.

2175.0.5 INSPECTION OBJECTIVES

1. To review the marketing and sale of uninsured annuities sold by the bank holding company and its member banks, or those sold through a third party.

2. To determine whether the bank holding company and its banks have adequate policies and procedures in place and if they are monitored by the parent company.

3. To determine if, prior to agreeing to sell annuities, a comprehensive financial analysis is made of the financial condition of the annuities underwriter and whether products of only financially secure underwriters are sold.

4. To determine whether the contract and advertising and related documents disclose prominently that the annuities do not represent deposits or obligations of an insured depository institution and that they are not insured by the Federal Deposit Insurance Corporation.

5. To ascertain that annuities are not sold at teller windows or other areas where deposits are routinely accepted.

2175.0.6 INSPECTION PROCEDURES

1. Determine whether the bank holding company and its banks have adequate policies and procedures in place:

a. to assess the financial condition of the annuities underwriter;

Banking organizations engaged in the sale of annuities are expected to sell only products of financially secure underwriters. Prior to agreeing to sell annuities, a comprehensive financial analysis of the obligor should be performed and reviewed with the banking organization's directors. The policies should also include a program to evaluate the underwriter's financial condition at least annually and to review the credit ratings assigned to the underwriter by the independent agencies evaluating annuity underwriters.

b. to ensure that the marketing and sale of uninsured annuities is not misleading and is separated and distinguished from routine retail deposit-taking activities.

(1) With regard to the sale of annuities, determine whether the contract, advertising, and

all related documents disclose prominently in bold print that the annuities:

(a) are not deposits or obligations of an insured depository institution; and

(b) are not insured by the Federal Deposit Insurance Corporation.

(2) State member banks should not sell annuity instruments at teller windows or other areas where retail deposits are routinely accepted. In assessing the adequacy of disclosures and the separation of the marketing and sale of uninsured annuities from the retail deposit-taking function, examiners should take into account whether:

(a) advertisements *do not* contain words, such as "deposit", "CD", etc., or a logo that could lead an investor to believe an annuity is an insured deposit instrument;

(b) the obligor of the annuity contract is prominently disclosed, and names or logos of the insured depository institution are not used in a way that might suggest the insured depository institution is the obligor;

(c) adequate verbal disclosures are made during telemarketing contacts and at the time of sale;

(d) retail deposit-taking employees of the insured depository institution *are not engaged* in the promotion or sale of uninsured annuities;

(e) information on uninsured annuities *is not* contained in retail deposit statements of customers or in the immediate retail deposit-taking area;

(f) account information on annuities owned by customers *is not* included on insured deposit statements; and

(g) officer or employee remuneration associated with selling annuities is limited to reasonable levels in relation to the individual's salary.

(3) If a bank allows a third-party entity to market annuities on depository institution premises, examiners should take into account whether:

(a) the depository institution has assured itself that the third-party company is properly registered or licensed to conduct this activity;

(b) depository institution personnel *are not* involved in sales activities conducted by the third party;

(c) desks or offices *are not* used to market or sell annuities, are separate and dis-

tinctly identified as being used by an outside party; and

(d) depository institution personnel *do not* normally use desks or offices used by a third party for annuities sales.

2. Determine that advertisements do not prominently display the bank's name and logo that suggests the product is an obligation of a BHC bank.

3. Determine whether the banks obtain a signed statement from the customer indicating that the customer understands that the annuity is not a deposit or any other obligation of the depository institution, that the depository institution is only acting as an agent for the insurance company (underwriter), and that the annuity is not FDIC insured.

On January 5, 2004, the federal banking and thrift agencies¹ (the agencies) issued an inter-agency policy to alert banking organizations, including their boards of directors and senior management, of the safety-and-soundness implications of and the legal impediments to a bank providing financial support to investment funds² advised by the bank, its subsidiaries, or affiliates (that is, affiliated investment funds). A banking organization's investment advisory services can pose material risks to the bank's liquidity, earnings, capital, and reputation and can harm investors, if the associated risks are not effectively controlled. In addition, bank-affiliated investment advisers are encouraged to establish alternative sources of financial support to avoid seeking support from affiliated banks. (See SR-04-1 and SR-94-53.)

Banks are under no statutory requirement to provide financial support to the funds they advise; however, circumstances may motivate banks to do so for reasons of reputation risk and liability mitigation. This type of support by banking organizations to funds they advise includes credit extensions, cash infusions, asset purchases, and the acquisition of fund shares. In very limited circumstances, certain arrangements between banks and the funds they advise have been expressly determined to be legally permissible and safe and sound when properly conducted and managed. However, the agencies are concerned about other occasions when emergency liquidity needs may prompt banks to support their advised funds in ways that raise prudential and legal concerns. Federal laws and regulations place significant restrictions on transactions between banks and their advised funds. In particular, sections 23A and 23B of the Federal Reserve Act and the Board's Regulation W (12 C.F.R. 223) place quantitative limits and collateral and market-terms requirements on many transactions between a bank and certain of its advised funds.

2178.0.1 POLICY ON BANKS PROVIDING FINANCIAL SUPPORT TO ADVISED FUNDS

To avoid engaging in unsafe and unsound banking practices, banks should adopt appropriate policies and procedures governing routine or emergency transactions with bank-advised investment funds. Such policies and procedures should be designed to ensure that the bank will *not* (1) inappropriately place its resources and reputation at risk for the benefit of the funds' investors and creditors; (2) violate the limits and requirements contained in sections 23A and 23B of the Federal Reserve Act and Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or (3) create an expectation that the bank will prop up the advised fund. Further, the agencies expect banking organizations to maintain appropriate controls over investment advisory activities that include:

- Establishing alternative sources of emergency support from the parent holding company, nonbank affiliates, or external third parties prior to seeking support from the bank.
- Instituting effective policies and procedures for identifying potential circumstances triggering the need for financial support and the process for obtaining such support. In the limited instances that the bank provides financial support, the bank's procedures should include an oversight process that requires formal approval from the bank's board of directors, or an appropriate board-designated committee, independent of the investment advisory function. The bank's audit committee also should review the transaction to ensure that appropriate policies and procedures were followed.
- Implementing an effective risk-management system for controlling and monitoring risks posed to the bank by the organization's investment advisory activities. Risk controls should include establishing appropriate risk limits, liquidity planning, performance measurement systems, stress testing, compliance reviews, and management reporting to mitigate the need for significant bank support.
- Implementing policies and procedures that ensure that the bank is in compliance with existing disclosure and advertising require-

1. The Board of Governors of the Federal Reserve System (Board), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS).

2. Bank-advised investment funds include mutual funds, alternative strategy funds, collective investment funds, and other funds where the bank, its subsidiaries, or affiliates is the investment adviser and receives a fee for its investment advice.

ments to clearly differentiate the investments in advised funds from obligations of the bank or insured deposits.

- Ensuring proper regulatory reporting of contingent liabilities arising out of its investment advisory activities in the banking organization's published financial statements in accordance with FAS 5, and fiduciary settlements, surcharges, and other losses arising out of its investment advisory activities in accordance with the instructions for completing call report Schedule RC-T (Fiduciary and Related Services).

2178.0.2 NOTIFICATION AND CONSULTATION WITH THE PRIMARY FEDERAL REGULATOR

Because of the potential risks posed by the provision of financial support to advised funds, bank management should notify and consult with its appropriate federal banking agency prior to (or immediately after, in the event of an emergency) the bank providing material financial support to its advised funds. The appropriate federal banking agency will closely scrutinize the circumstances surrounding the transaction and will address situations that raise supervisory concerns.

2178.0.3 INSPECTION OBJECTIVES

1. To determine if the BHC has adequate oversight and control of its functionally regulated investment adviser subsidiaries.
2. To review and assess the existence, adequacy, maintenance, and monitoring of the BHC's policies, procedures, and practices (includes those involving the parent company's oversight and investment adviser subsidiaries). The BHC's policies, procedures, and practices should be designed to limit the exposures to financial, litigation, or reputational risk arising from its bank and nonbank subsidiaries.
3. To ensure that the BHC's banking subsidiaries that advise investment funds are in compliance with the Interagency Policy on Banks and Thrifts Providing Financial Support to Funds Advised by the Banking Organization or Its Affiliates.

2178.0.4 INSPECTION PROCEDURES

1. Determine if the BHC has adequate oversight policies, procedures, and practices to ensure that its banking and nonbank subsidiaries that advise investment funds do not—
 - a. inappropriately place the resources and reputation of the bank at risk for the benefit of affiliated investment funds' investors and creditors;
 - b. violate the limits and requirements in Federal Reserve Act sections 23A and 23B and Regulation W, other applicable legal requirements, or any special supervisory condition imposed by the agencies; or
 - c. create an expectation that a bank will support the advised fund (or funds).
2. Find out how the BHC ensures through its communications with subsidiaries that bank-affiliated investment advisers are encouraged to establish alternative sources of financial support from an unaffiliated bank or other affiliate.
3. Ascertain whether the BHC's internal or external auditors verified that its oversight policies and procedures for bank-advised funds were adequately communicated to its banking subsidiaries to ensure compliance with the January 5, 2004, Interagency Policy on Banks and Thrifts Providing Financial Support to Funds Advised by the Banking Organization or Its Affiliates. Compliance includes the BHC's or subsidiary's notification of and consultation with its appropriate federal banking agency before (or, in an emergency, immediately after) providing material financial support to an affiliated investment fund.
4. Find out if the BHC's internal audit function monitors any financial support given to bank or nonbank subsidiaries' advised funds and if the internal auditors follow up on compliance with any policies, limits, or internal controls that are intended to restrict the activities.
5. Determine if the BHC is able to assess at all times the extent of its subsidiary banks' risk exposures that may arise from providing support to affiliated investment funds.

Existing regulations permit banks and bank holding companies to engage in a wide range of securities activities in overseas markets. For a number of years these activities were not considered to be significant in the context of total bank and bank holding company assets. Indigenous rules and market practice served to constrain to a degree securities activities of U.S. banking organizations overseas.

Changes in local rules now make it possible for members of the London stock exchange to be wholly-owned by non-member companies and by year-end 1986 will allow stockbrokers to act as principals or market makers in securities. These new rules are expected to change significantly the complexion of the London securities market. In this context, U.S. banking organizations are making substantial investments in U.K. securities firms, and are also significantly expanding their securities business in other foreign and international markets.

The Board has expressed its concerns, in connection with an application by a banking organization to expand its securities activities overseas, that proper safeguards, limits, and controls will be exercised to protect the organization from undue risk. Applications generally state the methods through which the banking organization plans to control risk and establish oversight over securities operations. While these safeguards are initially evaluated at the time the application is made, nevertheless, examinations of bank holding companies and Edge corporations should incorporate an assessment of all overseas securities activities in order to determine the degree to which these activities conform to high standards of banking and financial

prudence. The affiliation of a securities company, especially one engaged in corporate debt and equities transactions, with a banking organization raises a potential for conflict of interest and in some cases could pose substantial additional risk to the institution.

In those U.S. banking organizations where overseas securities trading and brokering are significant in scope or are prominent in the scale of the local market, examination procedures must incorporate an assessment of the controls, limits, and safeguards implemented by the organization to monitor and contain risk. Securities activities should be subject to the same degree of scrutiny and rigorous assessment of risk as bank lending activities. In addition, examiners should monitor the substance and nature of all transactions.

In particular, the following kinds of activities should be reviewed to determine whether they raise considerations of safety and soundness or otherwise do not conform to standards of prudence required of U.S. banking organizations:

- The degree of lending by a bank holding company to its securities affiliate, especially when loans are extended to support or enhance the obligations underwritten by the securities affiliate;
- The extent to which securities underwritten by an affiliate are purchased by the bank holding company as principal or trustee; and,
- The extent to which the parent is liable to an exchange for any losses incurred by the affiliate due to failure to deliver securities or settle contracts.

Violations of Federal Reserve Margin Regulations Resulting from “Free-Riding” Schemes

Section 2187.0

Targeted examinations and investigations by the Federal Reserve and the Enforcement Division of the Securities Exchange Commission (SEC), as well as court actions, have found banks in violation of Regulation U, Credit by Banks for the Purpose of Purchasing or Carrying Margin Stock, (12 C.F.R. 221) when their trust departments, using bank or other fiduciary funds, have extended credit to individuals involved in illegal day trading or free-riding schemes. These activities also involved the aiding and abetting of violations of two other securities credit regulations: Regulation T, Credit by Brokers and Dealers (12 C.F.R. 220), and Regulation X, Borrowers of Securities Credit, (12 C.F.R. 224).

Day trading and free-riding schemes involve the purchase and sale of stock on the same day (or within a very short period of time) and the funding of the purchases with the proceeds of the sale. Banking organizations¹ engaging in such illegal activities may subject themselves to disciplinary proceedings, as well as to substantial credit risk.

Federal Reserve examiners should ensure that banks and bank holding companies (including the broker-dealer and trust activities of banking and nonbanking subsidiaries of state member banks and bank holding companies) are not engaged in such illegal activities. Examiners must make certain that these entities have taken all steps necessary to prevent their customers from involving them in free-riding. Prompt enforcement action may be needed to eliminate free-riding activities. (See SR-93-13.)

2187.0.1 TYPICAL DAY TRADING OR FREE-RIDING ACTIVITIES

The free-riding conduct in question typically involves trading large amounts of securities without depositing the necessary money or appropriate collateral in their customer accounts. The customer seeks to free-ride, that is, purchase and sell the same securities and pay for the purchase with the proceeds of the sale. Often, free-riding schemes involve initial public offerings because broker-dealers are prohibited

1. The use of the term “banking organization” in this section, with regard to Regulation U, means a bank, trust department of a bank, or trust company of a bank holding company that is subject to Regulation U. Regulation U includes any nondealer nonbank subsidiary of a bank holding company that extends purpose credit by margin stock. With regard to Regulation T, it refers to any nonbank company that conducts broker-dealer activities.

from financing these new issues. If the money to pay for the securities is not in the account when the securities are delivered in a delivery-versus-payment (DVP) transaction, a bank that permits completion of the transaction creates a temporary overdraft in the customer’s account. This overdraft is an extension of credit that subjects the banks to Regulation U.

The typical free-riding scheme involves a new customer’s opening a custodial agency account into which a number of broker-dealers will deliver securities or funds in DVP transactions. Although a deposit may be made into the custodial agency account, the amount of trading is greatly in excess of the original deposit, causing the financial institution to extend its own credit to meet the payment and delivery obligations of the account. Therefore, although the financial institution may be earning fees as a result of the activity in these accounts, it is subjecting itself to substantial losses if the market prices for the purchased securities fall or the transactions otherwise fail. In addition, other liabilities under federal banking and securities laws may be involved.

2187.0.2 SECURITIES CREDIT REGULATIONS

2187.0.2.1 Regulation U, Credit by Banks or Persons Other Than Brokers or Dealers for the Purpose of Purchasing or Carrying Margin Stocks

Any extension of credit in the course of settling customer securities transactions, including those occurring in a trust department or trust subsidiary of a bank holding company, must comply with all of the provisions of Regulation U.² Regulation U requires all extensions of credit for the purpose of buying or carrying margin

2. For purposes of the regulation, the definition of “bank” specifically includes institutions “exercising fiduciary powers.” (See 12 C.F.R. 221.2, 15 U.S.C. 78(c)(a)(6), and *Federal Reserve Regulatory Service* at 5–795 (1946).) When used in discussing a bank’s trust department or any other type of financial institution exercising fiduciary powers, the term “extension of credit” includes overdrafts in settling customer’s accounts that may be covered by advances from the banking organization, from other fiduciary customers, or from a combination of both.

stock that are secured by margin stock to be within the 50 percent limit. To avoid violations of the Board’s securities credit regulations, on settlement date, the customer’s account must hold sufficient funds, excluding the proceeds of the sale of the security, to pay for each security purchased. Although Regulation U applies only to transactions in margin stock, free-riding in nonmargin stocks in custodial agency accounts could result in a banking organization’s aiding and abetting violations of Regulations T and X and other securities laws, and could raise financial safety-and-soundness issues.

2187.0.2.2 Regulation T, Credit by Brokers and Dealers, and Regulation X, Borrowers of Securities Credit

Because the custodial agency accounts are used to settle transactions effected by the customer at broker-dealers, a banking organization that opens this type of account should have some general understanding of how Regulation T restricts the customer’s use of the account at the institution. Regulation T requires the use of a cash account for customer purchases or sales on a DVP basis. Section 220.8(a) of Regulation T specifies that cash-account transactions are predicated on the customer’s agreement that the customer will make full cash payment for securities before selling them and does not intend to sell them before making such payment. Therefore, free-riding is prohibited in a cash account. A customer who instructs his or her agent financial institution to pay for a security by relying on the proceeds of the sale of that security in a DVP transaction is causing, or aiding or abetting, the broker-dealer to violate the credit restrictions of Regulation T. Regulation X, which generally prohibits borrowers from willfully causing credit to be extended in violation of Regulations T or U, also applies to the customer in such cases.

As described above, banking organizations³ involved in customer free-riding schemes may be aiding and abetting violations of Regulation T by the broker-dealers who deliver securities or funds to the banking organization’s customers’ accounts. As long as a financial institution uses its funds to complete a customer’s transac-

tions, broker-dealers may not discover that they are selling securities to the customer in violation of Regulation T. A similar aiding and abetting violation of Regulation X could occur if a customer used the financial institution to induce a broker-dealer to violate Regulation T.

2187.0.3 NEW-CUSTOMER INQUIRIES AND WARNING SIGNALS

Examiners should make certain that all banks and other financial-institution subsidiaries of a bank holding company are administering and following appropriate written policies and procedures concerning the establishment of custodial agency accounts or any new account involving customer securities transactions. Such policies and procedures should address, among other things, ways an institution can protect itself against free-riding schemes. One way is to obtain adequate background and credit information from new clients, including whether the customer intends to obtain credit to use with the account. This type of activity requires more extensive monitoring than the typical DVP account in which no credit is extended. It would be prudent to inquire why a new customer is not using the margin-account services of its broker-dealers. If the account is to be used as a margin account, a financial institution must obtain Form FR U-1 from the customer and must sign and constantly update the form.

The financial institution should obtain from the customer a list of broker-dealers that will be sending securities to or receiving funds from the account in DVP transactions. If a number of broker-dealers may be used, the institution should obtain from the customer a written statement that all transactions with the broker-dealer will conform with Regulations T and X and that the customer is aware that a security purchased in a cash account is not to be sold until it is paid for. Similarly, when obtaining instructions for settling DVP transactions for a customer, the financial institution should clarify that it will not rely upon the proceeds from the sale of those securities to pay for the purchase of the same securities.

2187.0.4 SCOPE OF THE INSPECTION FOR FREE-RIDING ACTIVITIES

Examiners, bank holding companies, state member banks, and financial-institution and trust subsidiaries owned by bank holding companies (also U.S. branches and agencies of foreign

3. For a discussion of Regulation T as it applies to a bank holding company’s broker-dealer nonbank subsidiary, see section 3230.0.

banks exercising trust powers) should ensure that their banking organizations monitor accounts closely for an initial period to detect patterns typical of free-riding, including intraday overdrafts, and to ensure that sufficient funds or margin collateral are on deposit at all times. Frequent transactions in securities being offered in an initial public offering may suggest an avoidance of Regulations T and X. If it appears that a customer is attempting to free-ride, the financial institution should immediately alert the broker-dealers involved in transferring securities and take steps to minimize its own credit risk and legal liability.

At a minimum, examiners should also evaluate a trust institution’s ability to ensure that it does not extend to a customer more credit on behalf of a bank or other financial institution than is permitted under Regulation U. If there are any questions in this regard, examiners should consult with their Reserve Bank’s trust examiners. Any overdraft that is related to a purchase or sale of margin stock, and that is secured by margin stock, is an extension of credit subject to the regulation, including overdrafts that are outstanding for less than a day. Board staff have published a number of opinions discussing the application of Regulation U to various transactions relating to free-riding.

Free-riding violations that could endanger the banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits), as well as significant violations that were previously noted but have not yet been corrected, should be noted in the inspection report. Violations of the Board’s Regulation T, U, or X, as applicable to the inspection, should be reported on the Examiner’s Comments and Violations report pages. The report should discuss what action has or will be taken to correct those violations.

2187.0.5 SEC AND FEDERAL RESERVE SANCTIONS AND ENFORCEMENT ACTIONS

The SEC, in exercising its broad authority to enforce the Board’s securities credit regulations, requires banks to (1) establish credit compliance committees to formulate written policies and procedures concerning the extension of purpose credit in their securities-clearance business, (2) establish training programs for bank personnel responsible for the conduct of their securities-clearance business, and (3) submit to outside audits to verify their compliance with the conditions of injunctions. The Board may

also institute enforcement proceedings against the banking organizations it supervises and against any institution-affiliated parties involved in these activities, including cease-and-desist orders, civil money penalty assessments, and removal and permanent-prohibition actions.

2187.0.6 INSPECTION OBJECTIVES

1. To make certain that policies of the bank holding company’s board, and the supervisory operating procedures, internal controls, and audit procedures will ensure, in the course of settling customers’ securities transactions—
 - a. that bank extensions of credit within the holding company comply with the provisions of Regulation U (including the requirement that initial extensions of credit that are secured by margin stock are within the initial 50 percent margin limit) and
 - b. that customer accounts hold sufficient funds on the settlement date for each security purchased.
2. To determine—
 - a. whether the banking organizations of the bank holding company can adequately monitor compliance with Regulation U through systems of internal controls, training, and compliance procedures (i.e., use of credit compliance committees) that address free-riding activities within the “back-office function”⁴ and
 - b. whether noncompliance is properly reported.
3. To initiate corrective action when policies, practices, procedures, or internal controls are not sufficient to prevent free-riding schemes, and when violations of the Board’s regulations have been noted by bank examiners or self-regulatory organizations.

2187.0.7 INSPECTION PROCEDURES

1. Review the bank holding company’s board of directors’ policies for its banking institution subsidiaries regarding supervisory operational policies, procedures, and internal controls for loans extended for the purpose

4. Refers to the movement of cash and securities relating to trades and to the processing and recording of trades. This process is also called the “securities-clearance cycle.”

- of buying or carrying margin stock and secured directly or indirectly by margin stock.
 - a. Determine whether the policies require, for *each* extension of credit not specifically exempted under Regulation U, that a Form FR U-1 be executed and signed by the customer and accepted and signed by a duly authorized officer of the banking organization acting in good faith.
 - b. Determine whether the policies limit extensions of credit to no more than the maximum allowed loan value of the collateral, as set by section 221.7 of Regulation U, and whether those policies require adherence to margin requirements.
2. Review the bank holding company’s board of directors’ credit policies and operating policies, internal controls, and internal audit procedures to determine if they provide adequate safeguards against customers’ free-riding practices. In so doing—
- a. determine if new-customer accounts are required to be approved by appropriate personnel; and
 - b. establish whether the bank holding company’s credit-system policies require—
 - controlling securities positions and financial-instrument contracts that serve as collateral for loans;
 - monitoring established restrictions and limits placed on the amounts and types of transactions to be executed with each customer and the dollar amounts placed on unsettled trades;
 - obtaining appropriate documentation consisting of essential facts pertaining to each customer, and in particular, financial information evidencing the customer’s ability to pay for ordered securities, repay extensions of credit, and meet other financial commitments;
 - monitoring the location of all collateral;
 - ensuring that there are no overdrawn margin accounts; and
 - monitoring the status of failed transactions for the purpose of detecting free-riding schemes.
3. Determine if the bank holding company’s audit committee or its internal or external auditors are required to review a selected random sample of individual or custodial agency accounts for customer free-riding activities.

2187.0.8 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Credit by brokers and dealers		220 (Reg. T)		
Regulation U, Credit by Banks or Persons Other Than Brokers or Dealers for the Purpose of Purchasing or Carrying Margin Stocks		221 (Reg. U)

 2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

2220.3.1 NOTE ISSUANCE FACILITY (NIF)

One type of off-balance-sheet activity is the note issuance facility (NIF). The first public facility was arranged in 1981. A NIF is a medium-term arrangement under which a borrower can issue short-term paper. The paper is issued on a revolving basis, with maturities ranging from as low as 7 days to up to one year. Underwriters are committed either to purchasing any unsold notes or to providing standby credit. Bank borrowing usually involves commercial paper consisting of short-term certificates of deposit and for nonbank borrowers it would generally be promissory notes (Euro-notes). NIF is the most common term used for this type of arrangement. Other terms include the revolving underwriting facility (RUF), and the standby note issuance facility (SNIF). NIFs, RUFs, and SNIFs are essentially the same credit product. The NIF is usually structured for 5 to 7 years.

Euronotes are denominated in US dollars and are issued with high face values (often \$500,000 or more), being intended for the more sophisticated investor (professional or institutional investors). Holders of the notes show them as an asset on their balance sheets. The underwriting commitment represents an off-balance sheet item. The NIF allows the various functions performed by a single institution in a syndicated credit to be separated and performed by different institutions.

Instead of lending money, as in a syndicated credit, the NIF arranger provides a mechanism for placing notes with other investors when funds are needed. The underwriting commitment transforms the maturity, assuring the borrower access to short-term funds over the medium term, which remains off-balance sheet, unless drawn upon. The underwriters take the short-term credit risk since they face the risk of lending to a borrower that has difficulty in obtaining full confidence from investors.

NIFs can be arranged with an issuer-set margin whereby the issuer determines the margin over LIBOR (the London Interbank Offered Rate), or some other index at which notes will be offered. The issuer thus benefits from any improvement in market conditions. The notes are placed by the placing agent, but senior underwriters have the option of purchasing a

prearranged share of any notes issued. Any notes not taken up at the issuer-set margin are distributed to underwriters at the pre-established maximum (cap) rate.

2220.3.2 REVOLVING UNDERWRITING FACILITY (RUF)

Another type of facility, a revolving underwriting facility (RUF), was introduced in 1982. A revolving underwriting facility is a medium-term revolving commitment to guarantee the overseas sale of short-term negotiable promissory notes (usually a fixed-spread over LIBOR) issued by the borrower at or below a predetermined interest rate. RUFs separate the roles of the medium-term risk-taker and the providers of the funding (the short-term investors). RUFs and NIFs allow access to capital sources at interest rates considerably below conventional financing rates. The savings in interest cost are derived because the borrower obtains the lower interest costs prevailing in the short-term markets, while still retaining the security of longer term financing commitments. The notes issued under RUFs are attractive for institutional investors since they permit greater diversification of risk than the certificates of deposit of only one bank. Underwriters favor them because their commitments do not appear on the statement of financial condition. RUFs are usually structured for periods of four to seven years.

A revolving underwriting facility (RUF) differs from a (NIF) in that it separates the functions of underwriting and distribution. With a RUF, the lead bank (manager or arranger) acts as the only placing agent. The arranger retains total control over the placing of the notes. The lead bank provides assistance to a borrower who forms a lending group of banks. The borrower, assisted by a lead bank (arranger), obtains a medium term revolving commitment that guarantees the sale of short-term negotiable promissory notes at or below a pre-determined interest rate. The participating group of banks arrange the funding, subject to certain lending conditions and rates, for the duration of the facility. In return, the borrower pays a facility fee to the revolving credit banks.

When the borrower desires funds, a placement agent or tender panel¹ places short-term notes with other banks and institutional investors (usually having maturities of 90 days, 180 days or 12 months). The short term notes can be issued to these investors at significantly lower interest rates than would be available from a revolving credit facility that the same banks would have been willing to provide. The note purchasers generally have a rollover option at maturity and new note purchasers are added as needed. The note purchasers bear the risk of loss in the event of default by the borrower. New note purchasers are added as needed. In the event the full line of credit is not placed with the note purchasers on any rollover date, the revolving credit banks must make funding available for the difference at the previously committed revolving credit interest rates, subject to the terms and conditions within the agreement.

With the RUF, and the use of a sole placing agent, the underwriters are not assured of securing any notes that they could place themselves nor can they benefit from any improvement in terms available in the market. The hindrance is removed by the use of NIFs with an issuer-set margin whereby the issuer determines the margin over an index at which notes will be offered.

Another form of a RUF is a transferable revolving underwriting facility (TRUF). With this arrangement the underwriter is able, with the borrower's approval, to transfer all rights and obligations under the underwriting commitment to another institution at any time during the life of the facility.

2220.3.3 RISK

The loan commitments involved in NIF and RUF transactions contain substantially the same terms as other loan commitments extended to similar borrowers. The failure of the borrower to satisfy the revolving standby agreement relieves the banks of any obligation to fund the

transaction. The major source of risk is thus the liquidity risk that is derived from the uncertainty of the timing or amount of required funding. If the underlying notes cannot be marketed at or below the interest rate specified in the agreement, the bank would need to discount the notes to whatever rate would be necessary to make the notes attractive to investors, perhaps taking an up-front loss to avoid funding a low margin loan.

NIFs and RUFs involve less credit risk than extensions of credit because of the additional step that is required before funding takes place, a step that is not present with a revolving credit agreement. In other words, no funding is required until: (1) a decision is made by the borrower to issue notes; and (2) the placing agent becomes unable to place the short-term notes with short-term investors. Further, the risk of loss rests with the note investors. The underwriter's risk of nonpayment is not present until the rollover date. If there has been a significant deterioration in the issuer/borrower's financial condition on that date, the issuer/borrower may be prevented from drawing under the facility. This would be dependent on the funding conditions or the cancellation provisions stipulated in the agreement.

2220.3.4 PRICING AND FEES

The forms of compensation involving a NIF and RUF are: the underwriting and commitment fee; the one-time arrangement fee, and the periodic placement fees. An annual fixed underwriting fee is paid by the borrower on the amount of underlying commitment. This fee must be paid regardless of the frequency of usage of the facility or whether or not the underwriters are required to make any purchases of the short-term paper. This compensation is for the commitment to underwrite the issuance of the notes. The arranger receives a one-time arrangement fee based on a percentage of the amount of the facility. The issuer pays the borrowing costs on the notes issued, usually at a spread above or below an index. A portion of this borrowing fee is retained by the placement agent or the tender panel members as compensation for placing the paper.

Competitive pricing on NIFs and RUFs causes them to be very thinly margined. Commitment fees may be as low as 5 basis points for blue chip customers, while "BBB" credit-rated or equivalent borrowers might be charged as much as 20 basis points. Because of the thin spread some banks may only be serving as an

1. The tender panel was introduced in 1983. It is usually made up of several commercial investment banks and other institutional investors. The panel members bid for any notes issued, up to a predetermined maximum spread. The revolving credit banks can bid as part of the tender panel, but they are not required to do so. Any notes not bid for are purchased by the revolving credit banks or they extend credit of an equal amount. The tender panel may be a continuous tender panel whereby the underwriters are entitled to purchase notes from the lead manager up to their pro rata share at any time during the offer period, if available, at the market price.

arranger, preferring to not participate in the market. Typical fees for this service may consist of: an up-front arrangement fee of 20 basis points on the total principal amount of the facility, and an annual placement fee such as 12.5 basis points on the short-term notes sold. Revolving credit banks usually receive facility fees and annual maintenance fees.

If the underwriters have to purchase the notes, the backup rate of interest may be the index plus 10 to 15 basis points for blue chip companies to plus 37.5 basis points over the index for “BBB” rated borrowers. The interest rates charged (if funded) are usually lower because of market-pricing conventions (lower spreads) and the intense competition within the market.

2220.3.5 STANDBY RUFs

Some RUFs may provide for a utilization fee or may provide for a higher yield on the notes in the event that more than a nominal amount of paper is allocated to the underwriters. Such a provision would more likely be found in a standby facility. Standby facilities are backup commitments under which notes are not expected to be issued. This provision essentially protects the underwriter from having to book loans that are earning an insufficient yield. The structure of the facility generally determines its pricing depending upon the requirements of the issuer/borrower.

Standby RUFs substitute for committed bank lines which may be used, for example, as backup commitments for issuance of U.S. commercial paper. Commitment fees will be low because of the low probability that funds will need to be advanced. A standby facility will make borrowing from the underwriter very expensive in relation to what the issuer might have to pay. Otherwise, the underlying notes are issued on a regular basis, the maximum yield on

the notes is set to approximate the normal market level for the issuer’s short term borrowings. This facility would have a higher underwriting fee than a standby facility, because the regular issuances of notes increase the likelihood that the underwriting bank will have to purchase notes that cannot be placed.

2220.3.6 RUF DOCUMENTS

The *revolving credit agreement* is the primary document in a RUF. It includes the principal agreement of the transaction, executed by the revolving credit banks and the borrower. It contains the terms and conditions under which the borrower can draw on the facility. The document includes the financial covenants and events of default.

An *agency agreement* between the borrower and the placement agent designates the placement agent for the notes and sets forth the conditions of the agent’s obligations for arranging the sale of the notes. Included are representations and warranties of the borrower regarding the authority to enter into the agreement and to issue the notes.

A description of the terms and conditions of the facility is contained within an *information memorandum*. Detail is provided with regard to the use of the proceeds, current and historical financial information, a description of the company, its finances and operations. It is distributed to prospective credit banks and note purchasers.

The *note* is the last document involving a RUF. Usually the notes will be unsecured obligations of the borrower and will include representations and warranties of the company regarding authorization and the absence of material litigation and bankruptcy proceedings. It will also contain a statement that a revolving credit facility is available to the borrower.

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2007, this section incorporates the June 22, 2006, interagency statement, The 2006 Revisions to Uniform Standards of Professional Appraisal Practice, which was effective on July 1, 2006. Under the appraisal regulations, banking organizations must ensure that their appraisals supporting federally related transactions adhere to Uniform Standards of Professional Appraisal Practice (USPAP). The interagency statement provides an overview of the 2006 USPAP revisions and the ramifications of those revisions to regulated banking organizations. (See SR-06-9.)

The following paragraphs (through section 2231.0.1) provide an overview of the Board's appraisal regulation and also the interagency guidelines for real estate appraisal and evaluation policies and review procedures.

The Board's long-standing policy on real estate appraisals emphasizes the importance of sound appraisal policies and procedures in a banking organization's real estate lending activity. In December 1987, the Board and the other bank regulatory agencies jointly adopted guidelines for real estate appraisal policies and review procedures. With the passage of the Federal Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA), the Board and the other federal financial institutions regulatory agencies adopted regulations in August 1990 to implement the statute's title XI (the statute) (12 U.S.C. 3331) provisions (12 U.S.C. 3310, 3331–3351, and 1844(b)) relating to the performance and use of appraisals by federally regulated financial institutions. On June 7, 1994, the Board and the federal financial institutions regulatory agencies adopted several amendments to their appraisal regulations to clarify the agencies' appraisal requirements.¹ Additionally, the Board revised its guidelines for real estate appraisal and evaluation programs in September 1992. The guidelines were reissued on Octo-

ber 27, 1994, followed by an interagency statement on October 27, 2003. (See SR-94-35, SR-94-50, SR-94-55, SR-95-16, SR-95-27, SR-95-31, SR-98-31, and SR-03-18.) The October 27, 1994, Interagency Appraisal and Evaluation Guidelines can be found in appendix A (see section 2231.0.16). The October 27, 2003, interagency statement on Independent Appraisal and Evaluation Functions can be found in appendix B (see section 2231.0.17). The interagency statement further clarifies and should be reviewed in conjunction with the agencies' appraisal and real estate lending regulations and the Interagency Appraisal and Evaluation Guidelines.

The intent of the statute and subpart G of the Board's Regulation Y (12 C.F.R. 225) is to protect federal financial and public policy interests in real estate–related financial transactions that require the services of an appraiser in connection with federally related transactions. The statute requires that real estate appraisals be prepared in writing, in accordance with uniform standards, by individuals who have demonstrated competency and whose professional conduct is subject to effective supervision.

The statute permitted each state to establish a program for certifying and licensing real estate appraisers who are qualified to perform appraisals in connection with *federally related transactions*.² Additionally, title XI designated the Appraisal Qualifications Board and the Appraisal Standards Board of the Appraisal Foundation, a nonprofit appraisal industry group, as the authority for establishing qualifications criteria for appraiser certification and standards for the performance of an appraisal. The states were authorized by the statute to establish qualification standards for licensing. The statute established the Appraisal Subcommittee of the Federal Financial Institutions Examination Council to monitor the requirements established

1. The appraisal standards for federally related transactions are found in sections 225.61 to 225.67 of subpart G of Regulation Y. Section 225.63 was amended, effective December 28, 1998, to exclude from the Board's appraisal requirements transactions that involve underwriting or dealing in mortgage-backed securities. The amendment permits bank holding company subsidiaries engaged in underwriting and dealing in securities to underwrite and deal in mortgage-backed securities without demonstrating that the loans underlying the securities are supported by appraisals that meet the Board's appraisal requirements. (See 1999 FRB 50.)

2. A *federally related transaction* refers to any real estate–related financial transaction entered into on or after August 9, 1990, that (1) the Board or any regulated institution engages in or contracts for and (2) requires the services of an appraiser. A *real estate–related financial transaction* is any transaction involving (1) the sale, lease, purchase, investment in, or exchange of real property, including interests in property, or the financing thereof; (2) the refinancing of real property or interests in real property; or (3) the use of real property or interests in property as security for a loan or investment, including mortgage-backed securities. (See 12 U.S.C. 3350 (4)–(5).)

to meet the intent of the statute. If the Appraisal Subcommittee issues a finding that the policies, practices, or procedures of a state are inconsistent with title XI, the services of licensed or certified appraisers from that state may not be used in connection with federally related transactions.

The Board's appraisal regulation (Regulation Y, subpart G (12 C.F.R. 225, subpart G)) requires appraisals performed in connection with federally related transactions entered into after August 9, 1990, to comply with the regulation. Real estate-related financial transactions entered into before August 9, 1990, would have had to comply with the Board's supervisory guidelines, issued in 1987, as well as with safe and sound banking practices. Transactions are deemed to have been entered into and a loan is deemed to have been originated if there was a binding commitment to perform before the effective date. The requirement to use a state-certified or -licensed appraiser was effective December 31, 1992.³

2231.0.1 APPRAISAL AND EVALUATION POLICY

A banking organization's board of directors is responsible for adopting policies and procedures that establish effective real estate appraisal and evaluation programs. Analyzing real estate collateral at a loan's inception and over its life requires a sufficient understanding of appraisals and evaluations in order to fully assess credit risk. While the appraisal plays an important role in the loan-approval process, undue reliance should not be placed on the value of collateral in lieu of an adequate assessment of the borrower's repayment ability. However, when a credit becomes troubled, the primary source of repayment often shifts from the borrower's capacity to repay to the value of the collateral. For these reasons, it is important to have sound appraisal policies and procedures.

3. States had the flexibility to adopt an earlier implementation date for state requirements that an appraiser be certified or licensed to perform an appraisal within his or her state. Financial institutions doing business in a state that had an earlier effective date for mandatory use of a certified or licensed appraiser than the federally mandated effective date would have had to abide by any state laws.

2231.0.1.1 Appraisal and Evaluation Programs

The appraisal and evaluation programs should be tailored to the lender's size, its location, and the nature of its real estate market and attendant real estate-related activity. These programs should establish prudent standards and procedures to ensure that written appraisals or evaluations are obtained and analyzed for real estate-related financial transactions before a final credit decision is made.

Appraisal and evaluation programs should also establish the manner in which the institution selects, evaluates, and monitors individuals who perform real estate appraisals or evaluations. Key elements of the programs should ensure that individuals are fairly considered for the assignment, possess the requisite expertise to satisfactorily complete the assignment, hold the proper state certification or license if applicable, and are capable of rendering a high-quality appraisal or evaluation in writing.

2231.0.1.2 Real Estate Appraisal Compliance Procedures

To ensure compliance with the Board's real estate appraisal regulation and supervisory guidelines, the banking organization should have established regulatory compliance procedures for all appraisals and evaluations. The compliance review may be part of a loan officer's overall credit analysis and may take the form of a narrative or checklist. The individual who prepared the appraisal or evaluation should take corrective action for noted deficiencies. Unreliable appraisals or evaluations should be replaced before the final credit decision. Formal documentation or evidence of the review should be maintained.

Additionally, a banking organization should have comprehensive analytical procedures that focus on certain types of loans, such as large-dollar credits, loans secured by complex or specialized properties, nonresidential construction loans, or out-of-area real estate loans. The banking organization should establish criteria for identifying which appraisals should be considered for more comprehensive analytical procedures. These comprehensive analytical procedures should be designed to verify the appropriateness of the methods and approaches used in the appraisal and assess the reasonableness of the appraiser's analysis, opinions, and conclusions.

Formal documentation to support the comprehensive analytical procedures should be maintained. An individual performing this analysis, either an employee of the banking organization or an outside consultant, should have real estate–related training or experience and be independent of the transaction. The individual may not change the appraisal’s or evaluation’s estimate of value as a result of the review—unless that person is appropriately licensed or certified and performs the review according to procedures in Standard 3 of the Uniform Standards of Professional Appraisal Practice.

2231.0.1.3 Reappraisals and Re-evaluations

A program should be developed for obtaining reappraisals or re-evaluations as part of a program of prudent portfolio review and monitoring techniques—even when additional financing is not being contemplated. Examples include obtaining appraisals and revaluations for loans comprising large credit exposures and out-of-area loans. The decision to reappraise or re-evaluate the real estate collateral for a subsequent transaction should be guided by the appraisal exemption for renewals, refinancings, and other subsequent transactions. Loan workouts, debt restructurings, loan assumptions, and similar transactions involving the addition or substitution of borrowers may qualify for the exemption for renewals, refinancings, and other subsequent transactions. Use of this exemption, however, depends on the condition and quality of the loan, the soundness of the underlying collateral, and the validity of the existing appraisal or evaluation.

A loan may be renewed or refinanced on the basis of a valid appraisal or evaluation if the planned future use of the property is consistent with the use identified in the appraisal or evaluation. However, if the property has reportedly appreciated because of a planned change in use, such as a rezoning, an appraisal would be required for a federally related transaction—unless another exemption applied (for example, if the amount financed is below the appraisal threshold).

While the Board’s appraisal regulation generally allows appropriate evaluations of real estate collateral in lieu of an appraisal for loan renewals and refinancings, in certain situations an appraisal is required. If new funds in excess of reasonable closing costs are advanced, a new appraisal for the renewal of an existing transaction should be obtained when there is a mate-

rial change in market conditions that threatens the banking organization’s real estate collateral protection.

For loan workouts, a reappraisal or reevaluation may be prudent, even if it is obtained after the modification. If there is an expected delay in obtaining the appraisal or evaluation, the banking organization should first protect its interest to facilitate the orderly collection of the loan or to reduce the risk of loss. In a troubled-loan situation, a reappraisal would not be required when a banking organization advances funds to protect its interest in a property, such as to repair damaged property, because these funds are being used to restore the damaged property to its original condition.

Real estate posted as collateral that has been acquired by a banking organization through foreclosure or deed in lieu of qualifies for the appraisal exemption for subsequent transactions. Therefore, the banking organization is only required to have an evaluation but may first initiate the foreclosure proceedings to protect its collateral interests before obtaining the evaluation. Because the sale or disposal and the financing of the sale of other real estate owned (OREO) do not arise from an existing extension of credit, these OREO transactions do not qualify for the appraisal exemption. Thus, a banking organization is required to have a valid appraisal to support the sale of OREO unless the transaction qualifies for another appraisal exemption. If the banking organization already has a valid appraisal (or an evaluation) of the real estate, it need not obtain a new appraisal.

2231.0.2 TRANSACTIONS NOT REQUIRING THE SERVICES OF A LICENSED OR CERTIFIED APPRAISER

The Board has determined that certain categories of real estate–related financial transactions do not require the services of a certified or licensed appraiser and, as such, are not considered federally related transactions.

Transactions not requiring the services of a certified or licensed appraiser include transactions in which—

1. the transaction value⁴ is \$250,000 or less;

⁴ *Transaction value* is defined as the amount of the loan or extension of credit under consideration. For a pool of loans or

2. a lien on real property has been taken as collateral in an abundance of caution;
3. the transaction is not secured by real estate;
4. a lien on real estate has been taken for purposes other than the real estate's value;
5. the transaction is a business loan that has a transaction value of \$1 million or less and is not dependent on the sale of, or rental income derived from, real estate as the primary source of repayment;
6. a lease of real estate is entered into, unless the lease is the economic equivalent of a purchase or sale of the leased real estate;
7. the transaction involves an existing extension of credit at the lending institution, provided that there has been no obvious and material change in market conditions or physical aspects of the property that threatens the adequacy of the institution's real estate collateral protection after the transaction, even with the advancement of new monies, or there is no advancement of new monies, other than funds necessary to cover reasonable closing costs;
8. the transaction involves the purchase, sale, investment in, exchange of, or extension of credit secured by a loan or interest in a loan, pooled loans, or interests in real property, including mortgage-backed securities, and each loan or interest in a loan, pooled loan, or real property interest met the Board's regulatory requirements for appraisals at the time of origination;
9. the transaction is wholly or partially insured or guaranteed by a U.S. government agency or U.S. government-sponsored agency;
10. the transaction either qualifies for sale to a U.S. government agency or U.S. government-sponsored agency, or involves a residential real estate transaction in which the appraisal conforms to the Federal National Mortgage Association or Federal Home Loan Mortgage Corporation appraisal standards applicable to that category of real estate;
11. the regulated institution is acting in a fiduciary capacity and is not required to obtain

- an appraisal under any other law;
12. the transaction involves underwriting or dealing in mortgage-backed securities;⁵ or
13. the Board determines that the services of an appraiser are not necessary to protect federal financial and public policy interests in real estate-related financial transactions or to protect the safety and soundness of the institution.

For transactions below the appraisal threshold, qualifying for the \$1 million or less business-loan exemption, or qualifying for the existing extension-of-credit exemption, the Board still requires an appropriate evaluation of the real property collateral that is consistent with safe and sound banking practices.

The Board reserves the right to require an appraisal on an exempt transaction whenever it is necessary to address safety-and-soundness concerns. Whether a banking organization will be required to obtain an appraisal for a particular transaction or an entire group of credits will depend on its condition. For example, if a banking organization is in troubled condition that is attributable to underwriting problems in its real estate loan portfolio, the Board may require the banking organization to obtain an appraisal for all new transactions below the threshold. However, regardless of a banking organization's condition, an examiner may require an appraisal for a particular real estate-related transaction to address safety-and-soundness concerns.

2231.0.3 OBTAINING AN APPRAISAL

The banking organization or its agent is responsible for engaging the appraiser and must have sufficient time to analyze the appraisal as part of its decision process to enter into the transaction. (See the discussion below on the selection of an appraiser.) A banking organization may not accept an appraisal prepared for a potential borrower as the appraisal for a federally related transaction. An appraisal obtained by a financial services institution may be used by a federally regulated institution so long as procedures have been established for reviewing appraisals, the review indicates that the appraisal meets the regulation's requirements, and the review is documented in writing.

For a multiphased development or construction loan, the appraisal of an earlier phase cannot be used for a new phase due to the change in

a mortgage-backed security, the transaction value is the amount of each individual loan. In determining transaction value, the senior and junior debt are considered separate transactions under the appraisal rule. However, a series of related transactions will be considered one transaction if it appears that an institution is attempting to avoid the appraisal requirement by structuring the transactions below the appraisal threshold.

5. This Regulation Y exemption from the Board's appraisal standards was effective on December 28, 1998.

risk. However, if the original appraisal was prepared for all phases of the project, the project appraisal may be used if the appraisal's value for the new phase is still valid at the time additional credit is extended.

2231.0.4 USEFUL LIFE OF AN APPRAISAL

Since a banking organization may wish to use an existing appraisal or evaluation for a subsequent loan or investment, its appraisal and evaluation program should include criteria to determine the validity of an existing appraisal or evaluation. The useful life of an appraisal will vary, depending on the circumstances surrounding the property and the marketplace. When deciding if an appraisal or evaluation may be used for a subsequent transaction, a banking organization should determine if any material changes to the underlying assumptions have occurred that would affect the original estimate of value.

Examples of factors that could cause material changes to reported values include the passage of time; the volatility of the local market; the availability of financing; the inventory of competing properties; new improvements to, or lack of maintenance of, the subject or competing, surrounding properties; a change in zoning; or environmental contamination. The banking organization should document its information sources and analyses used to determine if an existing appraisal or evaluation remains valid. It should also document whether the banking organization will be using that appraisal or evaluation in a subsequent transaction.

2231.0.5 APPRAISAL REQUIREMENTS

The objective of an appraisal is to communicate the appraiser's reasoning and conclusions logically so that the reader is led to the appraiser's opinion of market value. The contents of appraisals should conform to the standards of the Board's appraisal regulation and to those established in the current USPAP as promulgated by the Appraisal Standards Board (ASB) of the Appraisal Foundation. The actual form, length, and content of appraisal reports may vary, depending on the type of property being appraised and the nature of the assignment. Standard forms completed in compliance with the regulation and USPAP are also acceptable.

A banking organization is responsible for

obtaining an appraisal that is appropriate for the particular federally related transaction. The appraisal must consider the risk and complexity of the transaction. The level of detail should be sufficient to understand the appraiser's analysis and opinion of the property's market value. In accordance with USPAP, appraisers are responsible for establishing the scope of work to perform in rendering an opinion of the property's market value and have available three different reporting options. The appraiser's scope of work should be consistent with the valuation methodology employed for similar property types, market conditions, and transactions.

2231.0.5.1 Interagency Statement on the 2006 USPAP

The federal banking and thrift agencies⁶ issued an interagency statement, *The 2006 Revisions to Uniform Standards of Professional Appraisal Practice*, on June 22, 2006. (See SR-06-9.) The statement provides an overview of the USPAP revisions and the ramifications of the revisions to regulated institutions' compliance with the agencies' appraisal regulations.

The ASB revised the USPAP in 2006, effective July 1, 2006, and incorporated certain prominent revisions,⁷ including a new Scope of Work Rule. It also deleted the Departure Rule and its associated terminology (such as "binding" and "specific" requirements and "complete" and "limited" appraisals). The Scope of Work Rule clarifies the standards for the type and extent of research and analysis performed by the appraiser in an appraisal assignment. The ASB noted that the appraisal process was not changed and that there is a greater emphasis on the appraiser's process of problem identification and the development of an appropriate scope of work.

Under the USPAP's Scope of Work Rule, an appraiser must determine an appropriate scope of work that should be performed to produce "credible assignment results." According to the USPAP Advisory Opinion 29, credible assign-

6. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

7. The 2006 USPAP and other ASB documents are available on the Appraisal Foundation web site at www.appraisalfoundation.org/s_appraisal/sec.asp?CID=3&DID=3.

ment results depend on the scope of work meeting or exceeding both (1) the expectations of parties who are regularly intended users for similar assignments and (2) what an appraiser's peers' actions would be in performing the same or a similar assignment. Further, the appraisal report must contain sufficient disclosure to allow intended users to understand the scope of work performed. (Appraisers may continue to label appraisal reports as self-contained, summary, or restricted use.)

A banking organization may use an engagement letter in ordering an appraisal to facilitate communications with the appraiser and to document the expectations of each party to the appraisal assignment. To determine an appraisal's acceptability, a banking organization should review the report to assess the adequacy of the appraiser's scope of work given the intended use of the appraisal. In accordance with the Board's appraisal regulation, a banking organization must determine that the appraisal report contains sufficient information and analysis to support the credit decision.

2231.0.5.2 Appraisal Standards

The minimum standards for appraisals performed in connection with federally related transactions are those set forth in USPAP, as well as any other standards that the Board deems necessary. In summary, an appraisal must—

1. conform to the generally accepted appraisal standards as evidenced by USPAP, unless principles of safe and sound banking require compliance with stricter standards;
2. be written and contain sufficient information and analysis to support the banking organization's decision to engage in the transaction;
3. analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, non-market lease terms, and tract developments with unsold units;
4. be based on the definition of market value as set forth in the regulation; and
5. be performed by state-licensed or -certified appraisers in accordance with the requirements in the regulation.

From the appraiser's perspective, these regulatory appraisal requirements are "supplemental standards" to USPAP. If an appraiser knowingly

fails to comply with supplemental standards, the appraiser is in violation of the USPAP Ethics Rule. When ordering appraisals, a banking organization should convey to an appraiser that these supplemental standards remain applicable.

The Board's appraisal regulation permitted banking organizations to use appraisals prepared according to the former USPAP Departure Provision, which permits limited exceptions to "specific guidelines" in USPAP. Under the former Departure Provision, the appraisal amendment would be considered a complete or limited appraisal. In a complete appraisal assignment, an appraiser must meet all USPAP standards and guidelines in estimating market value. In a limited appraisal assignment, the appraiser elects to depart from certain specific guidelines by invoking the Departure Provision.

2231.0.5.3 Appraisal Reports

The appraisal report usually includes a disclosure of sales history and an opinion as to the highest value and best use of the property. After preparing a report, appraisers must certify that—

1. statements of fact are true and correct,
2. limiting conditions have been disclosed,
3. they have no interest (present or future) in the transaction or property,
4. compensation is not contingent on rendering a specified value,
5. they have complied with USPAP,
6. an inspection of the property was or was not performed, and
7. assistance was or was not received in the preparation of the appraisal.

Three different report formats can be used to report the results of the appraisal assignment: a self-contained report, a summary report, and a restricted report. Since USPAP requires all appraisal reports to encompass all aspects of the assignment, reports will differ based on the degree of detail presented. The self-contained appraisal report provides the most detail; the summary appraisal report condenses the information; and the restricted appraisal report presents minimal information, with supporting details maintained in the appraiser's work files.

The restricted report is not appropriate for a significant number of federally related transactions because the minimal amount of information limits the usefulness of the document for underwriting, compliance, and other decision-making purposes. However, a restricted report

might be used when providing ongoing collateral monitoring of a banking organization's real estate transactions and under other circumstances when a banking organization's program requires an evaluation.

2231.0.5.4 Appraisal Content

The appraisal must reflect a market value of the real estate. The regulation defines market value as the most probable price that a property should bring in a competitive and open market under all conditions requisite to a fair sale, the buyer and seller each acting prudently and knowledgeably, and assuming the price is not affected by undue stimulus. Implicit in this definition is the consummation of a sale as of a specified date and the passing of title from the seller to the buyer under conditions whereby—

1. the buyer and seller are typically motivated,
2. both parties are well informed or well advised and acting in what they consider their own best interests,
3. a reasonable time is allowed for exposure in the open market,
4. payment is made in terms of cash in U.S. dollars or in terms of financial arrangements comparable thereto, and
5. the price represents the normal consideration for the property sold, unaffected by special or creative financing or sales concessions granted by anyone associated with the sale.

To properly underwrite a construction loan, a banking organization may need to know the prospective value of a property and its market value as of the appraisal date. Prospective value is based on events yet to occur, such as completion of construction or renovation, reaching stabilized occupancy, or some other event yet to be determined. Thus, more than one value may be reported in an appraisal as long as all values are clearly described and reflect the projected dates when future events could occur. Assumptions and projections used to develop prospective value estimates must be fully supported and reasonable in light of current market conditions.

2231.0.6 APPRAISAL VALUATION APPROACHES

The appraiser typically uses three market-value approaches to analyze the value of property:

1. cost approach

2. comparable-sales approach
3. capitalization-of-income approach

All three approaches have particular merits depending on the type of real estate being appraised. For single-family residential property, the cost and comparable-sales approaches are most frequently used since the common use of the property is the personal residence of the owner. However, if a single-family residential property is intended to be used as a rental property, the appraiser would have to consider the income approach as well as the cost and comparable-sales approaches. For special-use commercial properties, the appraiser may have difficulty obtaining sales data on comparable properties and may have to base the value estimate on the cost and capitalization of income approach. If an approach is not used in the appraisal, the appraiser should disclose the reason the approach was not used and whether this had an impact on the value estimate.

2231.0.6.1 Value Correlation

The three value estimates—cost, market, and income—must be evaluated by the appraiser and correlated into a final value estimate based on the appraiser's judgment. Correlation does not imply averaging the value estimates obtained by using the three different approaches. When these value estimates are relatively close together, correlating them and setting the final market-value estimate presents no special problem. However, if widely divergent values are obtained by using the three appraisal approaches, the appraiser must exercise judgment in analyzing the results and determining the estimate of market value.

2231.0.6.1.1 Cost Approach

In the cost approach to value estimation, the appraiser obtains a preliminary indication of value by adding the estimated depreciated reproduction cost of the improvements to the estimated land value. This approach is based on the assumption that the reproduction cost is the upper limit of value and that a newly constructed building would have functional and mechanical advantages over an existing building. The appraiser would evaluate any depreciation, that is, disadvantages or deficiencies, of

the existing building in relation to a new structure.

The cost approach consists of four basic steps: (1) estimate the value of the land as though vacant, (2) estimate the current cost of reproducing the existing improvements, (3) estimate depreciation and deduct from the reproduction-cost estimate, and (4) add the estimate of land value and the depreciated reproduction cost of improvements to determine the value estimate.

2231.0.6.1.2 Comparable-Sales Approach

The focus of this approach is to determine the recent sales price of similar properties. Through an appropriate adjustment for differences in the subject property and the selected comparable properties, the appraiser estimates the market value of the subject property based on the sales price of the comparable properties. To determine the extent of comparability of two or more properties, the appraiser must judge their similarity with respect to age, location, condition, construction, layout, and equipment. The sales or list price of those properties that the appraiser determines to be most comparable will tend to set the range for the value of the subject property.

2231.0.6.1.3 Income Approach

The income approach estimates the project's expected income over time converted to an estimate of its present value. The income approach typically is used to determine the market value of income-producing properties such as office buildings, apartment complexes, hotels, and shopping centers. In the income approach, the appraiser can use several different capitalization or discounted-cash-flow techniques to arrive at a market value. These techniques include the band-of-investments method, mortgage-equity method, annuity method, and land-residual technique. The use of a particular technique will depend on whether there is project financing, there are long-term leases with fixed-level payments, and the value is being rendered for a component of the project such as land or buildings.

The accuracy of the income approach depends on the appraiser's skill in estimating the anticipated future net income of the property

and in selecting the appropriate capitalization rate and method. The following data are assembled and analyzed to determine potential net income and value:

1. Rent schedules and the percentage of occupancy for the subject property and for comparable properties for the current year and several preceding years. This information provides gross rental data and the trend of rentals and occupancy, which are then analyzed by the appraiser to estimate the gross income the property should produce.
2. Expense data such as taxes, insurance, and operating costs being paid from revenues derived from the subject property and comparable properties. Historical trends in these expense items are also determined.
3. The timeframe for achieving "stabilized" or normal occupancy and rent levels (also referred to as the "holding period").
4. An appropriate capitalization rate and valuation technique, selected and applied to net income to establish a value estimate.

Basically, the income approach converts all expected future net operating income into a value estimate. When market conditions are stable and no unusual patterns of future rents and occupancy rates are expected, the direct-capitalization method is used to value income properties. This method calculates the value of a property by dividing an estimate of its stabilized annual income by a factor called a "cap" rate. Stabilized income generally is defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions. The cap rate—usually defined for each property type in a market area—is viewed by some analysts as the required rate of return stated in terms of current income.

The use of this technique assumes that either the stabilized income or the cap rate, used accurately, captures all relevant characteristics of the property relating to its risk and income potential. If the same risk factors, required rate of return, financing arrangements, and income projections are used, explicit discounting and direct capitalization will yield the same results.

For special-use properties, new projects, or troubled properties, the discounted-cash-flow (net present value) method is the more typical approach to analyzing a property's value. In this method, a timeframe for achieving a stabilized or normal occupancy and rent level is projected. Each year's net operating income during that

period is discounted to arrive at the present value of expected future cash flows. The property's anticipated sales value at the end of the stabilization period (its terminal or reversion value) is then estimated. The reversion value represents the capitalization of all future income streams of the property after the projected occupancy level is achieved. The terminal or reversion value is then discounted to its present value and added to the discounted income stream to arrive at the total present market value of the property.

Most importantly, the analysis should be based on the ability of the project to generate income over time based on reasonable and supportable assumptions. Additionally, the discount rate should reflect reasonable expectations about the rate of return that investors require under normal, orderly, and sustainable market conditions.

2231.0.7 OTHER DEFINITIONS OF VALUE

The Board's appraisal regulation requires that the appraisal contain a market value of the real estate collateral. Some other definitions of value that are encountered when appraising and evaluating real estate transactions are described below.

1. *Fair value* is an accounting term that is generally defined as the amount in cash or cash-equivalent value or other consideration that a real estate parcel would yield in a current sale between a willing buyer and a willing seller (selling price), other than a forced or liquidation sale.⁸ According to accounting literature, fair value is generally used in valuing assets in nonmonetary transactions, troubled-debt restructuring, quasi-reorganizations, and business combinations accounted for by the purchase method. An accountant generally defines fair value as market value; however, depending on the circumstances, these values may not be the same for a particular property.
2. *Investment value* is based on the data and assumptions that meet a particular investor's criteria and objectives for a specific property or project. The investor's criteria and objectives are often substantially different than those of participants in a broader market.

Thus, investment value can be significantly higher than market value in certain circumstances and should not be used in credit-analysis decisions.

3. *Liquidation value* assumes that there is little or no current demand for the property and that the property needs to be disposed of quickly. In this situation, the owner may have to sacrifice property appreciation for an immediate sale.
4. *Going-concern value* is based on the value of the business entity, rather than the value of the real estate. The valuation is based on the existing operations of a business that has a proven operating record, with the assumption that the business will continue to operate.
5. *Assessed value* represents the value on which a taxing authority bases its assessment. The assessed value and market value may differ considerably due to tax assessment laws, timing of reassessments, and tax exemptions allowed on properties or portions of a property.
6. *Net realizable value (NRV)* is recognized under generally accepted accounting principles⁹ as "the estimated selling price in the ordinary course of business less estimated costs of completion (to the stage of completion assumed in determining the selling price), holding, and disposal." The NRV is generally used to evaluate the carrying amount of assets being held for disposition and properties representing collateral. While the market value or future selling price is generally used as the basis for the NRV calculation, the NRV also reflects the current owner's costs to complete the project and to hold and dispose of the property. For this reason, the NRV will generally be less than the market value.

The appraiser should state the definition of value reported in the appraisal, and, for federally related transactions, the value must meet the definition of market value in the regulation. This is the most probable price that a property should bring in a competitive and open market under all conditions requisite to a fair sale, assuming the buyer and seller are both acting prudently and knowledgeably, and the price is not affected by undue stimulus. Other presenta-

8. FASB Statement No. 67, "Accounting for Costs and Initial Rental Operations of Real Estate Projects," appendix A—Glossary.

tions of value, in addition to market value, are allowed and may be included in the appraisal at the request of the banking organization.

2231.0.8 EVALUATION REQUIREMENTS

The Board's appraisal regulation requires an evaluation for certain real estate-related financial transactions that are exempt from the title XI appraisal requirement. These transactions include—

1. transactions below the \$250,000 threshold;
2. transactions qualifying for the exemption for business loans of \$1 million or less, when rental income or sales proceeds from real estate is not the primary source of repayment; and
3. subsequent transactions resulting from an existing extension of credit (for example, renewals and refinancings).

An evaluation should provide a general estimate of the value of the real estate and need not meet the detailed requirements of a title XI appraisal.¹⁰ An evaluation must provide appropriate information to enable the banking organization to make a prudent decision regarding the transaction. Moreover, a banking organization is not precluded from obtaining an appraisal that conforms to the regulation for any exempt transaction. At a minimum, an evaluation should—

1. be written;
2. include the preparer's name, address, and signature, and the effective date of the evaluation;
3. describe the real estate collateral, its condition, and its current and projected use;
4. describe the sources of information used in the analysis;
5. describe the analysis and supporting information; and
6. provide an estimate of the real estate's market value, with any limiting conditions.

10. An appraisal is the kind of specialized opinion on the value of real estate that contains certain formal elements recognized by appraisal industry practices and standards.

2231.0.8.1 Form and Content of Evaluations

The documentation for evaluations should fully support the estimate of value and include sufficient information to understand the evaluator's analysis, assumptions, and conclusions. The evaluator is not required to use a particular form or valuation approach, but the analysis should apply to the type of property and fully explain the value rendered.

An individual who conducts an evaluation should have real estate-related training or experience relevant to the type of property. However, the individual does not have to be a state-licensed or -certified appraiser. Prudent practices require that a more detailed evaluation be performed as the banking organization engages in more complex real estate-related financial transactions or as its overall exposure in a real estate-related financial transaction increases.

An evaluation for a transaction that needs a more detailed analysis should describe the property; give its location; and discuss its use, especially for nonresidential property. An evaluation for a transaction that requires a less detailed analysis may be based on information such as comparable property sales information from sales-data services (for example, the multiple-listing service or current tax-assessed value in appropriate situations).¹¹ Further, an evaluation may be based on the banking organization's own real estate loan portfolio experience and on value estimates prepared for recent loans on comparable properties, when appraisals meeting the regulatory requirements were obtained. Regardless of the method, the banking organization must document its analysis and findings in the loan file.

2231.0.9 SELECTION AND QUALIFICATIONS CRITERIA FOR APPRAISERS AND EVALUATORS

The accuracy of an appraisal or evaluation depends on the competence and integrity of the individual performing the appraisal or evaluation, as well as on that person's expertise at developing and interpreting pertinent data for the subject property. Appraisers and evaluators should have adequate training, experience, and

11. Assessed values for tax purposes may be a specified fraction of market value, as determined by the tax assessor. Therefore, tax-assessed values should be adjusted to a market-value equivalent. In cases where the assessed value does not have a reliable correlation to current value, the use of assessed value would be inappropriate as the basis for an evaluation.

knowledge of the local real estate market to make sound judgments concerning the value of a particular property. Their level of training, experience, and knowledge should be commensurate with the type and complexity of the property to be valued. Additionally, appraisers and evaluators should be independent of the credit decision, have no interest in the property being appraised, and have no affiliations or associations with the potential borrower. Absent absolute lines of independence, a banking organization must be able to demonstrate that it has prudent safeguards in place to isolate its collateral-evaluation process from influence or interference from the loan-production process.

2231.0.9.1 Appraiser Qualifications

Title XI of FIRREA identified two classifications of appraisers to be used in federally related transactions: state-certified appraisers and state-licensed appraisers. For a state-certified appraiser, the statute anticipated that the states would adopt similar standards for certification based on the qualification criteria of the Appraiser Qualifications Board of the Appraisal Foundation. The Appraisal Foundation standards set forth minimum educational, testing, experience, and continuing-education requirements. For a licensed appraiser, the states have some latitude to establish qualification standards, provided criteria are adequate to protect federal financial and public policy interest.

The Appraisal Subcommittee of the FFIEC is responsible for monitoring state compliance with the statute. The Board also has the authority to impose additional certification and licensing requirements on those adopted by a given state.

2231.0.9.2 Selection of an Appraiser

An independent appraisal is one in which the appraiser is not participating in the administration of the credit or in the approval of the transaction and has no interest, financial or otherwise, in the property. In certain instances involving small banking organizations, officers and directors who perform appraisals must take appropriate steps to ensure that they are independent from the transaction under consideration.

When selecting an appraiser for an appraisal assignment, a banking organization is expected to consider whether the individual holds the proper state certification or license and has the

appropriate experience and educational background to complete the assignment. Financial institutions may not exclude a qualified appraiser from consideration for an appraisal assignment solely because the appraiser lacks membership in a particular appraisal organization or does not hold a particular designation from an appraisal association, organization, or society.

In that regard, banking organizations are expected to treat all appraisers fairly and equitably in determining whether to use the services of a particular appraiser. Generally, banking organizations have established procedures for selecting appraisers and maintaining an approved appraiser list. The practice of pre-approving appraisers for ongoing appraisal work and maintaining an approved appraiser list is acceptable so long as all appraisers are required to follow the same approval process. However, a banking organization that requires appraisers who are not members of a particular appraisal organization to formally apply, pay an application fee, and submit samples of previous appraisal reports for review—but does not have identical requirements for appraisers who are members of other appraisal organizations—would be viewed as having a discriminatory selection process.

2231.0.9.3 Appraisals Performed by Certified or Licensed Appraisers

In summary, a banking organization is required to use a certified appraiser for (1) all federally related transactions over \$1 million, (2) nonresidential federally related transactions of more than \$250,000, and (3) complex residential federally related transactions of more than \$250,000.¹² A banking organization may use either a state-certified or a state-licensed appraiser for noncomplex residential federally related transactions that are under \$1 million.

2231.0.9.4 Other Appraiser Designations

Some states have adopted other appraiser designations that may cause confusion about whether a particular appraiser holds the appropriate des-

12. A complex one- to four-family residential property appraisal is one in which (1) the property to be appraised is atypical, (2) the form of ownership is atypical, or (3) the market conditions are atypical.

ignation for a given appraisal assignment. Additionally, some states use designations such as “certified residential” appraiser and “certified general” appraiser, which leads to further confusion. Other states have no specified license designation but have used the term “certified residential” based on the standards for licensing. For this reason, a banking organization needs to understand the qualification criteria set forth by the state appraiser regulatory body and whether these standards are equivalent to the federal designations accepted by the Appraisal Subcommittee.

The Appraisal Subcommittee has recognized two other appraiser designations: certified residential appraiser and transitional licensed appraiser. For the certified residential appraiser, the minimum qualification standards are those established by the Appraiser Qualifications Board for “certified residential real estate appraiser.” Under the Board’s regulation, a certified residential appraiser would be permitted to appraise real estate in connection with a federally related transaction designated for a “certified” appraiser, provided the individual is competent for the particular appraisal assignment.

The Appraisal Subcommittee and the Board are also willing to recognize a transitional license that would allow a state to issue a license to an appraiser, provided the individual has passed an examination and has satisfied either the education or experience requirement. A transitionally licensed appraiser is permitted to appraise real estate collateral in connection with a federally related transaction as if licensed. The transitionally licensed appraiser is expected to complete his or her education or experience requirement within a set time frame, or the license expires. Recognition of a transitional license was believed to be necessary to ease the initial problems and inefficiencies resulting from a new regulatory program. The Appraisal Subcommittee has advised the states that the use of the transitional licenses should be phased out once the appraiser regulatory program is fully established. As a result, use of the transitional license and the applicable time frame will vary from state to state.

2231.0.9.5 Qualifications of Individuals Who Can Perform Evaluations

Evaluations can be performed by a competent person who has experience in real estate-related

activities, including, but not limited to, appraisals, real estate lending, real estate consulting, and real estate sales. A banking organization may also augment in-house expertise by hiring an outside consultant familiar with a certain market or a particular type of real estate. The evaluation procedures should have established standards for selecting qualified individuals to perform evaluations and for confirming their qualifications and independence to evaluate a particular transaction. An individual performing an evaluation need not be licensed or certified. However, if a banking organization desires, it may use state-licensed or -certified appraisers to prepare evaluations.

2231.0.10 EXAMINER REVIEW OF APPRAISAL AND EVALUATION POLICIES

A banking organization’s appraisal and evaluation policies and procedures will be reviewed as part of the inspection of the organization’s overall activities. This review will include the organization’s procedures for selecting an appraiser for a particular appraisal or evaluation assignment and for confirming that the appraiser is qualified, independent, and, if applicable, licensed or certified to undertake the assignment. If an institution maintains a listing of qualified real estate appraisers who are acceptable for the banking organization’s use, the examiner should ascertain whether the board of directors or senior management has reviewed and approved the list.

If a banking organization is in troubled condition that is attributable to underwriting problems in its real estate loan portfolio, the Board may require the banking organization to obtain appraisals for all new real estate-related financial transactions below the threshold that are not subject to another exemption. The Reserve Bank will determine if a particular banking organization will have to obtain appraisals below the threshold.

When analyzing individual credits, examiners will analyze appraisals or evaluations to determine that the methods, assumptions, findings, and conclusions are reasonable and comply with the Board’s rule, policies, and supervisory guidelines. Examiners should not challenge underlying assumptions, including the discount and capitalization rates used in appraisals, that slightly differ from norms that would generally be associated with the property under review. Furthermore, an examiner is not bound to accept the appraisal or evaluation results, regardless of

whether a new appraisal or evaluation was requested during the examination. An examiner who concludes that an appraisal or evaluation is deficient for any reason will take that fact into account when judging the quality of the credit.

When the examiner can establish that the underlying facts or assumptions are inappropriate and can support alternative assumptions, he or she may adjust the estimated value of the property for credit-analysis purposes. It is important to emphasize that an examiner's overall analysis and classification of a credit may be based on other credit or underwriting standards, even if the loan is secured by real property whose value is supported by an appraisal or evaluation.

Significant failures to meet standards and procedures as outlined above will be criticized and corrective action will be required. Furthermore, banking organizations that fail to maintain a sound appraisal or evaluation program or that fail to comply with the agencies' appraisal regulations and policies or the Board's supervisory guidelines will be cited in inspection reports and may be criticized for unsafe and unsound banking practices. Deficiencies will require corrective action.

The appraisal regulation and guidelines require that banking organizations use the services of qualified, independent, and certified or licensed appraisers to perform appraisals. Furthermore, a banking organization that knowingly uses the services of an individual who is not properly certified or licensed to perform an appraisal in connection with a federally related transaction is violating the Board's Regulation Y or applicable law. Any action of a state-certified or -licensed appraiser that is contrary to the Board's appraisal regulation or applicable law should be reported to the Federal Reserve Bank for referral to the appropriate state appraiser regulatory agency for investigation.

2231.0.11 INTERAGENCY RESPONSES TO QUESTIONS ON THE AGENCIES' APPRAISAL REGULATIONS AND ON THE INTERAGENCY STATEMENT ON INDEPENDENT APPRAISAL AND EVALUATION FUNCTIONS

On March 22, 2005, the Federal Reserve and the other federal financial institutions regulatory agencies issued interpretive responses (in a question-and-answer format) to questions raised by federally regulated financial institutions about the agencies' real estate appraisal regula-

tions. The topics include—

1. selecting an appraiser,
2. ordering an appraisal,
3. accepting a transferred appraisal,
4. reviewing appraisals, and
5. evaluation and other appraisal topics.

The interpretive responses address common questions on the requirements of the appraisal regulations and the October 2003 interagency statement Independent Appraisal and Evaluation Functions (the interagency statement).¹³ (See SR-05-5 and its attachment.)

On September 8, 2005, the Federal Reserve and the other federal financial institutions regulatory agencies jointly issued additional interpretive responses (also in a question-and-answer format) to assist regulated institutions in complying with the agencies' appraisal regulations and real estate lending requirements when financing residential construction in a tract development.¹⁴ (See SR-05-14 and its attachment.)

The topics include the—

1. definition of residential tract development, including clarification of a residential unit and pre-sold unit;
2. appraisal requirements for residential tract development, raw land, residential lots, and condominium buildings;
3. clarification of loan amount and collateral value for purposes of calculating the loan-to-value ratio for residential-tract-development loans;
4. acceptable use of an appraisal of a model home;
5. underwriting characteristics of a revolving line of credit in which a borrowing base sets the availability of funds to the borrower; and
6. appraisal requirements for transactions financing the construction of single-family homes in a residential tract development.

Refer to these interpretive documents when questions arise about the appraisal regulations, the interagency statement, and appraisals involving residential tract lending.

13. See also the Board's appraisal regulations (12 C.F.R. 208, subpart E, and 12 C.F.R. 225, subpart G) and related guidance, including SR-94-55 and SR-03-18.

14. See the Interagency Appraisal and Evaluation Guidelines (SR-94-55) and the real estate lending standards regulation and guidelines, 12 C.F.R. 208, subpart E and appendix C.

2231.0.12 INSPECTION OBJECTIVES

1. To determine whether policies, practices, procedures, and internal controls regarding real estate appraisals and evaluations for real estate–related financial transactions are adequate.
2. To determine whether the banking organization’s officers and employees are conforming with the appraisal policies of the board of directors.
3. To determine whether appraisals performed in connection with federally related transactions comply with the minimum standards of the Board’s appraisal regulation and the Uniform Standards of Professional Appraisal Practice.
4. To determine if appraisers used in connection with federally related transactions are certified or licensed as appropriate.
5. To determine whether appraisers are competent to render appraisals in federally related transactions and whether they are independent of the transaction or other lending, investment, or collection functions as appropriate.
6. To initiate corrective action when policies, practices, procedures, or internal controls are deficient, or when violations of laws or regulations or noncompliance with provisions of supervisory guidelines has been noted.

2231.0.13 INSPECTION PROCEDURES

1. Test real estate–related financial transactions for compliance with approved real estate appraisal and evaluation policies and established practices, procedures, and internal controls. Also obtain a listing of any deficiencies noted in the latest review performed by internal or external auditors, and determine if appropriate corrections have been made. On the basis of these results, determine the scope of the inspection for appraisals.
 - a. Provide copies of the banking organization’s appraisal and evaluation policies and procedures to examiners assigned to functional areas in which real estate–related transactions may require the services of an appraiser or evaluator.
 - b. Review appraisals and evaluations of individual real estate–related transactions during the inspection of loans, BHC prem-

- ises, DPC assets, or OREO transactions. Review the appraisals and evaluations for compliance with the Board’s appraisal regulation and appraisal guidelines and for compliance with the banking organization’s appraisal and evaluation programs.
- c. When real estate–related transactions are examined on a portfolio basis, review the appraisal and evaluation processes. Determine whether the processes ensure that appraisals and evaluations comply with the Federal Reserve Board’s appraisal regulation, the interagency appraisal guidelines, and the banking organization’s appraisal and evaluation programs.
2. When performing the above steps, determine whether the following procedures are in place:
 - a. The board of directors approves and periodically reviews the appraisal policies and procedures that establish the appraisal and evaluation programs for real estate lending, as required by the Board’s real estate lending regulation.
 - b. Policies and procedures establish and maintain an effective, independent appraisal and evaluation program for all of the banking organization’s lending functions; policies and procedures are sufficiently comprehensive; and policies and procedures are applied uniformly to all units engaged in federally related transactions.
 - c. The appraisal and evaluation programs include comprehensive appraisal and evaluation critique procedures and internal loan-review procedures.
 - d. The banking organization engages competent individuals who are independent of the transaction to perform appraisals and evaluations, and the banking organization’s appraisal and evaluation programs establish how it selects, evaluates, and monitors those individuals.
 - e. The appraisal and evaluation programs establish the selective criteria the banking organization uses to select, evaluate, monitor, and ensure the independence of the individuals who perform or critique real estate appraisals and evaluations.
 - f. The appraisal program (1) considers the independent appraiser’s qualifications, experience, and educational background; (2) ensures that appraisals are not used that were prepared by an individual who is recommended or selected by the borrower (including those individuals listed by the banking organization as approved

- appraisers); and (3) conforms to the Board's appraisal regulation.
- g. The evaluation program ensures that evaluations conform to the Board's guidance on evaluations (SR-94-55, SR-94-50, and SR-03-18).
 - h. The appraisal and evaluation programs appropriately reflect the banking organization's size, its location, and the nature and complexity of its real estate lending and other real estate-related lending activities.
 - i. Policies and procedures require independent appraisals and evaluations to be written.
 - j. Criteria have been established for determining when to obtain reappraisals or re-evaluations as part of a program of prudent portfolio review and monitoring.
 - k. The banking organization has appropriate procedures to assess the validity of appraisals and evaluations for certain subsequent transactions exempt from the Board's appraisal requirements, or to determine whether new appraisals or evaluations were obtained.
3. Review and assess the banking organization's compliance procedures to ensure that the appraisal and evaluation programs are effective and in compliance with regulatory requirements and that the appropriateness of appraisals and evaluations is reviewed before final credit decisions. Determine if the following procedures are in place:
 - a. The monitoring procedures demonstrate that appraisals and evaluations comply with the Board's appraisal regulation and the Board's appraisal and evaluation guidelines.
 - b. The program provides that appraisals and evaluations are obtained before the final credit or other decision. However, for transactions involving loan workouts or restructurings to facilitate the orderly collection of the credit or to reduce the risk of loss, appraisals or evaluations were obtained in a reasonable time after the transaction occurred.
 - c. The programs have review procedures to verify that the methods, assumptions, and conclusions in the appraisals or evaluations are reasonable and appropriate for the transaction and the property.
 - d. Criteria are established to identify which transactions should have their appraisal or evaluation considered for more comprehensive analytical critique procedures. For example, the banking organization should ensure that appraisals or evaluations for certain types of transactions, such as large-dollar credits, loans secured by complex or specialized properties, nonresidential real estate construction loans, or out-of-area real estate, provide adequate support for the particular transaction.
 - e. The banking organization ensures that individuals who perform reviews of appraisals and evaluations have appropriate training and experience and are independent of the transaction.
 - f. There is adequate documentation to demonstrate that the review has occurred. While a checklist may serve this purpose for many transactions, a more comprehensive review would require a more detailed written analysis.
 - g. Appropriate procedures exist for resolving any deficiencies noted in the review. Procedures should require that (1) the individual who prepared the appraisal or evaluation correct the deficiencies or (2) a new appraisal or evaluation be obtained before making the final credit extension or other decision.
 - h. The program ensures that changes of an appraisal's estimate of value were made in accordance with Standard 3 of the Uniform Standards of Professional Appraisal Practice (USPAP), and the program ensures that the changes were made by an appropriately qualified licensed or certified appraiser.
 - i. Appropriate procedures exist for referring potential cases of misconduct by licensed and certified appraisers to the appropriate state appraiser regulatory authority.
4. Assess the procedures for determining whether a real estate-related transaction requires an appraisal or evaluation or is otherwise exempt from the Board's appraisal regulation.
 - a. For appraisals required under the appraisal program, determine whether the banking organization has performed the following procedures:
 - The banking organization engaged the appraiser or, if the appraiser was engaged directly by another financial services entity, the banking organization determined that the appraisal complies with its own program and the Board's appraisal regulation. (The

- banking organization may *not* accept an appraisal prepared for the borrower.)
- The appraisal was obtained in sufficient time to be analyzed before the final credit or other decision.
 - The appraisal conforms to the generally accepted appraisal standards as evidenced by USPAP, for example—
 - the appraiser uses the three market-value approaches—cost, comparable-sales, and income—and correlates the results into a final value estimate;
 - if the above-mentioned approaches were not used, the appraiser discloses the reason and whether this affected the value estimate;
 - the appropriate type of appraisal was obtained (complete or limited), and the appropriate report format (self-contained, summary, or restricted) was used for the particular transaction; and
 - if a limited appraisal was used (that is, the appraiser invoked the former Departure Provision), the appraisal fully discloses the limiting conditions.
 - The appraisal is written and contains sufficient information and analysis to support the banking organization’s decision to enter into the transaction.
 - If the appraisal is for proposed construction or renovation, partially leased buildings, nonmarket lease terms, or tract developments with unsold units, the appraisal includes an appropriate analysis and disclosure of deductions and discounts for holding costs, marketing costs, leasing commissions, rent losses, tenant improvements, and entrepreneurial profits.
 - The appraisal contains an estimate of the current market value of the property in its actual physical condition and current zoning, as defined by the Board’s appraisal regulation.
 - The appraisal contains an estimate of the property’s prospective market value based on the completion of improvements or stabilized occupancy, if the appraisal is for a property where improvements or renovations are to be made.
- The appraisal clearly identifies each value estimate and, for the prospective value, gives the projected dates when future events are expected to occur, when more than one estimate of value is reported.
 - The individual who performed the appraisal was independent of the transaction and appropriately licensed and certified for the assignment:
 - A certified appraiser must perform the appraisal for a transaction of \$1 million or more, a nonresidential transaction of \$250,000 or more, or a complex residential transaction of \$250,000 or more.
 - A licensed or certified appraiser must perform the appraisal for any other type of federally related transaction.
 - The individual who performed the appraisal had appropriate training, experience demonstrating his or her expertise in appraising similar types of properties, and knowledge of the property’s market.
 - The Reserve Bank documents incidents of possible appraiser misconduct for possible referral to the state appraiser regulatory agency.
- b. For exempt transactions requiring an evaluation, such as transactions below the \$250,000 threshold, business loans of less than \$1 million, and subsequent transactions such as renewals and refinancings, determine whether the following procedures are in place:
- The evaluation, at a minimum—
 - is written;
 - includes the preparer’s name, address, and signature and the effective date;
 - describes the real estate collateral, its condition, and its current and projected use;
 - describes the source of information used in the analysis;
 - describes the analysis and supporting information; and
 - gives an estimate of the real estate’s value with limiting conditions.
 - The evaluation provides sufficient detail to support the estimate of collateral value in more-complex real estate-related transactions or when the overall exposure is high.
 - The individual who performed the evaluation had the appropriate real

- estate training and sufficient experience and knowledge of the market to prepare the evaluation.
- The individual who performed the evaluation, regardless of whether the banking organization's staff performed the evaluation, was independent of the transaction, credit decision, or function.
5. Assess management's compliance with its policies and procedures and with the Board's appraisal regulation and guidance by reviewing appraisals and evaluations.
 6. If the review of appraisals or evaluations on one- to four-family residential loans or multi-family loans indicates that the appraisals or evaluations do not meet the Board's requirements or that the loan-to-value ratio at origination was higher than 80 percent for fixed-rate loans or 75 percent for floating-rate loans, these loans may not be eligible for the 50 percent risk weight permitted under the Board's risk-based capital rule.
 7. Evaluate the banking organization's independent appraisal and evaluation programs, and determine the following:
 - a. the adequacy of written, independent appraisals and evaluations
 - b. the methods the banking organization's officers use to conform with established policy
 - c. internal control deficiencies or exceptions
 - d. the integrity of the appraisal and evaluation process, including appraisal and evaluation compliance procedures
 - e. the integrity of individual appraisals and evaluations—their adequacy and reasonableness, the appropriateness of the methods, assumptions, and techniques used; and their compliance with the Board's appraisal regulation and real estate appraisal and evaluation guidelines
 - f. recommended corrective action when policies, practices, or procedures are found to be deficient
 - g. the degree of any violations of the Board's appraisal regulation, and the extent of noncompliance with interagency appraisal guidelines, if noted
 - h. the existence of other matters of significance, for example—
 - misrepresentation of data, such as the omission of information on favorable financing, seller concessions, sales history, feasibility, zoning, easements, or deed restrictions;
 - inadequate techniques of analysis, that is, failure to use the cost, comparable-sales, or income approach in the appraisal when the approach is appropriate for the type of property;
 8. Report any instances of questionable conduct by appraisers, along with supporting documentation, to the Reserve Bank for possible referral to the appropriate state appraisal authorities.
 9. Update workpapers with any information that will facilitate future inspections.

2231.0.14 INTERNAL CONTROL QUESTIONNAIRE

Review the internal controls, policies, practices, and procedures for real estate appraisals and evaluations. The appraisal and evaluation system should be documented completely and concisely and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. *The items marked with an asterisk (*) require substantiation by observation or testing.*

2231.0.14.1 Appraisal and Evaluation Policies

1. Has the board of directors, consistent with its duties and responsibilities, adopted written

appraisal and evaluation policies that define—

- a. management's responsibility for selecting, evaluating, monitoring, and ensuring the independence of the individual who is performing the appraisal or evaluation?
 - b. the basis for selecting staff appraisers and engaging fee appraisers for a particular appraisal assignment? (Is the individual independent of the transaction, and does he or she possess the requisite qualifications, expertise, and educational background and hold the proper state certification or license, if applicable?)
 - c. the procedures as to when appraisals and evaluations should be obtained?
 - d. the procedures for when to obtain an independent reappraisal or re-evaluation, including its frequency and scope?
 - e. appraisal and evaluation compliance and review procedures? Do those procedures ensure that the bank holding company's appraisals and evaluations are reviewed by qualified and adequately trained individuals who are not involved in the loan-production process, and ensure that the appraisals are consistent with USPAP and the Board's regulations, policies, and guidelines?
 - f. internal controls that prevent officers, loan officers, and directors that order a review, appraisal, or an evaluation from having sole authority for approving the requested loans?
2. Does the board of directors periodically review its appraisal, evaluation, and review policies and procedures to ensure that they meet the needs of the bank holding company's real estate lending activity?

2231.0.14.2 Appraisals

- *3. Are appraisals in writing, dated, and signed?
- *4. Does the appraisal meet the minimum standards of the Board's regulation and USPAP, including the appraisal's purpose, market value, effective date, and marketing period, and the sales history of the subject property? Does the appraisal—
 - a. reflect a valuation using the cost, income, and comparable-sales approaches?
 - b. evaluate and correlate the three

approaches into a final value estimate based on the appraiser's judgment?

- c. explain why an approach is inappropriate and not used in the appraisal?
 - d. fully support the assumptions and the value rendered through adequate documentation?
- *5. Are appraisals received before the bank holding company makes its final credit or other decision? (For example, is the date of the loan commitment letter later than the date of the appraisal—unless the loan commitment letter is conditioned on receipt of the appraisal?)
- *6. If the bank holding company is depending on an appraisal obtained for another financial services institution as support for its transaction, does the bank holding company have appraisal review procedures to ensure that the appraisal meets the standards of the appraisal regulation? These types of transactions would include loan participations and mortgage-backed securities.
- *7. If an appraisal for one transaction is used for a subsequent transaction, are the determinations that the appraiser is independent, the appraisal complies with the Board's appraisal regulation, and the appraisals are still valid sufficiently documented?

2231.0.14.3 Appraisers

8. Are appraisers fairly considered for assignments regardless of their membership or lack of membership in a particular appraisal organization?
9. Before taking the assignment, do appraisers have the requisite knowledge, education, qualifications, and experience to complete the appraisal?
10. For large, complex, or detached commercial real estate properties—
 - a. are written engagement letters used when ordering appraisals, and are copies of the letters retained?
 - b. are more in-depth review procedures used for appraisals ordered by agents of the banking organization?
11. Are appraisers independent of the transaction?
 - a. Are staff appraisers independent of the lending, investment, and collection functions and not involved, except as an appraiser, in the federally related transaction? Has a determination been made

- that they have no direct or indirect interest, financial or otherwise, in the property?
- b. Are fee appraisers engaged directly by the banking organization or its agents?
 - c. Are written assurances obtained that those appraisers have no direct or indirect interest, financial or otherwise, in the property or transaction?
 - d. Are any appraisers recommended or selected by the borrower (applicant)?
12. If staff appraisers are used, does the bank holding company periodically have independent appraisers perform test appraisals to check the organization's knowledge of trends, values, and markets?
 13. If fee appraisers are used, are investigations performed to determine their knowledge, education, experience, qualifications, and reputation?
 14. Is the status of an appraiser's state certification or license verified with the state appraiser regulatory authority to ensure that the appraiser is in good standing?
 15. Are fee appraisers paid the same fee whether or not the loan is granted?
 16. If the transaction is outside the local geographic market, does the bank holding company engage appraisers or consultants who have knowledge of the market where the real estate collateral is located?

2231.0.14.4 Evaluations

17. Are individuals performing evaluations independent of the transaction?

- *18. Are evaluations required to be in writing, dated, and signed?
- *19. Does the bank holding company require sufficient information and documentation to support the estimate of value and the evaluator's analysis?
- *20. If an evaluation obtained for one transaction is used for a subsequent transaction, is the determination that the evaluation is still valid sufficiently documented?
- *21. Are evaluations received before making the final credit decision?
- *22. If the bank holding company is depending on an evaluation obtained for another financial services institution as support for its transaction, does the holding company have evaluation review procedures to ensure that the evaluation meets the Board's regulation and guidance?

2231.0.14.5 Evaluators

23. Are individuals who perform evaluations competent to complete the assignment?
24. Are evaluations prepared by individuals who are independent of the transaction?

2231.0.14.6 Reappraisals and Re-evaluations

25. Is a formal reappraisal and re-evaluation program followed?
26. Does the bank holding company sufficiently document and follow its criteria for obtaining reappraisals or re-evaluations?

2231.0.15 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

2231.0.16 APPENDIX A—INTERAGENCY APPRAISAL AND EVALUATION GUIDELINES, OCTOBER 27, 1994

Purpose

The Office of the Comptroller of the Currency (OCC), the Board of Governors of the Federal Reserve System (FRB), the Federal Deposit Insurance Corporation (FDIC), and the Office of Thrift Supervision (OTS) (the agencies) are jointly issuing these guidelines, which supersede each of the agencies' appraisal and evaluation guidelines issued in 1992.¹ These guidelines address supervisory matters relating to real estate appraisals and evaluations used to support real estate-related financial transactions and provide guidance to examining personnel and federally regulated institutions about prudent appraisal and evaluation policies, procedures, practices, and standards.

Background

Title XI of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) requires the agencies to adopt regulations on the preparation and use of appraisals by federally regulated financial institutions.² Such real estate appraisals are to be in writing and performed in accordance with uniform standards by an individual whose competency has been demonstrated and whose professional conduct is subject to effective state supervision.

Common agency regulations³ issued pursuant to section 304 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) also require each regulated institution to adopt and maintain written real estate lending policies that are consistent with safe and sound banking practices and that reflect consideration of the real estate lending guidelines attached to the regulation. The real estate lending guidelines state that a real estate lending program should include an appropriate real estate appraisal and evaluation program.

1. FRB: "Guidelines for Real Estate Appraisal and Evaluation Programs," September 28, 1992; OCC: BC-225, "Real Estate Appraisal and Evaluation Guidelines," September 28, 1992; FDIC: FIL-69-92, "Guidelines for Real Estate Appraisal and Evaluation Programs," September 30, 1992; OTS: Thrift Bulletin 55, "Real Estate Appraisal and Evaluation Guidelines," October 13, 1992.

2. OCC: 12 C.F.R. 34, subpart C; FRB: 12 C.F.R. 208.18 and 12 C.F.R. 225, subpart G; FDIC: 12 C.F.R. 323; and OTS: 12 C.F.R. 564.

3. OCC: 12 C.F.R. 34, subpart D; FRB: 12 C.F.R. 208, subpart C; FDIC: 12 C.F.R. 365; and OTS: 12 C.F.R. 545 and 563.

Supervisory Policy

An institution's real estate appraisal and evaluation policies and procedures will be reviewed as part of the examination of the institution's overall real estate-related activities. An institution's policies and procedures should be incorporated into an effective appraisal and evaluation program. Examiners will consider the institution's size and the nature of its real estate-related activities when assessing the appropriateness of its program.

When analyzing individual transactions, examiners will review an appraisal or evaluation to determine whether the methods, assumptions, and findings are reasonable and in compliance with the agencies' appraisal regulations, policies,⁴ supervisory guidelines, and the institution's policies. Examiners also will review the steps taken by an institution to ensure that the individuals who perform its appraisals and evaluations are qualified and are not subject to conflicts of interest. Institutions that fail to maintain a sound appraisal or evaluation program or to comply with the agencies' appraisal regulations, policies, or these supervisory guidelines will be cited in examination reports and may be criticized for unsafe and unsound banking practices. Deficiencies will require corrective action.

Appraisal and Evaluation Program

An institution's board of directors is responsible for reviewing and adopting policies and procedures that establish an effective real estate appraisal and evaluation program. The program should—

- establish selection criteria and procedures to evaluate and monitor the ongoing performance of individuals who perform appraisals or evaluations,
- provide for the independence of the person performing appraisals or evaluations,

4. The appraisal guidance contained in the Interagency Policy Statement on the Review and Classification of Commercial Real Estate Loans, November 7, 1991, generally applies to all transactions.

- identify the appropriate appraisal for various lending transactions,
- establish criteria for contents of an evaluation,
- provide for the receipt of the appraisal or evaluation report in a timely manner to facilitate the underwriting decision,
- assess the validity of existing appraisals or evaluations to support subsequent transactions,
- establish criteria for obtaining appraisals or evaluations for transactions that are otherwise exempt from the agencies' appraisal regulations, and
- establish internal controls that promote compliance with these program standards.

Selection of Individuals Who May Perform Appraisals and Evaluations

An institution's program should establish criteria to select, evaluate, and monitor the performance of the individuals who perform a real estate appraisal or evaluation. The criteria should ensure that—

- the institution's selection process is nonpreferential and unbiased;
- the individual selected possesses the requisite education, expertise, and competence to complete the assignment;
- the individual selected is capable of rendering an unbiased opinion; and
- the individual selected is independent and has no direct or indirect interest, financial or otherwise, in the property or the transaction.

Under the agencies' appraisal regulations, the appraiser must be selected and engaged directly by the institution or its agent. The appraiser's client is the institution, not the borrower. An institution may use an appraisal that was prepared by an appraiser engaged directly by another financial services institution, as long as the institution determines that the appraisal conforms to the agencies' appraisal regulations and is otherwise acceptable.

Independence of the Appraisal and Evaluation Function

Because the appraisal and evaluation process is an integral component of the credit-underwriting process, it should be isolated from influence by

the institution's loan-production process. An appraiser and an individual providing evaluation services should be independent of the loan and collection functions of the institution and have no interest, financial or otherwise, in the property or the transaction. If absolute lines of independence cannot be achieved, an institution must be able to clearly demonstrate that it has prudent safeguards to isolate its collateral-evaluation process from influence or interference from the loan-production process.

The agencies recognize, however, that it is not always possible or practical to separate the loan and collection functions from the appraisal or evaluation process. In some cases, such as in a small or rural institution or branch, the only individual qualified to analyze the real estate collateral may also be a loan officer, other officer, or director of the institution. To ensure their independence, such lending officials, officers, or directors should abstain from any vote or approval involving loans on which they performed an appraisal or evaluation.

Transactions That Require Appraisals

Although the agencies' appraisal regulations exempt certain categories of real estate-related financial transactions from the appraisal requirements, most real estate transactions over \$250,000 are considered federally related transactions and thus require appraisals.⁵ A *federally related transaction* means any real estate-related financial transaction in which the agencies engage, contract for, or regulate, and that requires the services of an appraiser. An agency also may impose more stringent appraisal requirements than the appraisal regulations require, such as when an institution's troubled condition is attributable to real estate loan underwriting problems.⁶

Minimum Appraisal Standards

The agencies' appraisal regulations include five minimum standards for the preparation of an appraisal. The appraisal must—

5. To facilitate recovery in designated major disaster areas, subject to safety-and-soundness considerations, section 2 of the Depository Institutions Disaster Relief Act of 1992 authorized the agencies to waive certain appraisal requirements for up to three years after a presidential declaration of a natural disaster.

6. As a matter of policy, OTS requires problem associations and associations in troubled condition to obtain appraisals for all real estate-related transactions over \$100,000 (unless the transaction is otherwise exempt).

- conform to generally accepted appraisal standards as evidenced by the Uniform Standards of Professional Appraisal Practice (USPAP) promulgated by the Appraisal Standards Board (ASB) of the Appraisal Foundation unless principles of safe and sound banking require compliance with stricter standards;

Although allowed by USPAP, the agencies' appraisal regulations do not permit an appraiser to appraise any property in which the appraiser has an interest, direct or indirect, financial or otherwise.

- be written and contain sufficient information and analysis to support the institution's decision to engage in the transaction;

As discussed below, appraisers have available various appraisal development and report options; however, not all options may be appropriate for all transactions. A report option is acceptable under the agencies' appraisal regulations only if the appraisal report contains sufficient information and analysis to support an institution's decision to engage in the transaction.

- analyze and report appropriate deductions and discounts for proposed construction or renovation, partially leased buildings, nonmarket lease terms, and tract developments with unsold units;

This standard is designed to avoid having appraisals prepared using unrealistic assumptions and inappropriate methods. For federally related transactions, an appraisal is to include the current market value of the property in its actual physical condition and subject to the zoning in effect as of the date of the appraisal. For properties where improvements are to be constructed or rehabilitated, the regulated institution may also request a prospective market value based on stabilized occupancy or a value based on the sum of retail sales. However, the sum of retail sales for a proposed development is not the market value of the development for the purpose of the agencies' appraisal regulations. For proposed developments that involve the sale of individual houses, units, or lots, the appraiser must analyze and report appropriate deductions and discounts for holding costs, marketing costs, and entrepreneurial profit. For proposed and rehabilitated rental developments, the appraiser must make

appropriate deductions and discounts for items such as leasing commission, rent losses, and tenant improvements from an estimate based on stabilized occupancy.

- be based upon the definition of market value set forth in the regulation; and

Each appraisal must contain an estimate of market value, as defined by the agencies' appraisal regulations.

- be performed by state-licensed or -certified appraisers in accordance with requirements set forth in the regulation.

Appraisal Options

An appraiser typically uses three market-value approaches to analyze the value of a property—cost, income, and comparable-sales—and reconciles the results of each to estimate market value. An appraisal will discuss the property's recent sales history and contain an opinion as to the highest and best use of the property. An appraiser must certify that he or she has complied with the current USPAP and is independent. Also, the appraiser must disclose whether the subject property was inspected and whether anyone provided significant assistance to the person signing the appraisal report.

The agencies do not prohibit the use of a Limited Appraisal for a federally related transaction, but the agencies believe that institutions should be cautious in their use of a Limited Appraisal because it will be less thorough than a Complete Appraisal.

Complete and Limited Appraisal assignments may be reported in three different report formats: a Self-Contained Report, a Summary Report, or a Restricted Report. The major difference among these three reports relates to the degree of detail presented in the report by the appraiser. The Self-Contained Appraisal Report provides the most detail, while the Summary Appraisal Report presents the information in a condensed manner. The Restricted Report provides a capsulized report with the supporting details maintained in the appraiser's files.

The agencies believe that the Restricted Report format will not be appropriate to underwrite a significant number of federally related transactions due to the lack of sufficient supporting information and analysis in the appraisal

report. However, it might be appropriate to use this type of appraisal report for ongoing collateral monitoring of an institution's real estate transactions and under other circumstances when an institution's program requires an evaluation.

Moreover, since the institution is responsible for selecting the appropriate appraisal report to support its underwriting decisions, its program should identify the type of appraisal report that will be appropriate for various lending transactions. The institution's program should consider the risk, size, and complexity of the individual loan and the supporting collateral when determining the level of appraisal development and the type of report format that will be ordered. When ordering an appraisal report, institutions may want to consider the benefits of a written engagement letter that outlines the institution's expectations and delineates each party's responsibilities, especially for large, complex, or out-of-area properties.

Transactions That Require Evaluations

A formal opinion of market value prepared by a state-licensed or -certified appraiser is not always necessary. Instead, less-formal evaluations of the real estate may suffice for transactions that are exempt from the agencies' appraisal requirements. The agencies' appraisal regulations allow an institution to use an appropriate evaluation of the real estate rather than an appraisal when the transaction—

- has a value of \$250,000 or less;
- is a business loan of \$1,000,000 or less, and the transaction is not dependent on the sale of, or rental income derived from, real estate as the primary source of repayment; or
- involves an existing extension of credit at the lending institution, provided that (i) there has been no obvious and material change in the market conditions or physical aspects of the property that threatens the adequacy of the institution's real estate collateral protection after the transaction, even with the advancement of new monies, or (ii) there is no advancement of new monies other than funds necessary to cover reasonable closing costs.

Institutions should also establish criteria for obtaining appraisals or evaluations for safety-and-soundness reasons for transactions that are

otherwise exempt from the agencies' appraisal regulations.

Evaluation Content

An institution should establish prudent standards for the preparation of evaluations. At a minimum, an evaluation should—

- be written;
- include the preparer's name, address, and signature, and the effective date of the evaluation;
- describe the real estate collateral, its condition, its current and projected use;
- describe the source(s) of information used in the analysis;
- describe the analysis and supporting information; and
- provide an estimate of the real estate's market value, with any limiting conditions.

An evaluation report should include calculations, supporting assumptions, and, if utilized, a discussion of comparable sales. Documentation should be sufficient to allow an institution to understand the analysis, assumptions, and conclusions. An institution's own real estate loan portfolio experience and value estimates prepared for recent loans on comparable properties might provide a basis for evaluations.

An evaluation should provide an estimate of value to assist the institution in assessing the soundness of the transaction. Prudent practices also require that as an institution engages in more-complex real estate-related financial transactions, or as its overall exposure increases, a more detailed evaluation should be performed. For example, an evaluation for a home equity loan might be based primarily on information derived from a sales data services organization or current tax assessment information, while an evaluation for an income-producing real estate property should fully describe the current and expected use of the property and include an analysis of the property's rental income and expenses.

Qualifications of Individuals Who Perform Evaluations

Individuals who prepare evaluations should have real estate-related training or experience and knowledge of the market relevant to the subject property. Based upon their experience and training, professionals from several fields

may be qualified to prepare evaluations of certain types of real estate collateral. Examples include individuals with appraisal experience, real estate lenders, consultants or salespersons, agricultural extension agents, or foresters. Institutions should document the qualifications and experience level of individuals whom the institution deems acceptable to perform evaluations. An institution might also augment its in-house expertise and hire an outside party familiar with a certain market or a particular type of property. Although not required, an institution may use state-licensed or -certified appraisers to prepare evaluations. As such, Limited Appraisals reported in a Summary or Restricted format may be appropriate for evaluations of real estate-related financial transactions exempt from the agencies' appraisal requirements.

Valid Appraisals and Evaluations

The agencies allow an institution to use an existing appraisal or evaluation to support a subsequent transaction, if the institution documents that the existing estimate of value remains valid. Therefore, a prudent appraisal and evaluation program should include criteria to determine whether an existing appraisal or evaluation remains valid to support a subsequent transaction. Criteria for determining whether an existing appraisal or evaluation remains valid will vary depending upon the condition of the property and the marketplace, and the nature of any subsequent transaction. Factors that could cause changes to originally reported values include the passage of time; the volatility of the local market; the availability of financing; the inventory of competing properties; improvements to, or lack of maintenance of, the subject property or competing surrounding properties; changes in zoning; or environmental contamination. The institution must document the information sources and analyses used to conclude that an existing appraisal or evaluation remains valid for subsequent transactions.

Renewals, Refinancings, and Other Subsequent Transactions

While the agencies' appraisal regulations generally allow appropriate evaluations of real estate collateral in lieu of an appraisal for loan renewals and refinancings, in certain situations an appraisal is required. If new funds are advanced over reasonable closing costs, an institution would be expected to obtain a new appraisal for

the renewal of an existing transaction when there is a material change in market conditions or the physical aspects of the property that threatens the institution's real estate collateral protection.

The decision to reappraise or re-evaluate the real estate collateral should be guided by the exemption for renewals, refinancings, and other subsequent transactions. Loan workouts, debt restructurings, loan assumptions, and similar transactions involving the addition or substitution of borrowers may qualify for the exemption for renewals, refinancings, and other subsequent transactions. Use of this exemption depends on the condition and quality of the loan, the soundness of the underlying collateral, and the validity of the existing appraisal or evaluation.

A reappraisal would not be required when an institution advances funds to protect its interest in a property, such as to repair damaged property, because these funds should be used to restore the damaged property to its original condition. If a loan workout involves modification of the terms and conditions of an existing credit, including acceptance of new or additional real estate collateral, which facilitates the orderly collection of the credit or reduces the institution's risk of loss, a reappraisal or re-evaluation may be prudent, even if it is obtained after the modification occurs.

An institution may engage in a subsequent transaction based on documented equity from a valid appraisal or evaluation, if the planned future use of the property is consistent with the use identified in the appraisal or evaluation. If a property, however, has reportedly appreciated because of a planned change in use of the property, such as rezoning, an appraisal would be required for a federally related transaction, unless another exemption applied.

Program Compliance

An institution's appraisal and evaluation program should establish effective internal controls that promote compliance with the program's standards. An individual familiar with the appropriate agency's appraisal regulation should ensure that the institution's appraisals and evaluations comply with the agencies' appraisal regulations, these guidelines, and the institution's program. Loan-administration files should document this compliance review, although a detailed analysis or comprehensive analytical

procedures are not required for every appraisal or evaluation. For some loans, the compliance review may be part of the loan officer's overall credit analysis and may take the form of either a narrative or a checklist. Corrective action should be undertaken for noted deficiencies by the individual who prepared the appraisal or evaluation.

An institution's appraisal and evaluation program should also have comprehensive analytical procedures that focus on certain types of loans, such as large-dollar credits, loans secured by complex or specialized properties, nonresidential real estate construction loans, or out-of-area real estate. These comprehensive analytical procedures should be designed to verify that the methods, assumptions, and conclusions are reasonable and appropriate for the transaction and the property. These procedures should provide for a more detailed review of selected appraisals and evaluations prior to the final credit decision. The individual(s) performing these reviews should have the appropriate training or experience, and be independent of the transaction.

Appraisers and persons performing evaluations should be responsible for any deficiencies in their reports. Deficient reports should be returned to them for correction. Unreliable appraisals or evaluations should be replaced prior to the final credit decision. Changes to an appraisal's estimate of value are permitted only

as a result of a review conducted by an appropriately qualified state-licensed or -certified appraiser in accordance with Standard III of USPAP.

Portfolio Monitoring

The institution should also develop criteria for obtaining reappraisals or re-evaluations as part of a program of prudent portfolio review and monitoring techniques—even when additional financing is not being contemplated. Examples of such types of situations include large credit exposures and out-of-area loans.

Referrals

Financial institutions are encouraged to make referrals directly to state appraiser regulatory authorities when a state-licensed or -certified appraiser violates USPAP or applicable state law, or engages in other unethical or unprofessional conduct. Examiners finding evidence of unethical or unprofessional conduct by appraisers will forward their findings and recommendations to their supervisory office for appropriate disposition and referral to the state, as necessary.

2231.0.17 APPENDIX B—INTERAGENCY STATEMENT ON INDEPENDENT APPRAISAL AND EVALUATION FUNCTIONS

On October 27, 2003, the federal bank and thrift agencies¹ (the agencies) jointly issued this statement on Independent Appraisal and Evaluation Functions. The statement addresses concerns about the independence of the collateral-valuation process that were identified during examinations. This statement applies to all real estate-related financial transactions originated or purchased by a regulated institution for its own portfolio or as assets held for sale. It clarifies and should be reviewed in conjunction with the agencies' appraisal and real estate lending regulations² and the Interagency Appraisal and Evaluation Guidelines (the guidelines).³

An institution's board of directors is responsible for reviewing and adopting policies and procedures that establish and maintain an effective, independent real estate appraisal and evaluation program (the program) for all of its lending functions. The real estate lending functions include commercial real estate mortgage departments, capital-market groups, and asset-securitization and -sales units. Concerns about the independence of real estate appraisals and evaluations include the risk that appraisals prepared by biased or compromised appraisers may undermine the integrity of credit-underwriting processes. More broadly, an institution's lending functions should not have undue influence that might compromise the program's independence.

Selecting Individuals to Perform Appraisals or Evaluations

The guidelines establish minimum standards for an effective program, including standards for selecting individuals who may perform appraisals or evaluations. Among other considerations,

1. The Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), the Federal Deposit Insurance Corporation (FDIC), the Office of Thrift Supervision (OTS), and the National Credit Union Administration (NCUA).

2. FRB: 12 C.F.R. 208, subpart E and appendix C, and 12 C.F.R. 225, subpart G; OCC: 12 C.F.R. 34, subparts C and D; FDIC: 12 C.F.R. 323 and 12 C.F.R. 365; OTS: 12 C.F.R. 564, 12 C.F.R. 560.100, and 12 C.F.R. 560.101; and NCUA: 12 C.F.R. 722.5.

3. The interagency guidelines may be found in SR-letter 94-55 for the FRB; the *Comptroller's Handbook for Commercial Real Estate and Construction Lending* for the OCC; FIL-74-94 for the FDIC; and Thrift Bulletin 55a for the OTS. NCUA was not a party to the guidelines; however, the NCUA applies the content to credit unions, when applicable.

the selection criteria must provide for the independence of the individual performing the appraisal or evaluation. That is, the individual has neither a direct nor indirect interest, financial or otherwise, in the property or transaction. Institutions also need to ensure that the individual selected is competent to perform the assignment. Consideration should be given to the individual's qualifications, experience, and educational background. Selection occurs when, based on an oral or written agreement, the individual accepts the assignment to appraise or evaluate a particular property. Moreover, appraisal or evaluation preparatory work should not commence until the institution finalizes the selection process.

The agencies' appraisal regulations address appraiser independence and require that an institution, or its agent, directly engage the appraiser. The only exception to this requirement is that an institution may use an appraisal prepared for another financial services institution, provided that the institution determines that the appraisal conforms to the agencies' appraisal regulations and is otherwise acceptable. Independence is compromised when an institution uses an appraiser who is recommended by the borrower or allows the borrower to select the appraiser from the institution's list of approved appraisers.

Institutions may not use an appraisal prepared by an individual who was selected or engaged by a borrower. An institution's use of a borrower-ordered appraisal violates the agencies' appraisal regulations. Likewise, institutions may not use "readdressed appraisals"—appraisal reports that are altered by the appraiser to replace any references to the original client with the institution's name. Altering an appraisal report in a manner that conceals the original client or intended users of the appraisal is misleading and violates the agencies' appraisal regulations and the Uniform Standards of Professional Appraisal Practice (USPAP).

It is also important to ensure that the program is safeguarded from internal influence and interference from an institution's loan-production staff. Individuals independent of the loan-production area should oversee the selection of appraisers and individuals providing evaluation services. The agencies recognize that it may not be possible or practical for small institutions to

separate the collateral-valuation and loan-production processes. To ensure independence, loan officials, officers, or directors with the responsibility for ordering appraisals and evaluations should not have sole approval authority for granting the loan request.

When selecting and engaging appraisers, an institution needs to identify the assignment and order the appropriate appraisal or evaluation, as discussed in the guidelines. To foster control and accountability, institutions are encouraged to use written engagement letters when ordering appraisals, especially for large, complex, or out-of-area commercial real estate properties. An institution should include a copy of the written engagement letter in the permanent loan file. An appraiser may also incorporate an engagement letter in the appraisal report. The engagement letter confirms that the assignment was made in a manner that complies with the institution's procedures and the agencies' regulations and guidelines.

Appraisal and Evaluation Compliance Reviews

An institution's appraisal and evaluation program must maintain effective internal controls that promote compliance with program standards and the agencies' appraisal regulations and guidelines. Internal controls should, among other criteria, confirm that appraisals and evaluations are reviewed by qualified and adequately trained individuals who are not involved in the loan-production processes. The institution's standards for and the depth of such reviews should reflect the risk of the transaction and the process through which the appraisal or evaluation is obtained. An institution should establish more in-depth review procedures for appraisals of large, complex, or out-of-area commercial real estate credits and for those appraisals and evaluations that are ordered by agents of the institution, such as loan brokers or another

financial services institution.

Even in small institutions when absolute lines of independence cannot be achieved, effective internal controls should be implemented to ensure that no single person has sole authority to render credit decisions involving loans on which they ordered or reviewed the appraisal or evaluation. Further, lending officials, officers, or directors should abstain from any vote or approval involving loans for which they performed the appraisal or evaluation.

Supervisory Approach

Examiners will review an institution's standards of independence, taking into consideration the size of the institution and the nature and complexity of its real estate-related activities. Examiners will consider whether policies and procedures are comprehensive and applied uniformly to all units engaging in federally related transactions.

If an institution suspects that a licensed or certified appraiser is violating applicable laws or USPAP, or is otherwise engaging in other unethical or unprofessional conduct, the institution should refer the matter directly to the appropriate state appraiser regulatory authorities. Examiners finding evidence of unethical or unprofessional conduct, including improperly prepared appraisals or evaluations and read-dressed appraisals, should forward their findings and their recommendations to their supervisory office for appropriate disposition and referral to the state appraiser regulatory authority, as necessary. Institutions and institution-affiliated parties, including lenders, staff, and fee appraisers, are reminded that they could be subject to enforcement actions, which include removal/prohibition orders, cease-and-desist orders, and civil money penalties, for violations of the agencies' appraisal and real estate lending regulations.

These guidelines are designed to ensure that troubled real estate loans receive consistent treatment nationwide. The guidelines are not intended to be a substitute for the examiner's judgment or for careful analysis of applicable credit and collateral factors. Use of the word "institution" in these guidelines refers to any lending source within the bank holding company organization, whether the lender is the parent company, a bank, thrift, or nonbanking subsidiary.

2240.0.1 EXAMINER REVIEW OF COMMERCIAL REAL ESTATE LOANS

2240.0.1.1 Loan Policy and Administration Review

As part of the analysis of an institution's commercial real estate loan portfolio, examiners review lending policies, loan administration procedures, and credit risk control procedures. The maintenance of prudent written lending policies, effective internal systems and controls, and thorough loan documentation are essential to the institution's management of the lending function.

The policies governing an institution's real estate lending activities must include prudent underwriting standards that are periodically reviewed by the board of directors and clearly communicated to the institution's management and lending staff. The institution must also have credit risk control procedures that include, for example, prudent internal limits on exposure, an effective credit review and classification process, and a methodology for ensuring that the allowance for loan and lease losses is maintained at an adequate level. The complexity and scope of these policies and procedures should be appropriate to the size of the institution and the nature of the institution's activities, and should be consistent with prudent banking practices and relevant regulatory requirements.

2240.0.1.2 Indicators of Troubled Real Estate Markets and Projects, and Related Indebtedness

In order to evaluate the collectibility of an institution's commercial real estate portfolio, examiners should be alert for indicators of weakness in the real estate markets served by the institution. They should also be alert for indicators of

actual or potential problems in the individual commercial real estate projects or transactions financed by the institution.

There are several warning signs that real estate markets or projects are experiencing problems that may result in real estate values decreasing from original appraisals or projections. Adverse economic developments and/or an overbuilt market can affect a project's economic feasibility and may cause a real estate project and the loan to become troubled. Available indicators, such as permits for—and the value of—new construction, absorption rates, employment trends, and vacancy rates, are useful in evaluating the condition of commercial real estate markets. Weaknesses disclosed by these types of statistics may indicate that a real estate market is experiencing difficulties that may result in cash flow problems for individual real estate projects, declining real estate values, and ultimately, in troubled commercial real estate loans.

Indicators of potential or actual difficulties in commercial real estate projects may include:

- An excess of similar projects under construction.
- Construction delays or other unplanned adverse events resulting in cost overruns that may require renegotiation of loan terms.
- Lack of a sound feasibility study or analysis that reflects current and reasonably anticipated market conditions.
- Changes in concept or plan (for example, a condominium project converted to an apartment project because of unfavorable market conditions).
- Rent concessions or sales discounts resulting in cash flow below the level projected in the original feasibility study or appraisal.
- Concessions on finishing tenant space, moving expenses, and lease buyouts.
- Slow leasing or lack of sustained sales activity and increasing sales cancellations that may reduce the project's income potential, resulting in protracted repayment or default on the loan.
- Delinquent lease payments from major tenants.
- Land values that assume future rezoning.
- Tax arrearages.

As the problems associated with a commer-

cial real estate project become more pronounced, problems with the related indebtedness may also arise. Such problems include diminished cash flow to service the debt and delinquent interest and principal payments.

While some commercial real estate loans become troubled because of a general downturn in the market, others become troubled because they were originated on an unsound or a liberal basis. Common examples of these types of problems include:

- Loans with no or minimal borrower equity.
- Loans on speculative undeveloped property where the borrowers' only source of repayment is the sale of the property.
- Loans based on land values that have been driven up by rapid turnover of ownership, but without any corresponding improvements to the property or supportable income projections to justify an increase in value.
- Additional advances to service an existing loan that lacks credible support for full repayment from reliable sources.
- Loans to borrowers with no development plans or noncurrent development plans.
- Renewals, extensions and refinancings that lack credible support for full repayment from reliable sources and that do not have a reasonable repayment schedule.¹

2240.0.1.3 Examiner Review of Individual Loans, Including the Analysis of Collateral Value

The focus of an examiner's review of a commercial real estate loan, including binding commitments, is the ability of the loan to be repaid. The principal factors that bear on this analysis are the income-producing potential of the underlying collateral and the borrower's willingness and capacity to repay under the existing loan terms from the borrower's other resources if necessary. In evaluating the overall risk associated with a commercial real estate loan, examiners consider a number of factors, including the character, overall financial condition and

1. As discussed more fully in Manual section 2240.0.2, the refinancing or renewing of loans to sound borrowers would not result in a supervisory classification or criticism unless well-defined weaknesses exist that jeopardize repayment of the loans. Consistent with sound banking practices, institutions should work in an appropriate and constructive manner with borrowers who may be experiencing temporary difficulties.

resources, and payment record of the borrower; the prospects for support from any financially responsible guarantors; and the nature and degree of protection provided by the cash flow and value of the underlying collateral.² However, as other sources of repayment for a troubled commercial real estate loan become inadequate over time, the importance of the collateral's value in the analysis of the loan necessarily increases.

The appraisal regulations of the federal bank and thrift regulatory agencies require institutions to obtain appraisals when certain criteria are met.³ Management is responsible for reviewing each appraisal's assumptions and conclusions for reasonableness. Appraisal assumptions should not be based solely on current conditions that ignore the stabilized income-producing capacity of the property.⁴ Management should adjust any assumptions used by an appraiser in determining value that are overly optimistic or pessimistic.

An examiner analyzes the collateral's value as determined by the institution's most recent appraisal (or internal evaluation, as applicable). An examiner reviews the major facts, assumptions, and approaches used by the appraiser (including any comments made by management on the value rendered by the appraiser). Under the circumstances described below, the examiner may make adjustments to this assessment of value. This review and any resulting adjustments to value are solely for purposes of an examiner's analysis and classification of a credit and do not involve actual adjustments to an appraisal.

A discounted cash flow analysis is an appropriate method for estimating the value of income-producing real estate collateral.⁵ This analysis should not be based solely on the current performance of the collateral or similar

2. The treatment of guarantees in the classification process is discussed in subsection 2240.0.3.

3. Department of the Treasury, Office of the Comptroller of the Currency, 12 CFR Part 34 (Docket No. 90-16); Board of Governors of the Federal Reserve System, 12 CFR Parts 208 and 225 (Regulation H and Y; Docket No. R-0685); Federal Deposit Insurance Corporation, 12 CFR 323 (RIN 3064-AB05); Department of the Treasury; Office of Thrift Supervision, 12 CFR Part 564 (Docket No. 90-1495).

4. Stabilized income generally is defined as the yearly net operating income produced by the property at normal occupancy and rental rates; it may be adjusted upward or downward from today's actual market conditions.

5. The real estate appraisal regulations of the federal bank and thrift regulatory agencies include a requirement that an appraisal (a) follow a reasonable valuation method that addresses the direct sales comparison, income, and cost approaches to market value; (b) reconcile these approaches; and (c) explain the elimination of each approach not used. A discounted cash flow analysis is recognized as a valuation method for the income approach.

properties; rather, it should take into account, on a discounted basis, the ability of the real estate to generate income over time based upon reasonable and supportable assumptions.

When reviewing the reasonableness of the facts and assumptions associated with the value of the collateral, examiners may evaluate:

- Current and projected vacancy and absorption rates;
- Lease renewal trends and anticipated rents;
- Volume and trends in past due leases;
- Effective rental rates or sale prices (taking into account all concessions);
- Net operating income of the property as compared with budget projections; and
- Discount rates and direct capitalization (“cap”) rates.

The capacity of a property to generate cash flow to service a loan is evaluated based upon rents (or sales), expenses, and rates of occupancy that are reasonably estimated to be achieved over time. The determination of the level of stabilized occupancy and rental rates should be based upon an analysis of current and reasonably expected market conditions, taking into consideration historical levels when appropriate. The analysis of collateral values should not be based upon a simple projection of current levels of net operating income if markets are depressed or reflect speculative pressures but can be expected over a reasonable period of time to return to normal (stabilized) conditions. Judgment is involved in determining the time that it will take for a property to achieve stabilized occupancy and rental rates.

Examiners do not make adjustments to appraisal assumptions for credit analysis purposes based on worst case scenarios that are unlikely to occur. For example, an examiner would not necessarily assume that a building will become vacant just because an existing tenant who is renting at a rate above today’s market rate may vacate the property when the current lease expires. On the other hand, an adjustment to value may be appropriate for credit analysis purposes when the valuation assumes renewal at the above-market rate, unless that rate is a reasonable estimate of the expected market rate at the time of renewal.

When estimating the value of income-producing real estate, discount rates and “cap” rates should reflect reasonable expectations about the rate of return that investors require under normal, orderly and sustainable market conditions. Exaggerated, imprudent, or unsustainably high or low discount rates, “cap” rates,

and income projections should not be used. Direct capitalization of nonstabilized income flows should also not be used.

Assumptions, when recently made by qualified appraisers (and, as appropriate, by institution management) and when consistent with the discussion above, should be given a reasonable amount of deference. Examiners should not challenge the underlying assumptions, including discount rates and “cap” rates used in appraisals, that differ only in a limited way from norms that would generally be associated with the property under review. The estimated value of the underlying collateral may be adjusted for credit analysis purposes when the examiner can establish that any underlying facts or assumptions are inappropriate and can support alternative assumptions.

2240.0.2 CLASSIFICATION GUIDELINES

As with other types of loans, commercial real estate loans that are adequately protected by the current sound worth and debt service capacity of the borrower, guarantor, or the underlying collateral generally are not classified. Similarly, loans to sound borrowers that are refinanced or renewed in accordance with prudent underwriting standards, including loans to creditworthy commercial or residential real estate developers, should not be classified or criticized unless well-defined weaknesses exist that jeopardize repayment. An institution will not be criticized for continuing to carry loans having weaknesses that result in classification or criticism as long as the institution has a well-conceived and effective workout plan for such borrowers, and effective internal controls to manage the level of these loans.

In evaluating commercial real estate credits for possible classification, examiners apply standard classification definitions. In determining the appropriate classification, consideration should be given to all important information on repayment prospects, including information on the borrower’s creditworthiness, the value of, and cash flow provided by, all collateral supporting the loan, and any support provided by financially responsible guarantors.

The loan’s record of performance to date is important and must be taken into consideration. As a general principle, a performing commercial real estate loan should not automatically be

classified or charged-off solely because the value of the underlying collateral has declined to an amount that is less than the loan balance. However, it would be appropriate to classify a performing loan when well-defined weaknesses exist that jeopardize repayment, such as the lack of credible support for full repayment from reliable sources.

These principles hold for individual credits, even if portions or segments of the industry to which the borrower belongs are experiencing financial difficulties. The evaluation of each credit should be based upon the fundamental characteristics affecting the collectibility of the particular credit. The problems broadly associated with some sectors or segments of an industry, such as certain commercial real estate markets, should not lead to overly pessimistic assessments of particular credits that are not affected by the problems of the troubled sectors.

2240.0.2.1 Classification of Troubled Project-Dependent Commercial Real Estate Loans⁶

The following guidelines for classifying a troubled commercial real estate loan apply when the repayment of the debt will be provided solely by the underlying real estate collateral, and there are no other available and reliable sources of repayment. The guidelines are not intended to address loans that must be treated as “Other Real Estate Owned” for bank and BHC reporting purposes.

As a general principle, for a troubled project-dependent commercial real estate loan, any portion of the loan balance that exceeds the amount that is adequately secured by the value of the collateral, and that can clearly be identified as uncollectible, should be classified “loss.”⁷ The portion of the loan balance that is adequately secured by the value of the collateral should generally be classified no worse than “substandard.” The amount of the loan balance in excess of the value of the collateral, or portions thereof,

should be classified “doubtful” when the potential for full loss may be mitigated by the outcomes of certain pending events, or when loss is expected but the amount of the loss cannot be reasonably determined.

If warranted by the underlying circumstances, an examiner may use a “doubtful” classification on the entire loan balance. However, this would occur infrequently.

2240.0.2.2 Guidelines for Classifying Partially Charged-off Loans

Based upon consideration of all relevant factors, an evaluation may indicate that a credit has well-defined weaknesses that jeopardize collection in full, but that a portion of the loan may be reasonably assured of collection. When an institution has taken a charge-off in an amount sufficient that the remaining recorded balance of the loan (a) is being serviced (based upon reliable sources) and (b) is reasonably assured of collection, classification of the remaining recorded balance may not be appropriate. Classification would be appropriate when well-defined weaknesses continue to be present in the remaining recorded balance. In such cases, the remaining recorded balance would generally be classified no more severely than “substandard.”

A more severe classification than “substandard” for the remaining recorded balance would be appropriate if the loss exposure cannot be reasonably determined, e.g., where significant risk exposures are perceived, such as might be the case for bankruptcy situations or for loans collateralized by properties subject to environmental hazards. In addition, classification of the remaining recorded balance would be appropriate when sources of repayment are considered unreliable.

2240.0.2.3 Guidelines for Classifying Formally Restructured Loans

The classification treatment previously discussed for a partially charged off loan would also generally be appropriate for a formally restructured loan when partial charge-offs have been taken. For a formally restructured loan, the focus of the examiner’s analysis is on the ability of the borrower to repay the loan in accordance with its modified terms. Classification of a formally restructured loan would be appropriate, if, after the restructuring, well-defined weaknesses exist that jeopardize the orderly repayment of the loan in accordance with reasonable modified

6. The discussion in this section is not intended to address loans that must be treated as “other real estate owned” for bank regulatory reporting purposes or “real estate owned” for thrift regulatory reporting purposes. Guidance on these assets is presented in supervisory and reporting guidance of the agencies.

7. For purposes of this discussion, the “value of the collateral” is the value used by the examiner for credit analysis purposes, as discussed in a previous section of this policy statement.

terms.⁸ Troubled commercial real estate loans whose terms have been restructured should be identified in the institution's internal credit review system, and closely monitored by management.

2240.0.3 TREATMENT OF GUARANTEES IN THE CLASSIFICATION PROCESS

Initially, the original source of repayment and the borrower's intent and ability to fulfill the obligation without reliance on third party guarantors will be the primary basis for the review and classification of assets.⁹ The federal bank and thrift regulatory agencies will, however, consider the support provided by guarantees in the determination of the appropriate classification treatment for troubled loans. The presence of a guarantee from a "financially responsible guarantor," as described below, may be sufficient to preclude classification or reduce the severity of classification.

For purposes of this discussion, a guarantee from a "financially responsible guarantor" has the following attributes:

- The guarantor must have both the financial capacity and willingness to provide support for the credit;
- The nature of the guarantee is such that it can provide support for repayment of the indebtedness, in whole or in part, during the remaining loan term; and¹⁰
- The guarantee should be legally enforceable.

The above characteristics generally indicate that a guarantee may improve the prospects for repayment of the debt obligation.

2240.0.3.1 Considerations Relating to a Guarantor's Financial Capacity

The lending institution must have sufficient

8. An example of a restructured commercial real estate loan that does *not* have reasonable modified terms would be a "cash flow" mortgage which requires interest payments *only* when the underlying collateral generates cash flow but provides no substantive benefits to the lending institution.

9. Some loans are originated based primarily upon the financial strength of the guarantor, who is, in substance, the primary source of repayment. In such circumstances, examiners generally assess the collectibility of the loan based upon the guarantor's ability to repay the loan.

10. Some guarantees may only provide for support for certain phases of a real estate project. It would not be appropriate to rely upon these guarantees to support a troubled loan after the completion of these phases.

information on the guarantor's financial condition, income, liquidity, cash flow, contingent liabilities, and other relevant factors (including credit ratings, when available) to demonstrate the guarantor's financial capacity to fulfill the obligation. Also, it is important to consider the number and amount of guarantees currently extended by a guarantor, in order to determine that the guarantor has the financial capacity to fulfill the contingent claims that exist.

2240.0.3.2 Considerations Relating to a Guarantor's Willingness to Repay

Examiners normally rely on their analysis of the guarantor's financial strength and assume a willingness to perform unless there is evidence to the contrary. This assumption may be modified based on the "track record" of the guarantor, including payments made to date on the asset under review or other obligations.

Examiners give due consideration to those guarantors that have demonstrated their ability and willingness to fulfill previous obligations in their evaluation of current guarantees on similar assets. An important consideration will be whether previously required performance under guarantees was voluntary or the result of legal or other actions by the lender to enforce the guarantee. However, examiners give limited credence, if any, to guarantees from obligors who have reneged on obligations in the past, unless there is clear evidence that the guarantor has the ability and intent to honor the specific guarantee obligation under review.

Examiners also consider the economic incentives for performance from guarantors:

- Who have already partially performed under the guarantee or who have other significant investments in the project;
- Whose other sound projects are cross-collateralized or otherwise intertwined with the credit; or
- Where the guarantees are collateralized by readily marketable assets that are under the control of a third party.

2240.0.3.3 Other Considerations as to the Treatment of Guarantees in the Classification Process

In general, only guarantees that are legally

enforceable will be relied upon. However, all legally enforceable guarantees may not be acceptable. In addition to the guarantor's financial capacity and willingness to perform, it is expected that the guarantee will not be subject to significant delays in collection, or undue complexities or uncertainties about the guarantee.

The nature of the guarantee is also considered by examiners. For example, some guarantees for real estate projects only pertain to the development and construction phases of the project. As

such, these limited guarantees would not be relied upon to support a troubled loan after the completion of those phases.

Examiners also consider the institution's intent to enforce the guarantee and whether there are valid reasons to preclude an institution from pursuing the guarantee. A history of timely enforcement and successful collection of the full amount of guarantees will be a positive consideration in the classification process.

During the early 1980s, open-end credit primarily consisted of credit card accounts with small lines of credit to the most creditworthy borrowers. Currently, open-end credit consists of much larger lines of credit that have been extended to diverse borrowers with a variety of risk profiles. In 1980, the Federal Financial Institutions Examination Council (FFIEC) (the Federal Reserve Board, Federal Deposit Insurance Corporation, Office of the Comptroller of the Currency, and, in 1987, the Federal Home Loan Bank Board (now the Office of Thrift Supervision)) adopted a uniform policy for the classification of installment credit based on delinquency status. The 1980 policy also provided for different charge-off time frames for open-end and closed-end credit.

Because open-ended borrowing practices had changed and institutional practices for charging off open-end accounts based on their past-due status were inconsistent, the agencies (the FRB, FDIC, OTS, and OCC) undertook a review of the 1980 FFIEC classification policy in concert with a review of all written policies, as mandated by section 303(a) of the Riegle Community Development and Regulatory Improvement Act of 1994 (RCDRIA). In February 1999, an updated policy was issued, effective for use on FFIEC bank call reports beginning December 31, 2000. This new policy was revised again and reissued in June 2000, with the same effective date. (The June 2000 policy supersedes both the 1980 policy and the updated February 1999 policy.) The June policy provides supervisory guidance for residential and home equity loans; fraudulent loans; loans to deceased persons; loans to borrowers in bankruptcy; treatment of partial payments involving past-due loans; and re-aging, deferrals, renewals, or rewrites of open-end and closed-end credit. The agencies are to use this expanded supervisory guidance when applying the uniform classifications to retail-credit loans extended by depository institutions. See SR-00-8.

While the terms of the revised policy apply only to federally insured depository institutions, the Federal Reserve believes the guidance is broadly applicable to bank holding companies (BHCs) and their nonbank lending subsidiaries. Accordingly, examiners should apply the revised policy, as appropriate, in the inspection of consumer finance subsidiaries of BHCs.

When reviewing consumer finance subsidiaries of banking organizations, examiners should consider the methodology used for aging retail loans. In accordance with the FFIEC bank

call report instructions, banks and their consumer finance subsidiaries are required to use the contractual method, which ages loans based on the status of contractual payments. BHCs, in preparing their financial statements, are permitted to use the range of options available under GAAP. This, in effect, allows uninsured, non-bank consumer finance subsidiaries of BHCs to employ the recency method, which ages loans according to the date of the most recent payment, regardless of the contractual terms of the loan.

In general, the contractual method provides a more accurate reflection of loan performance and, therefore, is the *preferred* methodology, especially from the standpoint of financial-statement transparency and public disclosure. Examiners should encourage BHCs and their consumer finance subsidiaries to use the contractual method. However, BHCs should not change their aging methodology from contractual to recency without the prior concurrence of the Federal Reserve. A BHC subsidiary may not change its methodology if the intent or effect of such a change is to mask asset quality or financial weaknesses. Moreover, in the event that consumer receivables are transferred from a bank to its BHC or the BHC's nonbanking subsidiaries, the BHC or the nonbanking subsidiaries should continue to age the receivables according to the contractual method.

When a BHC uses the recency method, it should have adequate controls in place to accurately track the performance of loans within the retail portfolio and to demonstrate sound and compelling business reasons for the use of the recency method. Examiners should see section 3100.0 for further guidance on the review of consumer finance operations.

2241.0.1 UNIFORM RETAIL-CREDIT CLASSIFICATION AND ACCOUNT-MANAGEMENT POLICY

The uniform retail-credit classification and account-management policy issued by the FFIEC (and approved by the Federal Reserve Board) is reproduced below. The Board has clarified certain provisions of this policy. In this text, the Board's revisions are in brackets. Section numbers have also been added to the subtitles of the text.

The Uniform Retail-Credit Classification and Account-Management Policy¹ establishes standards for the classification and treatment of retail credit in financial institutions. Retail credit consists of open- and closed-end credit extended to individuals for household, family, and other personal expenditures, and includes consumer loans and credit cards. For purposes of this policy, retail credit also includes loans to individuals secured by their personal residence, including first mortgage, home equity, and home-improvement loans. Because a retail-credit portfolio generally consists of a large number of relatively small-balance loans, evaluating the quality of the retail-credit portfolio on a loan-by-loan basis is inefficient and burdensome for the institution being examined and for examiners.

Actual credit losses on individual retail credits should be recorded when the institution becomes aware of the loss, but in no case should the charge-off exceed the time frames stated in this policy. This policy does not preclude an institution from adopting a more conservative internal policy. Based on collection experience, when a portfolio's history reflects high losses and low recoveries, more conservative standards are appropriate and necessary.

The quality of retail credit is best indicated by the repayment performance of individual borrowers. Therefore, in general, retail credit should be classified based on the following criteria:

1. Open- and closed-end retail loans past due 90 cumulative days from the contractual due date should be classified substandard.
2. Closed-end retail loans that become past due 120 cumulative days and open-end retail loans that become past due 180 cumulative days from the contractual due date should be classified loss and charged off.² In lieu of

1. [For the Federal Reserve's depository institution classification guidelines, see section 2060.1, "Classification of Credits," in the *Commercial Bank Examination Manual*.]

2. For operational purposes, whenever a charge-off is necessary under this policy, it should be taken no later than the end of the month in which the applicable time period elapses. Any full payment received after the 120- or 180-day charge-off threshold, but before month-end charge-off, may be considered in determining whether the charge-off remains appropriate.

OTS regulation 12 CFR 560.160(b) allows savings institutions to establish adequate (specific) valuation allowances for assets classified loss in lieu of charge-offs.

Open-end retail accounts that are placed on a fixed repayment schedule should follow the charge-off time frame for closed-end loans.

charging off the entire loan balance, loans with non-real estate collateral may be written down to the value of the collateral, less cost to sell, if repossession of collateral is assured and in process.

3. One- to four-family residential real estate loans and home equity loans that are past due 90 days or more with loan-to-value ratios greater than 60 percent should be classified substandard. Properly secured residential real estate loans with loan-to-value ratios equal to or less than 60 percent are generally not classified based solely on delinquency status. Home equity loans to the same borrower at the same institution as the senior mortgage loan with a combined loan-to-value ratio equal to or less than 60 percent need not be classified. However, home equity loans where the institution does not hold the senior mortgage, that are past due 90 days or more should be classified substandard, even if the loan-to-value ratio is equal to, or less than, 60 percent.

For open- and closed-end loans secured by residential real estate, a current assessment of value should be made no later than 180 days past due. Any outstanding loan balance in excess of the value of the property, less cost to sell, should be classified loss and charged off.

4. Loans in bankruptcy should be classified loss and charged off within 60 days of receipt of notification of filing from the bankruptcy court or within the time frames specified in this classification policy, whichever is shorter, unless the institution can clearly demonstrate and document that repayment is likely to occur. Loans with collateral may be written down to the value of the collateral, less cost to sell. Any loan balance not charged off should be classified substandard until the borrower re-establishes the ability and willingness to repay for a period of at least six months.
5. Fraudulent loans should be classified loss and charged off no later than 90 days of discovery or within the time frames adopted in this classification policy, whichever is shorter.
6. Loans of deceased persons should be classified loss and charged off when the loss is determined or within the time frames adopted in this classification policy, whichever is shorter.

2241.0.1.1 Other Considerations for Classification

If an institution can clearly document that a past-due loan is well secured and in the process of collection, such that collection will occur regardless of delinquency status, then the loan need not be classified. A well-secured loan is collateralized by a perfected security interest in, or pledges of, real or personal property, including securities with an estimable value, less cost to sell, sufficient to recover the recorded investment in the loan, as well as a reasonable return on that amount. "In the process of collection" means that either a collection effort or legal action is proceeding and is reasonably expected to result in recovery of the loan balance or its restoration to a current status, generally within the next 90 days.

2241.0.1.2 Partial Payments on Open- and Closed-End Credit

Institutions should use one of two methods to recognize partial payments. A payment equivalent to 90 percent or more of the contractual payment may be considered a full payment in computing past-due status. Alternatively, the institution may aggregate payments and give credit for any partial payment received. For example, if a regular installment payment is \$300 and the borrower makes payments of only \$150 per month for a six-month period, [the institution could aggregate the payments received ($\$150 \times$ six payments, or \$900). It could then give credit for three full months ($\$300 \times$ three payments) and thus treat the loan as] three full months past due. An institution may use either or both methods in its portfolio, but may not use both methods simultaneously with a single loan.

2241.0.1.3 Re-aging, Extensions, Deferrals, Renewals, and Rewrites

Re-aging of open-end accounts, and extensions, deferrals, renewals, and rewrites of closed-end loans³ can be used to help borrowers overcome

3. These terms are defined as follows. *Re-age*: Returning a delinquent, open-end account to current status without collecting (at the time of aging) the total amount of principal, interest, and fees that are contractually due. *Extension*: Extending monthly payments on a closed-end loan and rolling back the maturity by the number of months extended. The account is shown current upon granting the extension. If extension fees are assessed, they should be collected at the

temporary financial difficulties, such as loss of job, medical emergency, or change in family circumstances like loss of a family member. A permissive policy on re-aging, extensions, deferrals, renewals, or rewrites can cloud the true performance and delinquency status of the portfolio. However, prudent use is acceptable when it is based on a renewed willingness and ability to repay the loan, and when it is structured and controlled in accordance with sound internal policies.

Management should ensure that comprehensive and effective risk management and internal controls are established and maintained so that re-ages, extensions, deferrals, renewals, and rewrites can be adequately controlled and monitored by management and verified by examiners. The decision to re-age, extend, defer, renew, or rewrite a loan, like any other modification of contractual terms, should be supported in the institution's management information systems. Adequate management information systems usually identify and document any loan that is re-aged, extended, deferred, renewed, or rewritten, including the number of times such action has been taken. Documentation normally shows that the institution's personnel communicated with the borrower, the borrower agreed to pay the loan in full, and the borrower has the ability to repay the loan. To be effective, management information systems should also monitor and track the volume and performance of loans that have been re-aged, extended, deferred, renewed, or rewritten and/or placed in a workout program.

2241.0.1.4 Open-End Accounts

Institutions that re-age open-end accounts should establish a reasonable written policy and adhere to it. To be considered for re-aging, an account should exhibit the following:

1. The borrower has demonstrated a renewed willingness and ability to repay the loan.

time of the extension and not added to the balance of the loan. *Deferral*: Deferring a contractually due payment on a closed-end loan without affecting the other terms, including maturity, (or the due date for subsequently scheduled payments,) of the loan. The account is shown current upon granting the deferral. *Renewal*: Underwriting a matured, closed-end loan generally at its outstanding principal amount and on similar terms. *Rewrite*: Underwriting an existing loan by significantly changing its terms, including payment amounts, interest rates, amortization schedules, or its final maturity.

2. The account has existed for at least nine months.
3. The borrower has made at least three consecutive minimum monthly payments or the equivalent cumulative amount. Funds may not be advanced by the institution for this purpose.

Open-end accounts should not be re-aged more than once within any twelve-month period and no more than twice within any five-year period. Institutions may adopt a more conservative re-aging standard; for example, some institutions allow only one re-aging in the lifetime of an open-end account. Additionally, an over-limit account may be re-aged at its outstanding balance (including the over-limit balance, interest, and fees), provided that no new credit is extended to the borrower until the balance falls below the predelinquency credit limit.

Institutions may re-age an account after it enters a workout program, including internal and third-party debt-counseling services, but only after receipt of at least three consecutive minimum monthly payments or the equivalent cumulative amount, as agreed upon under the workout or debt-management program. Re-aging for workout purposes is limited to once in a five-year period and is in addition to the once-in-twelve-months/twice-in-five-years limitation described above. To be effective, management information systems should track the principal reductions and charge-off history of loans in workout programs by type of program.

2241.0.1.5 Closed-End Loans

Institutions should adopt and adhere to explicit standards that control the use of extensions, deferrals, renewals, and rewrites of closed-end loans. The standards should exhibit the following:

1. The borrower should show a renewed willingness and ability to repay the loan.
2. The standards should limit the number and frequency of extensions, deferrals, renewals, and rewrites.
3. Additional advances to finance unpaid interest and fees should be prohibited.

Management should ensure that comprehensive and effective risk management, reporting, and internal controls are established and maintained to support the collection process and to ensure timely recognition of losses. To be effective, management information systems should track the subsequent principal reductions and charge-off history of loans that have been granted an extension, deferral, renewal, or rewrite.

2241.0.1.6 Examination Considerations

Examiners should ensure that institutions adhere to this policy. Nevertheless, there may be instances that warrant exceptions to the general classification policy. Loans need not be classified if the institution can document clearly that repayment will occur irrespective of delinquency status. Examples might include loans well secured by marketable collateral and in the process of collection, loans for which claims are filed against solvent estates, and loans supported by valid insurance claims.

The Uniform Retail-Credit Classification and Account-Management Policy does not preclude examiners from classifying individual retail-credit loans that exhibit signs of credit weakness regardless of delinquency status. Similarly, an examiner may also classify retail portfolios, or segments thereof, where underwriting standards are weak and present unreasonable credit risk, and may criticize account-management practices that are deficient.

In addition to reviewing loan classifications, the examiner should ensure that the institution's allowance for loan and lease losses provides adequate coverage for probable losses inherent in the portfolio. Sound risk- and account-management systems, including a prudent retail-credit lending policy, measures to ensure and monitor adherence to stated policy, and detailed operating procedures, should also be implemented. Internal controls should be in place to ensure that the policy is followed. Institutions that lack sound policies or fail to implement or effectively adhere to established policies will be subject to criticism.

Issued by the Federal Financial Institutions Examination Council on June 6, 2000.

In carrying out its regulatory and supervisory responsibilities, the Board requires the submission of various reports from bank holding companies. These reports are an integral part of the Board's supervision, monitoring, and surveillance functions. Information from these reports is used to evaluate the performance of bank holding companies, appraise their financial condition, and determine their compliance with applicable laws and regulations. The examiner must review the reports (submitted to the Federal Reserve System) for accuracy and timeliness and insist on their being amended if material errors are found. If inaccurate data are submitted, the resulting ratios could conceal deteriorating trends in the company's financial condition and performance. Bank holding companies should maintain sufficient internal systems and procedures to ensure that reporting is accomplished according to appropriate regulatory requirements. Clear, concise, and orderly workpapers should support the data presented and provide a logical tie between report data and the financial records. For detailed current information on who must submit reports and what the reporting requirements are, see the Board's public site on the Internet at the following address: www.federalreserve.gov/boarddocs/reportforms.

2250.0.1 PENALTIES FOR ERRORS IN REPORTS

Section 8 of the Bank Holding Company Act (the act) was amended to provide for the assessment of civil money penalties for the submission of late, false, or misleading reports filed by bank holding companies that are required by the act and Regulation Y and for the failure to file the required regulatory reports. Financial institutions that have adequate procedures to avoid any inadvertent errors but that unintentionally submit incorrect information or are minimally late in publishing or transmitting the reports can be fined up to \$2,000 per day. The financial institution has the burden of proving that the error was inadvertent. If the error was not inadvertent, a penalty of up to \$20,000 per day can be assessed. If the submission was done in a knowing manner or with reckless disregard for the law, a fine of up to \$1 million or 1 percent of the institution's assets can be assessed for each day of the violation. Institution-affiliated parties who participate in any manner in the filing of an institution's false or misleading required regula-

tory report, or who cause the failure to file or a late filing of a required regulatory report, may be assessed a civil money penalty of up to \$25,000 per day.

2250.0.2 APPROVAL OF DIRECTORS AND SENIOR OFFICERS OF DEPOSITORY INSTITUTIONS

The Federal Deposit Insurance Act (12 U.S.C. 1811) was amended to require each insured depository institution and depository institution holding company to give 30 days' prior notification to the federal banking authority of (1) the proposed addition of any individual to its board of directors or (2) the employment of any individual as a senior executive officer. This requirement applies to the following institutions:

1. institutions that have been chartered less than two years
2. institutions that have undergone a change in control within the preceding two years
3. institutions that are in a troubled condition or whose capital is below minimum standards

The agencies have the authority to issue a notice of disapproval to stop the appointment or employment of an individual if they feel that appointing or employing the person would not be in the interests of the public, taking into account that individual's competence, experience, character, and integrity.

2250.0.3 INSPECTION OBJECTIVES

1. To determine that required reports are being filed on time.
2. To determine that the contents of reports are accurate and complete.
3. To recommend corrective and, if needed, formal enforcement action when official reporting practices, policies, or procedures are deficient.

2250.0.4 INSPECTION PROCEDURES

1. A bank holding company's historical record concerning the timely submission of reports should be ascertained by reviewing relevant

- Reserve Bank files. The examiner should determine, from documentation in the files, which reports should have been filed because of the passage of time or the occurrence of an event. If a report is delinquent, the bank holding company should be instructed to prepare and submit the report expeditiously.
2. Copies of regulatory reports filed since the prior inspection should be reviewed and compared with company records on a random, line-by-line basis, using a significance test. In some cases, the review will necessarily extend to supporting schedules and workpapers that substantiate the data reflected in the reports. If the initial reports reviewed are found to be substantially correct, then the scope of subsequent reviews may be curtailed. If the reports are found to be incorrect, the overall review procedures should be intensified. When an error or misstatement is considered significant, the matter should be brought to management's attention and the bank holding company should be required to submit adjusted data. Improper methods used in preparing reports should be called to management's attention. The examiner should explain all changes carefully and assist bank holding company personnel in whatever way possible to ensure proper reporting in future reports.
 3. At the conclusion of the review process, the examiner should discuss the following with management, when applicable:
 - a. inaccuracies found in reports and the need for submission of amended pages or reports
 - b. violations of law, rulings, or regulations
 - c. recommended corrective action when policies or procedures have contributed to deficiencies noted in the reports or the untimely submission of report(s)
 4. Details concerning the late or inaccurate preparation of reports should be listed in the inspection report on the Other Supervisory Issues report page. If the matter is considered significant, it should be noted on the Examiner's Comments and Matters Requiring Special Board Attention report page, as well. When the exceptions are considered minor and have been discussed with management and corrected, it will suffice to state this on the Other Supervisory Issues workpaper supporting page.
 5. When it is determined that false, misleading, or inaccurate information is contained in financial statements or reports, consider whether formal enforcement action is needed to ensure that the offending bank holding company, financial institution, or other entity under the holding company structure will correct the statements and reports.

2260.0.1 INTRODUCTION

Venture capital activities are usually conducted through one or more of the following types of entities: Small Business Investment Companies (SBIC); Minority Enterprise Small Business Investment Companies (MESBIC); Non-licensed Venture Capital Companies; and Partnerships or Venture Capital Funds. SBIC's and MESBIC's are licensed and regulated by the Small Business Administration (SBA); the other types are not. Both SBIC's and MESBIC's are limited by regulation to investing in and lending to small businesses; whereas, non-licensed venture capital companies and partnerships have greater latitude. The activities of MESBIC's (section 103d companies) are specifically limited to small firms owned by socially or economically disadvantaged persons. Most banks and bank holding companies engage in venture capital activities through an SBIC because of its broad ability to take equity positions in other companies. SBIC's are permitted to own up to 49.9 percent of the voting shares of a company. By contrast, a non-licensed venture capital company that is a subsidiary of a bank holding company may not own more than 4.9 percent of the voting shares of a business. To escape from this limitation some bank holding companies have formed partnerships or venture capital funds. However, a bank holding company can only participate as a limited partner with an ownership interest not to exceed 24.9 percent. Limited partnerships are preferred by those bank holding companies who do not possess the expertise for this type of activity but seek the potential opportunity for high returns.

Through the use of private capital and, in some cases, borrowed money, venture capital companies invest in and lend to new and growing business enterprises. They prefer to invest in and lend to companies that exhibit strong management talent and clearly defined strategies. Many of the companies are yet unknown to the public. Their products either have been introduced to the market or are due to arrive in the next few years. Venture capital companies do not favor pioneering research. Instead, they are interested in financing innovative products, i.e.,

those next in generation to existing ones, that have a wide market appeal and the potential for strong growth. Such products are preferred because of their shorter development time and possible faster realization of profits. One of the ways a venture capital company makes money is by purchasing the common stock of an emerging company and selling it when the company has grown and the stock has appreciated in value. It also generates earnings by making convertible preferred stock investments and by lending money in the form of subordinated debentures and term loans. Usually lending agreements contain provisions which enable a venture capital company to acquire shares or increase existing holdings through the exercise of warrants or stock options at a later date. Although in most cases some equity interest is taken, venture capital companies, generally, do not acquire a controlling interest in a business they finance.

Once financing commences, venture capital companies typically take an active role in the management of the companies. They usually receive representation on the company's board of directors, which enables them to review budgets and assist in structuring the company's long-range strategic plan. Guiding a company through its developing stages is considered essential for the achievement of equity appreciation and realization of the high returns sought by venture capital companies.

2260.0.2 LOANS AND INVESTMENTS

Investments and lending philosophy may differ among venture capital companies. Some choose to be equity-oriented; that is, they look for higher returns on investments through capital appreciation, while others favor lending in the form of loans or convertible debt securities which provide cash flow to fund operations and service debt. However, most companies will strive for a diversified portfolio in terms of the type of investment and industry mix. The range of financing possibilities associated with lending and/or investing is as follows:

First Step Financing	Funds needed for seed capital to help develop an idea.
Start-up Financing	Funds needed to cover the cost of preparing a business plan, conducting market studies and opening a business.
First Stage Financing	Funds needed to start manufacturing and selling the product(s).
Second Stage Financing	Funds needed for working capital to expand production and build inventories. Company is operating but not yet profitable.
Third Stage Financing	Funds needed to improve the product, build working capital and expand marketing and production facilities. At this point, the company should be generating a profit.
Fourth Stage Financing	Additional working capital funds needed prior to initial public offering which may be as much as a year later.

In addition to the above, venture capital companies will consider financing leveraged buy-outs and turnaround situations.

The degree of risk assumed varies according to the stage of financing, i.e., lower stages contain greater risk because of the requirement for longer-term investment discipline than higher stages. Investments in start-up companies typically take five to seven years or more to mature. Because of the high risk involved, most bank-affiliated venture capital companies will avoid the earlier or lower stages of financing. Newly established venture capital companies and especially those that use leverage tend to focus on the intermediate and latter stages of financing. These stages are represented primarily by debenture financing, preferred stock investments, and straight term loans. In structuring a portfolio, a venture capitalist should consider both liquidity and capital protection. The ideal financing mix might entail a limited amount of money invested in common stock with the remainder distributed between debentures, loans, and preferred stock. These instruments will provide income to cover operating expenses and service debt as well as give some protection should the business start to decline. Limited holdings of common stock give the company the opportunity to enhance earnings through capital gains without adversely effecting cash flow. Regardless of the type of financing offered, the ability to exist from an investment or loan through either the issuance of public stock or a cash buyout by a larger company is the goal of a venture capital company.

2260.0.3 FUNDING

A venture capital company may use private capital, leverage, or a combination of both to fund its portfolio of loans and investments. Venture capital companies obtain private capital from their parent organization, either banks or bank holding companies. Generally, private capital is used to fund high-risk, lower-stage investments, although some companies may diversify their portfolio and deploy a portion of capital in loans, debentures and preferred stock. Leverage may be derived from internal and external borrowings. SBIC's that are banking subsidiaries may receive funding in the form of loans from their parent bank. For those companies that are a subsidiary of a bank holding company, internal funding may be provided by the bank holding company from internal cash flow or its external borrowing sources. A bank holding company might borrow from its available bank lines or other borrowing sources to fund venture capital operations. There is, however, one exception; that is, the use of commercial paper proceeds to fund venture capital investments and loans does not appear to qualify under the exemptive provisions of section 3(a)(3) of the Securities Act of 1933. SBIC's and MESBIC's can obtain external financing from the U.S. government and the private sector, while, non-licensed venture capital companies are limited to only private sources for their external financing. Under current SBA regulations, an SBIC can borrow up to \$35 million from the federal financing bank with no limit as to the aggregate amount of private debt. Because of the investment restrictions on MESBIC's, the SBA allows them to incur higher leverage. MESBIC's are permitted to

borrow up to four times their capital base and issue preferred stock to the SBA up to two times their capital base. MESBIC's also have no limit on the aggregate amount of private debt. All government borrowings are through the federal financing bank and carry the guarantee of the SBA. Such borrowings are classified as senior debt.

2260.0.4 PROFITABILITY

Earnings of venture capital companies can fluctuate widely depending on the nature of their activities. Those companies that blend their portfolios with loans, debentures and preferred stock investments tend to be more predictable and less erratic in earnings performance than companies that are strictly equity-oriented. The difference being that loans, debentures and preferred stock provide income to cover operating expenses and debt service requirements, while common stock investments may not yield positive returns for several years. Portfolio diversification tends to smooth out earnings, although the potential for major fluctuations in earnings exists in the future should capital gains be realized on equity investments. In measuring earnings performance, one should consider the combination of net realized earnings (net investment income plus net realized gains (losses) on sale of investments) and net unrealized appreciation or depreciation on investment holdings found in the capital structure of the balance sheet. It is not uncommon to see aggregate returns on capital reach 50

or more. Typically, returns of this magnitude are influenced by either large gains realized on the sale of investments or a substantial amount of unrealized appreciation on investments held or a combination of both. Appreciation or depreciation in portfolio investments represents potential realized gains or losses and, therefore, should be considered in evaluating the company's earnings performance. Specifically, the change in year-to-year net unrealized appreciation or depreciation is a factor that should be considered in analyzing results. When measuring the company's contribution to consolidated earnings, net unrealized appreciation or depreciation should be ignored.

2260.0.5 CAPITALIZATION

In addition to the usual equity components of capital stock, surplus and retained earnings, the capital structure of a venture capital company

includes a separate category for net unrealized appreciation (depreciation) on equity interests. Net unrealized appreciation (depreciation) on equity interests represents the gross amount reported under loans and investments less an appropriate provision for taxes. Since unrealized appreciation (depreciation) on equity interests represents future profits (losses) they are measured separately in the equity account rather than in earnings.

There are no industry norms with which to measure capital adequacy. What is known, however, is that the SBA requires a minimum capital investment of \$1,000,000 to establish an SBIC. Moreover, regulations governing SBIC's limit the dollar amount of investments and/or loans to a single customer to 20 percent of an SBIC's capital base. Although banks are limited by statute to a maximum capital investment in an SBIC of 4.9 percent of their primary capital, statistics show that SBIC's have substantially less than this limit. By contrast, there are no restrictions as to the amount of capital that a bank holding company may invest in a nonbank affiliated venture capital company. Dependence on capital to fund portfolio loans and investments seems to be preferred as the cost of leverage, at present, cannot provide meaningful spreads. It can be assumed that the larger the capital position the higher the dollar amount available for investing and/or lending to a single customer.

Sustained profitability and satisfactory asset quality are required to maintain financial soundness and capital adequacy. The SBA will consider an SBIC's capital as impaired if net unrealized depreciation and/or operating losses equal 50 percent or more of its capital base. It would seem appropriate to use this guideline for measuring the adequacy of capital of non-licensed venture capital companies that are affiliated with a bank holding company.

2260.0.6 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the Act and Regulation Y.

2. To determine whether transactions with affiliates, especially banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios and whether the allowance for losses is

adequate in relation to portfolio risk and whether the nonaccrual policy is appropriate.

4. To determine the viability of the company as a going concern, and whether its affiliate status represents a potential or actual adverse influence upon the parent holding company and its affiliated bank and nonbank subsidiaries and the condition of the consolidated corporation.

5. To determine whether the company has formal written policies and procedures relating to lending and investing.

6. To determine if such policies and procedures are adequate and that management is operating in conformance with the established policies.

7. To assess management's ability to operate the company in a safe and sound manner.

8. To suggest corrective action when policies, practices or procedures are deficient, or when asset quality is weak, or when violations of laws or regulations have been noted.

2260.0.7 INSPECTION PROCEDURES

2260.0.7.1 Pre-Inspection

All SBIC's and MESBIC's are subject to comprehensive regulations and annual examinations administered by the SBA. Therefore, it is not necessary to conduct a full scope inspection of these subsidiaries. The bank holding company inspection should focus on the quality of assets, as disclosed in the annual director's valuation and financial statements submitted to the SBA on an annual basis, transactions with affiliates and an overall financial evaluation.

The decision whether the operations of a non-licensed venture capital company will be inspected "on-site" is based on the availability and adequacy of data from either the parent holding company or that which is obtained upon request from the subsidiary. The following information should be obtained and thoroughly reviewed prior to making a decision to go "on-site":

1. Minutes of the board and executive committee meetings since inception of company or the date of the previous inspection;

2. Comparative interim and fiscal financial statements containing value accounting adjustments, including the year-end filing with the SBA;

3. Listing of contingent liabilities, including any pending material litigation;

4. Latest director's valuation of loans and investments and results of latest internal loan or credit review;

5. Copies of the most recent internal and external audit reports;

6. Trial balance of all loans and investments, indicating the percent ownership of a company involving an equity interest;

7. Listing of loans, debentures and preferred stock on which scheduled payments are in arrears 30 days or more or on which payments are otherwise not being made according to original terms;

8. Details of internal and external borrowing arrangements; and

9. Any agreements, guarantees or pledges between the subsidiary and its parent holding company or affiliates.

After reviewing the above information, a decision whether or not to conduct an on-site inspection must be made. Some of the determinants of this decision would include: relative size; current level and trend of earnings; asset quality as indicated in the director's valuation of loans and investments; and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would warrant a visit even though a satisfactory condition had been determined during the previous inspection. All non-licensed venture capital companies should be inspected on-site at least once every three years.

2260.0.7.2 On-Site Inspection

If the decision was made to conduct an "on-site" inspection of the subsidiary, the examiner should expand the scope of the review to include these additional procedures:

1. Hold a brief meeting with the chief executive officer of the company to establish contact and present a brief indication of the scope of the inspection;

2. Review the company's policy statements for loans, investments, nonaccruals, and charge-offs;

3. Review the latest internal review by the company's directors or the loan review department of the bank affiliate or bank holding company;

4. Conduct an independent review of the portfolio;

a. Establish the minimum dollar of loans

and investments to be reviewed to achieve at least 70 percent coverage of the portfolio;

b. Review loans and investments in sample, giving consideration to the following:

- Latest balance sheet and income data;
- Profitability projections;
- Product(s) being produced by customer and their market acceptance;
- Business plan;
- Extent of relationship with customer;
- Funding sources; and
- Ultimate source of repayment.

c. Discuss the more serious problem loans and investments with management;

d. Classify, if necessary, those loans and investments that exhibit serious weaknesses where collectibility is problematical or worse. Lower classification criteria must accompany these assets, which possess a higher degree of credit risk than found in other types of nonbank lending;

e. Determine the diversification of risk within the portfolio, i.e., the mix of loans and investments and the type of industries financed;

f. Review the adequacy of the allowance for loan losses and determine the reasonableness of the amount of unrealized appreciation or depreciation reported on the balance sheet in conjunction with the asset evaluation; and

g. Determine whether the board of directors or parent holding company has established credit limits for the maximum amount of loans and investments to be extended to a single customer. Verify adherence to the limits.

5. Review equity investments for compliance with the 4.9 percent maximum limitation to any one customer;

6. Verify office locations and activities with system approvals;

7. Compare company's general ledger with statements prepared for the latest FR Y-6;

8. Review the quality and liquidity of other investment holdings;

9. Review and classify, if necessary, assets acquired in liquidation of a customer's business due to default. Determine compliance of divestiture period with section 4(c)(2) of The Bank Holding Company Act;

10. Review the manner and frequency in which subsidiary management reports to the parent holding company;

11. Follow-up on matters criticized in the most recent audit reports and the previous inspection report on the subsidiary; and

12. Assess the expertise of subsidiary management and awareness of subsidiary directors.

2260.0.7.3 Matters Warranting Recommendation in Inspection Report

Deficiencies or concerns that warrant citation in the inspection report for the attention of management are:

1. Lack of policies and/or controls in the lending and investing functions;

2. Improper diversification of risk in the loan and investment portfolio;

3. Adverse tie-in arrangements with the affiliate bank(s);

4. Lack of management expertise;

5. Impairment of capital as a result of operating losses or high unrealized depreciation on equity interests or a combination of both; and

6. Lack of adequate reporting procedures to parent holding company management.

The Bank Holding Company Act of 1956 (BHC Act) was enacted to limit the expansion of banking institutions into nonbanking activities. A bank holding company was defined in the BHC Act as an entity that owned or controlled 25 percent or more of the voting shares of two or more banks; companies owning only one bank were exempted from regulation under the BHC Act.

During the 1960s, the number of commercial enterprises that purchased one bank, engaged in nonbanking activities, and remained exempt from regulation grew dramatically. As a result of this change in the structure of bank ownership, Congress enacted the Bank Holding Company Act Amendments of 1970. Of these amendments, the most significant is the extension of the act to grant to the Federal Reserve Board the authority to regulate the activities of one-bank holding companies.

In 1978, Congress passed the International Banking Act (IBA). Section 8 of the IBA expanded the nonbanking prohibitions of the BHC Act to foreign banks that engage in the business of banking in the United States directly through a branch or agency or indirectly through a subsidiary commercial lending company. This expanded the nonbanking restrictions beyond simply covering foreign banks that own or control U.S. banks or bank holding companies. However, section 2(h) of the BHC Act provides foreign organizations that are principally engaged in the business of banking outside the United States with exemptions from the nonbanking prohibitions of the BHC Act. Further exemptions have been granted by the Board's discretionary authority under section 4(c)(9) when such exemptions were in the public interest and were consistent with the purposes of the BHC Act.

Under section 4(c) of the BHC Act, Congress exempted a limited number of investments from the general prohibition against owning or controlling shares of nonbank concerns. Section 4(c)(8) permitted investment in "shares of any company the activities of which the Board after due notice and opportunity for hearing has determined by regulation to be so closely related to banking or managing or controlling banks as to be a proper incident thereto." The act also provided that any bank holding company might apply to the Board for permission to engage in an activity that had not yet been determined to be permissible if the applicant was of the opinion that the activity in its particular circumstances was closely related to banking or managing or controlling banks. Sec-

tion 225.28(b) of the Board's Regulation Y lists permissible nonbanking activities that the Board has deemed to meet these criteria. (See appendix 1.) The list of permissible nonbanking activities has been expanded at various times.

The Board also has permitted by order, on an individual basis, certain activities that it has considered to be closely related to banking under section 4(c)(8) of the BHC Act. In doing so, the Board did not expand the list of permissible activities under section 225.28(b) of Regulation Y. (For a list of such activities, see appendix 2.)

In determining whether the performance of a nonbank activity by a bank holding company or the acquisition of a nonbank firm by a bank holding company was a proper incident to banking, the Board applied a "public interest test." The Board determined whether the proposed new activity or proposed acquisition "[could] reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices."

An interpretation of Regulation Y (12 C.F.R. 225.126) dated April 28, 1972, and amended September 20, 1972, listed activities that the Board determined do not satisfy the "so closely related" test under section 4(c)(8). The Board subsequently determined that a number of other activities do not satisfy the closely related test. (For a complete list of these impermissible activities, see appendix 3, and, for a brief description of a selected number of the activities denied by the Board, see section 3700.0 et seq.)

As the primary regulator for bank holding companies and their directly held nonbank subsidiaries, the Federal Reserve System conducts inspections of their operations, financial condition, and compliance with appropriate banking and other related statutes and regulations. Inspection personnel are called upon to evaluate the current condition of the organizations, as well as their future prospects.

On August 10, 1987, the Competitive Equality Banking Act of 1987 was signed into law. This act redefined the definition of "bank" in section 2 of the BHC Act so that an FDIC-insured institution is deemed a bank.

State-Authorized Activities of Savings Banks

A special rule was established for qualified savings banks (state-chartered, FDIC-insured institutions organized before March 5, 1987) that are subject to the BHC Act. (See section 2090.7.) In accordance with section 3 of the BHC Act, a qualified savings bank may engage in any nonbanking activity, except insurance activities, either directly or through a subsidiary, that it is permitted to conduct directly as a state-chartered savings bank, even if those activities are not otherwise permissible for bank holding companies. To engage in those activities, however, a qualified savings bank must remain a savings bank and a subsidiary of a savings bank holding company (a company that controls one or more qualified savings banks whose total aggregate assets, upon formation and at all times thereafter, constitute at least 70 percent of the assets of the holding company). With respect to insurance activities, qualified savings banks may engage in underwriting and selling savings bank life insurance if the savings bank is located in Connecticut, Massachusetts, or New York, and if certain other conditions are met.

BHCs Engaging in Nonbanking Activities in Foreign Countries

A bank holding company has greater leeway to perform nonbanking activities abroad than in the United States in that it may engage in nonbanking activities abroad that would not be permissible in the United States. However, activities abroad are subject to limitations. Section 211.8 of Regulation K requires a bank holding company to limit its direct and indirect activities abroad to those usual in connection with banking and financial activities and to necessary related activities. Section 211.10 also lists particular activities that are permissible abroad and provides rules regarding when a bank holding company must submit an application to engage in such activities directly or through investments.

Edge Act or Agreement Corporations

A bank holding company may own an Edge Act or agreement corporation. The Federal Reserve Act and Regulation K govern the permissible

activities of Edge Act or agreement corporations. An Edge Act or agreement corporation is an international banking vehicle that may only engage in listed or approved activities that are incidental to international or foreign business. (See 12 C.F.R. 211.6) The restriction generally permits an Edge Act or agreement corporation to engage only in international banking or financial activities. (See 12 C.F.R. 211.8.) A separate manual, *Guidelines and Instructions for Examination of Edge Corporations*, sets forth the rules and procedures for examining Edge Act or agreement corporations and for determining whether their activities are permissible.

Companies that own only an Edge Act or agreement corporation. Any company, other than a bank, that acquired an Edge Act or agreement corporation after March 5, 1987, must conform its activities to section 4 of the BHC Act.

Underwriting and Dealing in Debt and Equity Securities

Beginning in January 1989, certain nonbanking subsidiaries of bank holding companies were approved to underwrite and deal in debt or equity securities (excluding open-end investment companies), subject to the prohibition on affiliation with an organization dealing in securities under section 20 of the Glass-Steagall Act. (See 1989 FRB 192.) The Board delayed commencement of the activity by each applicant until it determined that the applicant had established the necessary managerial and operational infrastructure to commence the expanded underwriting and dealing activity and to comply with the Board order. The applicant's capital plan had to be determined to be adequate along with the necessary policies and procedures needed to comply with the Board's order. The Board's order requires that loans to and capital investments in the underwriting subsidiary be deducted from the bank holding company's capital, as provided for in the Board's capital adequacy guidelines. The Board further confirmed that the activities could not be conducted in any other subsidiary other than the Board-approved section 20 subsidiary. (See section 3600.21.4.)

As for underwriting and dealing in equity securities, the Board stated in the order that it would review within a year whether applicants could commence the activity. The first Board

authorization to commence underwriting and dealing in equity securities was given on September 20, 1990, subject to the commitments given by the bank holding company in connection with its respective Board order, including its commitment to maintain the capital of its section 20 subsidiary at levels necessary to support its activities and commensurate with industry standards, and to increase the capital of the section 20 subsidiary accordingly as it grew.

Modifications to the Board's Orders Authorizing BHC Subsidiaries to Underwrite and Deal in Bank-Ineligible Securities Consistent with Section 20 of the Glass-Steagall Act

The Board announced its approval of modifications to its previous section 20 authorizations by order on September 21, 1989 (1989 FRB 751). The modifications (1) raised from 5 percent to 10 percent (currently 25 percent) the revenue limit on the amount of total revenues a section 20 subsidiary might derive from bank-ineligible securities underwriting and dealing activities, and (2) permitted underwriting and dealing in the securities of affiliates, consistent with section 20 of the Glass-Steagall Act, if the securities were rated by an unaffiliated, nationally recognized statistical rating organization or were issued or guaranteed by the Federal National Mortgage Association (Fannie Mae), the Federal Home Loan Mortgage Corporation (FHLMC), or the Government National Mortgage Association (GNMA), or if they represented interests in such obligations.

Acting as Agent in the Private Placement of All Types of Securities and Acting as Riskless Principal in Buying and Selling Securities

In another Board order, the Board authorized a bank holding company to transfer its private-placement activities from its commercial bank subsidiary to its section 20 subsidiary. The section 20 subsidiary would act as agent in the private placement of all types of securities, including the provision of related advisory services, and would buy all types of securities on the order of investors as a "riskless principal." The Board concluded that the section 20 subsidiary's private placement of debt and equity securities within the limits proposed did not involve the underwriting or public sale of securities for the purposes of section 20 of the Glass-Steagall

Act. The revenues derived therefrom should not be subject to the 25 percent revenue limitation placed on bank-ineligible securities activities. (See section 3230.4.)

Foreign Banks Authorized to Operate Section 20 Subsidiaries to Underwrite and Deal in Corporate Debt, Commercial Paper, and Other Securities

In a Board order (1990 FRB 158), the Board authorized a foreign bank to operate a section 20 subsidiary under the bank to underwrite and deal in corporate debt, commercial paper, and other securities. (Securities issued by open-end investment companies are not included.) The foreign bank operated outside the United States but owned a subsidiary bank in the United States. To achieve equality between the domestic and foreign banking operations in the United States and in an effort to negate any advantages that a foreign bank might have over a domestic bank, the Board considered the foreign bank as a bank holding company even though the bank was not part of a bank holding company structure. In so doing, the Board imposed restrictions on the section 20 subsidiary. The foreign bank might fund the section 20 subsidiary, but that action required prior Board approval. In addition, the section 20 subsidiary might not borrow from its parent bank. Any loans to, transfers of assets to, or investments in the section 20 subsidiary also required Board approval. (See 1990 FRB 158, 455, 554, 568, 573, 652, and 683.)

Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA)

FIRREA became law on August 9, 1989. The law revised section 4(c)(8) of the BHC Act and authorized the Board to approve applications from bank holding companies for the acquisitions of savings associations. The Board thus revised section 225.28(b)(4)(i) of Regulation Y to include as a permissible nonbanking activity the owning, controlling, or operating of a savings association, if the savings association engaged only in deposit-taking, lending, and other activities permissible for bank holding companies. The legislation required the Board to remove tandem restrictions found in previous Board orders that were not prohibited by FIRREA and, in approving applications, to confine

limitations on transactions between the savings association and its bank holding company affiliates to those required by sections 23A and 23B of the Federal Reserve Act. FIRREA made sections 23A and 23B applicable to savings associations as though they were member banks. Two exceptions apply: (1) no extensions of credit may be granted by a savings association to an affiliate unless the affiliate is engaged only in activities permissible for bank holding companies under the BHC Act, and (2) savings associations may not purchase or invest in securities of an affiliate other than shares of a subsidiary. The legislation also provided for a “sister-bank” exemption from the provisions of sections 23A and 23B of the Federal Reserve Act. (See sections 2020.1.1.6 and 2090.8.1.)

1992 Revisions to the Regulation Y List of Nonbanking Activities—the “Laundry List”

During 1992, the Board initiated several actions that affected certain nonbanking activities. The first action, effective May 18, 1992, amended section 225.28(b) of Regulation Y with regard to tangible personal property leases. Subject to the stated limitations, a bank holding company can rely on estimated residual values of up to 100 percent of the acquisition costs of the leased property in order to recover the bank holding company’s leasing costs. Previously, the nonbanking activity had only been approved by Board order. (See the initial Board order at 1990 FRB 462 and the subsequent Board orders at 1990 FRB 960 and 1991 FRB 187 and 490.)

The Board issued a revised interpretive rule, effective August 10, 1992, regarding investment advisory activities of bank holding companies to expressly provide that a bank holding company or its nonbank subsidiary may act as agent for customers in the brokerage of shares of an investment company advised by the holding company or any of its subsidiaries. In addition, the revision provided that a bank holding company or its nonbank subsidiary may provide investment advice to customers regarding the purchase or sale of shares of an investment company advised by an affiliate. In both instances, the Board requires certain disclosures to be made to address potential conflicts of interest or adverse effects. (See 12 C.F.R. 225.125(h) of Regulation Y.)

Effective September 10, 1992, the Board added two nonbanking activities to Regulation Y that were previously approved by Board order. The two activities dealt with full brokerage services and financial advisory services. (See 12 C.F.R. 225.28(b)(6) and (7).)

Comprehensive Revision of Regulation Y

In August 1996, the Board proposed comprehensive revisions to Regulation Y that were designed to significantly reduce regulatory burden, improve efficiency, and eliminate unwarranted constraints on credit availability. The proposal followed a Board review of its regulations that was required by the Riegle Community Development and Regulatory Improvement Act of 1994. The changes (1) removed a number of restrictions on the permissible nonbanking activities of BHCs, (2) expanded and reorganized the regulatory list of permissible nonbanking activities to include numerous nonbanking activities that had been previously approved only by Board order,¹ (3) streamlined the application/notice process for BHCs and the procedures governing change in bank control notices, and (4) revised the tying rules to enhance banking organizations’ ability to provide customer discounts on services. Included were changes that streamlined the procedures for well-run BHCs to seek Federal Reserve System approval to acquire additional banks within certain limits. The Board approved these revisions to Regulation Y, effective April 21, 1997.

Limitation on Board-Approved Nonbanking Activities

The Gramm-Leach-Bliley Act (the GLB Act) amended the BHC Act to limit bank holding companies that are not financial holding companies to engaging only in “activities which had been determined by the Board by regulation or order under section 4(c)(8) of the BHC Act and section 225.28 of Regulation Y before November 12, 1999 (the approval date of the GLB Act), to be so closely related to banking as to be a proper incident thereto (subject to such terms and conditions contained in such regulation or order, unless modified by the Board)” (12 U.S.C. 1843(c)(8)). Prior to November 12, 1999, the

1. See subsection 3000.0.2, appendix 1. See also section 225.28(b) of Regulation Y. In addition to these activities, other activities have been approved by Board order. For a list of those activities, see subsection 3000.0.3, appendix 2.

Board had determined that “[a]ny activity usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit, as determined by the Board” is closely related to banking. Accordingly, the Board retains authority after the GLB Act to define the scope of this section 4(c)(8) activity and to modify the terms and conditions that apply to the activity.

Financial Holding Companies

The GLB Act, approved in November 1999, amended section 4 of the BHC Act and expanded the powers of qualifying BHCs and foreign banks that elect to become financial holding companies (FHCs). An FHC is defined in the GLB Act as a BHC that meets certain eligibility requirements. The law repealed those provisions of the Glass-Steagall Act and the BHC Act that restricted the ability of BHCs to affiliate with securities firms and insurance companies. For a bank holding company to become an FHC and be eligible to engage in new activities authorized under the GLB Act, the GLB Act requires that all depository institutions controlled by the BHC be well capitalized and well managed. With regard to a foreign bank that operates a branch or agency or that owns or controls a commercial lending company in the United States, the GLB Act requires the Board to apply comparable capital and management standards that give due regard to the principle of national treatment and equality of competitive opportunity.

Qualifying BHCs that elect to become FHCs can engage in a broad array of financially related activities, including (1) securities underwriting and dealing, (2) insurance agency and insurance underwriting activities, and (3) merchant banking activities. With respect to merchant banking, the GLB Act (1) permits an FHC to retain a merchant banking investment only as long as necessary to dispose of the investment on a reasonable basis consistent with the financial viability of its merchant banking activities, and (2) provides that an FHC may not routinely manage or operate a company held as a merchant banking investment except as necessary to obtain a reasonable return on the investment.

The statute also sets forth parameters for the relationships between the Federal Reserve and other regulators. The statute differentiates between the Federal Reserve’s relations with regulators of depository institutions and functional regulators, such as those for nonbanking or nonfinancial activities such as insurance, securities, and commodities activities.

An FHC may engage in any other activities that the Board and the Secretary of the Treasury jointly determine to be financial in nature or incidental to financial activities. An FHC may also engage in any nonfinancial activity that the Board determines (1) is complementary to a financial activity and (2) does not pose a substantial risk to the safety and soundness of depository institutions or the financial system generally. The activities of BHCs and foreign banks that are not FHCs continue to be limited to activities currently authorized under section 4(c) of the BHC Act to be closely related to banking and permissible for BHCs. No additional activities may be found to be so closely related to banking as to be a proper incident thereto after November 11, 1999, thus limiting the ability of BHCs and foreign banks that are not FHCs to expand their activities.

In this manual, the sections in the 3900 series have been designated for FHCs. Those sections discuss FHC qualification requirements (domestic and foreign); permissible nonbanking FHC activities designated by statute (for example, merchant banking activities) or regulation, including activities jointly approved by the Board and the Secretary of the Treasury; and the supervisory approach and guidance for FHCs.

To implement the provisions of the GLB Act that govern FHCs, the Board amended Regulation Y by adding subpart I for FHCs. The provisions of an interim rule became effective March 11, 2000, and the Board approved a final rule effective December 21, 2000. Key provisions of the final rule are discussed within the 3900 sections of this manual. With respect to permissible activities of FHCs, the rule includes activities that previously were determined to be closely related to banking under section 225.28 of Regulation Y, activities that are usual in connection with transactions of banking abroad (including those in section 211.10 of Regulation K), and other activities defined as financial in nature by the GLB Act.

3000.0.1 CATEGORIES OF NONBANKING ACTIVITIES

Section 4(c)(8) of the BHC Act authorizes bank holding companies to engage directly or through a subsidiary in activities that the Board determined before November 12, 1999, to be so closely related to banking or managing or con-

trolling banks as to be a proper incident thereto. The Board and the courts established the following guidelines for determining whether a nonbanking activity is closely related to banking:²

1. whether banks have generally provided the service
2. whether banks generally provide services that are operationally or functionally so similar to the proposed service as to equip them particularly well to provide the proposed service
3. whether banks generally provide services that are so integrally related to the proposed service as to require their provision in specialized form

In addition, before November 12, 1999, the Board considered other factors in deciding what activities were closely related to banking.³ For those activities found to be closely related to

banking or to managing or controlling banks, the Board also must find that the proposed activity is a “proper incident” to banking and that performance of an activity by a bank holding company could reasonably be expected to produce benefits to the public (such as greater convenience, increased competition, or gains in efficiency) that outweigh possible adverse effects (such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices). The following describes three categories of bank holding company nonbanking activities:

1. those that have been found to be permissible and are listed in Regulation Y, the so-called laundry list activities (see appendix 1)
2. those that are permissible by Board order only (see appendix 2)
3. those that have been denied by the Board (see appendix 3)

2. *National Courier Association v. Board of Governors*, 516 F.2d 1229 (D.C. Cir. 1975).

3. *Alabama Association of Insurance Agents v. Board of Governors*, 533 F.2d 224 (5th Cir. 1976), *cert. denied*, 435 U.S. 904 (1978).

3000.0.2 APPENDIX 1—Activities Approved by the Board as Being Considered “Closely Related to Banking” Under Section 4(c)(8) of the Bank Holding Company Act (Section 225.28(b) of Regulation Y)

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
<i>Note: The bulleted items in this appendix are provided for historical reference only. The narrative before the bulleted items reflects the current Regulation Y authorization.</i>	
1. Extending credit and servicing loans	1971
Making, acquiring, brokering, or servicing loans or other extensions of credit (including factoring, issuing letters of credit, and accepting drafts) for the company’s account or the account of others.	
2. Activities related to extending credit ²	
a. Appraising	
(1) Real estate appraising	1980
(2) Personal property appraising	1986
b. Arranging commercial real estate equity financing	1983
c. Check-guaranty services	1986
d. Collection agency services	1986
e. Credit bureau services	1986
f. Asset management, servicing, and collection activities	1997
g. Acquiring debt in default	1995
h. Real estate settlement servicing	1997
3. Leasing personal or real property or acting as agent, broker, or adviser in leasing such property	
• Personal property leasing ³	1971
• Real property leasing	1974
4. Operating nonbank depository institutions	
a. Owning, controlling, or operating an industrial bank, Morris Plan bank, or industrial loan company so long as the institution is not a bank	1971
b. Owning, controlling, or operating a savings association, if the savings association engages in deposit-taking activities, lending, and other activities that are permissible for bank holding companies	1989
5. Trust company functions or activities	1971
6. Financial and investment advisory activities: acting as an investment adviser or financial adviser to any person, including (without limiting these activities in any way)—	1971

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
a. Serving as an investment adviser to an investment company registered under the Investment Company Act of 1940, including sponsoring, organizing, and managing a closed-end investment company	1972
• Investment or financial advising	1971
• Advisory services to open-end (mutual fund) investment companies	1972
b. Furnishing general economic information and advice, general economic statistical forecasting services, and industry studies	1984
c. Providing advice in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, reorganizations, recapitalizations, capital structurings, financing transactions, and similar transactions, ⁴ and conducting financial feasibility studies ⁵	1992
• Financial futures and options on futures	1986
d. Providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments	1992
• Financial futures and options on futures	1986
• Providing financial advice to—	
— state and local governments and	1973
— foreign governments, including foreign municipalities and agencies of foreign governments, such as with respect to the issuance of their securities	1992
• Inclusion of any investment or financial advisory activity without restriction	1997
• Discretionary investment advice to be provided to any person (includes investment advice regarding derivative transactions to institutional or retail customers as an investment, commodity trading, or other adviser) regarding contracts related to financial or nonfinancial assets (such advice is no longer restricted to institutional customers)	1997
• Financial and investment advice (or any permissible nonbanking activity) can be provided in any combination of permissible nonbanking activities listed in Regulation Y	1997
e. Providing educational courses and instructional materials to consumers on individual financial-management matters	1986
f. Providing tax-planning and tax-preparation services	1986
7. Agency transactional services for customer investments (principal positions)	
a. Securities brokerage services (including securities clearing and/or securities execution services on an exchange) for the account of customers and does not include securities underwriting or dealing	
(1) Securities brokerage services (including securities clearing and/or securities execution services on an exchange), whether alone or	1982
(2) In combination with advisory services and incidental activities (including related securities credit activities and custodial services)	1992
b. Riskless-principal transactions	1997
c. Private-placement services	1997
d. Futures commission merchant activities	1984
• A nonbanking subsidiary may act as an FCM with respect to any exchange-traded futures contract and options on a futures contract based on a financial or nonfinancial commodity	1997

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
e. Other transactional services such as providing to customers as agent transactional services with respect to the following:	1997
(1) Swaps and similar transactions	
(2) Investment transactions as principal ⁶	
(3) Transactions permissible for a state member bank	
(4) Any other transaction involving a forward contract, an option, futures, an option on a futures or similar contract (whether traded on an exchange or not) relating to a commodity that is traded on an exchange	
8. Investment transactions as principal	
a. Underwriting and dealing in government obligations and money market instruments	1984
b. Investing and trading activities. Engaging as principal in the following:	
(1) Foreign exchange	1984
(2) Forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on any rate, price, financial asset (including gold, silver, platinum, palladium, copper, or any other metal approved by the Board), nonfinancial asset, or group of assets, other than a bank-ineligible security, if the transaction meets certain requirements (A bank-ineligible security is any security that a state member bank is not permitted to underwrite or deal in under 12 U.S.C. 24 and 335.)	1997
(3) Forward contracts, options, futures, options on futures, swaps, and similar contracts, whether traded on exchanges or not, based on an index of a rate, a price, or the value of any financial asset, nonfinancial asset, or group of assets, if the contract requires cash settlement	1997
9. Management consulting and counseling activities	
a. Providing management consulting advice on any matter (financial, economic, accounting, or audit) to any other company ⁷	
• Unaffiliated banks (depository institutions)	1974
• Nonbank depository institutions	1982
• Other unaffiliated depository institutions	1997
• Any financial, economic, account, or audit matter to any other company	1997
b. Employee benefits consulting services	1997
c. Career counseling services	1997
10. Support services	
a. Courier services	1973
b. Printing and selling MICR-encoded checks and related documents	1997
11. Insurance agency and underwriting	
a. Credit insurance: acting as principal, agent, or broker for insurance (including home mortgage redemption insurance)	
• Acting as insurance agent or broker primarily in connection with credit extensions ⁸	1971
• Underwriting credit life and credit accident and health insurance related to an extension of credit	1972

<i>Permitted by Regulation¹</i>	<i>Year Added to Regulation Y</i>
b. Finance company subsidiary: insurance agent or broker for extension of credit by finance company subsidiary	1982
c. Insurance agency activities in small towns	1984
d. Insurance agency activities conducted on May 1, 1982	1984
e. Supervision of retail insurance agents	1984
f. Insurance agency activities by small bank holding companies	1984
g. Insurance agency activities conducted before 1971	1984
12. Community development	
a. Financing and investment in community development activities	1971
b. Advisory and related services designed to promote community welfare	1997
13. Issuance and sale of payment instruments	
a. Issuance and sale of retail money orders	1984
b. Sale of savings bonds	1979
c. Issuance and sale of traveler's checks	1981
14. Data processing	
a. Providing data processing and data transmission services; facilities (including data processing and data transmission hardware, ⁹ software, documentation, or operating personnel); databases; advice; and access to services, facilities, or databases by any technological means	
• Providing bookkeeping and data processing	1971
• Data processing and transmission services	1982
• Providing data processing and transmission advice to anyone on processing and transmitting banking, financial, and economic data	1997
b. Conducting data processing and data transmission activities not described in "a." that are <i>not</i> financial, banking, or economic ¹⁰	1997

1. See section 225.28(b) of Regulation Y for the details of the regulatory authorizations.

2. A Board staff opinion, issued July 9, 2002, concluded that a BHC's certain proposed flood zone-determination services are usual in connection with making mortgage loans and that these activities are within the scope of permissible activities related to extending credit under section 225.28(b)(2) of Regulation Y.

3. The provision of higher residual value leasing for tangible personal property was added to Regulation Y in 1992, including acting as agent, broker, or adviser in leasing such property.

4. The words "and similar transactions" were added in 1997.

5. Feasibility studies do not include assisting management with the planning or marketing for a given project or providing general operational or management advice.

6. Transactions described in section 225.28(b)(8) of Regulation Y.

7. Management consulting services may be provided to other customers not described in section 225.28(b)(9) of the rule, but the revenues derived therefrom are subject to a 30 percent annual revenue limitation.

8. Scope narrowed to conform to court decisions in 1979 and 1981; in 1982, it was further narrowed by title VI of the Garn-St Germain Depository Institutions Act.

9. Beginning in April 1997, the general-purpose hardware may not constitute more than 30 percent (previously 10 percent) of the cost of any package offering.

10. The total revenue may not exceed 30 percent (increased to 49 percent, effective January 8, 2004) of the company's total annual revenues derived from data processing, data storage, and data transmission activities.

3000.0.3 APPENDIX 2—Activities Considered “Closely Related to Banking” Under Section 4(c)(8) of the Bank Holding Company Act

<i>Permitted by Order on an Individual Basis</i>	<i>Year Approved</i>	<i>Manual Section 3600.</i>
1. Operating a “pool-reserve plan” for the pooling of loss reserves of banks with respect to loans to small businesses	1971	1
2. Operating an article XII New York investment company	1977	5.1
3. Underwriting and dealing in commercial paper to a limited extent	1987	21.1
4. Underwriting and dealing in, to a limited extent, municipal revenue bonds, mortgage-related securities, and commercial paper	1987	21.2
5. Underwriting and dealing in, to a limited extent, municipal revenue bonds, mortgage-related securities, consumer receivable-related securities, and commercial paper	1987	21.3
6. Issuing and selling mortgage-related securities backed by the guarantees of the Government National Mortgage Association	1988	23
7. Engaging in title insurance agency activities (approved under exemption G of the Garn–St Germain Depository Institutions Act of 1982)	1988	17.1
8. Underwriting and dealing in, to a limited extent, corporate debt and equity securities	1989	21.4
9. Acting as a sales-tax refund agent	1990	24.1
10. Providing real estate settlement activities through a permissible title insurance agency (exemption G companies only)	1990	26
11. Providing administrative and certain other services to mutual funds	1993	27
12. Acting as a dealer-manager in connection with cash-tender and exchange-offer transactions	1993	21.5
13. Privately placing limited partnership interests	1994	8
14. Engaging in real estate title abstracting	1995	30
15. Providing employment histories to third parties	1995	29
16. Underwriting “private ownership” industrial development bonds by a section 20 company	1995	21.6
17. Serving as a commodity pool operator of investment funds engaged in purchasing and selling futures and options on futures on certain financial and nonfinancial commodities	1996	13.1

<i>Permitted by Order on an Individual Basis</i>	<i>Year Approved</i>	<i>Manual Section 3600.</i>
18. Development of broader marketing plans and advertising, sales literature, and marketing materials for mutual funds (see 1997 FRB 678)	1997	28
19. Sale of government services involving (see 1998 FRB 481)— a. postage stamps and postage-paid envelopes b. public transportation tickets and tokens c. vehicle registration services (including the sale and distribution of license plates and license tags for motor vehicles) d. notary public services	1998	25
20. Operating a securities exchange	1999	6
21. Acting as a certification authority for digital signatures	1999	7

3000.0.4 APPENDIX 3—Activities Considered Not to Be “Closely Related to Banking” Under Section 4(c)(8) of the Bank Holding Company Act

<i>Activities Denied by the Board</i>	<i>Year Denied</i>
1. Insurance premium funding (“equity funding”) (combined sales of mutual funds and insurance)	1971
2. Underwriting general life insurance not related to credit extension	1971
3. Real estate brokerage	1972
4. Land investment and development	1972
5. Real estate syndication	1972
6. General management consulting	1972
7. Property management	1972
8. Trading in platinum and palladium coin and bullion ¹	1973
9. Armored car service ²	1973
10. Sale of level term credit life insurance	1974
11. Underwriting mortgage guarantee insurance	1974
12. Computer output microfilm services ³	1975
13. Operating a travel agency	1976
14. Underwriting property and casualty insurance	1978
15. Real estate advisory activities	1980
16. Certain contract key entry services	1980
17. Offering investment notes with transactional features	1982
18. Engaging in “pit arbitrage” spread transactions on commodities exchanges to generate trading profits	1982
19. Engaging in the publication and sale of personnel tests and related materials	1984
20. Providing credit ratings on bonds, preferred stock, and commercial paper	1984
21. Providing independent expert actuarial opinions of a general nature for purposes such as divorce action and personal injury litigation	1984
22. Acting as a specialist in foreign-currency options on a securities exchange	1985

*Activities Denied by the Board**Year Denied*

- | | |
|---|--------|
| 23. Title insurance activities (See the Board letter dated March 17, 1986, re: Independence Bancorp, Inc. and the Board order at 1989 FRB 31) | 3000.0 |
| 24. Acting as a broker for customers in the purchase and sale of forward contracts based on certain financial and nonfinancial commodities, and acting as the primary clearing firm for professional floor traders ⁴ | 1991 |

1. Authorized by the Board in 1995 FRB 190 (platinum) and 1996 FRB 571 (palladium).

2. On June 18, 1990, the Board determined that the activity of providing armored car services to the general public is closely related to banking (see 1990 FRB 676). In order for the Board to approve a nonbank activity for a bank holding company, the Board must also find that the activity is a "proper incident thereto." On February 10, 1993, the Board denied the application (1993 FRB 352), finding that the pro-

posed transactions posed potential violations of section 23B of the Federal Reserve Act and that the applicant had failed to prove that the activity is a proper incident to banking.

3. The Board's interpretation of Regulation Y at 12 C.F.R. 225.123 was amended on November 25, 1987, by deleting item (e)(4) relating to the impermissibility of the activity (see 52 *Federal Register* 45160-45161 and 1987 FRB 933).

4. The Board subsequently approved this activity by Board order. (See 1997 FRB 138.)

Section 2(c) of the BHC Act (Savings Bank Subsidiaries of BHCs Engaging in Nonbanking Activities) Section 3001.0

As an FDIC insured institution, a savings bank qualifies as a “bank” under section 2(c) of the BHC Act, as amended by section 101(a) of the Competitive Equality Banking Act of 1987 (“CEBA”). CEBA amended the BHC Act, in section 3(f), stating that any qualified savings bank, which is a subsidiary of a bank holding company, could engage directly, or through a subsidiary, in any nonbanking activity, except for certain insurance activities, that it is permitted to engage in by State law—including activities which are not otherwise permitted for bank holding companies under section 4(c)(8) of the BHC Act. In order for a qualified savings bank, that is a subsidiary of a bank holding company, to engage in such activities, however, the bank holding company must be a savings bank holding company as defined in section 2(1) of the BHC Act, in other words, 70 percent of the assets of the bank holding company must consist of one or more savings banks at the time of formation.

Insurance activities of any qualified savings bank which is a subsidiary of a bank holding company are limited to the insurance activities allowed under section 4(c)(8) of the BHC Act. A qualified savings bank that was authorized to engage in the sale or underwriting of savings bank life insurance, as of March 5, 1987, can sell or underwrite such insurance directly, provided that it is permitted to underwrite and engage in the sale of savings bank life insurance as that activity is authorized for savings banks by state law, and is located in Massachusetts, Connecticut, or New York. Should the bank

holding company parent of the qualified savings bank cease to be a savings bank holding company, the savings bank must cease engaging in these activities within two years.

In a separate application a nonoperating company, which was formed for the purpose of acquiring a savings bank, insured by the Federal Deposit Insurance Corporation, applied for the Board’s approval to become a bank holding company pursuant to section 3(a)(1) of the Bank Holding Company Act, acquiring all of the voting shares of the savings bank. The savings bank engages through subsidiaries in real estate investment and development activities authorized pursuant to State law.

As part of the Board’s analysis in this case, including its evaluation of the capital and financial resources of the bank holding company and the bank involved, the Board considered the risk to the Applicant and to the savings bank of the real estate development activities to be conducted by the savings bank through its nonbank subsidiaries. The Board expressed serious reservations with regard to this application and similar applications by bank holding companies to acquire savings banks engaged directly or through subsidiaries in real estate development activities. In the Board’s view the conduct of real estate development activities through a holding company subsidiary rather than a bank subsidiary would provide more effective corporate separateness.

The Board approved the application by Order on October 30, 1987 (1987 FRB 925), relying on the Applicant’s commitments.

Section 2(c)(2)(F) of the BHC Act (Credit Card Bank Exemption from the Definition of a Bank) Section 3005.0

WHAT'S NEW IN THIS SECTION

Effective January 2006, this section has been revised to incorporate a table of Laws, Regulations, Interpretations, and Orders concerning a credit card bank exemption found in section 2(c)(2)(F) of the Bank Holding Company Act. (See the discussion below of the Board staff legal interpretation dated February 18, 2005.)

3005.0.1 SECTION 2(c)(2)

Section 2(c)(2) of the Bank Holding Company Act (the BHC Act) provides 10 exemptions from the definition of a bank for purposes of the BHC Act. Section 2(c)(2)(F) sets forth the criteria that an institution must meet in order to qualify for the so-called credit card bank exemption. The credit card bank exemption applies to any “institution, including an institution that accepts collateral for extensions of credit by holding deposits under \$100,000, and by other means which—

1. engages only in credit card operations;
2. does not accept demand deposits or deposits that the depositor may withdraw by check or similar means for payment to third parties or others;
3. does not accept any savings or time deposit of less than \$100,000;
4. maintains only one office that accepts deposits; and
5. does not engage in the business of making commercial loans.”¹

3005.0.2 SECTION 2(c)(2)(F)

On February 18, 2005, Board staff issued an interpretation in response to a bank’s (MB Bank’s) legal counsel, who had requested a determination that (1) MB Bank would qualify for the “credit card bank exemption” from the definition of bank in section 2(c)(2)(F) of the BHC Act and that (2) no application to the Board would be required under the BHC Act either for the proposed acquisition of control of MB Bank (the acquisition) by Financial Group (a joint venture), or for the proposed redemption of shares of common stock of MB Bank’s parent, MB BHC—a bank holding company for the purposes of the BHC Act—in connection with the acquisition.

Financial Group proposed to acquire substantially all of the outstanding stock of MB BHC and, indirectly, MB Bank. Prior to the acquisition, MB Bank planned to convert itself to a depository institution that would qualify for the credit card bank exemption under the BHC Act. Before the acquisition, but after MB Bank’s conversion to a credit card bank, MB BHC also proposed to redeem approximately 50 percent of its common stock.

To comply with the provisions of the credit card bank exemption under the BHC Act, other representations and commitments were made by and on behalf of MB Bank and MB BHC. Under these commitments, MB Bank would—

1. engage only in credit card operations² as of and after the acquisition, including selling advertising space in monthly statements mailed to account holders (“statement stuffers”);
2. provide, as agent, limited debt-protection services to its credit card customers—services in which, for a fee, customers can receive debt relief from MB Bank during certain unexpected hardships (the limited debt-protection coverage provides for the payment of MB Bank’s outstanding credit card balance in the event of the borrower’s death, disability, or involuntary unemployment); and
3. not engage in the business of making commercial loans as of and after the acquisition.

MB Bank also agreed to cease providing certain ancillary services within three months of the acquisition by (1) selling a credit report-monitoring service offered by an unaffiliated third party and (2) selling a membership-based roadside-assistance product offered by an unaffiliated third party. In addition, MB Bank committed to restricting the scope of its deposit operations as of, and after, the acquisition to comply with the credit card bank exemption provisions of the BHC Act. MB Bank agreed to not accept demand deposits or deposits that the depositor may withdraw by check or similar means for payment to third parties or others.

² The Senate report accompanying S. 790 states that the “engage only in credit card operations” language was intended to limit a qualifying institution to engage “only in the business of issuing and processing credit cards for individuals and in transactions that are necessary and incident to that business.”

1. 12 U.S.C. 1841(c)(2)(F).

Moreover, except for deposits that serve as collateral for MB Bank's credit card loans (collateral deposits), MB Bank will not accept savings or time deposits of less than \$100,000. MB Bank also represented that each collateral deposit held by MB Bank will be no greater than the amount of the relevant customer's line of credit with the bank. Any deposit not conforming to the credit card bank exemption requirements or the representations and commitments within the letter of interpretation and not transferred to an unaffiliated third party prior to the acquisition would be liquidated by MB Bank prior to the acquisition through a wire transfer to the relevant depositor. MB Bank would maintain only one office that accepts deposits.

At the time of the determination request, MB Bank was issuing debit cards and holding related deposits that were not permissible for a depository institution that qualifies for the credit card bank exemption under the BHC Act. Therefore, to qualify for the credit card bank exemption, MB Bank committed to transferring, before the acquisition, its current debit card accounts and related deposits to another bank (the issuing bank), which would issue new debit cards under the issuing bank's name to the current holders of MB Bank's debit card accounts. MB Bank also committed that it would cease all debit card-related activity, including origination, ser-

ving, and marketing services provided to the issuing bank, within three months of the acquisition. MB Bank would also cease engaging in any account-servicing activities for debit card or credit card accounts of affiliated or unaffiliated banks within three months of the acquisition (except on a temporary basis in connection with acquisitions of credit card accounts by MB Bank from other credit card lenders).

Various other specific representations and commitments regarding MB Bank's investment activity were also made, including a commitment to divest within two years of the acquisition certain reverse-mortgage-loan participations. Based on all the facts of record and subject to the commitments and representations stated in the Board staff's February 18, 2005, interpretation and in letters to the Board's Legal Division, the Board's Legal Division informed MB Bank's legal counsel that it would not recommend that the Board find MB Bank to be a bank for purposes of the BHC Act as of and after the acquisition, or that the Board require Financial Group or its parent companies to file an application with the Board under section 3 of the BHC Act for the acquisition. Because MB Bank would cease to be a bank, the Board also determined that it would not require MB BHC to provide notice to the Board to redeem MB Bank shares pursuant to 12 C.F.R. 225(4)(b).

3. *Federal Reserve Regulatory Service* reference.

Section 4(c)(i) and (ii) of the BHC Act (Exemptions From Prohibitions on Acquiring Nonbank Interests) Section 3010.0

3010.0.1 INTRODUCTION

The prohibitions against a bank holding company having or acquiring nonbank interests do not apply to bank holding companies meeting the requirements of section 4(c)(i) and (ii) of the Act.

3010.0.2 LABOR, AGRICULTURAL OR HORTICULTURAL ORGANIZATIONS

Section 4(c)(i)—“Any company that was on January 4, 1977, both a bank holding company and a labor, agricultural or horticultural organization exempt from taxation under section 501 of the Internal Revenue Code of 1954, or . . . any labor, agricultural or horticultural organization to which all or substantially all of the assets of such company are hereafter transferred.”

Exemption under this section was amended when the Financial Institutions Regulatory and Interest Rate Control Act of 1978 became effective early in 1979. The effect of the amendment was to repeal exemption under this section for labor, agricultural or horticultural organizations becoming BHCs after *January 4, 1977*, except for those organizations becoming BHCs by means of acquiring all or substantially all of the assets of a company that was both a BHC and a labor, agricultural or horticultural organization exempt from taxation on January 4, 1977. In order for a holding company to be entitled to this exemption, net income derived from the organization cannot inure to the benefit of any individual. Organizations must be formed primarily for the betterment of the working conditions of the labor organization’s members, or improvement in the grade of agricultural or horticultural products for an agricultural or horticultural organization. The growing of products for profit by agricultural or horticultural organizations would disqualify them for exemption. Thus the phrase “any labor, agricultural or horticultural organization” is intended to include only such organizations that are also exempt from taxation under section 501 of the Internal Revenue Code of 1954.

In order for a labor, agricultural or horticultural organization to receive exemption from taxation under section 501(c)(5) of the Internal Revenue Code of 1954, it must file an application (form 1024) with the IRS. In response to the application, the organization receives a determination letter which should be reviewed

to assure that exemption was allowed and to verify the date the company became exempt under section 501. The date of exemption is determined as follows. A company which files for exemption within 18 months after its organization is considered exempt as of the date of its organization. The date of IRS approval is the date of exemption if application for exemption is filed more than 18 months after organization. The date of exemption must be no later than January 4, 1977, for the company to be entitled to exemption from section 4 of the Act. The fact that an organization pays income taxes annually does not disallow its exemption under section 501 of the tax code. Despite its tax exemption, an organization is subject to tax on its unrelated business income.

3010.0.3 FAMILY-OWNED COMPANIES

Section 4(c)(ii)—“A company covered in 1970 more than 85 percentum of the voting stock of which was collectively owned on June 30, 1968, and continuously thereafter, directly or indirectly, by or for members of the same family, or their spouses, who are lineal descendants of common ancestors.”

The phrase “voting stock” does not limit the form of an organization to an incorporated entity. Exemption under this section extends to other forms of business associations which meet the definition of a company. For example, for a partnership, the 85 percent rule applies to “general partnership interest” and for a trust which meets the definition of a company, the 85 percent rule applies to “beneficial ownership.” A company must continue to control the same subsidiary bank that it controlled on June 30, 1968, to retain its exemption under this section. Lineal descendants of common ancestors include descendants by half as well as full blood and legally adopted children.

In January 1980, the Board approved an application of a one-bank holding company covered by the exemption in 4(c)(ii) to acquire an additional bank, but stated that the holding company could no longer rely on that section for conducting its nonbanking activities. Based upon its review of the legislative intent of Congress in providing this exemption, it was the Board’s judgment that the exceptionally broad exemp-

tion afforded by section 4(c)(ii) must be limited to family-owned one-bank holding companies that are not engaged in the management of banks. Moreover, in the Board's view, upon the acquisition of an additional bank, a one-bank holding company that is exempt under section 4(c)(ii) of the Act, would become engaged in the management of banks, and would thereby terminate its eligibility for the exemption. In addition, the Board believed that to permit unsupervised nonbank expansion by a multibank holding company would constitute an evasion of the Act, which the Board is authorized to prevent pursuant to section 5(b) of the Act.

3010.0.4 INSPECTION OBJECTIVES

1. To verify that a holding company qualifies for exemption from the prohibitions of section 4 by virtue of either section 4(c)(i) or 4(c)(ii).

2. Review the activities conducted by a company qualifying for an exemption under section 4(c)(ii) of the BHC Act, which may be faced with revocation of the exemption, and determine if there may be eligibility for permanent grandfathering under section 4(a)(2) of the BHC Act.

3010.0.5 INSPECTION PROCEDURES

1. Although bank holding companies qualify-

ing for a section 4(c)(i) or 4(c)(ii) exemption are not routinely inspected on a periodic basis, when inspected their exempt status should be verified. All nonbank activities of exempt organizations should be examined in the inspection. The nature of all such activities and the dates they were commenced should be documented in the work papers to establish their current permissibility in the event the organization should lose its exemption from section 4.

2. For BHCs exempt under section 4(c)(i), the examiner should ascertain the date the company became exempt under section 501 of the tax code. Also, the stock books of the subsidiary bank or other pertinent documents should be reviewed to assure that the company was a BHC on January 4, 1977.

3. When verifying a company's exemption under section 4(c)(ii), the stock records of the subsidiary bank and the stock records, partnership agreements, trust agreements and other records of the bank holding company should be reviewed to assure that the following conditions have been satisfied:

a. 25 percent or more of the voting stock of the subsidiary bank has been continuously owned by the BHC since June 30, 1968;

b. Members of the same family have continuously held an 85 percent or more interest in the holding company since June 30, 1968.

Section 4(c)(1) of the BHC Act (Investment in Companies Whose Activities are Incidental to Banking) Section 3020.0

3020.0.1 INTRODUCTION

By virtue of section 4(c)(1) of the Act, a bank holding company may invest, without supervisory approval, in the shares of companies engaged in activities that Congress felt were incidental to the business of banking. The following activities are permissible investments for bank holding companies under this section.

3020.0.2 PROVIDING BANKING QUARTERS

Section 4(c)(1)(A) provides that a BHC may invest in a company engaged in holding or operating properties used wholly or substantially by any banking subsidiary of such bank holding company in the operations of such banking subsidiary or acquired for such future use.

Normally, bank utilization of 50 percent or more of the property would meet the requirements of this section. Investments in property where usage of such property by subsidiary banks is less than 50 percent will be reviewed on an *ad hoc* basis to determine its permissibility under this section. Future needs of the bank holding company and its bank subsidiaries will be considered when reviewing these cases.

In acquiring property, a bank holding company must have definite plans for use of the property as a subsidiary bank's premises within a reasonable period of time. Property may not be acquired and indefinitely warehoused until a need develops for the property.

This section of the BHC Act does not provide the authority for a BHC to invest in the shares of a company engaged in holding or operating properties used by nonbank subsidiaries. Directly holding or operating properties used by a nonbank subsidiary is considered an incidental activity necessary to carry on the main business activity of the subsidiary and thus is exempt under section 4(a)(2)(A) of the Act and section 225.22(a)(2)(vi) of Regulation Y.

3020.0.3 SAFE DEPOSIT BUSINESS

Section 4(c)(1)(B) of the Act provides that a holding company may invest in the shares of a company whose activities are limited to conducting a safe deposit business. Refer to Section 225.22(b) of Regulation Y.

3020.0.4 FURNISHING SERVICES TO BANKING SUBSIDIARIES

Section 4(c)(1)(C) of the BHC Act provides that a BHC may invest in a company which furnishes services to or performs services for the bank holding company or its banking subsidiaries. Section 225.22(a) of Regulation Y provides that a bank holding company may, without the Board's prior approval, furnish services to or perform services for its banking and non-banking subsidiaries either directly or indirectly through a subsidiary. Generally, a BHC may only provide services related to the internal operations of the BHC or its subsidiaries. A bank holding company or its subsidiaries may not rely on the servicing exemption to deal with the public as principal, but may deal with outside parties provided they are acting only as agent for the holding company or its subsidiaries.

The term "services" implies servicing operations a bank may carry on itself, but which the BHC chooses to have done through a nonbank subsidiary. Section 225.22(a)(2) states that services for the internal operations of the bank holding company or its subsidiaries include: accounting, auditing, appraising, advertising, public relations, data processing, data transmission services, data bases or facilities, personnel services, courier services, holding or operating property used wholly or substantially by a subsidiary in its operations or for its future use, and selling, purchasing or underwriting insurance such as blanket bond insurance, group insurance for employees, and property and casualty insurance. For the later insurance activities, bank holding companies are permitted under the servicing exemption to act as agent or to underwrite insurance on their own risks (e.g. blanket bond insurance or employee group insurance plans). Refer to section 225.22(a)(2) of Regulation Y for other services permissible for the internal operations of the BHC or its subsidiaries.

The servicing exemption extends to services that are normally performed by a bank for its customers or correspondent banks. These activities generally include computerized billing, payroll, accounting, financial records maintenance and other similar data processing services as long as the subsidiary bank is permitted under applicable State or federal law to provide the service. These services may be provided only

upon request by the customers to the subsidiary bank. Furthermore, the contractual arrangements must be made between the customer and the bank. The company can service existing service contracts the bank has originated but is prohibited from purchasing the contracts or entering into contracts to provide services directly to the public.

The purchasing of participations by the parent in loans from subsidiary banks generally is not considered an exempt activity under the authority of sections 4(a)(2) or 4(c)(1). Holding companies that engage in the purchase of participations from their subsidiary banks should file an application pursuant to Section 4(c)(8) of the BHC Act. Purchasing participations in loans for the purpose of providing liquidity or acquiring a portion of a line of credit to facilitate the needs of the bank's customers (overlines) provides a service or benefit to the bank and is considered an acceptable purchase under the services exemption. In all cases where a participation in a loan is purchased, the loan must be made in the name of the bank and serviced by the respective bank. The purchasing of a loan for reasons other than those set forth above may be viewed as a direct lending activity.

3020.0.5 FURNISHING SERVICES TO NONBANK SUBSIDIARIES

The Bank Holding Company Act of 1956 prohibited a BHC itself from engaging in any business except (1) banking, (2) managing or controlling banks, and (3) furnishing services to its bank subsidiaries. In 1970, Congress amended section 4 of the BHC Act to expressly authorize a BHC to furnish services to or perform services for its nonbank subsidiaries as well as its bank subsidiaries under exemption A of section 4(a)(2). While section 4(c)(1) authorizes a BHC to invest in shares of a company engaged in certain activities, exemption A provides the authority for a BHC to engage in those activities directly.

The Board issued an interpretation (12 C.F.R. 225.141), effective August 1980, which stated that it will permit, without any regulatory approval, a bank holding company to form a wholly-owned subsidiary to perform servicing activities for both banking and nonbanking subsidiaries that the holding company itself could perform directly or through a department or a division under section 4(a)(2)(A) of the BHC Act. In addition, an approved section 4(c)(8)

company may form a wholly-owned subsidiary to engage in activities that such company could itself engage in.

3020.0.6 LIQUIDATING ASSETS

Section 4(c)(1)(D) provides that a BHC may own shares of a company which engages in liquidating assets acquired from such BHC (not including its nonbank subsidiaries) or its banking subsidiaries or which were acquired from any other source prior to May 9, 1956, or the date on which such company became a BHC, whichever is later.

Assets acquired for liquidation by a section 4(c)(1)(D) subsidiary are subject to the same time limitations as shares acquired D.P.C. pursuant to section 4(c)(2) of the Act.

BHCs seeking to hold the shares of a liquidating or nominee subsidiary organized to dispose of assets acquired D.P.C. by a BHC nonbank subsidiary, can rely on the Board's August 1980 interpretation permitting, without prior regulatory approval, a BHC to form a subsidiary to perform activities which itself could perform under exemption A of section 4(a)(2).

3020.0.7 INSPECTION OBJECTIVES

1. To determine whether the activities conducted by companies in which the BHC has a greater than 5 percent investment in the company and for which the BHC claims exemption under section 4(c)(1) of the BHC Act, are the types of permissible activities contemplated by that section—activities claimed under the premises exemption under 4(c)(1)(A), the safe deposit business exemption under 4(c)(1)(B), the services exemption under (4)(c)(1)(C), or the liquidating subsidiary exemption (4)(c)(1)(D).

3020.0.8 INSPECTION PROCEDURES

The inspection of a nonbank subsidiary exempt under section 4(c)(1) of the Act should center on a review of the activities to assure that those activities are the types permissible under section 4(c)(1) subsections A, B, C and D.

3020.0.8.1 Section 4(c)(1)(A)—Bank Premises

The following procedural steps should be performed in connection with an inspection of a bank premises company.

1. Obtain a list of all real estate held by the company including the following information:

- a. Property description and location;
- b. Date acquired;
- c. Current utilization;
- d. Extent of utilization by banking subsidiaries and others indicating percentage of square feet leased to subsidiaries.

2. When use of the property by a subsidiary bank(s) is less than 50 percent, discuss future plans for the use of the property with management. Note any related discussion contained in the minutes of directors' and committee meetings, and action taken to date to implement these plans. Lease agreements with other tenants should be reviewed to determine the term of a lease including options to renew.

3. Evaluate the permissibility of holding each property under the premises exemption.

4. Review and evaluate other activities engaged in and assets held by the company to establish their permissibility under the premises exemption. Such activities could include leasing property and providing a general maintenance service to other tenants.

3020.0.8.2 Section 4(c)(1)(B)—Safe Deposit Business

Activities exempt under this section are restricted to conducting a safe deposit business. All activities engaged in and assets held by companies for which the BHC is claiming exemption under this section should be reviewed and evaluated to determine their permissibility under this exception.

3020.0.8.3 Section 4(c)(1)(C)—Services

The following procedural steps should be performed when inspecting service companies.

1. List and describe all services provided to subsidiaries in the inspection report.

2. Review and evaluate the types of services provided to the banking and nonbanking subsidiaries to determine their permissibility.

3. Obtain from management any written bank holding company policies concerning the provision of services and the assessment of fees or discuss with management the basis on which service fees are established.

4. Comment on the reasonableness of fees relative to the fair market value, cost, volume, or quality of such services rendered.

5. Indicate if all service contracts have been approved by each subsidiary's board of directors.

6. When reviewing services provided to banking subsidiaries for their customers:

- a. List and describe all services provided;
- b. Determine that the company is operating as an adjunct to its affiliated banks for the purpose of facilitating the bank's operations, and not as a separate, self-contained organization;
- c. Review contractual arrangements to assure that the company has not purchased any service contracts from a subsidiary bank and has not entered directly into agreements to provide services to any party other than the bank;

d. Review and evaluate all services to determine whether they are services that the subsidiary bank is permitted to provide under applicable State or federal law.

d. Review and evaluate all services to determine whether they are services that the subsidiary bank is permitted to provide under applicable State or federal law.

3020.0.8.4 Section 4(c)(1)(D)—Liquidating Subsidiary

The following procedural steps should be followed in connection with an inspection of a liquidation company in which the BHC holds an investment.

1. Obtain a list of all assets acquired by the company for the purpose of liquidation including the following information:

- a. Asset description and location;
- b. Date acquired;
- c. Source of acquisition;
- d. Liquidation plans, including timetable and selling price;
- e. Cost of assets and book value, including detail on any improvements.

2. Verify that assets acquired from sources other than the parent or its subsidiary banks were acquired prior to May 9, 1956, or the date on which the holding company became a BHC, whichever is later.

3. Verify that assets acquired for liquidation did not originate in a nonbank subsidiary. If a section 4(c)(1)(D) liquidating subsidiary is holding a material amount of assets acquired from a nonbank subsidiary, discuss the propriety of these holdings with the Reserve Bank office staff and, if necessary, Board staff in the Division of Banking Supervision and Regulation or the Legal Division.

4. Review the bank holding company's policies, practices and procedures concerning the liquidation of assets and determine if the subsidiary is in compliance with the time limits indicated above.

5. Discuss with management and note the

liquidation plans and progress to date in liquidating assets that have been held in excess of 12 months. Note any related discussion found in the minutes of directors' and committee meetings.

6. Comment on whether management is making a *bona fide* effort to dispose of all assets for fair value.

7. Check improvements made to property by the company to assure that the nature and use of the asset has not substantially changed. The investment of funds to change substantially the nature of the asset (such as undeveloped real estate) to increase its value would generally be viewed as engaging in real estate development, an activity which is not permissible.

3020.0.9 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Purchase of instalment paper for subsidiary banks as furnishing of services		225.104	4-192	
Furnishing insurance not "services"		225.109	4-193	
Services for banks that are not subsidiaries		225.113	4-194	
Computer services for customers of subsidiary banks		225.118	4-195	
Applicability of Bank Service Corp. Act in certain BHC situations		225.115	4-174.1	
Mortgage company services		225.122	4-196	
Insurance and sale of short-term debt obligations by BHCs		250.221, 225.130	4-867

Approved 4(c)(8) subsidiary forming an operations subsidiary to perform activities it could itself perform				1979 FRB 566 footnote 1
1. 12 U.S.C., unless specifically stated otherwise.		3. Federal Reserve Regulatory Service reference.		
2. 12 C.F.R., unless specifically stated otherwise.				

Section 4(c)(2) of the Bank Holding Company Act permits a bank holding company or any of its subsidiaries to acquire shares in satisfaction of debts previously contracted (DPC) in good faith. The shares must be disposed of within two years from the date they were acquired, except that the Board is authorized upon application of a company to grant additional exemptions if, in its judgment, the extension would not be detrimental to the public interest and either the bank holding company has made a good faith attempt to dispose of those shares during the five-year period, or the disposal of the shares would have been detrimental to the company. The aggregate duration of the extensions cannot extend beyond 10 years.

Even though the statute refers specifically to shares, the Board has taken the position, in section 225.22(d) of its Regulation Y and in an interpretation (12 C.F.R. 225.140), that the congressional policy evidenced by section 4(c)(2) should apply to DPC acquisitions of other assets, other than shares (assets), and real estate by bank holding companies and their nonbanking subsidiaries. Section 225.22(d)(1) provides the same holding periods (including provision for extensions) for other DPC assets or real estate as are provided by statute for DPC shares.

Regulation Y, section 225.22(d), addresses nonbanking acquisitions that do not require prior Board approval. With respect to DPC acquisitions, voting securities, or other assets or real estate acquired by foreclosure or otherwise, in the ordinary course of collection of a debt previously contracted (DPC property) in good faith, Regulation Y does not require the Board's prior approval if the DPC property is divested within two years of acquisition. Regulation Y further states that the Board may, upon request, extend the two-year period for up to three additional years. Further, the Board may permit additional extensions for up to five years (for a total of 10 years). This provision applies to shares, real estate, or other assets in which the holding company demonstrates that each extension would not be detrimental to the public interest and either the bank holding company has made good faith attempts to dispose of such shares, real estate, or other assets, or the disposal of the shares, real estate, or other assets during the initial period would have been detrimental to the company. Transfers within the bank holding company system do not extend any period for divestiture of the property.

Under the Board's delegated authority, the Reserve Banks may approve a BHC's requests

for extensions beyond the two-year divestiture period.¹ In accordance with a Board interpretation (12 C.F.R. 225.138), extensions should not be granted except under compelling circumstances, and periodic progress reports on divestiture plans are generally required. When these permissible extension periods expire, the Board no longer has discretion to grant further extensions. A BHC would be in violation of the act if shares, other assets, or real estate acquired DPC is not disposed of within the prescribed time frame.

In July 1980, the Board issued an interpretation of Regulation Y (12 C.F.R. 225.140) that provided for a possible approval for an additional five-year period for the divestiture of real estate acquired DPC. With respect to DPC real estate, this interpretation requires that (1) the value of the real estate on the books of the company be written down to fair market value, (2) the carrying costs cannot be significant in relation to the overall financial position of the company, and (3) the company must make good faith efforts to effect divestiture. Fair market value should be derived from appraisals, comparable sales, or some other reasonable method. Companies holding real estate for this extended period are expected to make active efforts to dispose of it, and they should advise the Reserve Bank regularly concerning their ongoing efforts.

In accordance with the Board's interpretation (12 C.F.R. 225.140), after two years from the date of acquisition of DPC assets, the holding company is to report annually to the Federal Reserve on its efforts to accomplish divestiture of the assets. The Reserve Bank will monitor the efforts of the company to effect an orderly divestiture. Divestiture may be ordered before the end of the authorized holding period (beyond the initial two-year period that requires no Board authorization) if supervisory concerns warrant such action.

Section 4(c)(1)(D) allows a bank holding company to establish a subsidiary to hold real estate acquired by itself or by any of its banking subsidiaries for debts previously contracted, for the purpose of disposing of the real estate in an orderly manner. Permissible activities of this

1. Each Federal Reserve Bank has been delegated the authority (12 C.F.R. 265.2(f)(12)) to extend the time within which a bank holding company or any of its subsidiaries must divest itself of interests acquired in satisfaction of a debt previously contracted.

liquidating subsidiary include completion of a real estate development project and other activities necessary to make the real estate saleable. The "date of acquisition" is the date the bank holding company (or subsidiary of the bank holding company) acquired the DPC asset. Section 4(c)(1)(D) may not be used to extend the time under which a bank holding company may indirectly hold DPC property under section 4(c)(2). In most cases where a subsidiary bank has held property for the statutory holding period, a BHC may not shift the property to another subsidiary or to the parent to avoid disposing of the property. However, due to the complexity and potential impact on the organization of a forced divestment at the end of the holding period, inspection personnel and Reserve Bank staff are encouraged to discuss the situation with Board staff to tailor the supervisory response to the particular situation.

With respect to the transfer by a subsidiary of other DPC shares, other assets, or real estate to another company in the holding company system, including a section 4(c)(1)(D) liquidating subsidiary, or to the holding company itself, such transfers would not alter the original divestiture period applicable to such shares or assets at the time of their acquisition. Moreover, to ensure that assets are not carried at inflated values for extended periods of time, the Board expects, in the case of all such intercompany transfers, that the shares or assets will be transferred at a value no greater than the fair market value at the time of transfer and that the transfer will be made in a normal arm's-length transaction. With regard to DPC assets (except for DPC shares as described above) acquired by a banking subsidiary of a holding company, as long as the assets continue to be held by the bank itself, the Board will regard them as being solely within the authority of the primary supervisor of the bank.

Section 4(c)(3) of the Bank Holding Company Act permits a bank holding company to acquire shares or real estate from any of its subsidiaries if a subsidiary had been requested to dispose of the shares by any federal or state authority having power to examine the respective subsidiary. The Board does not have authority to extend the two-year disposition period under section 4(c)(3) of the act. Section 4(c)(3) may not be used to extend the statutory period in which a bank must dispose of DPC assets (10 years in the case of DPC real estate assets, five years for all other).

3030.0.1 EXEMPTION TO SECTION 4(c)(2) DISPOSITION REQUIREMENTS OF DPC SHARES

Section 4(c)(5) of the Bank Holding Company Act allows a bank to own shares in certain nonbanking companies, specifically, the kinds and amounts eligible for investment by national banking associations under the provisions of section 5136 of the Revised Statutes (see section 3050.0 for a detailed explanation of section 4(c)(5)). The exemption provided by section 4(c)(5) covers any shares, including shares acquired DPC, that meet the conditions set forth in that exemption. Therefore, DPC shares held by a banking subsidiary of a bank holding company which meet section 4(c)(5) conditions are not subject to the disposition requirement prescribed in section 4(c)(2); however, such shares would continue to be subject to requirements for disposition as may be prescribed by provisions of any other applicable banking laws or by the appropriate bank supervisory authorities.

Section 4(c)(6) of the act allows a bank holding company to own shares, including those acquired DPC, of any nonbank company that does not exceed 5 percent of the outstanding voting shares of such company. The Board has expressed an opinion (12 C.F.R. 225.101(f)) that any shares acquired DPC under this section, whether by a holding company or a bank subsidiary, are not subject to the disposition requirements of section 4(c)(2) of the act.

Real property is often shown on an entity's books as other real estate (ORE). Possession of ORE usually results from a distressed loan collateralized by a lien on real estate. In addition, in attempting to salvage other types of credit, an entity may have obtained title to real property through process of law or by voluntary deed. Acquisition costs for other real estate acquired for debts previously contracted usually consist of the principal amount that was due on the defaulted loan at the time the entity took possession, unpaid interest, legal fees and other foreclosure costs, accrued and unpaid taxes, and mechanic's liens. Property acquired DPC may be recorded on the company's books by capitalizing the loan amount and acquisition costs. Advances to complete the project can be included in the capitalized investment if the ORE is an unfinished project. The fact that the additional investment is being used to improve the property and make the property more saleable should be evident.

A company owning a DPC asset should maintain records documenting its efforts to dispose

of the asset. Because an ORE asset is normally a nonliquid, nonproductive asset of uncertain value, a company should attempt to dispose of the asset at the earliest date possible. Unless special circumstances are present, a company should sell the ORE asset when a price offer sufficient to cover the acquisition, investment, and carrying costs is obtained.

3030.0.2 INSPECTION OBJECTIVES

1. To determine compliance with applicable laws, rulings, and regulations, and to initiate corrective action when violations appear in these areas.

2. To determine whether policies, practices, and internal controls regarding DPC shares, other assets, or real estate are adequate and to recommend correction when deficiencies are noted.

3. To evaluate the quality of DPC shares, other assets, or real estate and the progress toward their disposition.

4. To determine whether the DPC shares, other assets, or real estate acquired are recorded at fair market value.

3030.0.3 INSPECTION PROCEDURES

1. During the preinspection review, compile a list of shares, other assets, and real estate known to have been acquired DPC by the bank holding company and its nonbank subsidiaries, as well as a list of shares known to have been acquired DPC by the BHC's bank subsidiaries. Information on this list should include—

- a. a description of the shares or asset(s);
- b. the fair market value of the shares and asset(s), and the method of valuation, if available;
- c. the name of the company owning the shares and asset(s); and
- d. the date the shares and asset(s) were acquired.

2. If the shares or asset has been held longer than the initial holding period, determine whether the BHC has requested an extension of time.

3. In the Officer's Questionnaire, request a list of DPC shares, other assets, or real estate owned by the holding company and its nonbanking subsidiaries, and a list of DPC shares owned by the holding company's bank subsidiaries, including a detailed description of the shares or asset, the value of the shares or asset on the entity's books, the date the shares or asset was

acquired, and plans for disposal of the shares or asset. In addition, a list of DPC shares, other assets, or real estate which has been disposed of since the previous inspection or within the past year should be obtained. Compare these lists with the list compiled during the preinspection review.

4. Review other real estate owned accounts to evaluate—

a. the fair market value of the property (A qualified appraiser should appraise the property at the time of acquisition, and subsequent timely appraisals should be conducted to determine the current fair market value of the property.);

b. the carrying costs of the property; and

c. the company's efforts to dispose of the property (Information on file should include documentation showing a record of offers made by potential buyers and other information reflecting efforts to sell the property (i.e., advertisement brochures)).

5. Determine whether additional advances have been made on an unfinished project and whether evidence supports that the advances are making the property more saleable.

6. Determine whether a first-lien status exists and whether there are any tax liens or other encumbrances against the property.

7. Discuss DPC shares, other assets, or real estate and their values with management who is familiar with the history and current status of the shares or asset and assign classification, if warranted. A substandard classification may be applied when a company is sustaining losses in maintaining the property, and prospects for sale are not evident or encouraging. A company's acquisition of property through foreclosure often indicates a lack of demand and, as time elapses, the value of the real estate may become more questionable if the lack of demand persists. If the carrying amount of the investment exceeds the estimated value of the property, an adequate allowance reserve for any difference should be established and maintained. Property that is in the process of being sold for an amount in excess of the carrying value should not be classified if it appears that ultimate payment will be forthcoming.

8. List shares, other assets, and real estate acquired DPC under "other assets" in the inspection report. For significant shares and assets, the examiner may choose to present in the inspection report or in the workpapers, whichever is deemed appropriate, the following information:

- a. a brief description sufficient to identify the property, the manner in which the property was acquired, and the reasons for its acquisition
- b. the value of the shares or assets on the books of the company, the method used to determine the booked value, and whether it is the fair market value
- c. a brief statement as to management’s efforts to sell the property, its opinion of the likelihood of sale, and the anticipated sales price
- d. a summary of the carrying costs subsequent to assumption and income generated from the property
- e. the date when the holding company or its subsidiary must dispose of the property or request an extension to continue to hold the DPC shares or asset
- f. the amount classified, if appropriate
- g. any apparent discrepancies with rules or regulations

3030.0.4 Laws, Regulations, Interpretations, and Orders

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Transactions not requiring Board approval:				
1. Acquisition of securities by a BHC with majority control	1843(c)(2)	225.12(b)

 2. 12 C.F.R., unless specifically stated otherwise.
 3. *Federal Reserve Regulatory Service* reference.

Section 4(c)(4) of the Bank Holding Company Act (the act) provides that nonbank shares held or acquired by a bank in good faith in a fiduciary capacity are exempt from the general prohibitions of section 4 of the act. This exemption is provided to allow banks to continue their normal fiduciary operations without significant interference and without being subject to the limitations of the Bank Holding Company Act. Without this exemption, a subsidiary bank could act as trustee for up to only 5 percent of a nonbank company's shares, as provided by section 4(c)(6) of the act.

Certain exceptions were included within the body of the section 4(c)(4) exemption to prevent use of the trust vehicle to circumvent the intent of the act. The section 4(c)(4) exemption is not applicable when shares acquired are held by a trust that is considered a "company" under section 2(b) of the act. Under section 2(b), a trust is defined as a company if it does not terminate within 25 years or within 21 years and 10 months after the death of individuals living on the effective date of the trust. Such trusts are generally referred to as perpetual trusts and include employee benefits and charitable trusts that can operate in perpetuity.

Another exception to the exemption implies that no more than 5 percent of the shares of a nonbank company may be held by a subsidiary bank as trustee under a trust established for the benefit of the bank itself; the bank's parent company or any of its subsidiaries; or the shareholders or employees of the bank, the parent company, or its subsidiaries, as indicated in section 2(g)(2) of the act. Employee benefit trusts have become a principal source of banks' trust assets. As strictly applied, section 4(c)(4) would limit acquisition of stock of a nonbank company to 5 percent of its shares for employee trust accounts of banks that are subsidiaries of bank holding companies.

3040.0.1 TRANSFER OF SHARES TO A TRUSTEE

Under section 4(c)(4), if a bank holding company transfers nonbank shares to a trustee and the trustee has one or more directors in common with the bank holding company, the nonbank shares are deemed to be controlled by the bank holding company until the Board determines otherwise.

3040.0.2 TRUST COMPANY SUBSIDIARIES

Even though section 4(c)(4) refers to shares held or acquired by a bank in good faith in a fiduciary capacity, the exemption also applies to shares held or acquired in a fiduciary capacity by a trust company subsidiary of a bank holding company.

3040.0.3 QUALIFYING FOREIGN BANKING ORGANIZATION OWNING OR CONTROLLING SHARES OF A COMPANY IN A FIDUCIARY CAPACITY

A foreign bank that maintains branches in the United States is subject to the provisions of the BHC Act in the same manner and to the same extent as a U.S. bank holding company.¹ Section 4 of the BHC Act prohibits a bank holding company and its subsidiaries from owning or controlling nonbanking assets or shares or engaging in any nonbanking activity unless it qualifies for an exemption.² Accordingly, such a foreign bank may not own nonbanking assets or shares (such as real estate), directly or through any company it controls, unless it qualifies for an exemption from the nonbanking prohibitions of section 4 of the BHC Act.

Under section 211.23(f)(4) of Regulation K, a qualifying foreign banking organization may "[o]wn or control voting shares of any company in a fiduciary capacity under circumstances that would entitle such shareholding to an exemption under section 4(c)(4) of the [BHC Act] . . ."³ Section 225.22(d)(3) of the Board's Regulation Y (which implements section 4(c)(4) of the BHC Act) provides that the BHC Act's nonbanking prohibitions shall not apply to "voting securities or assets acquired by a bank or other company (other than a trust that is a company) in good faith in a fiduciary capacity, if the voting securities or assets are . . . held in the ordinary course of business and not acquired for the benefit of the company or its shareholders, employees, or subsidiaries."⁴

1. 12 U.S.C. 3106(a).

2. 12 U.S.C. 1843.

3. 12 C.F.R. 211.23(f)(4).

4. 12 C.F.R. 225.22(d)(3).

Two subsidiaries of the foreign bank CMB AG (the foreign bank) that are located in Germany currently invest in non-U.S. real estate for the benefit of third-party investors. One of the subsidiaries, IGC, manages only retail investment trusts (beneficial interests in which are typically sold widely to retail investors); the other subsidiary, SGC, manages only institutional investment trusts (beneficial interests in which are sold to 30 or fewer institutional investors). Through its legal counsel, the foreign bank requested an interpretation of section 4 of the BHC Act (12 U.S.C. 1843) and section 211.23(f)(4) of the Board's Regulation K (12 C.F.R. 211.23(f)(4)) that would permit its two asset-management subsidiaries, IGC and SGC, to sponsor and manage German-based investment trusts that invest in U.S. real estate.

The powers and duties of the asset-management services provided by IGC and SGC to their investment trusts are governed by the German Investment Law and a trust agreement entered into between IGC or SGC, on the one hand, and the investor, on the other hand (the trust agreement). IGC and SGC are subject to the supervision and regulation of the German bank supervisory authority (BaFin). Compliance by IGC and SGC with the German Investment Law and the trust agreement would be monitored and enforced by BaFin. Amendments in 2002 to the German Investment Law liberalized the ability of companies to sponsor, manage, and serve as distributor for one or more retail or institutional investment trusts, allowing investment in real estate outside the European Economic Area, including in the United States.

In light of the 2002 changes in German law, IGC established a retail investment trust (the retail trust) to invest in real estate located in the United States, Europe, and Asia. In addition, SGC is established as an investment trust for institutional investors (the institutional trust, and, together with the retail trust, the trusts) to invest in U.S. real estate. The trusts proposed to invest in existing commercial real estate properties in major U.S. cities (the properties), but not in undeveloped U.S. real estate. As required by the German Investment Law, title to each of the properties would be held either directly by IGC or SGC or by a special-purpose entity established and controlled by IGC or SGC.

Interests in the trusts would be sold only to non-U.S. persons. All property management, leasing, real estate brokerage, and refurbishment services obtained by the properties would be

obtained from parties that are unaffiliated with the foreign bank or any of its subsidiaries. For their services to the trusts, IGC and CGS would receive an annual management fee based primarily on the net asset value of the trusts. The foreign bank's legal counsel contended that the proposed ownership of U.S. real estate by IGC and SGC for the account of the trusts would qualify for the fiduciary exemptions available in Regulation K and Regulation Y.

Under the arrangement, the two subsidiaries are subject to fiduciary duties that closely resemble those of a trustee in the United States. Under the German Investment Law, the investment trusts would not be legal entities separate from the two subsidiaries, IGC and SGC. The foreign bank made several representations and commitments in support of its inquirer's interpretation that the proposed ownership of U.S. real estate by IGC and SGC for the account of the trusts would qualify for the fiduciary exemptions under section 211.23(f)(4) of Regulation K and section 225.22(d)(3) of Regulation Y. In particular, the foreign bank committed that neither it nor its subsidiaries or employee benefit plans would own any beneficial interests in the investment trusts.

Based on all the facts, including all the representations and commitments made by or on behalf of the foreign bank, IGC, and SGC, Board legal staff stated that it would not recommend that the Board disagree with the inquirer's interpretation of the availability of the fiduciary exemptions in section 211.23(f)(4) of Regulation K and section 225.22(d)(3) of Regulation Y to the foreign bank. The fiduciary exemptions in the Board's Regulations K and Y (12 CFR 211.23(f)(4) and 225.22(d)(3)) would, therefore, permit the two subsidiaries of the foreign bank to take title to U.S. real estate on behalf of the investment trusts and for the benefit of the investors in the trusts. (See the Board staff's legal interpretation dated November 24, 2004. See also the summary of the interpretation in the *Federal Reserve Regulatory Service* at 3-744.13 and 4-305.2.)

3040.0.4 OTHER REPORTING REQUIREMENTS

In certain circumstances, holdings in fiduciary capacities of nonbank stock over 5 percent may also trigger reporting requirements under the federal securities laws.

3040.0.5 INSPECTION OBJECTIVES

To determine that nonbank shares held by a bank in a fiduciary capacity are in compliance with section 4(c)(4).

ing procedures to establish that bank trust departments report 5 percent holdings in nonbank companies. In multibank companies, determine that controls are in place to aggregate nonbank shares held by each bank so that if an aggregate of 5 percent is held, it is reported in the Y-6.

3040.0.6 INSPECTION PROCEDURES

Review the holding company's internal report-

Section 4(c)(5) of the BHC Act (Investments Under Section 5136 of the Revised Statutes) Section 3050.0

Section 4(c)(5) of the Bank Holding Company Act permits (without prior approval) investments by a bank holding company in shares of the kinds and amounts eligible for investment by national banks under the provisions of section 5136 of the Revised Statutes (12 U.S.C. 24(7)).

National banks are prohibited by section 5136 of the Revised Statutes from purchasing and holding shares of any corporation except those corporations whose shares are specifically made eligible by federal statute. This prohibition is made applicable to State member banks by section 9, paragraph 20 of the Federal Reserve Act (12 U.S.C. 335).

In 1968, the Board interpreted section 5136 as permitting a member bank to purchase shares of a corporation engaging in business (at locations the bank is authorized to engage in business) and carrying out functions the bank is empowered to perform directly. Section 5136 is a broad statute with types of permissible activities both explicitly defined and implied indirectly without express definition. Therefore, to limit the need for constant Board interpretation regarding the implied areas of section 5136, the Board curtailed the authority of a bank holding company to acquire shares on the basis of section 4(c)(5) through section 225.22(d) of Regulation Y. As a result, effective June 30, 1971, permissible shares for bank holding company acquisition under section 4(c)(5) are limited to those *explicitly* authorized by any federal statute. Additional reasons for limiting the scope of activities to those explicitly defined by statute, are that section 4(c)(5) acquisitions require neither prior Board approval, nor the opportunity for interested parties to express their views, nor any prior regulatory consideration of anti-trust and related matters.

3050.0.1 COMPANIES IN WHICH BHC'S MAY INVEST

The following is a list of permissible companies expressly authorized by federal statute. The list includes the companies most frequently encountered.

1. Small business investment companies ("SBICs").
2. Agriculture credit companies.
3. Edge and agreement corporations.
4. Bank premises companies (usually exempt under section 4(c)(1)(A)).
5. Bank service corporations (usually exempt under section 4(c)(1)(C)).
6. Safe deposit companies.
7. Obligations of student loan marketing associations.
8. State housing corporations.

3050.0.2 LIMITATIONS

On most 5136 authorizations, share investments are limited in some form, usually based on a percentage of the bank's capital and surplus. Under section 4(c)(5), a holding company's investment in such shares is also limited by amount and type to those permitted for a national bank to prevent avoidance of these limitations by a bank holding company.

3050.0.3 INSPECTION OBJECTIVES

1. To determine the permissibility of each activity encountered during the inspection which claims a section 4(c)(5) exemption.
2. To determine if the operations and financing of the section 4(c)(5) activity is not to the detriment of the bank(s).

3050.0.4 INSPECTION PROCEDURES

1. Review compliance with section 5136 of the Revised Statutes to determine if the activity is expressly permitted by any federal statute.
2. Determine the financial condition of the activity and its impact on the bank affiliate.

3050.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

Section 4(c)(6) and (7) of the BHC Act (Ownership of Shares in Any Nonbank Company of 5 Percent or Less) Section 3060.0

3060.0.1 SECTION 4(c)(6)

This section provides an exemption for ownership of shares of any nonbank company that do not exceed 5 percent of the outstanding voting shares of such company. The exemption is designed to permit diversification of investments by a bank holding company and its subsidiaries which do not result in control of a nonbanking organization. The Board has indicated through an interpretation of 12 U.S.C. 225.101, that in its opinion, the 5 percent limitation applies to the aggregate amount of voting stock in a particular nonbank company held by the entire bank holding company organization including the parent company and all of its direct and indirect bank and nonbank subsidiaries. This is to prevent a holding company from acquiring a controlling interest in a nonbank company through ownership of small blocks of stock by numerous subsidiaries in circumvention of the provisions of section 4 of the BHC Act.

3060.0.1.1 D.P.C. Shares

The same interpretation (12 C.F.R. 225.101) also addresses the question of the applicability of section 4(c)(6) to nonbank shares acquired in satisfaction of debts previously contracted (D.P.C.) by a subsidiary bank, any nonbank subsidiaries, or the parent company. In this instance, the Board expressed the opinion that the 5 percent exemption provided by section 4(c)(6) covers any nonbank shares, including those acquired D.P.C. Consequently, shares which meet such conditions are not subject to the disposition requirements of section 4(c)(2) of the Act. It is important to remember that the exemption provided by section 4(c)(6) applies only to shares of any nonbank company. Acquisitions of any bank shares are subject to the provisions contained in section 3(a) of the Act.

Although the 5 percent limitation of this section applies, by its language, to “voting shares” rather than “any class of voting shares” as used elsewhere in the Act, the Board has indicated in 12 C.F.R. 225.137 that it applies to “any class of voting shares” rather than to the aggregate of all classes of voting shares held. Thus section 4(c)(6) is not available to a group of BHCs each owning a “class of voting securities” even if each BHC owns less than 5 percent of all shares outstanding. Further, section 4(c)(6) must be viewed as permitting ownership of 5 percent of a company’s voting stock only when that owner-

ship does not constitute “control” as otherwise defined in section 2 of the Act.

Note that section 4 prohibits engaging in nonbank activities other than those permitted by section 4(c)(8). Thus, if a BHC may be deemed to be “engaging in an activity” through the medium of a company in which it owns less than 5 percent of the voting stock it may nevertheless require Board approval, despite the section 4(c)(6) exemption.

3060.0.1.2 Acquisition of Nonbank Interests—Royalties as Compensation

A bank holding company requested an opinion on the permissibility of its subsidiary’s receiving limited overriding royalty interests in oil, gas, and other hydrocarbon leasehold interests as partial compensation for investment advisory services in connection with those properties. The bank holding company was not acquiring more than 5 percent interest in any project. The subsidiary was to place the assigned royalties in a compensation plan for assignment to certain professional employees. Neither the subsidiary nor any affiliate were to acquire, hold, locate, sponsor, develop, organize, or manage any other energy property investment or in any other manner control the investment. The subsidiary was to hold interest in energy properties only if the interest had not yet been reassigned to an employee, or if an employee terminates service with the subsidiary and is required to reassign his or her energy properties to the subsidiary. The bank holding company’s proposal was consistent with section 4(c)(6) of the Bank Holding Company Act, which exempts passive investments of 5 percent or less from the prohibitions of section 4 of the Bank Holding Company Act.

3060.0.2 SECTION 4(c)(7)

This section provides bank holding companies the opportunity to own, directly or indirectly, shares of an investment company (any amount up to 100 percent of outstanding shares) provided that each of the following conditions is met:

1. The investment company is not itself a bank holding company;
2. The investment company is not engaged in

any business other than investing in securities; and

3. Securities in which the investment company invests do not include more than 5 percent of the outstanding voting securities of any company.

4. As in section 4(c)(6), the 5 percent limitation applies, by its language, to “voting shares” rather than “any class of voting shares,” as used elsewhere in the Act. However, the criterion applies to “any class of voting shares” for purposes of this section.

The 5 percent restriction does not prevent an investment company from having direct or indirect subsidiaries of its own, provided that ownership of such subsidiaries is permitted under another provision of the Act. Rather, the limitation is intended to apply only to securities purchased in the ordinary course of investing by the investment company.

The legislative history of this provision of the Act does not provide a clear indication as to the type of institutions encompassed under the term “investment company” as used in this section. It appears, however, that any company primarily engaged in the purchasing and ownership of securities may be regarded as an investment company for purposes of this section. Section 4(c)(7) can be viewed, more or less, as an extension of section 4(c)(6) which permits a bank holding company to directly or indirectly through subsidiaries own up to 5 percent of the voting stock of any nonbank company. In fact, until the Amendments of 1966, the Bank Holding Company Act incorporated both section 4(c)(6) and section 4(c)(7) under one section. From a practical standpoint, the parent company is allowed, under section 4(c)(6), to directly engage in the same activities as an investment company. Accordingly, most holding companies conduct these activities through the parent company, rather than through an investment company subsidiary. Such an arrangement prevents duplicate payment of certain taxes and provides more flexibility for utilizing funds in other areas of the organization.

3060.0.3 INSPECTION OBJECTIVES

3060.0.3.1 Section 4(c)(6)

1. To determine that the investments held pursuant to section 4(c)(6) comply with the Act and 12 C.F.R. 225.101 and 225.137.

2. To determine that no more than 5 percent

of the voting shares of any nonbank company (other than those owned pursuant to other provisions of the Act) is held by the bank holding company and its subsidiaries.

3060.0.3.2 Section 4(c)(7)

1. To determine the overall quality of the investments held.

2. To determine the financial impact of the ownership of such shares upon the bank holding company and its subsidiaries.

3. To determine if policies, practices and procedures regarding investments are adequate.

4. To suggest corrective action where necessary in the areas of policies, procedures, or laws and regulations.

3060.0.4 INSPECTION PROCEDURES

3060.0.4.1 Section 4(c)(6)

1. Review investments held to determine that the BHC has a total interest of no more than 5 percent.

2. Determine that 5 percent does not constitute control.

3. Determine that the BHC is not “engaged” in any nonbank activity through its 5 percent ownership.

3060.0.4.2 Section 4(c)(7)

1. Where section 4(c)(7) applies, compare the investment company’s general ledgers with statements prepared for the latest FR Y–6.

2. Obtain schedules of investments in voting shares of any companies. Review quality of such shares (utilizing rating service publications, etc.) and check for ownership interests exceeding 5 percent.

3. Review policies (written or oral) regarding purchase and sale of stocks.

4. Obtain and evaluate documentation relating to credit review for securities held. Determine adequacy of procedures to maintain credit updates.

5. Compare carrying value of stocks to current market value to determine market depreciation, if any and determine adequacy of any established reserves.

6. Perform verification procedures, including physical review of stock held in safekeeping, where practical.

7. Determine that purchases and sales of stocks are appropriately approved by directors or designated officers.

8. Review minutes of the board of directors meetings (where an investment company subsidiary is involved).

3060.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>

WHAT'S NEW IN THIS REVISED SECTION

Effective January 2007, this section was revised to delete a reference to SR-95-31, which was superseded by SR-99-26, Interagency Guidance on High LTV Residential Real Estate Lending.

A mortgage banker specializes in the origination, acquisition, and sale of residential real estate loans to permanent investors (the secondary mortgage market). Most mortgage banking firms that are affiliated with banks and bank holding companies primarily originate residential real estate loans, although some firms may engage in interim and other lending secured by real estate. Unlike their nonbank competitors, the vast majority of the loans mortgage banks originate are sold to permanent investors in the secondary mortgage market.

Mortgage banks can retain or sell their loans and sell or retain the servicing of their mortgages. The mortgage banking industry currently offers a wide variety of products, market mechanisms, financing vehicles, and financial strategies due to competitive pressures within the mortgage banking industry and rapid growth in the demand for loans and related securities within the secondary mortgage market. Mortgage bankers use these marketing and financing strategies to differentiate themselves from the competition in terms of interest rates, maturities, down-payment requirements, and product offerings.

The earnings stream, cash flow, and capital needs of a mortgage banking company are all highly influenced by management's decision whether to retain or sell the mortgage loans as well as the related mortgage-servicing rights. The majority of loans that are sold in the secondary market are originated under government-sponsored programs. Such loans are either sold directly or are converted into securities that are collateralized by the underlying mortgages (mortgage-backed securities). The pools of collateralized mortgage loans backing mortgage-backed securities provide a form of risk diversification for the investor.

Originations, secondary market sales, and servicing constitute the primary functional business lines within a typical mortgage company. As an originator of mortgages, the company is responsible for the initial phase of the mortgage, from original contacts with the borrowers to the closing of the loans. At closing, the company disburses its funds and becomes the lender of

record. Mortgage loans can also be acquired through a network of correspondent companies. Most mortgage banking companies use a combination of origination and acquisition strategies. The decision about whether to originate or purchase loans also varies over time due to fluctuations in demand and pricing discrepancies.

The secondary marketing department is responsible for selling loans in the secondary market and managing the interest-rate risk associated with loans during the interim period. In most cases, the mortgage company retains the loans until it can find a permanent investor to purchase the loans. The mortgage banker obtains purchase commitments from permanent investors and submits completed loan documentation packages to the investors for their approvals in satisfaction of the commitments.

As part of the overall process, the mortgage banker maintains a relationship with a variety of other permanent investors to whom the originated mortgages are sold. These investors are generally institutional investors such as securities dealers, commercial banks, life insurance companies, pension funds, and other financial and nonfinancial institutions. Some of these investors are restricted by state law, charter, or bylaws as to the type of mortgages and the locations of the property in which they can invest. Accordingly, their purchase commitments should incorporate these limits as well as the price and/or required yield of the mortgage loans or mortgage-backed securities. When these commitments are filled and the mortgages sold to the investors, the mortgage banker may retain the servicing rights to the mortgages it sells to permanent investors or sell the servicing rights in the secondary market.

The servicing department manages the loans that were retained in permanent loan portfolio or those that were sold to another permanent investor. Fees paid for services rendered in administering the mortgage portfolios of investors are a principal source of revenue for most mortgage bankers. In general, the company receives a fee that is usually based on a percent of the unpaid balance of the administered mortgages. In return for the fee, the servicer is responsible for collecting and remitting payments, managing the tax and insurance escrow accounts, inspecting the properties when required, pursuing delinquent borrowers, foreclosing on

the mortgages when necessary, and providing accounting support. Considering the services rendered and the generally low fees involved, the servicing portfolio must be sizable for the company to be profitable. The servicing portfolio may represent very little credit risk to the servicer and can be a valuable source of residual income to the company.

The mortgage banking industry is experiencing significant consolidation. To be competitive, participants must maximize economies of scale and efficiencies. Emphasis has been placed on using more efficient systems and technologies that enhance loan processing, underwriting, servicing, and the management of pipeline risk (the interest-rate risk associated with the holding period for the mortgages). Existing mortgage banking firms are larger and operate more efficiently (faster, cheaper, and with higher quality) than they did in the past. Operating efficiencies are achieved through the use of sophisticated information systems, such as electronic data interchange, imaging, optical character recognition, expert systems, and other forms of artificial intelligence.

Within a bank holding company, mortgage banking subsidiaries generally focus on residential mortgage lending. As discussed initially, these mortgage bankers may also engage in other forms of lending. On an industry basis, they extend loans to real estate brokers who buy properties for resale, engage in second mortgage and home improvement lending (usually through dealer agreements), and extend interim loans. Interim loans represent a means of funding a project through one or more phases, with the property and improvements as collateral for the loan. The size of interim loans may range from a single residence under construction to large industrial, commercial, or residential projects. Construction lending and other forms of lending may be provided by other such real estate lending subsidiaries located elsewhere within the bank holding company's organizational structure.

The mortgage banker, as a lender, has the flexibility to fund any and all phases of a project including land acquisition, development, and construction. Land acquisition credit may be extended for the acquisition of more than one parcel of land, which may not necessarily be identified with a specific project. More frequently, acquisition credit is tied into a specific project for which the lender expects to fund more than one phase. In development-phase lending, funds are advanced to "improve" the

property, bring utilities on-site, cut roadways, and prepare the site for its intended use. Many residential and industrial park projects are funded through this phase, with the sale of individual parcels providing the repayment of the loan. Construction lending funds the project from the foundation to completion. For those loans that fund two or more phases, there may be no clear distinction between the phases as certain elements of each may be underway concurrently.

On large projects funded through completion, such as apartment and office buildings where the construction is to be repaid from a permanent mortgage, the lender will usually require the borrower to obtain a permanent mortgage commitment from a third party. While this "takeout" commitment may or may not be arranged through the lender's network of investors, this commitment provides the lender with some assurance of repayment. In some cases, particularly in unsettled market environments, these takeouts are not available, and the lender may issue a "standby" commitment. On occasion, no permanent financing will be available upon completion and the lender will extend a "bridge" loan for the interim period between project completion and the placement of a permanent mortgage. Making construction loans without takeout commitments from responsible term lenders could expose the construction lender to adverse interest-rate movements as well as the market acceptability of the project. The absence of a takeout can represent a weakness in a loan. The general lack of takeouts in a portfolio should be a criticizable management practice (unless mitigating circumstances prevail) and should be discussed with management.

This section provides inspection guidance and procedures for mortgage banking nonbank subsidiaries of bank holding companies. Except for the limited guidance that pertains only to bank holding companies, they may also serve as examination guidance and procedures for mortgage banking subsidiaries of state member banks. The way in which these procedures are used should be determined on a case-by-case basis depending on the size of a particular company and its business activities. The information in "Board Oversight and Management," "Financial Analysis," and "Intercompany Transactions" presented in this section is applicable to all mortgage banking reviews. The subsection "Mortgage-Servicing Rights" is recommended for use in companies that have significant risk exposure. The examiner should also target functional areas such as production, marketing, and servicing/loan administration.

3070.0.1 BOARD OVERSIGHT AND MANAGEMENT

The examiner should assess the quality and effectiveness of a mortgage banking company's board of directors (board) and executive man-

agement team, the appropriateness of its organizational structure, the nature of its internal control environment, and the effectiveness of internal control programs.¹ Such internal control programs may include internal and external audits, loan review, quality control over mortgage loans originated and/or serviced for investors, compliance, fraud detection, and related employee training programs.

The board and executive management team must be evaluated within the context of the particular circumstances surrounding each mortgage banking company. Since business complexities and operating problems vary according to the institution's size, organizational structure, and business orientation, directors and managers who are competent to effectively discharge their responsibilities under one set of conditions may be less competent as these conditions change.

Board oversight and management should be rated satisfactory, fair, or unsatisfactory based on both objective operating results and more subjective criteria. Performance must be evaluated against virtually all the factors necessary to operate the mortgage banking company's activities in a safe, sound, and prudent manner, including the ability to anticipate and plan for future events that may have a material impact on the company's financial condition. Such a rating should also be considered when assigning a consolidated rating of risk management (see section 4070.1 and SR-95-51).

3070.0.1.1 Board Oversight

The mortgage banking company's board provides oversight, governance, and guidance to the executive management team. The board may include executives of the mortgage banking company, executives of the bank holding company and other affiliated companies, and outside directors.

The examiner should determine whether a separate board exists, as well as the identity and qualifications of the members. Minutes of board meetings should be reviewed to determine

whether directors are fulfilling their fiduciary responsibilities. At a minimum, directors should—

- select and retain a competent executive management team;
- establish, with management, the company's short- and long-term business objectives and adopt operating policies to achieve those objectives in a safe and sound manner;
- monitor operations to ensure they are controlled adequately and are in compliance with laws and policies;
- oversee the mortgage banking company's business performance; and
- ensure that the mortgage banking company meets the community's residential mortgage credit needs.

The examiner should assess whether directors exercise independent judgment in evaluating management's actions and competence, attend board and committee meetings regularly, remain well informed regarding the company's activities and the mortgage banking industry overall, and are knowledgeable regarding all applicable state and federal laws and regulations. The examiner should also review the quality of board reporting. Board reports must provide accurate and timely information to directors with respect to operating results, asset-quality trends, liquidity and capital needs, and relevant industry and peer-group performance statistics for each operational area. Directors should also receive information regarding exceptions to established policies and operating procedures, volume-related processing backlogs, and the effectiveness of the internal control programs. Information on hedging products and strategies should be routinely provided to the board and to holding company management. In connection with this portion of the review, examiners should also request and review information regarding all loans to insiders and their related interests to ensure that no preferential transactions have been extended to these parties.

3070.0.1.2 Management

The executive management team generally consists of a president and chief executive officer (CEO), chief operating officer (COO), chief financial officer (CFO), and senior executives in charge of production, marketing, and servicing/

1. See section 1010.1 of the *Commercial Bank Examination Manual* and a report, "Internal Control—Integrated Framework," which was issued in September 1992 by the Committee of Sponsoring Organizations of the Treadway Commission, for a more detailed discussion of internal controls. The Treadway Commission report broadly defines internal control as a process, effected by an entity's board of directors, management, and other personnel, designed to provide reasonable assurance regarding the effectiveness and efficiency of operations, reliability of financial reporting, and compliance with applicable laws and regulations.

loan administration. Management formulates operating policies and procedures and oversees the day-to-day administration of mortgage banking activities. Management should be evaluated in terms of its technical competence, leadership skills, administrative capabilities, and knowledge of relevant state and federal laws and regulations. The management assessment should evaluate management's attitude toward risk, as evidenced by the type of products that are offered; the existence of effective hedging programs; and/or the degree of reliance that is placed on the resources of affiliate banks, non-banks, and other entities to support mortgage banking company activities.

Prudent operating policies and procedures that are consistent with the business needs and risk-management practices of the parent bank holding company should be in place for each functional area. An effective risk-management program should also be in place. Without adequate management oversight, excessive errors can occur, fraud or other violations of law may go undetected, and financial information may be reported incorrectly. Any of these events can damage the company's image, impair its access to external funding sources, and jeopardize its ability to originate and sell mortgage loans in the secondary market.

It is management's responsibility to develop and maintain management information systems (MIS), which should be dedicated to obtaining, formatting, manipulating, and presenting data to managers when needed. Such systems should generate accurate financial statements; identify the need for financial, human, technological, and physical resources; and produce timely and useful management exception reports.

Management should also be evaluated on its ability to plan effectively. Effective planning entails the annual approval of an operating budget and the development of a long-term strategic plan that helps management anticipate changes in the internal and external environment and respond to changing circumstances. Because losses on the origination of mortgage loans are common in the mortgage banking industry, management should assess the servicing time necessary to recapture costs and achieve required returns. This information is critical to decisions to purchase mortgage-servicing assets, and it should be incorporated into hedging strategies.

The strategic plan should identify the company's strengths and weaknesses, growth targets, and other strategic initiatives (including

management's philosophy toward the business, the extent of financial risk-taking, commitments to maintaining procedures and controls in managing the business, and management's commitment to staff development) over a one- to three-year time horizon. Planning efforts should also address system deficiencies and technological advancements within the industry. Without appropriate planning, the company can only react to external events and market forces.

Management should be results-oriented, but not at the expense of sound risk-management practices. Goals and objectives should be specific and measurable. Management should develop a performance measurement system that tracks progress toward achieving both financial and nonfinancial goals.

3070.0.1.3 Organizational Structure

The organizational structure should be reviewed to determine, on a legal-entity basis, the relationship between the mortgage banking company, the bank holding company, and any other bank or nonbank subsidiaries. The structure should also be reviewed to determine whether the lines of authority are clearly defined, the responsibilities are allocated logically, and management depth is sufficient within each division, department, or functional area.

The president and CEO usually reports directly to the mortgage banking company's board of directors, as well as to an executive management committee at the affiliate bank or the bank holding company level. Other reporting lines may exist between functional area executives and their counterparts at either a bank affiliate or the holding company level.

3070.0.1.4 Control Environment

Management's attitude toward risk is communicated to employees through the company's corporate culture. In general, the CEO should establish and communicate a corporate culture that promotes safe, sound, and prudent business practices. The corporate culture should provide a positive control environment, set high standards, and reward ethical, desirable behavior.

Management's failure to communicate acceptable standards of behavior may encourage impermissible or high-risk business practices. For instance, compensation programs that are incentive-based may generate poor-quality loans. Below-market pricing strategies or overly aggressive growth targets may further exacer-

bate asset-quality problems or generate loans in excess of processing and servicing capabilities.

3070.0.1.5 Control Programs

Management controls in a mortgage banking company consist of an internal audit, an external audit, loan review, compliance, quality control over loans originated and/or serviced for investors, fraud detection procedures and related employee training programs, insurance coverage, and legal review. The examiner should review recent reports conducted by internal loan review, state and federal agencies, and private investors to determine the scope of the review, the nature of any problems noted, and the adequacy of management's response.

3070.0.1.5.1 Internal Audit

The internal audit function in a mortgage banking company is responsible for detecting irregularities; determining compliance with applicable laws and regulations; and appraising the soundness and adequacy of accounting, operating, and administrative control systems. Accounting, operating, and administrative control systems are designed to ensure the prompt and accurate recording of transactions and a proper safeguarding of assets.

Internal audit activities may be conducted through a separate department located on-site or through the internal audit department of the bank holding company. Very small financial institutions that do not maintain a separate audit function may rely solely on their external auditor to perform these functions.

Regardless of the organizational structure, internal auditors must be independent of the line areas being reviewed, have access to all company records, and maintain sufficient status and authority within the company. The internal auditors' findings should be reported directly to the board or a designated committee thereof.

The scope, frequency, and coverage provided through the internal audit program should reflect the size and complexity of the institution. The audit schedule should cover underwriting practices and other high-risk areas of mortgage banking, including the most significant balance-sheet accounts, income statement accounts, and internal control systems.

To yield meaningful results, the department must be adequately staffed with individuals who are experienced and knowledgeable about mortgage banking. Audit staff should receive ongoing

training and be encouraged to hold professional industry certifications. Internal audit reports should be issued and responded to by line management in a timely fashion. Follow-up procedures should be in place to ensure that corrective measures are taken.

3070.0.1.5.2 External Audit

External auditors generally review and assess the mortgage company's financial condition and the adequacy of internal controls. The engagement letter sets forth the external auditor's responsibilities, scope, and extent of reliance that is placed on the internal audit department with respect to the type of engagement. When an external audit is to be performed, the audit is an examination that is conducted to determine that the present financial condition of the company and the results of operations are fairly stated and are in conformity with generally accepted accounting principles.

Examiners should review the most recent external audit report to determine whether the opinion regarding the company's financial statements and their disclosures was qualified in any manner. If applicable, examiners should note any significant concerns or weaknesses in the company's internal control structure. Examiners should also review management's written response to the audit to determine whether corrective measures were appropriate, complete, and timely and whether the response reveals any internal control weaknesses.

The reason behind any changes in external audit firms used should be investigated. Unusual items and areas of potential concern should be discussed with management and/or the external auditor. If questions arise during the safety-and-soundness review, the examiner should determine whether the area of concern was considered to be a material item by external auditors, the nature of audit work performed, and the outcome of that review. If questions persist, the examiner may want to request access to specific external audit workpapers.

3070.0.1.5.3 Loan Review

Loan review activities may be conducted at the mortgage banking company or in conjunction with the loan review activities of either an affiliate or the parent bank holding company. In any

event, loan review should determine whether mortgage loans that are originated and/or purchased meet underwriting standards as defined in the internal loan policy. Loan review may also sample loans to determine whether they meet underwriting criteria established by investors. The scope of the loan review program should be evaluated. The examiner should also review a copy of the most recent loan review to determine whether problems are identified and addressed in a timely manner.

3070.0.1.5.4 Quality Control

Mortgage banking companies that service loans for investors must also maintain a separate quality control department to test the quality of loans produced and serviced for investors. Investors such as the Government National Mortgage Association (GNMA or Ginnie Mae), Federal Home Loan Mortgage Corporation (FHLMC or Freddie Mac), and FannieMae issue very specific guidelines that must be met with respect to the scope and frequency of such reviews.

At a minimum, these investors require that the mortgage banking company sample at least 10 percent of all closed loans each month and conduct a quality control review to determine the extent of accuracy, completeness, and adherence to agency underwriting standards. Random samples should include loans originated through the company's own production network, purchased loans, loans for which work was performed by a third party (outsourced), and loans with various product characteristics, such as a high loan-to-value or a convertible feature.

Quality control personnel reverify loan documentation, including the appraisal, down payment, employment, and income information. After each review, the department should issue a comprehensive report detailing specific quality control findings and recommendations. Quality control reviews must be completed within 90 days of closing. Exceptions to company policy or investor underwriting standards should be documented and communicated to executive management. Corrective measures should be initiated promptly.

The quality control function should serve as an early warning system that alerts management to situations that may jeopardize the financial strength, image, or origination and sale capacity of the company. To function as an effective management control, the quality control depart-

ment should operate independently from the production and servicing/loan administration departments. Quality control should complement, not substitute, work performed by the internal audit and loan review functions.

3070.0.1.5.5 Insurance Program

The insurance program should be reviewed to determine whether coverage adequately protects the mortgage banking company and its affiliates against exposure to undue financial risk. Insurance policies should be reviewed and approved by the board at least annually.

3070.0.1.5.6 Litigation

The legal department should be contacted to determine whether existing or pending litigation exposes the mortgage banking company or its affiliates to undue financial risk. Particular attention should be paid to the status of any actual or pending class action lawsuits of a material nature.

Examiners should also determine whether procedures exist to detect and investigate suspected fraud, either internal or external. In many instances, the legal department coordinates fraud training and investigations, as well as the submission of criminal referral or suspicious activities reports and the initiation of legal action. If a separate fraud division or unit does not exist, examiners should determine whether procedures governing the detection, investigation, and referral of potentially fraudulent situations exist and function effectively. Examiners should also determine whether management reports adequately detail and track potential exposure.

3070.0.1.6 Inspection Objectives—Board Management and Oversight

1. To assess the composition, qualifications, and degree of oversight provided by the mortgage company's board and executive management team.

2. To determine whether the organizational structure is appropriate given the nature and scope of the mortgage banking company's operations.

3. To evaluate the reasonableness of the operating budget, long-term business planning, performance measurement systems, and MIS and related management and board reports.

4. To determine the nature of the company's internal control environment and the effectiveness of its system of internal controls, including internal and external audits, loan review, quality control, suspicious activities and fraud detection (including criminal referral and suspicious activities reporting) and related employee training programs, insurance coverage, and pending litigation.

3070.0.1.7 Inspection Procedures—Board Management and Oversight

Board Oversight

1. Review biographies of the board of directors and minutes from board and committee meetings to determine whether directors are qualified and fulfilling their fiduciary responsibilities.
2. Review the most recent package of information that was provided to directors. Do they receive sufficient detail regarding the financial condition, internal controls, and risk-management techniques employed within the company?

Management

1. Review biographies of members of the executive management team to determine their level of experience, technical knowledge, leadership skills, and administrative capabilities. Discuss whether salaries are commensurate with management's experience level and expertise.
2. Evaluate the quality of operating policies and procedures within each division or functional area and the extent to which compliance with such policies and procedures is monitored and reported.
3. Evaluate the output from the planning process, including the most recent operating budget, business plan, and related performance measurement system reports. Determine whether objectives, goals, and growth targets are reasonable.

Organizational Structure

1. Review the organization chart to determine whether the organizational structure is appropriate, as well as the appropriateness of the division of functional responsibilities and the degree of management depth within each division or functional area.

Internal Control Environment

1. Evaluate the nature of the internal control environment and how risk parameters are communicated to employees.

Internal Control Programs

1. Assess the effectiveness of internal controls in identifying and controlling risks. Internal controls include internal and external audits, quality control for mortgage loans, insurance coverage, and fraud detection procedures and related employee training programs.

Internal Audit

1. Determine whether a separate internal audit function exists and, if so, its degree of independence.
2. Review the qualifications of the internal audit manager and his or her staff for mortgage banking and accounting and auditing expertise. Consider the size of the department and its ongoing training programs, as well as the experience levels, educational backgrounds, and professional certifications of the department's staff.
3. Determine the scope and frequency of the internal audit program to ensure that all high-risk areas are reviewed regularly.
4. Review all internal audit reports, management responses to them, and follow-up audit reports for work conducted since the previous inspection.
5. Select a significant sample of internal audit reports and respective workpapers and conduct an intensive review of the internal audit program. Determine that all issues and exceptions were brought forward to the final audit report, the report was presented to the board or a committee thereof, and that any detected and disclosed problems or control weaknesses received appropriate management attention.
6. Evaluate the internal audit department's system for following up on issues and exceptions. Determine whether prompt, satisfactory resolution of issues was effected.

External Audit

1. Review the engagement letter for the most recent external audit to determine the external

auditor's scope, responsibilities, and extent of reliance on the internal audit department.

2. Review the most recent external audit report to determine whether the opinion regarding the company's financial condition was qualified in any way and whether any internal control weaknesses were noted. Review the notes to the financial statements for appropriate disclosures.

3. Discuss any unusual items and areas of potential concern with management and/or the external auditor. Determine whether any areas of concern were considered to be material items by the external auditors, based on the nature of audit work performed, management's representations in the management letter, and the outcome of that review. If questions persist, consider the need to request and review specific external audit workpapers.

4. Discuss the reasons for any recent changes in external auditors with management.

Compliance and Disaster Recovery

1. Review the methods used to ensure compliance with state and federal laws and regulations by—

a. interviewing the person who is responsible for compliance to determine the nature of outstanding problems and the adequacy of corrective measures that have been taken, and

b. reviewing the system for logging, tracking, and responding to customer complaints.

2. Determine whether the disaster recovery plan is adequate.

Quality Control

1. Review the quality control department's policies and procedures to determine whether the quality control program meets minimum investor requirements.

2. Review a sample of reports issued by the quality control unit to determine whether they were issued in a timely manner and conclusions were adequately documented.

3. Determine whether quality control results are relayed to executive management and whether follow-up procedures are adequate.

4. Determine whether the quality control unit is sufficiently staffed and independent.

5. Determine whether quality control out-sources work to outside parties. If so, are adequate controls in place to ensure that such out-

sourcing meets the company's own quality standards?

Insurance

1. Review insurance policies maintained for the mortgage banking company to determine whether coverage is adequate and whether the majority of insurable risks is included, giving consideration to a cost versus benefits analysis.

2. Review board minutes to ascertain the date the board last reviewed and approved the insurance program.

Litigation

1. Review all current and pending litigation of a material nature and determine whether adequate reserves are maintained to cover anticipated financial exposure.

Fraud Detection and Training

1. Determine whether a separate fraud unit exists and whether procedures are in place regarding the detection and investigation of suspected fraudulent activity and the issuance of related management reports.

2. Evaluate the company's early warning system for detecting potential fraud. Is the level of training adequate?

3. Review any criminal referral or suspicious activities forms filed since the prior inspection and discuss their status with management.

3070.0.2 PRODUCTION ACTIVITIES

Loan production covers the process of originating or acquiring loans. Production begins with the initial loan application and ends when a loan has been underwritten and processed, closed, and reviewed by post-closing.

3070.0.2.1 Types of Loans

Loans are categorized as either government or conventional loans. *Government loans* generally carry a below-market interest rate and are either insured by the Federal Housing Administration (FHA) or guaranteed by the Veterans Administration (VA). Both agencies protect investors holding such securities against losses in the event of a borrower default, thereby slightly

reducing investors' required yields. To be insured or guaranteed, a loan must meet agency standards regarding the size, interest rate, and terms. The lender can obtain a certificate of insurance or guaranty to give support to a loan for securitization. A certificate of insurance or guaranty may not be needed for a loan to be securitized.²

Loans that are not FHA-insured or VA-guaranteed are referred to as *conventional loans*. Conventional loans are generally originated for larger loan amounts and made to stronger borrowers. Conventional loans typically require higher down payments and bear market interest rates. Most lenders that offer programs with smaller down-payment terms require that the borrower purchase private mortgage insurance for the top 5 to 20 percent of the loan principal balance so that a proportionate share of the credit risk is borne by a private mortgage insurance (PMI) company.

The extent of credit risk associated with a loan often depends on the marketing program under which the loan is originated. Marketing programs and participants are described briefly here; for a more detailed description, see "Marketing Activities" later in this section.

The market for residential real estate loans is dominated by three government-sponsored entities: the Government National Mortgage Association (GNMA), the Federal Home Loan Mortgage Corporation (FHLMC), and the Federal National Mortgage Association (FannieMae). GNMA is a government agency that guarantees the timely payment of principal and interest on pass-through securities that are backed by pools of FHA-insured or VA-guaranteed mortgages. These guaranties are backed by the full faith and credit of the U.S. government. Although investors will get paid in full, servicers may retain some risk of loss, particularly with respect to VA loans (see subsection 3070.0.4.5 for additional information on "VA no-bids").

Pass-through securities provide for monthly installments of interest at the stated certificate rate plus scheduled principal amortization on specific dates, despite the delinquency status of the underlying loans, as well as any prepayments and additional principal reduction. The issuer collects the mortgage payments and, after retaining servicing and any other specified fees, remits monthly payments to the certificate holders.

Although FHLMC and FannieMae are not extensions of the U.S. government, the market believes that there is an implicit guaranty that

their securities will be repaid. FHLMC and FannieMae securitization involves the purchase of conventional loans from lenders and the selling of mortgage-participation certificates, which are similar to GNMA pass-through securities. Participation certificates represent an ownership interest in pools of conventional loans. FHLMC and FannieMae guarantee the monthly pass-through of interest, the scheduled amortization of principal, and the ultimate repayment of principal. Unlike GNMA pass-throughs, however, participation certificates are not backed by the full faith and credit of the U.S. government.

Conventional loans are classified as either conforming or nonconforming. *Conforming* loans must comply with FannieMae's and/or FHLMC's underwriting and documentation guidelines in order to be sold in the secondary market. Conforming mortgages may be sold to FannieMae or FHLMC on either a recourse or nonrecourse basis.

Private pools of *nonconforming* loans that do not meet FannieMae or FHLMC guidelines may be sold in the secondary market under a private label structure. Nonconforming loans are often "nontraditional" products such as loans with teaser rates, limited documentation, and graduated payment schedules, as well as "jumbo" loans that exceed maximum agency size requirements. To improve salability, pools of nonconforming loans may be insured through third-party credit enhancements (for example, letters of credit) or various senior/subordinate structures. Since the underlying mortgages generally already carry private mortgage insurance, such pools are, in effect, doubly insured.

3070.0.2.2 Production Channels

Mortgage loan applications are generated through either *retail* (internal) or *wholesale* (external) production channels. Retail loans are originated through the company's own branch network. A branch network is relatively costly, since origination costs often exceed the origination fees received from the borrowers.

Wholesale production channels (where contact with the borrower is made by another party) take several forms. Whole loans can be purchased either individually or by using bulk commitments. Bulk commitments either require the correspondent to deliver a set amount of loans (mandatory) or deliver all registered loans that close (best effort or optional).

2. See the appropriate agency seller/servicer guide for standards and requirements regarding certificates of insurance or guaranty.

Loans may be closed in the buyer's own name using its own funds, closed in the seller's name using the buyer's own funds, or closed and funded by the seller with delivery to the buyer within a certain number of days. If the seller closes in its own name, the mortgage and note are generally assigned to the buyer simultaneously upon closing.

Three hybrid production channels are worth mentioning here. Examiners should note that terminology within the industry varies greatly. Under the first method, *table funding*, a mortgage banking company funds loans at closing that have been originated by a correspondent or broker according to the company's own specifications. Historically, the company's ability to record mortgage-servicing rights depended on the degree of independence that was maintained and the extent of risk borne by the originator. See subsection 3070.0.6, on "Mortgage-Servicing Assets and Liabilities."

The second hybrid method, *assignment of trade*, involves the bulk purchase of loans and investor commitments to sell the loans in the secondary market. The purchaser bears virtually no market risk under this production method. The third hybrid method, *co-issue*, entails the acquisition of servicing rights only, at the time a security is issued.

Most mortgage originators operate on a non-recourse basis. For purchasers of correspondent production, credit risk increases to the extent that the lender relies on other parties to correctly process and underwrite the loan. Contracts with correspondents should include representations and warranties from the correspondent that loans delivered meet the underwriting requirements of the agency or investor program for which the loan was originated. Approved correspondent lenders should be continually monitored for the quality of the product delivered and the financial ability to repurchase mortgages that do not meet the standard representations and warranties under which the mortgages are sold.

3070.0.2.3 Production Strategies

A successful production strategy combines high credit-quality standards with cost containment and effective marketing. In contrast, an overly aggressive or inappropriate strategy leads to heightened production risk. High-risk production strategies can be evidenced by relaxed credit standards, low documentation require-

ments, an executive officer's compensation based on volume, an emphasis on high-risk product types or geographic areas, and/or dependence on a limited number of production channels. Examiners are responsible for recognizing and reaching agreement with management to better control such high-risk production strategies where appropriate.

3070.0.2.4 Production Process

There are five principal steps in the retail production process: (1) pipeline entry, (2) processing, (3) underwriting, (4) closing and funding, and (5) post-closing. Each of these functions should be independent from one another and separately supervised to ensure the quality of the loans produced. Each step is briefly discussed below.

1. *Pipeline entry.* A loan has entered the pipeline when a prospective borrower completes a loan application. The applicant authorizes the lender to verify his or her employment, credit history, bank deposits, and other information that evidences repayment capacity.

2. *Processing.* The application is then processed to qualify the applicant and the property for the loan. Processing personnel verify the applicant's employment history and credit information and order an appraisal on the property. Processing activities should be controlled through standardized procedures, checklists, and systems.

3. *Underwriting.* The underwriting unit approves or disapproves applications based on underwriting criteria that are established by the FHA, VA, FannieMae, and FHLMC and by private mortgage insurers and institutional investors. To ensure objectivity, the underwriting unit should not report to management of the production function.

4. *Closing and funding.* After an application has been approved, the lender generally issues a commitment letter to the borrower, which states the interest rate and terms of the loan. At closing, the lender or its agent obtains all the legal and related documents executed by the parties to the sale, disburses the proceeds of the loan, and collects certain funds from the borrower.

5. *Post-closing.* After closing, a post-closing review is performed to ensure that documents were properly executed and underwriting instructions were followed. The post-closing review also identifies any trailing or missing documents that must be tracked and obtained to meet investors' pool certification requirements. Specific

agency requirements are detailed in the agency seller/servicer guides. Before the loan is transferred to the delivery or shipping department, processing begins for the final mortgage insurance (from the private mortgage insurer or from the FHA/VA guaranty certificate). Receipt of the actual certificate may take 45 to 60 days or longer. Pool custodians and investors will allow the lender to complete the sale if final documentation, including the insurance certificate, is expected to be received within a reasonable timeframe.

3070.0.2.5 Production Risks

The production process can present risks of both a short- and potentially long-term impact. Operational inefficiencies can result in high management and staff turnover, an inability to meet investor documentation requirements, an increasing number of pools that have not received final certification, or an unusually high production cost structure. Operations risk often increases during peak volume periods. If additional resources (which can include independent service providers) are not allocated to the processing, underwriting, closing, and post-closing areas, delinquency levels may increase and workloads may exceed existing capacity.

Management should be prepared to quickly respond to interest-rate cycles and related volume increases or declines, since failure to act promptly can affect earnings and capital. During the pooling and securitization process, for example, if the number of pools that lack final certification exceed a certain limit, the company may be required to seek financial support in the form of a letter of credit from an affiliate bank or bank holding company to ensure that all required loan documentation is secured in a timely manner. Credit risk and operational inefficiencies may also create liquidity problems and additional interest-rate risk if the company is unable to sell its loans in the secondary market.

To the extent a company retains servicing on either its retail or correspondent production, long-term credit risk issues may develop. These include exposure to the pools being serviced through recourse arrangements, potential non-reimbursable foreclosure costs, or costs associated with VA “no-bid” options.

3070.0.2.6 Overages

In certain instances, originators and loan brokers may have the ability to deviate from mort-

gage loan prices that are established by the marketing department. An overage exists when a lender permits an originator or broker to impose a higher number of points (or a higher interest rate) on a loan to certain borrowers than is imposed for the same product offered to other borrowers at a given point in time. (See CA-94-6.)

Overages are often used as an incentive to compensate originators or brokers. The amount that is received over the expected price is often shared by the mortgage banking company and the originator or broker. The practice of permitting overages may contribute to or result in lending discrimination under the Equal Credit Opportunity Act (ECOA) and the Fair Housing Act (FHAct).

Examiners should review the mortgage banking company’s lending policy and determine whether overages are permitted and whether the practice has resulted in lending discrimination. If a more detailed review of overages is deemed necessary, such review should be performed in conjunction with the appropriate Federal Reserve System’s legal and consumer compliance staff.

3070.0.2.7 Inspection Objectives— Production Activities

1. To determine the types of loans offered to borrowers and any significant changes in product mix.

2. To determine whether mortgage loans are securitized; if so, to determine whether mortgage-backed securities are insured or otherwise guaranteed by government-sponsored agencies or private entities.

3. To determine what channels are used to originate loans.

4. To determine if production processes are consistent with operational risk controls and efforts to minimize risk.

5. To determine whether production processes can handle cyclical changes in volume.

6. To determine whether overages are permitted and to assess whether the practice has resulted in lending discrimination.

3070.0.2.8 Inspection Procedures— Production Activities

General

1. Review organization charts to determine

the structure of the production function and its status within the company. Verify that functional units such as underwriting and quality control are independently managed.

2. Determine the types of mortgage products offered and the company's target markets. Evaluate portfolio trends for overreliance on one product type and undue concentrations in one geographic area.

3. Discuss the company's credit culture, compensation methods, and growth targets to determine whether income and loan volume are emphasized over credit quality.

4. Determine whether the level of nonconforming or unsalable loans being originated present undue risk and whether the quality and delinquency trends for such loans are adequately monitored.

Originations

1. Review policies and procedures for retail branch originations. How are originators compensated? Determine whether originators have the authority to alter loan pricing parameters set by the marketing unit.

2. Determine the size of the branch network and its cost structure. Is the network growing or shrinking? How does management plan for anticipated changes in loan volume?

3. Determine if the mortgage banking company is involved in overage activities. If so—

a. determine whether management has developed comprehensive policies and procedures, detailed documentation and tracking reports, accurate financial reporting systems and controls, and comprehensive customer complaint tracking systems to adequately monitor and supervise overage activities;

b. review whether overages are an essential component of the mortgage banking company's earnings and origination activities, and review the percentage of mortgages originated since the previous inspection that resulted in overages and the average overage per loan;

c. determine if management reviews overage activity for disparate treatment and disparate impact; and

d. determine if overages are a major component of loan officer and/or broker compensation.

4. Review policies and procedures for wholesale purchases. Which production channels are used and how do they work? Channels may include whole loan purchases (production flow),

table funding, assignment of trade, or co-issuances (bulk purchases of servicing rights only). For each production channel, review how brokers and correspondents are compensated.

5. Review the method for reviewing and approving brokers and correspondents and specific programs under which wholesale loans are purchased. Is there an approved list of correspondents? How is it updated and how frequently? Determine whether exceptions to this list are made and by whom, and whether controls are in place to prevent unauthorized purchases.

6. Evaluate the process for conducting financial reviews on correspondents. How often are financial statements obtained, and who analyzes them?

7. Determine whether adequate controls are in place to detect changes in the financial condition of a correspondent, test and monitor the quality of loans purchased, and evaluate the correspondent's financial capacity to perform under contractual repurchase obligations.

8. Select a sample of contracts for the largest correspondents for additional review. Do contracts clearly state pricing structures, maximum dollar volumes, recourse arrangements, and whether loans are purchased on a mandatory delivery or a standby basis? Have any legal issues arisen as a result of the contract language? How frequently does management put back loans to its largest correspondents?

9. Determine whether management information systems adequately track approvals and denials by loan type and production channel. Are exceptions to policy adequately tracked and monitored?

Processing

1. Determine whether processing is performed in-house or by another party (a third-party contractor or the originator). Review checklists and procedures for the processing unit and determine whether loan tracking systems are adequate.

2. Review steps that have been taken to address any audit or quality control findings. Determine whether additional corrective actions are necessary.

Underwriting

1. Determine whether underwriting is performed in-house, by third-party underwriters, or by the originator. Is management planning for

peak volume periods and are controls over the underwriting process adequate?

2. Review policies and procedures to gain a reasonable assurance that underwriting standards are prudent and comply with investor guidelines. If individual underwriters perform this function, determine whether management has established approval limits, developed exception procedures for loans that are rejected or suspended, and receives reports that track loan quality for each underwriter. If a committee performs the underwriting function, review its charter, composition, and minutes. If a scoring system is used, review credit scoring methodology. Can the system be overridden? If so, by whom?

3. Review a representative sample (preferably a statistical sample) of current loans to test the underwriting policies and procedures and also determine the validity and adequacy of documentation supporting loans held for sale or investment.

4. If an unusual increase in unmarketable loan inventory has been noted, select a small sample of loans in current production for additional review. Does underwriting comply with established guidelines? If a credit scoring system is used, focus on loans that are of the lowest acceptable grade. If deficiencies are noted, consider expanding the review sample.

5. Review loans that were rejected and then approved. Did the proper authority approve such loans, and was management's rationale adequately documented?

Closing/Post-Closing

1. Evaluate procedures, checklists, and systems for closing loans. Are all required documents obtained from the borrower before funds are disbursed? If not, evaluate the appropriateness of suspense items.

2. Determine if a post-closing documentation review process exists to differentiate, track, and obtain both trailing and missing documents. Assess its effectiveness.

3. Determine if wholesale loans are re-underwritten at delivery. If not, how does management ensure that loans are re-underwritten in accordance with secondary marketing program requirements?

4. Determine the number of pools that lack final pool certification. Has this number exceeded the maximum allowable limit since the previous review? Why has this problem occurred, and what steps are being taken to secure the necessary documentation? Has a letter of credit been

posted? Does the situation pose undue financial risk for the company or any of its affiliates?

3070.0.3 MARKETING ACTIVITIES

The marketing department is typically responsible for the development of mortgage products, determination of products to be offered, and the establishment of daily mortgage prices. The marketing department, which is also referred to as secondary marketing, is also responsible for the sale of mortgage loans to investors. Given these roles, the marketing department acts as an intermediary between the borrower and the investor. All of these activities require close coordination to be effective and are appropriately placed within one department.

3070.0.3.1 Oversight

Marketing activities are generally supervised by a marketing committee, which may consist of the chief executive officer, chief operating officer, chief financial officer, and the executive officers responsible for marketing, production, and servicing/loan administration. The marketing committee is responsible for the formulation of marketing policies, departmental operating procedures, pricing strategies, and parameters governing the use of various mortgage-related products and strategies used to hedge the interest-rate risk associated with certain mortgage loans.

3070.0.3.2 Securitization

The marketing department's primary tool in performing its activities involves securitization outlets. Securitization activities are discussed in SR-90-16, which transmitted the following documents: (1) the Examination Guidelines, (2) An Introduction to Asset Securitization, and (3) Accounting Issues Relating to Asset Securitization. There is also a discussion of these activities in the *Commercial Bank Examination Manual*, section 4030.1. A review of the securitization process can provide a clearer understanding as to the value the marketplace assigns to a mortgage banker's production. Mortgage securities, however, are usually issued by an entity other than the mortgage banking company under inspection (such as government-

sponsored agencies, securities affiliates, or brokerage firms).

Many approaches are used for securitization, but the great majority of activity occurs with conduits such as GNMA, FHLMC, and FannieMae. Conduits provide many programs that a mortgage originator can use to deliver a mortgage or pools of mortgages in return for cash or securities. To investigate current program requirements and available options, the examiner should consult the seller guidelines issued by the agencies.

The securitization process presents the marketing department with a complex set of options to consider when deciding how to sell the company's loan production for maximum profit. If the company's own servicing valuation differs from pricing offered by the agencies, for instance, the marketing department can use some flexibility in pool formation guidelines to retain or divest servicing cash flows. Recourse to the originator or servicer can be negotiated to reduce agency guaranty fees. Agencies also alter guaranty fees based on different methods of remitting principal and interest payments. Sales to the agencies can be on a best-efforts or mandatory basis. A best-efforts basis is when loan delivery is not required if the loan does not close. Better prices are received for the lender's acceptance of the more rigid performance requirements of mandatory commitments. Master commitment contracts can be reviewed by the examiner to determine negotiated terms.

Although most securitization activity occurs within the programs already mentioned, private security issues are also used. The private issues are used primarily for loans that do not meet the underwriting criteria of the agencies, commonly due to larger than accepted loan amounts (jumbo loans). Nonconforming loan production is usually sold to brokers or security affiliates who have marketed the product to investors, sometimes using complex real estate mortgage investment conduits (REMICs).

3070.0.3.3 Pooling Practices

As an intermediary between the borrower and the investor, marketing personnel coordinate the flow of loan documents from the shipping department to the pool custodian and the ultimate holder. If servicing is retained, the loan will be input into the company's servicing system soon after closing. Staffing levels should be

adequate to ensure that processing backlogs are managed and workloads remain reasonable. Temporary help and/or outsourcing may be used during peak volume periods.

Operating procedures governing the selection of mortgage loans for pooling, packaging, and sale should be evaluated to ensure that the shipping and pooling processes are efficient and that loan files ultimately contain complete documentation. Management reports should identify and track the number of pools that lack final agency certification and the status of missing (unavailable) and trailing (delayed) documentation.

If third-party guaranties are used during the securitization process, procedures should also establish methods for evaluating and monitoring the financial condition of all third-party entities that provide credit enhancement. If loans or securities are sold with recourse, management reports should identify and track potential recourse obligations. Management should also analyze historical recourse losses by investor and product type and determine the appropriate level of reserves to cover estimated recourse exposure.

3070.0.3.4 Marketing Risks and Risk Management

3070.0.3.4.1 Techniques

The marketing department manages several risks, which can be categorized as follows:

- unsalability
- pricing
- fallout
- counterparty performance

3070.0.3.4.2 Unsalability

Under most circumstances, a mortgage banking company will originate mortgage products that are acceptable to GNMA, FannieMae, FHLMC, or other major investors. This minimizes the risk that mortgage products originated will not be marketable to investors and have to be retained as a portfolio investment. However, the marketing department may also initiate certain products that are intended for the loan portfolio of the mortgage company or portfolios of bank or nonbank affiliates. In the case of production for bank affiliates, underwriting and pricing arrangements must be structured to ensure compliance with the restrictions imposed by sections 23A and 23B of the Federal Reserve Act. See the subsections on production activities (3070.0.2) and intercompany transactions (3070.0.7).

3070.0.3.4.3 Pricing Risk

The mortgage banking business is volume driven. Because profit margins are thin and fixed costs associated with loan production can be large (especially in the case of a retail origination network), it takes a significant volume of mortgages to generate profits. Mortgage pricing decisions are critical because the price is a major determinant in the volume of mortgages originated.

Pricing strategies can be affected by divisional profit and loss allocations or external industry practices. A neutral price structure sets mortgage prices that are equivalent to the expected price for which the mortgages will be sold to investors, plus a normal servicing spread of 25 to 50 basis points depending on the type of loan. Daily adjustments are usually made to prices to reflect market changes for future settlement of mortgage-backed securities (MBS).

Due to regional or local competition, mortgage banking companies often find it necessary to deviate from a purely neutral pricing strategy to maintain volume in certain markets. However, large deviations from market price in either a lower or even upward direction can have adverse consequences. In addition to causing marketing losses, price cutting could place operational strains on the production and servicing areas. Premium pricing can position the company as a lender of last resort with adverse credit quality implications.

The marketing department attempts to minimize price risk by matching origination pricing with the price it expects to receive from investors. However, estimating the price at which the mortgages can be sold can be difficult because it is determined in large part by external factors such as interest rates. The longer the elapsed time between when the mortgage applicant decides to lock in a loan rate and the time the loan closes, the greater the risk that the prices for which the mortgages can be sold will change. Some companies encourage customers to “float” their interest rate until closing approaches to reduce the volume and costs of hedging.

3070.0.3.4.4 Fallout

A third type of risk that the marketing department manages relates to pipeline “fallout.” This is the risk that the proportion of loans in the rate-committed pipeline that are expected to close will change with a given change in interest rates. As market interest rates decline, fewer mortgages in the pipeline will close because

applicants will opt to make new applications at the lower rates. As interest rates rise, the proportion of pipeline loans that will close increases as more applicants choose to lock in rates. Mismatches that occur in the long and short positions can result in financial losses when the institution needs to settle its trades.

3070.0.3.4.5 Hedging Strategies

The most common hedging strategy used to protect the inventory of closed loans and the rate-committed pipeline against adverse interest-rate movements involves the use of mandatory and optional forward sales of MBS. Under this hedging strategy, the inventory and rate-committed pipeline (the long position) are generally covered through short sales (mandatory delivery contracts with settlements corresponding to expected delivery volumes). Put and call options on MBS are sometimes purchased to manage heightened fallout risks during periods of volatile interest-rate fluctuations.

The typical practice is to hedge 100 percent of the closed loan inventory that is marketable. In addition, pipeline loans very near to closing are generally also hedged at or close to 100 percent. However, a significant degree of uncertainty exists as to the amount and timing of 30- and 60-day rate-committed pipeline closings due to interest-rate fluctuations, underwriting delays, and cancellations. To control exposure to rate movements, management must estimate the percentage of the rate-committed pipeline that is expected to close in the current economic environment.

Although estimation techniques vary, data are generally collected on a number of pipeline characteristics such as product type, whether the loan is a purchase or refinance, and whether it is retail- or wholesale-originated. Fallout behavior can vary depending on these and other factors. Based on this information, management then derives an estimated closing percentage that becomes management’s operating target for coverage of the rate-protected pipeline.

Marketing personnel often use simulation modeling to assess fallout percentages, assist in balance-sheet valuations, and develop appropriate hedging strategies. Such models may be either purchased from outside vendors or developed in-house, and they vary greatly in their degree of sophistication. In any event, the primary assumptions and inputs to the model should

be reasonable, well documented, and reviewed periodically by both the marketing committee and by an independent source such as an internal or external audit. Results from the marketing simulation model should be provided to management through summary reports. Information may also be provided to bank holding company personnel for asset/liability management purposes.

Other products may also be used to hedge inventory loans and the rate-committed pipeline, particularly loans with an adjustable rate feature or other specialized characteristics. The marketing committee should review and approve all specialized hedge products used, the degree of correlation between the hedge product and the underlying position being hedged, and the degree of risk that each strategy or position entails. The accounting department should also determine whether such products qualify for hedge accounting treatment, establish appropriate management reports, and establish accounting policies. See subsection 3070.0.6, "Mortgage-Servicing Rights."

3070.0.3.4.6 Position Reports

To limit risk, the marketing committee should place prudent limits on the amount of exposure that can be incurred through hedging operations. Limits, which may be contained in the marketing policy, might establish a constraint on the size of uncovered long positions, require that coverage be maintained at the marketing committee's current closure estimates, or establish a constraint based on an earnings-at-risk measurement.

Compliance with limits should be monitored through regular position reports, which should be provided to senior management (the marketing committee and perhaps the treasury function of the parent company, if they participate in decisions or policy enforcement) at least weekly. Position reports should detail the company's long and short positions in relation to limits, as well as unrealized and realized gains and losses on loans and securities. Department managers generally require daily position reports in order to effectively monitor the position. Marketing position reports may not reconcile directly with reports prepared by the accounting department for financial reporting purposes. Significant differences should be investigated.

3070.0.3.4.7 Counterparty Performance

The marketing committee is also generally responsible for managing investor/counterparty performance risk. The marketing committee (or the treasury department of the parent bank holding company) should approve all brokers and dealers to which securities are sold before trading commences. Dealer limits should be established to limit the maximum amount of trades outstanding with each firm. Frequent position reports should be prepared to monitor compliance with established limits. The accounting department may be responsible for the ongoing monitoring of the financial capacity of the brokers and dealers.

3070.0.3.5 Inspection Objectives— Marketing Activities

- To review the types of products developed.
- To determine the pricing strategies offered to borrowers and investors.
- To review pipeline fallout estimation techniques.
- To review hedging methods as they relate to loan production.
- To determine whether information systems are adequate for senior management to monitor fallout behavior and hedge performance.

3070.0.3.6 Inspection Procedures— Marketing Activities

Management Oversight

1. Review the composition of the marketing committee and minutes from recent committee meetings to determine the nature and scope of its responsibilities, the frequency of meetings, and the degree to which oversight over marketing activities is provided.

2. Review the marketing policy as it relates to product offerings, pricing strategies, loan sales, and hedging operations. Are all relevant marketing risks identified? Note the date the marketing policy was last reviewed and approved by the board of directors.

3. Determine how management measures and controls interest-rate risk associated with closed loans in inventory and rate-locked loan applications in the pipeline. How are limits established and quantified (i.e., earnings at risk, economic value of equity at risk, percentage of capital, etc.)? Are such limits reasonable? Evaluate management's oversight of asset securitization

activities in accordance with SR-90-16, as applicable.

4. Assess the adequacy of management information systems and related management reports that are designed to track compliance with established policy. Determine the extent to which operational practices adhere to policy. How are exceptions handled?

Securitization and Pooling Practices

1. Determine the secondary marketing programs used to sell mortgages to investors and the volume of sales under each program.

2. Discuss the strategies and procedures used for the selection of mortgage loans for pooling, packaging, and sale. Are there quality control procedures in place to ensure that the files of pooled loans contain complete documentation? What impact does strategy have on departmental profitability?

3. Evaluate the company's securitization practices:

- Determine how much risk the company retains and in what form.
- Determine the source, conditions, and costs of third-party guaranties. Verify that the financial condition of all third-party credit enhancers is substantiated.
- Determine the procedures used to obtain final pool certifications from investors (coordinate with the examiner(s) assigned to the production function). Determine the number and volume of securities that lack final certification. Is management doing everything possible to obtain missing documents? Are problems volume-driven or due to a lack of internal controls?

4. Determine whether loans or securities are sold with recourse. If so, are management information systems in place to track recourse obligations? Are analyses of recourse losses conducted by investor and product type? Are reserves held for recourse loans? What is the methodology for determining the adequacy of reserves? Review actual and potential losses. Are reserve levels adequate to cover identified exposure? Is compensation tied to trading profit?

Unsalability

1. Review the marketing policy to determine

whether all mortgage products originated by the mortgage company are intended to be salable in the secondary market (for example, do they conform to guidelines issued by GNMA, Fannie-Mae, FHLMC, or other major investors?). How is actual salability monitored?

2. Determine if mortgage loans that are not salable are generated specifically for the permanent investment portfolio of either the mortgage banking company or its bank or nonbank affiliates.

3. Determine who is responsible for the review of temporarily unsalable loans, the frequency of such reviews, the actions taken to correct documentation and/or credit deficiencies, and if internal controls are adequate. This information is needed to ensure that hedge volumes are accurate.

Pricing Strategies

1. Review the current list of mortgage product offerings and the daily price sheet. Are prices determined centrally and are they uniform? Discuss pricing strategies with management to determine whether the company uses a neutral, above-market, or below-market pricing strategy.

2. Ascertain what procedures are in place to ensure that deviations from the approved pricing policies receive the proper degree of scrutiny and approval by senior management. If such discrepancies are common, why is this occurring (competition, compensation schemes, or departmental profitability considerations)? What impact have such deviations had on production volumes and the company's overall profitability?

3. Determine what policies are in effect regarding customer rate-locks. If a rate-lock expires, is it automatically renewed or is it renegotiated at current interest rates? Are the number and dollar volume of loans with expired rate-locks adequately monitored and tracked?

Fallout

1. Discuss the methodology used to predict the volume of applications that are expected to "fall out" of the mortgage pipeline. Is fallout methodology well documented?

ALCO/Simulation Modeling

1. Determine whether the expected fallout ratio is based on intuition, historical data, or an empirical model. Are assumptions reasonable? Are volatility assumptions based on historical performance or on implied volatility levels in the market? Who is responsible for reviewing model assumptions, and are these individuals sufficiently independent from the process itself? Does management also engage in sensitivity analyses to determine the impact interest-rate fluctuations will have on expected fallout levels?

2. Determine to what extent management uses output from these models in business planning, financial management, and budgeting.

3. Assess the degree to which mortgage banking activities are incorporated into the parent company's asset/liability management reports and program.

Hedging Practices

1. Discuss management's philosophy and strategy to determine the amount of interest-rate risk they are willing to accept. How successful has the company's marketing strategy been over the past few years and how is it changing? What are management's primary sources of market information? Are sources sophisticated enough given the size of the company and the scope of its activities?

2. Review the marketing policy to determine products and strategies used to hedge the interest-rate risk associated with inventory loans and rate-locked loan applications in the pipeline. Review actual hedging practices to determine whether they conform with established policy limitations and guidelines. What percentage of closed loans held in inventory and loan applications in the pipeline are matched against specific investor commitments? How are coverage levels determined and how have they changed over time? Is the basis for this coverage ratio adequately documented? Determine whether the current coverage ratio exposes the company to undue risk associated with potential marketing losses.

3. Determine the adequacy of management's strategies for hedging loans that have special risks (ARMs with interest-rate caps and floors).

4. Ascertain if basis risk exists for any hedg-

ing products, whether such risks are significant, and the impact on correlation. How is basis risk identified, monitored, and controlled?

5. Determine whether call options are written to enhance inventory yields. If so, verify that they are written against covered positions. Determine whether management is speculating in any way and whether this activity subjects the company to undue risk.

6. Obtain profit/loss reports on hedging activities. How frequently are they prepared, how are they used, and to whom are they distributed? Evaluate the financial results of the hedging program over the past three years. Is management taking on excessive risk to record profits in this area?

7. Review management reports relating to pipeline and closed-loan hedging operations. Determine whether such reports are complete, accurate, and timely. Do such reports adequately limit excesses, record exception approvals, and detail risk exposures?

8. Review information provided to executive management and the board to determine whether hedging practices are adequately supervised.

Counterparty Risk

1. Review the marketing committee's list of approved brokers and dealers. Have appropriate dealer limits been established and are such limits adhered to? How are exceptions monitored, reported, and controlled?

3070.0.4 SERVICING/LOAN ADMINISTRATION

Mortgage banking companies that originate and sell residential real estate loans in the secondary market often retain the right to service those loans for the investor for a fee. In return, the servicer collects monthly payments from mortgagors, collects and maintains escrow accounts, pays the mortgagors' real estate taxes and insurance premiums, and remits principal and interest payments to the ultimate investors. The servicer also maintains records for the mortgagor, collects late payments on delinquent accounts, inspects property, initiates and conducts foreclosures, and submits regular reports to investors. Such functions and responsibilities should be documented within a formal written servicing agreement.

3070.0.4.1 Revenue Generation

The right to service mortgage loans provides a stable source of earnings and the potential for one-time gains. For this reason, servicing portfolio growth has become a primary objective for many mortgage banking companies.

Mortgage-servicing revenues are derived from six sources. The primary source is the contractual servicing fee. Because this fee is usually expressed as a fixed percentage of each outstanding mortgage loan's principal balance, servicing-fee revenues decline over time as the loan balance declines.

The second source of servicing income arises from the interest that can be earned by the servicer from the escrow balance that the borrower often maintains with the servicer for the payment of taxes and insurance on the underlying property. This income may vary, however, as some states require that interest payments on escrow balances be paid to the borrower.

The third source of revenue is the float earned on the monthly loan payment. This opportunity for float arises because of the delay permitted between the time the servicer receives the payment and the time that the payment must be remitted to the investor.

The fourth source of revenue consists of income late fees charged to the borrower if the monthly payment is not made on time. A fifth source is income in the form of commissions that many servicers receive from cross-selling credit life and other insurance products to the borrowers. The sixth and last source is when the servicer might generate fee income by selling mailing lists to third parties.

3070.0.4.2 Cost Containment

Long-term profitability is achieved through cost containment, technological improvements, and economies of scale, which reduce the per-unit cost of servicing. Servicing costs vary widely across institutions depending on portfolio characteristics such as product type, loan size and age, delinquency status, and foreclosure statistics. Nevertheless, two efficiency measures frequently used within the industry to measure cost containment are unit-servicing costs and the number of loans serviced per employee. The minimum size of a loan-servicing portfolio needed to achieve economies of scale varies across institutions and depends on portfolio characteristics and the servicer's expertise and technological capabilities.

Servicing data are available through the Mortgage Bankers Association's publication, "Mortgage Banking Performance Report." Based on detailed financial-statement information from a sample of companies, the report presents a compilation of performance data on all aspects of the mortgage banking industry.

3070.0.4.3 Growth Strategies

Many companies have established aggressive growth targets for their servicing portfolios. The size of the portfolio may be increased through originations, purchases of loans (individual or bulk), or purchased servicing rights. Portfolio size is reduced through normal runoff, prepayments, and sales of either loans or servicing rights only. Management's growth strategy should be examined in light of its expertise and systems capabilities.

3070.0.4.4 Servicing Agreements

The servicer generally operates under a written contract with each investor. This contract, also known as a servicing agreement, establishes minimum conditions for the servicer such as its fiduciary responsibilities, audit requirements, and fees. Contracts may be standardized or tailored to the individual investor.

Under most servicing agreements, the servicer warrants that full principal has been advanced, the mortgage is in fact a first mortgage on the property, and that the first mortgage position will be maintained by the servicer. Additional warranties that are either unwritten or implied may create significant exposure for the servicer.

A servicer may also enter into an agreement with another company to subservice certain loans or portfolios of loans. The company's method of evaluating and monitoring the financial condition of its subservicers should also be reviewed. Servicing and subservicing agreements should be evaluated in terms of the subservicer's responsibilities, reporting requirements, performance, and fees. They should also be reviewed to determine that no additional liabilities, real or contingent, are imposed upon the company beyond its responsibilities as a servicing agent.

3070.0.4.5 Recourse Obligations

A servicing agreement may contain specific recourse obligations that go beyond the servicer's customary fiduciary obligations. A mortgage banking company can choose to service loans for investors either with or without recourse back to the mortgage banking company. Servicing agreements should be reviewed to determine the extent of any recourse obligations. The risk of recourse should also be discussed with management to assess whether the risk is being identified and effectively managed.

The degree of recourse varies by investor. FannieMae offers either "regular" or "special" servicing options. With FannieMae's regular option, the servicer retains all risk of loss from mortgage default. With FannieMae's special servicing option, the mortgage banking company only retains exposure for normal representations and warranties. FHLMC offers similar servicing options. FannieMae and FHLMC generally limit eligibility for the regular servicing option to participants with the knowledge and financial wherewithal to make good on their recourse obligations.

GNMA servicing carries no contractual recourse. However, in the event of mortgage default, the servicer may have exposure to principal loss and other nonreimbursable expenses, particularly with respect to VA-guaranteed loans. If a borrower defaults on a VA-guaranteed loan, the VA can exercise a "no-bid" put option, which allows the VA to pay out its guaranty and leave the property with the servicer for disposition.

When a borrower defaults on a VA-guaranteed loan, the VA makes a calculation that will guide its decision to accept or reject conveyance of the property. The VA's decision to exercise its no-bid option is based on the net value of loan collateral and the VA's guaranteed percentage of the indebtedness. The mortgage servicer, at its option, could pay down the outstanding principal balance on the loan to a point where the VA would not be expected to exercise its no-bid option. Such "buydowns" result in additional foreclosure losses for the servicer.

The risk-based capital guidelines require a charge to capital when any risk of loss is retained on such recourse obligations. The charge would be at the bank holding company, the bank, or both,³ depending on ownership of the risk. For

this reason, the accuracy of reported recourse obligations should be verified.

3070.0.4.6 Guaranty Fees

The amount of guaranty fee the mortgage banking company pays the government-sponsored agencies (or private issuer) is negotiated. Guaranty fees vary based on the amount of recourse assumed by the mortgage banking company (the servicer) and the timing of the cash flows. A smaller guaranty fee is negotiated when the guarantor assumes less risk or receives payments sooner in the remittance cycle. Remittance cycles vary by investor.

The examiner should discuss with servicing personnel the amount of risk that has been taken on by the marketing department in exchange for reduced guaranty fees. Excessive risk accepted by the mortgage banking company should be incorporated into the assessment of management.

3070.0.4.7 Internal Controls

The servicing process begins after the post-closing review has been completed and the loan has been set up on the mortgage banking company's servicing computer system. Servicers are responsible for adequately safekeeping loan documents. Documents must be stored in a secured and protected area such as a fireproof vault. Servicers must also maintain a tracking system for following up on missing documents.

The control environment that sets the tone of a servicing department's operation should be assessed. A servicing department's management faces a variety of risks that it should identify and control. In addition to identifying and controlling risks, management also needs to institute adequate and effective internal controls to match a servicing portfolio's growth and the department's technological changes. When assessing the control environment, the examiner needs to consider the extent to which management uses internal and external audits, quality control reports, and investor audits to ensure that its policies and procedures are followed.

The servicer's performance should be evaluated, with any loss of servicing due to operating inefficiencies or excessive risk-taking discussed and noted. A discussion of the risks within each operational area, as well as the management reports and internal controls, follows.

- *Loan accounting.* Incoming payments may be processed in-house, through a lockbox, or

3. If at the bank, then it is also consolidated at the bank holding company level.

through some combination of both. Payments are deposited into a clearing account and then transferred to the respective investor custodial bank accounts the next day. Investor remittances may be required daily, weekly, monthly, or as funds are received. In certain cases, servicing agreements may specify that payments be sent directly to security holders. Numerous accounts through which incoming and outgoing payments pass should be reconciled daily to avoid costly processing errors. The reconciliation process should be reviewed with management to ensure that reconciliations are performed on a timely basis and without chronic discrepancies.

- *Escrow administration.* In addition to receiving and remitting payments, servicers are also responsible for paying taxes and insurance on the underlying property. Accurate information must be maintained for each loan regarding a legal description of the property; the appropriate taxing authority, due dates, and amounts for taxes owed; and the insurance provider and due dates and amounts for insurance owed. Failure to maintain such information may result in missed tax and insurance payments on the property, which may lead to penalties and/or lapsed insurance coverage. The servicer's record of tax penalties paid over the past several years should be reviewed to determine whether a problem exists in this area.

Escrow account balances should be adequate to meet expected tax and insurance obligations. If the servicer advances its own funds to cover an escrow overdraft, such payments may be capitalized and recorded as a receivable only if the servicer is to be reimbursed by either the mortgagor or the investor. Escrow receivables should be aged, with stale or otherwise uncollectible receivables charged off.

Escrow accounts should be analyzed at least annually, with a copy of the analysis sent to the mortgagor. Shortages (overdrafts) may be billed or spread out over 12 months. Overages should be returned to the borrower or handled in a manner consistent with federal and state laws and regulations. For loans that were set up without an escrow account, the examiner should verify that adequate information has been obtained from the mortgagor to ensure that taxes and insurance are current.

- *Investor reporting.* Investor remittance and reporting requirements vary greatly. Remittances are contractually arranged. In some instances, the servicer may be required to

advance to investors funds that have not yet been received from the mortgagor (for example, cash advances to ensure timely payment of principal and interest). In such cases, a receivable is created on the balance sheet. Receivables relating to investor remittances should be aged in the same manner as escrow receivables and periodically reviewed by a supervisor. Stale or otherwise deemed uncollectible receivables should be periodically charged off in a timely manner.

Investor reports should include detailed account reconciliations and information on the mortgagor's name, principal balance outstanding, escrow balance, delinquency status of the account, and any foreclosure activity or transfer to the servicer's other real estate owned account. The quality and accuracy of investor reporting should be periodically reviewed by internal or external auditors.

- *Collections, foreclosures, and other real estate (ORE).* Investor requirements also vary concerning contact with delinquent borrowers, forbearance policies, and reimbursement for foreclosure expenses, ORE write-downs, and related losses. Detailed policies concerning collection efforts and foreclosures should be in place and followed. The property should be inspected regularly to ensure that its condition is adequately monitored. Delinquency and foreclosure statistics should be tracked by product type and originator.

Foreclosures are generally initiated after three full installments are due and unpaid. The servicer notifies the mortgagor of its intent in writing and refers the case to an attorney. Detailed records should be maintained for all expenses that are incurred. If the loan is insured, claims may ultimately be filed against the FHA, VA, or private mortgage insurance (PMI) company. However, it should be noted that certain interest expenses and collection or foreclosure costs are not reimbursable.⁴ These expenses are a cost of doing business that must be factored into the servicing fee charged for providing these services.

The timeframe for taking title on foreclosed property varies widely and is determined by state law. *Once title is taken, the property should be classified as ORE.* Although

4. For a detailed list of both reimbursable and nonreimbursable expenses, see the agency seller/servicer guides.

all ORE is generally managed through a centralized unit, for accounting purposes, ORE may fall into one of two distinct categories: ORE that is owned by the mortgage banking company, and ORE that is serviced on behalf of the investor. ORE that is owned should reconcile to the balance sheet, whereas ORE that is serviced for others is an off-balance-sheet item. ORE appraisal, valuation, and financing policies should be consistent with regulatory policy. In-substance foreclosures and any troubled debt restructurings should be properly identified and accounted for.

- *Payoffs.* Loans are considered “paid off” when the loan matures, the loan is refinanced, or the property is sold. Prior to payoff, the servicer is responsible for sending payoff instructions to the mortgagor. After a loan has been paid off, the servicer makes a satisfaction remittance to the investor or the pool; obtains documentation; cancels the note; and forwards the satisfied mortgage documentation plus an escrow refund check, if applicable, to the mortgagor. A high level of refinance activity may strain payoff personnel’s ability to perform this obligation accurately and promptly. Management reports should monitor the level of payoff activity and alert supervisors to operational backlogs, the need to hire temporary personnel, or the need to outsource work to third parties.
- *Customer service.* Poor service may damage the mortgage banking company’s business reputation (reputation risk) and ability to originate, sell, and service loans within the community. Because of name recognition, problems in this area may also adversely affect affiliate banks or the bank holding company and its nonbank companies.

For this reason, servicers should maintain an adequate system for logging, tracking, and responding to customer inquiries and complaints. Management reports should track the volume and disposition of such inquiries and complaints. Inordinate volumes of complaints may be an indication of operational backlogs, inefficiencies, or mishandling of accounts. If this occurs, corrective measures should be initiated immediately.

3070.0.4.8 Data Security/Contingency Planning

The servicing system should be of a complexity

and size necessary to accommodate both the current and the projected volume of transactions. Examiners should obtain information on the servicing system in use and any limitations it might pose in terms of future growth plans.

Procedures for maintaining physical security in the workplace, data security, and file backup also should be discussed with management. A contingency plan should describe the use of alternative backup sites, as well as procedures that would be followed to reconstruct altered or destroyed files. Contingency plans should be reviewed and approved at least annually and tested regularly.

3070.0.4.9 Inspection Objectives— Servicing/Loan Administration

1. To assess the adequacy of management oversight of risk through policies and procedures, management information systems and reports, and other internal and external audits, with respect to the following:

- collecting monthly payments from mortgagors
- reporting loan activity and remitting funds to investors
- monitoring escrow account balances
- disbursing property insurance and real estate tax payments
- monitoring delinquencies, initiating collection activities, and initiating foreclosure proceedings in a timely manner

2. To evaluate the level of risk assumed by the mortgage banking company through servicing recourse arrangements.

3070.0.4.10 Inspection Procedures— Servicing/Loan Administration

Management Assessment

1. Obtain an organization chart for the servicing department and resumes for senior management and key staff members. Evaluate management’s qualifications and expertise.

2. Review servicing policies and procedures manuals to determine whether reasonable operating standards have been established for each functional area. Also assess whether management reports adequately monitor compliance with established policies and procedures. Determine how exceptions are identified and addressed.

3. Review internal and external audits, quality control reports, and investor audits to determine whether internal controls are functioning effectively.

4. Evaluate safeguards in place for loan documents and determine if an adequate document tracking system exists.

5. Verify that a disaster recovery plan is in place that covers all in-house servicing functions. Verify that backup systems exist should primary systems fail. Determine if backup systems would provide information to substantiate servicing portfolio asset values.

6. Obtain a list of subservicers and vendors, if any, employed to perform servicing functions.

- Determine if a periodic review of services provided by each subservicer is conducted. In addition, the financial condition of each subservicer should be evaluated at least annually.
- Determine whether a contingent operating plan has been established should subservicers and vendors be unable to perform their contractual obligations.

Profitability Analysis

1. Review business line profitability for the servicing department to identify significant trends and/or areas of potential weakness. Discuss and review key efficiency measures such as unit cost and cost per employee.

2. Analyze servicing income and expenses to determine whether operations are profitable and economies of scale are being achieved in line with industry norms:

- Determine whether all direct and indirect costs are included.
- Compare servicing revenues with costs.
- Assess the impact of any bulk servicing purchases or sales on departmental profitability.
- Analyze efficiency in light of management's growth projections.

3. Review servicing portfolio trends and characteristics, including the following:

- investors (GNMA, FannieMae, FHLMC, private)
- recourse provisions
- loan types (30-year fixed, 15-year fixed, ARM, balloon)
- average loan size

- interest rates (particularly those above market)
- remaining contractual life
- projected life
- geographic distribution of mortgagors
- delinquency statistics
- foreclosure statistics
- number of subserviced loans and servicers

Loan Accounting

1. Review with management the procedures for receiving payments from mortgagors and depositing funds into segregated accounts. Determine that the segregation of duties and other controls over custodian accounts are adequate.

2. Review any outstanding advances to investors. Evaluate the collectibility of advances, the timeliness of charge-offs, and the adequacy of reserves.

3. Determine whether outstanding items related to investor account reconciliations are being resolved in a timely manner. Are reconciliations routinely reviewed and approved by a supervisor?

Escrow Administration

1. Review with management the system in place for ensuring the timely payment of taxes, insurance, and other obligations.

2. Review the servicer's method for analyzing the amount and adequacy of escrow account balances, and evaluate its effectiveness. Assess procedures relating to shortages and overages in escrow accounts:

- Determine whether procedures comply with 12 U.S.C. 2609 (RESPA) and to the extent possible with state laws.
- Determine whether the borrower is sent an analysis statement showing the amount of discrepancy, how it occurred, and an explanation of how it is to be corrected.

3. Determine the volume of loans with no escrow requirement and procedures for ensuring that insurance payments and taxes are current.

4. Determine how escrow funds are invested, assess the appropriateness of the investment vehicles, and review management's analysis of yield on escrow funds.

5. Evaluate whether controls are in place to prevent the use of escrow custodial accounts to meet other obligations.

6. Review outstanding escrow advances, and determine if claims for reimbursement are processed in a timely manner. Evaluate the collectibility of outstanding advances and verify that uncollectible advances are charged off in a timely manner.

Investor Reporting

1. Review the list of investors for which servicing is performed.

2. Review servicing contracts to verify that signed, current contracts exist. Discuss with management the nature of any recourse provisions, forbearance requirements, and nonreimbursable collection and/or foreclosure expenses.

3. Review the most recent investor audit reports on the servicing function. Discuss findings with management and evaluate the adequacy of any actions taken to correct deficiencies.

4. Determine whether any servicing contracts have been terminated for cause or are likely to be lost in the near future. Determine the reason for any termination and the extent of any corrective actions taken.

Collections and Foreclosures

1. Review and assess, on a statistical-sample basis, the accuracy and adequacy of loan delinquency reports by product type and originator. Ascertain the reasons for poor or declining asset quality within the servicing portfolio.

2. Review policies and procedures for collecting late payments.

- Determine when collection efforts start once an account becomes delinquent.
- Verify that all attempts at collecting past-due payments are documented, including each date of communication with borrowers, the nature of the communications, and the customers' replies.

3. Select a sample of files for borrowers who are 120 days or more delinquent and determine whether foreclosure proceedings are instituted in a timely manner.

- Determine if borrowers and investors are appropriately notified of the initiation of foreclosure action.

- Verify that contacts with borrowers are documented.
- Determine whether property inspections are conducted in accordance with policy.
- Verify that foreclosure practices comply with FHA/VA/PMI requirements and guidelines.

4. Determine the average foreclosure costs for each product type. Foreclosure costs include inspections, legal and administrative costs in excess of those defined as normal and customary, VA no-bid, and VA write-downs.

5. Obtain a list of loans in foreclosure in which action has been delayed, and determine if the justifications for delay are reasonable.

6. Determine the number and dollar volume of delinquent loans that were purchased from the servicing portfolio (buyouts or buybacks).

- Assess the impact of repurchases on profitability, the appropriateness of this practice, and the accounting procedures for these loans.

7. Discuss with management the effect that negotiated guaranty fees may have on the level of losses associated with foreclosures.

Payoffs

1. Review procedures for payoffs to determine whether—

- payoff instructions are sent to the mortgagor before payoff;
- satisfaction remittances are made to the investor or to the pool, necessary documentation is obtained, notes are canceled properly, and documentation plus any escrow refund checks are sent to the mortgagor in a timely manner; and
- internal controls are in place to ensure that funds are not misappropriated and employee fraud is detected and reported according to policy.

Other Real Estate

1. Determine the number and dollar volume of ORE by geographic location.

- Compare the volume of ORE with historical levels and the industry average for similar-sized servicers.

- Evaluate the impact of ORE on profitability.
- Review the policies and practices for ORE accounting, property supervision, and marketing. Verify that policies are consistent with investor guidelines and regulatory policies.

2. Determine whether ORE parcels are purchased from the servicing unit by the bank holding company or its affiliates.

- Evaluate the controls in place to limit or prevent this practice and the accounting treatment for such loans.
- Verify that information regarding ORE is properly reported to the parent bank or holding company for consolidation into regulatory reports.

Customer Service

1. Review the system for logging, tracking, and responding to customer complaints. Has the volume of complaints grown? Are complaints addressed promptly with any problems resolved in a timely manner?

2. Review the servicer's customer-complaint file to gain more insight into the nature of the complaints. Do complaints suggest that internal policies and procedures are not being followed or that staffing levels are inadequate?

cial risk. The examiner should also investigate any trends that appear inconsistent with the mortgage banking company's industry peer group, business orientation (such as wholesale versus retail, originations versus servicing, etc.), and future growth plans or with the current economic and interest-rate environment.

Financial-statement presentation may vary across mortgage banking companies. If questions arise, financial-statement presentation and accounting should be reviewed with the company's internal and/or external accountants for propriety. During the review of the financial statements, the examiner should establish whether regulatory reports are prepared accurately. Banks must conform to the reporting requirements of the Commercial Bank Reports of Condition and Income (call report). Bank holding companies and their direct subsidiaries must conform to generally accepted accounting principles (GAAP). Relevant GAAP statements of the Financial Accounting Standards Board include SFAS No. 65, "Accounting for Certain Mortgage Banking Activities," as amended; SFAS No. 91, "Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases"; SFAS No. 115, "Accounting for Certain Investments in Debt and Equity Securities"; SFAS No. 125, "Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities;" and SFAS No. 80, "Accounting for Futures Contracts." Other relevant accounting pronouncements are identified in appendix B, Accounting Literature.

The financial analysis should also include an assessment of asset quality, earnings, liquidity and funding, and capital. Any problems or conditions that expose the mortgage banking company, affiliate banks and nonbanks, and/or the parent bank holding company to undue financial risk should be brought to management's attention and discussed in the Examiner's Comments and Matters Requiring Special Board Attention.

3070.0.5 FINANCIAL ANALYSIS

This section provides the examiner a framework with which to analyze the financial condition of a mortgage banking company. The analysis begins with a review of the mortgage company's balance sheet and income statement. The financial analysis should incorporate a review of primary balance-sheet and income-statement levels and trends, off-balance-sheet assets and liabilities, asset quality, market share and earnings performance, funding sources, liquidity needs, and capital adequacy. Any problems or conditions that expose the mortgage banking company, affiliate banks and nonbanks, and/or its parent bank holding company to undue financial risk should be brought to management's attention and documented in page one, Examiner's Comments and Matters Requiring Special Board Attention. The examiner should focus on items that are either large relative to the company's operations or that may pose undue finan-

3070.0.5.1 Balance Sheet

3070.0.5.1.1 Assets

The asset side of the balance sheet may consist of cash, reverse repurchase agreements, marketable securities, receivables and advances, mortgage loans held for sale, mortgage loans held for

investment, mortgage-servicing assets (MSAs) (including mortgage-servicing rights), reserves for loan and other credit-related losses (contra accounts), other real estate owned (OREO), and other assets.

3070.0.5.1.1.1 Mortgage-Related Securities

The examiner should determine whether the accounting treatment for mortgage-related securities reported on the balance sheet is consistent with SFAS 115. SFAS 115 applies to equity securities having readily determinable fair values and to all debt securities. It does not apply to loans purchased.

Under SFAS 115, at acquisition and at each subsequent reporting date, all debt and equity securities that fall under the scope of the statement should be classified into one of the following categories:

- trading securities
- available-for-sale securities
- held-to-maturity securities

Both debt and equity securities can be assigned to the above first two categories. The third classification can only consist of debt securities.

Trading. Mortgage-backed securities that are held for sale in conjunction with mortgage banking activities should be classified as trading securities and reported at fair value. Debt securities not held to maturity and equity securities that have readily determinable fair values should be classified as trading securities when (1) they are held for short periods of time and (2) they have been acquired with the expectation of a profit from short-term price differences. Securities that are actively traded should be carried at fair value on the balance sheet, with net unrealized gains or losses included in income.

Available-for-sale. Debt and equity securities having readily determinable fair values that are not otherwise classified, as above, should be categorized as available-for-sale and carried at fair value on the balance sheet. Unrealized holding gains and losses should be reported in a separate component of shareholders' equity and should not be included in income.

Held-to-maturity. For a security to qualify as held-to-maturity under SFAS 115, the mortgage

banking company must demonstrate the positive intent and ability to hold it until maturity.

3070.0.5.1.1.2 High-Risk Securities

The examiner should also review any high-risk mortgage securities that are on the balance sheet, such as collateralized mortgage obligations (CMOs), real estate mortgage investment conduits (REMICs), CMO and REMIC residuals, and stripped mortgage-backed securities (stripped MBSS). See sections 2126.1 and 2190.0.5.

3070.0.5.1.1.3 Mortgage Loans Held for Sale

The examiner should determine whether the accounting treatment for mortgage loans held for sale is consistent with SFAS 65, as amended. Mortgage loans held for sale shall be reported at the lower of cost or market value, determined as of the balance-sheet date.⁵ The amount by which the cost exceeds market value shall be accounted for as a valuation allowance. Changes in the valuation allowance shall be included in net income of the period in which the change occurs.

3070.0.5.1.1.4 Mortgage Loans Held for Investment

Mortgage loans held for investment may include loans that (1) do not meet secondary-market guidelines and are therefore unsalable, (2) loans that were repurchased from an investor due to poor documentation and/or improper servicing, (3) loans put back to the mortgage banking company under recourse agreements, and (4) loans intentionally originated for portfolio.

SFAS 65 states that a mortgage loan transferred to a long-term investment classification shall be transferred at the lower of cost or market value as of the transfer date. The securitization of a mortgage loan held for sale shall be accounted for as the sale of the mortgage loan

⁵ According to SFAS 65, as amended, the capitalized costs of acquiring rights to service mortgage loans, associated with the purchase or origination of mortgage loans, shall be excluded from the cost of mortgage loans for the purpose of determining the lower of cost or market value.

and the purchase of an MBS classified as a trading security at fair value. Any difference between the carrying amount of the loan and its principal balance shall be recognized as an adjustment to yield by the interest method.

A mortgage loan shall not be classified as a long-term investment unless the mortgage banking company has both the intent and the ability to hold the loan for the foreseeable future or until maturity. If the ultimate recovery of the carrying amount of the loan is doubtful and the impairment is considered to be other than temporary, the carrying amount of the loan shall be reduced to its expected collectible amount, which becomes the new cost basis. The difference is recognized as a loss. A recovery of the new cost basis shall only be reported as a gain upon sale, maturity, or disposition of the loan.

3070.0.5.1.2 Liabilities

The liability side of the balance sheet may include repurchase agreements, commercial paper, revolving warehouse lines of credit, long-term debt instruments, intercompany payables, and equity capital.

3070.0.5.1.2.1 Repurchase Agreements

A mortgage banking company may finance its mortgage loans or MBSs held for sale by transferring mortgage loans or MBSs temporarily to banks, nonbanks, or other financial institutions under formal repurchase agreements that indicate that control over the future economic benefits relating to those assets and the risk of market loss are retained by the mortgage banking company.

Repurchase agreements can provide a cost-effective method of holding mortgage-backed securities before their sale to investors. Securities dealers repo the securities for a period of 30 to 180 days at a substantial cost advantage to warehouse facilities. Repurchase agreements involve delivery of the security to the dealer with an agreement to repurchase it on a specified date. Upon receipt, the dealer wires the haircut proceeds to the mortgage company. The mortgage company then reduces the amount of its outstanding warehoused loans. If the repo is being handled by the dealer that is arranging the ultimate sale of the security, the amount of that discount should approximate the discount on the sale. If another dealer is involved in the ultimate sale, the haircut may be greater because the security must be repurchased and redelivered to

the second dealer. This may also require a rehousing to provide funds to honor the repurchase commitment. Most warehouse lenders allow traditional warehouse lines to be collateralized by individual mortgages and mortgage-backed securities.

A mortgage banking company may use repurchase agreements in conjunction with sales of loan pools. The company may use repurchase agreements to pledge mortgage loans and/or MBSs as collateral for borrowings. In return, it receives advanced funds against future deliveries. The lenders are repaid through the sales of MBSs. The amount outstandings bear interest for the number of days the funds are outstanding.

Under repurchase agreements, the same loans or MBSs are generally reacquired when they are sold to permanent investors. Mortgages or MBSs may also be transferred temporarily without a repurchase agreement. However, some type of informal agreement generally exists. Mortgage loans and MBSs held for sale that are transferred under either formal or informal repurchase agreements shall be accounted for as collateralized financing arrangements and reported as either mortgage loans held for sale or MBSs classified as trading securities on the mortgage banking company's balance sheet.

3070.0.5.1.2.2 Commercial Paper

Another source of short-term funding is the issuance of commercial paper. In general, commercial paper represents unsecured notes with maturities up to 270 days from the date of sale. Because of its short maturity, proceeds should be limited to current transactions with short-term maturities. Commercial paper proceeds should not be used to fund loans held for sale for a period greater than one year.

Commercial paper can be less reliable than warehouse lines of credit. If commercial paper funding is used, examiners should review related commercial paper backup lines of credit and ratings issued by credit rating agencies. The reason for any rating changes during the prior year should be investigated. Additional guidance on this topic is set forth in sections 2080.05, 2080.1, and 5010.23.

3070.0.5.1.2.3 Revolving Warehouse Lines of Credit

Short-term revolving warehouse credit lines are

often used to fund loans held for sale, which is generally the largest asset on the company's balance sheet. Revolving credit lines may be obtained from an affiliate bank, the parent bank holding company, or an unrelated third party.

The extension of credit for a particular loan is paid off when the mortgage lender sells the mortgage loan to a government-sponsored agency such as GNMA, FannieMae, or FHLMC or to a private investor. Lenders who provide warehouse lines of credit typically enter into a warehouse credit agreement with the borrower. Under the agreement, the warehouse lender agrees to extend credit to the mortgage banking company for the purpose of originating loans. The mortgage banking company agrees to repay each extension of credit within the terms of the agreement. Each extension of credit is secured by placing a lien on the originated mortgage loan. The warehouse lender perfects its security interest by taking possession of the original promissory note executed by the borrower, endorsed "in blank," together with an assignment of the mortgage securing the loan. To further protect its security interest, the warehouse lender usually takes the responsibility of delivering the loan package to the secondary market investor for purchase. The investor, in turn, delivers the purchase price of the mortgage directly to the warehouse borrower (mortgage banking company). Each portion of the warehouse line may be priced separately to reflect various levels of risk and the documentation requirements of each.

The details of all credit lines should be specified in formal, written credit agreements. Revolving credit lines may be either unsecured or secured by a lien on the underlying mortgages. Under most secured lines, a formula is used to calculate the borrowing base, which generally consists of cash, cash equivalents, loans held for sale, securities, and a percentage of the mortgage-servicing portfolio less certain short-term indebtedness. Some credit lines require the maintenance of compensating balances.

Internal credit arrangements (conducted either by a mortgage banking subsidiary of a bank or bank holding company) must comply with sections 23A and 23B of the Federal Reserve Act. See sections 2020.1 and 3070.0.7 of this manual.

Examiners should evaluate the adequacy and efficiency of warehouse funding operations. The examiner should determine whether the warehouse lender is of a sufficient size and whether it is well positioned financially to provide

adequate lines of credit, as needed. Examiners should ascertain whether funding must be regularly derived from more than one warehouse lender (including whether the warehouse line has to be participated out to other lenders) and whether the lender has proper internal controls to safeguard collateral documents for pool certification. The examiner should also determine what management's contingency plans are for the use of alternative financing sources beyond standard warehouse lines of credit for backup financing and lower-cost efficiency purposes. Has management (1) explored variations in existing lines of credit to reduce overall borrowing costs and (2) determined what competitor lenders are paying for similar financing facilities?

Procedures should be in place to monitor compliance with all short-term debt covenants. Covenants may limit servicing of loans with recourse, limit total debt to specified levels, and/or require minimum tangible net worth, leverage, and current ratios. Most credit agreements also limit the borrower's financial flexibility if the company's long-term debt ratings decline or the company becomes unrated or if certain events occur related to securities.

3070.0.5.1.2.4 Long-Term Debt

Longer-term assets are more appropriately funded through the issuance of longer-term liabilities or capital. Toward this end, mortgage banking companies may issue medium- or long-term public debt securities (including warrants to purchase debt securities). Debt may be issued in the form of fixed-rate or floating-rate notes with various repayment or redemption terms. Loan agreements should specify all relevant terms and conditions and may contain debt covenants similar to those found in the warehouse funding arrangements.

Long-term debt may incorporate restrictive covenants which limit the company's activities in certain respects. These covenants may set limits on the amount of senior debt outstanding and the minimum amount of liquid net worth (as defined by the documents), and may limit the proportions of specific categories of assets. Such covenants should be reviewed to make certain that they are not too restrictive and that they permit financial flexibility.

3070.0.5.1.3 Equity Capital

Funding is also provided through equity capital,

which may be supplemented by capital contributions from the parent company or the direct issuance of equity securities.

3070.0.5.2 Income Statement

Mortgage banking revenues generally consist of the following: loan servicing/administration revenue; loan-origination-fee revenue; interest income; gains (losses) on the sale of mortgage loans, mortgage securities, or mortgage-servicing rights; and management and other fee income. The examiner may find that gross gain (loss) on the sale of mortgage loans or securities is reported on the income statement net of loan-origination fees and direct loan-origination costs such as personnel and office expenses.

Expenses may include interest expense; salaries, commissions, and other personnel costs; interest losses on MBS pools; amortization of mortgage-servicing assets and any other purchased intangible assets; electronic data processing and other selling, general, and administrative costs; occupancy and equipment; depreciation; provision for foreclosure and other loan losses; and a provision for income taxes. Some companies net amortization of MSAs directly against loan-servicing revenues.

3070.0.5.3 Unique Characteristics

The financial analysis should reflect certain operational characteristics that are unique to the mortgage banking industry. Many of these characteristics are cyclical based on interest rates and economic conditions.

For example, the cost of funding loans in the warehouse is relatively inexpensive during periods of low interest rates, but may increase significantly as interest rates rise. Marketing operations are also highly dependent on the interest-rate cycle. During periods of falling interest rates, the company may experience substantial gains on the sale of mortgage loans and securities to permanent investors. Alternatively, during periods of rising interest rates, the company will usually experience losses on the sale of mortgages and securities. Interest-rate volatility can cause large fluctuations in warehouse funding costs and marketing gains and losses.

The examiner should also consider the impact of current economic conditions on the size and composition of the mortgage banking company's balance sheet. When the economy expands, loan volume increases and the overall size of the balance sheet tends to grow. During recessions,

the balance sheet should contract, reflecting the lower demand for new loans. Management's planning efforts should incorporate this type of economic trend analysis in their growth targets. Steady annual growth may or may not be anticipated.

Efficiency measures, such as activity ratios (inventory turnover and efficiency ratios), should be used to determine management's ability to originate and sell loans efficiently. The inventory of loans held for sale is transitory, lasting between 45 to 60 days. A buildup of loans on the balance sheet may indicate processing delays and/or asset-quality problems that may prevent their ultimate sale to permanent investors. Because of the transitory nature of the balance sheet, traditional leverage ratios (asset-to-equity capital) may not be meaningful and should be used sparingly.

Another unique characteristic of a mortgage banking company is the economic value of its mortgage-servicing operations, which constitutes an off-balance-sheet item. Failure to incorporate this economic value into the financial analysis may overstate the degree of financial leverage that is employed within the company.

3070.0.5.4 Asset Quality

The quality of assets that are on the balance sheet is evidenced by the following: compliance with original underwriting standards; the existence of effective loan review and quality control programs; borrower payment and agreement performance; the fair value of MBSs held for sale or investment; the collectibility, independent valuation, nature, volume, and existence of recorded assets; the application of GAAP in accounting for the assets; and the degree of protection afforded by real estate mortgage collateral, including any private mortgage insurance. The value afforded by real estate mortgage collateral includes the extent of compliance with the Federal Reserve Board's real estate appraisal regulations and guidelines. (See section 2231.0.) Asset quality should be analyzed in terms of regional and national economic factors as well as portfolio and managerial factors.

For any review of any loan portfolio, a sampling of real estate appraisals should be included to determine whether the appraisal results reasonably support the amount loaned. If the property appears to be overappraised or if there is a

problem with the appraisal (for example, the appraisal is obsolete or the validity of the appraisal is in question), the examiner should consider recommending that a new appraisal be performed.⁶ It may be necessary for the examiner to classify the loan (i.e., as a loss) and for the parent holding company to increase its allowance for loan and lease losses.

Bank holding companies and/or their non-bank subsidiaries should be criticized if initial appraised values appear to be inadequate and/or not properly supported by proper documentation. If corrective action is not taken by management, formal enforcement action should be considered. Such actions may require the bank holding company to revamp its appraisal activities and/or collection procedures and, if warranted, to retain the services of an independent appraiser to conduct an evaluation of loan collateral.

With respect to MBSs, the quality characteristics of the underlying mortgage collateral should be considered. If the securities are backed by GNMA, FannieMae, or FHLMC, the rating agencies consider such securities to be the highest quality asset because of their linkage to the federal government. If the collateral consists of unsecuritized mortgages, the examiner should consider the geographic dispersion, type of mortgage and property, underwriting standards, and term to maturity of the underlying pool of mortgage loans. External factors can affect the value of mortgage securities directly, such as the default or downgrading (by a credit rating agency) of a private mortgage insurer.

To a large extent, insurance and guaranties provided by government-sponsored agencies and other third parties (for example, private mortgage, bankruptcy protection, fraud, and mortgage pool insurers, as well as performance bond insurers and other guarantors) mitigate credit risk for an originator; however, the originator still remains responsible for the quality of loans sold to investors for at least the first 90 days, as well as for any loans sold under recourse arrangements. As a servicer, the company also can be held liable if it does not initiate collection and foreclosure actions in strict accordance with investor-servicing agreements. In addition, certain interest losses and expenses relating to

collections, foreclosure, and ORE are not fully reimbursable and should be anticipated.

The mortgage banking company must maintain adequate management reports to measure and track the quality of originated, purchased, and serviced assets. Proper administration over loans and other assets held for sale or investment requires the use of aging and other tracking reports. For assets held for sale, the reports should identify loans and other marketable assets, other than marketable securities,⁷ that have been in this category longer than 60 days. In such instances, a determination should be made as to whether credit quality problems and/or documentation deficiencies exist that will prevent the timely sale of the loan in the secondary market. If problems are not correctable within a reasonable timeframe, the loans and other related assets should be revalued and transferred to the held-for-investment category. Procedures governing the valuation and transfer of poor-quality assets should be in writing and should be followed.

The MIS should also generate for management's review reports on the delinquency status of loans held for investment and loans serviced for investors. Such reports provide an early warning system and an analysis tool to evaluate internal collection activities. If a loan becomes delinquent (30 days or two payments past due), the borrower should be contacted. Collection efforts should be strengthened if the delinquency continues. If the loan becomes severely delinquent, foreclosure proceedings should be initiated consistent with the investor-servicing agreement, and the value of the collateral supporting the loans should be assessed. Anticipated shortfalls should be recognized as losses in a timely manner.

MIS should also include an internal loan-grading system, which tracks the borrower's ability to meet its monthly payment obligations. Although MIS should be tailored to meet management's needs, information should be consistent with loan-grading systems that are used by the controlling bank holding company and federal bank regulatory agencies. Reports should also track collection and foreclosure actions initiated by the servicer and repurchase requests initiated by a permanent investor or other third party.

Examiners should also verify that appraisal practices are consistent with the Board's

6. For certain credits, the bank holding company should develop criteria for obtaining reappraisals or revaluations as part of a prudent portfolio review and monitoring program.

7. For mortgage-backed securities available-for-sale, similar account classification procedures apply, but those are accounted for in accordance with SFAS 115.

appraisal regulations,⁸ the interagency appraisal and evaluation guidelines (see SR-94-50, SR-94-55, SR-95-16, SR-95-27, and SR-99-26), and any other state and federal laws and regulations. Mortgage banking companies that are subsidiaries of either state member banks or bank holding companies are subject to the same appraisal standards and requirements as their parent companies.

3070.0.5.4.1 Classification Procedures

The classification process begins with an analysis of delinquent loans. The examiner should begin by obtaining an aged listing of all delinquent loans in the held-for-sale and the held-to-maturity portfolios. Clear-cut shortfalls in property values compared with loan or investment values should usually be classified unless there are mitigating circumstances. Usually loans or investments with doubtful or loss elements have other significant weaknesses that will ordinarily justify a classification of substandard for the remaining balance. Loans secured by collateral such as real estate should be classified in accordance with these guidelines and the applicable classification guidance found in sections 2060.1 and 2090.1 of the *Commercial Bank Examination Manual* and sections 2010.2, 2065.1, 2240.0, and 5010.10 of this manual.

Portions of these loans may warrant a more severe classification if the value of the underlying collateral is insufficient to fully repay the loan. The identification of potential or actual loss exposure may warrant the use of either a split (substandard and loss) or a doubtful rating.

The examiner should also review the ORE portfolio, notes and accounts receivable, and other investments on the company's balance sheet for potential classifications. ORE may usually warrant a substandard classification due to an investment's nonearning status and an increased probability of loss on disposal of the underlying assets.

Assets that represent illegal or impermissible holdings or those that are subject to some regulatory concern should not be classified, per se, for these factors. Such holdings should be treated separately within the report. In those instances where a credit-quality issue is also present, the classification and the separate treatment should be cross-referenced.

The examiner should also review any off-balance-sheet exposure for which credit risk is retained. Loans sold to investors on a recourse basis have the potential of being put back to the servicer. The portion of the recourse portfolio that is severely delinquent should be classified according to the guidelines provided previously, since the exercise of this "put option" is highly likely.

At the end of the classification process, the examiner should evaluate the level and trend of classified assets to determine whether asset quality poses undue financial risk to the mortgage banking company or its parent bank holding company. A list of total classifications should be compiled and left with management.

As part of the analysis of asset quality, the aggregate of loss classifications plus an amount expected to ultimately be loss should be compared with the existing allowance for loan and lease losses. If the aggregate exceeds the existing contra asset balance(s) then additional loan-loss provisions are needed. In such situations, the parent company should be advised of the deficiency and reminded of its responsibility to ensure that an adequate allowance for loan and lease losses, as well as other contra asset valuation balances, is maintained by the subsidiary for its asset portfolio.

Any discrepancies between the classifications list and information contained on the company's MIS should also be discussed with management. If asset quality presents undue or excessive risk, appropriate comments should be documented and brought forward on Examiner's Comments and Matters Requiring Special Board Attention, page one of the report.

3070.0.5.4.2 Presentation of Classifications

As a minimum standard, brief write-ups stating the reason for classifications should be provided for any nonbank subsidiary's asset whose doubtful and/or loss classification exceeds the lesser of \$100,000 or 5 percent of the subsidiary's total assets. In general, substandard assets should be listed without a write-up, regardless of size. However, a brief write-up is required for any asset whose classification is challenged by management. The examiner has the option to provide a write-up for any classified assets, regardless of size.

8. See Regulation Y, subpart G (12 C.F.R. 225.61–67), and its incorporation by reference into Regulation H (12 C.F.R. 208.18).

While the following presentation guidelines may be useful in structuring the write-ups, the examiner may include any other format appropriate to the situation:

- recapitulation of the status and purpose of the loan, the lien position, type and appraised value of the collateral, its delinquency and accrual status, guarantors and other debit or credit balances related to the loan
- the problems with the loan, borrower, or collateral, presented in a concise, descriptive narrative
- the examiner's evaluation of the situation, indicating estimated values, major assumptions, and mitigating or negative factors
- the classification, which should represent a logical combination of the relevant factors presented in the first three elements

Within the elements presented, the examiner should stress accuracy, brevity, and clarity in the presentation, as well as a logical pattern leading to the classification. Historical information and financial data that are not pertinent or that are too stale to have a direct bearing on the present situation should not be included.

Presentations for OREO properties need not include the original loan date, history, and financial information, unless there is some relevance to the current condition (for example, the property has been foreclosed on for the second time or some circumstance before foreclosure continues to have an impact). For those companies in which numerous loans and OREO properties are classified, a summary of classifications, segmented by loans and real estate owned and indexed to the pages containing the classifications, presents clear benefits to the users of the report. This becomes more pertinent when numerous assets below the write-up line are included in total classifications. In addition, both management and the subsequent examiners will have an official listing of the classifications.

3070.0.5.4.3 Reserves

Management should establish and maintain adequate contra asset allowances and other contingency reserves to cover identified loss exposure. Policies and procedures, and financial statement disclosures, should clearly state the purpose of and intended accounting treatment for each reserve. Management should evaluate the level of each reserve account at least quarterly, docu-

ment this analysis, and replenish each reserve as necessary.

The financial presentation for reserves varies. Reserves maintained for on-balance-sheet exposure are generally reported as a contra asset. Reserves maintained for contingent liabilities relating to the sale of loans and servicing of loans for investors may be shown as a liability in practice.

Disclosures relating to valuation reserves should be consistent with GAAP. Examiners may wish to confer with the mortgage banking company's external auditors regarding the nature or appropriateness of any reserve accounts that are unusual.

3070.0.5.5 Earnings Performance

Earnings performance should be assessed in terms of the level, composition, quality, and trend of net income. The earnings analysis should consider internal factors such as the company's business orientation and management's growth plans, as well as relevant external factors such as interest rates and economic trends.

Unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, provisions for losses, salaries and overhead items, or income taxes should be discussed with management, as well as with internal or external auditors. Large write-downs or amortization adjustments relating to mortgage-servicing rights should also be investigated. (See section 3070.0.6.)

Current and historical ratio trend analysis, compared with published industry results (for example, see the Mortgage Bankers Association's annual statistics in the "Mortgage Banking Performance Report"), should also be incorporated into the profitability analysis, where appropriate. This includes income structure, expense structure, and operating performance ratios. However, ratios that compare earnings to average assets or equity may be of limited use unless the examiner also considers the transitory nature of the balance sheet and the impact of off-balance-sheet servicing activities on the company's use of financial leverage. Finally, the examiner should consider the company's ability to generate sustainable positive earnings consistently over time, as well as the proportionate share of consolidated earnings (or losses).

3070.0.5.6 Liquidity and Funding

Management's ability to satisfy the company's liquidity needs and plan for contingencies with-

out placing undue strain on affiliate bank or nonbank resources or reliance on the parent bank holding company is crucial. Liquidity needs depend on the size of the warehouse, the nature and extent of longer-term assets, opportunities to issue debt at a reasonable price, and management's ability to forecast and plan for contingencies. Liquidity is often dependent on cash generated through short-term liquid assets and on short-term borrowings to fund operations. Earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, maintenance of debt covenants, and contingent liquidity plans are all significant factors in the evaluation of liquidity. Liquidity can quickly erode if investor perceptions of a company's credit standing change. Consequently, the ability to fund mortgage operations under economic duress and access to alternate liquidity sources become key considerations.

Funding needs are driven by the need to temporarily finance mortgage loans and MBSs before their sale to a permanent investor. The examiners should do a trend review of external liquidity to assess how easy it is to sell mortgage-backed securities by the firm in the secondary market. The analysis should include the normal trading volume in MBS securities, the volume of loans held for sale and their market value, and the size of the "floating" supply of mortgage securities or loans that are not closely held. Liquidity needs must also take into consideration longer-term assets such as fixed assets, mortgage-servicing rights, and permanent loan and MBS portfolios. (See section 2080.05.)

3070.0.5.6.1 Financial Flexibility

The liquidity analysis should include a determination as to the company's financial flexibility. Financial flexibility is the ability to obtain the cash required to make payments as needed. Cash can be obtained from (1) business operations; (2) liquid assets already held by the company either in the form of cash or marketable securities or by selling liquid assets such as receivables or inventories for cash; and (3) external lines of credit, bank borrowings, or the issuance of debt or equity securities in the capital markets.

3070.0.5.6.2 Cash-Flow Analysis

The liquidity analysis should also include a review of the net current items on the cash-flow statement pertaining to cash flow from opera-

tions, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. The examiner's analysis of cash flows may reveal transactional trends between cash inflows and outflows. For example, within the Cash Flows from Operating Activities, cash flow from the sale and principal repayments on mortgage loans held for sale may correlate with originations and purchases of mortgage loans available for sale. With regard to investing activities, attention should be given to the differences between short-term purchases of mortgage loans held for investment versus principal repayments on mortgage loans held for short-term investment. In addition, purchases of real estate owned from the loan-servicing portfolio may correlate with net sales of real estate owned. A review of the financing activities should indicate if there is sufficient cash flow provided from revolving warehouse lines of credit, commercial paper, proceeds from the issuance of any other short-term debt, and net changes in advances payable to affiliates.

The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity. When analyzing liquidity, the examiner needs to consider the principles and guidelines set forth in section 2080.05, "Funding (Bank Holding Company Funding and Liquidity)" of this manual.

3070.0.5.6.3 Asset/Liability Management

In general, funding liability maturities should closely approximate the maturities of underlying assets to mitigate the risk of a funding mismatch. Otherwise, the company is exposed to short-term interest-rate fluctuations unless appropriately hedged. Funding mismatches can lead to significant earnings volatility in the event that interest rates change rapidly. Management's asset/liability management program should be evaluated in terms of the degree of matching, risk aversion, and the accuracy of information that is provided to the holding company through daily, weekly, or monthly management reports.

3070.0.5.7 Capital Adequacy

Capital must be adequate to absorb potential operating losses, provide for liquidity needs and expected growth, and meet minimum requirements set by third-party creditors and investors.

At a minimum, a mortgage banking company must meet the nominal capital levels required by investors such as FannieMae (\$250,000) or FHLMC (\$1 million, based on financial reporting under GAAP, or \$500,000, adjusted for certain assets and any deferred-tax liability). Additional capital is required based on the outstanding principal balance of loans serviced for investors. If these requirements are not met, the company may not be able to sell mortgages to and/or service mortgages for these investors.

As noted above, these are minimum capital requirements. Management should identify the level of capital that is required to support current operations and projected future growth, given the risk tolerance preferences of management and the board. Capital levels, dividend payments, and capital planning should be addressed in a written capital plan that is reviewed and approved by the board at least annually in conjunction with the budgeting and strategic planning activities.

There also may be a need to meet minimum leverage ratios established by the parent bank holding company or to meet debt covenants set forth in either warehouse credit facilities or long-term debt instruments. Companies that have excessive off-balance-sheet risk or high growth expectations may require additional capital. In addition, risk-based capital guidelines impose certain reporting requirements and limitations regarding the amount of MSA mortgage banking companies may include in their regulatory capital.

Capital levels should be monitored and reported to the company's board of directors regularly to mitigate the risk of inadequate or eroding capital. Management and the board are further encouraged to adopt a capital policy that specifically addresses the particular needs of the company.

The examiner should evaluate capital adequacy, the amount of dividends that are upstreamed to the parent bank holding company, and the extent to which the parent company can be relied on to augment the ongoing capital needs of its bank and nonbank subsidiaries. In some instances, the parent company may operate on the premise that the mortgage banking company requires little capital of its own as long as the parent company remains adequately capitalized.⁹ Under the Federal Reserve's source-

of-strength doctrine, the parent company must be prepared to support its subsidiaries should the financial need arise. If the parent is not prepared to inject capital and capital levels have declined, the examiner should comment on the mortgage banking company's extended leveraged position on page one of the inspection report. Under extreme circumstances, the examiner should also recommend that its leverage be reduced and its capital structure augmented to ensure that mortgage operations are conducted in a safe, sound, and prudent manner.

3070.0.5.8 Overall Assessment

The overall financial condition of the mortgage banking company should reflect its financial statement presentation, asset quality, earnings, liquidity and funding practices, and capital adequacy. Report comments should be prepared to the extent necessary.

3070.0.5.9 Inspection Objectives

1. To evaluate the financial condition of the mortgage banking company based on a review of the following:

- primary balance-sheet and income-statement levels and trends
- off-balance-sheet exposure such as the servicing portfolio
- asset quality
- earnings performance
- funding sources and liquidity needs
- capital adequacy

2. To determine the accuracy of regulatory reporting (regulatory accounting practices (RAP) and GAAP) and compliance with applicable state and federal laws and regulations.

3. To evaluate the quality of the mortgage banking company's assets for collateral sufficiency, performance, credit quality, and collectibility.

4. To assess earnings performance through the analysis of the level, composition, and trend of net income. If material, interest income, impairment of mortgage-servicing assets, gains and losses on asset sales, and personnel and other expenses should be factored into the analysis.

⁹ When MSAs are valued for inclusion in capital, the risk-based capital guidelines for banks and BHCs require the discount rate to be not less than the original discount rate

inherent in the intangible asset at the time of its acquisition, based on the estimated future net cash flows and price paid at the time of purchase.

5. To assess the funding and liquidity needs of the mortgage banking company through ratio analysis and a review of the funding instruments used.

6. To assess capital adequacy by ensuring that investor minimum requirements are met and by comparing capital levels with peer and industry data. Consideration of the capital needs of the individual mortgage banking company should override any comparison with peers.

3070.0.5.10 Inspection Procedures

Financial Statement Level and Trends

1. Review the mortgage banking company's financial statements and related notes over the previous three-year period.

2. Discuss significant balance-sheet and income-statement categories with management, as well as with internal and external auditors.

3. Determine whether financial trends are consistent with the economic environment, interest-rate movements, the company's business orientation, and management's intended growth strategy.

4. Determine whether reports filed with regulatory agencies are prepared accurately and submitted in a timely manner, with particular attention paid to the reporting for mortgage-servicing assets and recourse obligations retained by the mortgage banking company.

Asset Quality

1. Spread past-due and nonaccrual loans by balance-sheet asset category (for example, mortgage loans held for sale, mortgage loans held for investment), product type, and delinquency status (for example, 31–90 days, 91–180 days, and 181 days and over). Include any loans in the process of foreclosure.

2. Obtain a trial balance and delinquency listing for loans held for sale and loans held for investment.

a. Reconcile balances of the real estate held for sale and investment to the respective general ledger accounts.

b. Classify severely delinquent loans as required based on the financial condition of the borrower, his or her inability to make monthly payments as required, and the protection afforded by current collateral values.

c. Determine accounting policies and practices with respect to these loans. Review aging reports for loans held for sale and for investment. Discuss the frequency of reviews for loans held for sale, revaluation practices, and transfers among accounts. Verify that accounting practices are consistent with GAAP and RAP.

3. Obtain a listing of loans in the process of foreclosure and bankruptcy and discuss these with management for potential classification.

4. Reconcile all other real estate owned by the mortgage banking company to the general ledger and classify based on risks and any income-producing characteristics of the properties. Compare current appraisals to carrying value for potential write-downs.

5. Obtain a list of loans sold under recourse arrangements and assess for potential classification.

6. Discuss the methodology used to establish foreclosure reserves and related accounting procedures. Review analysis used to project future foreclosures.

- Evaluate the adequacy of foreclosure reserves based on the volume of projected foreclosure actions, average foreclosure costs, and the past history of reinstated loans.

7. Review other reserve accounts and assess for reasonableness.

Earnings Performance

1. Assess earnings performance in terms of the level, composition, and trend of net income. Consider internal factors, such as the company's business orientation and management's growth plans, and external factors, such as interest rates and the economic environment, when evaluating earnings trends.

2. Discuss any unusual aspects of origination and servicing-fee income, marketing gains and losses, the net interest margin, reserves, write-downs or adjustments in MSA amortization, salaries and overhead items, or income taxes with management, as well as with internal or external auditors.

3. Incorporate ratio and industry comparisons into the earnings analysis, where appropriate. Bear in mind that ratios that compare earnings to total assets or equity are of limited use unless the transitory nature of the balance sheet and the impact of off-balance-sheet servicing

activities on the company's use of financial leverage are taken into consideration.

Liquidity and Funding

1. Determine the mortgage banking company's liquidity needs based on a review of the size of its warehouse and the nature and extent of other longer-term assets.

2. Determine whether sources of liquidity are adequate, both under current conditions and economic duress. Consider earnings performance, capital adequacy, the degree of market contact with underwriters and credit rating agencies, maintenance of debt covenants, and contingent liquidity-planning capabilities.

3. Evaluate financial instruments used to fund mortgage operations. Financial instruments may include repurchase agreements, commercial paper, revolving warehouse lines of credit, and/or long-term debt. Review related credit agreements and systems used to monitor compliance with debt covenants.

4. Establish whether excessive borrowing activities have led to a highly leveraged financial condition that exposes the company to money market changes in the cost of funds. Evaluate the impact a change in the company's cost of funds would have on its net interest margin and earnings.

5. Determine the degree of financial flexibility the company maintains. Financial flexibility is the ability to obtain the cash required to make payments as needed. Does the company possess adequate financial strength and have access to lines of credit and/or assets that can be easily collateralized?

6. Review the net current items on the cash-flow statement pertaining to cash flow from operations, cash flows from investing activities, and cash flows from financing activities on a year-by-year trend basis. Determine whether sufficient positive cash flow exists from the level of current transactions. The summary analysis of the cash-flow statement should convey how the underlying transactions collectively contribute to a positive cash flow and liquidity.

7. Review asset/liability management practices to determine whether funding maturities closely approximate the maturities of underlying assets or whether a funding mismatch exists. Is the company exposed to short-term interest-rate fluctuations that may lead to signifi-

cant earnings volatility in the event that interest rates change rapidly?

Capital Adequacy

1. Determine whether capital levels are adequate to absorb potential operating losses, provide for liquidity needs and expected growth, and meet minimum requirements set by investors whose loans are serviced and other external parties.

2. Review policies and procedures to determine whether management adequately monitors and reports capital levels to the board of directors. Review the capital plan to determine whether it adequately addresses the particular needs of the company.

3. Evaluate the amount of dividends that are upstreamed to the parent bank holding company, as well as the extent to which the parent company can be relied on to augment the ongoing capital needs of its bank and nonbank subsidiaries. Is the parent company prepared to support its subsidiaries should the financial need arise? Are cash dividends paid by the mortgage banking subsidiary to the parent company reasonable?

Accounting

1. Review accounting procedures for retail loans. Determine whether loan fees in excess of cost are deferred in accordance with SFAS 91. Verify that income is recognized over the estimated life of the asset and not in the current period and that fees and costs are allowable under SFAS 91. Are controls in place to ensure proper recognition for net fee income when loans are sold? (SFAS 91 applies to loans held in portfolio, as well as to loans swapped for securities when the securities are retained.)

2. Determine if the accounting for recognizing sales of loans and mortgage-backed securities (including participation agreements) is in accordance with the three conditions for true sales recognition specified in SFAS 77, "Reporting for Transfers of Receivables with Recourse."¹⁰ Also determine if the sales price

10. A transfer is recognized as a sale if—

a. The transferor surrenders control of the future economic benefits of the receivables;

b. The transferor's obligation, under the recourse provisions of the sale agreement, can be reasonably estimated. The transferor should have had past experience with the recourse provisions so that a reasonable estimate can be made. The current transferred receivables should possess characteristics

was adjusted for all probable adjustments (as defined in SFAS 5, “Accounting for Contingencies”). If the mortgage banking company is a subsidiary of a bank, refer to the bank call report, glossary entry on “sales of assets.”

3. If servicing is retained, determine if a “normal servicing fee” is set and how it conforms to FannieMae/FHLMC fees and to FASB Technical Bulletin 87-3, “Accounting for Mortgage-Servicing Fees and Rights.”¹¹ If the mortgage banking subsidiary is a subsidiary of a bank, see the reporting instructions for Schedule F of the bank call report (Schedule RC-F for Other Assets, Item 3—Excess residential mortgage-servicing fees receivable).

Overall Financial Condition

1. Evaluate the overall financial condition of the mortgage banking company, considering its asset quality, earnings, liquidity, and capital adequacy. Update the financial component of the supervisory rating and prepare report comments as necessary.

3070.0.6 MORTGAGE-SERVICING ASSETS AND LIABILITIES

This subsection discusses mortgage-servicing assets (MSAs) and liabilities and provides guidance with respect to the measurement, impairment testing, and financial reporting requirements of MSAs. The subsection concludes with a discussion of MSA hedging practices and instruments.

SFAS No. 125 “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,” was issued in June 1996

similar to previously transferred receivables evidencing the transferor’s relevant prior experience.

c. The transferor cannot require the transferee to repurchase the receivables, except as stated in the agreement’s recourse provisions.

11. According to FASB Technical Bulletin No. 87-3, the servicing-fee rates set by GNMA, FHLMC, and FannieMae in servicing agreements should be considered a normal servicing-fee rate for transactions with those agencies. If the normal service fees are expected to be less than the estimated servicing costs, the expected loss should be recognized at the time the loans are sold. If a seller/servicer sells mortgage loans directly to private-sector investors and retains servicing on the loans, the seller/servicer should consider the normal servicing-fee rate that would have been specified in comparable servicing agreements if the loans had been sold to or securitized by one of the federally sponsored secondary market makers. As of May 1995, normal servicing-fee rates established by GNMA, FHLMC, and FannieMae were 44, 25, and 37.5 basis points, respectively.

as an amendment to SFAS Nos. 65, 76, 77, and 115. The provisions of SFAS 125 supersede SFAS 122 and are to be applied prospectively in fiscal years beginning after December 31, 1996. The statement requires that a liability be derecognized when either (1) the debtor pays the creditor and is relieved of its obligation for the liability or (2) the debtor is legally released from being the primary obligor under the liability either judicially or by the creditor.

Under SFAS 125, a mortgage banking company is required to recognize as separate assets or liabilities the right to service mortgage loans for others, however those servicing rights are acquired. Servicing of mortgage loans includes, but is not limited to, collecting principal, interest, and escrow payments from borrowers; paying taxes and insurance from escrowed funds; monitoring delinquencies; executing foreclosure if necessary; temporarily investing funds pending distribution; remitting fees to guarantors, trustees, and others providing services; and accounting for and remitting principal and interest payments to the holders of beneficial interest in the mortgage loans. Servicing is inherent in all mortgage loans; however, it becomes a distinct asset or liability only when contractually separated from the underlying assets by sale or securitization of the assets with servicing retained or separate purchase or assumption of the servicing.

3070.0.6.1 Measurement

A mortgage banking company initially acquires MSAs either by (1) purchasing the right to service mortgage loans separately or (2) purchasing or originating mortgage loans and selling those loans with servicing rights retained. When a mortgage banking company purchases or originates mortgage loans, the cost of acquiring those loans includes the cost of the related MSAs.

With respect to SFAS 125, when an entity incurs an obligation to service financial assets, it must record servicing assets or a servicing liability for each servicing contract, unless it securitizes the assets and retains all of the resulting securities, classifying them as debt securities that are to be held to maturity. When servicing assets or liabilities are assumed, rather than being acquired by a sale or undertaken in a securitization of the financial assets that are to

be serviced, they are measured initially at fair value (that is, the price paid). A servicing asset or liability is amortized in proportion to and over the period of estimated net servicing income (loss). Any impairment of a servicing asset or liability is determined based on fair value.

When the mortgage banking company sells or securitizes the loans and retains the MSAs, management shall allocate the total cost of the mortgage loans (the recorded investment in the mortgage loans including net deferred loan fees or costs and any purchase premium or discount) to the MSAs and the loans (without the MSAs) based on their relative fair values if it is practicable to estimate those fair values. If a mortgage banking organization undertakes a servicing liability in a sale or securitization, the servicing liability should initially be measured at fair value.

The fair value of an asset is the amount at which the asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. Quoted market prices in active markets are the best evidence of fair value and shall be used as the basis for measurement, if available. If quoted market prices are not available, the estimate of fair value shall be based on the best information that is available, including prices for similar assets and the results of valuation techniques used by management. Valuation techniques may include the present value of estimated expected future cash flows using a discount rate commensurate with the risks involved; option-pricing models; matrix pricing; option-adjusted spread models; and fundamental analysis. Valuation techniques for measuring MSAs should be consistent with the objective of measuring fair value and should incorporate assumptions that market participants would use in their estimates of future servicing income and expense, including assumptions about prepayment, default, and interest rates. If it is not practicable to estimate the fair values of the MSAs and the mortgage loans (without the MSAs), the entire cost of acquiring the mortgage loans shall be allocated to the mortgage loans (without the MSAs) and no cost shall be allocated to the MSAs.

The amount capitalized as MSAs shall be amortized in proportion to and over the period of estimated net servicing income. Estimates of future servicing revenue shall include expected late charges and other ancillary revenue. Estimates of expected future servicing costs shall include direct costs associated with performing

the servicing function and appropriate allocations of other costs. Estimated future servicing costs may be determined on an incremental-cost basis.

MSAs are highly subject to interest-rate and prepayment-rate risk since the amount of future cash flows that are provided to the holder is derived from, and is thus dependent on, the outstanding balances of the underlying mortgage loans.¹² Prepayments of underlying mortgage loans accelerate during periods of declining interest rates as borrowers take advantage of the option they hold to refinance their loans. As interest rates decline, holders of MSAs are exposed to a risk of prepayment of the underlying loans, and thus a diminished amount of cash flow from their investment. Holders of interest-only stripped securities (I/O strips) are exposed to similar interest-rate and prepayment risks when interest rates decline. I/O strips possess very similar prepayment risk characteristics.

A particular mortgage company's exposure to prepayment risk can also be influenced by portfolio composition factors such as geographical mix, loan-to-value ratios, and the proportion of government (FHA/VA) and conventional loans in the portfolio. Government loans that may be assumable by the purchaser of a home are generally for smaller amounts and may be extended to borrowers with limited financial resources. As a result, government loans tend to prepay more slowly than conventional loans.

Unanticipated changes in interest rates, prepayment speed, or other valuation assumptions may impair the carrying value of MSAs and require accelerated amortization or a write-down. Therefore, the recoverability of the unamortized balance should be evaluated periodically, and amortization and/or the value of the asset should be adjusted accordingly. To the extent that impairment is not recognized, MSA values may be inflated. As a result, assets, earnings, and capital may be overstated.

12. Several conventions exist for quantifying prepayment speed. The most common convention is a measure developed by the Public Securities Association (PSA). The PSA measure was based on actual historical experience of FHA mortgages, but it is not predictive. The PSA measure assumes that mortgages prepay at a rate of .2 percent per year in the first month, increase by .2 percent each subsequent month up to 30 months, and remain at 6 percent per year thereafter until maturity. This 6 percent level is referred to as 100 percent PSA. Mortgages that prepay at 200 percent PSA pay off twice as fast as a mortgage that is performing at 100 percent PSA. Another convention is known as the conditional prepayment rate (CPR) measure. CPR assumes that a constant fraction of the remaining principal is prepaid each period, "conditional" on the previous period's remaining balance. Typically, CPR is computed over a one-month time period. The PSA model simply represents a series of stable CPR assumptions.

3070.0.6.2 Impairment Testing

SFAS 125 states that a mortgage banking company shall measure impairment of capitalized MSAs¹³ based on their fair value. For the purpose of evaluating and measuring impairment of capitalized MSAs, management should stratify those assets based on one or more of the predominant risk characteristics of the underlying loans.¹⁴ Those characteristics may include loan type, loan size, note rate, date of origination, term, and geographic location.

Impairment shall be recognized through a valuation allowance for an individual stratum. The amount of impairment that is recognized shall be the amount by which the capitalized MSAs for a given stratum exceed their fair value. The fair value of MSAs that have not been capitalized shall not be used in the evaluation of impairment.

Subsequent to the initial measurement of impairment, management shall adjust the valuation allowance to reflect changes in the measurement of impairment. Fair value in excess of the capitalized MSAs shall not be recognized. If the fair value of a mortgage-servicing liability increases above the book value, the increased obligation shall be recognized as a loss in current earnings. SFAS 125 does not address when a mortgage banking company should record a direct write-down of capitalized MSAs; therefore, examiner judgment in this area is required.

3070.0.6.3 Disclosures

SFAS 125 requires that the fair value of capitalized MSAs, and the methods and significant assumptions used to estimate that fair value, be disclosed. If no cost is allocated to certain MSAs, management shall describe those MSAs and describe the reasons why it is not practicable to estimate the fair values of the MSAs and the mortgage loans (without the MSAs). The risk characteristics of the underlying loans used to stratify capitalized MSAs for the purposes of measuring impairment shall also be disclosed. For each period for which results of operations are presented, the activity in the valuation allowances for capitalized MSAs,

including the aggregate balance of the allowances at the beginning and end of each period, aggregate additions charged and reductions credited to operations, and aggregate direct write-downs charged against the allowances shall be disclosed.

3070.0.6.4 Intercompany MSAs

Intercompany MSAs may arise when a mortgage banking company originates loans, sells the loans to an affiliate bank, and the affiliate bank records related MSAs. Intercompany MSAs should be evaluated closely to determine whether a valid business purpose exists, the loans are actually sold, the entity holding the MSAs has revalued the rights correctly, and such intercompany MSAs are eliminated in consolidation. If the purpose of the transaction is merely to bolster capital levels at the bank, the practice may constitute an unsafe and unsound banking practice.

3070.0.6.5 Table Funding

One method of acquiring mortgage loans, and recording related MSAs, is through so-called “table-funding arrangements.” In a table-funding arrangement, the mortgage banking company provides the original funding when a mortgage broker or correspondent closes the mortgage loan with the borrower. Concurrent with the loan closing, the mortgage banking company acquires the loan and the related MSAs.

Emerging Issues Task Force Issue No. 92-10 (EITF 92-10), “Loan Acquisitions Involving Table Funding Arrangements,” clarified under what conditions these arrangements could be characterized as loan purchases. According to EITF 92-10, a mortgage banking company may account for a loan acquired in a table-funding arrangement as a purchase only if *all* of the following conditions are met:

- The correspondent is registered and licensed to originate and sell loans under the applicable laws of the states or other jurisdictions in which it conducts business.
- The correspondent originated, processed, and closed the loan in its own name and is the first titled owner of the loan, with the mortgage banking company becoming a holder in due course.

13. The term “capitalized mortgage-servicing rights” refers to the cost originally allocated to the MSAs less the amount amortized.

14. SFAS 65, as amended, applies to impairment evaluations of all capitalized MSAs. However, a mortgage banking company may continue to apply its previous accounting policies for stratifying MSAs to MSAs that were capitalized before the adoption of the amendments to SFAS 65.

- The correspondent is an independent third party and not an affiliate of the mortgage banking company as defined in SFAS 65. As a nonaffiliate, the correspondent must bear all of the costs of its place of business, including the costs of its origination operations.
- The correspondent must sell loans to more than one mortgage banking enterprise and not have an exclusive relationship with the purchaser.
- The correspondent is not directly or indirectly indemnified by the mortgage banking company for market or credit risks on loans originated by the correspondent. However, a commitment by the mortgage banking company for the purchase of loans from the correspondent is not considered to be an indemnification for purposes of this requirement.

If any one of the above criteria is not met, the mortgage banking company must account for the loan as an origination. MSAs that were recorded before the adoption of the SFAS 65 amendments should be reviewed to ensure that they were originated and funded consistent with the above requirements. MSAs that are recorded under SFAS 125 may arise in connection with either originated or purchased mortgage loan transactions.

3070.0.6.6 Regulatory Reporting

The examiner should also determine whether the method used to value MSAs is in accordance with the instructions for the Bank Report of Condition and Income (call report) and the BHC reporting instructions (FR Y-9C). If capitalized MSAs are not appropriately valued, they cannot be included in capital. Management should review the carrying amount at least quarterly, adequately document this review, and adjust the book value as necessary.

3070.0.6.7 Risk-Based Capital

Readily marketable MSAs may be included in a bank or bank holding company's tier 1 capital subject to certain limitations. Tier 1 capital for bank holding companies includes common equity, minority interest in the equity accounts of consolidated subsidiaries, qualifying noncumulative perpetual preferred stock, and limited qualifying cumulative perpetual preferred stock.^{14a} Tier 1

capital excludes goodwill; amounts of mortgage-servicing assets, nonmortgage-servicing assets, and purchased credit-card relationships that, in the aggregate, exceed 100 percent of tier 1 capital; amounts of nonmortgage-servicing assets and purchased credit-card relationships that, in the aggregate, exceed 25 percent of tier 1 capital;¹⁵ all other identifiable intangible assets; and deferred-tax assets that are dependent upon future taxable income, net of their valuation allowance, in excess of certain limitations.

The amount of MSAs which may be included in capital is also limited to the *lesser* of—

- the amount recorded on the balance sheet under GAAP, or
- 90 percent of their fair market value. If both the application of the limit on MSAs and the adjustment of the balance-sheet amount for MSAs would result in an amount being deducted from capital, the bank holding company would deduct only the greater of the two amounts from its core capital elements in determining tier 1 capital.

3070.0.6.8 Previously Recognized Excess Servicing-Fee Receivables

SFAS No. 125, "Accounting for the Transfers and Servicing of Financial Assets and Extinguishments of Liabilities" (paragraph 20), addresses the accounting treatment for excess servicing-fee receivables based on contracts that were in existence before January 1, 1997. Previously recognized servicing rights and excess servicing-fee receivables are to be combined, net of any previous servicing obligations under the contract, as a servicing asset or a servicing liability. Any previously recognized excess servicing-fee receivables that exceed contractually specified servicing fees are to be reclassified as interest-only strips receivables.

3070.0.6.9 MSA Hedging Practices and Instruments

During the refinancing waves of 1992 and 1993, several mortgage banking companies experi-

25 percent of tier 1 capital.

15. Amounts of MSAs, non-MSAs, and PCCRs in excess of these limitations, as well as all other identifiable intangible assets, including core deposit intangibles and favorable leaseholds, are to be deducted from an organization's core capital requirements in determining tier 1 capital. Identifiable intangible assets, however, exclusive of MSAs and PCCRs, acquired on or before February 19, 1992, generally will not be deducted from capital for supervisory purposes. They will, however, continue to be deducted for applications purposes.

14a. Cumulative perpetual preferred stock is limited to

enced large losses due to the impact of rising prepayments on the value of servicing rights. As a result, many companies have begun to hedge MSAs. An effective hedge program should reflect a solid understanding of the underlying MSA risk characteristics.

3070.0.6.9.1 Hedging Practices

Interest-rate and prepayment-rate risk are often reduced through the natural offset between the production and servicing functions; however, the degree of protection afforded by this relationship depends on the company's business orientation (originations versus purchases) and can be very difficult to measure.¹⁶ Other financial instruments are also used to mitigate interest-rate and prepayment-rate risks. The remainder of this subsection discusses existing hedge accounting guidance and rudimentary descriptions of certain customized MSA hedge products. Examiners should also refer to the Federal Reserve System's *Trading Activities Manual* for additional guidance on derivatives.

3070.0.6.9.2 Hedge Accounting

Existing accounting literature is vague with respect to the accounting treatment for MSA hedge products, particularly in the area of derivatives. However, analogies exist that facilitate the application of existing accounting standards. SFAS No. 80, "Accounting for Futures Transactions," provides financial reporting standards for exchange-traded futures contracts on both interest-rate products and raw materials (commodities). Several EITF issues releases provide financial reporting guidance for interest-rate swap transactions. Finally, an issues paper prepared by the American Institute of Certified Public Accountants (AICPA), "Accounting for Options," provides informal but nonauthoritative guidance relating to options contracts. The AICPA issues paper addresses options on all tangible goods, including both exchange-traded options and nonexchange traded options on interest-rate caps and floors.

16. When interest rates fall, increases in production volumes and related revenues tend to offset runoff in the servicing portfolio and reductions in servicing-fee income. Alternatively, to the extent that the marketing department hedges less than 100 percent of its estimated long position (closed loans plus rate-locked loans that are expected to close) and interest rates fall, the resulting marketing gains on the uncovered position tend to offset a portion of any required write-downs in the servicing portfolio.

To qualify for hedge-accounting treatment under SFAS 80, a financial instrument must meet two criteria:

- The hedged item exposes the entity to price or interest-rate risk.
- The financial instrument used as a hedge reduces that exposure and is designated as a hedge.

SFAS 80 states that at the inception of the hedge and throughout the hedge period, changes in the market value of the financial instrument used as a hedge should correlate highly with changes in the fair value of, or interest income or expense associated with, the hedged item(s) so that the results of the financial instrument(s) used as a hedge will substantially offset the effects of price or interest-rate changes on the exposed item(s). Although required correlation levels are not specifically defined, the accounting industry has determined that 80 percent is a reasonable benchmark.

Before claiming hedge-accounting treatment, management must obtain an opinion from its CPA or internal accountant confirming that the instrument that is proposed would qualify for such treatment. If these criteria are not met, the financial instrument should be carried at its market value (i.e., marked to market). Hedge performance should be monitored daily and reported to the responsible management or board committee at least quarterly.

3070.0.6.9.3 Relevant MSA Characteristics

To evaluate a mortgage banking company's hedge program for MSAs, one must first understand how MSAs perform. Duration, convexity, and amortization are useful concepts that will be reviewed as they relate to MSAs. Duration measures the change in the value of MSAs (or their cash flows) for a given change in interest rates. Duration can be either positive or negative. An asset with a positive duration, such as a fixed-income bond, tends to increase in value as interest rates fall. Conversely, an asset with a negative duration, such as an MSA, tends to decrease in value as interest rates fall.

Convexity measures the rate of change in an instrument's duration, or the nonlinearity of its price/yield curve. Like duration, convexity can

be either positive or negative. An asset with a positive convexity will rise more in value for a given change in interest rates than it will fall if interest rates move equally in the opposite direction. Conversely, an asset with a negative convexity will decline more in value for a given change in interest rates than it will increase in value if interest rates move equally in the opposite direction. Because of their prepayment characteristics, MSAs and most other mortgage-related assets are negatively convex within a specified range of interest rates. Borrowers can be expected to exercise their option to prepay a loan at a time that is most disadvantageous to the MSA holder.

MSAs are also an amortizing asset. When a prepayment occurs, the loss of value is permanent and cannot be recovered. The use of a nonamortizing asset as a hedge would necessitate an active hedge-management strategy to adjust the position as the unamortized balance of the MSAs declines. If the position is not adjusted correctly, this strategy may expose earnings and capital to additional risks that are not within the scope of the company's MSA hedge program.

3070.0.6.9.4 Hedge Instruments

An effective MSA hedge instrument will possess characteristics that mitigate the interest-rate and prepayment risks associated with MSAs without assuming additional basis risk. Basis risk measures how well changes in the value of the hedge instrument correlate to changes in the value of the MSA. An effective hedge should also be reasonable in terms of transaction costs and management's time.

Several types of specialized derivative products have evolved to meet the needs of mortgage banking companies. Early MSA hedge products were interest-rate-driven, utilizing zero-coupon Treasury bonds or interest-rate swaps. However, the basis risk of such hedges proved to be excessive. Next came principal-only (PO) and super-principal only (SPO) bonds, which were prepayment-driven.¹⁷ However, these products also proved ineffective due to geographic basis risk, potential average-life mismatches, additional capital requirements, and dissimilar

accounting treatment which led to accounting losses.

MSA hedge products generally fall into three categories: bond hedges, short-term option hedges, and long-term option hedges. Bond hedges use Treasury bonds, "plain vanilla" interest-rate swaps, interest amortizing rate swaps, positive convexity swaps, POs, and SPOs. Bond hedges may be either interest-rate-driven or prepayment-rate-driven. Prepayment-rate-driven products reduce more basis risk and are therefore more expensive. Although most bond hedges are positively convex, they fail to provide enough positive convexity to offset the negative convexity in MSAs. In other words, when interest rates decline, the value of the bond hedge will not increase in an amount sufficient to offset the simultaneous decline in the MSAs. Another disadvantage to bond hedges is that the downside risk is generally unlimited.

Short-term option hedges consist of over-the-counter (OTC) Treasury options, options on futures contracts, and options on OTC mortgage securities. Short-term option hedges generally contain enough positive convexity to offset the negative convexity of MSAs, and the downside risk is limited to the option premium paid at inception. However, option strategies using these products require frequent rebalancing, are therefore expensive, and do not work well in a rapidly changing interest-rate environment because they are not amortizing assets.

Long-term option hedges include prepayment caps, interest amortizing rate (IAR) servicing hedges, LIBOR floors, and swaptions. These products may protect the servicer and/or seller against changes in either interest rates or prepayments. As off-balance-sheet products, they impose very few capital constraints on the MSA holder.

A prepayment cap is an off-balance-sheet, prepayment-driven option product that can be used to hedge a mortgage-servicing portfolio. In exchange for paying a fee, either up-front or over the life of the hedge, the servicer and/or seller receives a payment from the counterparty every month that the option is "in the money." The option is in the money if the difference between the "strike balance" and the actual balance of a "reference portfolio," less the sum of previous balance differences, is positive. Each month the option is in the money, the counterparty will pay the "strike price," usually the book cost of the servicing portfolio, multiplied by this balance shortfall. The reference portfolio, strike price, and strike balance can be customized to match the servicer and/or seller's risk parameters and individual portfolio.

17. A special class of REMIC securities backed by POs. SPOs are a more leveraged type of PO.

An IAR servicing hedge is an off-balance-sheet, interest rate–driven option product that can be used as either a revenue or a balance-sheet hedge of a mortgage-servicing portfolio. In exchange for paying a fee, either up-front or over the life of the hedge, the servicer and/or seller receives a series of payments from the counterparty to the extent that amortization of a “reference balance” exceeds scheduled amortization of a “strike balance.” The main difference between an IAR and a prepayment cap is that with an IAR, option payments are based on the performance of a “reference portfolio” rather than the seller and/or servicer’s actual portfolio. For an IAR revenue hedge, the option payout is based on the current balance shortfall between the reference and strike balances. For an IAR balance-sheet hedge, option payouts are based on the cumulative excess amortization of the reference balance over the strike balance. IAR hedges are less expensive than comparable prepayment-linked hedges because they contain basis risk. If actual prepayments occur more rapidly than predicted at the onset of the hedge, the servicer and/or seller will be underhedged.

Numerous other types of customized hedge products are available. The advantages and disadvantages of each product should be well understood before it is incorporated into a mortgage banking company’s interest-rate risk management strategies.

3070.0.6.10 Inspection Objectives

1. To determine whether MSAs pose a significant financial risk to earnings and capital.
2. To evaluate management’s expertise and the oversight provided by the board of directors.
3. To determine whether policies and procedures used to initially record, amortize, and reevaluate MSAs are in conformance with GAAP and risk-based capital requirements, and whether actual practice is consistent with stated policies and procedures.
4. To verify that asset values are fairly stated.
5. To evaluate the methods used to hedge interest-rate and prepayment risks associated with MSAs, the degree of oversight provided by management or the board of directors, the adequacy of written policies and procedures, and the effectiveness of the company’s hedge program for MSAs.
6. To identify any excessive risk-taking which is caused by the company’s business mix and/or strategy.

3070.0.6.11 Inspection Procedures

1. Determine the extent of financial risk associated with MSAs through a review of the following:
 - a. Significant changes in the size of the servicing portfolio. Obtain a reconciliation for the servicing portfolio for the prior fiscal year and the most recent interim period. If significant growth has occurred, determine whether loans were originated, purchased individually (on a flow basis), purchased in bulk transactions, or acquired through whole company acquisitions. If the portfolio size has declined, determine the reason for such decline (sales of servicing rights, prepayments) and the impact on the remaining servicing portfolio.
 - b. The proportion of capitalized MSAs relative to the outstanding principal balance of mortgage loans in the servicing portfolio.
 - c. Other unusual characteristics of the servicing portfolio that may present undue risk, such as the weighted average coupon rates, weighted average maturities, delinquency characteristics, or mix of government (FHA/VA) loans versus conventional loans.

If the level of financial risk is sufficient to place earnings and capital at risk, the examiner should complete the remainder of the MSA procedures.

2. Review the qualifications of the individuals who are responsible for initially recording, amortizing and evaluating MSAs. Does management possess the necessary accounting expertise and experience with respect to valuation methodologies?

3. Review the accounting systems used to track MSAs. Is the necessary information being maintained in an understandable and useable form? Does the adoption of SFAS 65, as amended, and 125 pose any system problems for the company? Are such problems being addressed in a timely manner? At a minimum, MSAs should be tracked by product type and year of origination. The following information should be maintained for each pool of loans: the original and current principal balance for each pool; original and current book values of related MSAs; prepayment speeds, normal servicing fees, and the original discount rate used; and the actual historical payment experience for each pool.

4. Review written policies and procedures for initially recording, amortizing, and periodically reevaluating MSAs. Determine the manage-

ment or board committees responsible for approval of such policies, the date of last approval, and the frequency of their review.

5. Determine whether MSA policies and procedures are in conformance with GAAP and risk-based capital requirements and whether actual practice conforms with established policies and procedures. At a minimum, policies and procedures should clearly address the following areas:

a. Initial valuation of MSAs and related pricing policies. With respect to MSAs, policies and procedures should describe the method for allocating the total cost of originated and purchased mortgage loans to the MSAs and the related loans (without the MSAs) based on their relative fair values at the date of origination or purchase; procedures to be followed if a definitive plan for sale of the loans does not exist and loans are sold at a later date; procedures to be followed in the event that it is not practicable to estimate the fair value of the MSAs and the related loans (without MSAs); and MSAs recorded under table funding relationships with correspondents and/or brokers.

b. The method for amortizing MSAs over the estimated lives of the assets, and instances where amortization lives may be adjusted.

c. The method for measuring impairment of capitalized MSAs based on their fair value. Policies and procedures should address the basis for stratification of MSAs based on the risk characteristics of the underlying loans; the types of valuation allowances used to reflect changes in the measurement of impairment; the method used to arrive at the fair value of assets (quoted market prices, estimated prices for similar assets, and the results of valuation techniques); the frequency of revaluation tests; the presentation of valuation test results to senior management and the board of directors; instances where write-downs would be required; disclosures; and the basis for assumptions used.

6. Verify that the valuation techniques for measuring MSAs are consistent with the objective of measuring fair value. Review model output and related manuals and/or marketing materials. Evaluate the reasonableness of all key parameters and assumptions, with an emphasis on the source for prepayment speed estimates, the number of interest-rate “paths” used (vectoring or binomial models being more desirable than a single interest-rate projection path), the basis for the interest rate used to discount cash

flows, and the source of servicing revenue and cost data.

7. Review the most recent quarterly valuation process and the related output to determine whether necessary write-downs or amortization adjustments were made, management or board oversight was adequate, and actual practice is consistent with established policies and procedures. Ensure that any significant changes to the model’s parameters and/or output are approved by the appropriate management or board committee and that such changes are adequately documented.

8. Verify that disclosures are accurate with respect to the following:

- the fair value of capitalized MSAs
- the methods and significant assumptions used to estimate that fair value
- a description of MSAs for which no cost has been allocated and the reasons why it is not practicable to estimate the fair values of those MSAs and the mortgage loans (without the MSAs)
- the risk characteristics of the underlying loans used to stratify capitalized MSAs for the purposes of measuring impairment
- the activity in the valuation allowances for capitalized MSAs, including the aggregate balance of the allowances at the beginning and end of each period; aggregate additions charged and reductions credited to operations; and aggregate direct write-downs charged against the allowances

9. Obtain a list of intercompany MSAs as of the close of business for the most recent quarter-end. Determine whether a valid business purpose exists, the loans are actually sold, the entity holding the MSAs has revalued the rights correctly, and such intercompany MSAs are eliminated in consolidation. If the purpose of the transaction is merely to bolster capital levels at the bank, the practice may constitute an unsafe and unsound banking practice.

10. Review policies and practices regarding the sale of MSAs and liabilities to investors.

11. If the company sells loans with recourse, are recourse reserves established at the time of sale? Are estimated losses factored into the calculation of gain/loss on sale of loans?

12. Obtain an organizational chart to determine the individuals responsible for hedging MSAs. Review biographies to ensure that staff members responsible for this function are knowledgeable regarding accounting guidance, hedge products, and related strategies.

13. Review methods used to hedge the interest-rate and prepayment-rate risk associated with MSAs. Verify the management or board committee responsible for approving hedge instruments, the list of approved products, and the frequency and date of last review.

14. Review management reports to determine the correlation between hedge instruments and the underlying assets, the accounting treatment for hedges, related gains and losses, and the overall effectiveness of the company's hedge program. If hedge accounting treatment is being used, management and/or the company's external accountants must perform the appropriate level of due diligence and maintain adequate supporting documentation. In determining the effectiveness of the hedging program, the examiner should compare the actual results of hedge performance with the expected results.

15. Evaluate the quality of information that is communicated to senior management, the board of directors (if applicable), and the parent company's senior management and board of directors to determine whether management and directors are adequately informed regarding the financial risks associated with MSAs, amortization methods and hedging techniques, and the degree of risk inherent in the company's strategic focus and business mix with respect to the projected volume of MSAs.

3070.0.7 INTERCOMPANY TRANSACTIONS

A mortgage banking company that is organized as a nonbank subsidiary of a bank holding company often sells assets to, receives funding from, or services loans for its bank affiliates. Given the trend toward managing mortgage banking activities as a line function rather than by legal entity, such intercompany transactions have become an area of heightened supervisory concern.

In general, sections 23A and 23B of the Federal Reserve Act are designed to prevent a bank from being disadvantaged through the purchase of low-quality assets from an affiliate, the pressure to fund the majority of an affiliate's working-capital needs, and intercompany transactions that either inadequately compensate the bank or are not conducted on an arms-length basis.

3070.0.7.1 Section 23A of the Federal Reserve Act

Section 23A was enacted as part of the Banking Act of 1933 (the Glass-Steagall Act) for state

member banks and later extended to all federally insured banks.¹⁸ Section 23A defines companies that control or are under common control with the bank as affiliates of the bank. For example, the term "affiliates" includes bank holding companies and their subsidiaries as well as banks and nonbanking companies that are under common individual control.¹⁹ The two primary aspects of section 23A—quantitative restrictions and collateral requirements—are discussed next.

3070.0.7.1.1 Quantitative Restrictions

The quantitative restrictions imposed by section 23A generally limit the aggregate amount of so-called "covered transactions" to 10 percent of the bank's capital and surplus for transactions with a given affiliate, and 20 percent of the bank's capital and surplus for transactions with all of its affiliates.²⁰ Covered transactions include—

- a loan or extension of credit by a bank to an affiliate, such as a warehouse line of credit provided to the affiliate;
- the purchase of or investment in securities such as a privately issued MBS issued by an affiliate;
- the purchase of assets from an affiliate, such as a loan purchased either as an accommodation to a bank customer or for the bank's asset/liability management purposes;
- the acceptance by a bank of securities issued by an affiliate as collateral for a loan or extension of credit by the bank to any person or company (Securities might include either the stock of a publicly held affiliate or the stock from one of its officer's own business enterprises); or

18. As originally enacted, the Banking Act of 1933 covered only member banks. In 1966, Congress amended section 18(j) of the Federal Deposit Insurance Act, 12 U.S.C. 1828(j), to extend the coverage of section 23A to include insured nonmember banks. As a result, section 23A now applies to all federally insured banks. (12 U.S.C. 371c)

19. Nonbank subsidiaries of banks, as opposed to nonbank subsidiaries of bank holding companies, are not affiliates for purposes of section 23A, unless the Board of Governors of the Federal Reserve System determines otherwise. Banks that are part of a chain banking organization are subject to the restrictions of section 23A.

20. For section 23A purposes, the definition for capital and surplus includes the allowance for loan and lease losses.

- the issuance by a bank of a guaranty, acceptance, or letter of credit, including an endorsement or standby letter of credit, on behalf of an affiliate (A letter of credit might be posted by the bank to cover an excessive number of GNMA pools that lack final pool certification.).

The examiner should determine the bank's method for identifying covered transactions and applying the quantitative limits for section 23A purposes. If a covered transaction is found that exceeds these quantitative limits, either on an individual or an aggregate basis, an apparent violation of section 23A has occurred. All such apparent violations of law should be discussed with management and cited in the report.

Particular attention should be paid to inter-company asset transfers and funding arrangements to determine whether they constitute covered transactions under section 23A. In Interpretation 250.250 (12 C.F.R. 250.250)²¹ the Board determined that a member bank's purchase, without recourse, and at face value, of a mortgage note, or a participation therein, from a mortgage banking subsidiary of the parent bank holding company, which had no financial interest in the underlying asset on which it had granted credit through the note, did not involve a "loan" or "extension of credit"²² from the member bank to the seller of the mortgage note within the meaning of section 23A if—

- the member bank's commitment to purchase the loan or participation therein was obtained by the affiliate within the context of a proposed transaction or series of proposed transactions in anticipation of the affiliate's commitment to make such loan(s),
- the commitment to purchase the loan was based on the bank's independent credit evaluation of the creditworthiness of the mortgagor(s),²³ and
- there could be no blanket advance commitment by the member bank to purchase a stipulated amount of loans that bore no reference to specific proposed transactions. Accord-

ingly, the nonbank affiliate must have adequate and independent working capital to fund its operations.

The Board stated that if the bank followed these procedures, then the bank would be taking advantage of an individual investment opportunity and thus should be exempt from section 23A. However, the Board was concerned that the bank should not be allowed to set up a business relationship with any affiliate which could create the opportunity for the bank, at some time in the future, to engage in unsafe transactions because the bank felt impelled by an improper incentive to alleviate the working-capital needs of the affiliate. Accordingly, the bank's transactions with the affiliate should not be of such a volume as to create pressure on the bank to relax its sound credit judgment concerning the individual loans involved and thereby result in an inappropriate risk to the soundness of the bank.

3070.0.7.1.2 Collateral Requirements

In addition to the quantitative restrictions, certain covered transactions between a bank and an affiliate must also be secured at the time of the transaction by collateral having a certain market value. Unless otherwise exempted, covered transactions that must be adequately secured include loans or extensions of credit, guaranties, acceptances, and letters of credit issued on behalf of the affiliate.

Collateralization requirements range from 100 percent to 130 percent depending on the type of collateral used. Acceptable forms of collateral include U.S. government or U.S. government-guaranteed obligations, instruments that are acceptable at the Federal Reserve's discount window, bank deposits that are segregated into accounts specifically earmarked for this purpose, other debt instruments, stock, leases, or other real or personal property. According to an August 31, 1987, Board interpretation (at FRRS 3-1164.3), mortgage-servicing rights do not constitute a permissible form of collateral for purposes of section 23A because of (1) their inherent volatility, making it difficult to accurately value the rights, and (2) the need to secure permission to transfer servicing rights from the legal owner of the underlying mortgage.²⁴

21. See also *Federal Reserve Regulatory Service*, 3-1133.

22. Under section 23A, as amended by the Garn-St Germain Act in 1982, a member bank's purchase of a loan from its nonbank affiliate that was made to an unaffiliated party is now considered a purchase of an asset from the affiliate unless it is excepted under interpretation 250.250.

23. Dual employees may not be used to satisfy the independent credit evaluation requirement.

24. Item (2) refers to the bank's ability to sell the mortgage-servicing rights if the affiliate defaults on its loan.

An example of a covered transaction that is subject to both the quantitative restrictions and the collateral requirements of section 23A would be an overdraft in the mortgage company's checking account with an affiliate bank, which is considered an extension of credit. A line of credit by a bank to a nonbank affiliate also constitutes a covered transaction. It is important to remember that the full value of the line, not just the portion drawn down, must satisfy the quantitative and the collateral requirements of section 23A at all times. The examiner should review checking accounts and funding arrangements to ensure that the appropriate level and type of collateral is maintained. Collateral values should be monitored regularly so that depreciated or matured collateral is replaced as needed.

3070.0.7.1.3 Prohibited Transactions

In addition to the quantitative and collateral requirements, section 23A also prohibits certain affiliate transactions altogether. Most importantly, a bank and its subsidiaries may not purchase a low-quality asset (generally a classified or past-due asset) from an affiliate or accept a low-quality asset as collateral for a loan. Section 23A also requires that all covered transactions be conducted on terms that are consistent with safe and sound banking practices.

3070.0.7.1.4 Exemptions from Section 23A of the FRA

As mentioned previously, several types of intercompany transactions are exempted from the requirements of section 23A. For example, transactions between banks in which 80 percent or more of each bank's stock is owned by the same bank holding company (so-called "sister banks") are exempt from most provisions of section 23A.²⁵ Other transactions that are exempt include the following:

- deposits received from the affiliate during the ordinary course of business (checks in the process of collection)

25. Foreign banks do not qualify as sister banks for section 23A purposes. These transactions are still subject to the prohibition against the purchase of low-quality assets and to the requirement that covered transactions be on terms and conditions that are consistent with safe and sound banking practices. It should also be noted that federal savings banks do qualify for the sister-bank exemption if all banks in the corporate chain have met their fully phased-in capital guidelines, as provided for in the Home Owner's Loan Act.

- immediate credit given to an affiliate for uncollected items received in the ordinary course of business
- loans, extensions of credit, guaranties, acceptances, or letters of credit issued on behalf of the affiliate that are fully secured by obligations issued or guaranteed by the U.S. government or a segregated earmarked account in the bank
- the purchase of assets having a readily and identifiable market price at the time of purchase
- transactions that are deemed to be in the public interest and consistent with the purposes of the act

Internal controls should be in place to ensure that all transactions are adequately reviewed. Documentation should be maintained for intercompany transactions that are exempted from the requirements of section 23A.

3070.0.7.2 Section 23B of the Federal Reserve Act

The Competitive Equality Banking Act of 1987 amended the Federal Reserve Act to add a new provision, known as section 23B. In general, section 23B provides that covered transactions between a bank and its affiliates must be on terms and under circumstances, including credit standards, that are substantially the same or at least as favorable to the bank as those prevailing at the time for comparable transactions with or involving nonaffiliated companies. If no comparable transactions exist, the transaction must be on terms and under circumstances, including credit standards, that in good faith would be offered to or applied to nonaffiliated companies. A bank is also generally prohibited from purchasing as a fiduciary securities or assets from an affiliate except under specified circumstances. Finally, a bank and its affiliate may not advertise or enter into an agreement that suggests the bank is in any way responsible for the obligations of the affiliate.

Section 23B applies to any covered transaction with an affiliate, as that term is defined in section 23A. However, section 23B excludes banks from the term "affiliate." Therefore, transactions between sister banks and banks that are part of a chain banking organization are exempt from section 23B.

3070.0.7.3 Management and Service Fees

The Federal Reserve System's 1979 policy statement on diversion of bank income practices is intended to prevent excessive or unjustifiable management or service fees, as well as any other unwarranted payments or practices that, by diverting bank resources to the parent company or a nonbank affiliate, may have an adverse financial impact on a subsidiary (paying) bank (see section 2020.6). Diversion of income practices with respect to a mortgage banking company might potentially include, but are not limited to—

- servicing fees, or other payments assessed by the mortgage banking company and paid by the bank that bear no reasonable relationship to the fair market value, cost, volume, or quality of services rendered by the nonbank subsidiary in its role as servicer and/or seller;
- balances maintained by the bank primarily in support of mortgage banking company borrowings without appropriate compensation to the bank;
- prepayment of fees to the mortgage banking company for services not yet rendered;
- nonreimbursed origination fees, marketing costs, or other expenses incurred by the bank that primarily support the mortgage banking company's activities; and
- loan repurchase agreements between the bank and the mortgage banking company while the mortgage banking company is processing loans in the mortgage pipeline.

Purchase and funding agreements should adequately itemize and document the types of services provided and the basis for fees. Billing statements and other documentation should clearly evidence that fees actually charged and paid are reasonable and consistent with regulatory policy requirements as described.

3070.0.7.4 Tie-In Considerations of the BHC Act

Section 106 of the BHC Act Amendments of 1970 contains five restrictions intended to prohibit anticompetitive behavior by banks: two prohibit tying arrangements; two prohibit reciprocity arrangements; and one prohibits exclu-

sive dealing arrangements.²⁶ The tying restrictions, which have the greatest effect on industry practices, prohibit a bank from restricting the availability or service (the *tying product*) on the condition that a customer purchase another product or service offered by the bank or by any of its affiliates (the *tied product*).

Section 106 was adopted in 1970 when Congress expanded the authority of the Board to approve proposals by bank holding companies to engage in nonbanking activities. The provisions of section 106 were based on congressional concern that banks' unique role in the economy, in particular their power to extend credit, would allow them to create a competitive advantage for their affiliates in the new, nonbanking markets that they were being allowed to enter.²⁷ Congress therefore imposed special limitations on tying by banks—restrictions beyond those imposed by the antitrust laws. Section 106 is a broader prohibition; unlike the antitrust laws, a plaintiff in action under section 106 need not show that (1) the seller has market power in the market for the tying product, (2) the tying arrangement has had an anti-competitive effect in the market for the tied product, or (3) the tying arrangement has had a substantial effect on interstate commerce.

Section 106 applies only when a *bank* offers the tying product.²⁸ The Board has authority to grant exceptions to section 106, which it has used to allow banking organizations to package their products when doing so would benefit the organization and its customers without anticompetitive effects.

3070.0.7.4.1 Section 225.7(d) of Regulation Y

The Board originally extended section 106, which covers tying arrangements by *banks* only, to cover nonbank affiliates and bank holding companies. The Board rescinded this extension of the statute effective April 21, 1997. Thus, unless subject to another exemption, section 106 *prohibits*—

- a bank from telling a customer that it can only receive a loan (or a discount thereon) if it purchases another product from the bank; and

26. 12 U.S.C. 1972.

27. See S. Rep. No. 1084, 91st Cong., 2d Sess. (1970).

28. See 1997 FRB 275.

- a bank from telling a customer that it can only receive a loan (or a discount thereon) if it purchases another product from an affiliate of the bank.

Section 106 and the Board's regulation allow—

- a broker-dealer affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from an affiliated bank; and
- a broker-dealer affiliate to tell a customer that it can only receive placement services (or a discount thereon) if it obtains a loan from a nonbank affiliate.

These distinctions make sense if one keeps in mind the concern of the statute: banks (*not* nonbanks) have special power over credit and, thus, are able to induce or coerce their customers into purchasing products that they would otherwise prefer not to purchase or to purchase from someone else.²⁹

3070.0.7.4.2 *Interaffiliate Tying Arrangements Treated the Same as Intrabank Arrangements*

Section 106 contains an explicit exception (the *statutory traditional bank product exception*) that permits a bank to tie any product or service to a loan, discount, deposit, or trust service offered by that bank.³⁰ For example, a bank could condition the use of its messenger service on a customer's maintaining a deposit account at the bank. Although the statutory traditional bank product exception appears to have been effective in preserving traditional relationships between a customer and bank, the exception is limited in an important way—it does not extend to transactions involving products offered by affiliates.

The Board has adopted a *regulatory traditional bank product exception* that extends the statutory exception to transactions involving affiliates.³¹ Although the Board has previously limited the scope of this extension, interaffiliate arrangements are now exempt to the same extent as intrabank arrangements.³²

29. The Board's rule also includes a limited prohibition on tying arrangements involving electronic benefit transfer services (12 C.F.R. 225.7(d)).

30. 12 U.S.C. 1972(1)(A).

31. See 12 C.F.R. 225.7(b)(1).

32. A similar action was taken for interaffiliate reciprocity arrangements, in which section 106 permits a bank to condition the availability of a product or service on the customer's

3070.0.7.4.3 *Foreign Transactions Under Section 106*

The Board has adopted a “safe harbor” from the anti-tying rules for transactions with corporate customers that are incorporated or otherwise organized and that have their principal place of business outside the United States, or with individuals who are citizens of a foreign country and are not resident in the United States. However, the safe harbor would not protect tying arrangements in which the customer is a U.S.-incorporated division of a foreign company. Furthermore, the safe harbor would not shelter a transaction from other antitrust laws if they were otherwise applicable.³³

3070.0.7.4.4 *Technical Change*

The Board also has adopted a definition of “bank” for purposes of the anti-tying rules. The definition clarifies that any exemptions afforded to banks generally also would be applicable to credit card and other limited-purpose institutions and to U.S. branches and agencies of foreign banks.³⁴

3070.0.7.5 *Inspection Objective*

1. To evaluate transactions between a mortgage banking company organized as a direct subsidiary of a bank holding company and affiliated banks for compliance with federal laws and regulations, and related policy guidance.

3070.0.7.6 *Inspection Procedures*

1. Review management's method for monitoring and identifying section 23A and 23B covered transactions and applying the quantitative limitations. Determine whether—

- a. all covered transactions have been identified;
- b. quantitative limits are calculated correctly;
- c. covered transactions, including any overdrafts and lines of credit, meet both the

providing to the bank some product or service “related to and usually provided in connection with” a loan, discount, deposit, or trust service (12 U.S.C. 1972(1)(C)).

33. See 12 C.F.R. 225.7(b)(3).

34. See 12 C.F.R. 225.7(e).

quantitative limits and collateral requirements of section 23A; and

d. adequate collateral values have been maintained over the life of the covered transactions (For example, collateral is maintained for the full amount of any credit lines with the bank, and any depreciated or matured collateral has been replaced as required.).

2. Review purchase and funding contracts between the mortgage banking company and the bank, as well as the substance of actual transactions, to determine that—

a. asset purchases by the bank are either within the quantitative limits of section 23A or meet the exemption requirements of C.F.R. section 250.250,

b. all purchases are at fair market value and consistent with market terms as required by section 23B,

c. no low-quality assets were transferred to the bank since the previous inspection,

d. the method of compensating the bank for balances maintained and net interest income earned on warehouse loans or lines is reasonable and based on market terms.

3. Review servicing contracts between the mortgage banking company and the bank, as well as the substance of actual transactions, to determine—

a. the capacity in which the affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?);

b. the nature of all services provided; and

c. billing arrangements, the frequency of billing, the method of computation, and the basis for such fees.

4. Review the bank holding company's policy statement on the prohibition of tie-in arrangements, the adequacy of training provided to employees, and whether its respective subsidiaries are in full compliance with internal policy.

against stipulated public benefits cited in Board orders, and reviews of various activities for technical compliance.

While not specifically detailed in this guidance, the examiner may find it necessary to conduct a review of the company's ledgers and accounts that is sufficient to disclose possible impermissible activities and potential violations of law. The audit function, both internal and external, should not be solely relied on for this disclosure because the auditor's program may emphasize other areas of concern. As a nonbank subsidiary of a bank holding company, reference should be made to part 225 of the Code of Federal Regulations (such as section 225.28(b) of Regulation Y) and other relevant sections thereof.

Concurrent with the review of assets for credit quality, the examiner should undertake a review of asset-related activities for compliance with the subsidiary's approval orders. In mortgage banking firms, it is possible that the company is engaging unknowingly in certain impermissible activities, such as those described by 12 C.F.R. 225.126 (i.e., real estate brokerage, land development, real estate syndication, and property management) and those deemed impermissible by Board order (see sections 3000.0.4 and 3700.0 to 3700.12). The Board of Governors has ruled (1972 FRB 429) that the purchase and development of land for sale to third parties constitutes land development by a nonbank subsidiary. However, the completion of a foreclosed property to facilitate the recovery of funds advanced under the loan appears to be permissible, provided that the additional work brings the project underway at foreclosure up to a saleable condition. The Board has also ruled that property management for third parties is impermissible (1972 FRB 652). However, property management as a fiduciary, for operating premises of affiliates, or for properties acquired for debts previously contracted (DPC) is permissible. In addition to the other impermissible activities, engaging in real estate joint ventures has also been ruled impermissible. If such impermissible activities are found, they represent violations and should be appropriately treated. The servicing agreements should be reviewed to determine that no additional liabilities, real or contingent, are imposed on the company beyond its responsibilities as a servicing agent.

The usual source of growth in the servicing portfolio is the company's own origination activity. However, it is not uncommon for a company to supplement this growth with bulk purchases of serviced mortgages from other companies. Under certain circumstances, usu-

3070.0.8 REGULATION Y COMPLIANCE

During the course of the on-site inspection, the examiner is expected to conduct sufficient tests and inquiries to determine whether the company is in compliance with Regulation Y and the act. Such tests and inquiries would include a listing of company offices which can be compared with the approved offices, comparisons of credit-related insurance policies and rate schedules

ally relating to the relative percentage of the seller's portfolio, these transactions may not comply with 12 C.F.R. 225.132. Since these transactions may represent the effective acquisition of a going concern subject to prior approval by the Federal Reserve System, "servicing portfolio" acquisitions should be reviewed for compliance.

Section 225.22(d)(1) of Regulation Y provides an exemption from required Board approval for DPC property acquired in good faith and divested within two years of acquisition. The Board may permit additional extensions that can result in the property being held by a bank holding company for a total of 10 years, if the property has value and marketability characteristics similar to real estate. In conjunction with the review of real estate owned, the examiner should determine if any subsidiary holds title to any property that should have been disposed of within the time limits of Regulation Y, the book value of which has been reduced to zero and the property is not disclosed on the balance sheet. See section 3030.0 "Acquisition of DPC Shares or Assets," for additional information on DPC property acquired.

Legal counsel representing a BHC requested an opinion as to whether certain proposed flood zone-determination activities, to be conducted through a majority-owned (50 percent) joint venture company, would be within the scope of activities related to extending credit as defined in section 225.28(b)(2) of Regulation Y. The BHC proposes to engage in a variety of lending-related activities, including providing real estate appraisals and flood zone determinations.

The Board has determined, in section 225.28(b)(2) of Regulation Y, that it is permissible for bank holding companies to engage in "[a]ny activity usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit, as determined by the Board."³⁵ (See 12 C.F.R. 225.28(b)(2).) The

Board also determined by regulation that performing real estate appraisals is an activity that is usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit. (See 12 C.F.R. 225.28(b)(2)(i).) The Board had not specifically addressed whether providing flood zone determinations is an activity that is usual in connection with lending activities.

The proposed flood zone-determination services are considered to be a necessary aspect of mortgage lending in the United States. As noted, federal law prohibits a federally regulated lender from making, increasing, extending, or renewing a loan that is secured by improved real estate or a mobile home located in an area designated by the Federal Emergency Management Agency (FEMA) as a special flood hazard area unless the borrower obtains flood insurance.³⁶ (See 12 C.F.R. 208.25(c).) Further, federal law also provides that if a federally regulated lender determines, at any time during the life of a loan, that the improved real estate or mobile home securing the loan is located in a special flood hazard area and is not covered by flood insurance, the lender must instruct the borrower to obtain flood insurance and must purchase flood insurance on the borrower's behalf if the borrower fails to promptly purchase the required insurance. (See 12 C.F.R. 208.25(g).)

In addition, federal law requires the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation, and the Government National Mortgage Association (the government-sponsored enterprises or GSEs) to have procedures reasonably designed to ensure that flood insurance is in place where required at the initiation of, and during the lives of, the mortgage loans they purchase. (See 12 U.S.C. 4012a(b).) The GSEs meet this requirement by requiring lenders that sell loans to them, and companies that service loans for them, to monitor on an ongoing basis the flood zone status of any loans sold to, or serviced for, the GSEs. To comply with the requirements of federal law and the GSEs, mortgage lenders must obtain an initial flood zone determination before the origi-

35. The Gramm-Leach-Bliley Act (the GLB Act) amended the Bank Holding Company Act to limit bank holding companies that are not financial holding companies to engaging only in "activities which had been determined by the Board by regulation or order under this paragraph as of the day before the date of the enactment of the Gramm-Leach-Bliley Act on November 12, 1999, to be so closely related to banking as to be a proper incident thereto (subject to such terms and conditions contained in such regulation or order, unless modified by the Board)" (12 U.S.C. 1843(c)(8)). Before November 12, 1999, the Board had determined that "[a]ny activity usual in connection with making, acquiring, brokering, or servicing loans or other extensions of credit, as determined by the Board" was closely related to banking. Accordingly, the Board retains authority after the GLB Act to define the scope of this section 4(c)(8) activity and to modify the terms and conditions that apply to the activity.

36. Statutory authority to issue flood insurance policies under the National Flood Insurance Program (NFIP) expired on December 31, 2002, after Congress adjourned without extending the FEMA authority. On January 13, 2003, the National Flood Insurance Program Reauthorization Act was approved, extending the authorization of the NFIP to December 31, 2003; this authorization was also made retroactive to December 31, 2002.

nation of each mortgage loan and must take steps to monitor, throughout the life of the loan, the flood zone status of any improved real estate or mobile home collateral securing the loan.³⁷

The joint venture company proposes to provide initial flood zone determinations to mortgage lenders and to provide mortgage lenders with ongoing flood zone-tracking services with respect to their mortgage loans. The company's activities would be limited to making determinations as to whether particular parcels of real estate are in designated flood zones, preparing the FEMA standard flood zone-determination form, and communicating flood zone determinations to customers. The company committed to not be involved in placing, underwriting, or issuing flood insurance or in the collection of flood insurance premiums. The proposed flood zone determinations would be provided in connection with providing real estate appraisals and as a separate service. In addition, the joint venture company may assist customers who wish to request that FEMA amend its flood maps to remove a property from a designated special flood hazard area.

The proposed flood zone-determination services were found to be an essential part of mortgage lending, designed to assist mortgage lenders in complying with the requirements of federal law and the GSEs. The services generally would be provided to mortgage lenders,³⁸ thus usual in connection with making mortgage loans. Board staff therefore issued the opinion on July 9, 2002, concluding that the proposed flood zone-determination services are within the scope of permissible activities related to extending credit under section 225.28(b)(2) of Regulation Y (12 C.F.R. 225.28(b)(2)).

ing the material available at the parent company level, including the audit review, a decision whether or not to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by nonaccrual and delinquency reports, the level of risk exposure to the organization (see section 4030.2), and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected that would require a visit, even though a satisfactory condition had been determined during the previous inspection. Mortgage subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected. All significant mortgage banking subsidiaries should be fully inspected at least once every three years.

3070.0.9 ON-SITE INSPECTION OF MORTGAGE BANKING SUBSIDIARIES

Scheduling of on-site inspections of mortgage banking nonbank subsidiaries of bank holding companies should be done in accordance with the Board policy for frequency and scope of inspections. (See section 5000.0.2.) After review-

37. Lenders are specifically permitted to charge a reasonable fee to borrowers for flood zone determinations and life-of-the-loan tracking. For example, see 12 C.F.R. 208.25(h).

38. It was represented that the joint venture company would only market its services to mortgage lenders and that it would rarely provide services to nonlenders.

3070.0.11 APPENDIX A—FIRST DAY LETTER

FEDERAL RESERVE BANK
OF BOSTONP. O. BOX 2076
BOSTON, MASSACHUSETTS 02106-2076

June 15, 19x9

Mr. John Doe
President
XYZ Mortgage Bank Corporation
Boston, Massachusetts 02107

Dear Mr. Doe:

In conjunction with the inspection of the XYZ Bank Holding Company, we plan to begin an inspection of XYZ Mortgage Bank Corporation on July 15, 19x9. To facilitate this inspection, please provide a copy of or make available the following information relative to your organization's mortgage banking activities. Information should be as of xx/xx/xx and should be delivered to the examiner-in-charge as soon as it is available. Whenever possible, standardized management reports should be provided. Please include the name and telephone extension of the appropriate persons to contact, by department, if additional information is necessary.

Board Oversight and Management

1. Provide a listing of the mortgage banking company's board of directors that includes each individual's name, place of employment, title and position, age, management responsibilities (if any), and the length of time he or she has served on the board.
2. List significant management and board committees and have minutes from these meetings available for examiner review. Provide a copy of standardized reports that are provided before each meeting.
3. Provide an organizational chart that highlights individuals who are responsible for the following functional areas: production, warehousing and funding, marketing, servicing, finance, mortgage-servicing asset (MSA) valuations, internal audit, quality control, loan review, compliance, and legal. Include biographies and salary information.
4. Describe any organizational changes that have taken place at the mortgage banking company since xx/xx/xx, including any mergers, acquisitions, or consolidation of mortgage banking activities. Describe any management changes at or above the senior vice president level and provide details on management's new responsibilities.
5. Provide a copy of standardized management reports that are used to monitor compliance with established policies, operating procedures, and controls within each functional area.
6. Provide a copy of the mortgage banking company's most recent operating budget and its long-term strategic plan. Evaluate how interest-rate movements, competition, and other external factors have affected product mix, staffing levels, and the allocation of capital.
7. Describe the internal control environment and the internal control programs that are in place within the mortgage banking company. Have available for examiner review the following reports that were conducted since xx/xx/xx:
 - a. internal and external audits
 - b. loan reviews

- c. internal control and compliance audits completed by or on behalf of agencies such as HUD, FHA, GNMA, FannieMae, FHLMC, state agencies, and private investors

Also have available management's response to each report and the most recent copy of any management reports that monitor the status of outstanding issues or problems.

8. Provide an organization chart for the *internal audit* department. Indicate the scope and frequency of internal audits for the mortgage banking company, highlighting any weaknesses or problem areas noted. Upon request, make internal audit workpapers available for examiner review.
9. Provide an organization chart for the *loan review* department. Indicate the scope and frequency of loan reviews for the mortgage banking company, highlighting any weaknesses or problem areas noted. Upon request, make loan review workpapers available for examiner review.
10. Provide details on the nature and scope of the quality control program for loans originated and/or serviced for investors. Include an organization chart for the unit(s) involved in such activities, details on any outsourcing programs used since the previous inspection, copies of quality control reports submitted to senior management, and management responses.
11. Describe the method for ensuring compliance with state and federal laws and regulations. Make available for examiner review the procedures manual, work programs, and workpapers compiled by the person/department responsible for compliance.
12. Describe the insurance coverage in effect for the mortgage banking company and its officers and the date it was last reviewed by the board of directors.
13. Recap all mortgage banking–related legal claims/lawsuits in excess of \$1 million. Indicate the nature of any legal reserve that is maintained and the method used to assess reserve adequacy.
14. Describe the system for logging, tracking, and responding to customer complaints. The customer complaint file should be made available for examiner review while on-site.
15. Provide a copy of the disaster recovery plan and describe safeguards in place to protect loan documents and data processing input records.

Production and Correspondent Lending Data

16. Provide detailed organization charts for departments within the company which relate to the production function (i.e., retail originations, wholesale purchases, processing, underwriting, closing, shipping).
17. Provide information on the total number and dollar amount of loans generated by the following sources during the two most recent fiscal years and the interim year-to-date period. For purchased loans, please specify the method of purchase (i.e., bulk versus flow), program name, and amount subject to recourse back to either the seller or the investor):
 - a. originated by the mortgage banking company
 - b. purchased from affiliates
 - c. purchased from nonaffiliated third parties
18. Provide written policies and procedures manuals that describe traditional and nontraditional mortgage products, underwriting standards, closing and funding procedures, exception reporting practices, management and employee compensation methods, and training programs for loan production personnel. State methods used to establish ongoing compliance with written policies and procedures and provide copies of relevant management exception reports.
19. Describe the credit approval process used for in-house originations. Include information on rate commitment options extended to the borrower, the average length of the commitment period,

controls that are in place to monitor fallout caused by processing backlogs, and procedures for expired commitments.

20. Provide details on the correspondent lending program, including a list of approved institutions and copies of the most recent loan-quality reports. Describe the credit review process before purchase and any controls that are in place to protect the mortgage banking company against future losses on loans purchased from affiliates and from correspondents.
21. Determine whether rate-locks are provided to correspondents on best effort production programs. What methods are used to verify reported loan fallout?
22. Provide information on the average income and cost per origination and compare with industry standards. Describe the method of accounting used for origination fees and other related noninterest income and expenses.
23. If the mortgage banking company is a subsidiary of a state member bank or sells loans to a bank affiliate that is subject to Regulation O, furnish a list of extensions of credit to “an executive officer, director, or principal shareholder” (as defined in section 215.2 of Regulation O) of—
 - a. the state member bank;
 - b. a bank holding company of which the state member bank is a subsidiary;
 - c. any other subsidiary of that bank holding company;
 - d. a company controlled by an insider, as defined by Regulation O; and
 - e. a political or campaign committee that benefits or is controlled by an insider as defined by Regulation O.

For all such extensions of credit, include the amount, date the loan(s) was originated or renewed, interest rate, collateral requirements, total amount of loans outstanding to that individual or company, and date of approval by the board of directors. Also include the aggregate amount of loans outstanding to all such insiders as of the inspection date in relation to the bank’s unimpaired capital and unimpaired surplus as defined in Regulation O. (See subsection 2050.0.3.2.)

Marketing and Hedging Data

24. Provide detailed organization charts for departments within the company that relate to the marketing and hedging functions. Describe management’s roles and responsibilities with respect to the sale of loans in the secondary market, asset securitization, funding, liquidity risk management, interest-rate risk management, and interaction with the asset/liability management function at the parent company.
25. Provide a copy of written policies and procedures used to hedge interest-rate risk associated with the pipeline and closed-loan warehouse. Describe any parameters and limits that are in place and provide a list of securities dealers with whom management is authorized to conduct business.
26. Provide management reports on pipeline and closed-loan (warehouse) inventory volume, mix, yield, age, and turnover as of the inspection date. Describe the method used to project fallout and any models that are used to determine the sensitivity of the pipeline to interest-rate fluctuations.
27. Indicate the methods used to securitize loans for sale in the secondary market, including the use of third-party guaranties and other forms of credit enhancement. Are securities generally sold or retained on the balance sheet?
28. Provide information on the number and volume of securities that lacked final pool certification as of the inspection date. State whether this volume is in compliance with investor guidelines. If

applicable, indicate whether the requirements for obtaining a letter of credit or other guaranty have been satisfied.

Servicing Data

29. Provide a detailed organization chart for the servicing department.
30. List subservicers and vendors who are employed to perform servicing functions. Briefly describe the nature of the services provided.
31. Indicate whether any contracts with subservicers and/or vendors have been terminated for cause since the prior inspection.
32. Provide the monthly servicing management reports since the prior inspection, including the number of loans serviced, dollar volume, and composition of the servicing portfolio in terms of product mix, average loan size, weighted average coupon rates, weighted average maturities, geographic location, and delinquencies and foreclosures.
33. Provide a list of investors for whom servicing was performed as of the most recent quarter-end. Identify any recourse or repurchase provisions and/or forbearance requirements.
34. State whether any investors have terminated servicing contracts with the mortgage company and/or its affiliates for cause since the prior inspection, or if any are likely to be terminated in the near future.
35. Provide a list of all major bulk purchases and sales of servicing since the prior inspection. Identify the terms of each sale and any resulting gains or losses.
36. Provide a list and aging of all outstanding advances to investors as of the date of inspection.
37. Provide access to the servicing policies and procedures manual. Indicate the frequency with which manuals are updated. How does management ensure that subservicers and vendors comply with these same policies and procedures?
38. Provide a servicing-fee schedule (in basis points) for conventional, government, and nontraditional loans serviced for third parties.
39. Provide copies of management reports used to track portfolio runoff.
40. Provide a loan delinquency report segmented into 30, 60, 90, 120, and 180 foreclosure categories. Indicate the volume and number of loans in each segment by loan type. Also include information on the number and dollar volume of delinquent loans that were purchased out of investor pools.
41. Detail the number and dollar volume of other real estate (ORE) parcels segregated by company-owned and investor-owned. Provide a list of loans in foreclosure for which action has been delayed, if applicable.
42. Provide access to the customers' complaint file so that examiners can review it while on-site.

Financial Data

43. Provide copies of the Report of Condition and Income and/or Y-series report that was filed by the mortgage banking company for the two previous fiscal years and the most recent interim period.
44. Provide an internally prepared balance sheet and income statement that reconcile with the most recent Report of Condition and Income and/or Federal Reserve Board Y-series report.

45. Provide the latest published financial statements, if applicable, including the annual report, SEC 10K, 10Qs, and any press releases.
46. Provide copies of the accounting policies pertaining to mortgage loans, securities, and other assets held for sale and held for investment. Also provide copies of management reports that monitor compliance with SFAS No. 115 (securities), the current SFAS No. 65 (loans), SFAS No. 125 (mortgage-servicing assets), and internal policies as of the close of business of the most recent quarter.
47. Provide details on all formal and informal funding mechanisms, including but not limited to repurchase agreements, commercial paper programs, and debt issuance facilities. Indicate the counterparties, where applicable; the amount uncommitted; and the amount outstanding under each facility as of the close of the most recent quarter. Provide copies of all formal and informal written agreements.
48. Provide copies of credit agreements for all funding lines from affiliated and nonaffiliated institutions. Describe methods used to monitor the credit quality of all funding sources. The following information should be included:
 - a. lending bank (include copies of confirmation letters)
 - b. total credit line
 - c. amount in use as of the inspection date
 - d. amount available for use and by whom
 - e. expiration date
 - f. compensating balance and/or fee arrangements
 - g. purpose
 - h. whether the credit lines are contractual obligations of the lenders
 - i. reciprocity arrangements, if any
 - j. collateral requirements
 - k. legal opinions evidencing compliance with sections 23A and 23B of the Federal Reserve Act, as amended
49. Provide copies of any contingency planning documents that outline alternative courses of action should the condition of traditional funding sources deteriorate.
50. Provide a copy of any standardized financial presentations made to the executive management team and to the board of directors.
51. Provide a copy of standardized management reports used to measure and track the quality of originated, purchased, and serviced assets. Include an aging report that identifies loans that are past due 30, 60, 90, 120, and 180 or more days and indicate whether such loans are *held for sale*, *held for investment*, or *serviced for investors*.
52. Provide a copy of internal policies that apply to loans held for investment. Indicate the date each loan that was on the books as of the most recent quarter-end was transferred to this account, its amortized cost, market value, and any write-downs or adjustments to yield at the date of transfer. Indicate the person responsible for reviewing these loans for collectibility, the frequency of such reviews, and any adjustments or write-downs taken over the past year.
53. Provide detail pertaining to the transfer or sale of assets between the nonbank mortgage banking company and affiliated entities since the last inspection and that supports the FR Y-8 Reports. Also provide related documentation evidencing methods for asset valuation and credit-quality determination.
54. Provide detail on the allowance for loan and lease losses, contra asset valuation allowances, and

other reserve accounts as of xx/xx/xx (fiscal) and xx/xx/xx (interim). For each account in use, provide a copy of the most recent analysis and a description of the applicable loan and other losses provisions reserving methodology.

55. Provide a copy of the company's policy with respect to real estate appraisals.
56. Provide a copy of management reports that are used for liquidity, funding, and asset/liability management. If these activities are coordinated with affiliate bank or parent bank holding company personnel, provide copies of the information that is routinely provided.
57. Indicate the method for assessing capital adequacy at the mortgage company level. Provide a copy of the company's capital and dividend policies, as well as a list of dividends paid to shareholders during the two previous fiscal years and the most recent interim period. Are any changes in the level of dividends planned or anticipated?

Mortgage-Servicing Assets

58. Provide an organization chart highlighting those areas and individuals responsible for the recording, measurement, and impairment testing for originated and purchased mortgage-servicing rights (MSAs).
59. Provide an inventory listing of all MSAs as of the close of business of the most recent quarter.
60. Discuss the various loan-origination and -purchase programs that give rise to MSAs; the method for calculating and communicating the price paid to correspondents and brokers for service release premiums; whether MSAs are recorded on table-funded loans; and the details on any bulk purchases since the previous inspection, including the price paid and yield realized.
61. Discuss the various loan-sale programs that give rise to MSAs, the method for calculating and recording the initial value of MSAs.
62. Provide a copy of detailed written policies and procedures regarding the initial recording, amortization, and periodic revaluation and impairment testing for MSAs. Indicate the management and/or board committee responsible for approving such policies and the date of last approval.
63. Provide detailed information on any valuation models used for MSA revaluations and a copy of the output as of the most recent quarter-end. Indicate whether such revaluations are performed in-house or by an outside vendor and the frequency of such revaluations.
64. Reconcile fair market values of MSAs to their respective book values as of the most recent quarter-end. Provide a copy of management reports and related journal entries used to record amortization adjustments and/or write-downs.
65. Provide copies of worksheets used to calculate the amount of MSAs included in Tier 1 capital for regulatory reporting purposes as of the most recent quarter-end.
66. Furnish copies of any management reports or presentations to the board of directors or a committee thereof regarding the risk characteristics of MSAs, business risk analysis, and methods used to hedge the interest-rate and prepayment-rate risks associated with capitalized MSAs.
67. Provide an organization chart highlighting those areas and individuals responsible for hedging the interest-rate and prepayment-rate risk associated with MSAs.
68. Provide information on any financial instruments used to hedge interest-rate and prepayment-risk associated with MSAs. Include a detailed prospectus on any customized hedge products that are purchased from investment bankers and a statement from either internal or external accountants on whether such instruments qualify for hedge accounting treatment under SFAS No. 80.

69. Provide a copy of management reports that identify the number of contracts or instruments used, their current market value, and the degree of correlation between the hedge instrument and the underlying MSAs being hedged. Such reports should demonstrate the effectiveness of the hedge under varying market conditions.
70. Provide information on the number and dollar volume of servicing rights sold during the most recent fiscal year and interim period.
71. If mortgage-servicing assets are sold, provide information on the number and dollar volume sold during the most recent fiscal year and interim period.

Intercompany Transactions

72. Provide an organizational chart on a legal-entity basis that includes the bank holding company and all directly held bank and nonbank affiliates.
73. If the mortgage banking company is a direct nonbank subsidiary of the bank holding company, describe the method for identifying transactions that constitute “covered transactions” under sections 23A and 23B of the Federal Reserve Act, as well as the method for applying quantitative limits for section 23A and 23B purposes.
74. Provide a current listing of collateral that is maintained for covered transactions. Indicate whether collateral is maintained for the full amount of any credit lines with the bank and whether any depreciated or matured collateral has been replaced since the previous review.
75. Provide copies of any purchase and funding contracts between the mortgage banking company and affiliated bank(s). Please address whether any or all of the following conditions are met and/or provide written support, where applicable:
 - a. asset purchases by the bank have been reviewed by management and are either within the quantitative limits of section 23A or meet the exemption requirements of section 250.250
 - b. all purchases are at fair market value and consistent with market terms as required by section 23B
 - c. no low-quality assets were transferred to a bank affiliate since the previous inspection
 - d. the method of compensating bank affiliates for balances maintained by the parent company or its nonbank subsidiaries and the net interest income earned on warehouse loans or lines is reasonable and based on market terms
76. Provide copies of any servicing contracts between the mortgage banking company and affiliate bank(s). If not so stated, indicate the following information:
 - a. the capacity in which the affiliate is acting (for example, is it acting as principal on its own behalf or as an agent for the affiliate bank?)
 - b. the nature of all services provided
 - c. billing arrangements, the frequency of billing, the method of computation and the basis for such fees
 - d. the date of last review and approval by the mortgage banking company’s board of directors
77. Provide a copy of the bank holding company’s policy statement on the prohibition of tie-in arrangements, a description of training that is provided to employees in this area, and an attestation as to whether the nonbank subsidiary is in full compliance with internal policy.
78. If the mortgage banking company charges management or other fees, describe the nature of the

fees, the method of computation for such fees, and the settlement procedures. Include a listing of fees charged for the prior two fiscal years and the most recent interim period.

79. Provide a copy of the bank holding company's intercompany tax allocation policy. Indicate the amount and timing of intercompany tax payments and credits received during the two previous fiscal years and the most recent interim period. If credits are due, please indicate the amount owed to the subsidiary and the date the intercompany receivable originated.

Sincerely yours,

Vice President,
Federal Reserve Bank of Boston

3070.0.12 APPENDIX B—ACCOUNTING LITERATURE

The following is a list of generally accepted accounting principles (GAAP) governing the mortgage banking industry that are in the form of accounting standards and interpretations. Accounting standards may change over time. Current accounting literature should be reviewed with management during each inspection.

Statements of Financial Accounting Standards (SFAS)

SFAS No. 5, “Accounting for Contingencies”

SFAS No. 65, “Accounting for Certain Mortgage Banking Activities,” as amended

SFAS No. 77, “Reporting by Transferors for Transfers of Receivables with Recourse”

SFAS No. 80, “Accounting for Futures Transactions”

SFAS No. 91, “Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases”

SFAS No. 115, “Accounting for Certain Investments in Debt and Equity Securities”

SFAS No. 125, “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities”

FASB Technical Bulletin

Technical Bulletin No. 87-3, “Accounting for Mortgage Servicing Fees and Rights”

Emerging Issues Task Force (EITF)

Issue No. 85-13, “Sale of Mortgage Service Rights on Mortgages Owned by Others”

Issue No. 85-26, “Measurement of Servicing Fee under FASB Statement No. 65—When a Loan Is Sold with Servicing Retained”

Issue No. 85-28, “Consolidation Issues Relating to Collateralized Mortgage Obligations”

Issue No. 86-38, “Implications of Mortgage Prepayments on Amortization of Servicing Rights”

Issue No. 86-39, “Gains from the Sale of Mortgage Loans with Servicing Rights Retained”

3070.0.13 APPENDIX C—REGULATORY GUIDANCE

The following is a list of sections in this manual that examiners may find particularly useful in the review of mortgage banking activities. Regulatory guidance also evolves over time. This list is not all inclusive.

2010.0.1	Policy Statement on the Responsibility of Bank Holding Companies to Act as Sources of Strength to Their Subsidiary Banks
2020.0–.7	Intercompany Transactions
2050.0	Extensions of Credit to BHC Officials
2060.0–.6	Management Information Systems
2065.2	Determining an Adequate Level for the Allowance for Loan and Lease Losses
2080.05	Bank Holding Company Funding and Liquidity
2080.0–.3	BHC Funding Practices
2125.0	Trading Activities of Banking Organizations
2126.0	Nontrading Activities of Banking Organizations
2126.1	Investment Securities and End-User Derivatives Activities
2128.02	Asset Securitization
2130.0	Futures, Forward, and Option Contracts
2150.0	Repurchase Transactions
3070.0	Section 4(c)(8)—Mortgage Banking
3080.0	Section 4(c)(8)—Servicing Loans
4000 sections	Financial Analysis
4030.0.2	Nonbanks (Analysis of Financial Condition and Risk Assessment)
4070.0	BHC Rating System

Section 4(c)(8) of the BHC Act (Nontraditional Mortgages— Associated Risks) Section 3070.3

The Federal Reserve and the other federal banking and thrift regulatory agencies (the agencies)¹ issued the Interagency Guidance on Nontraditional Mortgage Product Risks on September 29, 2006. The guidance addresses both risk-management and consumer disclosure practices that institutions² should employ to effectively manage the risks associated with closed-end residential mortgage products that allow borrowers to defer repayment of principal and, sometimes, interest (referred to as nontraditional mortgage loans). (See SR-06-15.)

Residential mortgage lending has traditionally been a conservatively managed business with low delinquencies and losses and reasonably stable underwriting standards. However, during the past few years consumer demand has been growing, particularly in high-priced real estate markets, for nontraditional mortgage loans. These mortgage products include such products as “interest-only” mortgages, where a borrower pays no loan principal for the first few years of the loan, and “payment-option” adjustable-rate mortgages (ARMs), where a borrower has flexible payment options with the potential for negative amortization.³

While some institutions have offered nontraditional mortgages for many years with appropriate risk management and sound portfolio performance, the market for these products and the number of institutions offering them has expanded rapidly. Nontraditional mortgage loan products are now offered by more lenders to a wider spectrum of borrowers; these borrowers may not otherwise qualify for more traditional mortgage loans and may not fully understand the risks associated with nontraditional mortgage loans.

Many of these nontraditional mortgage loans are underwritten with less stringent income and

asset verification requirements (reduced documentation) and are increasingly combined with simultaneous second-lien loans.⁴ Such risk layering, combined with the broader marketing of nontraditional mortgage loans, exposes financial institutions to increased risk relative to traditional mortgage loans.

Given the potential for heightened risk levels, management should carefully consider and appropriately mitigate exposures created by these loans. To manage the risks associated with nontraditional mortgage loans, management should—

- ensure that loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower’s repayment capacity;
- ensure that consumers have sufficient information to clearly understand loan terms and associated; and
- recognize that many nontraditional mortgage loans, particularly when they have risk-layering features, are untested in a stressed environment. As evidenced by experienced institutions, these products warrant strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses (ALLL) that reflects the collectibility of the portfolio.

The Federal Reserve expects institutions to effectively assess and manage the risks associated with nontraditional mortgage loan products.⁵

Institutions should use the guidance to ensure that risk-management practices adequately address these risks. Risk-management processes, policies, and procedures in this area will be carefully scrutinized. Institutions that do not adequately manage these risks will be asked to take remedial action.

This guidance focuses on the higher risk elements of certain nontraditional mortgage products, not the product type itself. Institutions with sound underwriting, adequate risk management, and acceptable portfolio performance will not be subject to criticism merely for offering such products.

4. Refer to the appendix for additional information on reduced documentation and simultaneous second-lien loans.

5. Refer to the Interagency Guidelines Establishing Standards for Safety and Soundness in 12 C.F.R. 208, appendix D-1.

1. The Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Thrift Supervision, and the National Credit Union Administration.

2. The term *institution(s)*, as used in this interagency guidance, applies to Federal Reserve-supervised state member banks and their subsidiaries, bank holding companies, and the nonbank subsidiaries of bank holding companies. It also refers to all other *federally supervised* banks and their subsidiaries, savings associations and their subsidiaries, savings and loan holding companies and their subsidiaries, and credit unions.

3. Interest-only and payment-option ARMs are variations of conventional ARMs, hybrid ARMs, and fixed-rate products. Refer to the appendix at 3060.3.4 for additional information on interest-only and payment-option ARM loans. This guidance does not apply to reverse mortgages; home equity lines of credit (HELOCs), other than as discussed in the Simultaneous Second-Lien Loans section; or fully amortizing residential mortgage loan products.

3070.3.1 NONTRADITIONAL LOAN TERMS AND UNDERWRITING STANDARDS

When an institution offers nontraditional mortgage loan products, underwriting standards should address the effect of a substantial payment increase on the borrower's capacity to repay when loan amortization begins. Underwriting standards should also comply with the Federal Reserve's real estate lending standards and appraisal regulations and associated guidelines.⁶

Central to prudent lending is the internal discipline to maintain sound loan terms and underwriting standards despite competitive pressures. Institutions are strongly cautioned against ceding underwriting standards to third parties that have different business objectives, risk tolerances, and core competencies. Loan terms should be based on a disciplined analysis of potential exposures and compensating factors to ensure that risk levels remain manageable.

3070.3.1.1 Qualifying Borrowers for Nontraditional Loans

Payments on nontraditional loans can increase significantly when the loans begin to amortize. Commonly referred to as *payment shock*, this increase is of particular concern for payment-option ARMs where the borrower makes minimum payments that may result in negative amortization. Some institutions manage the potential for excessive negative amortization and payment shock by structuring the initial terms to limit the spread between the introductory interest rate and the fully indexed rate. Nevertheless, an institution's qualifying standards should recognize the potential impact of payment shock, especially for borrowers with high loan-to-value (LTV) ratios, high debt-to-income (DTI) ratios, and low credit scores. Recognizing that an institution's underwriting criteria are based on multiple factors, an institution should consider these factors jointly in the qualification process and potentially develop a range of reasonable tolerances for each factor. However, the criteria should be based upon prudent and appropriate underwriting standards, considering both the borrower's characteristics and the product's attributes.

6. Refer to 12 C.F.R. 208.51 subpart E and appendix C and 12 C.F.R. 225 subpart G.

For all nontraditional mortgage loan products, an institution's analysis of a borrower's repayment capacity should include an evaluation of the borrower's ability to repay the debt by final maturity at the fully indexed rate,⁷ assuming a fully amortizing repayment schedule.⁸ In addition, for products that permit negative amortization, the repayment analysis should be based upon the initial loan amount plus any balance increase that may accrue from the negative amortization provision.⁹

Furthermore, the analysis of repayment capacity should avoid overreliance on credit scores as a substitute for income verification in the underwriting process. The higher a loan's credit risk, either from loan features or borrower characteristics, the more important it is to verify the borrower's income, assets, and outstanding liabilities.

3070.3.1.2 Collateral-Dependent Loans

Institutions should avoid the use of loan terms and underwriting practices that may heighten

7. The fully indexed rate equals the index rate prevailing at origination plus the margin that will apply after the expiration of an introductory interest rate. The index rate is a published interest rate to which the interest rate on an ARM is tied. Some commonly used indices include the 1-Year Constant Maturity Treasury Rate (CMT), the 6-Month London Interbank Offered Rate (LIBOR), the 11th District Cost of Funds (COFI), and the Moving Treasury Average (MTA), a 12-month moving average of the monthly average yields of U.S. Treasury securities adjusted to a constant maturity of one year. The margin is the number of percentage points a lender adds to the index value to calculate the ARM interest rate at each adjustment period. In different interest-rate scenarios, the fully indexed rate for an ARM loan based on a lagging index (for example, the MTA rate) may be significantly different from the rate on a comparable 30-year fixed-rate product. In these cases, a credible market rate should be used to qualify the borrower and determine repayment capacity.

8. The fully amortizing payment schedule should be based on the term of the loan. For example, the amortizing payment for a loan with a 5-year interest-only period and a 30-year term would be calculated based on a 30-year amortization schedule. For balloon mortgages that contain a borrower option for an extended amortization period, the fully amortizing payment schedule can be based on the full term the borrower may choose.

9. The balance that may accrue from the negative amortization provision does not necessarily equate to the full negative amortization cap for a particular loan. The spread between the introductory or "teaser" rate and the accrual rate will determine whether a loan balance has the potential to reach the negative amortization cap before the end of the initial payment-option period (usually five years). For example, a loan with a 115 percent negative amortization cap but only a small spread between the introductory rate and the accrual rate may reach a moderate 109 percent maximum loan balance before the end of the initial payment-option period, even if only minimum payments are made. The borrower could be qualified based on this lower maximum loan balance.

the need for a borrower to rely on the sale or refinancing of the property once amortization begins. Loans to individuals who do not demonstrate the capacity to repay, as structured, from sources other than the collateral pledged are generally considered unsafe and unsound.¹⁰ Institutions that originate collateral-dependent mortgage loans may be subject to criticism, corrective action, and higher capital requirements.

3070.3.1.3 Risk Layering

Institutions that originate or purchase mortgage loans that combine nontraditional features, such as interest-only loans with reduced documentation or a simultaneous second-lien loan, face increased risk. When features are layered, an institution should demonstrate that mitigating factors support the underwriting decision and the borrower's repayment capacity. Mitigating factors could include higher credit scores, lower LTV and DTI ratios, significant liquid assets, mortgage insurance, and other credit enhancements. While higher pricing is often used to address elevated risk levels, it does not replace the need for sound underwriting.

3070.3.1.4 Reduced Documentation

Institutions increasingly rely on reduced documentation, particularly unverified income, to qualify borrowers for nontraditional mortgage loans. Because these practices essentially substitute assumptions and unverified information for analysis of a borrower's repayment capacity and general creditworthiness, they should be used with caution. As the level of credit risk increases, the Federal Reserve expects an institution to more diligently verify and document a borrower's income and debt-reduction capacity.

Clear policies should govern the use of reduced documentation. For example, stated income should be accepted only if there are mitigating factors that clearly minimize the need for direct verification of repayment capacity. For many borrowers, institutions generally should be able to readily document income using recent W-2 statements, pay stubs, or tax returns.

3070.3.1.5 Simultaneous Second-Lien Loans

Simultaneous second-lien loans reduce owner equity and increase credit risk. Historically, as combined loan-to-value ratios rise, so do defaults. A delinquent borrower with minimal or no equity in a property may have little incentive to work with a lender to bring the loan current and avoid foreclosure. In addition, second-lien HELOCs typically increase borrower exposure to increasing interest rates and monthly payment burdens. Loans with minimal or no owner equity generally should not have a payment structure that allows for delayed or negative amortization without other significant risk-mitigating factors.

3070.3.1.6 Introductory Interest Rates

As a marketing tool for payment-option ARM products, many institutions offer introductory interest rates set well below the fully indexed rate. When developing nontraditional mortgage product terms, an institution should consider the spread between the introductory rate and the fully indexed rate. Since initial and subsequent monthly payments are based on these low introductory rates, a wide initial spread means that borrowers are more likely to experience negative amortization, severe payment shock, and an earlier-than-scheduled recasting of monthly payments. Institutions should minimize the likelihood of disruptive early recastings and extraordinary payment shock when setting introductory rates.

3070.3.1.7 Lending to Subprime Borrowers

Mortgage programs that target subprime borrowers through tailored marketing, underwriting standards, and risk selection should follow the applicable interagency guidance on subprime lending.¹¹ Among other things, the subprime guidance discusses circumstances under which subprime lending can become predatory or abusive. Institutions designing nontraditional mortgage loans for subprime borrowers should pay

11. See SR-99-6, Subprime Lending and its attachment, Interagency Guidance on Subprime Lending, March 1, 1999, and SR-01-4, Subprime Lending and its attachment, interagency Expanded Guidance for Subprime Lending Programs, January 31, 2001.

10. A loan will not be determined to be "collateral-dependent" solely through the use of reduced documentation.

particular attention to this guidance. They should also recognize that risk-layering features in loans to subprime borrowers may significantly increase risks for the institution and the borrower.

3070.3.1.8 Non-Owner-Occupied Investor Loans

Borrowers financing non-owner-occupied investment properties should qualify for loans based on their ability to service the debt over the life of the loan. Loan terms should reflect an appropriate combined LTV ratio that considers the potential for negative amortization and maintains sufficient borrower equity over the life of the loan. Further, underwriting standards should require evidence that the borrower has sufficient cash reserves to service the loan, considering the possibility of extended periods of property vacancy and the variability of debt service requirements associated with nontraditional mortgage loan products.

3070.3.2 PORTFOLIO AND RISK-MANAGEMENT PRACTICES

Institutions should ensure that risk-management practices keep pace with the growth and changing risk profile of their nontraditional mortgage loan portfolios and changes in the market. Active portfolio management is especially important for institutions that project or have already experienced significant growth or concentration levels. Institutions that originate or invest in nontraditional mortgage loans should adopt more robust risk-management practices and manage these exposures in a thoughtful, systematic manner. To meet these expectations, institutions should—

- develop written policies that specify acceptable product attributes, production and portfolio limits, sales and securitization practices, and risk-management expectations;
- design enhanced performance measures and management reporting that provide early warning for increasing risk;
- establish appropriate ALLL levels that consider the credit quality of the portfolio and conditions that affect collectibility; and
- maintain capital at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility. Institutions should hold capital commensurate with the

risk characteristics of their nontraditional mortgage loan portfolios.

3070.3.2.1 Policies

An institution's policies for nontraditional mortgage lending activity should set acceptable levels of risk through its operating practices, accounting procedures, and policy exception tolerances. Policies should reflect appropriate limits on risk layering and should include risk-management tools for risk-mitigation purposes. Further, an institution should set growth and volume limits by loan type, with special attention for products and product combinations in need of heightened attention due to easing terms or rapid growth.

3070.3.2.2 Concentrations

Institutions with concentrations in nontraditional mortgage products should have well-developed monitoring systems and risk-management practices. Monitoring systems should keep track of concentrations in key portfolio segments such as loan types, third-party originations, geographic area, and property occupancy status. Concentrations also should be monitored by key portfolio characteristics such as non-owner-occupied investor loans and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features. Further, institutions should consider the effect of employee incentive programs that could produce higher concentrations of nontraditional mortgage loans. Concentrations that are not effectively managed will be subject to elevated supervisory attention and potential examiner criticism to ensure timely remedial action.

3070.3.2.3 Controls

An institution's quality control, compliance, and audit procedures should focus on mortgage lending activities posing high risk. Controls to monitor compliance with underwriting standards and exceptions to those standards are especially important for nontraditional loan products. The quality control function should regularly review a sample of nontraditional mortgage loans from all origination channels and a representative sample of underwriters to confirm that policies are being followed. When control systems or operating practices are found deficient, business-

line managers should be held accountable for correcting deficiencies in a timely manner.

Since many nontraditional mortgage loans permit a borrower to defer principal and, in some cases, interest payments for extended periods, institutions should have strong controls over accruals, customer service, and collections. Policy exceptions made by servicing and collections personnel should be carefully monitored to confirm that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk. Customer service and collections personnel should receive product-specific training on the features and potential customer issues with these products.

3070.3.2.4 Third-Party Originations

Institutions often use third parties, such as mortgage brokers or correspondents, to originate nontraditional mortgage loans. Institutions should have strong systems and controls in place for establishing and maintaining relationships with third parties, including procedures for performing due diligence. Oversight of third parties should involve monitoring the quality of originations so that they reflect the institution's lending standards and compliance with applicable laws and regulations.

Monitoring procedures should track the quality of loans by both origination source and key borrower characteristics. This will help institutions identify problems such as early payment defaults, incomplete documentation, and fraud. If problems involving appraisals, loan documentation, credit problems, or consumer complaints are discovered, the institution should take immediate action. Remedial action could include more thorough application reviews, more frequent re-underwriting, and even termination of the third-party relationship.

3070.3.2.5 Secondary-Market Activity

The sophistication of an institution's secondary-market risk-management practices should be commensurate with the nature and volume of activity. Institutions with significant secondary-market activities should have comprehensive, formal strategies for managing risks.¹² Contingency planning should include how the institu-

tion will respond to reduced demand in the secondary market.

While third-party loan sales can transfer a portion of the credit risk, an institution remains exposed to reputation risk when credit losses on sold mortgage loans or securitization transactions exceed expectations. As a result, an institution may determine that it is necessary to repurchase defaulted mortgages to protect its reputation and maintain access to the markets. In the Federal Reserve's view, the repurchase of mortgage loans beyond the selling institution's contractual obligation is implicit recourse. Under the risk-based capital rules, a repurchasing institution would be required to maintain risk-based capital against the entire pool or securitization.¹³ Institutions should familiarize themselves with these guidelines before deciding to support mortgage loan pools or buying back loans in default.

3070.3.2.6 Management Information and Reporting

Reporting systems should allow management to detect changes in the risk profile of its nontraditional mortgage loan portfolio. The structure and content should allow the isolation of key loan products, risk-layering loan features, and borrower characteristics. Reporting should also allow management to recognize deteriorating performance in any of these areas before it has progressed too far. At a minimum, information should be available by (1) loan type (for example, interest-only mortgage loans and payment-option ARMs); (2) risk-layering features (for example, payment-option ARMs with stated income and interest-only mortgage loans with simultaneous second-lien mortgages); (3) underwriting characteristics (for example, LTV, DTI, and credit score); and (4) borrower performance (for example, payment patterns, delinquencies, interest accruals, and negative amortization).

Portfolio volume and performance should be tracked against expectations, internal lending standards, and policy limits. Volume and performance expectations should be established at the subportfolio and aggregate portfolio levels. Variance analyses should be performed regularly to identify exceptions to policies and prescribed thresholds. Qualitative analysis should occur when actual performance deviates from established policies and thresholds. Variance analysis

12. Refer to SR-02-16, dated May 23, 2002, Interagency Questions and Answers on Capital Treatment of Recourse, Direct Credit Substitutes, and Residual Interests in Asset Securitizations and its attachment.

13. Refer to 12 C.F.R. 208 and 225, appendix A, III.B.3.

is critical to the monitoring of a portfolio's risk characteristics and should be an integral part of establishing and adjusting risk-tolerance levels.

3070.3.2.7 Stress Testing

Based on the size and complexity of their lending operations, institutions should perform sensitivity analysis on key portfolio segments to identify and quantify events that may increase risks in a segment or the entire portfolio. The scope of the analysis should generally include stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the institution's immediate control. Stress tests typically assume rapid deterioration in one or more factors and attempt to estimate the potential influence on default rates and loss severity. Stress testing should aid an institution in identifying, monitoring, and managing risk, as well as developing appropriate and cost-effective loss-mitigation strategies. The stress testing results should provide direct feedback in determining underwriting standards, product terms, portfolio concentration limits, and capital levels.

3070.3.2.8 Capital and Allowance for Loan and Lease Losses

Institutions should establish an appropriate ALLL for the estimated credit losses inherent in their nontraditional mortgage loan portfolios. They should also consider the higher risk of loss posed by layered risks when establishing their ALLL.

Moreover, institutions should recognize that their limited performance history with these products, particularly in a stressed environment, increases performance uncertainty. Capital levels should be commensurate with the risk characteristics of the nontraditional mortgage loan portfolios. Lax underwriting standards or poor portfolio performance may warrant higher capital levels.

When establishing an appropriate ALLL and considering the adequacy of capital, institutions should segment their nontraditional mortgage loan portfolios into pools with similar credit-risk characteristics. The basic segments typically include collateral and loan characteristics, geographic concentrations, and borrower quali-

fying attributes. Segments could also differentiate loans by payment and portfolio characteristics, such as loans on which borrowers usually make only minimum payments, mortgages with existing balances above original balances, and mortgages subject to sizable payment shock. The objective is to identify credit quality indicators that affect collectibility for ALLL measurement purposes. In addition, understanding characteristics that influence expected performance also provides meaningful information about future loss exposure that would aid in determining adequate capital levels.

Institutions with material mortgage banking activities and mortgage servicing assets should apply sound practices in valuing the mortgage servicing rights for nontraditional mortgages. The valuation process should follow generally accepted accounting principles and use reasonable and supportable assumptions.¹⁴

3070.3.3 CONSUMER PROTECTION ISSUES

While nontraditional mortgage loans provide flexibility for consumers, the Federal Reserve is concerned that consumers may enter into these transactions without fully understanding the product terms. Nontraditional mortgage products have been advertised and promoted based on their affordability in the near term; that is, their lower initial monthly payments compared with traditional types of mortgages. In addition to apprising consumers of the benefits of nontraditional mortgage products, institutions should take appropriate steps to alert consumers to the risks of these products, including the likelihood of increased future payment obligations. This information should be provided in a timely manner—before disclosures may be required under the Truth in Lending Act or other laws—to assist the consumer in the product selection process.

3070.3.3.1 Concerns and Objectives

More than traditional ARMs, mortgage products such as payment-option ARMs and interest-only mortgages can carry a significant risk of payment shock and negative amortization, neither of which may be fully understood by consumers. For example, consumer payment obliga-

14. See SR-03-4, dated February 25, 2003, Interagency Advisory on Mortgage Banking and its attachment, which has the same title.

tions may increase substantially at the end of an interest-only period or upon the “recast” of a payment-option ARM. The magnitude of these payment increases may be affected by factors such as the expiration of promotional interest rates, increases in the interest-rate index, and negative amortization. Negative amortization also results in lower levels of home equity as compared with a traditional amortizing mortgage product. When borrowers go to sell or refinance the property, they may find that negative amortization has substantially reduced or eliminated their equity in the property—even when the property has appreciated. The concern that consumers may not fully understand these products is exacerbated by marketing and promotional practices that emphasize potential benefits without also providing clear and balanced information about material risks.

In light of these considerations, communications with consumers, including advertisements, oral statements, promotional materials, and monthly statements, should provide clear and balanced information about the relative benefits and risks of these products, including the risks of payment shock and of negative amortization. Clear, balanced, and timely communication to consumers of the risks of these products will provide consumers with useful information at crucial decision-making points, such as when they are shopping for loans or deciding which monthly payment amount to make. Such communication should help minimize potential consumer confusion and complaints, foster good customer relations, and reduce legal and other risks to the institution.

3070.3.3.2 Legal Risks

Institutions that offer nontraditional mortgage products must ensure that they do so in a manner that complies with all applicable laws and regulations. With respect to the disclosures and other information provided to consumers, applicable laws and regulations include the following:

- Truth in Lending Act (TILA) and its implementing regulation, Regulation Z
- Section 5 of the Federal Trade Commission Act (FTC Act)

TILA and Regulation Z contain rules governing disclosures that institutions must provide for closed-end mortgages (1) in advertisements,

(2) with an application,¹⁵ (3) before loan consummation, and (4) when interest rates change. Section 5 of the FTC Act prohibits unfair or deceptive acts or practices.¹⁶

Other federal laws, including the fair-lending laws and the Real Estate Settlement Procedures Act (RESPA), also apply to these transactions. Moreover, the Federal Reserve notes that the sale or securitization of a loan may not affect an institution’s potential liability for violations of TILA, RESPA, the FTC Act, or other laws in connection with its origination of the loan. State laws, including laws regarding unfair or deceptive acts or practices, also may apply.

3070.3.3.3 Recommended Practices

Recommended practices for addressing the risks raised by nontraditional mortgage products include the following:¹⁷

3070.3.3.4 Communications with Consumers

When promoting or describing nontraditional mortgage products, institutions should provide consumers with information that is designed to help them make informed decisions when selecting and using these products. Meeting this objective requires appropriate attention to the timing, content, and clarity of information presented to consumers. Thus, institutions should provide consumers with information at a time that will help consumers select products and choose among payment options. For example, institutions should offer clear and balanced product descriptions when (1) a consumer is shopping for a mortgage (such as when the consumer makes an inquiry to the institution about a mortgage product and receives information about nontraditional mortgage products) or (2) market-

15. These program disclosures apply to ARM products and must be provided at the time an application is provided or before the consumer pays a nonrefundable fee, whichever is earlier.

16. The Board of Governors enforces this provision under the FTC Act and section 8 of the Federal Deposit Insurance Act. See the joint Board and FDIC guidance titled *Unfair or Deceptive Acts or Practices by State-Chartered Banks*, March 11, 2004.

17. Institutions should review the recommendations relating to mortgage lending practices set forth in other supervisory guidance from their respective primary regulators, as applicable, including guidance on abusive lending practices.

ing relating to nontraditional mortgage products is provided by the institution to the consumer. Clear and balanced information should not be offered by the institution only upon the submission of an application or at consummation.¹⁸ The provision of such information would serve as an important supplement to the disclosures currently required under TILA and Regulation Z, as well as other laws.¹⁹

3070.3.3.4.1 *Promotional Materials and Product Descriptions*

To assist consumers in their product selection decisions, promotional materials and other product descriptions should provide information about the costs, terms, features, and risks of nontraditional mortgages (including information about the matters discussed below).

Payment Shock. Institutions should apprise consumers of potential increases in payment obligations for these products, including circumstances in which interest rates or negative amortization reach a contractual limit. For example, product descriptions could state the maximum monthly payment a consumer would be required to pay under a hypothetical loan example once amortizing payments are required and the interest rate and negative amortization caps have been reached.²⁰ Such information also could describe when structural payment changes will occur (for example, when introductory rates expire or when amortizing payments are required) and what the new payment amount would be or how it would be calculated. As applicable, these descriptions could indicate that a higher payment may be required at other

points in time due to factors such as negative amortization or increases in the interest-rate index.

Negative Amortization. When negative amortization is possible under the terms of a nontraditional mortgage product, consumers should be apprised of the potential for increasing principal balances and decreasing home equity, as well as other potential adverse consequences of negative amortization. For example, product descriptions should disclose the effect of negative amortization on loan balances and home equity, and could describe the potential consequences to the consumer of making minimum payments that cause the loan to negatively amortize. (One possible consequence is that it could be more difficult to refinance the loan or to obtain cash upon a sale of the home.)

Prepayment Penalties. If the institution may impose a penalty in the event that the consumer prepays the mortgage, consumers should be alerted to this fact and to the need to ask the lender about the amount of any such penalty.

Cost of Reduced Documentation Loans. If an institution offers both reduced and full documentation loan programs and there is a pricing premium attached to the reduced documentation program, consumers should be alerted to this fact.

3070.3.3.4.2 *Monthly Statements on Payment-Option ARMs*

Monthly statements that are provided to consumers on payment-option ARMs should provide information that enables consumers to make informed payment choices, including an explanation of each payment option available and the impact of that choice on loan balances. For example, the monthly payment statement should contain an explanation, as applicable, next to the minimum payment amount that making this payment would result in an increase to the consumer's outstanding loan balance. Payment statements also could provide the consumer's current loan balance, what portion of the consumer's previous payment was allocated to principal and to interest, and, if applicable, the amount by which the principal balance increased. Institutions should avoid leading payment-option ARM borrowers to select a non-amortizing or negatively amortizing payment (for example, through the format or content of monthly statements).

18. Institutions also should strive to (1) focus on information important to consumer decision making; (2) highlight key information to make it more prominent; (3) employ a user-friendly and readily navigable format for presenting the information; and (4) use plain language, with concrete and realistic examples. Comparative tables and information describing key features of available loan products, including reduced documentation programs, also may be useful for consumers who are considering the nontraditional mortgage products and other loan features described in this guidance.

19. Institutions may not be able to incorporate all of the practices recommended in this guidance when advertising nontraditional mortgages through certain forms of media, such as radio, television, or billboards. Nevertheless, institutions should provide clear and balanced information about the risks of these products in all forms of advertising.

20. Consumers also should be apprised of other material changes in payment obligations, such as balloon payments.

3070.3.3.4.3 *Practices to Avoid*

Institutions also should avoid practices that obscure significant risks to the consumer. For example, if an institution advertises or promotes a nontraditional mortgage by emphasizing the comparatively lower initial payments permitted for these loans, the institution also should provide clear and comparably prominent information alerting the consumer to the risks. Such information should explain, as relevant, that these payment amounts will increase, that a balloon payment may be due, and that the loan balance will not decrease and may even increase due to the deferral of interest or principal payments. Similarly, institutions should avoid promoting payment patterns that are structurally unlikely to occur.²¹ Such practices could raise legal and other risks for institutions, as described more fully above.

Institutions also should avoid such practices as (1) giving consumers unwarranted assurances or predictions about the future direction of interest rates (and, consequently, the borrower's future obligations); (2) making one-sided representations about the cash savings or expanded buying power to be realized from nontraditional mortgage products in comparison with amortizing mortgages; (3) suggesting that initial minimum payments in a payment-option ARM will cover accrued interest (or principal and interest) charges; and (4) making misleading claims that interest rates or payment obligations for these products are "fixed."

3070.3.3.5 Control Systems

Institutions should develop and use strong control systems to monitor whether actual practices are consistent with their policies and procedures relating to nontraditional mortgage products. Institutions should design control systems to address compliance and consumer information concerns as well as the safety and soundness considerations discussed in this guidance. Lending personnel should be trained so that they are able to convey information to consumers about product terms and risks in a timely, accurate, and balanced manner. As products evolve and new products are introduced, lending personnel

21. For example, marketing materials for payment-option ARMs may promote low predictable payments until the recast date. Such marketing should be avoided in circumstances in which the minimum payments are so low that negative amortization caps would be reached and higher payment obligations would be triggered before the scheduled recast, even if interest rates remain constant.

should receive additional training, as necessary. Lending personnel should be monitored to determine whether they are following these policies and procedures. Institutions should review consumer complaints to identify potential compliance, reputation, and other risks. Attention should be paid to appropriate legal review and to using compensation programs that do not improperly encourage lending personnel to direct consumers to particular products.

With respect to nontraditional mortgage loans that an institution makes, purchases, or services using a third party, such as a mortgage broker, correspondent, or other intermediary, the institution should take appropriate steps to mitigate risks relating to compliance and consumer information concerns discussed in this guidance. These steps would ordinarily include, among other things, (1) conducting due diligence and establishing other criteria for entering into and maintaining relationships with such third parties, (2) establishing criteria for third-party compensation designed to avoid providing incentives for originations inconsistent with this guidance, (3) setting requirements for agreements with such third parties, (4) establishing procedures and systems to monitor compliance with applicable agreements, bank policies, and laws, and (5) implementing appropriate corrective actions in the event that the third party fails to comply with applicable agreements, bank policies, or laws.

3070.3.4 APPENDIX (TERMS USED IN THIS DOCUMENT)

Interest-Only Mortgage Loan. An interest-only mortgage loan refers to a nontraditional mortgage in which, for a specified number of years (for example, three or five years), the borrower is required to pay only the interest due on the loan, during which time the rate may fluctuate or may be fixed. After the interest-only period, the rate may be fixed or it may fluctuate based on the prescribed index and payments, including both principal and interest.

Payment-Option ARM. A payment-option ARM is a nontraditional adjustable-rate mortgage that allows the borrower to choose from a number of different payment options. For example, each month, the borrower may choose a minimum payment option based on a "start" or introductory interest rate, an interest-only payment option

based on the fully indexed interest rate, or a fully amortizing principal and interest payment option based on a 15- or 30-year loan term, plus any required escrow payments. The minimum payment option can be less than the interest accruing on the loan, resulting in negative amortization. The interest-only option avoids negative amortization but does not provide for principal amortization. After a specified number of years, or if the loan reaches a certain negative amortization cap, the required monthly payment amount is recast to require payments that will fully amortize the outstanding balance over the remaining loan term.

Reduced Documentation. Reduced documentation is a loan feature that is commonly referred to as “low doc/no doc,” “no income/no asset,” “stated income,” or “stated assets.” For mortgage loans with this feature, an institution sets reduced or minimal documentation standards to substantiate the borrower’s income and assets.

Simultaneous Second-Lien Loan. A simultaneous second-lien loan is a lending arrangement where either a closed-end second lien or a home equity line of credit (HELOC) is originated simultaneously with the first-lien mortgage loan, typically in lieu of a higher down payment.
3070.3.5

3070.3.5 INSPECTION OBJECTIVES

1. To ascertain if the banking organization²² has adequate risk-management processes, policies, and procedures to address the risk associated with its nontraditional mortgage loans.
2. To evaluate whether the banking organization’s nontraditional mortgage loan terms are supported by a disciplined analysis of its potential exposures versus the mitigating factors that ensure that risk levels are adequately managed.
3. To determine if the underwriting standards for nontraditional mortgage loans comply with the Federal Reserve’s real estate lending standards and appraisal regulations and associated guidelines.

22. Going forward in this section (for bank holding company inspection purposes) “banking organization” refers to the bank holding company and its nonbank subsidiaries that are supervised by the Federal Reserve System.

4. To evaluate whether the banking organization’s management carefully considers and appropriately assesses and mitigates the risk exposures created by the nontraditional mortgage loans by ensuring that—
 - a. its loan terms and underwriting standards are consistent with prudent lending practices, including consideration of a borrower’s repayment capacity;
 - b. its nontraditional mortgage loan products have strong risk-management standards, capital levels commensurate with the risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
 - c. its consumers have sufficient information to clearly understand the loan terms and associated risks prior to making a nontraditional mortgage loan product choice.
5. To determine if the banking organization has borrower qualification criteria that include an evaluation of a borrower’s repayment capacity and ability to repay the debt—the full amount of the credit extended, including any balance increase that may accrue from negative amortization—by the final maturity date at the fully indexed rate.

3070.3.6 INSPECTION PROCEDURES

Risk Mitigation

1. Assess the banking organization’s management procedures to mitigate the risk created by nontraditional mortgage products. Determine that—
 - a. underwriting standards and terms are consistent with prudent lending practices, including consideration of each borrower’s repayment capacity;
 - b. products are supported by strong risk-management standards, capital levels that are commensurate with their risk, and an allowance for loan and lease losses that reflects the collectibility of the portfolio; and
 - c. borrowers have sufficient information to clearly understand the terms of their loans and their associated risks.

Underwriting Standards

1. Determine if the banking organization’s underwriting standards—
 - a. address the effect of a substantial pay-

- ment increase in the borrower’s capacity to repay when loan amortization begins,
 - b. comply with the Federal Reserve’s real estate lending standards and appraisal regulations and associated guidelines, and
 - c. require that loan terms are based on a disciplined analysis of potential exposures and mitigating factors, which will ensure that risk levels remain manageable.
2. Verify that the banking organization’s non-traditional mortgage loan qualification standards recognize the potential impact of payment shock (particularly for borrowers with high loan-to-value ratios, high debt-to-income ratios, and low credit scores).
 3. Ascertain that the analysis of a borrower’s repayment capacity include—
 - a. an evaluation of the borrower’s ability to repay the debt by final maturity at the fully indexed rate, assuming a fully amortizing repayment schedule;
 - b. a repayment schedule that is based on the initial loan amount plus any balance increase that may accrue from a negative amortization provision; and
 - c. avoiding an overreliance on credit scores as a substitute for income verification or reliance on the sale or refinancing of the property (pledged as collateral) when amortization begins.
 4. Determine whether originated or purchased mortgage loans that combine nontraditional features (such as interest-only loans with reduced documentation and second-lien loans) have mitigating factors (that is, higher credit scores, lower LTVs and DTI repayment ratios, significant liquid assets, mortgage insurance, or other credit enhancements) that support the underwriting decisions and the borrower’s repayment capacities.
 5. Verify that the banking organization has clear loan underwriting policies governing the use of—
 - a. reduced documentation of the borrower’s financial capacity (for example, non-verification of reported income when the borrower’s income can be documented based on recent W-2 statements, pay stubs, or tax returns),
 - b. minimal or no owner’s equity for second-lien home equity lines of credit (such loans generally should not have a payment structure allowing for delayed or negative amortization without other significant risk-mitigating factors),
 - c. introductory interest rates (banking organizations should minimize the likelihood

- of disruptive early recastings and extraordinary payment shock when setting introductory rates),
- d. subprime lending (adherence to the inter-agency guidance on subprime lending),²³ and
- e. non-owner-occupied investor loans (qualifications should be based on the borrower’s ability to service the debt over the life of the loan, which would include a combined LTV ratio that considers negative amortization and sufficient borrower equity, and continuing cash reserves).

Portfolio and Risk-Management Practices

1. If the banking organization originates or invests in nontraditional mortgage loans, determine if more robust risk-management practices have been adopted to manage the exposures.
 - a. Verify that there are appropriate written lending policies that have been adopted and are being used and monitored, specifying acceptable product attributes, production and portfolio limits (growth and volume limits by loan type), sales and securitization practices, and risk-management expectations (acceptable levels of risk).
 - b. Determine if enhanced performance measures have been designed and if there is management reporting that provides an early warning for increasing risk.
 - c. Find out if the appropriate ALLL levels have been established that consider the credit quality of the portfolio and the conditions that affect collectibility.
 - d. Evaluate whether adequate capital is maintained at levels that reflect portfolio characteristics and the effect of stressed economic conditions on collectibility.
 - e. Determine if capital is held commensurate with the risk characteristics of the banking organization’s nontraditional mortgage loan portfolios.
2. If the banking organization has concentrations in nontraditional mortgage products, determine if there are—
 - a. well-developed monitoring systems and risk-management practices, which monitor and keep track of concentrations in

23. See SR-01-4 and SR-99-6.

- key portfolio segments, such as by loan type, third-party originations, geographic area, and property occupancy status, and
- b. systems that also monitor key portfolio characteristics: non-owner-occupied investor loan and loans with (1) high combined LTV ratios, (2) high DTI ratios, (3) the potential for negative amortization, (4) credit scores of borrowers that are below established thresholds, and (5) risk-layered features.
3. Determine if the banking organization has adequate quality controls and compliance and audit procedures that focus on mortgage lending activities posing high risk.
 - a. Determine if the banking organization has strong internal controls over accruals, customer service, and collections.
 - b. Verify that policy exceptions made by servicing and collections personnel are carefully monitored and that practices such as re-aging, payment deferrals, and loan modifications are not inadvertently increasing risk.
 - c. Find out if the quality control function regularly reviews (1) a sample of nontraditional mortgage loans from all origination channels and (2) a representative sample of underwriters confirming that underwriting policies are followed.
 4. Bank oversight of third-party originators—
 - a. determine if the banking organization has strong systems and controls in place for establishing and maintaining relationships with third-party nontraditional mortgage loan originators, including procedures for due diligence, and
 - b. find out if the oversight of third-party mortgage loan origination lending practices includes monitoring the quality of originations (that is, the quality of origination sources, key borrower characteristics, appraisals, loan documentations, and credit repayment histories) so that they are reflective of the banking organization's lending standards and in compliance with applicable laws and regulations.
 5. Determine if the banking organization's risk-management practices are commensurate with the nature, volume, and risk of its secondary-market activities.
 - a. Find out if there are comprehensive formal strategies for managing the risks arising from significant secondary-market activities.
 - b. Ascertain if contingency planning includes how the banking organization will respond to a decline in loan demand in the secondary market.
 - c. Determine if there were any repurchases of defaulted mortgages and if the banking organization complies with its risk-based capital guidelines.
 6. Evaluate the appropriateness of management information and reporting systems for the level and nature of the banking organization's mortgage lending activity.
 - a. Verify that the reporting allows management to detect changes in the risk profile, or deteriorating performance, of its nontraditional mortgage loan portfolio.
 - b. Determine if management information is reported and available by loan type, risk-layering features, underwriting characteristics, and borrower performance.
 - c. Find out if—
 - 1) portfolio volume and performance are tracked against expectations, internal lending standards, and policy limits;
 - 2) volume and performance expectations are established at the subportfolio and aggregate portfolio levels;
 - 3) variance analyses are regularly performed to identify exceptions to policies and prescribed thresholds; and
 - 4) qualitative analyses are performed when actual performance deviates from established policies and thresholds.
 7. Determine if the banking organization, based on the size and complexity of its lending operations, performs sensitivity analysis on its key portfolio segments to identify and quantify events that may increase its risks in a segment or the entire portfolio.
 8. Verify that the scope of the sensitivity analysis includes stress tests on key performance drivers such as interest rates, employment levels, economic growth, housing value fluctuations, and other factors beyond the banking organization's immediate control.
 9. Find out if the stress testing results provide direct feedback for determining underwriting standards, product terms, portfolio concentration limits, and capital levels.
 10. Determine if the banking organization has established an appropriate ALLL for the estimated credit losses and commensurate capital levels for the risk inherent in its nontraditional mortgage loan portfolios (considering the higher risk of loss posed by the layered risks).
 11. If the banking organization has material

mortgage banking activities and mortgage servicing assets—

- a. evaluate whether sound practices were applied in valuing the mortgage servicing rights for its nontraditional mortgages and
- b. ascertain if the valuation process followed the nontraditional mortgage and other interagency guidance and generally accepted accounting principles, and whether reasonable and supportable assumptions were used.

Section 4(c)(8) of the BHC Act (Mortgage Banking—Derivative Commitments to Originate and Sell Mortgage Loans) Section 3071.0

3071.0.1 INTERAGENCY ADVISORY ON ACCOUNTING AND REPORTING FOR COMMITMENTS TO ORIGINATE AND SELL MORTGAGE LOANS

On May 3, 2005, the Federal Reserve and the other federal financial institution regulatory agencies¹ (the agencies) issued an Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans.² (See SR-05-10.)

The advisory provides guidance on the appropriate accounting and reporting for commitments to—

- originate mortgage loans that will be *held for resale*, and
- sell mortgage loans under mandatory-delivery and best-efforts contracts.

Commitments to originate mortgage loans that will be held for resale are derivatives and must be accounted for at fair value on the balance sheet by the issuer. All loan-sales agreements, including both mandatory-delivery and best-efforts contracts, must be evaluated to determine whether the agreements meet the definition of a derivative under Statement of Financial Accounting Standards No. 133, “Accounting for Derivative Instruments and Hedging Activities,” as amended by Statement of Financial Accounting Standards No. 149, “Amendment of Statement 133 on Derivative Instruments and Hedging Activities” (collectively, FAS 133). A financial institution should also account for loan-sales agreements that meet the definition of a derivative at fair value on the balance sheet.

The advisory discusses the characteristics that should be considered in determining whether mandatory-delivery and best-efforts contracts are derivatives and the accounting and regulatory reporting treatment for both commitments to originate mortgage loans that will be held for resale and those loan-sales agreements that meet the definition of a derivative. The advisory also addresses the guidance that should be considered in determining the fair value of derivatives.

The advisory provides additional guidance on

the application of FAS 133. Financial institutions, including those that are *not* required to file reports with the Securities and Exchange Commission (SEC), are expected to follow the guidance in SEC Staff Accounting Bulletin No. 105, “Application of Accounting Principles to Loan Commitments” (SAB 105).³

A financial institution is expected to account for and report derivative loan commitments and forward loan-sales commitments as derivatives in accordance with generally accepted accounting principles (GAAP), which include the use of valuation techniques that are reasonable and supportable in the determination of fair value. An institution’s failure to account for and report derivative loan commitments and forward loan-sales commitments in regulatory reports in accordance with GAAP may be an unsafe and unsound practice.

3071.0.1.1 Accounting and Reporting

3071.0.1.1.1 Accounting Policies

Well-managed financial institutions have written and consistently applied accounting policies for commitments to originate mortgage loans that will be held for resale and to sell mortgage loans under mandatory-delivery and best-efforts contracts, including approved valuation methodologies and procedures to formally approve changes to those methodologies. The methodologies should be reasonable, objectively supported, and fully documented. Procedural discipline and consistency are key concepts in any valuation-measurement technique. Institutions should ensure that internal controls, including effective independent review or audit, are in place to provide integrity to the valuation process. Institutions’ practices should, therefore, reflect these concepts to ensure the reliability of their valuations of derivative loan commitments and forward loan-sales commitments.

3071.0.1.1.2 Derivative Loan Commitments

A financial institution should account for deriva-

1. The agencies are the Board of Governors of the Federal Reserve System, the Federal Deposit Insurance Corporation, the National Credit Union Administration, the Office of the Comptroller of the Currency, and the Office of Thrift Supervision.

2. The guidance in the interagency advisory is also intended to apply to financial-statement reporting by bank holding companies.

3. Staff accounting bulletins (SABs) summarize the views of the SEC’s staff regarding the application of generally accepted accounting principles.

tive loan commitments at fair value on the balance sheet, regardless of the manner in which the intended sale of the mortgage loans will be executed (e.g., under a best-efforts contract, a mandatory-delivery contract, or the institution's own securitization). An institution should report each fixed, adjustable, and floating derivative loan commitment as an "other asset" or an "other liability" in their regulatory reports based upon whether the individual commitment has a positive (asset) or negative (liability) fair value.⁴

With respect to floating derivative loan commitments, because the interest rate on such a commitment "floats" on a daily basis with market interest rates, the fair value of a floating derivative loan commitment approximates zero as long as the creditworthiness of the borrower has not changed. However, as with other derivative loan commitments, an institution must report the entire gross notional amount of floating derivative loan commitments in its regulatory reports.

Commitments to originate mortgage loans that will be held for investment purposes and commitments to originate other types of loans are not within the scope of FAS 133 and, therefore, are not accounted for as derivatives.⁵ An institution should report the unused portion of these types of commitments, which are *not* considered derivatives, as "unused commitments" in its regulatory reports.

3071.0.1.1.3 Forward Loan-Sales Commitments

A financial institution should account for forward loan-sales commitments for mortgage loans as derivatives at fair value on the balance sheet. Each forward loan-sales commitment should be reported as an "other asset" or an "other liability" based upon whether the individual commitment has a positive (asset) or negative (liability) fair value.⁶

4. When preparing Reports of Condition and Income (Call Reports) and the Consolidated Financial Statements for Bank Holding Companies (BHC reports), fixed, adjustable, and floating derivative loan commitments should not be reported as unused commitments in Schedule RC-L, Derivatives and Off-Balance Sheet Items (Schedule HC-1 for bank holding companies), because such commitments are to be reported as derivatives in this schedule.

5. See FAS 133, paragraph 10(i).

6. Regardless of whether the underlying mortgage loans will be held for investment or for resale, commitments to purchase mortgage loans from third parties under either

3071.0.1.1.4 Netting of Contracts

For balance-sheet-presentation purposes, FAS 133 does not provide specific guidance on financial-statement presentation.⁷ A financial institution may not offset derivatives with negative fair values (liabilities) against those with positive fair values (assets), unless the criteria for "netting" under GAAP have been satisfied.⁸ In addition, an institution may not offset the fair value of forward loan-sales commitments against the fair value of derivative loan commitments (the pipeline) or mortgage loans held for sale (warehouse loans). Rather, forward loan-sales commitments must be accounted for separately at fair value, and warehouse loans must be accounted for at the lower of cost or fair value (commonly referred to as "LOCOM")⁹ with certain adjustments to the cost basis of the loans if hedge accounting is applied.

3071.0.1.1.5 Hedge Accounting

A financial institution should follow the guidance in FAS 133 when applying hedge accounting to its mortgage banking activities. If the FAS 133 qualifying criteria are met, an institution may apply—

- fair-value hedge accounting in a hedging relationship between forward loan-sales commitments (the hedging instrument) and fixed-rate warehouse loans (the hedged item), or
- cash-flow hedge accounting in a hedging relationship between forward loan-sales com-

mandatory-delivery contracts or best-efforts contracts are derivatives if, upon evaluation, the contracts meet the definition of a derivative under FAS 133. An institution should report its loan-purchase commitments that meet the definition of a derivative at fair value on the balance sheet.

7. That is, FAS 133 does not provide specific guidance where, in the financial statements, the fair value of derivatives or the changes in the fair value of derivatives should be classified and presented on the financial statement.

8. When an institution has two (or more) derivatives with the same counterparty, contracts with positive fair values and negative fair values may be netted if the conditions set forth in FASB Interpretation No. 39, "Offsetting of Amounts Related to Certain Contracts" (FIN 39), are met. Those conditions are as follows: (1) each of the parties owes the other determinable amounts; (2) the reporting party has the right to set off the amount owed with the amount owed by the other party; (3) the reporting party intends to set off; and (4) the right of setoff is enforceable at law. In addition, without regard to the third condition, fair-value amounts recognized for derivative contracts executed with the same counterparty under a master netting arrangement may be offset.

9. See Statement of Financial Accounting Standards No. 65, "Accounting for Certain Mortgage Banking Activities" (FAS 65), paragraph 4.

mitments (the hedging instrument) and the forecasted sale of the warehouse loans and/or the loans to be originated under derivative loan commitments (the forecasted transaction).¹⁰

If a financial institution does not apply hedge accounting, either because the FAS 133 hedge criteria are not met or the institution chooses not to apply hedge accounting, forward loan-sales commitments should be treated as nonhedging derivatives. If hedge accounting is not applied, an institution will account for its warehouse loans at the lower of cost or fair value. Because nonhedging forward loan-sales commitments are accounted for at fair value through earnings, such an approach causes volatility in reported earnings if the fair value of the warehouse loans increases above their cost basis. In this situation, the volatility is a result of recognizing the full amount of any decline in the fair value of the forward loan-sales commitments in earnings while not adjusting the carrying amount of the warehouse loans above their cost basis.

3071.0.1.1.6 *Income-Statement Effect*

Unless cash-flow hedge accounting is applied, a financial institution should include the periodic changes in the fair value of derivative loan commitments and forward loan-sales commitments in current-period earnings. An institution should report these changes in fair value in either “other non-interest income” or “other non-interest expense,” but not as trading revenue, in their regulatory reports. However, an institution’s decision as to whether to report the changes in fair value in its regulatory reports in an income or expense line item should be consistent with its presentation of these changes in its general-purpose external financial statements (including audited financial statements)¹¹ and should be consistent from period to period.

3071.0.1.2 Valuation

3071.0.1.2.1 *Fair Value*

FAS 133 indicates that the guidance in Statement of Financial Accounting Standards No. 107, “Disclosures About Fair Value of Financial Instruments” (FAS 107), should be fol-

lowed in determining the fair value of derivatives.¹² That guidance provides that quoted market prices are the best evidence of the fair value of financial instruments. However, when quoted market prices are not available, which is typically the case for derivative loan commitments and forward loan-sales commitments, estimates of fair value should be based on the best information available in the circumstances (e.g., valuation techniques based on estimated expected future cash flows). When expected future cash flows are used, they should be the institution’s best estimate based on reasonable and supportable assumptions and projections.

Estimates of fair value should consider prices for similar assets or similar liabilities and the results of valuation techniques to the extent available in the circumstances. In the absence of (1) quoted market prices in an active market, (2) observable prices of other current market transactions, or (3) other observable data supporting a valuation technique, the transaction price represents the best information available with which to estimate fair value at the inception of an arrangement.

A financial institution should not recognize an unrealized gain or loss at inception of a derivative instrument unless the fair value of that instrument is obtained from a quoted market price in an active market or is otherwise evidenced by comparison to other observable current market transactions or based on a valuation technique incorporating observable market data.¹³ Based on this guidance, derivative loan commitments generally would have a zero fair value at inception.¹⁴ However, subsequent changes in the fair value of a derivative loan commitment must be recognized in financial statements and regulatory reports (e.g., changes in fair value attributable to changes in market interest rates).

When estimating the fair value of derivative loan commitments and those best-efforts contracts that meet the definition of a derivative, a

12. See FAS 133, paragraph 17.

13. See footnote 3 in Emerging Issues Task Force Issue No. 02-3 (EITF 02-3), “Issues Involved in Accounting for Derivative Contracts Held for Trading Purposes and Contracts Involved in Energy Trading and Risk Management Activities.”

14. If a potential borrower pays the lender a fee upon entering into a derivative loan commitment (e.g., a rate-lock fee), there is a transaction price, and the lender should recognize the derivative loan commitment as a liability at inception using an amount equal to the fee charged to the potential borrower.

10. See FAS 133, paragraphs 20–21, and related FAS 133 guidance for hedging instruments, hedged items, and forecasted transactions that qualify for fair-value and cash-flow hedge accounting.

11. See footnote 7.

financial institution should consider predicted “pull-through” (or, conversely, “fallout”) rates. A pull-through rate is the probability that a derivative loan commitment will ultimately result in an originated loan. Some factors that may be considered in arriving at appropriate pull-through rates include (but are not limited to) the origination channel (which may be either internal [retail] or external [wholesale or correspondent, to the extent the institution rather than the correspondent closes the loan]),¹⁵ current mortgage interest rates in the market versus the interest rate incorporated in the derivative loan commitment, the purpose of the mortgage (purchase versus refinancing), the stage of completion of the underlying application and underwriting process, and the time remaining until the expiration of the derivative loan commitment. Estimates of pull-through rates should be based on historical information for each type of loan product adjusted for potential changes in market interest rates that may affect the percentage of loans that will close. An institution should not consider the pull-through rate when reporting the notional amount of derivative loan commitments in regulatory reports but, rather, must report the entire gross notional amount.

3071.0.1.2.2 SAB 105

In March 2004, the SEC issued SAB 105 to provide guidance on the proper accounting and disclosures for derivative loan commitments. SAB 105 is effective for derivative loan commitments entered into after March 31, 2004. SAB 105 indicates that the expected future cash flows related to the associated servicing of loans should not be considered in recognizing derivative loan commitments. Incorporating expected future cash flows related to the associated servicing of the loan essentially results in the immediate recognition of a servicing asset. Servicing assets should only be recognized when the servicing asset has been contractually separated from the underlying loan by sale or securitization of the loan with servicing retained.¹⁶

15. If an institution commits to purchase a loan that will be closed by a correspondent in the correspondent’s name, the institution would have a loan-purchase commitment rather than a derivative loan commitment. See footnote 6.

16. See Statement of Financial Accounting Standards No. 140 (FAS 140), “Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities,” paragraph 61.

Further, no other internally developed intangible assets (such as customer-relationship intangible assets) should be recognized as part of derivative loan commitments. Recognition of such assets would only be appropriate in a third-party transaction (for example, the purchase of a derivative loan commitment either individually, in a portfolio, or in a business combination).

3071.0.1.3 Standard-Setter Activities

Financial institutions should be aware that the SEC or the Financial Accounting Standards Board (FASB) may issue additional fair-value, measurement, or recognition guidance in the future (e.g., a fair-value measurement statement). To the extent that additional guidance is issued, institutions must also consider the guidance in developing fair-value-estimate methodologies for derivative loan commitments and forward loan-sales commitments as well as measuring and recognizing such derivatives.

3071.0.1.4 Changes in Accounting for Derivative Loan Commitments and Loan-Sales Agreements

Financial institutions should follow Accounting Principles Board Opinion No. 20 (APB 20), “Accounting Changes,”¹⁷ if a change in their accounting for derivative loan commitments, best-efforts contracts, or mandatory-delivery contracts is necessary. APB 20 defines various types of accounting changes and addresses the reporting of corrections of errors in previously issued financial statements. APB 20 states, “Errors in financial statements result from mathematical mistakes, mistakes in the application of accounting principles, or oversight or misuse of facts that existed at the time the financial statements were prepared.”

For regulatory reporting purposes, a financial institution must determine whether the reason for a change in its accounting meets the APB 20 definition of an accounting error. If the reason for the change meets this definition, the error should be reported as a prior-period adjustment if the amount is material. Otherwise, the effect of the correction of the error should be reported in current earnings.

If the effect of the correction of the error is

17. Effective December 15, 2005, APB 20 will be replaced by FASB Statement No. 154, “Accounting Changes and Error Corrections—A Replacement of APB Opinion No. 20 and FASB Statement No. 3.”

material, a financial institution should also consult with its primary federal regulatory agency to determine whether any of its prior regulatory reports should be amended. If amended regulatory reports are not required, the institution should report the effect of the correction of the error on prior years' earnings, net of applicable taxes, as an adjustment to the previously reported beginning balance of equity capital. For the Call Report, the institution should report the amount of the adjustment in Schedule RI-A, item 2, "Restatements due to corrections of material accounting errors and changes in accounting principles," with an explanation in Schedule RI-E, item 4.

The effect of the correction of the error on income and expenses since the beginning of the year in which the error is corrected should be reflected in each affected income and expense account on a year-to-date basis beginning in the next quarterly income statement (Call Report) to be filed and not as a direct adjustment to retained earnings.

3071.0.1.5 Definitions of Terms Used in the Advisory

3071.0.1.5.1 *Derivative Loan Commitment*

The term *derivative loan commitment* refers to a lender's commitment to originate a mortgage loan that will be held for resale. Notwithstanding the characteristics of a derivative set forth in FAS 133, these commitments to originate mortgage loans *must* be accounted for as derivatives by the issuer under FAS 133 and include, but are not limited to, those commonly referred to as *interest-rate-lock commitments*.

In a derivative loan commitment, the lender agrees to extend credit to a borrower under certain specified terms and conditions in which the interest rate and the maximum amount of the loan¹⁸ are set prior to or at funding. Under the agreement, the lender commits to lend funds to a potential borrower (subject to the lender's approval of the loan) on a fixed- or adjustable-rate basis, regardless of whether interest rates change in the market, or on a floating-rate basis. In a typical derivative loan commitment, the borrower can choose to—

- “lock in” the current market rate for a fixed-rate loan (i.e., a fixed derivative loan commitment),
- “lock in” the current market rate for an adjustable-rate loan that has a specified formula for determining when and how the interest rate will adjust (i.e., an adjustable derivative loan commitment), or
- wait until a future date to set the interest rate and allow the interest rate to “float” with market interest rates until the rate is set (i.e., a floating derivative loan commitment).

Derivative loan commitments vary in term and expire after a specified time period (e.g., 60 days after the commitment date). Additionally, derivative loan commitments generally do not bind the potential borrower to obtain the loan, nor do they guarantee that the lender will approve the loan once the creditworthiness of the potential borrower has been determined.

3071.0.1.5.2 *Forward Loan-Sales Commitment*

The term *forward loan-sales commitment* refers to either (1) a mandatory-delivery contract or (2) a best-efforts contract that, upon evaluation under FAS 133, meets the definition of a derivative.

3071.0.1.5.3 *Mandatory-Delivery Contract*

A *mandatory-delivery contract* is a loan-sales agreement in which a financial institution commits to deliver a certain principal amount of mortgage loans to an investor at a specified price on or before a specified date. If the institution fails to deliver the amount of mortgages necessary to fulfill the commitment by the specified date, it is obligated to pay a “pair-off” fee, based on then-current market prices, to the investor to compensate the investor for the shortfall. Variance from the originally committed principal amount is usually permitted, but typically may not exceed 10 percent of the committed amount.

All loan-sales agreements must be evaluated to determine whether they meet the definition of a derivative under FAS 133.¹⁹ A mandatory-

18. In accordance with the “Background Information and Basis for Conclusions” in Statement of Financial Accounting Standards No. 149 (FAS 149), the notional amount of a derivative loan commitment is the maximum amount of the borrowing. See FAS 149, paragraph A27.

19. See FAS 133, paragraph 6, for the characteristics of a financial instrument or other contract that meets the definition of a derivative.

delivery contract has a specified underlying (the contractually specified price for the loans) and notional amount (the committed loan-principal amount), and requires little or no initial net investment. Additionally, a mandatory-delivery contract requires or permits net settlement or the equivalent thereof as the institution is obligated under the contract to either deliver mortgage loans or pay a pair-off fee (based on the then-current market prices) on any shortfall on the delivery of the committed loan-principal amount. Since the option to pay a pair-off fee accomplishes net settlement, it is irrelevant as to whether the mortgage loans to be delivered are considered readily convertible to cash.²⁰ Based on these characteristics, a mandatory-delivery contract meets the definition of a derivative at the time an institution enters into the commitment.

3071.0.1.5.4 Best-Efforts Contract

The term *best-efforts contract* refers to a loan-sales agreement in which a financial institution commits to deliver an individual mortgage loan of a specified principal amount and quality to an investor if the loan to the underlying borrower closes. Generally, the price the investor will pay the seller for an individual loan is specified prior to the loan being funded (e.g., on the same day the lender commits to lend funds to a potential borrower). A best-efforts contract that has all of the following characteristics would meet the definition of a derivative:

- an underlying (e.g., the price the investor will pay the seller for an individual loan is specified in the contract)
- a notional amount (e.g., the contract specifies the principal amount of the loan as an exact dollar amount or as a principal range with a determinable maximum amount)²¹
- requires little or no initial net investment (e.g., no fees are exchanged between the seller and investor upon entering into the agreement, or a fee that is similar to a premium on other option-type contracts is exchanged)
- requires or permits net settlement or the equivalent thereof

lent thereof (for example, the seller is contractually obligated to either (1) deliver the loan to the investor if the loan closes or (2) pay a pair-off fee, based on then-current market prices, to the investor to compensate the investor if the loan closes and is not delivered. Since the option to pay a pair-off fee accomplishes net settlement, it is irrelevant as to whether the loan to be delivered is considered readily convertible to cash.)

3071.0.1.5.5 Master Agreement

A financial institution may enter into one of several types of arrangements with an investor to govern the relationship between the institution and the investor and set the parameters under which the institution will deliver individual mortgage loans through separate best-efforts contracts. Such an arrangement might include, for example, a *master agreement* or an *umbrella contract*. These arrangements may specify an overall maximum principal amount of mortgage loans that the institution may deliver to the investor during a specified time period, but generally they do not specify the price the investor will pay for individual loans. Further, while these arrangements may include pair-off-fee provisions for loans to be sold under individual best-efforts contracts covered by the arrangements, the seller is neither contractually obligated to deliver the amount of mortgages necessary to fulfill the maximum principal amount specified in the arrangement nor required to pay a pair-off fee on any shortfall. Because these arrangements generally either do not have a specified underlying or determinable notional amount or do not require or permit net settlement or the equivalent thereof, the arrangements typically do not meet the definition of a derivative. As discussed above, an individual best-efforts contract governed by one of these arrangements may, however, meet the definition of a derivative.

As the terms of individual best-efforts contracts and master agreements or umbrella contracts vary, a financial institution must carefully evaluate such contracts to determine whether the contracts meet the definition of a derivative in FAS 133.

20. See FAS 133, paragraph 57(c)(1), for a description of contracts that have terms that implicitly or explicitly require or permit net settlement.

21. The use of a maximum amount as the notional amount of a best-efforts contract is consistent with the loan-commitment discussion in the “Background Information and Basis for Conclusions” in FAS 149. See FAS 149, paragraph A27.

3071.0.1.6 Example of the Accounting for Commitments to Originate and Sell Mortgage Loans²²

3071.0.1.6.1 ABC Mortgage Financial Institution (Best-Efforts Contracts and No Application of Fair-Value Hedge Accounting)

The following simplified example was developed to provide a financial institution that has a limited number of derivative loan commitments general guidance on one approach that may be used to value such commitments.²³ This example also illustrates the regulatory reporting requirements for derivative loan commitments and forward loan-sales commitments.

The guidance in this example is for illustrative purposes only, as there are several ways that a financial institution might estimate the fair value of its derivative loan commitments. A second approach to valuing derivative loan commitments is described in *Derivative Loan Commitments Task Force Illustrative Disclosures on Derivative Loan Commitments*, a practice aid developed by staff of the American Institute of Certified Public Accountants (AICPA) and a task force comprising representatives from the financial services, mortgage banking, and public accounting communities.²⁴ As indicated in the body of the interagency advisory, a financial institution must consider the guidance in FAS 133, FAS 107, EITF 02-3, and SAB 105 in measuring and recognizing derivative loan commitments and forward loan-sales commitments. In addition, an institution should be aware that the SEC or FASB may issue additional guidance in the future that may alter certain aspects of this example.

3071.0.1.6.1.1 Background

ABC Mortgage Financial Institution (ABC) enters into fixed, adjustable, and floating deriva-

tive loan commitments to originate mortgage loans that it intends to sell. The institution accounts for the commitments as derivative financial instruments as required under FAS 133.

ABC enters into best-efforts contracts with a mortgage investor under which it commits to deliver certain loans that it expects to originate under derivative loan commitments (i.e., the pipeline) and loans that it has already originated and currently holds for sale (i.e., warehouse loans). ABC and the mortgage investor agree on the price that the investor will pay ABC for an individual loan with a specified principal amount prior to the loan being funded. Once the price that the mortgage investor will pay ABC for an individual loan and the notional amount of the loan are specified, and ABC is obligated to deliver the loan to the investor if the loan closes, the contract represents a forward loan-sales commitment. Under FAS 133, ABC accounts for these forward loan-sales commitments as derivative financial instruments.

On December 31 of a given year, the notional amounts of ABC's mortgage banking derivative loan commitments and forward loan-sales commitments are as follows:

Table 1—Notional Amounts of Derivative Loan Commitments and Forward Loan-Sales Commitments

	<i>Notional amount</i>
<i>Derivative loan commitments</i>	
Fixed-rate commitments	\$ 8,500,000
Adjustable-rate commitments	1,500,000
Floating-rate commitments	<u>2,000,000</u>
Total derivative loan commitments	<u>\$12,000,000 [A]²⁵</u>

22. This example uses the definitions and concepts presented in the body of the Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans (the interagency advisory). Refer to the interagency advisory for clarification of the terms and concepts used in this example.

23. Estimating fair values when quoted market prices are unavailable requires considerable judgment. Valuation techniques using simplified assumptions may sometimes be used (with appropriate disclosure in the financial statements) to provide a reliable estimate of fair value at a reasonable cost. See FAS 107, paragraphs 60–61.

24. The practice aid is available at www.aicpa.org/download/members/div/acctstd/lllustrative_Disclosure_on_Derivative_Loan_Commitments.pdf.

25. Alpha references in table 1 and the text of this example refer to the "Reference" column in table 3.

Table 1—continued

	<i>Notional amount</i>
<i>Forward loan-sales commitments</i>	
Pipeline loan commitments	\$12,000,000
Warehouse loan commitments	8,000,000
<i>Total forward loan-sales commitments</i>	<u>\$20,000,000 [B]</u>

Market interest rates have changed throughout the time period that ABC's derivative loan commitments and forward loan-sales commitments have been outstanding. Some of the fixed-rate commitments are at rates above current market rates while others are at rates at or below current market rates. All of ABC's adjustable-rate commitments are at rates below current market rates.

Based on its past experience, ABC estimates a pull-through rate of 70 percent on its fixed-rate commitments for which the locked-in rate is above current market rates (i.e., 70 percent of the commitments will actually result in loan originations) and a pull-through rate of 85 percent for its fixed-rate commitments for which the locked-in rate is at or below current market rates. ABC also estimates a pull-through rate of 85 percent for all of its adjustable-rate commitments that are below market rates.

The pull-through-rate assumptions in this example have been simplified for illustrative purposes. In determining appropriate pull-through rates, a financial institution must consider all factors that affect the probability that derivative loan commitments will ultimately result in originated loans. Therefore, an institution is expected to have more granularity (i.e., stratification) in its application of pull-through-rate assumptions to its derivative loan commitments.

3071.0.1.6.1.2 Discussion of ABC's Approach to Valuing Derivative Loan Commitments and Forward Loan-Sales Commitments

ABC estimates the fair value of its derivative loan commitments using the best information

available in the circumstances because quoted market prices are not available. In this case, ABC uses valuation techniques that take into account current secondary-market loan pricing information.²⁶ ABC had noted the appropriate reference price for the underlying loans on the day that each derivative loan commitment was given to a borrower, and assigned an initial fair value of zero to each loan commitment consistent with the guidance in SAB 105 and EITF 02-3. At the end of the month, ABC compares the current reference price of each underlying loan with its initial reference price and calculates the price difference. ABC then calculates the fair value of these derivatives by multiplying the price difference by the estimated pull-through rate. This approach is illustrated in table 2.

As illustrated in table 2, ABC excludes time value from its fair-value-estimate methodology due to the short-term nature of the derivative loan commitments. As the exclusion of time value is not appropriate for all fair-value estimates, an institution must consider the terms of its specific agreements in determining an appropriate estimation methodology.

In the example in table 2, ABC estimated the initial reference price of the underlying loan to be originated under the commitment, excluding the value of the associated servicing rights, to be \$100,000. That is, at the date it entered into the fixed derivative loan commitment with the borrower, ABC estimated it would receive \$100,000, excluding the value of the associated servicing rights, if the underlying loan was funded and sold in the secondary market on that day. Because this amount is equal to the notional amount of the loan, ABC would not experience a gain or loss on the sale of the underlying loan (before considering the effect of the loan-origination fees and costs associated with the loan). As such, the fair value of this derivative loan commitment would be zero, and there would not be any unrealized gain or loss at the inception of the derivative loan commitment. This may not be true for all derivative loan commitments.

ABC defers all unrealized gains and losses at the inception of its derivative loan commitments until the underlying loans are sold. ABC's policy is based on the short-term nature of its

26. In general, source data for secondary-market loan-pricing information may include, for example, quotations from rate sheets; brokers; or electronic systems such as those provided by third-party vendors, market makers, or mortgage loan investors. When secondary-market loan-pricing information that includes the value of servicing rights is used, the fair value of the derivative loan commitments ultimately must exclude any value attributable to servicing rights.

Table 2—ABC’s Calculation of the Fair Value of Derivative Loan Commitments: An Example of a Fixed Derivative Loan Commitment for Which the Locked-In Rate Is Above the Current Market Rate*

Notional amount of loan	<i>Initial reference price of loan to be originated under</i>	<i>Current reference price of loan to be originated under</i>	Price difference	Pull-through rate	Fair value of derivative loan commitment
	<i>commitment—excluding servicing rights</i>	<i>commitment—excluding servicing rights</i>			
(1)	(2)	(3)	[(3) - (2)]	(4)	[(3) - (2)] × (4)
\$100,000	\$100,000	\$100,500	\$500	70%	\$350

* The example in this table presents the fair-value calculation for one derivative loan commitment. The fair value of this derivative, which is positive, would be added to all the other derivative loan commitments with positive fair values. Netting derivatives with positive fair values (assets) against derivatives with negative fair values (liabilities) is not permitted unless the conditions stipulated in FIN 39 are met. Refer to footnote 8.

derivative loan commitments and was adopted in order to not accelerate the timing of gain recognition. As this practice may not be appropriate for all derivative loan commitments or other derivatives initially accounted for under EITF 02-3, and due to the lack of authoritative guidance in this area, an institution should consult with its accounting advisers concerning the appropriate accounting for its specific agreements.

After applying the methodology described above to individual derivative loan commitments, ABC aggregates the fair values of the derivative loan commitments by type (i.e., fixed, adjustable, and floating) and by whether the commitments have above-, at-, or below-market rates. The fair values of the fixed derivative loan commitments with above-market rates, adjusted for the appropriate pull-through rate, total \$21,000 [C], which represents an asset. The aggregate fair value of the fixed derivative loan commitments that have at- or below-market rates, adjusted for the appropriate pull-through rate, sums to (\$31,000) [D], which represents a liability. For the adjustable derivative loan commitments, the aggregate fair value, adjusted for the pull-through rate, is approximately (\$2,000) [E], which is also a liability. The fair value of the floating derivative loan commitments approximates zero.

ABC also estimates the fair value of its forward loan-sales commitments outstanding at the end of the month using a similar methodology as that described above. Based upon this information, ABC determines that the estimated fair value of the forward loan-sales commitments related to its derivative loan commitments and

warehouse loans with above-market rates is approximately (\$45,000) [F], which represents a liability, because current market interest rates for comparable mortgage loans are lower than the rates in effect when the derivative loan commitments were initiated. (Consequently, current offered delivery prices for similar commitments are greater than the delivery prices of ABC’s existing forward loan-sales commitments. Therefore, the change in the fair value of ABC’s forward loan-sales commitments since they were entered into represents a loss.) The fair value of ABC’s forward loan-sales commitments related to its derivative loan commitments and warehouse loans with at- or below-market rates is estimated to be \$50,000, which is an asset.²⁷

3071.0.1.6.1.3 Regulatory Reporting

The following table illustrates the regulatory reporting requirements for the derivative-related dollar amounts cited in the example.

As illustrated in table 3, depending upon particular market circumstances, individual derivative loan commitments and forward loan-sales

27. The absolute value of the fair value of the forward loan-sales commitments is greater than the absolute value of the fair value of the related derivative loan commitments because the forward loan-sales commitments also apply to, and act as an economic hedge of, ABC’s warehouse loans. ABC accounts for its warehouse loans at the lower of cost or fair value in accordance with FAS 65. In this example, ABC does not apply hedge accounting to its warehouse loans.

Table 3—Regulatory Reporting Implications for Derivative Loan Commitments and Forward Loan-Sales Commitments

	<i>Amount</i>	<i>Reference</i>
<i>Derivative loan commitments</i>		
Notional amount of “over-the-counter written options” ²⁸	\$12,000,000	[A]
Derivatives with a <i>positive</i> fair value held for purposes other than trading (asset)	\$21,000	[C]
Derivatives with a <i>negative</i> fair value held for purposes other than trading (liability)	\$33,000	[D + E]
<i>Forward loan-sales commitments</i>		
Notional amount of “forward contracts”	\$20,000,000	[B]
Derivatives with a <i>positive</i> fair value held for purposes other than trading (asset)	\$50,000	[G]
Derivatives with a <i>negative</i> fair value held for purposes other than trading (liability)	\$45,000	[F]
<i>Derivative loan commitments and forward loan-sales commitments</i>		
Total notional amount of derivative contracts held for purposes other than trading	\$32,000,000	[A + B]

commitments may have either positive or negative fair values, which ABC properly reports gross as assets or liabilities on its balance sheet. In addition, for regulatory reporting purposes, ABC consistently reports the periodic *changes* in the fair value of its derivative contracts in “other non-interest expense” in its income statement. Alternatively, ABC could have chosen to consistently report these fair-value changes in “other non-interest income” in its regulatory reports.

accounted for and reported—

- a. in accordance with the instructions for the BHC reports (for example, the FR Y-9C); GAAP; and SR-05-10 and its attached May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans and
- b. based on reasonable and supportable valuation techniques as prescribed by the May 3, 2005, interagency advisory.

3071.0.2 INSPECTION OBJECTIVE

1. To find out if the bank holding company accounted for and reported the following transactions at their fair value: (1) its commitments to originate mortgage loans that were held for resale (derivatives) and (2) its loan-sales agreements that are derivatives. If so, ascertain if these transactions were

²⁸ Because derivative loan commitments are in certain respects similar to options, they are reported with “over-the-counter written options” for regulatory reporting purposes.

3071.0.3 INSPECTION PROCEDURES

1. Determine whether the bank holding company has written and consistently applied accounting policies to its commitments to (1) originate mortgage loans that were held for resale and (2) sell mortgage loans under mandatory-delivery and best-efforts contracts.
2. Find out if the bank holding company has developed and uses approved valuation methodologies and procedures to obtain formal approval for changes to those methodologies.
 - a. Ascertain whether the valuation methodologies are reasonable, objectively supported, and fully documented.

- b. Determine if the bank holding company has internal controls, including an effective independent review or audit, in place that give integrity to the valuation process.
3. If the bank holding company issues fixed-, adjustable-, and floating-rate derivative loan commitments or forward loan-sales commitments, review an adequate sample that evidences the full coverage of these types of transactions.
 - a. Ascertain if these transactions were properly reported on the balance sheet as an “other asset” or an “other liability,” based on whether the individual commitment has a positive (asset) or negative (liability) fair value in accordance with the instructions for the BHC reports.
 - b. Determine if the floating-rate derivative loan commitments and other derivative loan commitments were reported at their entire gross notional amount in the BHC’s reports (such as the FR Y-9C).
 - c. Find out if the balance sheet correctly presents accounts for all such transactions, including the netting of contracts, the application of hedge accounting to mortgage banking activities, the valuation of derivatives, and any material or other accounting changes for derivative loan commitments and loan-sales agreements. Also determine if the bank holding company complies with the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans and with GAAP.
 - d. Ascertain if periodic changes in the fair value of derivative loan commitments and forward loan-sales commitments are reported in current-period earnings as either “other non-interest income” or “non-interest expense, as appropriate.
4. Report to the central point of contact or examiner-in-charge any failure by the bank holding company’s management to follow (1) the bank holding company’s accounting and valuation policies for its commitments to originate mortgage loans that are held for resale and its commitments to sell mortgage loans, (2) the instructions for the Consolidated Financial Statement for Bank Holding Companies, (3) the May 3, 2005, interagency advisory, or (4) GAAP.
5. When additional inspection scrutiny is needed—based on the examination’s findings; the supervisory concerns discussed in section 3071.0; the February 23, 2003, Interagency Advisory on Mortgage Banking (see SR-03-4 and its attachment); and the May 3, 2005, Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans (see SR-05-10 and its attachment)—consider using the comprehensive mortgage banking examination procedures in the appendix section A.2040.3 of the *Commercial Bank Examination Manual*.

Section 4(c)(8) of the BHC Act (Activities Related to Extending Credit)

Section 3072.0

In 1997, the Board amended Regulation Y to include “activities related to extending credit” in section 225.28(b)(2), which includes the following permissible nonbanking activities:

	<i>Section No.</i>
1. real estate and personal property appraising	3270.0
2. arranging commercial real estate equity financing	3220.0
3. check-guaranty services	3320.0
4. collection agency services	3330.0
5. credit bureau services	3340.0
6. asset-management, servicing, and collection activities	3084.0
7. acquiring debt in default	3104.0
8. real estate settlement services ¹	3072.8

1. Real estate settlement services do not include providing title insurance as principal, agent, or broker.

Section 4(c)(8) of the BHC Act Real Estate Settlement Services

Section 3072.8

In 1997, the Board incorporated real estate servicing into section 225.28(b)(2) as one of the activities related to extending credit. (See 12 C.F.R. 225.28(b)(2)(viii).) Real estate settlement services do not include providing title insurance as principal, agent, or broker. Previously, the Board had approved the activity by Board order. In the order, the Board found that real estate settlement services consist of—

1. reviewing the status of the title in the title commitment, resolving any exceptions to the title, and reviewing the purchase agreement to identify any requirements that need to be complied with;
2. verifying payoffs on existing loans secured by the real estate and verifying the amount of and then calculating the prorating of special assessments and taxes on the property;
3. obtaining an updated title insurance commitment to the date of closing; preparing the required checks, deeds, and affidavits; and obtaining any authorization letters needed;
4. establishing a time and place for the closing, conducting the closing, and ensuring that all parties properly execute all appropriate documents and meet all commitments;
5. collecting and disbursing funds for the parties, holding funds in escrow pending satisfaction of certain commitments, and preparing the HUD settlement statement, the deed of trust, mortgage notes, the Truth-in-Lending statement, and purchaser's affidavits; and
6. recording all of the documents required under law. (See 1990 FRB 1058.)

3072.8.1 REAL PROPERTY EXCHANGE TRANSACTIONS UNDER SECTION 1031 OF THE INTERNAL REVENUE CODE

A request submitted to the Board on behalf of a bank holding company (BHC) requested an advisory opinion pursuant to section 225.27 of Regulation Y (12 C.F.R. 225.27). The BHC was proposing the acquisition of a subsidiary (the 1031 exchange subsidiary) that provided services to customers seeking to make exchanges of real property pursuant to section 1031 of the Internal Revenue Code (1031 exchange transactions).

Section 1031 of the Internal Revenue Code provides a U.S. taxpayer with deferral of gain when the taxpayer exchanges his or her property

for another property of a “like kind.” In a “forward” 1031 exchange transaction, the taxpayer first sells his or her existing property and later purchases a replacement property.¹ In order to complete a forward 1031 exchange transaction successfully, a taxpayer must satisfy certain conditions in section 1031 of the Internal Revenue Code and the U.S. Treasury regulations that implement section 1031. For example, in a forward 1031 exchange transaction, at the closing of the sale of the initial property, the proceeds of the sale must be held by an individual or entity otherwise unrelated to the transaction (the qualified intermediary). In addition, the taxpayer engaging in the forward 1031 exchange transaction may not receive the sale proceeds during the period in which a replacement property is identified (up to 45 days) and acquired (up to 180 days). In this request, the BHC was proposing to acquire a subsidiary that would act as a qualified intermediary in forward 1031 exchange transactions involving real property.

The 1031 exchange subsidiary would engage in several activities in order to facilitate forward 1031 exchange transactions. First, the subsidiary would provide its customer with documents related to the exchange to ensure that the exchange qualified as a valid forward 1031 exchange transaction. Specifically, the subsidiary would provide an exchange agreement, an assignment agreement, and a notice. The exchange agreement is a contract between the customer and the subsidiary that, among other features, notes the requirements for the successful completion of the transaction. The assignment agreement transfers from the customer to the subsidiary certain responsibilities for the sale of the initial property and the receipt of sales proceeds in order to ensure that the customer does not “constructively receive” the proceeds of the initial property sale for tax purposes. These responsibilities may include taking the transitory title to the initial property and replacement property as they are transferred from seller to buyer. The notice informs the purchaser of the initial property that the transaction is part of a forward 1031 exchange transaction; it helps establish that the mecha-

1. In a “reverse” 1031 exchange transaction, the taxpayer first purchases a replacement property and later sells his or her property. The proposal did not include the provision of services to customers seeking to make reverse 1031 exchange transactions.

nism for the forward 1031 exchange transaction is in place at the time of the sale.

Second, the 1031 exchange subsidiary would invest the proceeds of the sale of the initial property on behalf of the customer until the customer acquired the replacement property. The proceeds would be invested at the discretion of the subsidiary but would typically be deposited into deposit accounts at the BHC's subsidiary state-chartered commercial bank.² The subsidiary would also transfer the necessary funds to the appropriate party to effect the customer's purchase of the replacement property. If the customer does not identify a replacement property or purchase the replacement property within the required time periods set forth in section 1031 of the Internal Revenue Code or U.S. Treasury regulations implementing section 1031, the proceeds of the sale of the initial property would be transferred to the customer. It was represented that the subsidiary would act in a fiduciary capacity in holding, investing, and disbursing the customer's funds and that a state-chartered nondepository trust company would be allowed to engage in the activities of the subsidiary.

The 1031 exchange subsidiary (1) would not participate in negotiating the terms of the real

property sale and purchase transactions that constitute the forward 1031 exchange transaction and (2) would not assist the customer in locating a buyer of the initial property or a seller of the replacement property. The requestor also asserted that the proposed services are permissible non-banking activities for BHCs under section 225.28(b) of Regulation Y (12 C.F.R. 225.28(b)).

In view of all the facts of the record, Board staff opined that the proposed activities of the 1031 exchange subsidiary would be permissible real estate settlement services under section 225.28(b)(2)(viii) of Regulation Y (12 C.F.R. 225.28(b)(2)(viii)); would be trust company functions under section 225.28(b)(5) of Regulation Y (12 C.F.R. 225.28(b)(5)); and would be financial advisory services, including tax-planning and tax-preparation services, under section 225.28(b)(6) of Regulation Y (12 C.F.R. 225.28(b)(6)).³

The opinion is limited to the activities relating to the 1031 exchange transaction described in the opinion and in the correspondence exchanged between the requestor and Board staff. See the Board staff's February 9, 2006, legal interpretation.

2. The BHC's commercial bank subsidiary also may be a lender with respect to real properties involved in the 1031 exchange transaction. Any lending relationship between the bank and the customer would depend on the ability of the customer and the loan transaction to meet the bank's standard underwriting terms and conditions.

3. The Office of the Comptroller of the Currency (OCC) authorized national banks to provide a wide range of services to facilitate their customers' 1031 exchange transactions. See OCC Interpretive Letter No. 880 (December 16, 1999) and OCC Corporate Decision No. 2001-30 (October 10, 2001).

3073.0.1 EXPANDED STUDENT-
LOAN-SERVICING ACTIVITIES

A bank holding company applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and section 225.23 of Regulation Y to expand the student-loan-servicing activities of its nonbank subsidiary. The activities would consist of—

1. providing student-loan authorities (the authority) with regular reports that include information in the aggregate and by individual lenders concerning the volume of loans being serviced for the authority and the volume of loans outstanding;
2. preparing projections for approval by the authority of student loans to be purchased and commitments to be issued in the future, based on the volume of loans being serviced and commitments outstanding, consistent with the amount of funds available to the authority as the result of its sale of bonds;
3. advising eligible lenders, borrowers, and other interested parties of the authority's student-loan-purchase program, including the criteria used by the authority in purchasing student loans and the extent to which the authority will be purchasing loans in the future based on the availability of funds; and
4. meeting regularly with the authority to advise it of the nonbank subsidiary's efforts in connection with the student-loan activities.

Under no circumstances would the nonbank subsidiary be authorized to bind the authority or its bank trustee to commit to purchase or actu-

ally to purchase student loans from eligible lenders.

The proposed activities were regarded as being equivalent to the activities of a mortgage banking subsidiary of a bank holding company, authorized under section 225.28(b)(1) of Regulation Y, with respect to acquiring and servicing mortgage loans for institutional investors or in connection with the secondary-mortgage market. The activities proposed and currently conducted by the applicant, to the extent that they were different from the services performed by any institution that services loans for others, were perceived as being different only in that they related to servicing student loans for a governmental authority. Banks and their nonbank subsidiaries generally provide comprehensive loan-acquisition and -servicing "packages" for investors in mortgage and other loans. The bank holding company's nonbank subsidiary was the nation's largest servicer of student loans, and was thus particularly well equipped to perform the proposed expanded services.

In addition to determining that the proposed activities were closely related to banking to approve the application, the Board had to conclude that the proposed activities would produce benefits to the public that would outweigh any possible adverse effects, such as unsound banking practices, unfair competition, conflicts of interests, or undue concentration of resources. The Board made that conclusion in addition to determining that the balance of public interest factors that it is required to consider under section 4(c)(8) of the BHC Act was favorable. Accordingly, the application was approved on July 1, 1985 (1985 FRB 725).

A bank holding company or its subsidiary may engage in the activity of servicing loans or other extensions of credit for either affiliated companies or for persons or institutions not affiliated with the holding company. The service will often be carried on as an additional activity of a credit-extending subsidiary, such as a mortgage company, where the loan serviced was originated by the subsidiary and subsequently sold to an investor. A servicing company provides the collection vehicle through receipt and disbursement of funds for investors who may not possess the resources to accomplish the activity. The purpose of servicing is to keep a sound loan in good standing for a passive investor. The servicing company's remuneration is usually based upon a percentage of the outstanding balance of the loan.

The traditional servicing arrangement arises from the normal business of a mortgage company. The company grants extensions of credit to qualified borrowers and subsequently packages and sells these loans, normally without recourse, to individuals or institutional investors who contract the collection of the credit to the mortgage company. The company may also purchase mortgages or other extensions of credit in the open market with the intention of reselling the credit and retaining the servicing or can simply purchase servicing portfolios (12 C.F.R. 225.132). The collection itself is basically a bookkeeping function.

Servicing loans for others is relatively risk-free to the company when the credits are sold without recourse to investors. A credit which has been sold with recourse represents an unusual circumstance and should, therefore, be reviewed in detail. The serviced loans will generally be high quality mortgages which are in turn purchased from the company by passive investors desiring a fixed rate of return on their funds. The risk to a servicing company lies in its portfolio of unsold loans, or its "warehouse." The risk is two-fold: (1) the loan may not be of high enough quality to attract an investor so that the servicing company will have to continue to carry the credit for its own account, and (2) the loan was made at an interest rate which is below current market rates. In the latter case, the servicing company must either sell the loan at a discount or continue to hold the credit for its own account. In either case, the loan is treated as an asset of the company and involves credit risk.

The inspection of a servicing company, or a servicing department of a credit-extending sub-

sidary, should focus on adequacy of documentation and controls, and on the quality and marketability of the warehoused loans. The examiner should obtain a past due report for the portfolio and note in the inspection report significant credits which are past due together with the period of delinquency, the type of loan, and the asset classification, if any. The nature of the servicing business is such that the number of past dues should be small because loans are only warehoused for a short period of time until they can be sold to an investor. As a rule, a past due loan or a current loan which has been warehoused for more than several months is indicative of some problem with the credit. Each loan should be evaluated to determine the reason it has not been sold.

During periods of rising long-term interest rates, the warehouse portfolio becomes subject to the risk that a loan may not be marketable, except at a discount, because of its relatively low yield. This affects both the servicer's income and liquidity.

In the case of the parent company acting as a servicer, the inspection should also determine whether the activity is being carried on under the proper exemption. A bank holding company may act as a servicer under section 4(c)(8) of the Act or under the provisions of sections 4(a)(2) and/or 4(c)(1) of the Act. If carried on under Section 4(a)(2) of the BHC Act, the holding company is limited to servicing loans only for its own account or its banking and nonbanking subsidiaries. If carried under Section 4(c)(1)(C) of the BHC Act, the bank holding company is limited to servicing loans only for its own account or its banking subsidiaries.

Finally, the income of the company should be subject to scrutiny. A servicing company should be a profitable business. The servicer receives a fee based upon a percentage of the outstanding balance of the loan. In the early years of the payback period, the fee should significantly exceed the cost of the service, and because much of the portfolio will be refinanced either prior to its maturity or prepaid, the fee income should be sufficient to cover the servicer's cost plus profit. The reason for poor earnings in this activity is generally either inefficiency in the collection area, failure to attain the breakeven point of servicing volume, or the inability to turnover the warehouse portfolio often enough to maintain new fee generation. In the event that

the servicer is unprofitable, the examiner should determine the reasons and clearly set them forth in the inspection report.

The servicing arrangement is of a fiduciary nature and as such it gives rise to certain contingent liabilities. In the situation where the servicer is not fully and properly discharging its servicing responsibilities in accordance with the servicing agreement, the holder of the serviced notes might bring legal claims against the servicer. The inspection process should direct attention to this area including a review of the servicing agreement and verification that the servicer is fulfilling its obligations. Management should be reminded of the significant loss exposure which can result from improper attention to its fiduciary responsibilities.

3080.0.1 INSPECTION OBJECTIVES

1. To determine that internal controls are adequate to administer effectively the servicing of the loan portfolio.

2. To determine the level of exposure to credit risk of loans held for the firm's own account.

3. To determine if the firm's earnings are sufficient so as not to be a burden on the parent or subsidiary bank.

3080.0.2 INSPECTION PROCEDURES

1. Review the balance sheet to determine the volume of credits held for the firm's own account and evaluate their asset quality.

2. Review internal controls and evaluate their adequacy.

3. Review earnings and appraise the impact on the parent and bank subsidiaries.

4. Review servicing agreements and evaluate the potential or contingent risks to which the firm is exposed in the event of failure by a borrower to service its loan properly.

5. Determine whether mortgage servicing rights are recorded as an asset and whether they are being amortized over the average life of the loans being serviced.

Section 4(c)(8) of the BHC Act (Asset-Management, Asset-Servicing, and Collection Activities) Section 3084.0

A bank holding company may engage under contract with a third party in the management, servicing, and collection¹ of the types of assets that an insured depository institution may originate and own. The company cannot engage in real property management or real estate brokerage services as part of these services. See Regulation Y, section 225.28(b)(2)(vi). Provided below are some initial historical examples of Board orders that involve asset-management services related to this nonbanking activity. The commitments and conditions provided for within the Board orders should not be considered to be currently applicable.

3084.0.1 ASSET-MANAGEMENT SERVICES TO CERTAIN GOVERNMENTAL AGENCIES AND UNAFFILIATED FINANCIAL INSTITUTIONS WITH TROUBLED ASSETS

Three bank holding companies (the applicants) applied for the Board's approval under section 4(c)(8) of the BHC Act to engage de novo in providing asset-management services to the Resolution Trust Corporation and the Federal Deposit Insurance Corporation, and generally to unaffiliated financial institutions with troubled assets. The applicants committed to conduct these activities under the same terms and conditions as set out in 1988 FRB 771.

The commitments and conditions of this order required that (1) the asset-management activities would be provided to the banks and savings associations, (2) the applicant would obtain the Board's approval before providing asset-management services for pools of assets that were not originated or held by financial institutions and their affiliates, (3) the applicant would cause its asset-management subsidiary to establish procedures to preserve the confidentiality of information obtained in the course of providing asset-management services, and (4) neither the applicant nor its management subsidiary would take title to the assets managed by the asset-management subsidiary.

The applications of these holding companies were approved by a Board order on December 24, 1990 (1991 FRB 124). Two additional

orders about providing asset-management services were approved on March 25, 1991 (1991 FRB 331 and 334).

3084.0.2 ASSET-MANAGEMENT SERVICES FOR ASSETS ORIGINATED BY NONFINANCIAL INSTITUTIONS

Two bank holding companies (the applicants) applied jointly for the Board's approval under section 4(c)(8) of the BHC Act to engage de novo in collection-agency activities pursuant to Regulation Y through a joint venture. The Board concluded that the collection activities were permissible.

The bank holding companies also applied for the Board's approval to engage in asset-management, asset-servicing, and collection activities through a nonbank of the joint venture located in New Jersey. The subsidiary would provide asset-management services to the Resolution Trust Corporation (RTC) and the Federal Deposit Insurance Corporation (FDIC). It would also provide these services to unaffiliated third-party investors that purchase pools of assets assembled by the RTC or the FDIC. Under the proposal, neither the applicants nor this nonbank subsidiary would acquire an ownership interest in the assets that they manage or in the institutions for which they provide the asset-management services. The applicants further committed that they would not provide real property management or real estate brokerage services as part of the proposed activities.

The Board previously determined that, within certain parameters, providing asset-management services for assets originated by financial institutions (banks, savings associations, and credit unions) and their bank holding company affiliates is an activity closely related to banking (see 1991 FRB 331, 334 and section 3600.15.3). The applicants proposed to conduct all asset-management activities subject to the same conditions as in the Board orders previously cited.

The applicants proposed to engage in asset-management activities for assets originated by nonfinancial institutions as well as by financial institutions. These assets include real estate, consumer, and other loans; equipment leases; and extensions of credit. Assets of nonfinancial institutions include pension funds, leasing com-

1. Asset-management services include acting as agent in the liquidation or sale of loans and collateral for loans, including real estate and other assets acquired through foreclosure or in satisfaction of debts previously contracted.

panies, finance companies, and investment companies formed to engage in asset-management activities. The managed assets would be limited to the types of assets that financial institutions have the authority to originate. The Board concluded that the applicants would have the expertise to engage in managing these types of assets,

regardless of the originating entity. The Board also determined that the proposal was consistent with the asset-management proposals approved in its prior orders. The Board concluded that the applicants' proposed activities are closely related to banking and approved the order on December 21, 1992. (1993 FRB 131)

Section 4(c)(8) of the BHC Act (Receivables)

Section 3090.0

Two nonbanking activities authorized under section 4(c)(8) of the BHC Act, per Regulation Y in section 225.28(b)(1), are the discount purchasing of a client's accounts receivables (factoring) and the establishment of a revolving

credit facility secured by an assignment of accounts receivable (accounts receivable financing). These activities date back to Board orders issued in 1951. See sections 3090.1 and 3090.2.

3090.1.1 INTRODUCTION

Factoring is the discount purchasing of the client's accounts receivable invoices for goods that have been manufactured and shipped. Factoring differs from accounts receivable financing in that the factor assumes the credit risk of collecting payment from the recipient of the goods. The principal advantage of factoring is that the client is assured of the collection of the proceeds of its sales, regardless of whether the factor is paid.

A factor generally offers four basic services: (1) credit investigation and approval; (2) buying the client's accounts receivable at a discount (generally between .75 and 1.5 percent) after shipment of the goods to which there is no subsequent claim, just a claim against the invoices; (3) bookkeeping in the form of posting accounts; and (4) advancing funds in the form of an "open account" when there could be 30 days between shipment and payment. The later allows the client to replenish inventory loans for working capital or expansion.

Maturity factoring and advance factoring are the basic techniques of the industry. In maturity factoring, an average maturity due date is computed for the receivables purchased during a period and the client receives payment on that date. Advance factoring uses the same computations, however, the client has the option of taking advance payments equal to a percentage of the balance due at any time *prior* to the computed average maturity due date. The unadvanced balance, sometimes called the "client's equity," is payable on demand at the due date.

The factor's balance sheet reflects the purchases as "factored receivables" and the liabilities as "due to clients." Usually the due to clients balance will be significantly less than the factored receivables balance because of payments and advances to the clients. The income statement will show factoring commissions, which represent the discount on the receivables purchased. Interest income for advances on the due to client balances may or may not be a separate line item.

The factor is a pivoting point between the buyer and the seller. The buyer must pay or all parties lose. Also the seller must have a reputation for delivering quality merchandise. The factor must know the business well enough to account for sudden increases in returns for out-of-specification merchandise or for merchandise of low quality. If the seller does not perform adequately, payment for the goods may not be

forthcoming, and if bankruptcy threatens the seller, buyers may hold back their future purchases.

3090.1.2 FUNDING

Since factors traditionally provide financing to industries with seasonal borrowing requirements, such as textiles, shoes, clothing, and other consumer goods, their own funding programs will usually reflect this volatility. It may be expected that factors generally will have greater access to short-term unsecured credit facilities than would be expected for other non-bank activities. This would hold true for factors funded solely from internal sources as well as external sources.

Because of a factor's inherent funding volatility, a major portion of a factor's liabilities will be short-term debt. For the internally funded company, this source will be predominantly commercial paper proceeds from the parent company, with perhaps some bank line proceeds intermixed. The externally funded company will probably rely on bank lines for its short-term needs, usually with the parent company's guaranty of the debt.

Longer term funding may be provided through bank term loans and subordinated debt, although the volume of this type of debt appears to be low relative to other financing industries. The terms and covenants of long-term debt appear to allow for relatively more flexibility in operations and more highly leveraged positions than similar debt for other financing industries in recognition of the volatility of factoring operations and the liquidity of factoring assets.

The principal suppliers of senior and subordinated funds to factors and accounts receivable financiers appear to be limited to a few insurance companies that specialize in this field, although a few banks also provide senior term funding. These lenders have incorporated their perceptions of acceptable balance sheet ratios and earnings performance into their debt agreements as restrictive covenants. Since comparative industry data is limited, these restrictive covenants may be the examiner's primary means of evaluating leverage, loss reserves, and capital adequacy. The "due to clients" account is another significant measure of a factor's liabilities. As noted before, the account represents the

accumulation of the amounts payable to the clients upon the maturity of their factored receivables. This liability is, to a large extent, self-liquidating through the collection of those receivables.

An analysis of the changes in the relative proportions of the “due to clients” account should provide valuable input into the analysis of a factor’s earnings. Since factoring is a highly competitive industry, price cutting has reduced factoring commissions to a point where they provide minimal support to earnings; therefore, the interest margins on factoring advances have a significant impact on net income. The implication of the analysis of proportional changes is that as more clients take advances (reducing “due to clients”), profit margins should widen, and conversely, as the “due to clients” proportion of total liabilities rises, profit margins may be expected to narrow.

3090.1.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the Act and Regulation Y.

2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios, and whether lending, monitoring and collection policies are adequate to maintain sound asset conditions.

4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.

5. To determine the viability of the company as a going-concern, and whether its affiliate status represents a potential or actual adverse influence upon the condition of the consolidated corporation.

3090.1.4 INSPECTION PROCEDURES

The inspection procedures for a factor have been divided into two phases, preliminary and on-site, when considered necessary.

The preliminary phase entails the gathering and analysis of information at the parent company in order to determine the scope of the field work to be performed on-site. The on-site segment of the procedures expresses some of the

typical practices and considerations in this form of financing.

During the preliminary phase, the following information should be reviewed:

1. System approvals for offices and activities, including stipulated public benefits;

2. Financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns;

3. All management reports which should indicate problem loans, loan volume, new accounts and other reports regarding loan portfolio and company status;

4. External debt instruments to determine material restrictive covenants;

5. Internal audit reports and workpapers;

6. Minutes of the board of directors, executive committee and loan committee, if available at the parent company;

7. The results of a parent company loan review, if any.

8. To be requested:

a. Schedules of past due loans, intercompany participations, and large loans;

b. Schedules of problem accounts, liquidating accounts, and repossessed assets;

c. General ledger trial balance;

d. Loan trial balance, including over-advances;

e. Statements of company lending, accrual, and other policies;

f. Reconciliation of the loan loss reserve for the period between inspections;

g. Listing of common borrowers between affiliates.

3090.1.4.1 On-Site Procedures

After reviewing the material available at the parent company, including the audit review, a decision whether to go on-site is in order. Some of the determinants of this decision are relative size, current earnings performance, overall contribution to the corporation’s condition, asset quality as indicated by internal loan review reports and problem loan reports, and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be

inspected each time the parent company is inspected.

The following comments provide a general outline of the factor's basic operation. This outline will provide a background for the comments in the inspection procedures.

While the typical factoring agreement stipulates that all accounts receivable of a client are assigned to the factor, not all are purchased without recourse. The agreement between the factor and the client will usually state that receivables subject to shipping disputes and errors, returns, and adjustments are chargeable to the client because they do not represent bona fide sales. In addition, sales made without the factor's approval are considered *client risk* receivables, with full recourse to the client if the customer fails to pay.

The usual approval process requires the client to contact the factor's credit department before filling a sales order on credit terms. The credit department will research its files, determine the credit worthiness of the customer, and approve or reject the sale. As stated before, if the credit department rejects the sale, the client may complete the sale, but at its own risk. The most common reasons for rejection are sales to affiliates, sales to known bad risks, sales to customers whose credit cannot be verified, and sales to customers whose outstanding payables exceed the factor's credit line.

Once a sale has been made and the receivable assigned to the factor, approved or not, the client's account will be credited for the net invoice amount of the sale. That is, any trade or volume discounts, early payment terms, and other adjustments are deducted from the invoice amount. The receivable then becomes part of the client's "availability" to be paid in advance or at the computed due date, depending upon the basis of the factoring arrangement.

Each month the client will receive an "accounts current" statement from the factor which details the transactions on a daily basis. This statement will reflect the daily assignments of receivables, remittances made, deductions for term loans, and interest charges and factoring commissions. Credit memos, client risk, charge backs, and other adjustments will also be shown. Client risk charge backs are the amounts deducted from the balance due to the client upon the failure of customers to pay receivables factored at client risk.

The accounts current statement and the availability sheets will be necessary for the asset analysis process. Considering the volume of transactions, the accounting system that develops this data will probably be automated, which

may allow the factor to obtain comparison and monitoring data on the client. If a monitoring system is in place, the data provided will be valuable in the asset analysis process.

The evaluation of a factor includes a review of its systems and controls as well as an analysis of the quality of its assets, both of which may be accomplished by a two segment analytical approach. A major portion of a factor's assets will be factored receivables, for which the credit department has the responsibility for credit quality and collection. The other major portion of the assets will be the client loans and credit accommodations, for which the account officers are responsible. The procedures for each area will be dealt with separately.

3090.1.4.2 Credit Department

Because of its integral function in the credit and collection process, the credit department is the heart of a factor. The department maintains credit files, which are continually updated as purchases are made and paid for by the customers. These files will include financial statements, credit bureau reports, and details of purchasing volume and paying habits. Usually, each customer will have an assigned credit line, which is the credit department's estimate of the customer's credit capacity.

The evaluation of this department should take the form of a review of a sample of the customer files. The sample may be drawn from lists of large volume customers and closely monitored customers, or it may be a random sample. The examiner should have either a copy of departmental policies and procedures or a verbal understanding of them prior to the review. It should be kept in mind that the objective of the review is to critique the credit and collection process and to verify departmental effectiveness, and not to obtain classifications.

3090.1.4.3 Asset Evaluation

Prior to the review of asset quality, the examiner should receive the lists of problem clients, client over-advances, term loans, and credit accommodations; as well as the aging schedule of factored receivables including client risk receivables. These will be used as the basis for selecting the clients to be reviewed. It is recommended that the selection be made from the list of clients with term loans, largest first, in addition to the

acknowledged problems. Clients with high dilution rates and those with client risk receivables equal to 20 percent or more of factored volume may also be included.

It should be noted that a factor usually collects principal and interest payments directly from the client's availability, which means that the expected delinquency rate is minimal. Past due factored volume is not an effective measure of client quality.

A maturity client's availability is the sum of all factored receivables, less trade and other discounts, factoring commissions, credit memos, and client risk charge-backs. There may also be other deductions for letters of credit and other credit accommodations. An advance client's availability would be further reduced by advances on the factored receivables, interest charges, and the reciprocal of the contractually agreed upon "advance" percentage. This reciprocal, 20 percent in the case of an 80 percent advance client, is sometimes referred to as the client's "equity" in the factored receivables. Availability may be increased by liens on additional collateral such as inventory, machinery and equipment, real estate, and other marketable assets.

The review and analysis of asset quality will be procedurally similar to that used in accounts receivable financing. However, certain aspects of the financial statements may need elaboration. The client's balance sheet will have a "due from factor" account instead of accounts receivable. The account balance may be somewhat lower than a normal receivables balance, which would affect turnover ratios and other short-term ratios. The difference relates to the client's ability to convert sales to cash faster with a factor than if the receivables were to be collected normally. In addition, the analysis of the statements should incorporate an assessment of the client's ability to absorb normal dilution and the potential losses associated with client risk receivables, particularly when these factors are higher than usual for the portfolio.

As a factor's systems and controls for client loans are somewhat similar to those for accounts receivable financing, the evaluation of asset quality must consider these factors before the classification of a client is made. While the typical client may have less than satisfactory financial statements, the factor's working knowledge of the client's operations and industry tends to mitigate the risk factors present.

For classification purposes, "client risk

receivables" is the only portion of factored volume that is appropriate for use in the amount classified. Because of the recourse aspect the balance is considered as an indirect obligation rather than a direct obligation.

As a further step in the evaluation of the lending area and its controls, the evaluation of the steps taken and the results of at least one recent client liquidation should be made. By reviewing the chronology of events along with the loan and collateral balances, the effectiveness of systems and controls under extended circumstances may be assessed. The type of liquidation will have a bearing on the losses taken. Losses tend to be higher when client fraud is involved.

In the process of evaluating a factor's condition, the adequacy of systems and controls and the capability of management are considered significant measures. Asset quality, as measured by classifications, may be influenced by seasonal aspects and should be carefully analyzed to allow for such influences. Because of a lack of regular and consistent comparative data for the industry, earnings and capital adequacy are evaluated in terms of the company's own performance.

The review of the company's internal systems and controls should be continuous during the inspection. Considering the large volume of daily transactions that flows through a factor, any internal control that can be easily negated represents a potential problem and should be brought to management's attention. In the broad context, this review would include the credit controls for both clients and customers. Since credit problems can develop rapidly in factoring, credit controls and systems must be responsive to the identification of these problems. Deficiencies noted should be discussed with management and, if significant, cited in the report. The company's earnings trends may be evaluated by using a comparative yield on assets approach. By analyzing yields on asset categories from period to period the examiner will be able to make a judgment as to the efficiency of the systems. Factors are subject to the same price competition in the commercial finance market as accounts receivable financiers. Declining portfolio yields may reflect the inroads made by competition and may indicate a decline in future profitability.

The subject of capital adequacy is influenced by the aforementioned seasonal characteristics. Over the period of a year, the comparisons of equity to assets and equity to liabilities will vary significantly. It is suggested that an average balance sheet be used to stabilize the variations.

In addition to balance-sheet ratio analysis, the effects of dividends and fees paid to the parent company on the capital accounts may be analyzed to determine the rate of internal capital generation. If the company is in a growth profile, or attempting to gain market share, the

comparisons between fiscal periods may reflect a declining trend. Such a trend should be discussed with parent company management.

The report comments should summarize these considerations in a clear, concise presentation.

3090.2.1 INTRODUCTION

Accounts receivable financing is a revolving credit facility secured by an assignment of accounts receivable. As a financing technique, it allows the client (the financed company) to obtain working capital without waiting for customer payments. This form of financing is frequently used by companies with working-capital shortages, companies in seasonal industries, and companies with weak financial conditions. Typically, the funding requirements of these companies are in excess of any amounts that would be available through unsecured bank financing.

The financing process begins with a bona fide credit sale by the client and the assignment of the resulting receivable to the financier. Upon assignment, the financier advances a specific percentage of the receivable to the client. The loan is repaid by customers' direct payments or, in the case of a lockbox, by the remittance of the customer's payment to the financier, who returns the amount in excess of the loan to the client. While a simple concept for a single transaction, the operations of an accounts receivable financier become a complex process when many clients and perhaps thousands of receivables are involved.

Companies engaged in accounts receivable financing usually incorporate the full range of commercial financing activities into their operation. These activities would include inventory financing, loans secured by machinery and equipment, some forms of real estate loans, and loans secured by other assets. As a general statement, these companies will provide working-capital financing using almost any form of viable collateral to secure the loans. These additional activities are facilitated by the financier's in-depth knowledge of the borrowers' financial conditions and cash flows. This knowledge comes from the controls placed on the borrowers, such as periodic field audits, the flow of the borrower's cash through the company, and an internal staff that specializes in the financed industries.

3090.2.2 FUNDING

Accounts receivable financing companies, like factors, traditionally provide working-capital financing to seasonal industries. Consequently, the funding programs of these financing companies will reflect these variations in their increased use of short-term funds relative to other nonbanking activities.

Since many accounts receivable clients have

seasonal businesses, a large portion of the financier's liabilities will be short-term debt. For internally funded financiers, this debt will be predominantly commercial paper proceeds from the parent company, with perhaps some bank lines intermixed. The externally funded company will probably rely on bank lines for its short-term needs, usually with the parent company's guaranty of the debt.

Longer term funding may be provided through bank term loans and subordinated debt, although the volume of this type of debt appears to be low relative to other financing industries, another parallel to factoring. The terms and covenants of long-term debt appear to allow for more flexibility in operations and somewhat more highly leveraged positions than similar debt for other financing industries. This practice is apparently in recognition of the volatility of this form of financing and the liquidity of the assets supporting the financier's loans.

The principal suppliers of senior and subordinated funds to collateral lenders (factors and accounts receivable financiers) appear to be limited to a few insurance companies that specialize in this field, although a few banks also provide senior term funding. These lenders have incorporated their perceptions of acceptable balance-sheet ratios and earnings performance into their debt agreements as restrictive covenants. Since comparative industry data are limited, these restrictive covenants may be the examiner's primary means of evaluating leverage, loss reserves, and capital adequacy.

3090.2.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the act and Regulation Y.

2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.

3. To determine the quality of the asset portfolios and whether lending, monitoring, and collection policies are adequate to maintain sound asset conditions.

4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.

5. To determine the viability of the company as a going concern, and whether its affiliate

status represents a potential or actual adverse influence upon the condition of the consolidated corporation.

3090.2.4 INSPECTION PROCEDURES

The inspection procedures for an accounts receivable company have been divided into two phases, preliminary and on-site.

The preliminary phase entails the gathering and analysis of information at the parent company in order to determine the scope of the field work to be performed on-site, if required. The on-site segment of the procedures expresses some of the typical practices and considerations in this form of financing.

During the preliminary phase, the following information should be reviewed:

1. system approvals for offices and activities, including stipulated public benefits
2. financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns
3. all management reports which should indicate problem loans, loan volume, new accounts and other reports regarding loan portfolio and company status
4. external debt instruments to determine material restrictive covenants
5. internal audit reports and workpapers—
 - a. internal control exception report to determine weaknesses and corrective actions,
 - b. flow charts in the workpapers which will enable the examiner to become familiar with company systems, and
 - c. additional internal reports may be identified which may assist the inspection on-site
6. minutes of the board of directors, executive committee and loan committee, if available at the parent company
7. the results of a parent company loan review, if completed
8. To be requested:
 - a. schedules of past-due loans, inter-company participations, and large loans
 - b. schedules of problem accounts, liquidating accounts, and repossessed assets
 - c. general ledger trial balance
 - d. loan trial balance
 - e. statements of company lending, accrual, and other policies
 - f. reconciliation of the loan-loss reserve for the period between inspections
 - g. listing of common borrowers between affiliates

3090.2.4.1 On-Site Procedures

After reviewing the material available at the parent company level, including the audit review, a decision whether to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by internal loan review reports and problem loan reports, and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The on-site inspection procedure will be similar to that used in a commercial department of a bank. Selection and evaluation of the assets, review of internal controls, identification of lending policies, and credit review procedures are all familiar areas to the examiner and do not need further explanation. However, the accounting and reporting systems are somewhat different and will require the examiner to become familiar with systems and policies before proceeding with the asset evaluation process.

3090.2.4.2 Accounting and Controls

There are two basic systems within the accounting and control environment of an accounts receivable company. The first system provides accounting and control for client loans and collateral balances and is frequently automated to handle the large flows of data generated in the operation. It is also common to find lockbox arrangements with banks that tie into the client system for the receipt of customer remittances. Such lockbox arrangements provide a greater degree of control over remittances.

The mechanics of the client system will be detailed in the internal audit file, which should also indicate the adequacy and efficiency of the system's controls. The audit file may also indicate the accounting techniques used and the client-monitoring reports that are generated by the system, such as dilution rates and trends, and year-to-year volume and operating comparisons. The client system provides the basic data for the company's accounting and control sys-

tem. While the basic accounting considerations are outlined in the AICPA *Industry Audit Guide: Audits of Finance Companies*, there are certain accounting aspects which deserve additional treatment. In some cases where a group of related companies are clients, the financing arrangements may include cross-guarantees and cross-collateralization agreements. In these cases, the financier might utilize excess availability for some of the related entities to offset the over-advance of another entity. Another treatment that may be applied is the use of a “reserve for liquidating accounts,” which in some instances is a specific reserve for a problem account that reverses at least current period earnings for the account. This reserve is in addition to the allowance for bad debts and may not be an explicit balance sheet account, but an offset to gross loans outstanding.

3090.2.4.3 Definitions

While many of the following comments define certain routine accounting and control considerations for accounts receivable financing, certain of the concepts are necessary for proper evaluation of client quality (i.e., availability, dilution, over-advances, and advances on other collateral). These definitions are general in nature as is the terminology, however, the processes will be similar in almost every company.

Loans to the client are based upon a contractual percentage of the client’s eligible receivables against which the financier has agreed to advance funds. Eligible receivables include all assigned receivables, less trade discounts, early payment discounts, contra-accounts (reciprocal sales between the client and customers), receivables past due beyond the eligibility period specified in the contract, and other adjustments. The advance percentage is determined by a number of factors which include the expected average dilution rate (disputed invoices, misshipped goods, returns and allowances, etc.) and the client’s expected gross profit margin. As a general rule, lenders in this field try to finance only the cost of sales and not the client’s profits.

Because this form of financing involves rapidly changing collateral balances, a high volume of customer payments, and frequent loan requests, the financier has to determine the client’s “availability” (loanable funds) before advancing the loan. Availability is the total of eligible receivables times the advance percentage less credit memos and the current loan balance. Credit memos are adjustments to the customer’s account for errors in the client’s shipments (i.e.,

the quantity shipped was less than that ordered). It is the client’s responsibility to provide this information to the financier on a daily basis. If there is sufficient availability, the requested amount is usually advanced. On occasion, the availability computation will show the client to be “over-advanced,” that is the loan balance exceeds the agreed percentage advance against collateral. This situation may have occurred because some receivables have become past due, or the financier may have authorized additional funds to meet some valid client requirement. As a rule, over-advance positions are usually subject to a quick paydown to reduce the loan balance to the original contractual terms.

At times, the availability computation will reflect additional collateral value in the form of inventories, machinery and equipment, and other assets, shown net of an advance percentage. These categories usually indicate term loans, secured by liens against the respective assets, which expand the collateral base and provide additional support to the client’s working capital requirements. These term loans should not be confused with loans for the acquisition of such assets which might appear only in the client’s monthly statement.

The accounts receivable financier charges interest on the daily cash borrowings of the client and accumulates these charges on the client’s monthly statement. The total interest charge for advances on receivables and other loans is deducted directly from remittances received by the financier. Accordingly, the expected delinquency rate for an accounts receivable operation is low except for the rare loan which is paid directly by the client and other assets which formerly belonged to a defunct client.

3090.2.4.4 Over-Advances and Other Loans

It was indicated earlier that an over-advance represented funds advanced in excess of available loanable funds and that there are two basic causes for over-advances. Some over-advances occur because a portion of eligible receivables becomes past due and ineligible for advances. This condition is usually corrected by the assignment of additional receivables or receipt of customer payments, and therefore may exist only for a few days.

The other basic over-advance occurs when a client requires additional funds for valid busi-

ness purposes, such as an inventory buildup at the beginning of a season. In such cases, the over-advance is set up as a very short-term loan and paid down rapidly out of the client's availability. While the policy for over-advances varies between financiers, when they are permitted they are usually carefully analyzed by the internal credit committee and closely monitored until paid off.

If a client is involved only in receivables financing and has made an over-advance request, the financier generally will prefer to take a lien against inventory rather than make an unsecured over-advance. Regardless of the purpose of the inventory loan, the financier will advance only a small percentage of the inventory value (40 to 50 percent) to allow for shrinkage, spoilage and obsolescence of the collateral. While inventory liens are in effect, the field audit staff will partially verify the inventory during each audit.

While machinery and equipment may be pledged as additional collateral to support working capital loans during the business period, most client companies will also finance equipment purchases on a secured basis. In either case, the financier usually advances a percentage of the quick sale or auction value of the equipment as determined by an appraisal. During field audits, the presence of the equipment and appropriate lien tagging are verified by the field auditors.

On occasion, a lien on real estate is part of the pledged collateral. The real estate may be operating premises, land, or the property of the principal of the client. Such liens may occur when the client is acquiring new, or expanding old, operating facilities and is using the financing relationship to fund the project. However, in many cases the lien was taken to provide additional collateral for working capital loans. In either case, appropriate documentation and appraisals should be on file.

It should be noted that loans on real estate collateral are limited to those providing support to the primary business of the client. Loans to finance speculative real estate acquisitions, and unrelated commercial property are not considered to be the usual practice of this industry, and would be considered as not complying with the general activities of a commercial finance company, unless specifically approved.

3090.2.4.5 Asset Evaluation

In selecting the loans to be reviewed, the first

group to be considered is the acknowledged problem accounts. The next sample should be drawn from accounts with high dilution rates, those with frequent or large over-advances, and those which constantly take down all of their availability. Participations, purchased or sold, between affiliates should also be included in the examiner's sample. While this approach may exclude some of the larger accounts, it is intended to include those accounts which are potential problems in the primary review group. Should the company have a monitoring system for potential problem accounts, the system should be used for drawing the review sample.

The principal tools for the review process should include: the credit file, the field audit file, the monthly statement for the inspection date, the availability sheet for the inspection date, and updated information for the interim period ending with the on-site inspection date. Within the credit file, the copies of the financing agreements will indicate the specific terms of the borrowing relationship: the pledged collateral; advance percentage; interest rate; guarantees; appraisals; and the required communications, such as monthly receivables agings, inventory and machinery and equipment certification, etc. The usual file information will also include management's analysis of the client's operations.

The field audit file will contain the audit reports originated by the financier's field audit staff. These reports are usually quite comprehensive, with a primary focus upon critical financial areas. As a minimum, the auditors will analyze trade payables, State and federal taxes, cash flows, inventories, and receivables. Particular attention is paid to the client's sales and shipping procedures in order to ascertain that valid invoices are being assigned to the financier. The client's accounting procedures are also analyzed to determine their effectiveness and accuracy. These reports represent a primary source of information regarding the general financial condition of the client.

The client's monthly statement and availability sheets represent spot information on the client's activity. Many clients operate in seasonal industries such as clothing and textiles. In such industries, a client will tend to use all of its availability, as well as seasonal over-advances, during its inventory buildup period, and will pay off the over-advances and may have excess availability during the sales and collection period. The examiner will have to analyze the client's current position with regard to its particular operating cycle. Over-advances granted to a client for valid reasons do not necessarily repre-

sent undue exposure or a substandard asset for the financier.

The financial statements of a client quite frequently reflect a “relatively unsatisfactory or weak” financial condition, with minimal working capital, high leverage, and uncertain earnings as prime ingredients. There have been cases where both deficit working capital and deficit net worth were in evidence, however, the financing relationship has continued to function properly. The financier can continue these relationships if the short-term factors (sales volume, receivables and inventory turnover, and current liabilities) are appropriate and the character of the principals warrants the exposure. Analysis of a financed client should emphasize the short-term analytical factors and the related trends in the evaluation of asset quality.

Such factors as the success of the selling season, availability of materials, and fad merchandising will have direct impact on the client’s financial condition. While the loan may be adequately protected by pledged collateral, the ability of the client to continue operations may be affected by these short-term factors.

For classification purposes, the financier’s controls will have to be considered in addition to weighing the degree and quality of collateral protection, short-term factors, and the client’s ability to withstand any financial reverses that are evident. Clients with deficit net worth, past-due trade obligations, and delinquent taxes should be considered to be problems and appropriately classified. The ability of the financier to control the risk exposure in the portfolio will be an important consideration in determining whether to classify a specific loan.

3090.2.4.6 DPC Assets

In some companies, assets acquired from defunct clients remain in the loan account instead of being reclassified to another balance-sheet category. Usually, these assets are uncollected accounts receivable, inventory, and machinery and equipment which have not been liquidated. However, these assets may include securities, as well as business and personal real estate, which had been pledged as collateral. By retaining these assets in the loan category, effective liquidation of the respective assets may be delayed because they usually represent small dollar amounts. Apart from this consideration, classification as loans may disguise the fact that certain of the assets may be subject to provisions of Regulation Y and the act, such as control and retention considerations. Separate control of these assets is recommended.

It is common practice in the accounts receivable and factoring industry for the lender to require a pledge of client company stock by the principals, particularly in overextended situations. Additional pledges of securities owned by the principals may also provide added collateral. While such pledges are not precluded by Regulation Y and the act, once they become company assets they should be reviewed for control and retention purposes.

3090.2.4.7 Financial Condition

Secured lending relies upon the four C’s of credit: the traditional Capital, Character, Capacity, and Collateral. Pragmatically, these lenders practice a fifth C, Control. In this context, control implies the continuous monitoring of the client’s financial condition, continued evaluation of the collateral, constant contact with the client, and the adjusting of the credit accommodation to conform to the client’s current situation. This control is the reason that the secured lender can maintain a proper and mutually profitable financing arrangement with the client.

It is to be expected that the typical portfolio may include clients with less than satisfactory financial conditions. Considering the controls imposed upon the borrowing relationships, the secured lender has compensated for some of the additional risk in the loans. The combination of field audits, collateral controls, and account officer contact can be expected to reduce the exposure to unsatisfactory clients to a minimum. However, clients do fail and losses may be taken in liquidating the account. The incidence rate of liquidations and the extent of losses taken may be an indicator of the effectiveness of company controls.

The earnings of an accounts receivable company are based upon loans carrying interest rates above prime, which means that loan volume is a major determinant of revenues. Because this industry is very competitive, loan pricing is frequently used to obtain new clients from other lenders in order to promote growth in loan volume. Increases in loan volume combined with declining interest margins may be an indicator of price competition that is yielding negative results. Analysis of client turnover may verify this possibility.

In summary, management’s ability to control risk and achieve profitability is essential to the soundness of an accounts receivable operation.

The effectiveness of company policies, the expertise of the lending staff and field audit staff, and the adequacy of systems and controls are the expressions of this ability to control risk. Company profitability is a measure of man-

agement's ability to obtain satisfactory client quality and terms in a price-competitive environment. The examiner will have to balance these factors in assessing the condition of the company.

3090.2.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

3100.0.1 INTRODUCTION

The basic activity of a consumer finance company is making installment loans to individuals and is permissible pursuant to section 225.28(b)(1) of Regulation Y and section 4(c)(8) of the BHC Act (the act). In most areas, a company may make these loans under one or more of the following licenses: consumer discount, small loan, sales finance, or second mortgage. Most of a company's activity will probably be direct cash lending, in which the borrower and the lender come into direct contact with one another in the credit-extension process. However, a significant volume of lending is done through third-party contact. This is sales finance lending in which the company purchases, or discounts, the loans originated by a durable goods dealer in daily retail sales activity. Second mortgage lending may be originated from either direct contact or through home-improvement contractors.

Most consumer finance companies offer credit-related insurance as part of their services, and may have a captive insurance subsidiary if they are large enough. Inspection considerations and procedures for reviewing credit-related insurance activities are covered in section 3170.0.

3100.0.2 FUNDING

In some holding companies, management has elected to use a conventional industry funding pattern to support its consumer finance company operations. This pattern makes use of long-term subordinated debt in a specific proportion to equity capital. The further addition of senior long-term and short-term debt is then limited by restrictive covenants incorporated into the subordinated debt agreements. These covenants also provide operating limits for management in such areas as the proportions of specific classes of assets, minimum levels of net worth to be maintained, and the maximum dividend payout allowable. Since the wording and limits of these covenants are negotiated between the borrower and the subordinated debt holder, generalizations regarding the usual terms are not practicable.

It appears that certain life insurance companies supply most of this subordinated debt to the consumer finance industry. Along with their general knowledge of the industry, these insurance companies police their loans by requiring periodic reports from the borrower and by sending teams of their people to review the borrow-

er's operations. In a sense, this approach to funding represents regulation and control by market forces rather than by governmental intervention.

In other holding companies, management has elected to support these operations using holding company funding sources such as commercial paper and lines of credit. In using this approach, operating management is generally free from market restrictions on operations.

It is likely that most affiliated consumer finance companies will have a funding plan that falls somewhere between these two extremes. Since commercial paper generally carries a lower total cost than bank lines of credit, the examiner may find that the senior short-term debt component is almost completely supplied by the parent company. On the other hand, long-term debt may have been obtained directly, or with the parent company's guaranty, or it may have been borrowed from the parent company's sources—that is, the parent borrows from a third party and re-lends the proceeds to the subsidiary.

Since a large volume of consumer installment paper carries maturities of three years or more, the use of commercial paper proceeds with maximum maturities of 270 days warrants some comment. Securities Act Release No. 401 specifically recognizes this use of commercial paper as appropriate. Further information may be found in the Code of Federal Regulations, 17 C.F.R. 231.4412. Also see sections 2080.1 and 5010.16 for information on commercial paper.

3100.0.3 INSPECTION OBJECTIVES

1. To determine whether the company is operating within the scope of its approved activities and within the provisions of the act and Regulation Y.
2. To determine whether transactions with affiliates, including banks, are in accordance with applicable statutes and regulations.
3. To determine the quality of the asset portfolio, and whether lending, monitoring, and collection policies are adequate to maintain sound asset conditions.
4. To determine the adequacy of the reserve for loan losses and whether the asset charge-off policy is appropriate.
5. To determine the viability of the company as a going concern, and whether its affiliate

status represents a potential or actual adverse influence on the condition of the consolidated corporation or the subsidiary bank(s).

3100.0.4 INSPECTION PROCEDURES

After reviewing the material available at the parent company level, including the audit review, a decision whether or not to go on-site is in order. Some of the determinants of this decision would include relative size, current earnings performance, overall contribution to the corporation's condition, asset quality as indicated by delinquency reports and industry comparisons (detailed later in this section), and the condition of the company when last inspected. From the information provided, it might be determined that the company is operating properly and is in apparently sound condition. In such a case, an on-site inspection may not be warranted, providing that a fairly recent on-site inspection had been conducted. Conversely, a deteriorating condition might be detected which would require a visit, even though a satisfactory condition had been determined during the previous inspection. Subsidiaries in unsatisfactory condition should be inspected each time the parent company is inspected.

The inspection procedures for a consumer finance company have been divided into two phases: preliminary and on-site. The preliminary phase entails the gathering and analysis of information at the parent company to determine the scope of the field work to be performed on-site. The on-site phase establishes a minimum scope of the inspection at the main office, and includes considerations to be incorporated into a visit to field offices if the inspection scope is expanded to that degree.

During the preliminary phase, the following information should be reviewed:

1. system approvals for offices and activities, including stipulated public benefits
2. financial statements, both interim and fiscal, for a sufficient period to determine trends and operating patterns
3. all management reports which should indicate problem loans, loan volume, delinquencies, and other reports regarding loan portfolio and company status including the Robert Morris Associates' *Direct Cash Lending Questionnaire* and similar reports

4. external debt instruments to determine material restrictive covenants
5. internal audit reports and workpapers:
 - a. internal control exception reports to determine weaknesses and corrective actions
 - b. flow charts in the workpapers to become familiar with company systems
 - c. additional internal reports may be identified which may assist the inspection on-site
6. examination reports of any state regulatory agencies having jurisdiction over the company's offices
7. minutes of the board of directors, executive committee, and any other such committee, if available at the parent company
8. the results of a parent company loan review or operations review, if conducted and available
9. the following items to be requested from management:
 - a. detailed past-due schedules and inter-company participations
 - b. schedule of problem accounts, liquidating accounts, and repossessed assets
 - c. general-ledger trial balance
 - d. loan trial balance
 - e. policy statements on lending, accrual, and charge-offs
 - f. reconciliation of the loan-loss reserve for the period between inspections
 - g. organization chart
 - h. listing of company offices with addresses and operating licenses

3100.0.4.1 On-Site Phase

The procedures of the on-site inspection are intended to evaluate management and its supervisory efforts, to determine the soundness and compliance with the company's operating policies, and to analyze the impact of these policies on the company's financial condition using ratio analysis. A thorough understanding of the policies and systems of the company is necessary for the examiner to accurately determine the company's condition.

During the initial period on-site, the examiner may obtain an overview of the company's systems by interviewing the key staff officers. These individuals can provide the examiner with the detailed reports, policy manuals, and other information necessary for the inspection.

3100.0.4.2 Policy Evaluation

Because of its large volume of transactions and the number of offices involved, the typical consumer company will maintain an extensive set of policy and procedure manuals which are intended to guide company personnel in their daily activities. During the review of these manuals, the examiner should bear in mind that liberal policies and procedures may allow the company to mask portfolio problems and reflect other than an accurate condition in its financial statements.

The principal policies to be considered cover such areas as:

1. extensions of credit;
2. treatment of delinquent accounts and partial payments;
3. loan renewals;
4. loan charge-offs;
5. provisions for loan losses;
6. bulk purchases of loans, for both credit and account purposes; and
7. treatment of deferred income.

After assessing the soundness of company policies, the next step is to test their implementation through a review of the company's supervisory structure.

3100.0.4.3 Evaluation of the Supervisory Structure

The effectiveness of the supervisory structure is a key element in the condition of a consumer finance operation. This system serves two functions: it communicates the policies to the field personnel, and it enforces those policies. Assuming that management's policies are valid, the effectiveness of this system will be partially reflected in the ratio analysis of the company. However, it may take close analysis to determine whether any poor ratios are due to inadequate policies or ineffective enforcement.

In order to evaluate the supervisory effort, the examiner may review a sample of the various supervisor's reports which are prepared after visits to the loan offices. The sample should represent a cross-section of the offices and supervisors in order to obtain a balanced view of the company.

A further evaluative step may be undertaken if there are sufficient resources available to the examiner. The on-site visits to selected loan offices may provide considerable input to the examiner in assessing supervisory effort. In selecting the offices to be visited, well-performing as well as poor-performing offices

should be selected. Concentration on poor offices will result in a biased assessment of the supervisory effort and may result in an invalid evaluation of company policies. The selection of the offices may be made by using the number of policy exceptions cited, poor performance records, or local economic conditions as criteria.

3100.0.4.4 Detailed Procedures for an Office Visit

The following steps outline a general procedure for determining field compliance with company policies and assessing the effectiveness of the supervisory effort. The examiner may modify, eliminate, or expand any of these steps or may devise any procedure deemed appropriate under the circumstances present.

The review of loans on-site should be oriented toward confirming the implementation of company policies for delinquency, balance renewals, charge-offs, extensions, partial payments, collection, and loan approvals. This review is intended to be a test of compliance and not a review of specific assets for classification purposes.

1. Review the detailed delinquency report for the selected office for a short period before the inspection date, generally two or three months. Trace the well overdue loans through to resolution, pay-off, charge-off, or reinstatement. Check these loans against the loan register to determine whether new loans have been granted to these customers and if so, determine if they are in accordance with company policy.
2. Review the controls for charging off loans and determine the effectiveness of the collection and recovery effort.
3. Review the loans to present borrowers. While renewals are usually granted to the better customers, the examiner will find a volume of renewals ("under 10 percent new money advanced" loans). In some companies, these "under 10 percent new money" loans represent efforts to rehabilitate borrowers with poor payment records due to ill health, unemployment, etc. However, the examiner may find that management is using this approach to adjust and control delinquency and loss rates. There should be sufficient internal controls present to prevent the continuous renewal of such loans to poor borrowers.

The examiner may find that some office personnel are circumventing these controls, for example, by advancing 11 percent new money to the borrower. If found, such circumvention raises serious questions regarding portfolio quality, the adequacy of internal controls, and the effectiveness of the supervisory effort. A high volume of “under 10 percent” loans or evidence of circumvention of controls may warrant separate treatment in the report.

4. Review partial-payment, interest-only, and extension accounts. Significant numbers of these accounts may indicate potential problems for the loan portfolio and the office.
5. Review credit-extension and loan documentation procedures, especially if the office’s portfolio has a high level of losses or frequent litigation. Proper credit controls and documentation are essential for sound operations. If the office extends second mortgage financing, appraisals and lien searches should be included with the documentation.
6. Test the office’s delinquency reporting. There are two methods for computing delinquencies, a contractual basis and the recency basis. On a contractual basis, principal reductions are applied to the most overdue payment under the contract and the loan is considered past due from the date of the oldest unsatisfied payment. On a recency basis, delinquency is computed from the date of last payment regardless of contract terms.

As an example, assume a loan was granted with payments beginning the first of March. The borrower makes the first payment on time and the second payment on the first of June. On the first of April, the loan is a 30-day recency account and current contractually. On the first of May, the loan is a 60-day recency account and a 30-day contractual account. Upon receipt of payment in June, the loan is current on a recency basis and a 60-day (two-payment) contractual account. Notice the difference in computations between the banking industry and the consumer finance industry.

The consumer finance industry has begun to institute contractual delinquency reporting standards. As these standards are developed and refined, changes in the computation of delinquent accounts may be expected.

7. Review the collection effort. The past-due accounts will be under the control of the collection manager, whose objective is to

return these accounts to current status. The manager’s collection efforts must begin early in the delinquency pattern if the loans are to be salvaged from charge-off. Consistent, persistent, frequent effort is expected.

The foregoing steps should provide the examiner opportunity to evaluate the company’s policies, procedures, and supervisory systems.

3100.0.4.5 Additional Procedures

While field visits are a desirable aspect of the inspection procedure, the examiner may have to rely on other procedures to be satisfied with certain aspects of company operations, particularly when the company reports past-due receivables on a recency rather than a contractual basis. The additional procedures may be necessary when the examiner has other reasons to question portfolio quality or the adequacy of internal controls.

The examiner may perform an extensive review of the most recent audit of the company, including the workpapers and programs of the internal and independent auditors, when available. In this review, the examiner should be able to determine whether internal controls are adequate, and portfolio characteristics are properly reported.

3100.0.4.6 Compliance

Certain aspects of the company are subject to review for compliance with the requirements of the act and Regulation Y. These include public benefits, office activities and locations, and bulk purchases of assets.

1. Public benefits stipulated in approval orders frequently require continuing reduced interest rates or insurance charges as part of the approval to operate. It is expected that these relative public benefits continue in effect despite changes in state-mandated rates.
2. Office locations and activities are subject to approval by the Board before opening for business. The operating licenses and activities of the offices should also be reviewed for compliance with the respective approvals.
3. On occasion, a consumer finance company may make a bulk purchase of loans or other assets of another finance company. Under certain circumstances, these purchases require the prior approval of the Board (12 C.F.R. 225.132). These bulk purchases should not be confused with the bulk purchase of sales finance contracts from a retailer recently signed to a dealer agreement.

4. While most consumer finance activity relates to consumer installment loans, some companies also extend credit under the “large loan” provisions of the consumer lending statutes of certain states. While the limitations vary from state to state, these provisions allow loans of many times the size of normal consumer loans. A review of these large loans may indicate that there are extensions of credit to local businesses which may constitute commercial installment lending. Unless specifically approved by the System, this activity may not be permissible for the company being inspected. Review for compliance with various consumer regulations is the responsibility of the Federal Trade Commission.

3100.0.4.7 Asset Classification Policy

As previously discussed, companies use one of two different methods of delinquency computation. In general, classifications should be based on the *contractual* reporting basis whenever possible. Since much of the industry utilizes *recency* reporting, which tends to reduce classifications comparatively, the classification approach enumerated above may unduly penalize an affiliated company using the contractual basis. This is particularly true when such important measures of portfolio quality as the liquidation ratios are in line with industry averages. Therefore, formula classification may result in more severe classifications for companies using the contractual method than those reporting on a recency basis. Examiners should indicate the reporting method used when calculating classifications.

Classification information is used to evaluate the adequacy of the loss reserve. In assessing the adequacy of the loss reserves, the examiner should take into consideration the charge-off frequency, the period of delinquency which would require charge-off under company policy, and the controls regarding renewal of severely past-due accounts. A shorter charge-off cycle prevents the accumulation of poor-quality assets; in this respect, monthly charge-offs are preferable to annual charge-offs. An unlimited “when deemed uncollectible” charge-off policy is considered lax and inadequate. The delinquency period to required charge-offs refers to the period of time a loan is past due before it is charged to the reserve; a six-month period is understandably preferred to a nine-month or one-year period. Management should have sufficient controls in place to prevent the continued

renewal of loans to avoid charge-off. Adequate controls might include special coding of such loans, with supervisory review of the renewals. Inadequate controls over these assets represent poor management practices deserving special comment.

Most subordinated debt agreements provide for an adjustment (reduction) to net worth when calculating compliance with leverage limits for any loans past due 60 days on a recency basis that exceed loss reserves. As there are some seasonal characteristics to the loan portfolio, it may be of benefit to compare the delinquency statistics on inspection date to the company’s seasonal pattern as revealed in both the subordinated debt calculations and monthly past-due reports. It is possible that a currently adverse portfolio condition may be due to local economic conditions which correct themselves over a period of time. Such conditions may relate to a tourist economy, an agricultural community, or a strike at a major local employer’s plant. Consumer finance companies are very sensitive to these local factors; therefore, these factors may temper the examiner’s evaluation of the loss reserves.

3100.0.4.8 Ratio Analysis

In order to assess the condition of a company using ratio analysis, the examiner will have to be familiar with the company’s accounting policies and systems. It will become obvious from the data used in the ratios that, under certain accounting treatments, the data can be misinterpreted. The following analysis has been structured around the *Direct Cash Lending Questionnaire*, published by the Robert Morris Associates and endorsed by the National Consumer Finance Association, in an effort to provide both a format for developing the information and a means of minimizing the possibility of misinterpretation. While some consumer companies do not prepare the questionnaire, much of the information is required for management purposes and should be available from company systems.

The analytical factors presented have been derived from two principal sources: *A Lender’s Approach to a Realistic Analysis of Consumer Finance Companies* by Richard E. Edwards (Philadelphia: The Philadelphia National Bank, 1970) and the *Industry Audit Guide: Audits of Finance Companies* by the Committee on Finance Companies (New York: American Institute of

Certified Public Accountants, 1988). These sources provide basic information on certain accounting and management policies and are recommended as references for the examiner. While the Federal Reserve System stipulates no specific accounting policies, the examiner may choose to criticize those policies which result in a misleading presentation of the company's financial condition.

Each year the *Annual Statement Studies*, published by Robert Morris Associates, includes sets of consumer finance company operating ratios. This information will provide a background against which the performance of the company under inspection can be measured. Such compiled ratios should be used only as background as they represent the "average company" in the respective sample. Attention should be directed toward the company's trends as they compare to the industry's trends and the changes in the company that are indicated by those trends.

3100.0.4.9 Delinquency

As shown in the *Annual Statement Studies*, the delinquency rates are on a recency-of-payment basis. *While past-due statistics based on contractual payments are preferred*, companies continue to report on a recency basis. It is important to have full knowledge of the company's reporting, lending, and renewal policies in order to fully understand the implications of this data. The trends for "interest-only" accounts and "partial-payment" accounts will provide some measure of the adherence of the operating personnel to company policy regarding these loan categories.

3100.0.4.10 Liquidation

Liquidation ratios provide two types of information. First, they indicate the amount of principal cash flowing back to the company for liquidity purposes. Secondly, they indicate the amount required to pay senior debt and the period of time required to do so. Several ratios follow:

1. Average monthly cash principal collection to average net monthly outstanding.

The higher this percentage, the more liquid the portfolio. A company following conservative policies such as requiring full payments and a contractual aging of receivables

will tend to show a higher principal collection percentage and, accordingly, a higher liquidity. This ratio can be used to estimate near term collections as compared to current outstandings.

Monthly cash collections should not include loan renewals or rebates during the period. On an industry-wide basis, there appears to be a pattern of increased loan renewals during November and December, which would be reflected in a seasonal decrease in principal cash collections. Lower than expected collections may be indications of changes in local economic patterns or of increased market effort by a competitor which has resulted in loan payoff. In any event, adverse change in the collection pattern should be reviewed for the underlying causes.

2. The ratio of unsubordinated liabilities less cash and near cash to estimated monthly principal collections results in the number of months it would take to pay senior debt.
3. The ratio of senior debt to gross receivables reflects the proportion of gross receivables which would have to be liquidated to repay senior debt. The higher the percentage, the more senior lenders are relying on the assets for protection.

3100.0.4.11 Loss Reserves

Analysis of the loss reserve for a specific entity has to include company policy regarding loan charge-offs, delinquencies, payments, and charge-off frequency. In addition, if charge-offs are made gross of deferred income, the reserve account may be slightly larger than if charge-offs were net of deferred income. Ratios used to evaluate loss reserves include—

1. Reserve for loan losses to total receivables, net of deferred income,
2. Loans charged off less recoveries to average outstandings (net or gross of deferred income, depending on policy).

Unless the company's charge-off and delinquency policies are realistic, this ratio will not depict true losses over the periods, and

3. Recoveries to loans charged off tends to be higher in companies with conservative charge-off policies than those with liberal policies. This ratio is indicative of the effectiveness of a company's collection and follow-up policy.

can provide the examiner with some information regarding the company's renewal and credit policies.

Lengthening of loan maturities during the current period will be reflected in the future average monthly principal collections and in the company's liquidity. While loans of longer maturity are not necessarily indicative of an adverse trend, the reasons behind a longer maturity portfolio should be analyzed. Ratios used to evaluate loan volume include:

1. *New money advanced to present borrowers to total loan volume.*

This ratio is somewhat indicative of whether the company's renewal policy is conservative or liberal. A high percentage may indicate that a volume of new money is being advanced along with the renewal of the previous balance.

2. *Loans to present borrowers with less than 10 percent new money advanced to loan volume.*

A high ratio can indicate the possibility of disguised delinquencies and potential charge-offs. The examiner may take a random sample of loans in the new money advanced to present borrowers category and review them to determine whether or not the company's "balance renewal" policy is being followed.

The preceding ratios were presented because they represent a means of measuring the effect of certain company policies. The analysis of company operations may be expanded to include other ratios such as return on equity, return on assets, interest margins, and other conventional measurements. The particular format utilized will, of course, vary to some degree between companies, however, the analysis should be broad enough in scope to determine the company's trends and the causes of those trends.

3100.0.4.13 Evaluation of the Company's Condition

Ratio analysis of a consumer finance company is a feasible technique for evaluating its condition because of the "portfolio effect" of its assets. However, the examiner must look beyond the ratios and analyze the effects of company policies on the elements of the ratios. As an example, if a company only charges off loans once a year, the losses determined by a formula classification would be less just after the charge-off date than just before.

In comparing classifications from one inspection to another, there might be a difference in the loss classifications which may be interpreted as an apparent improvement or decline in asset quality should the inspections bracket the charge-off date. Similar misinterpretations can occur from a change in charge-off frequency, a change to an automatic charge-off policy, or a shortening in the past-due period required for charge-off.

Certain accounting and reporting techniques may also be misleading in ratio analysis. For example, an artificial improvement in earnings would be reported when a company changes from a collection basis to an accrual basis of income recognition, if the collection and follow-up policy had been poor or deteriorating. Only a thorough review of the accounting policies and an understanding of their interplay with operating policies will prevent this type of misinterpretation. In some cases, the company's accounting system may yield results that inadvertently distort the ratios. A company recognizing income on a straight-line basis would, during a period of low loan volume, reflect improving gross interest income as a percentage of loans outstanding. While the importance of realistic accounting policies cannot be overstated, neither can the proper interpretation of reported results be overstressed.

One of the key elements in the evaluation of the company's performance is reflected in the ratios, but not quantified by the analysis. The company's internal controls and management information systems are the primary means of controlling asset quality and communicating management's policies. The supervisory effort is not only reflected by the ratios, but also in such areas as personnel turnover, citations in state supervisory reports, audit exceptions, and litigation. The systems relied on by management should be responsive not only to the changing needs of the company, but also to the changing climate of consumer regulations.

In the inspection report commentary, the examiner should maintain an objective view of the company under inspection. Management's corrective actions for exceptions and plans to reverse adverse trends are a necessary ingredient in the commentary. Report comments should give the reader an accurate picture of the condition of the company and its relationship with, and impact on, the financial condition of the consolidated corporation and the subsidiary bank(s).

3100.0.5 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Activities not closely related to banking		225.126	4-184	
Marketability of collateral under section 23A			3-1121	1935 FRB 395
Activities closely related to banking		225.123	4-176	1971 FRB 514 1975 FRB 245
Expansion of activities of a trust company, or acquisition of a de novo bank, to include consumer lending		225.28(b)(1)		1984 FRB 371 1985 FRB 51 1985 FRB 55 1985 FRB 61 1985 FRB 253

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

The Board amended Regulation Y, effective April 21, 1997, to include the acquiring of debt in default as an authorized nonbanking activity for bank holding companies (see Regulation Y, section 225.28(b)(2)(vii)). A bank holding may acquire debt that is in default at the time of acquisition if the company—

1. divests shares or assets securing debt in default that are not permissible investments for bank holding companies, within the time period required for divestiture of property acquired in satisfaction of a debt previously contracted under section 225.12(b) of Regulation Y;
2. stands only in the position of a creditor and does not purchase equity of obligors of debt in default (other than equity that may be collateral for such debt); and
3. does not acquire debt in default secured by shares of a bank or bank holding company.

The Board held that these restrictions were necessary to define the scope of the activity and to ensure that the activity remains the acquisition of debt instead of an impermissible nonbanking activity involving the acquisition of securities or other assets. As for calculating the time period for disposing of the underlying shares or assets, the time period is the same as that applied under the BHC Act to disposing of shares or assets acquired in satisfaction of a debt previously contracted. During this period, a bank holding company can divest the property or, in the case of any debt that has been previously contracted, restructure the debt.

The initial Board order that was issued to permit the acquisition of defaulted debt is summarized here as a historical example of the nonbanking activity. Provisions or commitments made in the Board order should not be relied upon. The current requirements are found in section 225.28(b)(2)(vii) of Regulation Y.

3104.0.1 ACQUISITION OF DEFAULTED DEBT—BOARD ORDER

A bank holding company (the applicant) within the meaning of the BHC Act gave notice under section 4(c)(8) of the BHC Act (12 U.S.C. 1843(c)(8)) and the Board's Regulation Y that it proposed to acquire a company (the company) and engage nationwide in asset-based commercial lending and management of assets.

The applicant proposed to engage through the

company in managing certain assets as the corporate general partner in two limited partnerships (the partnerships).¹ The applicant committed to conduct the activities, which the Board previously determined to be permissible, through the partnerships, subject to the limitations previously established by the Board.²

One nonbanking activity proposed by the partnerships, acquisition of defaulted debt, was an activity that the Board had not previously approved. The partnerships are engaged primarily in making, servicing, and investing in discounted bank loans and other debt securities.³ The partnerships acquire debt that has been or is in the process of being restructured, including secured and unsecured debt in the form of bank loans, privately placed and publicly traded debt instruments, bonds, notes, debentures, and discounted receivables.⁴ The applicant stated that the partnerships will take an active role in the restructuring of the defaulted debt they acquire, including participating on creditors' committees. The applicant indicates that such discounted debt would be acquired for the purpose of restructuring the debt to achieve a higher yield and greater collateral protection.

Some of the debt the partnerships would acquire may be in default at the time of acquisition and may be secured by voting shares or

1. The first partnership group (in which the company owned more than a 50 percent interest) was to terminate by December 31, 1995. The company owned less than 50 percent of the second partnership group, which would terminate by December 31, 1999.

2. See 1994 FRB 736. The partnerships, together with the applicant and its affiliates, would hold not more than 5 percent of any class of voting securities of any issuer and not more than 25 percent of the total equity, including subordinated debt, of any issuer. In addition, the applicant committed that no directors, officers, or employees of the applicant or its affiliates will serve as directors, officers, or employees of any issuer of which the applicant and its affiliates hold more than 10 percent of the total equity. The applicant also committed that future limited partnerships would be structured in the same manner as the current partnerships.

3. The partnerships are not leveraged, and the applicant stated that the partnerships will not be leveraged. The applicant has committed that neither the applicant nor any of its subsidiaries would be permitted to make loans to the partnerships.

4. The debt investments may include investments in companies that may be contemplating, be involved in, or recently have completed a negotiated restructuring of their outstanding debt or a reorganization under chapter 11 of the Federal Bankruptcy Code.

other assets that would be impermissible for a bank holding company to hold without Board approval.⁵ Because the partnerships would have the right in some cases to take title immediately to shares or assets securing defaulted debt that they acquire, the applicant committed that the partnerships would treat this collateral, as well as any other assets acquired in renegotiating this debt, as assets acquired in satisfaction of a debt previously contracted (DPC). Under the BHC Act, a bank holding company must divest any shares or assets acquired as DPC within two years from the date the asset is acquired. For this purpose, the applicant has committed that it will consider shares or assets acquired in satisfaction of defaulted debt to have been acquired on the date the defaulted debt is acquired.⁶

The Board stated that the acquisition of defaulted debt under the circumstances and conditions proposed by the applicant is an activity that is closely related to banking. The applicant stated that it will only purchase debt, not equity, and will stand in the position of a creditor.

Based on all the facts of record, the Board concluded that the proposed activities are closely related to banking. The Board approved the notice on October 17, 1995 (see 1995 FRB 1128). Approval was specifically conditioned on the applicant's compliance with the commitments made in connection with the notice.

5. The applicant has committed that the partnerships will not acquire debt in default that is secured by shares of banks or bank holding companies.

6. The applicant could apply for up to a three-year extension. See 12 C.F.R. 225.22(d)(1). The Board notes that the divestiture requirement would be satisfied if, during the divestiture period, the partnerships renegotiate the debt into a performing obligation and release the collateral to the borrower as part of the renegotiation. To the extent that defaulted debt acquired by the partnerships is secured by assets or shares that would be permissible investments for a bank holding company, this divestiture commitment would not apply.

Section 4(c)(8) of the BHC Act (Credit Card Authorization and Lost/Stolen Credit Card Reporting Services) Section 3105.0

A bank holding company applied for the Board's approval, pursuant to section 4(c)(8) of the BHC Act, to engage de novo, through its existing nonbank subsidiary, in credit card authorization services and lost/stolen credit card reporting services. The credit card authorization activity would consist of providing, for a fee, a service to issuers of credit cards that would enable merchants to determine the validity and credit limits of cards tendered to them. In addition, the applicant was to provide, for a fee, a reporting service to credit card holders, that would enable them to report the loss or theft of any of their credit cards via a single toll-free telephone call to the nonbank subsidiary.

A number of banks indirectly offer the service of reporting lost cards that are issued by other institutions by arranging with independent companies to provide the service under a trade name associated with the bank. With respect to

credit card authorization services, banks have a financial interest in the security of the credit cards and the availability of credit. Based on the foregoing, the Board believed that banks generally have, in fact, provided the services proposed by the applicant and are particularly well suited to provide the proposed services. On that basis, the Board concluded that the proposed services were closely related to banking.

Since the proposed credit card reporting service would create more competition and provide greater conveniences by allowing an individual who loses more than one card to report all lost cards at once to one source rather than having to make separate notifications to each card issuer, and there was no evidence of adverse effects as a result of the proposal, the application was approved by the Board on January 5, 1985 (1985 FRB 648). See Regulation Y, section 225.28(b)(2).

Section 4(c)(8) of the BHC Act (Stand-Alone Inventory-Inspection Services) Section 3107.0

A domestic bank holding company (the applicant) applied for the Board's permission under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of the Board's Regulation Y to engage de novo, through a wholly owned subsidiary, in the following services to customers who make loans secured by inventory:

1. identifying inventory and deciding its general condition, level of protection, and amount of use, as appropriate
2. identifying inventory subject to a purchase-money security interest under the Uniform Commercial Code
3. identifying missing inventory and any credit exposure that could result
4. supporting the proper allocation of loan payments that are related to the aging or sale of inventory¹

The applicant would provide the above inventory-inspection services only in connection with an extension of credit either by the

BHC (applicant) or a third party. The service would be provided throughout the United States, but only in connection with inventory pledged as collateral for a loan.

Bank holding companies currently inspect and survey collateral for loans made or services provided by them. Banks inspect collateral for loans originated in direct lending activities. The applicant suggested that its proposed collateral-inspection services to third-party lenders are identical to the collateral-inspection services performed for its own extensions of credit.

In accordance with section 225.28(b)(1) of Regulation Y, the Board authorized bank holding companies to make, acquire, and service loans for the company's own account or for the account of others. The Board believes that these activities include collateral-inspection services provided to third parties in connection with third-party extensions of credit. The Board also believes that bank holding companies have the necessary expertise to provide this service for other lenders (on a stand-alone basis).

The Board found that public benefits would result from a potential increase in the availability of inventory financing. It noted that there was no evidence suggesting that the proposal would result in significant adverse effects. The financial and managerial resources of the applicant were believed to be consistent with previous approvals. The Board, based on the facts of record, and the commitments and conditions made by the applicant, approved the request on September 13, 1993 (1993 FRB 1053).

1. For example, a loan may be secured by a pool of inventory collateral, but there may be an agreement to apply loan proceeds to specific items of collateral in a specified order. Equipment used beyond a stated number of hours might be of limited value, and the lender might agree to release its security interest in such items. The inspection of inventory collateral would verify the equipment's proceeds to pay off the oldest (or the youngest) items of collateral first (or last), rather than applying the proceeds pro rata to all items.

A bank holding company may acquire or retain an industrial bank to the extent authorized by state law, under section 225.28(b)(4) of Regulation Y only if the industrial bank acquired by the holding company is not a “bank” within the meaning of the Bank Holding Company Act. Industrial loan companies, industrial banks, and Morris Plan banks are state-chartered financial institutions which engage primarily in the business of furnishing consumer loans and small-business loans. The distinction between these institutional forms and consumer finance companies lies in the ability to generate funds through the acceptance of deposits or issuance of certificates of indebtedness (thrift notes). Although some of these institutions have the same charters as banks (in some states), they traditionally have not been considered to be banks for purposes of the Bank Holding Company Act as they cannot both make commercial loans and accept demand deposits, although in some states they have been empowered to offer NOW accounts. Under a decision of the Supreme Court, NOW accounts are not demand deposits for the purposes of defining what a bank is. Thus, industrial loan companies and similar institutions may offer NOW accounts and make commercial loans without being treated as banks for purposes of the Bank Holding Company Act. These institutions may be insured by the Federal Deposit Insurance Corporation and are eligible for membership in the Federal Reserve System. Many of the companies are “self-insured” (by a consortium of similar institutions in the form of a guaranty corporation) or are uninsured.

3110.0.1 NONBANKING ACQUISITIONS NOT REQUIRING PRIOR BOARD APPROVAL

In accordance with 12 C.F.R. 225.22(d)(8) of Regulation Y, the Board’s prior approval is not required for certain asset acquisitions by a lending company or industrial bank. This refers to the assets of an office(s) of a company of which all, or substantially all, the assets relate to making, acquiring, or servicing loans for personal, family, or household purposes, if—

- the acquiring company has previously received Board approval to engage in lending or industrial banking activities under Regulation Y;
- the assets acquired during any 12-month period do not represent more than 50 percent of the

risk-weighted assets (on a consolidated basis) of the acquiring lending company or industrial bank, or more than \$100 million, whichever amount is less;

- the assets acquired do not represent more than 50 percent of the selling company’s consolidated assets that are devoted to lending activities or industrial banking business;
- the acquiring company notifies the Reserve Bank of the acquisition within 30 days after the acquisition; and
- the acquiring company, after giving effect to the transaction, meets the Board’s capital adequacy guidelines and the Board has not previously notified the acquiring company that it may not acquire the assets under the exemption.

3110.0.2 INSPECTION OBJECTIVES

1. To determine the quality of the loan portfolio and the overall condition of the company.
2. To determine what exposure the subsidiary presents to the holding company and subsidiary bank(s).
3. To determine compliance with applicable laws and regulations.

3110.0.3 INSPECTION PROCEDURES

1. Contact the applicable state regulatory agency to determine the legal parameters within which the company operates and to assess the degree to which the company is supervised. Each of the institutional structures under this exemption is state chartered, and the laws and regulations vary widely from state to state. The company may be directly supervised by its state department of banking or may be subject to virtually no supervision or regulation. If the company is insured by the Federal Deposit Insurance Corporation or is a member of the Federal Reserve System, the company is primarily subject to the primary supervision and regulation of that agency. In cases in which the company is supervised by a banking agency, that agency’s report of examination will generally suffice. However, when the company is not supervised or examined, or when the Reserve Bank finds the supervisory

ing agency's report inadequate, an on-site inspection is necessary.

2. Focus on an evaluation of the loan portfolio and securities account, a determination of the volatility of the deposits, an appraisal of the adequacy of the audit program, and a review of the company's internal policies.
3. Review the receivables representing lending activities. The company should provide a schedule of the aging of the consumer receivables. It is preferable that the aging be done on a contractual method. Classification of the consumer paper may be done on a formula basis. The larger credits must be given a complete evaluation.
4. Review the adequacy of the allowance for loan and lease losses in conjunction with the asset evaluation.
5. Price the securities portfolio, with particular emphasis placed upon determining its liquidity. Since the deposits of these institutions are not always insured, they are more susceptible to a deposit run off; therefore, the requirement of adequate liquidity is of paramount importance.

The deposits may be insured by a guaranty corporation up to a certain limit in some states. These guaranty corporations have provided some stability to the industry. The guaranty corporations are indepen-

dent of any government agency or municipality and therefore are limited in the amount of protection which can be offered depositors.

6. Review back-up lines of credit available to ensure secondary liquidity to the company.
7. Review the deposit accounts of the company. The deposits are evidenced by certificates of indebtedness, or thrift notes. Information regarding the number of deposits, the size of accounts, and maturity distribution should be obtained to assess the stability of the funding base.
8. Determine that the institution makes proper disclosure to the public as to the type of instrument the certificate represents. Some states require that a disclosure statement, or a prospectus, be filed with the public yearly, which sets forth the uses to which the funds are being put and states that the funds are not insured. This prospectus should be reviewed for proper disclosure of the required information to ensure against possible suits.
9. Check the company's policy concerning withdrawals, giving recognition to state law requirements, to ascertain whether funds are generally not allowed to be withdrawn without prior notice.
10. Review the scope of the internal or external audits.

**WHAT'S NEW IN THIS REVISED
SECTION**

Effective January 2006, this section has been revised to clarify that bank holding companies may acquire, and thereby engage in operating, a savings association. Bank holding companies, however, must conform the acquired associations' nonbanking activities to those permissible under section 4 of the Bank Holding Company Act (the BHC Act). The section also discusses or lists additional Board orders that have authorized the acquisition of savings associations.

**3111.0.1 ACQUISITION OF A
SAVINGS ASSOCIATION**

Prior to 1989, the Board had determined that the operation of a savings association was closely related to banking but concluded, as a general rule, that the operation of a savings and loan association was not a proper incident to banking because the potential adverse effects, of allowing the affiliations of banks and thrift institutions outweighed the potential public benefits (1977 FRB 280). Upon consideration of some individual cases, the Board found that the adverse effects of the affiliation would be outweighed by the public benefits of preserving the failing thrift institution as a competitor in its market and of ensuring public confidence. (See 1985 FRB 462.) The 1982 Garn–St Germain Act recognized the Board's authority under section 4(c)(8) of the BHC Act to approve such acquisitions by authorizing the Board to dispense with the necessary notice and hearing requirements of this section under appropriate emergency circumstances.

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) amended section 4 of the Bank Holding Company Act to authorize, effective August 9, 1989, bank holding companies to acquire any savings association. The legislation lifted the previously existing "tandem operations" restrictions as they applied to savings associations owned by bank holding companies. (See 1989 FRB 716, appendix I.) These restrictions (1) provided that savings associations acquired by a bank holding company could not be operated in tandem with any other subsidiary of the bank holding company and (2) required approval by the appropriate Federal Reserve Bank before the savings association engaged in any transactions with the bank holding company or its other subsidiaries.

The Board may not impose these restrictions on such transactions in the future, except for those restrictions required by sections 23A and 23B of the Federal Reserve Act.

With respect to previous Board approvals of the acquisition of problem thrifts by BHCs, FIRREA required the Board to modify those approvals by limiting any restrictions on transactions between the savings association and its holding company affiliates to those required under sections 23A and 23B of the Federal Reserve Act. In 1989, the Board removed the tandem restrictions imposed on the operations of savings association subsidiaries of a bank holding company. (See 1989 FRB 71b.)

The Board amended Regulation Y pursuant to FIRREA, effective October 10, 1989 (12 C.F.R. 225.28(b)(4)(ii)). The regulation allows bank holding companies to acquire healthy and failed or failing savings and loan associations in accordance with FIRREA. The regulation permits bank holding companies to acquire savings and loan associations in any state, regardless of whether the holding company may operate a bank in that state. It does not impose any operational or branching conditions on the operation of savings and loan associations. The regulation authorizes, as a permissible activity under section 4(c)(8) of the BHC Act, the owning, controlling, or operating of a savings association if the savings association engages only in deposit taking, lending, and other activities that are permissible for BHCs.¹ The Board has permitted a short divestiture period for impermissible investments and other activities. (See 1992 FRB 707.)

The Board requires that when a bank holding company acquires a savings association, the BHC must conform the acquired institution's direct and indirect activities to those permissible for bank holding companies under section 4 of the BHC Act. In 2002, a foreign banking organization subject to the provisions of the BHC Act, and its wholly owned subsidiary, requested the

1. Section 225.2(m) of Regulation Y defines a savings association as (1) any federal savings association or federal savings bank; (2) any building and loan association, savings and loan association, homestead association, or cooperative bank if such association or cooperative bank is a member of the Savings Association Insurance Fund; and (3) any savings bank or cooperative deemed by the director of the Office of Thrift Supervision to be a savings association under section 10(l) of the Home Owners' Loan Act.

Board's approval under section 4(c)(8) and section 4(j) of the BHC Act to acquire a savings association and thereby engage in operating a savings association, and to conduct certain non-banking activities as a result of that acquisition. The foreign banking organization committed that it would conform all the activities of the acquired savings association to those permissible under section 4(c)(8) of the BHC Act and Regulation Y. (See section 225.28(b)(4)(ii). See also 2002 FRB 385, 2002 FRB 485, 2003 FRB 439, 2004 FRB 503, and 2005 FRB 91.) The foreign banking organization was also treated as a financial holding company. Any other activities of the acquired savings association were, therefore, required to conform to those permissible for a financial holding company under section 4(k) of the BHC Act.

FIRREA previously established a five-year moratorium on any acquisition that involved the transfer of deposits from one federally insured deposit fund to another, with limited exceptions. As a general rule, the moratorium prevented an institution whose deposits were insured by the Savings Association Insurance Fund (SAIF) from converting to an institution whose deposits were insured by the Bank Insurance Fund (BIF). A provision of FIRREA provided that this moratorium did not apply to the merger of a SAIF-insured savings association owned by a bank holding company into a BIF-insured bank sub-

sidary of the same holding company. This provision, known as the Oakar amendment,² authorized bank holding companies to (1) merge troubled savings associations into bank subsidiaries during the moratorium and (2) avoid the payment of exit and entrance fees to the deposit insurance funds required under FIRREA for other savings association conversion transactions.

A FIRREA provision (12 U.S.C. 1815(e)) addressing the liability of commonly controlled institutions has a significant bearing on BHCs. Any insured depository institution is liable for any loss incurred by the FDIC in connection with a commonly controlled insured depository institution in default or in danger of default. (See section 2090.8 for a discussion of this provision and section 2021.1 for a discussion on the sister-bank exemption from sections 23A and 23B of the Federal Reserve Act.)

2. The Federal Deposit Insurance Corporation Act of 1991 amended the Oakar provision (commonly referred to as the "Oakar II amendment") to authorize a bank that is not a subsidiary of a bank holding company to merge directly with a thrift. The Riegle Community Development and Regulatory Improvement Act further amended the Oakar provisions to eliminate the requirement for prior Federal Reserve Board approval of Oakar transactions when the bank involved (in an acquisition of a thrift) is a Bank Insurance Fund member subsidiary bank of a bank holding company.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

The performance of trust services by a trust company subsidiary that is neither a “bank” nor a nonbank bank encompasses virtually any kind of fiduciary, agency, or custodial service commonly performed by a trust company so long as the subsidiary does not accept demand deposits or make loans, except as expressly permitted by section 225.28(b)(5) of Regulation Y. Generally, under Regulation Y, a trust company may only accept deposits arising out of trust funds not currently invested; perform escrow services, such as receiving, holding, and disbursing downpayments and other funds deposited by purchasers in real estate transactions; and act as an agent for an issuer of, or broker or dealer in, securities in a capacity of a paying agent, dividend-disbursing agent, or securities clearing agent, so long as the funds are not used by the customer as a general-purpose checking account and do not bear interest. The subsidiary’s lending activities are restricted to making call loans to securities dealers and to purchasing money market instruments; however, such loans may not be used to provide funding for nonbank subsidiaries of the holding company.

Trust companies may be either state chartered or nationally chartered. Some nationally chartered trust companies have national bank charters but have agreed through limitations in their bylaws to engage only in those activities permitted for trust departments of national banks. To prevent the use of a trust company as a vehicle for evasion of section 3(d) of the Bank Holding Company Act, the Board has conditioned its approval of certain interstate acquisitions by requiring that (1) the trust company’s demand deposit-taking activities not be operated in tandem with any other subsidiary, (2) demand deposit and commercial lending services of affiliates will not be linked in any way, and (3) the trust company will not engage in any transactions with affiliates, other than the payment of dividends or the infusion of capital, without the Board’s approval (for example, see U.S. Trust Corporation, 1984 FRB 371). The scope of these conditions may be reviewed by the Board in connection with nonbank bank applications.

As part of normal administration of its trust accounts, a trust company will from time to time engage in an activity, such as property management or land development, that has been determined to be *not* closely related to banking by the Board. Any such service may only be performed incidentally to fiduciary-account

administration and may not be offered or marketed as a separate service.

The board of directors and senior management of financial holding companies (FHCs) and bank holding companies (BHCs) are responsible for overseeing the operations of their fiduciary activities in a safe and sound manner. Such oversight (particularly for those BHCs and FHCs engaged in a broad range of financial activities) at the consolidated level is important because the risks associated with financial activities as well as fiduciary activities can cut across legal entities and business lines. Federal Reserve examiners review and assess the internal policies, reports, and procedures and effectiveness of the BHC/FHC consolidated risk-management process.

The appropriate regulator of trust activities (including activities of a fiduciary, agency, or custodial nature) has the primary responsibility for evaluating risks, hedging, and risk management at the legal-entity level for any subsidiary or subsidiaries that the regulator supervises. Federal Reserve examiners should seek to use the examination findings of the appropriate regulators. (See SR-00-13.)

To determine the complete scope of fiduciary assets within an FHC/BHC, examiners should reference the Uniform Bank Performance Report (UBPR), which reflects the information gathered on Schedule RC-T. To further understand the scope of fiduciary assets within an FHC/BHC, an examiner should also look at information reported on Schedules Y-11 and Y-9C with respect to income derived from trust, fiduciary, and asset-management activities. (See also page 4 of the Bank Holding Company Performance Report (BHCPR) for the amount and percentages of income from fiduciary activities to adjusted operating income (tax-equivalent), including the BHC’s corresponding peer-group ratios.)

Peer analysis is also available at the bank level. Examiners should refer to pages Trust 1 and Trust 1A of the UBPR. General comparison information is also available on a lagged basis in the FFIEC’s electronic report “Trust Assets of Financial Institutions” (www2.fdic.gov/structur/trust/index.asp). Aggregate data are listed by year back to 1996.

3120.0.1 ON-SITE INSPECTIONS

Trust companies are normally engaged in activities such as management of funds for individuals. These activities are significant to the integrity of the banking system and involve significant potential liability to the bank holding company if not properly conducted. Therefore, periodic on-site inspections should be performed. If the trust company is examined by a state banking department, then alternate-year examination procedures may apply. If nationally chartered, a review of the periodic on-site examinations of the Comptroller of the Currency will generally suffice. If the trust company is not subject to a

regular examination by another federal banking agency (i.e., if it is an uninsured, state-chartered nonmember trust company), the Reserve Bank should perform regular on-site inspections to include, at a minimum, full-scope reviews of the trust activity. The inspections would use procedures such as those used in the examinations of trust activities of state member banks. This portion of the inspection should be performed by examiners specially trained in trust examinations. Holding company inspectors should specifically review trust activities for compliance with any conditions imposed by the Board in connection with the approval of an application.

Section 4(c)(8) of the BHC Act (General Financial and Investment Advisory Activities) Section 3130.0

The main sections that follow (sections 3130.1 through 3130.9) address all financial and investment advisory activities under section 4(c)(8) of the BHC Act and section 225.28(b)(6) of Regulation Y that have been authorized by the Board. This section provides general inspection objectives and procedures that relate to such financial and investment advisory activities. These objectives and procedures can be applied to the BHC inspection of every advisory activity when advisory activities are not listed separately in any of this manual's individual advisory sections.

Any commitments that were made by the bank holding company or its nonbank subsidiaries to the Federal Reserve System pertaining to its financial and investment advisory nonbanking activities should be reviewed by the examiner for compliance and applicability, in accordance with the current statutory and regulatory provisions. Any existing commitments or conditions that relate to the financial resources of a bank holding company or its subsidiaries or to commitments or conditions that relate to the risk-management policies of the organization should remain intact and should be reviewed by an examiner for compliance during each inspection.

The Board's Regulation Y, effective April 1997, resulted in a structural reorganization of financial and investment advisory nonbanking activities. The provision of discretionary investment advice is no longer limited to institutional customers. Bank holding companies and their subsidiaries may engage in financial and investment advisory activities without restriction. Bank holding companies can manage retail customer accounts outside of the trust department of an affiliated bank (to the extent permitted by law). Further, bank holding companies may engage in any combination of permissible nonbanking activities listed in Regulation Y. Accordingly, bank holding companies may provide financial and investment advice jointly with permissible agency transactional service, investment or trading transactions as principal, or any other listed nonbanking activity.

The rules in Regulation Y provide examples of financial and investment advisory activities that are illustrative rather than exclusive. With regard to the examples, a bank holding company may act as an investment or financial adviser without restriction to any person, including

1. serving as an investment adviser (as defined in section 2(a)(20) of the Investment Company Act of 1940) to an investment company

- registered under that act, including sponsoring, organizing, and managing a closed-end investment company;
2. furnishing general economic information and advice, general economical statistical forecasting services, and industry studies;
3. providing advice in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, capital structurings, financing transactions and similar instruments, and conducting financial-feasibility studies;
4. providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instrument;
5. providing educational courses and instructional materials to consumers on individual financial-management matters; and
6. providing tax-planning and tax-preparation services to any person.

Sections 3130.1 through 3130.9 include many historical examples of various financial and investment advisory activities that have been approved by the Board. These examples are to be viewed as historical references. They should be considered as to their applicability to current statutory and regulatory provisions. Some examples include, but are not limited to, providing financial advice in rendering fairness opinions and providing valuation services in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, and capital structurings. Other examples include providing advice on financing and similar transactions with respect to private and public financings and loan syndications; conducting financial-feasibility studies; and providing financial advice to state and local governments with respect to the issuance of their securities.

3130.0.1 INSPECTION OBJECTIVES

1. To review the adviser's organizational structure and the qualifications of its management to conduct business, and to determine whether they are satisfactory.

2. To determine the status of the adviser's financial condition and the adequacy of internal controls, general accounting policies, and reporting procedures, and to determine if they reflect the guidelines established by management.
3. To determine whether fee income is accurately computed and reported on a consistent basis.
4. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
5. To review and evaluate investment practices considering the adviser's investment responsibilities for the selection and allocation of investments for various types of accounts to determine whether they are appropriate.
6. To evaluate funding sources, including indebtedness, and their management with respect to maturities and interest rates.
7. To determine the adequacy of internal and external audits.
8. To determine whether the adviser company has adequate policies and procedures to prevent self-dealing and similar improper conflicts.
9. To determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with the contractual responsibilities and authorities.
10. To determine if any litigation is pending against the company and the possible impact of an unfavorable court decision.
11. To evaluate compliance with applicable bank holding company laws, regulations, and interpretations, including compliance with the standards of care and conduct applicable to fiduciaries as required by Regulation Y.
 - c. avoids executing customer transactions when acting in an advisory capacity.
2. Prepare financial statements for the last two fiscal years, plus interim if appropriate. Analyze for adverse trends and evaluate for negative effects on affiliates.
3. Evaluate asset quality when warranted, documenting the scope and detailing asset review. Compile classification data, write up classifications if appropriate, and evaluate reserve adequacy.
4. Obtain documentation for all indebtedness. Evaluate funding sources for maturity mismatch, dependence on affiliates' concentrations, and dependability. Review borrowings from affiliate banks for compliance with section 23A of the Federal Reserve Act.
5. Review income and expense accounts and transactions with affiliates for compliance with section 23B of the Federal Reserve Act.
6. Review the company's revenue sources to determine that it has not taken positions and does not, itself, execute transactions when acting in an advisory capacity.
7. Evaluate contracts and service agreements with affiliates. Identify whether the company receives or provides services or products. Determine that the services or products are needed and received or provided, and that the contract or agreement terms represent market rates.
8. Review the company's fee schedule for providing advice and the fees charged by affiliated banks to conduct transactions for the company's customers. Determine whether the bank is being adequately compensated for executing trades, or whether these profits are accruing largely to the benefit of the company.
9. Review checking-account statements for all accounts at affiliate banks for overdrafts since the previous inspection.
10. Evaluate whether the nonbank activities are being performed by affiliate bank personnel or are using bank assets. If so, is the bank adequately compensated?
11. Identify off-balance-sheet activities and contingent liabilities, and assess the risk to the company and any affiliate.
12. Obtain a listing of litigation against the company or any individuals who represent the company from the company's legal counsel, and evaluate potential effects on the financial condition.
13. Obtain and review internal and external audit reports and workpapers.

3130.0.2 INSPECTION PROCEDURES

1. Review System approval and activities for conformance with any limitations. Determine if the activity is conducted through a separately incorporated subsidiary of the bank holding company that—
 - a. refrains from taking positions for its own account;
 - b. observes the standards of care and conduct applicable to fiduciaries with respect to its advisory and transactional services; and

14. Obtain and review internal and external asset-review reports.
15. Obtain and review copies of the board of directors' and senior management's policies and procedures.
16. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.
17. Review the advisory contracts to determine if there are any conflicts of interests involving the parent company or affiliates, as well as the officers, directors, or principal shareholders and their related interests of the holding company and its affiliates.
18. Evaluate insurance for adequacy.
19. Obtain or verify that workpapers contain the following permanent documentation:
 - a. System approval letters
 - b. date of incorporation or date acquired
 - c. date activity commenced
 - d. articles of incorporation and by-laws
 - e. commitments
 - f. supervisory actions
 - g. other pertinent correspondence
20. Obtain and review a listing of shareholders for each class of stock outstanding, and a schedule of officers, directors, and their related interests.

A bank holding company or its nonbank subsidiary that engages in investment or financial adviser activities is subject to section 225.28(b)(6) of Regulation Y. The purpose of an inspection of a company providing investment or financial advice is to determine that it is operating according to applicable laws, regulations, and interpretations, and to determine that the company is subject to an adequate audit program. Regulation Y allows a bank holding company to serve as an investment adviser as defined in section 2(a)(20) of the Investment Company Act of 1940 (15 U.S.C. 80a-2(a)(20)), which defines an "investment adviser" of an investment company as "...any person who pursuant to contract with such company regularly furnishes advice to such company with respect to the desirability of investing in, purchasing or selling securities or other property, or is empowered to determine what securities or other property shall be purchased or sold by such company..."

The Board has issued an interpretive rule regarding the investment adviser activities of bank holding companies under Regulation Y (12 C.F.R. 225.125). The following is a list of some of its provisions:

1. Bank holding companies, including their bank and nonbank subsidiaries, may act as investment advisers to various types of investment companies such as mutual funds and closed-end investment companies. Mutual funds and closed-end investment companies are described in the interpretation.
2. Bank holding company investment adviser activities are limited by the Glass-Steagall Act (Banking Act of 1933 (12 U.S.C. 24, 78, 377, 378)). This act generally prohibits member banks from engaging in the purchase or sale of equity securities other than in an agency capacity.
3. A bank holding company may not sponsor, organize, or control a mutual fund. This does not apply to closed-end investment companies so long as they are not primarily or frequently engaged in the issuance, sale, or distribution of securities.
4. A bank holding company should not act as investment adviser to an investment company which has a name similar to the bank holding company or any of its subsidiary banks, unless the prospectus of the investment company contains certain required disclosures. In no case should a bank holding company act as investment adviser to an investment company that has either the same name as the name of the bank holding company or any of its subsidiary banks, or that has a name that contains the word "bank."
5. Since investment adviser activities may create potential conflicts of interest, the Board determined that a bank holding company and its subsidiaries should not purchase in their sole discretion, in a fiduciary capacity (including as managing agent), securities of any investment company for which the bank holding company acts as investment adviser, unless the purchase is specifically authorized by (1) the terms of the instrument creating the fiduciary relationship, (2) court order, or (3) the law of the jurisdiction under which the trust is administered.
6. A bank holding company may not engage, directly or indirectly, in the underwriting, public sale, or distribution of securities of any investment company for which it or any nonbank subsidiary acts as investment adviser, except in compliance with section 20 of the Glass-Steagall Act. The Board has determined, however, that the conduct of securities brokerage activities by a bank holding company or its nonbank subsidiaries, when conducted individually or in combination with investment advisory activities, is not deemed to be the underwriting, public sale, or distribution of securities prohibited by the Glass-Steagall Act.
7. A bank holding company or any of its nonbank subsidiaries that have been authorized by the Board under the Bank Holding Company Act to conduct securities brokerage activities (either separately or in combination with investment advisory activities) may act as agent, upon the order and for the account of customers of the holding company or its nonbank subsidiary, to purchase or sell shares of an investment company for which the bank holding company or its subsidiaries act as an investment adviser.
8. A bank holding company or any of its nonbank subsidiaries that have been authorized by the Board under the Bank Holding Company Act to provide investment advice to third parties generally (either separately or in combination with securities brokerage services) may provide investment advice to customers with respect to the purchase or sale of shares of an investment company for

which the holding company or any of its subsidiaries acts as an investment adviser.

9. A bank holding company or its subsidiary bank, at the time a service is provided, must caution customers to read the prospectus of the investment company before investing. Customers must be advised in writing that the investment company's shares are not insured by the Federal Deposit Insurance Corporation and are not deposits, obligations, or endorsed or guaranteed in any way by any bank (unless that is the case). The role of the company or affiliate as adviser to the investment company must be disclosed in writing. Such disclosures may be done orally, but the customer must be given such disclosures in writing immediately thereafter.
10. Because of potential conflicts of interest, a bank holding company which acts both as custodian (pursuant to section 225.25(b)(3) of Regulation Y) and investment adviser for an investment company should exercise care to maintain at a minimum level demand deposit accounts of the investment company which are placed with a bank affiliate, and should not invest cash funds of the investment company in time deposit accounts (including certificates of deposit) of any bank affiliate.

had traditionally existed between banks and state and local governments, and the net public benefits that would result from provision of advice to such governments by bank holding companies, the Board indicated that it would be more flexible in determining what particular services constitute "providing financial advice" rather than "management consulting" when the services are solely for state and local governments rather than other nonbank organizations. With the Board's April 1997 revision of Regulation Y, investment and financial advisory activities were grouped together and a bank holding company could act as an investment or financial adviser without restriction.

The Board also allowed the provision of management consulting services regarding any financial, economic, accounting, or audit matter to any company. These financial activities are directly related to the activities and expertise of bank holding companies. Management consulting services are subject to a revenue limitation, however. They may be provided to any customer on any matter, provided that the total annual revenue derived from the management consulting services does not exceed 30 percent of the company's total annual revenue derived from management consulting activities. Thus, any services provided to state and local governments that are deemed management consulting services are subject to this revenue limitation.

3130.1.1 REAL ESTATE DEVELOPMENT ADVISERS FOR STATE AND LOCAL GOVERNMENTS

Advising state and local governments about methods available to finance real estate development projects, and evaluating projected income to determine if debt resulting from proposed development projects can be adequately serviced is permissible if the activities are authorized under section 225.28(b)(6) of Regulation Y.

Before this activity was incorporated into Regulation Y, in 1980, the Board had received certain comments noting that certain aspects of these advisory services may be within the scope of the activity of "management consulting." The Board had found that it was not permissible for bank holding companies to offer management consulting services to nonaffiliated companies. Certain management consulting advice could be provided to unaffiliated depository institutions, however. In view of the relationship that

3130.1.2 INSPECTION OBJECTIVES

1. To review the adviser's organizational structure and the qualifications of management to conduct business, and to determine whether they are satisfactory.
2. To determine the status of the adviser's financial condition and the adequacy of internal controls, general accounting policies, and reporting procedures, and to determine if they reflect the guidelines established by management.
3. To determine whether fee income is accurately computed and reported on a consistent basis.
4. To determine what financial effect the activity has on the parent holding company and the bank subsidiaries.
5. To review and evaluate investment practices considering the adviser's investment responsibilities for the selection and allocation of investments for various types of accounts, and to determine whether they are appropriate.

6. To evaluate funding sources, including indebtedness, and their management based on maturities and interest rates.
7. To determine the adequacy of internal and external audits.
8. To determine whether the adviser company has adequate policies and procedures to prevent self-dealing and similar improper conflicts.
9. To determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with the contractual responsibilities and authorities.
10. To determine if any litigation is pending against the company and the possible impact of an unfavorable court decision.
11. To evaluate compliance with applicable bank holding company laws, regulations, and interpretations, including compliance with the standards of care and conduct applicable to fiduciaries as required by Regulation Y.

3130.1.3 INSPECTION PROCEDURES

1. Obtain the company's policy and procedure manuals, and distribute relevant portions to the examiners for review and compliance evaluation.
2. Review the minutes of meetings of the board of directors, audit committees, and any officer-level committees. Ensure that examiners performing other portions of the inspection review relevant minutes or summaries thereof.
3. Obtain, review, and evaluate the adequacy of internal and external audit procedures, reports, and workpapers.
4. Prepare financial statements for the last two fiscal years, plus the interim period, if appropriate. Analyze and evaluate the information for adverse trends and for negative effects on affiliates.
5. Obtain, review, and evaluate internal and external asset-review reports.
6. Evaluate asset quality where warranted, documenting the scope and detailing asset review. Compile classification data, write up classifications if appropriate, and evaluate the adequacy of contra asset allowances.
7. Obtain documentation for all indebtedness. Evaluate funding sources for maturity mismatch, dependence on affiliates, concentrations, and dependability. Review borrowings from affiliate banks for compliance with section 23A of the Federal Reserve Act.
8. Review checking-account statements for all accounts at affiliate banks, checking for overdrafts since the previous inspection.
9. Complete the inspection checklist (see the sections beginning at 3130.1.3.2) based on the guidance provided in section 3130.1.3.1.
10. Identify off-balance-sheet activities and contingent liabilities, and assess the risk to the company and any affiliate.
11. Obtain a listing of litigation against the company or any individuals who represent the company from the company's legal counsel, and summarize the matters in litigation (or in threatened litigation) and any compromise actions. Evaluate the potential effects on the company's financial condition.
12. Evaluate contracts and service agreements with affiliates. Identify whether the company receives or provides services or products. Determine that the services or products are needed and received or provided, and that the contract or agreement terms represent market rates.
13. Review income and expense accounts and transactions with affiliates for compliance with section 23B of the Federal Reserve Act.
14. Evaluate whether the nonbank activities are being performed by affiliate bank personnel or whether bank assets are being used. If so, is the bank adequately compensated?
15. Review FR System approvals, and check conformance with any specified limitations or commitments.
16. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.
17. Review the advisory contracts to determine if there are any conflicts of interests involving the parent company or affiliates, as well as the officers, directors, or principal shareholders and their related interests of the holding company and its affiliates.
18. Evaluate insurance, including bond coverage, for adequacy. Determine the extent of current liability insurance relating to the adviser function, and evaluate the adequacy of such coverage—particularly the extent to which possible significant surcharges would be covered by such insurance.
19. Obtain a listing of shareholders for each class of stock outstanding and a schedule of officers, directors, and their related interests.

20. Obtain or update biographical and experience information for key management personnel, together with overall staffing and salary levels as appropriate for full evaluation.
21. Determine whether operating practices provide for adequate legal documents and agreements such that the account activities, in general, are consistent with contractual responsibilities.
22. Ascertain if senior management is aware, or has adopted the procedures necessary to become aware, of its current and potential responsibilities in connection with any regulatory-reporting and/or regulatory-compliance requirements.
23. Obtain or verify that workpapers contain the following permanent documentation:
 - a. System approval letters
 - b. date of incorporation or date acquired
 - c. date activity commenced
 - d. articles of incorporation and by-laws
 - e. commitments
 - f. supervisory actions
 - g. other pertinent correspondence

3130.1.3.1 Scope of Inspection

It is expected that inspections of investment adviser subsidiaries will generally be conducted as part of regularly scheduled bank holding company inspections. If, however, the investment adviser subsidiary provides portfolio management services for a significant portion of trust assets held by a state member bank, the Reserve Bank should inspect the investment adviser subsidiary at the same time it examines the trust operations of the bank subsidiary. The scope of the inspection should be based on a review of the nature and complexity of the financial services provided to customers. An adviser which merely provides investment advice and does not provide any additional financial services, such as portfolio management, safekeeping, recordkeeping, or trading services, may not require an inspection. However, an adviser which provides portfolio management, safekeeping, or other services will require an inspection. To determine the scope of the inspection, it is essential to identify what types of services are being offered to customers and to assess the risks associated with those services.

The examiner needs to understand the adviser's operations, including how it represents itself to clients and whether the adviser has any vested

interests in the financial services which it offers. As indicated in SR-88-11 (April 28, 1988), examiners should use their discretion to schedule inspections based on the size and complexity of the adviser's operations. Most section 4(c)(8) BHC subsidiaries will be subject to SEC registration requirements. (See SR-91-4 (SA).) Appropriate checklist questions should be completed for registered investment advisers which provide investment advice to affiliated banks or trust companies and for investment advisers which engage in activities which could have a significant impact on the bank holding company's financial safety and soundness. The checklist should also be completed for all advisers that manage investment portfolios for their customers. The checklist is only a guideline and some of the sections in the checklist may not be applicable. Conversely, the scope of such examinations is not limited to the items included in this checklist.

3130.1.3.2 Inspection Checklist

The questions in this checklist will assist the examiner in evaluating various areas of supervisory concerns.

3130.1.3.2.1 Review of Fundamental Policies and Procedures

The investment adviser's policies and procedures should be reviewed using the following checklist to ensure that fundamental policies and procedures have been established and implemented.

1. Are adequate minutes of the board and board committee meetings prepared?
2. Is the adviser properly chartered and registered?
3. Does the adviser have sufficient blanket bond or other fidelity or liability coverage in place?
4. Is corporate and regulatory reporting performed on a timely basis?
5. Does the above reporting fairly present the accounting and supplemental data reflected by the corporate records?
6. Are internal accounting controls, provided by a segregation of duties or a need for administrative approvals, adequate?
7. Are duties properly segregated in the receiving, disbursing, and recording of cash and cash transactions?
8. Are fee calculations and billing procedures adequate to ensure accuracy and propriety?

9. Are all security transactions authorized or approved by the appropriate management level, and is there documented evidence of the authorization or approval?

3130.1.3.2.2 Supervision and Organization

Supervision refers to the conduct of an adviser's board of directors and senior management in establishing, communicating, and enforcing a system of policies, procedures, and practices suitable to its business objectives and legal requirements. Organization may be characterized as the framework of committees and the assigned responsibilities through which supervision functions. The examiner should (1) review the structure of the organization for adequacy of management information systems and (2) the organization framework as both relate to meeting the entity's stated responsibilities as well as generally accepted standards of conduct. The examiner should review the supervisory function by first identifying the duties and responsibilities of the board of directors. The directors owe the duty of reasonable supervision, including appropriate attention to areas in which the adviser is assuming sensitive and complex fiduciary responsibilities. The next level of review is the committee and officer positions to which certain authority has been delegated. In reviewing this level of supervision, the examiner should keep in mind that certain functions cannot be delegated; for example, approval of significant new services or lines of business, approval of formal policies designed to ensure that the adviser operates in basic compliance with laws and regulations, and the selection and supervision of senior management cannot ordinarily be delegated. Informal delegations and operating practices represent the last level of review. In reviewing both formal and informal delegations, consideration should be given to the institution's size and complexity. A final determination of the adequacy of supervision and organization must be based on findings of the entire inspection of the bank holding company or its nonbank subsidiaries. While topics that have direct or indirect impact on the adequacy of director supervision and management competence are of particular sensitivity, examiners nevertheless have a responsibility to carefully address and comment upon such issues. During the course of the inspection, the examiner should review the supervisory and organizational structure of the bank holding company, with particular reference to investment-related

activities. The examiner should determine whether the board of directors has developed adequate objectives and policies.

3130.1.3.2.2.1 Supervision and Organization Checklist

1. If the board of directors does not directly supervise investment adviser activities—
 - a. has a responsible board committee(s) been named to exercise this function?
 - b. are any delegations consistent with by-law provisions and other appropriate principles?
 - c. do the board's minutes nevertheless reflect periodic but timely review of the conduct and operating results of the function?
2. Do minutes of the board, or its committee(s), reflect that members—
 - a. attend meetings with reasonable frequency?
 - b. require and approve, where necessary, appropriate written policies, strategic plans, and management reports relating thereto?
 - c. review audit and regulatory reports (and management proposals and corrective measures in response thereto), litigation developments, earnings and expense reports, and changes to fee schedules?
3. Through adoption of formal policies and provisions for auditing, does the board adequately seek to ensure the integrity of the organization's records and operational systems?
4. Are policies and procedures adequately communicated to officers and staff?
5. Does the board or a board committee consider, periodically review, and provide for insurance protection?
6. Does the bank holding company maintain access to competent legal counsel and, where appropriate, obtain written opinions on significant legal questions such as—
 - a. pending or threatened litigation?
 - b. account agreements whose terms are unclear or ambiguous or raise complicated points of law?
 - c. proposed actions or policies involving matters such as conflicts of interest, restricted securities, ERISA, and other matters involving possible legal exposure?
7. If an account's securities are registered in a nominee name(s)—

- a. is the nominee agreement current?
 - b. is the nominee registered with the American Society of Corporate Secretaries (to guard against duplication of the nominee name) and state authorities (where required by local law)?
8. Is staffing adequate, in terms of both numbers and qualifications, to handle the current volume of business?
 9. Is there adequate provision for management succession, or for continuing operations in case of the loss of key personnel?
 10. Is senior management aware of its responsibilities in connection with, and has it established written policies and procedures to ensure compliance with, any applicable regulatory-reporting requirements?
 11. Are significant functions of the investment adviser subject to either internal or external audit? If not, ascertain whether an audit program should either be developed or expanded.
 12. When appropriate in light of the size and complexity of the adviser's operations, has management had an audit of financial statements performed by certified public accountants?
 13. Have all significant exceptions and recommendations in audits or examinations or inspection reports been corrected, implemented, or otherwise satisfactorily resolved?

3130.1.3.2.3 Portfolio Management

Investment selection is the process whereby the adviser evaluates, selects, and reevaluates those securities or other financial assets it will buy or sell for its clients, or for which it will make recommendations. It includes the process of researching and selecting recommended individual stocks and bonds, and setting objectives or strategies for diversifications by types and classes of securities into general or specialized portfolios, as well as the process of communicating and executing overall strategies for particular accounts.

When an adviser holds itself out as a professional, the adviser will be held to a high standard of prudence and expertise in the investment-selection and -review process. Therefore, advisers must carefully consider policies and procedures in this area in accordance with the size and character of the investment-selection responsibilities undertaken. In furnishing portfolio invest-

ment advice, particularly to retail clients, an investment adviser should observe the standards of care and conduct applicable to fiduciaries.¹

3130.1.3.2.3.1 Investment Standards and Research

1. Are the general investment standards and review and selection responsibilities defined and approved by the board of directors?
2. Does management or senior investment personnel review overall investment policy and potential investment problems at least annually?
3. Is portfolio management policy adequately communicated to appropriate personnel (for example, by including it in committee minutes, directives, or memoranda circulated to such personnel)?
4. Does the institution, where appropriate, diversify investments according to—
 - a. types of assets, such as common stocks, fixed-income securities, and real estate?
 - b. types of securities by characteristics such as income, growth, and size of company?
 - c. types of securities by industry and specific companies within industries?
 - d. maturities of debt securities?
 - e. geographic location of companies of issue, such as utilities?
 - f. tax-exempt income?
5. If the institution has a list of securities approved for purchase, retention, and/or sale—
 - a. are recommendations for additions to or deletions from such list(s) approved by a committee or group with appropriate authority and expertise?
 - b. are periodic reviews made of the lists of securities approved for purchase, retention, or sale to assess the current appropriateness of the investments listed?
6. If the institution uses any research or analysis in its general investment-review and -selection process—
 - a. are appropriate factors taken into account?
 - b. is appropriate documentation obtained and filed to reflect consideration of such factors?
7. If the size and character of the entity's discretionary investment responsibilities are such that the type of detailed research consider-

1. The term "portfolio investment" is intended to refer generally to the investment of funds in a "security" as defined in section 2(1) of the Securities Act of 1933 (15 U.S.C. 77b) or in real property interests, except when the real property is to be used in the trade or business of the person being advised. In furnishing portfolio investment advice, bank holding companies and their subsidiaries shall observe the standards of care and conduct applicable to fiduciaries.

- ations and files envisioned in the previous question are not relied on, does it use ratings by acceptable financial-rating agencies, such as Moody's or Standard and Poor's, together with evaluation of basic relevant factors pertaining to the type of security under consideration?
8. Where appropriate, does the organization differentiate its investment-selection process as to the type of account in question, such as those for which the need for growth or income is paramount, or for taxable versus tax-free trusts or retail versus institutional accounts?
 9. Do personnel possess sufficient expertise and experience to properly implement the firm's investment-selection systems and responsibilities?
5. As appropriate to the size and character of business, are account synopses and historical data used in the review of account assets?
 6. Does the investment-review information include—
 - a. amount and description of investment?
 - b. categories of investment, such as bonds and stocks?
 - c. types of investments within each category, such as industry groups for stocks?
 - d. cost?
 - e. market or appraised value at review date?
 - f. annual income?
 - g. yield at market?
 - h. rating of recognized financial service?
 7. For accounts in which the adviser makes investments at the direction of the client, does the adviser—
 - a. review the account to detect illegal, non-conforming, substandard, or otherwise unsuitable investments?
 - b. advise the power holder of any improper investments?
 - c. inform parties at interest in the account if any improper investment is not disposed of, and seek legal relief, if necessary?
 - d. resign from the account if corrective action is not taken concerning improper investments?

3130.1.3.2.3.2 Account Administration

Special consideration has to be given to accounts subject to the Employee Retirement Income Security Act of 1974 (ERISA), which imposes fiduciary responsibilities upon any person who has any power of control, management, or disposition over the funds or other property of any employee benefit fund. When an adviser exercises investment discretion over such plans, the extensive fiduciary responsibility and prohibited transaction rules of ERISA will apply.

1. Does the adviser have portfolio management procedures which provide for—
 - a. consideration of the needs and objectives of particular types of accounts, such as the need for income versus growth or taxable versus tax-free income?
 - b. conformity with investment provisions of governing instruments?
 - c. consideration of the liquidity needs of the account for anticipated distributions?
 - d. appropriate diversification, including avoidance or elimination of concentrations in individual securities and by type and subclass of securities?
2. When assets in discretionary accounts are considered unsuitable, is a program of prudent and timely sale of such assets followed unless retention is required?
3. In order to determine the advisability of retaining or changing assets, does the adviser have procedures for periodic reviews?
4. Do minute books or other records—
 - a. identify reviewed accounts?
 - b. report written conclusions on the advisability of retaining or disposing of assets in the accounts?
8. Have proxy voting policies and procedures as listed below been established for ERISA accounts that are suitable in relation to assumed responsibilities?
 - a. voting of routine proxies?
 - b. identification and handling of proxy or tender determinations when sensitive social issues, conflicts of interest, significant increases in management power or perquisites, or merger or buy-out proposals are involved?

NOTE: For requirements relating to proxy processing and the Shareholder Communications Act of 1985, see *Operations and Internal Controls in the Trust Examination Manual*. For questions relating to the voting of affiliate stock, see *Conflicts of Interest in the Trust Examination Manual*.

When an adviser invests accounts in options and/or futures, the following checklist questions (numbers 9 through 13) should be completed. For additional information as to appropriate uses of options and futures

contracts, see SR-83-2(SA) and SR-83-39(SA).

9. When an adviser uses options and/or futures, has the board of directors or a directors'-level committee approved a policy and strategy for their use? Does the policy address—
 - a. the investment objectives to be accomplished by the use of these contracts?
 - b. the specific types of contracts to be used?
 - c. the types of accounts authorized to use these contracts?
 - d. restrictions and/or conditions upon use of contracts, such as selection of brokerage houses, position limits, time frames, leveraging, etc.?
10. Was adequate disclosure made and adequate authorization obtained to execute contract transactions for various types of participating accounts?
11. Are adequate systems and controls in effect to ensure—
 - a. proper tax treatment?
 - b. proper segregation of securities and/or monies?
 - c. conformance with account objectives?
 - d. adherence to adopted strategy, position limits, and related program parameters?
 - e. periodic management evaluation and reporting systems with respect to—
 - results of contract activities upon overall investment performance?
 - market developments, including current liquidity of relevant futures and options contracts in which positions are taken?
 - financial condition, fee competitiveness, and performance of involved broker-dealers?
12. Does the accounting system accurately reflect contract activities with respect to—
 - a. transaction details?
 - b. current gains or losses on open contract positions?
 - c. necessary tax information?
13. Do operating personnel appear sufficiently knowledgeable relative to the level of contract-transactions activity?

3130.1.3.2.4 Conflicts of Interests

The inspection of an investment adviser subsidiary which provides services to an affiliated trust company or bank with a trust department requires expanded inspection procedures. Often the invest-

ment adviser subsidiary was organized for the purpose of providing investment advice and services for the trust accounts held at one or more of its affiliates. These subsidiaries often employ the same individuals who worked in the banks or trust company which they advise.

Conflict-of-interest problems may arise when the adviser exercises any “discretion” when there are mutually opposing interests. The most serious conflict of interest is self-dealing, which could include transactions such as an investment in affiliated banks or the purchase of securities from or through an affiliate. To resolve conflicts of interest, such transactions and the fees associated with them must be fully disclosed and authorized by the appropriate parties.

Potential conflict-of-interest situations are not limited to transactions between affiliates, but can be between the adviser and any of its directors, officers, or employees individually. Due to the complexity, sensitivity, and exposure involved in conflicts of interest, it is particularly important that an adviser develop the awareness and policies and procedures to identify and deal with conflicts situations. Therefore, it is considered highly desirable, even when not specifically required by regulation, that written policies be adopted and periodically revised as necessary.

3130.1.3.2.4.1 Self-Dealing

1. Has the adviser—
 - a. acquired any assets from itself or its affiliates?
 - b. acquired any assets from directors, officers, or employees of the organization or its affiliates, or from any other individuals with whom a connection exists that might affect their best judgment?
2. Has the adviser sold or transferred any account assets, by loan or otherwise, to—
 - a. any affiliates?
 - b. directors, officers, or employees of any affiliates?
 - c. other individuals or corporations with whom such a connection exists or other organizations in which such an interest exists that might affect the exercise of its best judgment?
3. Has the company purchased any securities for a customer account from any member of an undivided syndicate for which the adviser or any of its affiliates are participating, or from a private placement which the adviser assisted?

4. Does the company have satisfactory policies and procedures, in terms of its size and character of business, to address the preceding situations?
5. If the company directs extra fee-producing business to itself or an affiliate (for example, brokerage services or options-trading services), or if it charges separate fees to accounts for securities transactions or other services commonly provided as part of general account administration (for example, fees for cash management or investments in mutual funds when management or administration fees are received by the company or an affiliate)—
 - a. has it identified those accounts which may properly participate in such services in accordance with adopted policy, legal opinion, a Department of Labor ruling, and/or other necessary determinations?
 - b. has it made appropriate prior disclosures and obtained adequate specific authorizations for those accounts identified as entitled to the services?
6. Have any assets held by the company in one account been sold to another account? NOTE: The transaction may be permissible if appropriate disclosure is made, authorization is received, and the law or the governing instrument do not prohibit it. However, an interaccount transaction for ERISA accounts may be a prohibited transaction. In addition, difficult problems can arise in establishing or documenting a “fair” price for the transaction, particularly if the asset is a thinly traded security or is a unique asset.
7. Does the company have appropriate policies and procedures to ensure—
 - a. its discretionary accounts are not left in uninvested cash positions beyond a minimum period of time?
 - b. its accounts are invested in affiliate interest-bearing deposits only for appropriate temporary or other purposes? NOTE: To the extent the company has long-term affiliate deposits or significant aggregate holdings, a special review should be made of the company’s documentation evidencing the suitability of such investments in view of available alternate vehicles.
8. Are securities of affiliates only purchased upon proper direction or specific authorization in account instruments?
9. When the adviser purchases securities which are underwritten by an affiliate, does the adviser do so only upon proper direction and specific authorization of the customer?
10. Does the company act as investment adviser to an open-end or closed-end investment company that is registered under the Investment Company Act of 1940? If so, do its activities conform with the Board’s interpretation at 12 C.F.R. 225.125, which defines the scope of permissible activities?

3130.1.3.2.4.2 Broker Selection

1. When volume of activity warrants, is allocation of brokerage business controlled through an approved list which is periodically reviewed and approved by the company’s board or a senior-officer-level committee?
2. Does management attempt to obtain the best service for customers, including periodic evaluations of broker qualifications such as—
 - a. financial condition?
 - b. past record of good and timely delivery and payment on trades?
 - c. quality of execution and ability to handle specialized transactions?
 - d. quality of research received, if applicable?
3. Are there procedures to monitor or periodically survey available negotiated commission prices in order to ascertain reasonable costs for the execution requirements of its accounts?
4. If commissions higher than the “lowest” available negotiated commissions are being paid for executions in order to receive goods and/or services—
 - a. have such goods and/or services been determined to reasonably qualify as “brokerage and research services” as defined in section 28(e)(3) of the Securities Exchange Act of 1934?
 - b. does an appropriate committee periodically (at least annually) review and determine that the value of the goods and services justifies the payment of the higher brokerage commissions?
5. Does the entity periodically review and maintain records of all goods and/or services received from brokers or third parties in return for brokerage and/or dealer business allocated to particular firms?
6. Do policies and procedures preclude—
 - a. selection of broker-dealers on the basis of deposit balances?
 - b. agreements or understandings for allocation of specific amounts of business to a

broker-dealer such that the adviser company would not be able to cease allocating business to the firm if it were no longer providing acceptable execution?

7. Are auditing and other monitoring controls and reporting procedures in effect to verify the compliance of traders with policies regarding broker selection and payment of commissions? NOTE: Under section 28(e) of the Securities Exchange Act of 1934, the adviser may also legitimately pay more than the lowest-available commission for reasons of execution, financial soundness, and efficiency of delivery and payment.
8. In addition to advisory services, are brokerage services provided for customers pursuant to section 225.28(b)(7)(i) of Regulation Y? If so, the examiner should refer to the discount brokerage examination procedures in SR-85-29 (FIS), which contains guidelines and checklist questions for the inspection of brokerage activities.

3130.1.3.2.4.3 Trading Policies and Practices

1. When trading specialists are employed, are there adequate written or unwritten standards of competence, education, and training for such individuals?
2. When specialists are not employed, are the individuals responsible for trading reasonably trained and informed in relation to the volume and character of trading activity they are required to perform?
3. When transactions are permitted to be crossed between accounts, are procedures adequate to ensure fair pricing of the transactions? If it is not clear the transactions are permitted, has the company determined through counsel that crossing is permissible under applicable law?
4. When specialists are employed and volume of activity permits, are block trades considered in order to obtain more favorable trade prices and execution prices for accounts?
5. If applicable, do procedures, including establishment of time frames in advance of such trading, require special authorization and attention for large or block trades which are to be executed in a number of transactions?
6. If procedures permit the combining of purchase or sale orders of the same security—
 - a. are resulting benefits in price and/or execution costs applied on a pro rata or

average basis to the participating accounts?

- b. are allocable shares similarly pro-rated to participating accounts when a combined trade is not executed at once, but in a number of transactions over a period of time?
7. Does the adviser maintain policies “reasonably designed to prevent the misuse of material non-public information?”

3130.1.3.2.5 Recordkeeping

Registered investment advisers are subject to extensive recordkeeping requirements. SEC Rule 204-2 imposes recordkeeping standards and requires that registered investment advisers keep accurate records. In addition to this recordkeeping, the adviser is subject to the “brochure rule” (Rule 204-3). This rule requires an investment adviser to deliver a specified disclosure statement with respect to its background and business practices to every client or prospective client. In addition to an initial disclosure, the adviser must offer annually to deliver a current disclosure statement upon request. Those advisers which have custody or possession of securities of any client must maintain certain additional records, including separate ledger accounts for each client, copies of confirmations, and a position record showing the interest of each client and the location of the securities.

1. Does the investment adviser make and keep current appropriate books and records including—
 - a. journals or summary journals?
 - b. a memorandum of each order given by the firm or instructions received, showing terms and conditions of the orders?
 - c. all checkbooks, bank statements, canceled checks, and cash reconciliations?
 - d. all bills or statements, paid or unpaid?
 - e. trial balances, financial statements, and internal audit papers?
 - f. written communications received or sent by the firm?
 - g. list of discretionary accounts?
 - h. powers of attorney and discretionary powers?
 - i. written agreements?
 - j. copies of each notice, circular, advertisement, newspaper article, investment letter, bulletin, or other communication recommending the purchase or sale of a security?
2. Does the adviser maintain a record of every transaction in which the adviser or any

- “advisory representative” has a direct or indirect beneficial interest?
3. Are partnership articles, articles of incorporation, charter, minute books, and stock certificate books maintained at the adviser’s principal office?
 4. If required books and records are photocopied or microfilmed, or if they are produced or reproduced on computer storage media—
 - a. are such media indexed and arranged to permit immediate location of any particular record?
 - b. were any copies or printouts of such records promptly provided on request?
 - c. is at least one copy of the original records that are now on such media stored in a separate location from the original for the time required?
 - d. does the adviser maintain procedures for the maintenance and preservation of, and access to, records so as to reasonably safeguard them from loss, alteration, or destruction?
 - e. does the adviser have facilities for the immediate, easily readable projection of microfilmed records and for producing easily readable facsimile enlargements?
 5. Do the entries in the general ledger and journals properly reflect payments or receipts of monies or other goods or services?
 6. Do the financial statements, canceled checks, deposit slips, and check register properly reflect payments or receipts of monies or other goods or services?
 7. When the adviser’s financial records indicate that it is capitalized with client funds (through either loans or equity), have adequate disclosures been made to clients about the risks and conflicts of interest involved?
2. Does the adviser gain effective access to client assets through practices, arrangements, or relationships with clients, such as trustee, executor, or account signator?
 3. When the adviser has custody of client funds or securities, does the adviser maintain the following records:
 - a. a record reflecting all purchases, sales, receipts, and deliveries of securities, and all debits and credits to such accounts?
 - b. a separate ledger account for each client, showing purchases, sales receipts, and deliveries of securities?
 - c. copies of confirmations of all transactions for such clients?
 - d. a record for each security in which any client has a position, reflecting the name of the client, amount of interest, and location of security?
 4. When the adviser renders investment-management services, are the following records maintained:
 - a. for each client, a record of securities purchased and sold, containing the date, amount, and price of each transaction?
 - b. a record for each security in which any client has a current position, showing the name of each client and current interest or number of shares owned by each client?
 5. Are client assets physically segregated from the adviser’s own assets?
 6. For the vault and other related security-processing areas, are adequate controls/safeguards in effect which include the following:
 - a. Are assets maintained under a system of joint custody or dual control?
 - b. Is access to these areas restricted to designated/authorized personnel?
 - c. As appropriate, are other controls/safeguards systems in place (for example, rotation of assignments, key/lock combinations, or vault or area entrance log(s))?
 - d. Is a security-ticket system used as a vault and asset-movement control system?
 7. If a security-ticket system is used, are adequate controls/safeguards in effect which include the following:
 - a. Are security tickets prenumbered?
 - b. Does each copy of the security ticket clearly indicate its destination to ensure prompt and accurate delivery?

3130.1.3.2.6 Security Storage and Processing

Investment advisers generally do not take possession and control of client funds and securities. However, in those cases in which such responsibilities are assumed, the inspection must evaluate those internal controls which are in place for the safeguarding of client funds and securities. Controls and related processing procedures must be appropriately designed and implemented by the adviser to efficiently and safely facilitate such operations.

1. Does the adviser have custody of client funds or securities?

- c. Does the security ticket provide the necessary information to ensure proper processing and recording of the transaction?
 - d. Does the security ticket contain sufficient copies to ensure that sound internal control is maintained over the physical security-movement process by providing the following with a copy (or copies):
 - portfolio managers who initiated the transactions?
 - appropriate vault/operations personnel?
 - the audit/asset control function?
 - e. Are unissued security tickets properly safeguarded and subject to adequate numeric controls?
8. Does the control of security ticket/transaction cancellation and replacement include—
- a. restricting the ability to initiate such action to supervisory personnel?
 - b. reporting such activity to the audit/asset control function and other function(s) affected by such action?
 - c. procedures to ensure that securities are returned to the vault or that funds charged from an account are redeposited, or that the securities or funds are immediately placed under the control of a new security ticket/transaction?
 - d. identifying a replacement security ticket by recording such information on the replacement ticket?
 - e. requiring all copies of the replaced security ticket to be forwarded to the audit/asset control function?
9. For assets received, are adequate controls/safeguards in effect which include the following:
- a. Are all assets received promptly placed under joint custody or control?
 - b. Is appropriate documentation required and on file for all assets received, and is it compared to actual assets received and posted to control ledgers?
 - c. As applicable, are procedures in place for controlling and properly handling assets received by other means, including delivery by mail or messenger?
 - d. If assets are not to be physically held or issued (for example, mutual fund shares), is a receipt, statement, or acknowledgment obtained from the issuer or holder and processed by receipt ticket or other means to ensure proper accountability?
 - e. If securities received are not properly registered in the company's nominee name, are procedures in place to ensure prompt re-registration, control, and follow-up until re-registration?
10. For the delivery of assets, are adequate control/safeguards in place which include the following:
- a. Are appropriate receipts obtained and on file for securities delivered?
 - b. Are procedures in place to ensure that bearer securities are not mailed in amounts in excess of the company's insurance limits?
11. Do vault custodians—
- a. compare securities received/withdrawn to the security ticket?
 - b. for withdrawals, verify that the security ticket is signed (initialed) by authorized personnel?
 - c. for securities temporarily withdrawn from the vault (for example, for transfer, re-registration, or account/portfolio manager review), is a copy of the security ticket retained by vault personnel pending the return of the security to the vault?
12. For pending security transactions, are adequate controls in effect which include the following:
- a. Are pending items periodically reviewed by operations personnel?
 - b. Do procedures provide for prompt follow-up on items which have not been completed within established time periods?
 - c. Are exceptions promptly reported and resolved by appropriate personnel (for example, management, supervisors, and/or the audit/asset control function)?
 - d. Are current pending security items in compliance with established procedures for reporting exceptions, and are those transactions which have not been completed within established time periods been followed up satisfactorily? NOTE: Examiner judgment should be used in determining the scope of this review. However, at a minimum, the review should include procedures for handling security transactions pending 30 days or more.
13. Does the security-processing system—
- a. contain a sufficient number of controls/safeguards to properly reflect the current status of and limit an individual's control over a security transaction?

- b. contain sufficient information to identify, locate, and trace the movement of each asset?
 - c. provide for adequate segregation of duties and responsibilities?
14. Has individual accountability or responsibility been properly assigned for the physical protection of the securities and related cash flow, if applicable, throughout the security-processing system?
 15. Do procedures require that orders for trades originate with account or portfolio managers, with the signature or initials of the authorizing party shown on the order form or purchase/sale ticket?
 16. Are transactions made on a first-in, first-out basis (that is, executed in order of receipt), except when combined in blocks for execution pursuant to appropriate written procedures?
 17. Do operations personnel perform independently of account or portfolio managers to—
 - a. reconcile trade tickets to brokers' confirmations?
 - b. monitor and promptly follow up on any outstanding transactions, such as confirmations not received within specified time periods or purchases/sales which have not settled on settlement date?
 - c. promptly post payments for purchases/sales to the recordkeeping system and promptly record/remove assets?

3130.1.3.2.7 *Other Matters*

1. Is the adviser or any of its principals involved in litigation or arbitration which will have an impact on its ability to fulfill its contract with clients?
2. Were any matters of a material nature found in the adviser's correspondence, such as significant client complaints?
3. Did a review of customer-complaint files reveal any possible areas for special inspection focus?
4. Did a review of the adviser's current financial condition raise concerns as to the adviser's solvency or its ability to otherwise continue to provide advisory services?
5. Are there any other aspects of the adviser's operations, or the operations of an affiliate, which raise concerns?

3130.1.4 INSPECTION FINDINGS

A written summary of the subsidiary's activities should be presented to the examiner in charge of the bank holding company inspection and should be included in the inspection report or its supporting workpapers. Material exceptions should be noted with management's responses under an appropriate caption in the open section of the report. Any comments in the report regarding the scope of the investment advisory inspections should note that such inspections are primarily focused on safety-and-soundness considerations and not on compliance with securities laws.

In those cases in which a separate Report of Bank Holding Company Inspection on Investment Advisory Activities is prepared, examiners may use the Uniform Interagency Trust Rating System (see SR-98-37 FRB, revised October 13, 1998, and effective January 1, 1999), which provides a basis for the evaluation of critical areas of supervisory concern. The rating system is generally used by federal supervisory agencies to assess the condition of trust companies. However, the system can be adopted to report on advisory operations as well. When the inspection uncovers significant deficiencies which require corrective action, and the inspection was not done in conjunction with a concurrent bank holding company inspection, a separate report should be prepared and delivered to the inspected nonbank adviser. Send a copy of the summary and any report comments to the Trust Activities Program, Washington, DC 20551.

3130.1.5 ON-SITE INSPECTION BY TRUST EXAMINERS

An investment advisory subsidiary of a bank holding company will normally be registered as an investment adviser under the federal securities laws, and will be subject to examinations of its advisory activities by the Securities and Exchange Commission (SEC). Nevertheless, because investment responsibility is involved in any investment adviser's activities, and since the SEC's routine examinations may be infrequent, periodic on-site inspections should be conducted as an integral part of BHC inspections.

Consideration should be given to using trust examiners to conduct, or at least participate in, on-site inspections of financial and investment advisory nonbank subsidiaries, especially when the subsidiary provides services to an affiliate

bank trust department examined by the Board of Governors of the Federal Reserve System. If the bank holding company has to “spin off” the investment research and selection process of its banks’ trust departments into an investment advisory subsidiary, there may be a need to review the activities of the trust departments together with those of the advisory subsidiary through an on-site inspection.

The companies being advised on a contractual basis and which were sponsored by the holding company or any affiliate are also defined as affiliates in sections 23A and 23B of the Federal Reserve Act. The examiner should therefore be alert to any intercompany transactions between a bank subsidiary and the advised company. A review of financial statements of such companies is warranted.

3130.1.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Limitations and activity approval	15 U.S.C. 80; section 23A FRA 371c	225.28(b)(6) 225.125	4-177	1997 FRB 275 1971 FRB 512 1972 FRB 149, 571

4(c)(8)—Advice on Mergers and Similar Corporate Structurings, Capital Structurings, and Financing Transactions Section 3130.3

This section renders inspection guidance on financial and investment advisory activities that are provided in connection with mergers, acquisitions, divestitures, investments, joint ventures, leveraged buyouts, recapitalizations, capital structurings, and financing transactions and similar transactions, and on conducting financial-feasibility studies.¹ This section also provides historical examples of financial and investment advice previously approved by Board order. The examples consist of various kinds of advice with regard to mergers and similar corporate transactions under the current Regulation Y, section 225.28(b)(6)(iii). Some of the examples of advisory nonbank activities were approved for inclusion into Regulation Y long before the revision of Regulation Y that was effective April 21, 1997. The reader of these examples must only take into consideration the current provisions of Regulation Y. There should be no reliance on Board order commitments, old regulatory provisions, supervisory policies, and interpretations made before April 21, 1997, unless they were not revised. Certain former provisions or commitments may no longer be applicable. The historical examples discussed in this section have been revised according to the new regulatory provisions.

If inspection objectives and procedures are stated in a specific section, the examiner should use this specialized guidance. In addition, the examiner should use the generalized inspection objectives and procedures in section 3130.0, which are generally applicable to all advisory activities.

3130.3.1 ADVISER TO A MORTGAGE OR REAL ESTATE INVESTMENT TRUST

An adviser to a mortgage or real estate investment trust (REIT) furnishes expertise in the areas of funds acquisition, lending, investing, and servicing that is similar to the role of adviser to a mutual fund. The contracted service is performed on a fee basis that is generally based on a percentage of the trust's total assets. The intention of the exemption, found in section 225.28(b)(iii) of Regulation Y, is to allow the relationship to be advisory in nature as opposed to controlling. However, in some instances, the

relationship between trusts and their advisers has gone beyond the parameters of advice and resulted in legal entanglements, conflicts of interest, and financial exposure for the bank holding company. Because of the potential risk exposures which may result when a bank holding company or its subsidiary engages in this activity, the overall relationship must be subject to particular scrutiny during an inspection.

REITs were established by the U.S. Congress in 1960, effective January 1, 1961. A REIT is a hybrid form of an investment vehicle which is essentially a financial intermediary specializing in real estate lending and investment. A REIT obtains funds by borrowing from financial institutions or other lenders or by issuing shares (equity capital). It invests the funds in real estate, either as a lender or equity owner. REITs are usually owned by passive owners, not operators. REITs are designed to take advantage of benefits within the federal Internal Revenue Code.

There are generally four types of REITs: equity, mortgage, hybrid, and "finite-life." An equity REIT acquires income-producing properties, deriving its earnings mostly from rents. A mortgage REIT provides financing to real estate projects that are owned by others, deriving its earnings from interest charged on the loans. A hybrid REIT combines the equity REIT and the mortgage REIT. The finite-life REIT is structured to self-liquidate within an established time frame.

By meeting certain prescribed requirements during a taxable year, a REIT may function as a conduit with respect to income distributed to its beneficiaries. If at least 95 percent of the trust's income is distributed to the beneficiaries (excluding capital gains), the trust pays no taxes on the distributed income, thus avoiding the double taxation associated with corporations. Therefore, this investment vehicle has the tax advantage of a partnership but offers the limited liability and perpetuity of a corporation.

A REIT must be a corporation (other than an insurance company or bank), an association, or a trust, or it must be managed by at least one trustee, with transferable shares of beneficial interest as form and evidence of ownership. There must be at least 100 beneficial owners, and the trust must elect to be treated as a REIT for tax purposes. A REIT must meet the following threefold gross income test. At least 95 per-

1. Feasibility studies do not include assisting management with the planning or marketing for a given product or providing general operational or management advice.

cent of the trust's income must come from real property rentals, dividends, abatements and refunds of real property taxes, interest on loans, or gains from the sale of securities or real estate, with the further stipulation that no less than 75 percent of the trust's income must be directly related to real property. Also, less than 30 percent of the trust's income can be derived from the sale of any securities held for less than six months and from foreclosure property and real property held for less than four years that is not involuntarily converted.

In addition to the threefold gross income test, there is a twofold investment test which must be met. First, at least 75 percent of the value of the trust's total assets must be real estate assets, government securities, and cash. Second, 25 percent of the trust's total assets may be securities, but the trust cannot hold securities from one issuer which amount to greater than 5 percent of the trust's total assets and more than 10 percent of the outstanding voting securities of the issuer.

3130.3.1.1 Evaluating Advisory Activities for a REIT

A bank holding company may have an insignificant amount of capital invested in the advisory company. However, if the bank holding company or its subsidiaries have extensions of credit or unfunded commitments outstanding, an evaluation of the credit may be needed using normal classification criteria as to their collectibility, particularly if there is substantial risk exposure. Examination/inspection reports of subsidiaries should be reviewed to determine the consolidated exposure. The holding company or its banking subsidiaries may be participating in exchanges or swaps with the advised REIT, whereby trust assets are exchanged for forgiveness of bank debt. Such pending asset swaps should be considered in conjunction with the credit evaluations. The swaps may be for the purpose of reducing the REIT's liabilities, which can involve an exchange of assets with the lender. The lender's balance sheet reflects an exchange of one asset for another together with, possibly, a lump-sum payment of cash to the trust. If a swap is pending, review the criteria that the holding company used to (1) determine the benefit of the swap to the company and (2) select which of the REIT's assets would be considered for the swap. Also, determine the

amount of any cash or earning assets that will be given to the trust.

A holding company and a trust have separate and distinct shareholders but common management. The potential exposure in such cases may be pronounced. Such relationships should be reviewed for conflicts of interest. Loans may be booked by the holding company or its subsidiary and subsequently sold to the trust. The credit decision may have been made by the subsidiary, and the REIT's purchase of the loans may have been approved by the affiliated adviser. The benefits to the holding company may include receiving the origination fee and selling the loan to the trust, thereby increasing the REIT's assets, upon which the holding company's advisory fee is based. Following receipt of the sale's proceeds, the process may be repeated. If the holding company has participated in this type of process, there is potential for a conflict of interest. The holding company or its subsidiary may have to repurchase the credit.

Threatened or pending litigation may result from loans that were originated by the holding company or its subsidiaries or that were recommended by the adviser. The number of such loans together with the current payment status of the credit should be determined. If there are numerous loans on a nonaccrual status, the holding company may have accumulated a significant loss. Finally, any suit involving the adviser which pertains to services it performed should be explored as to its validity and potential financial exposure.

3130.3.2 INSPECTION OBJECTIVES

1. To determine the level of risk involved when the bank holding company or its subsidiaries have extensions of credit and unfunded commitments outstanding to the advised trust.
2. To review for conflicts of interests in cases when a holding company and a trust have separate and distinct shareholders but common management.
3. To review all threatened or pending litigation involving loans originated by the holding company or its subsidiaries that were recommended by the adviser.
4. To review all covered transactions between a bank holding company's subsidiary bank and a REIT, if the REIT is sponsored and advised on a contractual basis by the bank or any subsidiary or affiliate of the bank, to ensure that transactions are permitted pursuant to sections 23A and 23B of the Federal Reserve Act.

5. To determine whether the REIT has been advised to sell real estate in the ordinary course of business and, if so, whether the appropriate liability account for corporate federal and state taxes has been established by the advised subsidiary.
 6. To determine whether the REIT adviser is providing the appropriate advice to the REIT to generate nonspeculative high yields; adequate liquidity; portfolio diversification; sufficient cash flow to pay dividends; continuous repricing; and adequate public disclosure, including the extent of risk involved.
 7. To determine the adequacy and quality of professional management and the level of management's equity stake in the REIT.
 8. To determine the effect on net earnings from floating interest rates on asset yields that may have been caused by prepayment risk.
3. Review all threatened or pending litigation involving loans originated by the holding company or its subsidiaries that were recommended by the adviser.
 - a. Determine the number and amount of such loans together with the current payment status of the credit and whether any loans are on a nonaccrual status.
 - b. Evaluate any suit involving the adviser that pertains to services it performed as to the suit's validity and potential financial exposure.
 4. Evaluate the effect on net earnings and dividends that declining rates (floating-rate assets) have on the prices of floating-rate mortgage assets. Determine the results and the nature of any hedging strategies that are used to offset a decline in net earnings.

3130.3.3 INSPECTION PROCEDURES

1. Determine if there are any significant extensions of credit or unfunded commitments outstanding. If so—
 - a. evaluate the credit using normal classification criteria as to collectibility;
 - b. review examination or inspection reports of the holding company's subsidiaries and determine the consolidated exposure; and
 - c. review any pending asset swaps in conjunction with the credit evaluations, if the holding company or its banking subsidiaries are participating in exchanges or swaps with the advised REIT whereby trust assets are exchanged for forgiveness of bank debt.
 - Review the lender's balance sheet to make certain that it reflects an exchange of one asset for another, as well as any lump-sum payment of cash to the trust.
 - Review the criteria the holding company used to (1) determine the benefit of the swap to the company and (2) select which of the REIT's assets would be considered for the swap.
 - Determine the amount of any cash or earning assets that will be given to the trust.
2. Determine and evaluate any significant conflicts of interests in cases when a holding company and a trust have separate and distinct shareholders but common management.
 - a. Determine if there are any loans booked by the holding company or its subsidiary and subsequently sold to the trust, if the credit decision was made by the subsidi-

- ary, and if the REIT's purchase of the loans was approved by the affiliated adviser.
- b. If significant conflicts of interest exist, determine whether the holding company or its subsidiary must repurchase any associated credit.

See also the inspection procedures in sections 3130.0 and 3130.1.

3130.3.4 FINANCIAL ADVICE ON ISSUING SECURITIES OF FOREIGN GOVERNMENTS IN THE UNITED STATES

3130.3.4.1 Financial Advice to the Canadian Federal, Provincial, and Municipal Governments

An example of providing financial and investment advisory activities is a Board order that was previously approved (now authorized under section 225.28(b)(6)(iii) of Regulation Y). The order specifically authorized the providing of financial advice to the Canadian federal and provincial governments for issuing their securities in the United States. Also, the Board's Regulation K authorizes the provision of such investment, financial, or economic advisory services to foreign governmental entities (see section 211.10(a)(8)). The Board approved the proposed activity on February 12, 1988 (1988 FRB 249).

Another Board order authorized a foreign bank, subject to the BHC Act, to acquire a securities firm to engage in this activity, but to

expand the activity to include the providing of such advice to the Canadian municipal governments in addition to the federal and provincial governments. The Board concluded that the slight modification would not alter the activity to render it less closely related to banking. The Board approved the order on March 28, 1988 (1988 FRB 334). Other approved Board orders for this activity are 1988 FRB 500 and 1988 FRB 571.

3130.3.4.2 Providing Financial Advice to the Japanese National and Municipal Governments and Their Agencies

Another example of providing advice to foreign governments is a bank holding company that applied for the Board's approval to engage, through its wholly owned securities subsidiary, in certain securities-related, foreign-exchange, and investment and financial advisory activities. The activity, which consisted of providing financial advice to the Japanese national and municipal governments, had not previously been authorized for bank holding companies. When making its decision, the Board referred to similar orders as well as to the facts provided. It approved these advisory services by order on June 4, 1990. (See 1990 FRB 654.)

The Board, effective September 10, 1992, added the providing of financial advice to foreign governments, such as advice with respect to the issuance of their securities, to the activities permissible by Regulation Y, currently authorized by section 225.28(b)(iii).

3130.3.5 PROVIDING FINANCIAL-FEASIBILITY STUDIES AND VALUATION SERVICES

The following provides an example of a bank holding company that was authorized to provide financial-feasibility studies and valuation services, including expert-witness testimony in connection with the valuation services. A bank holding company (the applicant) had requested the Board's approval to acquire 100 percent of the voting shares of a company (the company) that engaged in investment advisory, investment management, and financial advisory services. The company engaged in providing (1) financial-feasibility studies for specific projects of private corporations, (2) valuations of compa-

nies and of large blocks of utility stock for a variety of purposes, and (3) expert-witness testimony on behalf of utility companies in rate cases.

In providing financial-feasibility studies, all financial aspects of the particular project were evaluated, including economic conditions, sales and earnings statements, balance sheets, and cash-flow data. Each engagement involved analyzing and projecting the income to be generated by a particular project. The Board believed that this activity was functionally similar to the financial advice traditionally offered by banks to their commercial lending customers. The applicant provided evidence revealing that certain major banks perform similar financial-feasibility analysis services for their customers. The Board thus approved the provision of such financial-feasibility studies for corporations. Certain commitments were made to guard against any possible conflicts of interests and related adverse effects between the applicant's credit-extending subsidiaries and the company, acting as an adviser regarding the financial-feasibility studies. Included was the condition that the company's financial advisory activities would not encompass the performance of routine tasks or operations for a customer on a daily or continuous basis.

Upon consideration of the above, the Board also determined the activity of providing valuations of companies, as well as the expert-witness testimony incidental to such valuations, to be permissible. The commercial lending and trust departments of banks commonly make valuations of a broad range of tangible and intangible property, including the securities of closely held companies. The applicant provided evidence that numerous banks compete directly with the company in offering corporate valuations for a fee.

The Board, effective September 10, 1992, added the providing of financial-feasibility studies to the list of nonbanking activities permitted by Regulation Y (see section 225.28(b)(6)(iii)). With the Regulation Y revisions, effective April 1997, the Board specifically determined that feasibility studies do not include assisting management with the planning or marketing for a given project or providing general operational or management advice. The 1992 amendment to this regulation permitted bank holding companies to conduct feasibility studies for high net worth individuals, as well as corporations, and financial and nonfinancial institutions. With the April 1997 amendment, such services could be provided to any person.

3130.3.5.1 Valuation Services

The valuation services included the following activities:

1. the valuation of a company for purposes of acquisitions, mergers, and divestitures
2. tender-offer evaluations
3. advice for management or for a bankruptcy court on the viability and capital adequacy of financially troubled companies and on the fairness of bankruptcy reorganizations
4. valuation opinions on transactions in publicly held securities
5. valuations on the fair market value of employee stock ownership trusts
6. periodic valuation of stock of privately owned companies held in pension or profit-sharing plans, charitable trusts, or venture-capital funds
7. the valuation of a privately owned company or of a large block of publicly owned securities for estate-tax purposes
8. for estate-tax purposes, valuations of a company's common stock and other securities for recapitalization of a privately held company

3130.3.5.2 Utility-Rate Testimony in Support of Utility-Company Valuations

The company frequently provided expert witness testimony on behalf of utility firms in rate cases. The company's personnel were retained to give expert testimony on financial matters such as the cost of capital, economic conditions, and the rate of return expected by investors in utility securities. The Board believed that to a large degree the activity may be considered incidental to the company's general provision of economic information and advice which is permissible under section 225.28(b)(6)(ii) of Regulation Y. Also, banks routinely calculate the cost of capital for customers to advise them regarding financial alternatives.

3130.3.6 EDUCATION-FINANCING ADVISORY SERVICES

Four bank holding companies (collectively, the notificants) gave notice pursuant to section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) of their intention to each acquire more than 5 percent of a company (the company) that would

provide education-financing advisory services.² The company would enable state governments to assist parents in financing the higher education of their children.

The company will (1) develop and manage an educational savings and lending program on behalf of the state, (2) design and provide necessary computer software for the program, (3) provide marketing and program materials, and (4) train state personnel to implement the program. The notificants would eventually provide the services to various state governments nationwide.

As part of developing the education savings and lending program, the company would assist in formulating and defining its overall scope; provide the research necessary to begin operations; design the program's operations; and organize the program in cooperation with all interested parties, including coordinating participation among the state authorities. The company would also coordinate key functions of a college-funding program, such as marketing, public relations, training, investment, lending, legal documentation, financial recordkeeping, and ongoing program evaluation. In addition, the company would design, install, and maintain the computer software necessary to implement the program's services. The company's compensation would be based on application fees received by a state educational assistance authority and the amount of investment and loan balances held by the program.

All of the intended services are integrally related to advising and administering student-loan and college-savings programs. Banks offering their own student-loan and college-savings programs engage in many of the planned activities and are uniquely suited to advise and assist other potential providers, including state governments, in structuring and implementing student-loan and college-savings programs.³ The Board previously concluded that bank holding companies may provide similar advisory and support services to state authorities that are engaged in making student loans.⁴ Accordingly,

2. The notificants would have varying ownership interests in excess of 5 percent. Other individual ownership interests of less than 5 percent would be held by various banks and savings institutions located in one state. Each notificant committed that the company would be treated as a subsidiary within the meaning of the BHC Act (12 U.S.C. 1841(d)).

3. See 12 C.F.R. 225.28(b)(1) and (6).

4. See 1985 FRB 725.

based on all the facts of record, the Board concluded that the proposed activities are closely related to banking under section 4(c)(8) of the BHC Act. The Board approved the notice on

September 25, 1995 (1995 FRB 1042). Approval of this proposal is specifically conditioned on the notificants' compliance with the commitments made in connection with this notice.

3130.3.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Providing financial-feasibility studies, valuation services, utility-rate testimony, but not “public” credit ratings		225.28(b)(6)(iii)		1985 FRB 118, 120
Financial-feasibility studies for issues of tax-exempt revenue bonds and private corporations				1987 FRB 59
Advice in connection with merger, acquisition/ divestiture, and financing transactions and advice regarding loan syndications, interest-rate swaps, and interest-rate-cap transactions		225.28(b)(6)(iii)		1987 FRB 59
Providing financial advice to the Canadian federal, municipal, and provincial governments, such as with respect to the issuance of their securities in the United States		225.28(b)(6)(iii)		1988 FRB 249 1988 FRB 334
Financial advice to the Japanese national and municipal governments		225.28(b)(6)(iii)		1990 FRB 654
Financial advice to state and local governments		225.28(b)(6)(iii)		1973 FRB 701

3. Federal Reserve Regulatory Service reference.

3130.4.1 INFORMATIONAL, STATISTICAL FORECASTING, AND ADVICE ON SUCH TRANSACTIONS AS FOREIGN EXCHANGE, SWAPS, COMMODITIES, AND DERIVATIVES

Providing financial and investment advisory activities may consist of a bank holding company's providing information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, caps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments.¹ The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible. The Board has also found that providing advice in connection with currency swaps is permissible,² as well as providing advice regarding loan syndications.³ This section provides an example of a February 16, 1983, Board order permitting a bank holding company to establish a de novo subsidiary to offer certain informational, advisory, and transactional services including the provision of the following:

1. General economic information and statistical forecasting with respect to foreign exchange and money markets through time-sharing networks. The services included the analysis of foreign-exchange and money market trends in the context of economic and political developments and the provision of information with respect to foreign exchange.
2. Advisory services designed to assist customers in monitoring, evaluating, and managing their foreign-exchange exposure, including making recommendations regarding policies and procedures to enhance a customer's ability to identify, measure, and manage financial risks in a multicurrency environment. The newly formed subsidiary would also provide advice on the timing of purchases and sales of foreign exchange in both spot and forward markets.
3. Transactional services with respect to foreign-exchange exposures. The subsidiary would arrange foreign-exchange transactions by affiliated bank holding company and other commercial banks.

As a condition for approval, the applicants were required to seek the Board's authorization if they engaged in any additional activities within the United States. (See 1983 FRB 221.)

Effective February 6, 1984, the Board amended Regulation Y to allow bank holding companies to offer foreign-exchange advisory and transactional services that include providing general information and statistical forecasting with respect to foreign-exchange markets. The activity included arranging for "swaps" among customers with complementary foreign-exchange exposures and the execution of foreign-exchange transactions, provided the activity would be conducted through a separately incorporated subsidiary of the bank holding company that will observe the standards of care and conduct applicable to fiduciaries with respect to its foreign-exchange advisory and transactional services.

3130.4.1.1 Inspection Objectives

1. To determine the financial effect of the activity on the parent BHC and its bank subsidiary (or subsidiaries).
2. To determine that the specific activities provided by the company are permissible.
3. To determine that the company is not exposing itself to conflicts of interest between its own role of recommending foreign-exchange positions to its customers and any role its affiliates may have in executing foreign-exchange transactions.

3130.4.1.2 Inspection Procedures

1. Review the company's financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent holding company or the bank subsidiary (or subsidiaries).
2. Review the company's policies and procedures to determine that the following are present:
 - a. adequate minutes of the board and board committee meetings
 - b. adequate blanket bond coverage
3. Review a sample of recommendations to determine that a reasonable basis exists for the company's recommendations.

1. See 62 Federal Register 9,290 (February 28, 1997) (12 C.F.R. 225.28 (b)(6)) or 1997 FRB 275.

2. See 1989 FRB 308.

3. See 1987 FRB 220.

4. Review the company's fee schedule for providing advice and the fees charged by affiliated banks to conduct foreign-exchange transactions for the company's customers. Determine whether bank subsidiaries are being adequately compensated for executing trades, or whether these profits are accruing largely to the benefit of the bank holding company or its nonbank subsidiaries.
5. Review the company's revenue sources to determine that it has not taken foreign-exchange positions and does not execute foreign-exchange transactions.

3130.4.2 FINANCIAL ADVICE AS TO THE STRUCTURING OF AND ARRANGING FOR LOAN SYNDICATIONS, INTEREST-RATE SWAPS, CAPS, AND SIMILAR TRANSACTIONS

A bank holding company may provide information, statistical forecasting, and advice with respect to any transaction in swaps, caps, and similar transactions; commodities; and any forward contract, option, future, option on a future, and similar instruments.⁴ The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible.⁵ The Board has also found the provision of advice regarding loan syndications to be permissible.⁶

An example of a Board order regarding providing financial advice is one in which a bank holding company (BHC) applied for the Board's approval to establish its company de novo as a financial advisory firm. The Board had not previously approved the structuring of and arranging for loan syndications (see section 225.25(b)(6)(ii) of Regulation Y) or arranging for interest-rate "swaps" and interest-rate caps, and similar transactions (see section 225.28(b)(6)(iv) of Regulation Y). Interest-rate caps are contractual agreements wherein the seller of a cap agrees to make payment to the purchaser of a cap if a particular interest-rate index (prime) exceeds a predetermined level, with payments

calculated on an assumed principal amount for a deferred time period. The caps and swaps are typically used to manage or hedge outstanding positions in the financial markets.

The Board's authorization included the following conditions:

1. The advice rendered by the company on an explicit fee basis will be rendered without regard to correspondent balances maintained by the customers of the company at any depository institution subsidiary of the BHC.
2. Company's financial advisory activities shall not encompass the performance of routine tasks or operations for a customer on a daily or continuous basis. The Board, on November 28, 1986, approved the activity by order (1987 FRB 59). (See 1990 FRB 756.) The Board subsequently, effective September 10, 1992, added this nonbanking activity to the list of activities permitted by Regulation Y. (See section 225.28(b)(6)(iii) for loan syndications and 225.28(b)(6)(iv) for interest-rate swaps and caps.)

Reference can also be made to another Board order (1991 FRB 184) relating to providing advice on joint ventures, leveraged buyouts, restructurings, recapitalizations, and other corporate transactions (see 225.28 (b)(6)(iii) of Regulation Y), as well as to providing advice regarding the structuring and arranging of swaps, caps, and similar transactions relating to interest rates, currency and exchange rates and prices, and economic and financial indexes (see 225.28(b)(6)(iv) of Regulation Y).

3130.4.3 ADVICE RELATING TO THE STRUCTURING OF AND ARRANGING FOR CURRENCY SWAPS

A foreign bank subject to the BHC Act applied for the Board's approval to acquire a company engaged in certain securities, foreign-exchange, and financial advisory activities. The Board previously determined the activities proposed by the BHC, except for providing advice relating to the structuring of and arranging for currency swaps, to be closely related to banking. As for advice on currency swaps, it was noted that most banks that provide advice relating to interest-rate swaps also provide advice relating to currency swaps. Providing advice as to currency swaps was deemed to be functionally and operationally similar to providing advice relating to the structuring of and arranging for interest-

4. See 62 Federal Register 9,290 (February 28, 1997) (12 C.F.R. 225.28 (b)(6)) or 1997 FRB 275.

5. See 1989 FRB 308.

6. See 1987 FRB 220.

rate swaps. Both transactions have the common objectives of securing low-cost funds and converting one type of risk to another, and both transactions require similar documentation. The Board approved the activity by order on February 13, 1989 (1989 FRB 308). The Board, effective September 10, 1992, added providing advice as to currency swaps to the nonbanking activities permitted by regulation. See section 225.28(b)(iv) of Regulation Y.

3130.4.4 ADVICE WITH RESPECT TO FUTURES CONTRACTS

3130.4.4.1 Limited Advisory Services with Respect to Futures Contracts on Stock Indexes and Options on Such Futures Contracts

The following is an example of a bank holding company that applied to the Board to engage de novo, through a wholly owned subsidiary, in the provision of advisory services with respect to futures contracts on stock indexes and options thereon. The advisory services to be provided consisted of general research and advice on market conditions and hedging strategies, client-account information and reconciliation of trades, and communication linkage between clients and exchange floors in connection with the subsidiary's futures commission merchant activities. The services offered to customers were provided either as part of an integrated package of services or for a separate fee.

The futures advisory services were essentially identical to the advisory services previously approved by the Board by regulation and order with respect to other financially related futures contracts. The Board concluded the applicant's provision of advisory services for futures contracts on stock indexes and for options thereon to be permissible (1987 FRB 220 and section 225.28(b)(6)(iv) of Regulation Y).

Previously, the Board had approved the execution and clearance of futures contracts on stock indexes and options thereon (1985 FRB 251). At that time, however, the Board had not approved a proposal to provide investment advisory services in connection with the execution and clearance of such instruments.

3130.4.4.2 Advice on Certain Futures and Options on Futures

This section is a historical example of a bank holding company that requested the Board's

approval to provide de novo investment advice concerning futures and options on futures contracts on foreign exchange, government securities, and bullion and money market instruments. In addition, the company would provide portfolio investment advice, for which applicant had previously received authorization pursuant to Regulation Y (the authorization is currently included in section 225.28(b)(6)(iv)).

Previously, the Board had approved the provision of investment advice as a futures commission merchant (FCM) (section 225.28(b)(7)(iv)(A)) or as a commodity trading adviser (CTA) registered with the Commodity Futures Trading Commission (CFTC). The provision by an FCM or CTA of such advice could include providing counsel, publications, written analyses, and reports relating to the purchase and sale of futures contracts and options on futures contracts that bank holding company futures commission merchant subsidiaries are permitted to execute and clear. Such advisory services could also consist of providing written or oral presentations on the historical relationship between the cash and futures markets or the functions of futures as hedging devices, demonstrating examples of financial futures uses for hedging, and assisting in structuring a hedging strategy for a cash position. FCMs and CTAs are subject to registration with and regulation by the Commodity Futures Trading Commission pursuant to the Commodity Exchange Act, as amended. (7 U.S.C. 1).

Before incorporation of the advisory activity into Regulation Y (see 1986 FRB 369), the Board had determined by order that the provision of futures and options advice by FCMs is permissible and closely related to banking (see 1985 FRB 168 and 111, 1984 FRB 780, and 1984 FRB 369). A CTA could provide such advice even though it is not acting as an FCM.

The issue presented by this latter proposal was whether the conduct of this activity by company would be a proper incident to banking if company, serving as an adviser, did not meet the former Regulation Y requirement of registering with the CFTC as a CTA or FCM. The applicant expected to qualify for a statutory exemption (7 U.S.C.6m) from the registration under section 4m of the Commodity Exchange Act. This exemption provides that any person who, during the previous 12 months, has not furnished commodity advisory services to more than 15 persons and has not represented himself or herself to the public as a CTA is exempt from

the registration requirements for CTAs under the act. The applicant's proposal permitted company to provide commodity trading advice without those safeguards. The Board held that it expects the adviser to disclose to its customers substantially the same information required for registered CTAs, including the CTA's performance record, conflicts of interest, possible trading risks, and civil and criminal actions against the CTA.

The Board concluded that the possible adverse effects would be further minimized by the following conditions:

1. Company will remain subject to the antifraud provisions of the Commodity Exchange Act as well as other restrictions in the act.
2. The adviser will not trade for its own account (except to hedge), will limit its advice to instruments that banks deal in extensively (foreign exchange, bullion, government securities, and money market instruments), and will only serve customers that are financially sophisticated and have significant dealings or holdings in the underlying commodities or instruments. The Board approved the application by order on October 18, 1988 (1988 FRB 820).

3130.4.5 PROVIDING DISCRETIONARY PORTFOLIO MANAGEMENT SERVICES ON FUTURES AND OPTIONS ON FUTURES ON NONFINANCIAL COMMODITIES

With respect to the Regulation Y provisions effective April 21, 1997, discretionary portfolio management advice is not separately listed in section 225.28(b)(6)(iv). Discretionary investment advice is discussed, however, within the preamble to the final rule. The preamble emphasizes that such advice may be provided to any person (such advice is no longer limited to institutional investors) regarding contracts relating to financial and nonfinancial assets.

Foreign banking organizations (applicants) subject to the BHC Act provided notice to engage through their subsidiary (company) in providing investment advisory services with respect to futures and options on futures on financial and nonfinancial commodities, including discretionary portfolio management ser-

VICES.⁷ The Board previously determined that the proposed activities, with the exception of providing discretionary portfolio management services with respect to futures and options on futures on nonfinancial commodities, are closely related to banking.

The Board had permitted bank holding companies to provide investment advice with respect to futures and options on futures on both financial and nonfinancial commodities. (See section 225.28(b)(6)(iv) of Regulation Y.) The Board also previously approved providing discretionary portfolio management services with respect to futures and options on futures on financial commodities. (See 1995 FRB 386.) In addition, the Office of the Comptroller of the Currency permits national banks to engage in discretionary funds management with respect to futures and options on futures on nonfinancial commodities. (See OCC Interpretive Letter No. 494 (December 20, 1989).)

In this regard, applicants committed that company would provide the proposed discretionary portfolio management services only at the request of the customer. Applicants also committed that company would comply with applicable law, including fiduciary principles. In addition, applicants proposed that company exercise its discretionary portfolio management authority only in purchasing and selling exchange-traded futures and options on futures contracts previously approved by the Board. (See SR-93-27.) The Board gave its approval on June 30, 1995 (1995 FRB 803).

3130.4.6 COMBINATION OF PROVIDING ADVICE WITH OTHER NONBANKING ACTIVITIES

3130.4.6.1 Providing Nonfinancial Futures Advice and the Combining of Foreign-Exchange, Government Securities Advisory, and Execution Services

A BHC applicant requested the Board's permission to engage in trading options on foreign exchange and offering investment advice on financial and nonfinancial options and futures contracts, securities, and interest-rate and currency swaps. The applicant applied to provide these advisory services through a partnership, of which it would own 80 percent of its equity.

7. Company does not trade futures or options on futures for its own account or provide futures commission merchant execution or clearance services.

This partnership would provide these advisory services only to the applicant, its affiliates, and the applicant's partner, a commodity trading organization. The partnership would provide execution services only to the applicant and its affiliates, not to the applicant's partner.

The Board had not previously approved the provision of nonfinancial futures advice for bank holding companies. The Board noted that the Office of the Comptroller of the Currency (OCC), by OCC Interpretive Letter 494 (December 20, 1989), determined that a national bank could provide execution, clearing, and advisory services for customer transactions in standardized, exchange-traded "nonfinancial" futures contracts and options, such as futures on oil and agricultural products. The OCC determined that the contracts are financial products and that the provision of investment advice was essentially the same as the advice given with respect to financial futures contracts. The OCC contends that investment advice is incidental to the bank's authority to purchase and sell the instruments on behalf of its customers.

The Board has permitted bank holding companies to provide advice with respect to futures and options on futures relating to bank-eligible securities, bullion, and foreign exchange (12 C.F.R. 225.28(b)(6)(iv)). The Board also has permitted bank holding companies to provide investment advice with respect to options and futures contracts based on broad-based indexes of stock and bonds (1990 FRB 770). The Board thus determined that the provision of investment advice with respect to investing in options and futures, based on nonfinancial instruments, to be the functional equivalent of providing advice on options and futures based on financial instruments. In each case, the bank holding company subsidiary is furnishing advice with respect to trading of a financial instrument. The partner-

ship would not provide advice to third parties without Federal Reserve approval. The Board thus approved the providing of investment advice on nonfinancial futures, options, and options on futures.

The applicant also proposed that the partnership provide execution services to the applicant's wholly owned subsidiary and to the applicant's U.S. branches with respect to—

1. over-the-counter options on foreign exchange, U.S. government securities, and other money market instruments, and indexes on such securities and instruments;
2. exchange-traded transactions in futures, options, and options on futures on foreign exchange, U.S. government securities, and other money market instruments, and indexes on such securities and instruments; and
3. spot and forward transactions in foreign exchange.

The Board previously approved the combination of advice and execution for—

1. foreign-exchange transactions (1990 FRB 649),
2. transactions on derivative instruments based on U.S. government securities and other money market instruments (1990 FRB 664), and
3. securities brokerage (1989 FRB 396).

The Board approved by order the providing of the combination of foreign-exchange and government securities advisory and execution services on December 21, 1990 (1991 FRB 126).

For these reasons, the Board approved the providing of discretionary portfolio management services with respect to futures and options on futures on nonfinancial commodities on June 30, 1995. (See 1995 FRB 803).

3130.4.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>

4(c)(8)—Providing Educational Courses and Instructional Materials for Consumers on Individual Financial Management Section 3130.5

The financial and investment advisory nonbanking activity of consumer financial counseling may consist of providing advice, educational courses, and instructional materials to individuals on consumer-oriented financial-management matters, including debt consolidation, applying for a mortgage, bankruptcy, budget management, real estate tax shelters, tax planning, retirement and estate planning, insurance, and general investment management. The authority for this advisory activity is currently derived from section 225.28(b)(6)(v) of Regulation Y.

This nonbanking activity was added to the Regulation Y “laundry list” in 1986. Previously, the Board authorized the provision of consumer financial counseling services by order. (See 1979 FRB 65, 1979 FRB 265, 1985 FRB 253, and 1985 FRB 662. These references are only historical examples.) A bank holding company may provide information, statistical forecasting, and advice with respect to any transaction in foreign exchange, swaps, caps, and similar transactions, commodities, and any forward contract, option, future, option on a future, and similar instruments.¹ The Board has found financial advice regarding interest-rate swap and cap transactions to be permissible. The Board has also found that providing advice in connection

with currency swaps is permissible,² as well as providing advice regarding loan syndications.³ The revised Regulation Y, effective April 1997, deleted restrictions on consumer-counseling services that prohibited bank holding companies from promoting specific products and services, and from obtaining or disclosing confidential customer information without the customer’s consent. These restrictions do not apply to banks that engage in the above activities.

Prudent management should take into consideration certain actions to prevent potential conflicts from arising. When considering these orders, the Board was concerned that the provision of consumer financial counseling activities could potentially result in unfair competition, conflicts of interest, and other adverse effects. (See 1979 FRB 267.) Examiners should be alert to problems that may arise from such conflicts as they review this nonbanking activity. Further, the examiner should determine whether counselors, as a general practice, are advising each customer that they are not required to purchase any services from affiliates, and determine whether customers have the option to exclude themselves from service and product offerings provided by affiliates.

2. See 1989 FRB 308.
3. See 1987 FRB 220.

3130.5.1 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Providing financial-management courses, counseling, and related instructional materials				1979 FRB 265
Engaging, through an acquired bank, in consumer financial counseling				1985 FRB 253
Providing consumer financial counseling services as a permissible nonbanking activity		225.28(b)(6)(v)		1986 FRB 833 1985 FRB 662

1. 12 U.S.C., unless specifically stated otherwise.
2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Financial and investment advisory services include tax-planning and tax-preparation services. Tax planning involves providing advice and strategies designed to minimize tax liabilities. For individuals, this includes analysis of the tax implications of retirement plans, estate planning, and family trusts; for corporations, it includes analysis of the tax implications of mergers and acquisitions, the portfolio mix, specific investments, previous tax payments, and year-end tax planning. Tax preparation involves the preparation of tax forms and advice concerning liability based on records and receipts supplied by the client. This nonbanking activity was included in the Regulation Y “laundry list” in 1986. (See section 225.28(b)(6)(vi).) Such services may be provided to any person. Effective April 21, 1997, certain restrictions were removed. These Regulation Y revisions deleted restrictions in the area of tax-planning and tax-preparation services that prohibited bank holding companies from promoting specific products or services and from obtaining or disclosing confidential customer information without the customer’s consent. These restrictions do not apply to banks. This fact needs to be considered when referring to the historical examples that follow.

The Board had previously approved, by order (1985 FRB 168), the activity of tax-preparation services for individuals. Since tax-preparation services for corporations is functionally or operationally similar to the tax-preparation services that banks already provide to individuals as well as to their affiliates and other financial institutions, the Board approved the providing of corporate tax-preparation services. When the nonbanking activity was incorporated into Regulation Y in 1986, tax-planning and tax-preparation services were authorized, not only for individuals and corporations, but for noncorporate businesses, such as partnerships and sole proprietorships and tax-exempt nonprofit organizations. Tax-planning and tax-preparation services must be conducted in accordance with applicable jurisdictional law.

3. To determine whether the company has formal written policies and procedures to ensure accurate, timely, and confidential preparation and maintenance of customers’ tax returns.
4. To determine whether the tax-return preparers are appropriately qualified to provide such tax services, and to determine the extent of management’s involvement in the activity.
6. To identify the potential and extent of off-balance-sheet risk associated with the activity.

3130.6.2 INSPECTION PROCEDURES

1. Review the company’s financial statements for accuracy, and determine if there are any factors or trends that could have an adverse impact on the parent company or the bank subsidiaries.
2. Determine whether bonding and other insurance coverage is adequate in relation to the risks associated with the activity.
3. Review pertinent contracts, client lists, public advertising and information, correspondence, and other documentation representing the services provided, and determine if charges for the tax-preparation service are on an explicit fee basis that is not dependent on the amount of tax savings achieved.
4. Determine if the client has a written legal opinion on file certifying that the activity is not considered the practice of law.
5. Review pertinent correspondence and the minutes of board of directors and board committee meetings, and determine if any significant law suits, Internal Revenue Service adverse actions, or other potential or contingency losses are pending and probable because of inaccurate tax-return preparation. Analyze their probable effect in relation to the financial condition of the company.
6. Review the company’s formal written policies and procedures for assurance of professional competence in providing sound tax-planning advice and the accurate, timely, and confidential preparation and maintenance of customer’s tax returns. The policies and procedures should require that tax-planning advice be clearly communicated by persons who are adequately supervised and who possess the necessary professional technical training and experience needed to provide tax-planning advice.

3130.6.1 INSPECTION OBJECTIVES

1. To ascertain whether the customer has the option to be excluded from promotions of other specific products and services.
2. To determine what financial effect the activity has on the parent company and its subsidiaries.

3130.6.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>
Preparation of tax returns in a non-fiduciary capacity is closely related to banking				1985 FRB 168
Permissible nonbanking activity		225.28(b)(6)(vi)		1986 FRB 833

3140.0.1 LEASING AUTHORIZATIONS
WITHIN REGULATION Y

Leasing is a form of financing that provides a lessee (the customer) the right to use land or depreciable assets without tying up working capital. As a result of the tax benefits that can arise from the ownership of equipment, real property, or tangible personal property, leasing provides the lessor (the owner of the property) with a generally higher rate of return than what could be achieved through lending. In 1971, “leasing personal property or acting as agent, broker, or adviser in leasing such property” was added to the Regulation Y list of permissible nonbanking activities for bank holding companies. In 1974, the authority to engage in this activity was expanded to include the leasing of real property.

In 1997, restrictions on leasing activities were removed to permit greater flexibility to acquire leaseable property in quantity and to sell or re-lease property upon the lease’s expiration. The removed restrictions consisted of the maximum lease term, maximum holding period for leased property, limit on acquisitions of property to specific leasing transactions, restriction on leases to those that served as the functional equivalent of extensions of credit, and 100 percent limit on the amount of reliance that could be placed on the value of leased property. The added clarifications consisted of more details on the requirements for a nonoperating lease, particularly those for automobile rentals.

3140.0.2 PERMISSIBLE LEASING
ACTIVITIES

Two types of leasing activities are permissible for bank holding companies: full-payout leasing and high-residual-value leasing. A *full-payout lease* is the functional equivalent of an extension of credit that relies primarily on rental payments and tax benefits to recover the cost of the leased property and related financing costs. *High-residual-value leasing* may involve significant reliance on the expected residual value of the leased property—on average, under 50 percent. However, this value can extend up to the full original cost of the property (that is, to recover the full acquisition cost of the leased property plus related financing costs).

When leasing personal or real property, or acting as agent, broker, or adviser, only those

leasing transactions meeting the following criteria are considered permissible:

1. The lease must be on a nonoperating basis.
2. The initial lease term must be at least 90 days.
3. For leasing involving real property—
 - a. at the inception of the initial lease, the effect of the transaction must yield a return that will compensate the bank holding company, as lessor, for its full investment in the property plus the estimated total cost of financing the property over the term of the lease (this includes rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease); and
 - b. the estimated residual value (yield) of the property at the expiration of the initial term of the lease may not exceed 25 percent of the acquisition cost of the property to the bank holding company (lessor).

With respect to leasing personal or real property on a nonoperating basis, the bank holding company or its subsidiary may not engage in operating, servicing, maintaining, or repairing leased property during the lease term. A bank holding company, however, can arrange for a third party to provide the services or products. (See Regulation Y, section 225.28(b)(3).)

As for automobiles, a bank holding company may not (1) provide servicing, repair, or maintenance of the leased vehicle during the lease term; (2) purchase parts and accessories either in bulk or for an individual vehicle after its delivery to the lessee; (3) provide the loan of an automobile during the vehicle’s servicing; (4) purchase insurance for the lessee; or (5) provide for the renewal of the vehicle’s license (registration) without authorization from the lessor.

3140.0.2.1 Automobile Fleet Leasing and
Fleet-Management Services

A foreign banking organization (FBO) that is treated as a bank holding company requested an opinion from the Board’s staff regarding leasing activities that the Board has determined to be permissible under section 225.28(b)(3) of Regulation Y. (See 12 C.F.R. 225.28(b)(3).) In connection with its automobile-leasing activities, the FBO provides, through a wholly owned

automobile fleet leasing subsidiary (AFLS), fleet-management services to its automobile fleet leasing customers. In connection with making automobile and equipment leases that conform with the requirements of Regulation Y, AFLS engages in the business of commercial lending and financial leasing of motor vehicle fleets and equipment located throughout the United States, and providing fleet-management services to companies that lease corporate automobile fleets. AFLS and other participants in the business market and deliver the three services as a bundled service to clients.¹

To better provide fleet-management services to its automobile-leasing customers (in connection with leases that conform with Regulation Y), AFLS acquired another fleet-management-services subsidiary company (FMSS) that (1) arranges for third parties to provide vehicle maintenance, accident-management services, and safety-management services and (2) directly provides client-support services in connection with the services arranged by AFLS. FMSS, in addition to permissible leasing activities, conducts some fleet-management services for automobiles that are owned by the client and that are not, therefore, subject to a lease.

As represented, approximately 90 percent of the vehicles serviced by FMSS are leased and 10 percent are client-owned. Revenues earned from fleet-management services that are provided for client-owned vehicles are less than 2 percent of the AFLS's total revenues. The FBO asked whether it would be permissible for it to provide fleet-management services with regard to automobile fleets if the customer owns rather than leases the vehicles.

In an opinion issued on December 19, 2003, Board staff noted that Regulation Y, as a general matter, permits a bank holding company to engage in any incidental activities that are necessary to carry on an activity permitted by the regulation.² Board staff stated also that, in light of the nature of the practices in the fleet-management industry and the difficulty in continually monitoring the migration between leased and owned vehicles in the same fleet, some

ability to perform fleet servicing for owned vehicles is necessary to retain customers in connection with AFLS's fleet-leasing activities. Board staff determined, in view of all the facts of record, including this necessity, the minimal amount of revenue earned from servicing owned vehicles,³ and the fact that the activity is primarily an agency activity, that the FBO could provide fleet-management services to owned vehicles as an activity incidental to the FBO's authorized leasing activities. In a December 19, 2003, opinion, Board staff stated that the provision of fleet-management services on owned vehicles is subject to the same restrictions set forth in Regulation Y for leased vehicles.⁴

3140.0.3 ACCOUNTING FOR LEASES

Leasing has become a prominent financing vehicle. Lessors have employed a number of different methods in structuring and accounting for leases. The Financial Accounting Standards Board (FASB) Statement No. 13, "Accounting for Leases," has become the uniform standard in accounting for leases.⁵

Accounting for leases must be viewed from the perspective of the parties involved in the leasing transaction, the lessee and the lessor. Negotiations and closing costs incurred with respect to the lease should be written off over the life of the lease. In applying FASB 13, certain terminology is used. Basic terms that should be considered are described below.

Inception of a lease. The inception of a lease refers to the date the lease contract was signed or to the date that the construction was completed, or, if earlier, to the date of the written commitment stating the significant terms.

Term of the lease. The lease term consists of the noncancelable term and the period comprising the bargain renewal option.

Fair value of lease property. The fair value of a lease consists of the price that the property could be sold in an arm's-length transaction.

Economic life of the leased property. The economic life of the leased property represents

1. The Board previously found providing fleet-management services to be permissible if the fleet involves vehicles that are under a lease that conforms to Regulation Y. (See 12 C.F.R. 225.28(b)(3), footnote 5.) Permissible leases are considered to be the financial equivalent of a loan.

2. See 12 C.F.R. 225.21(a)(2). Staff also noted that the courts have recognized the authority of bank holding companies to engage in incidental activities that are reasonably necessary to the conduct of closely related activities.

3. AFLS has stated that it will limit its fleet-management services involving vehicles not subject to a Regulation Y permissible lease to no more than 15 percent of the fleet-management revenues and to 5 percent of the total leasing revenues of AFLS.

4. See footnote 5 of section 225.28(b)(3) of the Board's Regulation Y (12 C.F.R. 225.28(b)(3), n. 5).

5. Other FASB releases dealing with leasing are FASB Statements 22, 23, 27, 28, 29, 76, 77, 92, 94, 98, and 109; FASB Interpretations 19, 21, 23, 24, 26, and 27; and FASB Technical Bulletins 79-10, 79-12, 79-13, 79-14, 79-15, 79-16, 85-3, 86-2, and 88-1.

the period over which the property is expected to be economically beneficial to one or more users for its intended purpose.

Estimated residual value of the leased property (ERV). The residual value is the estimated fair value of the leased property at the expiration of the lease term.

Interest rate implicit in the lease. The implicit interest rate is the discount rate that causes the sum of the minimum lease payments and the unguaranteed residual value at the end of the lease term to be equal to the fair value of the property at the beginning of the lease term.

Lessee's incremental borrowing rate. The incremental borrowing rate is the interest rate at which the lessee could borrow the funds to purchase the leased property.

3140.0.3.1 Accounting for Leases by a Lessee

The two methods for accounting for leasing transactions by a lessee are the operating method and the capitalized-lease method.

3140.0.3.1.1 Operating Method of Accounting for Leases

The operating accounting method merely records the cost of the rental payments as an expense when it is required to be paid in accordance with the terms of the lease agreement.

Example: Assume that equipment is leased for \$100,000 per year for three years. Under this method, the annual cost would be recorded as a rental expense on the income statement:

Dr. Rent	\$100,000	
Cr. Cash		\$100,000

To record an annual payment of rent based on an operating-lease agreement.

3140.0.3.1.2 Capitalized-Lease Method of Accounting for Leases

3140.0.3.1.2.1 When a Lessee Is to Use the Capitalized-Lease Method

If *any one* of the following conditions exist, the lessee must capitalize the lease:

1. The asset is owned by the lessee at the end of the lease term.
- *2. The lease term is equal to or more than 75 percent of the estimated economic life of the asset.
3. The lessee can purchase the asset below its fair market value before or at the end of the lease term (bargain purchase option).
- *4. The present value of the minimum lease payments at the beginning of the least term is equal to or more than 90 percent of the fair market value of the property.

* If the lease begins in the remaining 25 percent of the asset's estimated economic life, these items do not apply; such leases are considered operating leases.

Using this method, the lease is recorded as an asset at the lesser of the present value of the rental and other minimum lease payments or the fair value of the leased property as though the lease obligation was being purchased on credit.

The payment made is treated as a payment made on an installment debt. At the same time, the asset is being amortized over the lease term. The lease obligation is treated as a long-term debt. The discount rate that is used to capitalize the lease is the lessee's incremental borrowing rate or the interest rate implicit in the lease agreement.

Example #1: This example illustrates the capitalized-lease method using the same example as above with the added fact that the lease agreement contains an interest rate of 10 percent. Assume that the interest rate of the lease agreement is the same as the lessee's marginal borrowing rate.

Dr. Capitalized Lease	\$248,685	
Cr. Lease Obligation		\$248,685

To record an equipment lease obligation under a capitalized-lease agreement.

(Present value of \$100,000 per year for three years at a 10 percent interest rate)

1st Year

Interest Expense	\$ 24,869	
Lease Obligation	75,131	
Cash		\$100,000

To record the first year's payment on an equipment lease obligation.

$(\$248,685 \times .10 = \$24,869)$

Dr. Equipment Lease Amortization	\$ 82,895	
Cr. Capitalized Lease		\$ 82,895

To record the annual amortization of a capitalized equipment lease.

$(\$248,685/3 \text{ years})$

2nd Year

Dr. Interest Expense	\$ 17,355	
Dr. Lease Obligation	82,645	
Cr. Cash		\$100,000

To record the second annual lease payment under a three-year capitalized-lease agreement.

(Interest = $\$248,685 + 24,869 - \$100,000 = \$173,554 \times .10 = \$17,355$)

Dr. Lease Amortization	\$ 82,895	
Cr. Capitalized Lease		\$ 82,895

To record the second year's lease amortization under a three-year capitalized lease.

3rd Year

Dr. Interest Expense	\$ 9,091	
Dr. Lease Obligation	90,909	
Cr. Cash		\$100,000

To record the third year's lease payment under a three-year capitalized-lease obligation.

$$(\text{Interest} = \$173,554 + \$17,355 = \$190,909 - \$100,000 = \$90,909 \times .10 = \$9,091)$$

The financial statements are to include footnotes that disclose the present value of noncancelable lease commitments where the lessor either recovers more than 75 percent of the economic life of the asset leased or recovers the investment plus a reasonable return.

3140.0.3.2 Accounting for Leases by a Lessor

3140.0.3.2.1 Operating Lease (Lessor)

A lessor would have the following accounting entries for an operating lease:

Dr. Cash	\$xxx,xxx	
Cr. Rent Income on Leased Assets ⁶		\$xxx,xxx
Dr. Depreciation Expense	\$xxx,xxx	
Cr. Accumulated Depreciation—Leased Assets		\$xxx,xxx

In order for the *lessor* to be able to capitalize a direct-financing lease, any one of the same four criteria for a lessee must apply along with two additional criteria:

6. Any rent received in advance would be initially credited to "unearned rent revenue."

1. Collectibility of the minimum lease payments must be reasonably predictable.
2. No important uncertainties exist as the amount of unreimbursable costs incurred.

In accounting for the lessor's capitalized lease transactions, there are some common accounts that are used. These are described below.

Unearned income from lease financing receivables. Unearned income represents the unearned interest liability account that is netted against the total of lease payments receivable which includes the estimated residual value for balance-sheet presentation. It represents the "interest" income equal to the excess of rentals receivable over the fair value of the property at the inception of the lease.

Lease financing receivables. This asset account is established in the amount of total lease payments to be received from the lessee. The amount by which the rentals receivable exceeds the cost of the property is the functional equivalent of interest and represents a portion of the income

to be recognized over the life of the lease. In the example below, the cost of the property is temporarily charged to a fixed asset account, then transferred to lease payments receivable.

Throughout the lease term, the rentals receivable account is periodically reduced by the full amount of each rental payment received.

3140.0.3.2.2 Direct Financing Capitalized Lease

In this situation, a finance company purchases equipment from a manufacturer (recorded as equipment [asset] when purchased). The finance company (lease financing nonbanking subsidiary) then leases that equipment and records it as a normal financing lease. There is *no* dealer profit from the sale of the asset. Unearned interest income is recognized over the life of the lease using the effective interest method. Since the lessor has "sold" the asset, no depreciation is recorded.

Example #1: Lease with No Guaranteed Residual Value by the Lessee

Assume that the finance company purchases equipment costing \$100,000. It then leases the equipment to a lessee under a five-year lease agreement that requires annual payments of \$25,000 per year. At the end of the lease term, the lessee will own the equipment. The implied interest rate is 7.931 percent (comparison of the present value of the equipment of \$100,000 against the \$25,000 annual payment for five years).

Dr. Equipment	\$100,000	
Cr. Cash		\$100,000

To record the purchase of equipment to be leased

Dr. Lease Financing Receivables	\$125,000	
Cr. Equipment		\$100,000
Cr. Unearned Income from Lease Financing Receivables		25,000

To record the initial lease

Year 1

Dr. Cash	\$ 25,000	
Cr. Lease Financing Receivables		\$ 25,000
Dr. Unearned Income from Lease Financing Receivables	\$ 7,931	
Cr. Income from Lease Financing Receivables		7,931

To record the receipt of the first equipment lease payment.

Lease Payments Receivable	\$125,000	
Unearned Interest Revenue	<u>-25,000</u>	
	\$100,000	$\times .07931 = \$7,931$

Year 2

Dr. Cash	\$ 25,000	
Cr. Lease Financing Receivables		\$ 25,000
Dr. Unearned Income from Lease Financing Receivables	\$ 6,577	
Cr. Income from Lease Financing Receivables		\$ 6,577

To record the receipt of the second equipment lease payment.

Lease Payments Receivable	\$100,000	
Unearned Interest	<u>-17,069</u>	(\$25,000 – 7,931)
(Present Value of Remaining Receivable)	\$ 82,931	$\times .07931 = \$6,577$

Year 3

Dr. Cash	\$ 25,000	
Cr. Lease Financing Receivables		\$ 25,000
Dr. Unearned Income from Lease Financing Receivables	\$ 5,116	
Cr. Income from Lease Financing Receivables		\$ 5,116

To record the receipt of the third equipment lease payment.

Lease Payments Receivable	\$ 75,000	
Unearned Interest	<u>-10,492</u>	(\$17,069 – \$6,577)
(Present Value of Remaining Receivable)	\$ 64,508	$\times .07931 = \$5,116$

Year 4

Dr. Cash	\$ 25,000	
Cr. Lease Financing Receivables		\$25,000
Dr. Unearned Income from Lease Financing Receivables	\$ 3,539	
Cr. Income from Lease Financing Receivables		\$ 3,539

To record the receipt of the fourth equipment lease payment.

Lease Payments Receivable	\$ 50,000	
Unearned Interest	<u>-5,376</u>	(\$10,492 – \$5,116)
(Present Value of Remaining Receivable)	\$ 44,624	$\times .07931 = \$3,539$

Cr. Income from Lease Financing Receivables		\$ 1,837

To record the receipt of the fifth equipment lease payment.

Lease Payments Receivable	\$ 25,000	
Unearned Interest	<u>-1,837</u>	(\$5,376 – \$3,539)
(Present Value of Remaining Receivable)	\$ 23,163	$\times .07931 = \$1,837$

Example #2: Lease with a Residual Value (Guaranteed by the Lessee)

A lessor acquires property to be leased for \$14,000 (its fair value at the inception of the lease). The estimated economic life of the property is five years. The lease has a noncancelable lease term of four years with a rental payment due of \$3,649 at the end of each year. The lessee guarantees the residual value at the end of the four-year lease term in the amount of \$4,000. The lessor's implied rate of interest in the lease is 10.8695 percent. The present value of the minimum lease payments at this interest rate and monthly payments exceeds 90 percent of the fair value of the property at the inception of the lease ($.90 \times \$14,000 = \$12,600$).

Cr. Lease Financing Receivables		\$ 4,000

To record the receipt of the lessor's guaranteed residual value (guaranteed by the lessee) at the end of the lease term.

$$(\$6,898 + 751 - \$3,649 = \$4,000)$$

3140.0.3.2.3 Balance-Sheet Presentation

The lease payments receivable would be reported on the balance sheet as a single amount "net investment" (Lease Financing Receivables less the balance of the Unearned Income from Lease Financing Receivables). If the lessor has established an allowance for possible lease losses, this amount is shown separately as a deduction from the net investment. The net investment in the direct financing lease is \$18,000 for example #2 above. It consists of the gross investment of \$18,596 ($\$3,649 \times 4$ annual rental payments) plus the \$4,000 residual value less the unearned income of \$4,596.

interest rate method, and that the lease is now considered a loss. Further assume that the third payment should have been received eight months ago. It is determined during the inspection that the lease should be classified as doubtful of collection. The balance to be classified is the net investment of \$7,728. This consists of the balance of Lease Financings Receivable of \$9,513 (includes the \$4,000 estimated guaranteed residual value) less the balance of Unearned Income from Lease Financings Receivable of \$1,785 ($\$1,034 + \$751 =$ amount due on regular payment intervals) or a net investment of \$7,728.

3140.0.3.2.4 Classification

If it is deemed appropriate to classify a lease, the amount to be classified (in example #2 above) would be the net investment. For illustration, assume that two of the four payments had been received on the lease, that income has been recognized monthly according to the effective

3140.0.3.2.5 Delinquency

It is considered appropriate to state in the inspection report the percentage of delinquency in the lease portfolio. The percentage is calculated by dividing the aggregate rentals receivable on delinquent leases (less unearned income on the delinquent leases) by the total of rentals receivable on all leases (less their unearned income). Estimated realizable values would not be included in the delinquent amounts unless they were guaranteed by the lessee.

3140.0.4 LEVERAGED LEASES

The lessor can “leverage” a lease transaction by borrowing a substantial portion of the acquisition cost from a long-term lender, with the rentals and the property pledged as collateral for the loan. The lessor borrows in order to finance a leasing transaction with a small, or perhaps, a negative equity in the property to be leased.

The initial step in accounting for this type of lease involves calculating the cash flows over the term of the lease. The cash flows include the income tax effects of tax deductions to the lessor, the lessor’s initial investment in the property, the rental receipts net of debt service, and the proceeds expected to be received from the sale of any residual. The next step in accounting for a leverage lease involves determining the applied interest rate that, when applied to the net investment in the years that the net investment will be positive, would precisely allocate the net income to the positive years. See appendix E of SFAS 13 for an example as to how to account for a leveraged lease.

3140.0.5 INSPECTION OBJECTIVES

1. To determine the effect of the investment in the leasing subsidiary upon consolidated operations, and indirectly upon the bank subsidiaries’ safety and soundness.
2. To determine if the company is operating in compliance with applicable laws and regulations, and to ensure that corrective action is initiated if warranted.
3. To determine if policies, procedures, and controls are adequate to protect the company from mismanagement, unnecessary risk, and loss.
4. To assess the management’s ability to operate the company in a safe and sound manner.
5. To determine that accounting practices do not overstate income.

3140.0.6 INSPECTION PROCEDURES

The decision whether the operations of a leasing subsidiary will be inspected “on-site” is based on the availability and adequacy of leasing company data at the offices of the parent company. Item 1 below provides a listing of information necessary to the inspection process. If this and any other information necessary to assess the overall condition of the subsidiary is available at the parent’s office or can be obtained through a written request to the subsidiary, an on-site

inspection may not be necessary. The inspection frequency requirements, found in section 5000.0.4, should be reviewed in making such a determination.

1. The following information should be available at the start of the inspection:
 - a. trial balance of all leases and outstanding credits,
 - b. listing of accounts on which payments are delinquent 30 days or more, or on which payments are otherwise not being made according to schedule,
 - c. comparative interim and fiscal financial statements of the leasing company,
 - d. listing of unbooked assets and contingent liabilities,
 - e. cash-flow projections for the current fiscal year and the next fiscal year,
 - f. listing of available lines of credit,
 - g. copies of the most recent internal and external audit reports, and
 - h. minutes of board and executive committee meetings since the date of the previous inspection.
2. Establish a “credit line” above which all leases will be reviewed. The line can be set at an amount that will cause a certain percentage of the dollar volume of the lease portfolio to be reviewed (e.g., between 70 percent and 80 percent), or at an amount that will cause the review of each lease exceeding a certain percentage of gross capital. Leases on which payments are delinquent are to be reviewed regardless of amount.
3. Analyze the creditworthiness of the lessees. Consideration is given to the figures derived from the lessee’s financial statements, as well as cash flow, trends and projections of growth in sales and income, and the qualifications of management.

Delinquency on a lease obligation is potentially more serious than delinquency on a conventional loan. If the property under lease is necessary for the lessee’s continued production of income, as is frequently the case, the lessee’s financial condition will be seriously deteriorated before the lessee is willing to risk losing the property by default.
4. For those leases which might result in loss to the lessor, or for which financial information was not adequate to make such a determination, transcribe the following information to line sheets:
 - a. name and line of business of lessee

- b. name of guarantor(s)
 - c. original date of the lease contract
 - d. original amount of the rentals receivable
 - e. ERV of the property
 - g. book value of the investment in the lease as of the inspection date
 - h. cost of the property
 - i. description and location of the property
 - j. amount and frequency of rental payments
 - k. original amount, term, rate, and schedule of amortization of any nonrecourse debt associated with the lease
 - l. lessor's percentage of equity participation in the lease obligation, if applicable
 - m. summary financial data indicating the creditworthiness of the lessee, and guarantors, if applicable
5. Before the conclusion of the inspection, discuss with management all classified leases. Inadequate or negative cash flow and unfavorable trends reflected in financial statements of the lessee are usually indicative of a substandard lease. Leases classified doubtful typically include those on which payments are delinquent for an extended period and those on which the lessor's recovery of investment is dependent upon an event of unknown probability, such as a pending lawsuit or insurance claim.
- A loss classification results from the lessee's inability or refusal to continue making payments.
6. Prepare a write-up to support the classifications. The write-up should include the lessee's type of business, present financial status, circumstances which led to the classification, the probability that the terms of the lease can be met, and the amount of protection afforded by sale or re-lease of the underlying property.
7. Review a sample of the lessor's computations of lease yields to determine whether the lessor will recover not less than the full investment in the property plus the estimated total cost of financing the property over the term of the lease. This includes rental payments, estimated tax benefits, and the estimated residual value of the property at the expiration of the initial lease.
- With respect to the full-payout lease, governmental entities may be prohibited from entering into leases for periods exceeding one year. In that case, the bank holding company or its subsidiary (as lessor) should demonstrate that the lease is expected to be continually renewed until the cost is fully recovered.
8. Ascertain whether title to the property rests with the lessor, and that the lessor has taken steps to protect its ownership rights. Evidence of filing under the Uniform Commercial Code, where appropriate, should be found in the documentation file. Aircraft should be registered with the FAA, interstate vehicles with the ICC, and ships with the Coast Guard.
 9. Check for cancellation or other provisions in the contract which could jeopardize the full-payout status of the lease. There is no need to take exception to a cancellation provision which provides for payment by the lessee of an amount which allows the lessor to recover fully its investment in the property.
 10. Check that insurance coverage is effective on leased property and is provided by the lessee in compliance with all insurance provisions of the contract in an amount sufficient to protect against loss from property damage. Public liability insurance should also be provided to protect against loss from lawsuits which could arise from situations such as the crash of leased aircraft.
 11. Review the lessee's duties under the contract with respect to repairs and taxes. Determine whether the lessor has instituted procedures to check that the lessee's required duties are being performed.
 12. Review the status of all property acquired for lease purposes but which is not now under lease. Determine the reason for the "off-lease" status of the property, ascertain the realizable value of the property, and investigate whether the off-lease property will be sold or re-leased within the required two-year period.
 13. Investigate the lessor's procedures for periodic review of the reasonableness of the estimated residual value. The estimate should be reviewed at least annually and reduced in amount on the books if the value has declined on a presumably permanent basis.
 14. Review past operations of the lease company to determine if projections of income and ERV have been realistic in light of actual experience.
 15. Review the minutes of the meetings of the board and executive committees to determine whether purchases of property and delinquent leases are reported to the board.
 16. Determine if the company has entered into leases with companies owned or controlled by one director, officer, or 10 percent share-

- holder of the leasing company or holding company. Compare the rates and terms on such leases to the rates and terms offered on leases to companies of similar credit standing.
17. Check for lease concentrations to any one lessee or industry and prepare a comment for the inspection report if any concentration is considered unwarranted.
 18. Determine whether the company has established limits for the maximum amount of “credit” to be extended to a single lessee. If such limits have been established, investigate whether the company adheres to them. If they have not been established, inquire as to the company’s policy on this matter.
 19. Provide the examiner-in-charge with information to be included in the inspection report, including:
 - a. scope of the inspection (on- or off-premises)
 - b. comments concerning any policies or conditions having an adverse effect on the leasing company or parent company
 - c. brief history of the company and a description of its activities
 - d. summary analysis of financial factors of the company, including trends in the volume and classification of receivables, adequacy of capital and reserves, return on assets, and contribution to consolidated income and consolidated assets
 - e. statutory authority under which the company operates
 - f. details of all borrowings of the company from within the holding company system and from external sources
 - g. details of any litigation in which the company is a defendant
 - h. scope and frequency of audit of the company by both internal and external auditors
 20. Compare current earnings performance and balance-sheet ratios of the company with past performance and industry composites.
 21. Determine whether cash flows of the company are adequate to service all debts.
 22. Assess the adequacy of internal controls over the company’s operations.
 23. Check for action taken on matters criticized in the most recent audit reports and the previous inspection report. Determine if leases classified “loss” were removed from the books.
 24. Investigate whether any affiliated banks maintain compensating balances for lines of credit of the leasing company, and if so, whether the leasing company compensates the bank for maintenance of the balances. If “loss” leases have not been removed from the books, discuss with management the reasons why the charge-offs were not made. Determine whether the financial statements and reports submitted to the Board of Governors were misstated as a result of the “no charge-off” decision.
 25. For higher residual value leasing, determine that—
 - a. the residual values have been estimated accurately;
 - b. residual values are reviewed and adjusted annually;
 - c. the initial terms of the lease are at least 90 days;
 - d. the lessor relies on a residual value of the leased property that will recoup the acquisition cost of the property and any related financing or other associated costs;
 - e. the aggregate book value of all tangible personal property held for such a lease, having an estimated residual value in excess of 25 percent of the acquisition cost of the property, does not exceed 10 percent of the BHC’s consolidated domestic and foreign assets;
 - f. the BHC maintains separately identifiable records of the leasing transactions and activities; and
 - g. each company maintains capitalization fully adequate to meet its obligations and support its activities, and that its capital levels are commensurate with industry standards for companies engaged in comparable leasing activities.

3140.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Automobile leasing				1976 FRB 930
Consumer leasing	15 U.S.C. 1667			
Higher residual value leasing				1991 FRB 490,187 1990 FRB 462, 960
Personal or real property leasing activities of bank holding companies		225.28(b)(3)		
Special-purpose leasing corporation			3-712	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

The Board considers the making of equity and debt investments in corporations or projects designed “primarily to promote” community welfare as an activity closely related to banking. The Board includes such investments in the list of permissible nonbanking activities in Regulation Y; however, bank holding companies must obtain prior approval to engage in these activities. The Board, effective April 21, 1997, included the provision of advisory and related services for programs designed primarily to promote community welfare into Regulation Y. Such advisory activities had previously been permitted only by Board order. For examples of advisory services approved for community development projects, see 1990 FRB 671, 1989 FRB 576, and 1988 FRB 140.

3150.0.1 INVESTMENTS IN CORPORATIONS OR PROJECTS TO PROMOTE COMMUNITY WELFARE—BOARD INTERPRETATION

The Board also provides guidance with regard to investments in community welfare projects through its interpretation (see section 225.127 of Regulation Y (12 C.F.R. 225.127)). This interpretation describes projects that the Board has considered as promoting community welfare as their primary intent. These include but are not limited to—

1. projects to construct or rehabilitate housing for low- or moderate-income persons,
2. projects for construction or rehabilitation of ancillary local commercial facilities necessary to provide goods or services principally to persons residing in low- or moderate-income housing, and
3. projects designed explicitly to create improved job opportunities for low- or moderate-income groups.

Because the Board believes that bank holding companies should take an active role in the quest for solutions to the nation’s social problems, it has not defined other types of investments designed primarily to promote the community welfare in order to give bank holding companies greater flexibility in developing new and creative approaches to resolving community problems. Accordingly, the Board has maintained the flexibility to determine whether an

activity is primarily designed to promote the community welfare. Factors that the Board might consider include whether the activity benefits low- and moderate-income individuals in areas such as housing and employment and the need for specialized community development activities in different localities. The Board will consider a range of different activities, but will probably not approve a proposal that does not in some way either benefit low- or moderate-income individuals or benefit the specialized needs of local communities.

Once a bank holding company has obtained Board approval to engage in community development activities pursuant to Regulation Y, the holding company may, without further System approval, engage either directly or through a subsidiary in certain community development activities, so long as such activities do not exceed 5 percent of the bank holding company’s total consolidated capital stock and surplus.

A bank holding company may invest and provide financing—

1. to a corporation or project or class of corporations or projects that the Board previously has determined is a public welfare project pursuant to paragraph 23 of section 9 of the Federal Reserve Act (12 U.S.C. 338a);
2. to a corporation or project that the Office of the Comptroller of the Currency previously has determined, by order or regulation, is a public welfare investment pursuant to section 5136 of the Revised Statutes (12 U.S.C. 24 (Eleventh));
3. to a community development financial institution (other than a bank or bank holding company) pursuant to section 103(5) of the Community Development Banking and Financial Institutions Act of 1994 (12 U.S.C. 4702(5));
4. for the development, rehabilitation, management, sale, and rental of residential property if a majority of the units will be occupied by low- and moderate-income persons or if the property is a “qualified low-income building” as defined in section 42(c)(2) of the Internal Revenue Code (26 U.S.C. 42(c)(2));
5. for the development, rehabilitation, management, sale, and rental of nonresidential real property or other assets located in a low- or moderate-income area provided the property

is used primarily for low- and moderate-income persons;

6. to one or more small businesses located in a low- or moderate-income area to stimulate economic development;
7. for the development of, and to otherwise assist with, job training or placement facilities or to foster programs designed primarily for low- and moderate-income persons;
8. to an entity located in a low- or moderate-income area if that entity creates long-term employment opportunities, a majority of which (based on full-time equivalent positions) will be held by low- and moderate-income persons; and
9. for providing technical assistance, credit counseling, research, and program development assistance to low- and moderate-income persons, small businesses, or nonprofit corporations to help achieve community development.

3150.0.2 EXAMPLES OF BOARD-APPROVED ACTIVITIES DESIGNED TO PROMOTE COMMUNITY WELFARE

With its primary thrust to promote community welfare rather than creating a focus on a collateral effect, economic rehabilitation and development should focus on providing housing, services, or jobs for low- or moderate-income residents or groups. Examples of projects previously approved by the Board include an investment in—

1. an agricultural test farm (testing crops, equipment, alternative farming methods and chemicals, and providing student agricultural research opportunities and financial planning workshops for farmers (see 1990 FRB 671);
2. an entity that provides education to young persons (see 1991 FRB 70) through a nonprofit, tax-exempt bank holding company (educational programs consisted of the American economic system, how to start a business, college financial planning, and career opportunities in banking);
3. the acquisition and redevelopment of a sole medical clinic in a small rural town without public transportation that was located 30 miles from another facility and was needed to attract new physicians to replace those retiring (see 1991 FRB 63); and
4. a limited partnership to develop a nearly vacant office building into a hotel complex

within a major city, located adjacent to a public housing project. Commitments included providing training to welfare recipients residing in public housing projects and employing low- and moderate-income individuals at the hotel complex, and donating a portion of the profits to a nonprofit corporation designated to provide low-cost housing, employment, and business opportunities for disadvantaged residents. (See 1996 FRB 679.)

3150.0.3 EXAMPLES OF INVESTMENTS VIEWED AS NOT PROMOTING COMMUNITY WELFARE

The Board has indicated that some investments are not designed primarily to promote community welfare unless there is substantial evidence to the contrary, even though the investment may benefit the community to some extent. Examples include investments to build or rehabilitate high-income housing or commercial, office, or industrial facilities which are not designed explicitly to create job opportunities for low-income persons, even though the investment may benefit the community to some extent. This latter point was made in an order (see 1996 FRB 679) whereby the Board denied an application by a bank holding company to acquire an investment in an industrial development corporation involved in the construction of a shopping and office complex in an urban renewal area. The Board identified the critical issue as whether the project was devised primarily to promote the community welfare or primarily designed as a profit-making venture in which the benefits to the community were merely a collateral effect.

In another case, the Board denied a proposal intended to acquire a company that indirectly acted as a managing general partner of a private development venture. The venture was a large-scale, urban redevelopment initiative, jointly sponsored by government and private entities, that was intended to revitalize a geographic area that was largely abandoned within a working middle-class community. (See 1990 FRB 672.)

3150.0.4 INSPECTION OBJECTIVES

1. To determine that new investments and financing in community development and other corporations and projects are designed primarily to promote community welfare.
2. To determine that previous investments and financings continue to meet the standards

- imposed by section 225.28(b)(12) of Regulation Y.
3. To determine that the activity remains within the scope of regulatory approval when such approval involves specific rather than general investments.
 4. To determine that advisory and related services for programs designed primarily to promote community welfare are being conducted within the scope of their regulatory approval.

3150.0.5 INSPECTION PROCEDURES

As is standard practice in the examination of other subsidiaries engaged in nonbanking activities, a thorough review of pertinent books, records, contracts, and financial statements should be undertaken by the examiner. To fulfill the inspection objectives concerning this activity, the examiner may have to go beyond routine investigative practices. Since this activity

encompasses a wide variety of programs, procedures will have to be developed on an ad hoc basis. When federal or state approval of the program is required, the examiner may wish to review applications and other materials submitted to such authorities. The terms or conditions imposed by such bodies as well as the subsidiary's continued eligibility may also be of importance. Contact with responsible federal or state officials may be deemed appropriate in certain cases. Such contacts, however, should be initiated only in accordance with respective Reserve Bank procedures. When a community welfare project or financing does not include the involvement of another governmental body, the examiner will need to verify directly whether goals essential to the nature of the activity, such as providing housing for the elderly or jobs for low- or moderate-income people, are being met. In this regard, the burden should be on the holding company to provide such data. In some instances, an on-site visit to the project may be appropriate.

3150.0.6 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Permissible investments described	1701	225.28(b)(12) 225.127	4-178	1972 FRB 495 1978 FRB 45 1984 FRB 452

Denial of a venture that would revitalize an abandoned area in a middle-class community				1994 FRB 733

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

3160.0.1 PROVISION OF DATA PROCESSING AND TRANSMISSION SERVICES

Under section 4(c)(8) of the BHC Act, the permissibility of bank holding company data processing activities is generally predicated upon the type of data processed or transmitted. Subsidiaries formed under this section may engage in business directly with outside customers, unlike section 4(c)(1) subsidiaries, which can act only as servicers for affiliates¹ and cannot deal directly with outside customers.

The intent of section 4(c)(8) is to permit bank holding companies and their nonbank subsidiaries to directly provide to customers financially or economically oriented services (or services that are similar to these services) that banks have traditionally used in their own internal operations and provided to their customers. Such services (with prior approval) are unrestricted as to location and may be provided from out-of-state locations.

3160.0.2 INCIDENTAL ACTIVITIES

The Board regards the following as incidental activities necessary to carrying on permissible data processing activities:

1. Making excess computer time available to anyone as long as the only involvement by the bank holding company system is furnishing the facility and the necessary operating personnel. This stipulation applies when—
 - a. the equipment is not purchased solely for the purpose of creating excess capacity to sell;
 - b. hardware is not offered in conjunction with excess capacity; and
 - c. the facilities for the use of the excess capacity do not include providing any software other than systems software (including language), network communications support, and the operating personnel and documentation necessary for maintaining and using these facilities.
2. Selling byproducts of permissible data processing and data transmission activities when they are not designed, or appreciably enhanced, for the purpose of marketability.
3. Furnishing any data processing service upon

request of a customer if the service is not otherwise reasonably available in the relevant market area.

3160.0.3 SECTION 4(c)(8) vs. SECTION 4(c)(1)

Section 4(c)(1) data processing subsidiaries, which do not require prior approval, are limited as follows:

1. They can furnish computer services *only* for the internal operations of the bank holding company and its bank affiliates.¹
2. Direct computer services to nonaffiliated customers are not permitted. Any contract to furnish services to nonaffiliated customers must be between the affiliate bank and its customer, with the data processing subsidiary acting as a servicer for its affiliate bank. In addition, the kinds of services furnished are limited to those that a bank can normally provide.

Section 4(c)(8) data processing subsidiaries may deal directly with the customer. In accordance with section 4(c)(8) of the BHC Act and section 225.28(b)(14) of Regulation Y, the kinds of services nonbank subsidiaries of bank holding companies may provide to others are—

1. data processing and transmission services, facilities (including hardware, software, documentation, or operating personnel), databases, advice, and access to such services, facilities, or databases by any technological means, if—
 - a. the data to be processed or furnished are financial, banking, or economic data and
 - b. the hardware provided in connection with the data processing and transmission services is offered only in conjunction with software designed and marketed for the processing and transmission of financial, banking, or economic data, and the general-purpose hardware does not constitute more than 30 percent of the cost of any packaged offering.
2. data processing, data storage, and data transmission services for a third party that are not financial, banking, or economic related if the subsidiary's total annual revenue derived from

1. In this context, "affiliates" is limited to other organizations that have subsidiaries of the same parent bank holding company as the servicer.

those activities does not exceed 30 percent of its total annual revenues derived from data processing, data storage, and data transmission activities. On November 26, 2003, the Board approved an increase of this limit to 49 percent, effective January 8, 2004. See 1993 FRB 1158, 2004 FRB 55, and section 3160.2. The Board currently recognizes that, in certain situations, a bank holding company may have bona fide operational reasons for conducting its financial and related nonfinancial data processing activities through separately incorporated subsidiaries. In these cases, bank holding companies may request permission to administer the 49 percent revenue test on a business-line or multiple-entity basis. See section 225.28(b)(14) of Regulation Y (12 C.F.R. 225.28(b)(14)).

3160.0.4 MINICOMPUTER ACTIVITIES

Some data processing subsidiaries are actively engaged in placing minicomputers with some of their customers. However, if the subsidiary acts as sales agent for the manufacturer and receives a commission, it is in violation of section 225.28(b)(14) of Regulation Y and should be advised to cease the practice.

3160.0.5 HARDWARE AND SOFTWARE AS AN INTEGRATED PACKAGE

Customers of data processing services require that suppliers provide them with hardware and software as an integrated package. Providing general-purpose hardware is permissible only if the cost of the hardware does not exceed 30 percent of the cost of the packaged offering, and only in conjunction with permissible software. When hardware is provided in a specialized form (such as ATMs), its provision meets the *National Courier* test and is closely related to banking and therefore not subject to the 30 percent limitation.

3160.0.6 PACKAGED FINANCIAL SYSTEMS

The Board found that providing packaged financial systems, including data processing hardware and software, to be installed on the prem-

ises of the customer is closely related to banking if conducted within the limits of Regulation Y.

3160.0.7 EXCESS CAPACITY

The sale of excess computer time is currently treated in a Board interpretation as a permissible incidental activity. The interpretation (12 C.F.R. 225.123(e)(1)) currently permits a bank holding company to make excess computer time available to anyone so long as the only involvement of the holding company is furnishing the facility and the necessary operating personnel. Data processors that process time-sensitive data must maintain sufficient capacity to meet peak demand and provide backup in case of equipment failure. Excess capacity necessarily results from such needs; thus the sale of excess capacity is necessary to reduce costs and to remain competitive. Bank holding companies are limited in the sale of excess capacity as follows:

1. A bank holding company may not purchase data processing equipment solely for the purpose of creating excess capacity.
2. A bank holding company may not sell hardware in conjunction with excess capacity.
3. A bank holding company may provide only limited types of software in connection with its sale of excess capacity. This includes systems software (that is, software designed only to control and operate the hardware and not to perform substantive operations), network communications support, and the operating personnel and documentation necessary for maintaining and using these facilities.

3160.0.8 BYPRODUCTS

The sale of byproducts for the development of a program for a permissible data processing activity is treated in a Board interpretation (12 C.F.R. 225.123(e)) as a permissible incidental activity. Byproducts may be data, software, or data processing techniques or information developed by the bank holding company. Byproducts *may not* be designed or appreciably enhanced for the purpose of marketability.

3160.0.9 REQUIREMENT OF SEPARATE RECORDKEEPING

The Board's data processing interpretation is designed to minimize any possibility of unfair

competition. A bank holding company subsidiary or related entity that provides permissible data processing and data transmission activities (services, facilities, byproducts, or excess capacity) must keep separate books and records and provide the documents to any new or renewal customer upon request.

3160.0.10 SUMMARY

Holding company EDP proposals are evaluated from the standpoint of whether the proposed data processing activities involve banking, financial, or related economic data within the meaning of the Board's Regulation Y. Processing, storing, and transmitting data for third parties, when the data are not financial, banking, or economic, is permissible if the revenues derived from those activities do not exceed 49 percent of the subsidiary's total annual revenues derived from data processing, data storage, and data transmission activities. For examples of previous Board authorizations for data processing and transmission services in accordance with Regulation Y, see sections 3160.1 through 3160.5.

The data processing that is permissible under Regulation Y encompasses various data processing services, including sales analysis, inventory analysis, freight payment, municipal tax billing, credit union accounting, and savings and mortgage company bookkeeping and payroll processing.

3160.0.11 INSPECTION OBJECTIVES

1. To determine that the full range of EDP services performed are permissible financially oriented activities in compliance with applicable laws and regulations.
2. To review the relationship between the data processing subsidiary and its affiliates and the effect of those relationships on the affairs and soundness of the bank affiliate.
3. To determine if operating policies are adequate and if management is operating in conformance with the established policies.
4. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulation have been noted.

NOTE: All bank-related EDP servicers receive EDP examinations conducted by the primary bank regulator; these examinations cover detailed operations, audit, proper backup, and overall computer operations. The bank holding company-related inspection should focus on the types and

permissibility of services performed, the revenue limitations of section 225.28(b)(14) of Regulation Y, the types of customers serviced, and transactions between affiliates. The inspection should also provide an overall financial evaluation.

3160.0.12 INSPECTION PROCEDURES

3160.0.12.1 Pre-Inspection

1. Where available, review the EDP examination report in conjunction with the lead bank examination for details of the subsidiary's operations and management.
2. Review correspondence files and the application memo for the history of the subsidiary.

3160.0.12.2 On-Site

3. Have a brief meeting with the chief executive officer of the subsidiary to establish contact and present a brief indication of the scope of the inspection.
4. Ask the controller of the company for the schedules and other information requested in the entry letter.
5. Request the following information and schedules in addition to what was requested in the entry letter:
 - a. complete list of the computer applications the subsidiary performs
 - b. list of customers
 - c. policy and procedures manual, if any
 - d. copy of the latest internal and external financial and operational audits and internal control reviews
 - e. copy of the types of management reports the subsidiary submits to the parent company and directors
 - f. internal management organization chart
 - g. copy of the agreement executed with the affiliates concerning the services provided and the fees collected
6. Review minutes of meetings of the board of directors and of the executive committee to determine the broad types of the company's operations.
7. Determine the scope of the inspection, based on evaluations of—
 - a. corporate minutes,
 - b. schedules,

- c. accounting records,
 - d. internal controls, and
 - e. the scope of the work performed by the internal auditor.
8. Review the trial balances and compare them with the respective general ledger control accounts.
 9. Where necessary, interview pertinent division heads.
 10. Determine if management information systems are adequate and if regular periodic reports are made available. Determine if the reports provide sufficient segregated details on the annual revenues earned from (1) financial-, banking-, or economic-related data processing and data transmission services and (2) third-party nonfinancial data processing and data transmission services. Ascertain whether the information will allow verification of compliance with the revenue limitations found in section 225.28(b)(14) of the Board's Regulation Y.
 11. Verify that the subsidiary of the bank holding company is complying with the revenue limitations found in section 225.28(b)(14) of Regulation Y.
 12. Review the data processing, data storage, and data transmission services provided to customers for violations of the Board's regulations and interpretations. Obtain sufficient documentation for the workpapers.
 13. Prepare a statement of condition with a minimum two-year comparison. More than two years may be prepared if the information is available and meaningful.
 14. Prepare a statement of income using the same procedures outlined above.
 15. Review all significant internal policies. Determine if the policies were developed internally or by the parent company.
 16. Review the subsidiary's management reports to the parent company. Is the reporting complete and frequent (at least quarterly)? Is the parent company fully aware of the subsidiary's operations or problems?
 17. Review the adequacy of internal and external financial and operational audits and internal control reviews. Interview the EDP auditor and review the audit reports and CPA management letters (for the period of the inspection). Also conduct interviews with the auditors, including the EDP auditor (if one was engaged).
 18. Review the condition of the company's records, that is, their availability, completeness, and accuracy. Deficiencies should be discussed in detail with recommendations for improvement.
 19. Review all intercompany transactions. Be consistently alert for any transactions with affiliate bank(s) that would be a violation of Federal Reserve Act sections 23A and 23B and Regulation W.
 20. Review significant litigation and other contingent liabilities.

Section 4(c)(8) of the BHC Act (EDP Servicing—Network for the Processing and Transmission of Medical Payment Data) Section 3160.1

A bank holding company applied for the Board's approval to acquire all the shares of a nonbank data processing company to engage in the processing and transmission of certain medical-payment data. The nonbank subsidiary plans to engage in activities that specialize in a range of medical-payment electronic funds transfer services, including the development of software products related to the processing of medical-claims payments.

Basic network services. The Board determined by order that a nonbank subsidiary of a bank holding company may provide a network for the processing and transmission of medical-payment data between health-care providers (such as physicians, hospitals, and pharmacies) and entities responsible for paying medical benefits (such as health insurers, health maintenance organizations, and preferred provider organizations). These nonbanking activities are permissible under the Bank Holding Company Act and the Board's Regulation Y (12 C.F.R. 225.28(b)(14)). The information on the patient's medical-benefits card (made available by paying organizations) would be used to access the system (similar to a debit or credit card). In general, health-care providers would enter claims information into the network with a request for payment, and the payers would authorize electronic fund transfers for full or partial payment of the claims.

The bank holding company's nonbank subsidiary would also process and transmit medical-treatment data necessary for the processing of claims, and would furnish providers with access to a coverage-information database. The database would transmit information about the terms of a particular payer's medical coverage contract, such as the extent to which specific medical treatments are covered by the patient's insurance policy. While such medical and coverage data are not financial data, the processing and transmission of these data are essential to the transmission and processing of the medical payments and financial information in the network. Also, these data processing services allow the electronic transfer of funds. The Board found that the processing and transmission of the medical and coverage data, in connection with the nonbank subsidiary's operation of a payments network, are permissible as incidental activities. The Board further determined that the nonbank subsidiary's operation of a medical-payments network would constitute permissible data processing and data transmission activities under the BHC Act.

Adjudication software. The Board also authorized the bank holding company's nonbank subsidiary to furnish claims-adjudication software to payers. The software is designed for the processing of routine claims and would include the basic rules of a payer's coverage contract. Claims-adjudication processing would involve the interaction of financial and banking data and medical and coverage data as a necessary prelude to electronic funds transfer. The Board found that the processing of medical and coverage data involved in claims adjudication is an integral and necessary part of the processing of related financial and banking information, and the nonbank subsidiary's processing of underlying payment transactions. The Board concluded that the nonbank subsidiary's provision of claims-adjudication software is permissible as an activity incidental to its provision of software for the processing of banking and financial data and to its operation of a medical-payments network.

Electronic data interchange. The bank holding company's nonbank subsidiary also plans to provide medical-payments system participants with statistical and other data derived from the information in its database. Each participant would have on-line access to all of the data it places into the system, and third parties designated by a payer or provider could also receive access to the data owned by that customer. The Board has previously stated that bank holding companies may provide byproducts of permissible data processing and data transmission activities as long as the byproducts are not designed, or appreciably enhanced, for the purpose of marketability (12 C.F.R. 225.123(e)(2)). The Board has also indicated that byproducts include data, software, or data processing techniques that may be applicable to the data processing requirements of other industries.

The nonbank subsidiary may perform limited selection, combination, and similar functions on raw data so that the data can be transmitted to the customer in a reorganized and more usable form. It may also design software that would enable customers to perform similar reorganization functions on raw data. The Board concluded that the proposed electronic data interchange services would constitute permissible byproducts of the nonbank subsidiary's primary data processing activities, and are therefore permissible as an incidental activity.

The Board's approval of the application on December 22, 1993, is based on the facts of record and is subject to the commitments and representations that were made by the applicant and the conditions referred to in the order. (See 1994 FRB 139.)

Four bank holding companies (the applicants) applied for the Board's approval under section 4(c)(8) of the Bank Holding Company Act to engage de novo, through their joint venture corporation (the company), in nonbanking activities consisting of engaging in electronic benefit transfer services, stored-value-card services, and electronic data interchange services. The applicants proposed to engage in the activities throughout the United States. The applicants provide data processing and transmission services through the company to retail merchants using point-of-sale (POS) terminals and to banks who are members of the company's automated teller machine (ATM) network.

3160.2.1 ELECTRONIC BENEFIT TRANSFER SERVICES

The electronic benefit transfer services would involve data processing and transmission services required to permit the delivery of governmental program benefits (such as welfare payments and food stamps) through the ATM and POS terminals of participating merchants and banks. Under a benefits-services system, a benefit recipient would be issued a magnetically encoded card similar to an ATM card, which could be used to obtain access to a government benefit account maintained on behalf of the recipient. The Board concluded that such activities are financial activities that are operationally and functionally similar to the electronic payment and data processing services provided by banks and bank holding companies in the operation of ATM and POS networks. In particular, the proposed benefit services involve the processing of access and authorization requests submitted to, and the processing of electronic payments originating from, financial accounts on the same basis as transactions initiated with traditional credit and debit cards. The Board thus concluded that such electronic benefit transfer activities are closely related to banking and permissible for bank holding companies under the BHC Act.

3160.2.2 STORED-VALUE-CARD SERVICES

Stored-value-card services would involve data processing and transmission services and electronic payment services related to stored-value cards. These cards are similar to credit or debit

cards in which authorized funds can be transferred and credited using magnetic stripe or computer chip technology. The services would be provided in connection with both "closed" and "open" stored-value-card systems. Closed systems include both single-vendor stored-value-card systems and systems designed for single-use sites. An open system, by contrast, refers to multiple-vendor, multiple-site stored-value-card systems.

3160.2.2.1 Stored-Value-Card Closed Systems

In most current closed systems, cash must be deposited in a particular vendor's card-dispensing terminal, and the card received from the terminal may be used only for purchases from that specific vendor. The card itself is disposable, and the only account reconciliation that may be required would involve the vendor's own cash receipts, the amount of funds debited from the cards at turnstiles or other points of sale, and the amount of the vendor's liabilities stored on outstanding cards. The company intended to play a role in the operation of this basic type of closed system, as well as to help develop and operate more complex closed systems. These systems would use a plastic card containing electronic technology, such as a computer chip or magnetic stripe, to which funds could be credited and from which funds could be debited, for an indefinite period of time. The company proposed performing accounting functions in customer accounts and accounting for the level of the vendor's stored liabilities. In such a capacity, the company would be responsible for the settlement and reconciliation of these customer and vendor accounts. The company would also perform other functions, such as embossing and issuing cards and arranging for funds collection.

3160.2.2.2 Stored-Value-Card Open Systems

The applicants anticipate that stored-value cards eventually will operate in an open system similar to a POS network, which allows value stored on a card to be used with a wide range of participating vendors. The applicants expect that

the company's principal stored-value-card activities would involve the development and operation of such open systems.

In an open system, customers' debit cards would hold an integrated computer chip or some type of comparable technology capable of storing value for use in stored-value-card transactions. Value could be placed on the card at an ATM adapted to read and place value on the chip, at a limited-purpose ATM-type machine whose only functions would be to add value to the chip and to transfer stored value back to the customer's account, or at a cash-to-card machine or other value-transfer device (collectively, value terminals). These value terminals would be operated, in at least some cases, by the company. Once value is placed on a card, equivalent funds could be transferred to the company, which would hold the funds for payment of stored-value-card transactions. Stored value would leave the chip when the customer purchases goods or services either at a POS terminal (which may be operated by the company) or at a vending machine, telephone booth, mass transit turnstile, or other unmanned delivery location (collectively, reader terminals), or when the customer transfers funds back to an account at a value terminal. Reader terminals generally would be offline devices not connected to the company's ATM or POS networks. Instead of a direct electronic connection, a reader terminal would retain, for a period of time, value representing the amount of customer purchases at the terminal. Then, at the vendor's convenience, the company, the vendor, or a third party would collect value from the reader terminals using specially designed collection cards issued by the company. The collection cards would then be submitted to the company so that funds can be properly credited. Once these transactions occur, the company would be responsible for making settlement by transferring funds to the accounts of participating merchants and other appropriate parties.

The Board concluded that the company's activities in providing stored-value-card services, in both closed and open systems, are closely related to banking. The activities involve processing debits and credits to the stored-value cards and performing related accounting and settlement functions, and are thus a data processing activity. Financial balances are maintained and adjusted at POS and other terminals as the customer purchases various items or adds value to the card, and the activity constitutes the

processing of banking, financial, or economic data within the meaning of Regulation Y. In addition, aspects of the company's stored-value-card services are functionally similar to the issuance and sale of consumer payment instruments such as traveler's checks, which are activities that banks conduct and that the Board has previously determined to be closely related to banking within the meaning of the BHC Act. The Board concluded that the company's proposed services in connection with stored-value cards, in either an open system or a closed system, are closely related to banking.

3160.2.3 ELECTRONIC DATA INTERCHANGE SERVICES

The company also proposes to furnish retail merchants with data collected from sales transactions consummated at the merchant's place of business (data services). The data collected and furnished would relate to specific items and quantities of products purchased by the customer, as well as to customer-purchasing patterns over a period of time. The data would be formatted so that it could be used by the merchant for inventory control, targeted marketing, and other purposes. The company's data services generally would be furnished to merchants as an adjunct to its POS-transaction-processing services and would be rendered through a retail merchant's POS terminals. The company does not intend to offer data services independently. In addition, the data that are collected by the company would be furnished only to the merchant that is a party to the underlying sales transaction; that is, the company does not intend to provide such information to third parties.

The company's data services would be limited to capturing, formatting, and furnishing data collected from sales transactions consummated at a particular merchant's place of business. In addition, the data collected would be furnished only to that merchant and only in accordance with the merchant's specific instructions. The company does not intend to provide software, render advice, or provide other services associated with the marketing or other uses of the data. The applicants do anticipate, however, that the company could provide additional related functions, such as issuing store coupons or credits related to a merchant's marketing programs at POS terminals. Based on the facts presented, the Board determined that the sales data that would be processed under the proposed data services are financial and economic data within the meaning of Regulation Y.

3160.2.4 BOARD APPROVAL

Based on all the facts of record, the Board approved the applications. The Board's approval is specifically conditioned on compliance with the commitments made in connection with the applications and with the conditions referred to in the order. (See 1993 FRB 1158.)

Regulation Y provides that a bank holding company may render advice to anyone on processing and transmitting banking, financial, and economic data. On November 26, 2003, the Board approved an amendment to section 225.28(b)(14) of Regulation Y to expand the ability of all bank holding companies, including financial holding companies, to process, store, and transmit nonfinancial data in connection

with their financial data processing, storage, and transmission activities. The Board raised the total annual revenue limit from 30 percent to the 49 percent limit that applies to nonfinancial data processing activities. Specifically, a company (a nonbank subsidiary of a bank holding company) conducting data processing, data storage, and data transmission activities may conduct nonfinancial data processing, data storage, and data transmission activities (those that are not financial, banking, or economic in nature) if the total annual revenue derived from those activities does not exceed 49 percent of the company's total annual revenues derived from data processing, data storage, and data transmission activities. (See 12 C.F.R. 225.28(b)(14).)

Eleven bank holding companies (the applicants) applied for the Board's approval to engage through a joint venture corporation (the company) in certain nonbanking activities related to the operation of a retail electronic funds transfer network, including data processing and data transmission activities related to automated teller machine (ATM) and point-of-sale (POS) transactions, as well as electronic benefit transfer, stored-value card, and electronic data capture and interchange services. (A complete list of the proposed activities is found at 1994 FRB 1110-1111.)

The applicants also proposed to offer through the company certain data processing and data transmission services not previously considered by the Board. Those services consisted of allowing customers to use their ATM cards at an ATM terminal to withdraw funds from a bank account in the form of travelers' checks or postage stamps. Payment for the transactions would be accomplished by a debit to a cardholder's deposit account.

The transactions would occur at terminals that would not be owned and operated by the company. Cardholders buying postage stamps or travelers' checks at an ATM terminal would

purchase those products from the bank owning the ATM. The decision on which travelers' checks to issue would remain with the bank that owns the ATM terminal, and the company would not be the issuer of the travelers' checks.

The company's primary activities would be processing and transmitting access requests and payment authorizations. The company would also provide terminal-driving services, load ATM terminals with postage stamps and travelers' checks, and market the products through the network.

The Board determined that the proposed activities involved the processing of access and authorization requests submitted to deposit accounts on the same basis as other transactions initiated with a traditional debit card. The activity is operationally and functionally similar to the data processing services provided by banks and bank holding companies in their operation of ATM and POS networks. Traditionally, banks have been permissibly engaged in the sale of travelers' checks and postage stamps. The Board thus found the company's proposed data processing and transmission activities, with respect to these transactions, to be closely related to banking. (See 1994 FRB 1107.)

Five bank holding companies (the applicants) applied for the Board's approval to engage, through a joint venture subsidiary (the company), in certain data processing activities pursuant to Regulation Y. The applicants, through the company, would provide data processing and related services to banks and other automated teller machine (ATM) owners in connection with the distribution through ATMs of tickets, gift certificates, prepaid telephone cards, and other documents evidencing a prepayment for goods or services.¹

The company would provide the software and telecommunications channels necessary to transmit cardholder requests, card-issuer authorizations, and related switching and account reconciliation services. Specifically, the company would provide terminal driving services that include—

- establishing and maintaining an electronic link between an ATM and a telecommunications switch to transmit cardholder requests and card-issuer authorizations; and
- operating the feature and functions displays on an ATM screen using computer software to permit an ATM to dispense various products in addition to currency.

The company would also provide switching services and transaction processing to transmit account debiting, transaction authorization, and settlement data between the ATM owner, or its bank, and the cardholder's bank.

A typical transaction would consist of an ATM cardholder selecting a particular product, such as a concert ticket, from a menu displayed on the ATM screen. The electronic commands

transmitted by the company would verify that the deposit account or line of credit designated by the cardholder had sufficient funds to effect the purchase. Following authorization, the ATM would dispense the product and issue a receipt. The card-issuing bank would then debit an amount equal to the cost of the purchase from the cardholder's designated account and transfer the funds to the account of the merchant or ATM owner, using settlement procedures established by the company's ATM network.

The Board previously determined that a bank holding company could provide data processing and related services necessary to permit customers to use an ATM card to debit a deposit account or line of credit at an ATM terminal for cash and credit transactions, and for the purchase of travelers' checks, money orders, and postage stamps. The Board has further determined that a bank holding company may provide data processing services that support the use of credit cards by consumers in the direct purchase of goods and services from a merchant. (See 1995 FRB 492, 1990 FRB 549, and 1985 FRB 113.)

The data processing proposed in this case involves the same type of data processing support as the Board has previously approved for credit card transactions and other more traditional types of ATM transactions. The Board thus concluded that the activities proposed by the applicants are permissible, consisting of data processing and transmission services encompassed within the Board's Regulation Y, and are thus closely related to banking within the meaning of section 4(c)(8) of the Bank Holding Company Act. (See 1996 FRB 848.)

1. The tickets would include public transportation tickets and tickets to entertainment events. Gift certificates and prepaid telephone cards would be issued in fixed denominations for a specific merchant or group of merchants, and they would evidence prepayment of the purchase price of merchandise or services to be selected by the bearer at some time in the future. The ATM owners would also sell products that could be offered for sale directly by a financial institution, such as mutual fund shares or insurance policies, where permitted by applicable law.

3160.5.1 ENGAGE IN TRANSMITTING MONEY IN THE UNITED STATES

A bank holding company gave notice under section 4(c)(8) of the Bank Holding Company Act (BHC Act) (12 U.S.C. 1843(c)(8)) and section 225.23 of the Board's Regulation Y (12 C.F.R. 225.23) to engage de novo through two companies (the companies) in the activity of transmitting money for customers within the United States and its territories ("domestic money transmission services") to third parties located in foreign countries.¹ The activity was to be conducted at first through a network of approximately 1,200 "outside representative offices" located in California, Florida, Illinois, and Texas that are under contract with the companies to provide money transmission services.² The bank holding company proposes to engage in the planned activity nationwide. The companies are corporations that currently engage in the business of money transmission to Mexico through representatives in California, Florida, Illinois, and Texas.

Domestic money transmission services would be provided in the following manner: A customer would contact the companies directly by means of a dedicated telephone located in the outside representative office to request that the companies transmit funds to a third party for a fee. The outside representative would collect cash and a fee from the customer, issue a receipt, and deposit funds in an account maintained by the outside representative solely for the purpose of receiving funds in trust to be transmitted to a third party. The outside representative may maintain this account at any bank, including a subsidiary bank, but would have no agreement with any bank to accept deposits on its behalf. Neither the outside representatives nor the companies would be FDIC-insured institutions.

The companies would collect funds deposited in an outside representative's account daily through an automated clearinghouse (ACH) or similar transaction and deposit an amount equal to the amount to be transmitted into an account they maintain at a bank, which may include one

of its subsidiary banks, located near the third party receiving the funds. The third party would be notified that money is available at a local disbursement site, which could include a bank subsidiary of the bank holding company or consumer finance office or an unaffiliated check-cashing, finance, or other type of office. Funds would be made available to the third party by a check drawn on the companies' account almost immediately after the transmission order is placed by the customer.³

A customer would not transmit funds to any bank account maintained by the customer or any third party. Thus, the bank holding company would not use this service to collect deposits for customers of its subsidiary banks or any other bank.

There was no agreement between a customer and a bank to accept money in an account for use by the bank in connection with the proposed domestic money transmission services. The companies and their outside representative would accept money from a customer for the sole purpose of transmitting funds to a third party. A customer would not give funds to the companies with the expectation that the companies would permit the customer to reclaim the funds on demand or after a period of time. Moreover, the companies would not maintain balances or pay interest on the money they receive, and they would only hold funds long enough to transmit them to the designated third party.⁴

The Board previously determined that money transmission abroad is closely related to banking.⁵ The Office of the Comptroller of the Currency (OCC) also has concluded that it is permissible for a national bank to accept money from nonbank affiliates for the purpose of transmitting the funds to a foreign country and that a

1. The Board previously approved the bank holding company's acquisition of a company to engage in the activity of transmitting funds to third parties in Mexico by using an unaffiliated foreign bank to make the cash payments. See 1995 FRB 974.

2. Outside representative offices would be expanded to include consumer finance offices in addition to existing grocery stores, travel agencies, pharmacies, and insurance agencies.

3. The domestic money transmission services do not involve lending money because only funds provided by the customer would be transmitted to a third party. The plan does not involve the paying of checks. Although the third party receives money by means of a check drawn on an account maintained by the companies, the receipt of funds in check form is not the payment of a check (see *Independent Bankers Ass'n of America v. Smith*, 534 F.2d 921, 943-45 (D.C. Cir. 1976)).

4. Many states permit companies that are not chartered as banks to transmit money without deeming this activity to involve the taking of deposits. The bank holding company is required to conduct the proposed activities in compliance with licensing and other requirements of relevant state law.

5. See 1990 FRB 270.

nonbank affiliate that participates with the national bank in transmitting money abroad would not become a branch of the bank.⁶ Based on all the facts of record and for the reasons discussed in this and the Board's previous orders, the Board concludes that domestic money transmission services are closely related to banking. The Board has relied on the fact that the companies are subject to licensing and examination by state authorities.⁷ The companies have committed to comply with all applicable reporting requirements, including reporting all transactions over \$10,000 to the Internal Revenue Service. The bank holding company committed to apply the internal controls currently in place at the finan-

6. The OCC has reasoned that nonbank offices that transmit funds through a national bank to a third party do not constitute "branches" under federal law.

7. This order was specifically conditioned on requiring the bank holding company to obtain all necessary state licenses.

cial services company to ensure compliance with the Bank Secrecy Act.⁸

Based on the foregoing and all the facts of record, the Board approved the notice on October 17, 1995 (see 1995 FRB 1130). The Board's decision was specifically conditioned on the bank holding company's complying with all the commitments made in connection with the notice and obtaining all necessary approvals from state regulators.

8. These procedures include a weekly review of all transactions over \$10,000. In addition, the companies will require customer identification, including the customer's current address and occupation, for all transmissions above \$3,000. The companies also will run a computer match of all remitters and recipients by name and Social Security number so that reporting requirements cannot be evaded by means of a series of transactions.

The Board has included within Regulation Y (section 225.28(b)(10)(ii)(B)) the authority for bank holding companies to engage in the printing and selling of magnetic ink character recognition (MICR)-encoded items as part of support services. This activity includes this primary activity and also the printing and selling of corporate image checks, cash tickets, voucher checks, deposit slips, savings withdrawal packages, and other forms that require MICR encoding. The activity was initially authorized as a permissible activity by Board order, whereby such documents were to be printed for and sold exclusively to depository institutions. The applicant associated with that Board order proposed

to acquire a controlling interest in a printing company that prints and sells checks and related documents. It planned to engage in a joint venture with another company that engages in check printing and other printing activities. The Board concluded for that application that checks and other MICR-encoded documents used in the payments process are provided in specialized form and that they are an integral part of a fundamental banking service, and thus the activity is deemed closely related to banking. See 1986 FRB 794. The Board included the non-banking activity in the Regulation Y “laundry list,” effective April 1997.

Section 4(c)(8) of the BHC Act (Insurance Agency Activities of Bank Holding Companies) Section 3170.0

3170.0.1 INSURANCE ACTIVITIES PERMISSIBLE FOR BANK HOLDING COMPANIES

Before the enactment of the 1970 amendments to the Bank Holding Company Act, the Board by order authorized certain bank holding companies to engage in insurance activities. The specific type of permissible insurance activity for each bank holding company was described in its Board order. These few bank holding companies that commenced insurance agency activities before January 1, 1971, have grandfather rights under the current statutes and regulations (section 4(c)(8)), exemption G and 12 (CFR 225.28(b)(11)(vii)). These bank holding companies may, with the prior approval of the Board, engage in general insurance agency activities without restriction as to location or to type of insurance sold. (See section 3170.0.3.7)

The 1970 amendments to the Bank Holding Company Act authorized the Board to determine permissible nonbanking activities under section 4(c)(8). Subsequently, on September 1, 1971, the Board amended Regulation Y to permit bank holding companies to engage in certain insurance agency activities.

The Board further amended the section of Regulation Y concerning permissible insurance agency activities on September 1, 1981. The 1981 amendments limited permissible insurance activities previously authorized by Regulation Y. The first amendment deleted from the Board's regulations the authority for bank holding companies to act under section 4(c)(8) of the Bank Holding Company as agent for the sale of insurance for themselves and their subsidiaries. This amendment reflected a court decision of the United States Court of Appeals for the Fifth Circuit that acting as agent for the sale of insurance for the bank holding company and its nonbanking subsidiaries was impermissible (permissible for banks, however). Such insurance is permissible, however, if conducted pursuant to section 4(c)(1)(C) of the BHC Act.¹ The second 1981 amendment deleted from the Board's regulations the authority to act as agent for insurance

sold as a matter of convenience to the public. The opinion also found that the part of the Board's regulation relating to the sale of "convenience insurance"² exceeded the scope of the provisions of section 4(c)(8) of the Bank Holding Company Act. The sale of this other insurance was considered impermissible.

On October 15, 1982, Congress enacted the Garn-St Germain Depository Institutions Act (Public Law 97-320). Title VI of that act amended section 4(c)(8) of the Bank Holding Company Act. This amendment stated that insurance agency, brokerage, and underwriting activities are *not* "closely related" to banking within the meaning of section 4(c)(8) of the Bank Holding Company Act. However, the amendment provided for seven exceptions to the general prohibition of bank holding companies engaging in insurance activities. One of the seven exceptions contains grandfather exemptions for insurance agency activities conducted on May 1, 1982, or for those insurance activities approved by the Board on or before May 1, 1982. As a result, bank holding companies receiving Board approval on or before May 1, 1982, may continue to engage in their insurance agency activities. (See section 3170.0.3.4)

The seven types of insurance activities allowed as permissible for bank holding companies are as follows:

1. Acting as agent, broker, or principal (i.e., underwriter) for credit-related life, accident and health, or unemployment insurance.
2. For bank holding company finance subsidiaries, acting as agent or broker for credit-related property insurance in connection with loans not exceeding \$10,000 (\$25,000 in the case of a mobile home loan) made by finance company subsidiaries of bank holding companies. (The Board interpreted this provision as permitting only the sale of insurance that does not exceed the outstanding balance of the loan—vendor's single interest insurance rather than general property insurance that covers the borrower's equity interest.)

1. The Board's Regulation Y was amended as of December 1983 to include the sale of insurance for a holding company based on the services provision of section 4(c)(1)(C) of the BHC Act, which did not require any prior Board approval. Included in the regulation were the services of selling, purchasing, or underwriting such insurance as blanket bond insurance, group insurance for employees, and property and casualty insurance for the bank holding company or its subsidiaries.

2. "Convenience insurance" consisted of insurance that was sold as a matter of convenience to the purchaser. The premium income from the sale of this insurance was expected to constitute less than 5 percent of the aggregate insurance premium income of the holding company. The sale of this insurance was not designed to permit entry into the general insurance-agency business.

3. Acting as agent for the sale of any type of insurance in a place with a population not exceeding 5,000, or with insurance agency facilities that the bank holding company demonstrates to be inadequate.
4. Any insurance agency activity engaged in by a bank holding company or its subsidiaries on May 1, 1982 (or approved as of May 1, 1982), including (i) insurance sales at new locations of the same bank holding company or subsidiaries in the state of the bank holding company's principal place of business or adjacent states or any state or states in which insurance activities were conducted by the bank holding company or any of its subsidiaries on May 1, 1982, or, (ii) insurance coverage functionally equivalent to those engaged in or approved by the Board as of May 1, 1982.
5. Acting, on behalf of insurance underwriters, as supervisor of retail agents who sell fidelity insurance and property and casualty insurance on holding company assets or group insurance for the employees of a bank holding company or its subsidiaries.
6. Any insurance agency activities engaged in by a bank holding company having total consolidated assets of \$50,000,000 or less. Life insurance and annuities sold under this provision, however, must be authorized by (1), (2), or (3) above.
7. Any insurance agency activity that is performed by a registered bank holding company, which was engaged in some insurance activity before January 1, 1971, pursuant to the approval of the Board.

These seven types of insurance allowed by the amendment to section 4(c)(8) of the Garn-St Germain Act are generally consistent with the types of insurance activities previously authorized by the Board. The one general exception related to the prohibition of the sale of property and casualty insurance.

3170.0.2 INSURANCE AGENCY ACTIVITIES

Insurance agency activities are among the most widely practiced nonbank activities engaged in by bank holding companies. Many bank holding companies are involved in the sale of insurance at some level in the organization; however, the inspection focuses on these activities only when performed by the parent company or by a non-

bank subsidiary (excluding bank-owned subsidiaries). Many of the smaller bank holding companies engage directly in these activities rather than through insurance agency subsidiaries. In either arrangement, however, sales are usually conducted on the premises of the subsidiary bank by personnel who most often serve as officers or employees of the bank or parent company.

Performance of insurance agency activities has been profitable for most bank holding companies with many of the smaller companies relying heavily on the commissions generated to service acquisition or other related indebtedness. In most cases, little or no expenditures for fixed assets are required since the premises of the subsidiary banks or parent company are utilized. Likewise, little or no liabilities are incurred since there are minimal assets to be financed.

3170.0.3 PERMISSIBLE TYPES OF COVERAGE INCLUDING GRANDFATHER PRIVILEGES

As noted above, the Board, effective November 7, 1986, approved a revision of specific insurance agency and underwriting activities permissible for bank holding companies under section 4(c)(8) of the BHC Act (section 225.28(b)(11) of Regulation Y). In clarifying the scope of insurance activities that are closely related to banking and permissible for bank holding companies under the Garn-St Germain Act, the Board included in its revised Regulation Y the seven specific exemptions contained in that statute.

3170.0.3.1 Insurance Activities Permissible for Bank Holding Companies per Section 225.28(b)(11)(i) of the Board's Regulation Y

Permissible insurance agency activities include the sale of life, accident and health, and involuntary unemployment insurance that is directly related to an extension of credit by a bank holding company with respect to its own extensions of credit and those of its subsidiaries. For the purpose of determining what activities are permissible, the Board interpreted the term "extension of credit" to include direct loans to borrowers, loans purchased from other lenders, and leases of real or personal property so long as the leases meet all the criteria contained in section 225.28(b)(3) of Regulation Y, which

defines leases as the functional equivalent of an extension of credit. (See the discussion of leasing in section 3140.0.)

The regulation requires that insurance coverage be limited to the “outstanding balance due” on an extension of credit. The “outstanding balance due” is calculated as follows:

1. Include:
 - a. principal and interest
 - b. reasonable administrative fees outstanding on the loan
 - c. the balance of payments due in a lease transaction
2. Exclude:
 - a. the residual value of the leased item (since the lessor owns the leased item and the lessee is not obligated to purchase the item by paying the residual value)

The insurance may provide for total repayment of the extension of credit in the event of the death of the borrower or for periodic payments on the extension of credit when the borrower is temporarily disabled or unemployed. Such single or periodic payments may not exceed the balance on the loan and thus provide for additional general life or accident coverage.

While ordinarily such credit-related insurance coverage would be declining term as payments reduce the balance due on an extension of credit (loans in connection with first mortgages), a bank holding company may write or sell a level term policy on nonamortizing loans. Policies written or sold pursuant to this paragraph, moreover, may be individual rather than group policies, and the premiums on such policies may be age-related. The Board continues to require that insurance policies sold or written to cover the “outstanding balance due” insure only named borrowers or lessees of a particular bank holding company. Accordingly, such policies could cover both spouses jointly only if both spouses were actual borrowers or lessees under the terms of the agreement with the bank holding company.

The Board permits, with regard to an extension of credit, the sale and underwriting of credit-related life, accident and health, and involuntary unemployment insurance (1) with respect to lease transactions, as previously discussed, when such lease transactions are the equivalent of loans; (2) in connection with loans secured by residential first mortgages; and (3) in connection with the servicing of loans originated or purchased by the applicant bank holding company and subsequently sold.

The regulation explicitly permits the sale of life, disability, and involuntary unemployment

insurance with respect to a lease transaction, provided the lease is the type of nonoperating, full payout lease described as permissible for bank holding companies in section 225.28(b)(3) of Regulation Y. The Board has determined that such leases are the “functional equivalent of an extension of credit.” It believes that this type of lease is encompassed in the term “extension of credit” as it is used in exemption A of the Garn–St Germain Act.

As discussed previously, the first exemption of the Garn–St Germain Act permits the sale of any type of life, disability, and involuntary unemployment insurance relating to an extension of credit, including home mortgage redemption insurance. Home mortgage insurance insures the repayment of the unpaid balance of a residential first mortgage loan in the event of the death or disability of the mortgagor. The Board has determined that home mortgage redemption insurance is closely related to banking because it supports the lending function (1986 FRB 339 and 671) by providing for repayment of residential mortgage loans at a time when the death or disability of the borrower may delay or disrupt the scheduled repayment of such loans. Home mortgage redemption insurance in connection with residential mortgage loans is considered as fulfilling the same function as credit life and credit accident and health insurance with respect to other types of loans. The Board recognized that such insurance functions as credit insurance in supporting a bank’s lending function (see the Board’s approval for the *sale* of such insurance by bank holding companies within 1975 FRB 45).

In approving the activity of home mortgage redemption insurance by order, the Board previously relied on commitments by applicants to inform, in writing, borrowers who are prospective purchasers of such insurance that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources. The Board has also relied on a commitment for written notice to borrowers that the insurance contract may be rescinded at any time after the loan commitment is made and before closing. The Board continues to require that such notices be provided to borrowers. In addition, the Board continues to rely on the fact that premiums for such insurance are payable periodically during the term of the extension of credit, so as to increase the borrowers’ ability to rescind the insurance and to limit premium financing as an incentive to sell such insurance.

The Board considers an “extension of credit” as covering loans that are made or purchased by the bank holding company or its subsidiaries. Credit-related insurance may be continued on the loans that were sold, and are now only being serviced, provided that they were made or purchased by the bank holding company or its subsidiaries. The Board permits bank holding companies to sell credit-related life, accident and health, and involuntary unemployment insurance where the bank holding company previously placed funds at risk. In this situation, the bank holding company must continue to limit its insurance coverage to the outstanding balance due on the extension of credit by the borrower.

A bank holding company may not sell or underwrite insurance when merely servicing a loan and *it has never placed its funds at risk* either by originating or purchasing the loan; the bank holding company is permitted to collect and transmit insurance premiums, act as intermediary in renewing existing policies or adjusting coverages, and engage in other activities which are incidental to the servicing of loans. The bank holding company may collect a fee for such services, providing that the fee is based on the provision of the service and is not a premium for insurance sold. In that case, the bank holding company would be engaging in loan servicing rather than insurance activities.

3170.0.3.2 Section 225.28(b)(11)(ii) of Regulation Y—Sale of Credit-Related Property Insurance by Finance Company Subsidiaries of a BHC

The Garn–St Germain Act restricts the authority of bank holding companies to engage in property and casualty insurance activities. Before 1982, the Board approved the sale of property and casualty insurance that was directly related to an extension of credit by a bank or bank-related firm in the bank holding company system. The sale of property insurance is now limited to an extension of credit made by a finance company that is a subsidiary of a bank holding company, acting as agent or broker. A finance company subsidiary may only engage in the sale of such property insurance if—

1. the insurance is limited to assuring repayment of the outstanding balance on such extension of credit in the event of loss or damage to any property used as collateral for the extension of credit;

2. the extension of credit is not more than \$10,000, or \$25,000 if it is to finance the purchase of a residential manufactured home³ and the credit is secured by the home; and
3. the applicant commits to notify borrowers in writing that—
 - a. they are not required to purchase such insurance from the applicant;
 - b. such insurance does not insure any interest of the borrower in the collateral; and
 - c. the applicant will accept more comprehensive property insurance in place of such single interest insurance.

3170.0.3.2.1 Definition of a Finance Company

A “finance company” for purposes of the sale of property insurance includes all non-deposit-taking financial institutions that engage in a significant degree of consumer lending (excluding lending secured by first mortgages) and all financial institutions specifically defined by individual states as finance companies that engage in a significant degree of consumer lending. Finance companies, under this provision, include those entities that may be authorized to accept limited types of time or savings deposits under state law but which a state has defined to be a finance company. Since exemption B of the Garn–St Germain Act is directed to consumer loans, the regulation requires that a qualifying company be engaged in that type of lending to a significant degree as measured by either number of loans, percentage of loans, percentage of loan amounts outstanding, or some similar measure. The Board will evaluate the amount of the consumer lending on a case-by-case basis.

3170.0.3.2.2 Property Insurance a Finance Company May Sell

Section 225.28(b)(11)(ii) of Regulation Y permits finance company subsidiaries of bank holding companies to engage in the sale of single-interest property insurance that insures against damage or loss only to the extent of the lender’s interest in the property that serves as collateral for a loan. The Garn–St Germain Act limits the permissible insurance coverage to “the out-

3. These limitations increase at the end of each year, beginning with 1982, by the percentage increase in the Consumer Price Index for Urban Wage Earners and Clerical Workers published by the Bureau of Labor Statistics.

standing balance due on an extension of credit.” It does not contemplate general property insurance that covers the entire value of the property, including the balance due the lender and the equity interest of the borrower/owner. Generally such insurance is declining balance and the only interest in the collateral property that may be insured is that of the lender.

The sale of single-interest insurance is permitted provided that the BHC finance company subsidiary does not require such insurance of borrowers who have adequate property insurance on the loan collateral. In addition, the finance company subsidiary is required to disclose in writing that such insurance, if required, need not be purchased from the lender and that such insurance does not cover the borrower’s interest in the property. The requirement is also imposed by the Board’s Regulation Z, section 226.4(d)(2), if the premium is excluded from the finance charge.

3170.0.3.3 Section 225.28(b)(11)(iii) of Regulation Y—Insurance in Small Towns

Engaging in any insurance activity is permitted in a place where the bank holding company or a subsidiary of the bank holding company has a lending office in a community that—

1. has a population not exceeding 5,000 (as shown by the last preceding decennial census) or
2. has inadequate insurance-agency facilities, as determined by the Board, after notice and opportunity for hearing.

In order to provide insurance agency activities in a town with a population not exceeding 5,000, or in a community that has inadequate insurance agency facilities, the bank holding company must have a lending office that serves the public in the small town. The regulation specifically requires that the office be a lending office in order to provide the bank holding company with a link to the town, to avoid remote operation from a central location of a network of small-town insurance agencies, and generally to maintain insurance as a fee-generating activity to help sustain a small-town lending office as an independent, viable profit center.

The *current* requirement does not limit the sale of insurance to a “principal place of banking business” located in a community not exceeding a population of 5,000. Also, a bank holding company insurance agency is not precluded from selling insurance to those residing outside the community who initiate the transac-

tion at the agency’s place of business in the town of less than 5,000. Advertising in the community newspaper or a telephone book that may serve an area larger than the community of 5,000 is also not prohibited. The current regulation requires that the bank holding company or a subsidiary thereof establish or have a lending office in the community that has a population not exceeding 5,000.

3170.0.3.4 Section 225.28(b)(11)(iv) of Regulation Y—Insurance Agency Activities Conducted on May 1, 1982

This provision of the regulation includes engaging in any specific insurance agency activity⁴ if the bank holding company, or subsidiary conducting the specific insurance agency activity, conducted the insurance agency activity on May 1, 1982, or received Board approval to conduct the insurance agency activity on or before May 1, 1982. Activities engaged in on May 1, 1982, include activities carried on subsequently as the result of an application to engage in such activities pending before the Board on May 1, 1982, and approved subsequently by the Board or as the result of an acquisition by such company pursuant to a binding written contract entered into on or before May 1, 1982, of another company engaged in such activities at the time of the acquisition.

A bank holding company or subsidiary engaging in a specific insurance-agency activity under section 225.28(b)(11)(iv) of Regulation Y may—

1. engage in such specific insurance-agency activity only at locations—
 - a. in the state in which the bank holding company has its principal place of business (as defined in 12 U.S.C. 1842(d));
 - b. in any state or states immediately adjacent to such state; and
 - c. in any state in which the specific insurance-agency activity was conducted (or was

4. Nothing in paragraph (iv) precludes a BHC subsidiary that is authorized to engage in a specific insurance-agency activity under this clause from continuing to engage in the particular activity after merger with an affiliate, if the merger was for legitimate business purposes and prior notice has been provided to the Board.

approved to be conducted) by such bank holding company or subsidiary thereof or by any other subsidiary of such bank holding company on May 1, 1982; and

2. provide other insurance coverages that may become available after May 1, 1982, so long as those coverages insure against the types of risks as (or are otherwise functionally equivalent to) coverages sold or approved to be sold on May 1, 1982, by such bank holding company or subsidiary.

This provision of the regulation parallels exemption D of the Garn–St Germain Act and grandfathers those insurance agency activities in which individual bank holding companies were engaged on May 1, 1982. Under this provision, a bank holding company or subsidiary thereof may continue to engage in particular types of insurance agency activities that were permissible before the passage of the Garn–St Germain Act but which are now prohibited by that act. A qualifying bank holding company may engage, for example, in the sale of property and casualty insurance on property serving as collateral for loans made by a lending subsidiary of the holding company.

A qualifying bank holding company may also engage in grandfathered insurance related to the provision of “other financial services” previously authorized under section 225.28(b)(11)(i)(B) of Regulation Y. This type of insurance is not considered to be related to an extension of credit under the Garn–St Germain Act. As a result, the Board *no longer permits* the sale of insurance related to the provision of the general financial services offered by a bank or bank-related firm. Such insurance included, for example, insurance on the contents of safe deposit boxes, or savings completion insurance on certificates of deposit, Christmas club accounts, individual retirement accounts, tuition completion plans, or credit-related insurance for serviced loans. Prior to the Garn–St Germain Act, insurance related to the provision of general financial services was permitted to be sold to borrowers whose loans were neither purchased nor originated, but may have been serviced by the bank holding company. Insurance with respect to loan servicing was the primary type of insurance previously permitted by the Board as related to such financial services. Now, the Garn–St Germain Act limits the sale of insurance by bank holding companies in general to insurance related to an extension of credit.

3170.0.3.4.1 Limitations on Expansion of Grandfather Rights

Exemption D provides for limited expansion of grandfathered insurance agency activities in order to permit qualifying bank holding companies to remain effective insurance agent competitors. The exemption presented three issues that the Board resolved in paragraph (iv) of the regulation: (1) defining which subsidiaries of a bank holding company may engage in otherwise impermissible insurance agency activities under exemption D; (2) the scope of permissible geographic expansion; and (3) the scope of product-line expansion.

Specific Subsidiaries That May Engage in Grandfathered Activities

Grandfather rights do not inure to the benefit of the entire holding company system by virtue of the fact that a particular subsidiary was engaged in insurance agency activities before May 1, 1982. Only the subsidiary of the bank holding company that was engaged in insurance activities on May 1, 1982, or received Board approval to engage in insurance activities before May 1, 1982, has grandfather status.

The Board believes that the emphasis in the legislative history on the transfer of grandfather rights shows the intent of Congress to prohibit not only the transfer of such rights from “grandfathered” subsidiaries to those affiliates wholly without grandfather rights, but also to prohibit the transfer of grandfather rights with respect to particular kinds of insurance from one “grandfathered” subsidiary to another. Thus, a subsidiary that sold only credit life insurance before the grandfather date should not acquire grandfather rights to sell property and casualty insurance solely because an affiliate sold property and casualty insurance before the grandfather date. The grandfather rights of a particular subsidiary are limited to the precise activities (or their functional equivalent) engaged in before May 1, 1982. This requirement does not preclude the transfer of grandfather rights in the case of a bona fide merger (1983 FRB 554, 555).

Section 225.28(b)(11) of the Board’s Regulation Y is only intended to clarify the exemptions in title VI of the Garn–St Germain Act. It does not authorize any bank holding company to commence any insurance activity, or to acquire a company with insurance activities, without compliance with the notice and application requirements of section 4(c)(8) of the BHC Act.

Geographic Expansion by a Grandfathered Subsidiary of a Bank Holding Company.

The language of exemption D of the Garn–St Germain Act, while limiting the grandfathered activities to those agency activities conducted by the specific grandfathered subsidiary, *does allow* expansion into states where such specific types of agency activities “were conducted by the bank holding company or any of its subsidiaries on May 1, 1982 . . .” If a bank holding company subsidiary is selling a particular type of insurance in a given state, the Board does not believe there is any regulatory or business purpose served by restricting another grandfathered subsidiary from engaging in the same activity in the same location.

Product-Line Expansion

The Board’s regulation provides for product-line expansion. A grandfathered subsidiary of a bank holding company may seek approval from the Board to engage in the sale of new types of insurance that protect against the same types of risks as, or are otherwise functionally equivalent to, insurance sold on the grandfather date.

3170.0.3.4.2 Transfer of Grandfather Rights among Subsidiaries

A grandfathered subsidiary of a bank holding company (or its successor) may retain its grandfather rights after merger with an affiliate, if such merger is based on legitimate business concerns, for example, centralized management or increased efficiency, rather than as a means of extending insurance powers. The regulation further provides that bank holding companies must advise the Board before any such merger for legitimate business purposes in order to confirm the transfer of grandfather rights.

3170.0.3.5 Section 225.28(b)(11)(v) of Regulation Y—Bank Holding Company’s Insurance Coverage for Internal Operations

The Garn–St Germain Act approved, and the revised Regulation Y included, insurance agency activities where the activities are solely limited to supervising on behalf of insurance underwrit-

ers the activities of retail insurance agents who sell—

1. fidelity insurance and property and casualty insurance on the real and personal property used in the operations of the bank holding company or its subsidiaries and
2. group insurance that protects the employees of the bank holding company or any of its subsidiaries.

This provision of Regulation Y is reflective of an intent on the part of Congress to avoid preempting certain practices permissible under Texas law. This insurance relates to a particular situation that may have little applicability elsewhere.

3170.0.3.6 Section 225.28(b)(11)(vi) of Regulation Y—Small Bank Holding Companies

The Board has determined in section 225.28(b)(11)(vi) of its Regulation Y that engaging in any insurance agency activity is permissible if the bank holding company has total consolidated assets of \$50 million or less. A bank holding company performing insurance agency activities under this paragraph *may not* engage in the sale of life insurance or annuities except as provided in section 225.28(b)(11)(i) and (iii) of Regulation Y, and it may not continue to engage in insurance agency activities pursuant to that provision more than 90 days after the end of the quarterly reporting period in which total assets of the holding company and its subsidiaries exceed \$50 million.

A bank holding company is required to cease general insurance-agency activities pursuant to this provision within 90 days after the end of the quarterly reporting period in which the bank holding company’s total assets exceed \$50 million. Thereafter, the bank holding company may continue to engage in the sale of insurance pursuant to other exemptions.

3170.0.3.7 Section 225.28(b)(11)(vii) of Regulation Y—Insurance Agency Activities Conducted before 1971

The Board has determined in section 225.28(b)(11)(vii) of its Regulation Y that any insurance agency activity performed at any loca-

tion in the United States directly or indirectly by a bank holding company that was engaged in insurance agency activities before January 1, 1971, as a consequence of approval by the Board before January 1, 1971, is permissible.

3170.0.3.7.1 Agency Activities

The Board adopted a position in section 225.28(b)(11)(vii) permitting any qualifying bank holding company to engage in general insurance-agency activities without restriction as to location or to type of insurance sold (1985 FRB 171 and 1984 FRB 235, 470). A company qualifies under this provision if it was engaged in insurance agency activities as a consequence of Board approval before January 1, 1971. A very limited number of active bank holding companies received such Board approval in the period from passage of the BHC Act in 1956 until January 1, 1971.

The regulation does not limit the insurance agency activities of a qualifying company by requiring that the company engage only in the sale of such types of insurance as it sold before 1971 from such locations as it conducted insurance agency activities before 1971. The Board's regulation permits the limited number of qualifying companies to engage in general insurance-agency activities pursuant to exemption G regardless of their precise insurance agency activities before 1971 (1985 FRB 171 and 1984 FRB 470).

3170.0.4 INCOME FROM THE SALE OF CREDIT LIFE INSURANCE

3170.0.4.1 Policy Statement on Income from Sale of Credit Life Insurance

Effective May 1, 1981, the Board adopted a policy statement (1981 FRB 431) generally prohibiting employees, officers, directors, or others associated with a state member bank from profiting personally from the sale of life insurance in connection with loans made by the bank. The bank may, however, allow their employees and officers to participate in the income under a bonus or incentive plan not to exceed 5 percent of the recipient's annual salary. Income from the sale of credit-related life insurance should most appropriately be credited to the bank, or alternately to a bank

holding company or other affiliate of the bank so long as the bank receives reasonable compensation for its role in selling the insurance. As a general rule, "reasonable compensation" means an amount equivalent to at least 20 percent of the affiliate's net income attributable to the bank's credit life insurance sales. (Insurance agency activities engaged in directly by a bank subsidiary are regulated by the chartering authority. However, intercompany transactions should be reviewed by BHC inspection personnel.)

3170.0.4.2 Disposition of Credit Life Insurance Income

The Comptroller of the Currency has issued a regulation dealing with sales of credit life, health, and accident insurance by national banks which prohibits transfer of insurance commissions to an affiliate of the bank unless commission income in proportion to the shares held by the bank's minority shareholders is placed in trust and paid to them periodically. Where the subsidiary bank is wholly owned by a bank holding company, however, the regulation allows the commissions to be credited to the holding company or to its wholly owned subsidiaries (12 C.F.R. 2).

3170.0.5 INSPECTION OBJECTIVES

1. To determine the extent of insurance operations and the overall condition of subsidiaries engaged in insurance agency and underwriting activities.
2. To determine whether the types of insurance sold are in accordance with the provisions of section 225.28(b)(11) of Regulation Y.
3. To determine the impact of the performance of the activities on the parent bank holding company and its subsidiaries.
4. To suggest corrective action when necessary in the areas of policies, procedures, or laws and regulations.

3170.0.6 INSPECTION PROCEDURES

Where the insurance activities are performed through an insurance agency or underwriting subsidiary, perform the following activities:

1. Compare the company's general ledgers with statements prepared for the latest FR Y-6 and the annual report to the state insurance department.

2. Review minutes of the board of directors meetings.
 3. Review the activity's compliance with the Board's policy statement on income from the sale of credit life insurance (See section 3170.0.4.1) and the Comptroller of the Currency's regulation dealing with the sales of credit life, health, and accident insurance by national banks (12 C.F.R. 2).
 4. Review any agreements, guarantees, or pledges between the subsidiary and its parent holding company or affiliates.
- Where the insurance activities are performed through an insurance agency or underwriting subsidiary or directly by the parent company, perform the following procedures:
1. Obtain copies of insurance policies issued to determine that the types and terms of insurance coverage sold are within the scope of those permitted by the Board under section 225.28(b)(11) of Regulation Y.
 2. Check for compliance with section 106(b) of the 1970 Amendments to the BHC Act (prohibition against tie-in arrangements).

3180.0.1 INSURANCE
UNDERWRITING ACTIVITIES

On December 11, 1972, after consideration of a public hearing held on March 24, 1972, the Board amended Regulation Y to add the activity of underwriting credit life insurance and credit accident and health insurance to the list of activities in which a bank holding company may engage, provided that such insurance is directly related to an extension of credit by the holding company system. Such insurance ensures a bank or bank-related firm of repayment of a credit extension in the event of death or disability while at the same time providing the borrower with financial security in either event. In approving this activity, the Board set forth, in a footnote to Regulation Y, requirements to ensure that performance of the activity would result in demonstrable benefits to the public. The Board stated that applications to engage in underwriting activities would be approved only in cases in which the applicant demonstrates that such approval would benefit the consumer or result in other public benefits and that normally such a showing would be made by a projected reduction in rates charged the public for the insurance or an increase in other public benefits resulting from bank holding company performance of this service.

On October 3, 1986, the Board adopted a revision of the provisions of Regulation Y that deals with permissible insurance agency and underwriting activities for bank holding companies. The general revision of the insurance provisions of Regulation Y combined both the insurance agency and insurance underwriting activities reflects amendments to the Bank Holding Company Act by the Garn–St Germain Depository Institutions Act of 1982. The revision of the provisions relating to insurance underwriting eliminated the rate-reduction requirement that previously applied to those companies engaged in the underwriting of credit life, credit accident and health, and involuntary unemployment insurance. Accordingly, bank holding companies engaging in this activity may charge premiums as permitted by the states.

In order for insurance underwriting (including home mortgage redemption insurance) to be permissible in accordance with section 225.28(b)(11) of the Board’s revised Regulation Y, the insurance must—

1. be directly related to an extension of credit¹ by the bank holding company or any of its subsidiaries and
2. be limited to ensuring the repayment of the outstanding principal balance due on the extension of credit in the event of the death, disability, or involuntary unemployment of the debtor.

3180.0.1.1 Insurance Underwriting
Activities Permissible for Bank Holding
Companies per Section 225.28(b)(11)(i)
of the Board’s Regulation Y—Credit
Insurance

The Board permits the insurance underwriting activities described above as well as the insurance agency activities described in section 3170.0.

In section 225.28(b)(11)(i) of Regulation Y, the Board issued three significant interpretations of the term “extension of credit” as contained in the Garn–St Germain Act. It permits the underwriting of credit-related life, accident and health, and involuntary unemployment insurance (1) with respect to lease transactions where such lease transactions are the equivalent of loans (leasing is addressed in section 3140.0), (2) in connection with loans secured by residential first mortgages, and (3) in connection with the servicing of loans originated or purchased by the applicant bank holding company and subsequently sold.

Permissible insurance underwriting requires that the credit insurance must be directly related to an extension of credit by the bank holding company or any of its subsidiaries. An “extension of credit” includes direct loans to borrowers, and the lease of real or personal property, and loans purchased from other lenders. The first significant interpretation, noted above, allows the inclusion of leasing personal or real property, provided the lease is a nonoperating and full-payout lease, the insurance ensuring the payment of the remaining lease payments that are due in the event of the death, disability, or involuntary unemployment of the lessee.

1. “Extension of credit” includes direct loans to borrowers, loans purchased from other lenders, and leases of real or personal property so long as the leases are nonoperating and full-payout leases.

The interpretation thus defines leases as the functional equivalent of an extension of credit.

The second interpretation in paragraph (i) of the regulation involving the definition of “extension of credit” is the permissibility of underwriting home mortgage insurance, which ensures the repayment of the unpaid balance of a residential first mortgage loan in the event of the death or disability of the mortgagor. Exemption A of the Garn–St Germain Act permits the underwriting of any type of life, disability, and involuntary unemployment insurance related to an extension of credit by a bank holding company as long as the face value of the insurance policy does not exceed the “outstanding balance due” on the extension of credit. The Board continues to require that insurance policies written insure only named borrowers or lessees of a particular bank holding company. Such policies could cover both spouses jointly, but only if both spouses were actual borrowers or lessees under the terms of the agreement with the bank holding company (see 1974 FRB 138).

The Board had previously held that the underwriting of home mortgage insurance is not closely related to banking in part because it is more like general life insurance than credit life insurance and in part because banks have not generally underwritten such insurance (see 1980 FRB 660 and 1982 FRB 318). Recently, however, the Board permitted bank holding companies to underwrite such insurance (see 1986 FRB 339 and 1986 FRB 671). In permitting this activity by order, the Board provided detailed findings that the underwriting of home mortgage redemption insurance is permitted by exemption A of the Garn–St Germain Act, is closely related to banking, and does not present the possibility of such significant adverse effects that it should not be added to the list of activities permissible for bank holding companies. The Board also found that home mortgage insurance supports the lending function. The Board thus believes, for the reasons cited in the above-cited orders, that the underwriting of home mortgage redemption insurance is permissible for bank holding companies.

In approving the underwriting of home mortgage insurance by order, the Board relied on commitments by applicants to inform, in writing, borrowers who are prospective purchasers of such insurance that home mortgage redemption insurance is not required and that, if desired, it may be purchased from other sources. The Board has also relied on a commitment for

written notice to borrowers that the insurance contract may be rescinded at any time after the loan commitment is made and before closing. In processing applications to engage in the underwriting of home mortgage redemption insurance pursuant to the current regulation, the Board, and the Reserve Banks acting pursuant to delegated authority, will continue to require that such notices be provided to borrowers. In addition, the Board will continue to rely on the fact that premiums for such insurance are payable periodically during the term of the extension of credit, so as to increase the borrower’s ability to rescind the insurance and to limit premium financing as an incentive to sell and underwrite such insurance.

A third significant interpretation of the term “extension of credit” found in exemption A of the Garn–St Germain Act involves the underwriting of insurance in connection with the serviced loans (see section 3170.0.3.1) The Garn–St Germain Act limits bank holding companies in general to insurance related to an extension of credit. The term “extension of credit” is used in exemption A to describe transactions in which the funds of the bank holding company or its subsidiaries have been placed at risk, including direct loans or leases or loans that have been purchased. Loans that are merely being serviced by the bank holding company generally would not be covered by this definition.

The underwriting of insurance on loans being serviced is necessary only when the term of the insurance was originally shorter than that of the loan. The bank holding company that is selling and underwriting insurance on the loan that it originated and is servicing is, in effect, only extending the term of its original insurance policy to be coterminous with the duration of the loan. It is providing insurance that it could have provided previously. A bank holding company may not underwrite insurance in the case where it is merely servicing a loan and it has never placed its funds at risk either by originating or purchasing the loan.

3180.0.2 LIMITED PROPERTY INSURANCE RELATED TO AN EXTENSION OF CREDIT (FINANCE COMPANY SUBSIDIARY OF A BANK HOLDING COMPANY)

The Board’s revised regulation does not permit the underwriting of this type of insurance. See section 225.28(b)(11)(ii) of Regulation Y and section 3170.0.3.1 for information on authorized insurance agency activities.

3180.0.3 INSURANCE ACTIVITIES BEFORE 1971

The Board's revised regulation (section 225.28(b)(11)(vii)), as it relates to exemption G of the Garn–St Germain Act, does not authorize underwriting activities for bank holding companies. See section 3170.0.3.7 for information on the respective authorized insurance-agency activities under exemption G.

3180.0.4 UNDERWRITING AS REINSURER

The majority of bank holding company subsidiaries engaged in insurance underwriting are reinsurers rather than direct underwriters. As reinsurer, these companies engage a direct insurer to issue the policies, collect the premiums, pay claims, maintain accounting books and records, prepare federal and state tax returns, and perform other services necessary to conduct the insurance activities. Usually, such reinsurance companies will have executed a reinsurance agreement and a service agreement with the direct underwriter which spell out all services to be performed and set the fees to be paid for such services. The above arrangement involves a minimum of activity by the reinsurer and is probably most often chosen by bank holding companies since it does not place additional burdens on management and precludes hiring actuaries and other professional personnel to manage the insurance company.

There are many ratios or measures used to evaluate the condition of insurance underwriters. The National Association of Insurance Commissioners has developed a system consisting of nine ratios that measure various aspects of life and health insurance companies' financial condition and stability (*The Early Warning System for Life and Health Insurance Companies*). These tests establish benchmarks which are likely to distinguish between troubled and sound companies. The examiner may wish to compare the subject company's ratios to these benchmarks. When making comparisons, however, the examiner should recognize that one insurer may require a somewhat better ratio than another due to greater underwriting and investment risks. Smaller companies will generally maintain a proportionately larger surplus account since loss experience on a small volume of business tends to fluctuate more widely.

Another possible source of information available to help determine a company's condition is *Best's Insurance Reports*. The report is pub-

lished annually and provides pertinent financial and historical data for legal reserve life insurance companies operating in the United States and Canada. It assigns a rating for each company in the report. Information presented in the report is taken from annual statements filed with the state insurance departments. It should be noted that reports filed with the insurance departments are prepared using the statutory method of financial accounting and presentation rather than generally accepted accounting principles. Beginning in 1973, insurance companies were required to adhere to generally accepted accounting principles for certification of financial statements (see *Audits of Stock Life Insurance Companies*, American Institute of Certified Public Accountants), however, they continue to report under the statutory method to the state insurance departments. The statutory method is basically a cash-basis accounting presentation which generally depicts a more conservative position. Certain assets are "not admitted" by regulatory authorities in the financial presentation because they are not readily convertible into cash for the payment of claims and expenses.

Policy reserves represent the primary liability portion of underwriters' balance sheets. There are several acceptable methods permitted by state authorities for calculating these reserves. Most of these methods are rather complicated and a description of their calculation is beyond the scope of this manual. However, insurance companies are generally closely regulated by state authorities, which place primary importance on determining the adequacy of the policy reserves. A review of the latest available insurance examination report should give an evaluation of the adequacy of the reserves.

Reinsurance arrangements may distribute the insurance and losses in many different ways between the direct insurer and the reinsurer. An understanding of such arrangements is essential in determining the extent of risk incurred by the company being inspected.

3180.0.5 INSPECTION OBJECTIVES

1. To determine the extent of underwriting activities and the overall condition of subsidiaries engaged in underwriting.
2. To determine whether the activities performed are within the scope of those permitted under section 225.28(b)(11) of Regulation Y.

3. To determine the impact of the underwriting operations on the parent bank holding company and its subsidiaries.
4. To suggest corrective action where necessary in the areas of policies, procedures, or laws and regulations.
4. Review intercompany transactions, including balances maintained with or assets purchased from affiliated banks.
5. Review any agreements, guarantees, or pledges between the company and its parent holding company or affiliates.

Where the insurance activities are performed either directly or through an underwriting subsidiary, perform the following procedures:

3180.0.6 INSPECTION PROCEDURES

Where the insurance underwriting activities are performed through an underwriting subsidiary, perform the following procedures:

1. Compare the company's general ledgers with statements prepared for the latest FR Y-6. (Generally, records are maintained on the statutory accounting basis and are more easily tied to the financial statements in the annual report to the state insurance department).
2. Review minutes of the board of directors meetings.
3. Review the quality and liquidity of the subsidiary company's investments in CDs, stocks, bonds, or other marketable securities.
1. Review copies of any reinsurance and/or service agreements executed with other insurance companies.
2. Review the latest annual report submitted to the state insurance department.
3. Review the latest report of examination prepared by the state insurance department.
4. Check calculation of premium charges by a random sample of policies for adherence to the state rate structure.
5. Obtain copies of insurance policies issued to customers to determine that the types of insurance coverage and terms offered are within the scope of those permitted under section 225.28(b)(11) of Regulation Y.

3180.0.7 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Permissible underwriting activities	12 U.S.C. 1843(c)(A)–(G)	225.28(b)(11)	4–050.1	
Underwriting of permissible credit-related home mortgage insurance				1986 FRB 671, 339

Underwriting of joint credit life insurance			4–337	39 Federal Register 7493 1974 FRB 138

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

Courier activities are permissible for bank holding companies if the items being transported by the courier are themselves related to bank operations. Examples of such items are drafts, money orders, travelers' checks, commercial papers, written instruments, and data processing material. Currency and bearer-type negotiable instruments which require more than normal security measures may not be transported by the company.

If the courier company operates under the exemptive provision of section 4(c)(8) of the Bank Holding Company Act, the following restrictions are placed on its operations to ensure competition:

1. The company must be a separate, independent corporate entity.
2. The company must be profit-oriented and not subsidized by the holding company system.
3. Services of the company must be performed on a specific-fee basis with direct payment from the customer. Payment may not be made indirectly such as through maintenance by the customer of deposit balances at an affiliated bank.
4. Upon request, the company must furnish comparable services at comparable rates to firms which compete with banking or data processing subsidiaries of its parent company, unless compliance with the request would be beyond the practical capacity of the company.

The last restriction was intended to prevent use of bank-affiliated courier services for the purpose of gaining an advantage over competitors to whom courier services were not otherwise available.

3190.0.1 INSPECTION OBJECTIVES

1. To determine if the company is operating in compliance with applicable laws and regulations, and ensure that corrective action will be taken, if appropriate.

2. To determine if courier services are provided to competing institutions upon their request if courier services are not otherwise available.

3190.0.2 INSPECTION PROCEDURES

1. Determine whether the company makes known to its customers its minimum rate schedule for services and its general pricing policies.
2. Determine whether the company maintains for a period of two years or more the records of each request for service which it has denied to firms competing with the banking and data processing subsidiaries of its parent company. The reasons for the denial must also be recorded and maintained for a like period.
3. Review income statements of the company to ascertain whether the company is operating profitably, without a subsidy in any manner from any entity within the holding company system. Any operating losses sustained over an extended period of time are inconsistent with continued authority to engage in courier services.
4. Determine whether the materials transported by the company are restricted to those which would normally be exchanged among banks and banking institutions, including audit and accounting media of a banking or financial nature, and other business records or documents used in processing such media.

3190.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Courier activities of bank holding companies		225.28(b)(10)		1973 <i>Fed. Reg.</i> 32136 1975 <i>Fed. Reg.</i> 36309
Conditions of entry into courier activities		225.129	4-180	

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

On February 26, 1974, the Board amended Regulation Y to permit bank holding companies to engage in the activity of providing bank management consulting services to nonaffiliated commercial banks. The advisee institution must be a “bank” as that term is defined by section 2(c) of the BHC Act or an operations subsidiary of such an institution. (See 12 C.F.R. 250.141.) Effective April 20, 1982, the Board expanded this activity by permitting holding companies to provide management consulting advice to non-bank depository institutions. When expanding the activity to include management consulting advice to nonbank depository institutions, the Board indicated that the advisory services provided to nonbank institutions should generally be the services that were then being provided to banks.

Effective April 21, 1997, management consulting was expanded in Regulation Y (section 225.28(b)(9)) to allow bank holding companies to provide management consulting services to any customer on any matter so long as the total annual revenue derived from third-party management consulting services by a nonbank subsidiary of the bank holding company is less than 30 percent of the subsidiary’s total annual revenues derived from all management consulting activities. The Board continues to view “management consulting” as including, but not limited to, providing analysis or advice as to a firm’s—

1. purchasing operations, such as inventory control, sources of supply, and cost minimization subject to constraints;
2. production operations, such as quality control, work measurement, product methods, scheduling shifts, time and motion studies, and safety standards;
3. market operations, such as market testing, advertising programs, market development, packaging, and brand development;
4. planning operations, such as demand and cost projections, plant location, program planning, corporate acquisitions and mergers, and determination of long-term and short-term goals;
5. personnel operations, such as recruitment, training, incentive programs, employee compensation, and management-personnel relations;
6. internal operations, such as taxes, corporate organization, budgeting systems, budgeting control, evaluation of data processing systems, and efficiency evaluations; and

7. research operations, such as product development, basic research, and product design and innovation.

By interpretation, the Board previously determined that it considers bank management consulting advice to include, but not be limited to, advice concerning (1) bank operations, systems, and procedures; (2) computer operations and mechanization; (3) implementation of electronic funds transfer systems; (4) site planning and evaluation; (5) bank mergers and the establishment of new branches; (6) operation and management of a trust department; (7) international banking and foreign-exchange transactions; (8) purchasing policies and practices; (9) cost analysis, capital adequacy, and planning; (10) auditing; (11) accounting procedures; (12) tax planning; (13) investment advice as authorized in section 225.28(b)(6) of Regulation Y; (14) credit policies and administration, including credit documentation, evaluation, and debt collection; (15) product development, including specialized lending provisions; (16) marketing operations, including research, market development, and advertising programs; (17) personnel operations including recruiting, training, evaluation, and compensation; and (18) security measures and procedures. Providing management consulting advice on compliance with laws and regulations may be accomplished only when these activities are incidental to a primary consulting activity and when such advice would not constitute the rendering of legal advice.

In general, those consulting services that correspondent banks traditionally have provided to their respondents (both bank and nonbank depository institutions) are considered to be included within the scope of Regulation Y as permissible services to be provided by nonbank holding company subsidiaries to nonaffiliated bank and nonbank depository institutions.

3200.0.1 MANAGEMENT CONSULTING LIMITATIONS

Recognizing the potential for conflict-of-interest situations, such as the possibility for anticompetitive cooperative arrangements, improper use of confidential information, and similar abuses that this activity could entail, the Board incorporated in Regulation Y a few restrictions on a

bank holding company. With regard to affiliation status, neither the bank holding company nor any of its subsidiaries may own or control directly or indirectly more than 5 percent of the voting securities of the client institution. The prohibition would not apply when the shares were acquired in satisfaction of a debt previously contracted or to shares acquired in a fiduciary capacity without sole discretionary voting authority. A bank holding company may offer consulting advice to a client institution whose shares it holds in a fiduciary capacity with sole discretionary voting rights if said holding company does not hold more than 5 percent of the voting shares of that institution. Bank holding companies are permitted to have common management officials with the client institution to which they provide management consulting services if such interlocks would be permissible under exceptions found in the Board's Regulation L (Management Official Interlocks) that apply to such institutions in need of management or operating expertise (12 C.F.R. 212.4(b)).

Management consulting services may not be provided to a client on a daily or continuing basis except where necessary to instruct the client on how to perform the services for itself. The Board has informed bank holding companies that their management consulting subsidiaries should refrain from entering relationships on a daily or continuing basis even when the client institution may be experiencing financial or managerial difficulties. Particular caution should be exercised when a bank holding company contemplates the subsequent acquisition of the client institution. However, when a bank holding company is attempting to acquire a troubled depository institution, limited management consulting services may be offered via an on-premises bank holding company employee. Nevertheless, the representative should not have the authority to lend or make personnel decisions. Failure to heed these guidelines not only would cause the bank holding company to exceed the permissible bounds of the activity, but also could cause the BHC to acquire control of the client institution that might constitute an acquisition of a subsidiary within the meaning of section 3(a) of the BHC Act. Section 225.31(d)(2)(i) of Regulation Y indicates that a rebuttable presumption of control shall exist when a company enters into an agreement, such as a management contract, with a bank or other company pursuant to which the first company or any of its subsidiaries exercises significant influ-

ence over the general management or overall operations of the bank or other companies. Reserve Bank personnel are encouraged to contact the Board's applications section to discuss the restrictions on this activity whenever a BHC proposes to have its personnel assist a troubled or problem institution.

When evaluating a BHC's application to engage in management consulting, it is important to note whether the applicant bank holding company has exhibited the necessary expertise in operating its own subsidiaries—and whether this expertise qualifies it to offer advice to others.

3200.0.2 INSPECTION OBJECTIVES

1. To verify that the bank holding company is performing only those types of management consulting services at the locations for which it received prior regulatory approval.
2. To verify that the advice being provided is within the scope of the approval and consistent with the activities of the interpretation (12 C.F.R. 225.131) and section 225.28(b)(9) of Regulation Y.
3. To determine that the bank holding company does not own or control, directly or indirectly, securities of its client depository institutions except for shares acquired as the result of a default on a debt previously contracted or shares held in a fiduciary capacity (within certain limits), provided the holding company does not have sole discretionary authority to vote more than 5 percent of the client's shares. (See 12 C.F.R. 225.131.)
4. To determine that the bank holding company does not control the activities of a client institution by virtue of nonexempt interlocking directors.
5. To determine that services rendered to the client institutions are not being provided on a daily or continuing basis.
6. To determine that disclosure is made to each client of (1) the names of all depository institutions that are affiliates of the consulting company and (2) the names of all existing client institutions located in the same county (or counties) or standard metropolitan statistical area (or areas) (SMSA) as the client institution.

3200.0.3 INSPECTION PROCEDURES

A thorough review of pertinent records, contracts, lists of clients, and documentation of the

services being provided to clients should be undertaken to determine that adequate management information systems and detailed revenue and other reports are available to verify the BHC's compliance with the Board's rule on the revenue limitations in section 225.28(b)(9) of Regulation Y. Determine that services are being provided to the appropriate customer base and within the scope of the Board's approval. Further, the examiner should ascertain the existence of procedures to inform each potential client of the names of all depository and client institutions that are affiliates of the consulting company and of the names of all existing clients located in the same market area as the prospective client.

For management consulting services that do not involve any financial, economic, accounting, and auditing matters, verify that the revenues earned are within the limits permitted by the Board's regulations and interpretations. The basis for any fee structure should be determined to ascertain that the advice is being rendered on an explicit-fee basis, such as an hourly or daily

rate. Such fees should not be affected by factors not directly related to the service, such as balances maintained by the client at any subsidiary depository institution of the bank holding company. The extent of the consultant company's involvement in the day-to-day affairs and operation of the client should also be reviewed.

The absence of parent company control, direct or indirect, over the clients of the management consulting subsidiary should be established. The examiner should compare listings of directors and principal officers of the bank holding company, its various affiliates, and the clients with due regard to exempt interlocks. The examiner should determine the extent of ownership or control by the bank holding company and its affiliates of any equity securities in its clients by requesting a listing of all shares owned in outside organizations. Overall conclusions, including recommendations concerning the operation, apparent violations, and any possible control of client institutions and conflicts of interest, should be discussed with parent company management and detailed in the inspection report.

Within Regulation Y (section 225.28(b)(9)(ii)), management consulting and counseling activities include employee benefits consulting services. These employee benefits consulting services include providing consulting services to employee benefit, compensation, and insurance plans, including designing plans, assisting in the implementation of plans, providing administrative services to plans, and developing employee communication programs for plans.

The initial Board orders that were issued to permit employee benefit consulting services are summarized here as historical examples of the nonbanking activity. Commitments made in those Board orders should not be relied upon. Refer only to the provisions within the current Regulation Y, as cited above.

3202.0.1 BOARD ORDERS INVOLVING EMPLOYEE BENEFITS CONSULTING

A bank holding company (the applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and Regulation Y to acquire 100 percent of the voting shares of a company that provides a full range of services involving employee benefits plans. The services are divided into four basic types of activities:

1. *Plan design.* Designing employee benefit plans, including determining actuarial funding levels and cost estimates.
2. *Plan implementation.* Providing assistance in implementing plans, including assistance in the preparation of plan documents and in the implementation of employee benefit administration systems.
3. *Administrative services.* Providing administrative services with respect to plans, including recordkeeping services, calculating and certifying employment reports and government filings pursuant to ERISA, and providing information to a client's legal counsel in labor relations and negotiations.
4. *Employee communications.* Developing employee communication programs with respect to plans for the benefit of the client.

The applicant represented that all of the proposed activities were included in trust company or financial or investment advisory service activities permissible under Regulation Y. Although certain employee benefits consult-

ing activities (as conducted by the company being acquired, particularly activities involving plan administration) are conducted by trust companies or trust departments of banks in their capacities as trustees or custodians of employee benefit plans and investment managers of plan assets, it was not apparent that the *complete range* of employee benefits consulting services were generally conducted by trust companies or authorized by the Board as permissible trust company activities under Regulation Y.

The Board believed that employee benefits consulting was essentially a financial planning activity involving preparing and conveying financial data to a client, which it had previously determined to be closely related to banking and permissible under Regulation Y in the areas of investment advisory services, data processing services, and courier services. The record did not indicate, however, that employee benefits consulting is wholly encompassed within *any or all* of those activities. The Board, therefore, did not agree with the applicant that *all* of the proposed activities were currently authorized for bank holding companies under existing provisions of Regulation Y.

A review of the four basic types of activities revealed that many of the proposed employee benefits consulting activities either were already specifically engaged in by banks and trust companies, or were functionally related to activities in which banks and trust companies were regularly engaged. The Board recognized, however, that the actuarial aspect of the employee benefits consulting activities is not generally included in trust company or bank activities. Such activities are limited in scope and purpose in that they are conducted primarily as a means to ensure adequate funding of defined benefits plans. In this case, they were performed solely as a means for the applicant to provide a full range of benefits-planning activities for its clients. The acquired company's actuarial services would not be conducted as an independent activity, but only as a necessary and integrally related component of employee benefits consulting.¹

1. As part of its acquisition, the bank holding company proposed to assist firms in IRS audits of plans; inform clients of developments in employee benefit programs through newsletters and other correspondence and through participation in seminars, public programs, and other forums; and engage in professional actuarial activities and other activities incidental

In *Association of Data Processing Organizations, Inc. v. Board of Governors*, 745 F.2d 277 (D.C. Cir. 1984), the court of appeals held that the Board may permit those activities that are “a part of” the overall permissible activity where, as here, “in both market contemplation and technological reality, the service is a unitary one.” Based on this ruling, the Board concluded

that the applicant’s proposed activities are permissible as closely related to banking, and were approved on June 19, 1985 (1985 FRB 656).

Another Board order permitting the provision of employee benefits consulting services, which is slightly different from the order cited above, is found in 1986 FRB 337. See also 1986 FRB 729 and 1987 FRB 158, 681.

to the actuarial profession. The activities are generally related to the type of actuarial activities performed for purposes of engaging in employee benefits consulting and that would not generate any significant income. Such activities were, therefore, permissible as incidental to the bank holding company’s approved activities. The applicant also proposed to provide expert actuarial opinions of a general nature for purposes such as divorce actions and personal injury litigation. The Board believed that such activities were beyond the scope of incidental activities and were not permissible.

Career counseling services may be provided to—

1. a financial organization¹ and individuals currently employed by, or recently displaced from, a financial organization;
2. individuals who are seeking employment at a financial organization; and
3. individuals who are currently employed in or who seek positions in the finance, accounting, and audit departments of any company.

The initial Board order that was issued to permit the provision of career counseling services is summarized below as a historical example on the origination of this nonbanking activity. Commitments made in the Board order should not be relied upon. See the current provisions of Regulation Y (section 225.28(b)(9)(iii)) for that purpose.

3204.0.1 CAREER COUNSELING— INITIAL BOARD ORDER

A bank holding company (the applicant) applied for the Board's approval under section 4(c)(8) of the BHC Act and the Board's Regulation Y to provide career counseling services to unaffiliated parties through its wholly owned nonbank subsidiary. The applicant proposed to expand its employee benefits consulting services to include career counseling activities. The nonbank subsidiary currently provides these services to the applicant and its affiliates under section 4(c)(1)(C) of the BHC Act. It plans to expand the provision of these services nationwide to unaffiliated companies and individuals in a wide array of industries. The services would provide assistance to individuals who are employed and seeking advancement in their careers and to unemployed individuals who are seeking new employment. The nonbank subsidiary plans to provide these services directly to companies and advise these companies on effective methods of providing career counseling services to their employees.

The nonbank subsidiary will advise unaffiliated organizations on the advantages of including career counseling services as part of a comprehensive employee benefits plan. It will assist

these organizations in establishing their own facilities to implement career counseling services for their current or former employees. If the organization does not want to operate its own counseling facility, the nonbank subsidiary will provide the services directly to the organization's current or former employees at the nonbank subsidiary's career assistance center.

The proposed career counseling services include (1) assessing an individual's education, prior business experience, salary history, interests, and skills to aid in finding employment or evaluating opportunities for career development; (2) assisting in the preparation of résumés and cover letters; (3) contacting employers regarding employment opportunities and making this information available to clients; (4) conducting general workshops on the financial aspects of unemployment, current economic trends, the process of finding a job, and alternative career options; and (5) providing individual counseling on setting and obtaining employment goals.

The issue presented to the Board was whether the proposed activities are closely related to banking. The Board had not previously determined whether providing career counseling services to unaffiliated parties is closely related to banking under section 4 of the BHC Act and permissible for bank holding companies. The Board viewed the applicant's proposal in four parts: (1) career counseling services for financial organizations (that is, banks, bank holding companies and their subsidiaries, thrift institutions, and thrift holding companies and their subsidiaries) and employees of financial organizations; (2) career counseling services for individuals who are unemployed or employed outside the banking industry and who seek employment at banks and other financial institutions; (3) career counseling for individuals seeking financial positions (such as chief financial officer, cash management positions, and accounting and auditing personnel); and (4) career counseling services generally for any individual seeking any type of employment at any type of company.

The Board determined that career counseling services are closely related to banking when they are provided for (1) financial organizations and individuals currently employed at, or recently displaced from, a financial organization; (2) individuals who seek employment at a financial organization; and (3) individuals who

1. Financial organization means insured depository institution holding companies and their subsidiaries, other than nonbanking affiliates of diversified savings and loan holding companies that engage in activities not permissible under section 4 (c)(8) of the BHC Act.

are currently employed in, or who seek, financially related positions at any company. The Board concluded that the record does not presently support a finding that general career counseling services are otherwise closely related to banking.²

The applicant will provide career counseling services on a fee basis with no guarantee of

employment. The Board approved the order on November 8, 1993. As a condition to its approval, the applicant must comply with all commitments made in connection with the application, as well as with other conditions stated within Regulation Y and the Board's order. (1994 FRB 51)

2. When providing career counseling for an individual within one of the three proposed categories, the applicant was permitted to provide limited career counseling services regarding positions outside of these categories as "incidental" to the proposed career counseling services. However, the applicant is not permitted to hold itself out as a provider of general career counseling services for individuals seeking career opportunities outside the banking or financial industries. Regulation Y and judicial decisions construe "incidental activities" as activities that must be necessary to the provision of a closely related activity in order to be considered incidental. (See 12 C.F.R. 225.21(a)(2) and *National Courier Association v. Board of Governors*, 516 F.2d 1229, 1240-41 (D.C. Cir. 1975).)

Section 4(c)(8) of the BHC Act (Money Orders, Savings Bonds, and Travelers' Checks) Section 3210.0

The Board has included in Regulation Y (see section 225.28(b)(13)) the authority to issue and sell at retail money orders and similar consumer-type payment instruments; the sale of U.S. savings bonds; and the issuance and sale of travelers' checks. Previously, the Board, through various orders, had authorized over time various nonbanking activities in this regard. Initially, it permitted by order and then the Board had included in the list of permissible activities the sale and issuance at retail of money orders having a face value of not more than \$1,000, the sale of U.S. savings bonds, and the issuance and sale of travelers' checks. In its original order, effective February 26, 1979, the Board did not include the issuance of travelers' checks. However, after overwhelmingly favorable responses to its proposal to include the issuance of travelers' checks to the list of permissible activities, the Board included this activity effective December 21, 1981. As part of the Board's regulatory review of Regulation Y, and its subsequent overhaul, which was finalized and made effective February 4, 1984, the *issuance* of money orders was listed as a permissible activity. On March 16, 1984, the Board, by order, increased the face value of the payment instruments that the bank holding company could issue to \$10,000, if the bank holding company agreed to meet certain weekly reporting requirements (1984 FRB 364). Also, by order dated December 16, 1985, the Board allowed the sale of official checks with no maximum limitation as long as the proceeds of checks in excess of \$10,000 were deposited in a demand account and the bank holding company made weekly reports of these checks as well as money orders that had a face value of up to \$10,000 (1986 FRB 148). The Board later authorized the issuance and selling of variably denominated payment instruments without limitation as to face value. (See 1993 FRB 42.) As part of the comprehensive revision of Regulation Y, effective April 21, 1997, the Board removed the limitation of the face amount of payment instruments. (See section 225.28(b)(13) of Regulation Y.)

3210.0.1 INSPECTION OBJECTIVES

1. To determine that the scope of the activity is within the parameters established by the Board.
2. To determine if there is any loss exposure due to the lack of systems and controls.

3210.0.2 INSPECTION PROCEDURES

In determining whether a significant degree of risk exposure to the BHC exists, the examiner should address the following questions to management, when considered appropriate:

1. Are there written agreements between the bank and its parent concerning the obligations of each for the sale of money orders and U.S. savings bonds and for the issuance and sale of travelers' checks? Do the agreements provide information on the fees, reimbursable expenses, sharing of overhead expenses, and taxes?
2. Who prints the travelers' checks and money orders?
3. Is the printer bonded or covered by insurance?
4. Is the newly printed inventory of travelers' checks and money orders received in dual custody?
5. If check inventory sent to outlets is on a consignment basis, does the consignee acknowledge receipt on a "trust receipt"?
6. Does the consignment "inventory invoice" describe, in complete detail, the number of checks, serial numbers, and denominations?
7. How are inventories and sales monitored at the outlet level?
8. What are the maximum dollar shipments for the day, per outlet and per package?
9. Does the subsidiary bank maintain the settlement account?
10. What procedures are in effect to establish the checks that have been sold?
11. What are the remittance requirements for the agents for checks sold?
12. If losses and redemptions exceed proceeds from sales, who makes up the deficiency?
13. Does the parent invest the settlement account's float, generated by the excess of proceeds received over checks redeemed, in long-term investments?
14. If a nonbank subsidiary acts as agent on behalf of its parent, what fee is paid by the parent other than commissions on the sale of checks?
15. Is the subsidiary reimbursed for its expenses?
16. What has been the history of losses?
17. How long are losses carried in suspense accounts before being charged off?
18. Does the subsidiary bank maintain compensating balances in financial institutions as

an inducement for the financial institutions to carry the holding company's travelers' checks? If so, does the parent compensate

the bank for lost income?

19. What internal audit procedures are in place? Discuss frequency, scope, and follow-up.

3210.0.3 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws</i> ¹	<i>Regulations</i> ²	<i>Interpretations</i> ³	<i>Orders</i>
Adding activity to permissible list (excluding issuance of travelers' checks)		225.28(b)(13)		1979 FRB 265
Adding the issuance of travelers' checks to permissible list		225.28(b)(13)		1981 FRB 912
Increased face value or payment instruments to \$10,000, if weekly reports provided				1984 FRB 364
Sale of official checks with no maximum amount, if checks in excess of \$10,000 deposited in demand deposit account, if weekly reports of checks made as well as money orders with face value up to \$10,000				1984 FRB 148
Sale of official checks with no maximum limitation provided the proceeds of checks in excess of \$10,000 were deposited in a demand account and that weekly reports of the official checks were made as well as the total value of official checks with face values exceeding \$10,000				1986 FRB 148
Issuing and selling drafts and wire transfers in foreign currencies				1988 FRB 252
Issuing and selling variably denominated payment instruments without limitation as to face value				1993 FRB 42
Removal of the limitation on the face amount of payment instruments		225.28(b)(13)		1997 FRB 275

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. Federal Reserve Regulatory Service reference.

As noted in section 3210.0, the Board has authorized the issuance and sale of various payment instruments. This section provides brief historical summaries of the initial Board orders that led to the incorporation of the activity into the Regulation Y “laundry list.” Provisions within the Board orders, including commitments and any regulatory references, should not be relied upon as provisions that are currently authorized. For the current regulatory authorization, see section 225.28(b)(13) of Regulation Y, effective April 1997.

3210.1.1 ISSUING CONSUMER-TYPE PAYMENT INSTRUMENTS HAVING A FACE VALUE OF NOT MORE THAN \$10,000

A bank holding company applied for the Board’s approval under section 4(c)(8) of the BHC Act and section 225.23 of the Board’s Regulation Y to engage de novo in the issuance and sale of variably denominated payment instruments with a maximum face value of \$10,000. The instruments would be sold in U.S. dollars and foreign currency by the holding company’s subsidiaries and unaffiliated financial institutions and would consist of domestic and international money orders and official checks. They would also be used for certain internal transactions, such as payroll. The Board had recently amended Regulation Y to include on the list of permissible nonbanking activities the issuance or sale of money orders and other similar consumer-type instruments with a face value not exceeding \$1,000. The Board concluded that an increase in the denomination of such instruments would not affect their fundamental nature.

As a condition to its approval, the Board required the bank holding company to file with the Board weekly reports of daily data on the activity. The issuance of such instruments with a face value of more than \$1,000 could have an adverse effect on the bank holding company’s reserve base. Because reserve requirements serve as an essential monetary policy tool, the Board was concerned that the proposal might result in adverse effects resulting from an erosion of reservable deposits within the banking system (1984 FRB 364).

3210.1.2 ISSUING AND SELLING OFFICIAL CHECKS WITH NO MAXIMUM FACE VALUE

Effective December 16, 1985, the Board approved by order a bank holding company’s application to sell official checks with no maximum limitation on the face value, so long as the proceeds of checks in excess of \$10,000 were deposited in a demand account at its subsidiary until the respective payment instrument was paid. To address the Board’s monetary policy concerns about the activity potentially causing a significant reduction in the reserve base or resulting in other adverse effects on the conduct of monetary policy, the bank holding company agreed to make weekly reports of all outstanding instruments (including money orders and official checks) with face values of up to \$10,000, and also the aggregate value of all official checks with face values exceeding \$10,000 (1986 FRB 148).

3210.1.3 ISSUING AND SELLING DRAFTS AND WIRE TRANSFERS PAYABLE IN FOREIGN CURRENCIES

A foreign bank subject to the BHC Act applied for the Board’s approval under section 4(c)(8) of the act and section 225.23(a)(3) of Regulation Y to engage de novo through a wholly owned subsidiary in the issuance and sale of foreign drafts and wire transfers with unlimited face amounts that are payable in foreign currencies. The applicant proposed to conduct these activities through the subsidiary as well as through a nationwide network of unaffiliated selling agents, including commercial banks, thrift institutions, and others.

The Board previously determined that the issuance and sale of money orders and similar payment instruments with a maximum face value of \$1,000 is closely related to banking. (See former section 12 C.F.R. 225.25(b)(12).)¹ The Board also approved by order a limited number of applications to engage in the issuance and sale of (1) payment instruments with a \$10,000 maximum face amount (see 1987 FRB 727) and

1. Effective April 21, 1997, the \$1,000 limit was eliminated. The revised Regulation Y (see section 225.28(b)(13)) authorizes the issuance of payment instruments of any amount.

(2) payment instruments with unlimited face amounts, subject to certain operational and reporting requirements (see 1986 FRB 148).

In considering the previous applications, the Board expressed concern that the issuance of payment instruments in denominations larger than \$1,000² would have an adverse effect on the reserve base because such instruments are not subject to the transaction reserve account requirements of the Board's Regulation D. The Board noted that because reserve requirements serve as an essential monetary policy tool, the conduct of monetary policy could be adversely affected by the erosion of reservable deposits in the banking system.

To address the concerns expressed in previous Board orders, the applicant committed that the proceeds of all sales of foreign-currency-denominated instruments will be held in demand deposit accounts at U.S. commercial banks. Deposits stemming from the sale of instruments with denominations of \$10,000 or less are to be swept daily into nonreservable instruments. The total proceeds of the sale of any payment instruments with denominations greater than \$10,000 will be deposited in a demand deposit account at a U.S. depository institution, to be used to purchase foreign currency for each particular payment instrument at the time of the transaction. The Board determined that these commitments and other procedures outlined in the order adequately addressed its concerns about the potential adverse effects on the reserve base. The Board approved the application on February 3, 1988, subject to the continued evaluation of its potential for adverse effects on the conduct of monetary policy (1988 FRB 252).

3210.1.4 ISSUING AND SELLING VARIABLY DENOMINATED PAYMENT INSTRUMENTS WITHOUT LIMITATION AS TO FACE VALUE

A bank holding company applied for the Board's approval under section 4(c)(8) of the BHC Act

to engage both directly and indirectly through a bank holding company nonbank subsidiary in the issuance and sale of variably denominated payment instruments without limitation as to face value and without the reporting and reservable deposit requirement previously imposed by the Board on issuers of such instruments.

The Board previously determined by regulation that the issuance and sale of money orders and other similar consumer-type payment instruments with a face value not exceeding \$1,000³ is an activity that is closely related to banking and is therefore permissible for bank holding companies (see former section 225.25(b)(12) of Regulation Y (12 C.F.R. 225.25(b)(12))).

Effective December 22, 1992, the Board amended Regulation D to impose reserve requirements on teller's checks. The Board's notice amending Regulation D stated that bank holding companies that had received prior approval under section 4(c)(8) of the BHC Act to issue and sell variably denominated payment instruments—subject to the demand deposit requirement, reporting requirement, or limits on the denomination of payment instruments—could request relief by letter from those conditions. The Board believes that the adverse effect of erosion of the reserve base is addressed in the Regulation D revisions, and special reporting and demand deposit requirements previously imposed by the Board in connection with approvals to engage in the issuance and sale of variably denominated payment instruments in amounts over \$10,000 are no longer needed. As a result, the Board determined not to impose those requirements on the applicant and to grant the applicant's request for relief from the reporting requirement to which it was subject. The Board approved the application on November 12, 1992, subject to the Regulation D effective date of December 22, 1992, and the conditions and commitments stated in the order (1993 FRB 42).

2. See footnote 1.

3. See footnote 1.

Section 4(c)(8) of the BHC Act (Arranging Commercial Real Estate Equity Financing) Section 3220.0

Effective September 1, 1982, the Board approved an application of a bank holding company to engage in, through a nonbank subsidiary, the activity of arranging equity financing for certain types of income-producing properties (1982 FRB 647). The Board limited the activity by requiring that the holding company act only as an intermediary between developers and investors to arrange financing, and imposed certain other conditions to prevent the holding company from engaging in real estate development or syndication. At that time, however, the Board did not expand the Regulation Y list of permissible activities for bank holding companies to include this activity.

In February 1984, the Board added the arranging of commercial real estate equity financing to the list of permissible nonbanking activities in Regulation Y (section 225.28(b)(2)(ii)). Regulation Y incorporated the limitations placed on the activity by the Board's 1982 order, which is discussed below.

Equity financing involves arranging for the financing of commercial or industrial income-producing real estate through the transfer of the title, control, and risk of the project from the owner or developer to one or more investors. In performing the equity-financing activity for commercial or industrial income-producing real estate, consultations should be made with the owner or developer to determine the nature, objectives, and financing arrangements for the property or project. The project's concept, architectural design, building layout, suitability for its purpose and prospects, traffic flow, as well as competing projects, source(s) of customers, nature of the market, projected rentals and income flows, timetables for completion, and the avail-

ability of construction and long-term financing for the property, have to be carefully reviewed. Financing alternatives, including equity financing, should be predetermined.

The Board has found that the particular expertise and analysis required to provide equity financing for large commercial or industrial income-producing properties is functionally and operationally similar to the analysis and expertise that is required when a bank provides traditional mortgage financing services for such properties. This finding is supported by the fact that equity financing can be viewed as an economic substitute for long-term mortgage financing. The Board's view is that equity financing, subject to the limitations described below, bears a functional relationship to investment advisory services that are traditionally and lawfully performed by commercial banks with respect to commercial and industrial real estate.

The Board therefore, in 1984, approved adding the arranging of commercial real estate equity financing to the list of permissible nonbanking activities in Regulation Y. On April 21, 1997, the comprehensive revision of Regulation Y removed certain restrictions from this nonbanking activity. The activity currently consists of acting as an intermediary for the financing of commercial or industrial income-producing real estate by arranging for the transfer of title, control, and risk of such a real estate project to one or more investors, if the bank holding company and its affiliates do not have an interest in, or participate in, managing or developing a real estate project for which it arranges equity financing, and do not promote or sponsor the development of the property.

4(c)(8)—Agency Transaction Services for Customer Investments (Securities Brokerage) Section 3230.0

WHAT'S NEW IN THIS REVISED SECTION

Effective July 2008, this section has been revised to incorporate a name change to the Financial Industry Regulatory Authority, or FINRA (formerly, the National Association of Securities Dealers, or NASD).

3230.0.1 OVERVIEW OF SECURITIES BROKERAGE AS A NONBANKING ACTIVITY

In addition to providing a full panoply of financial services to their customers, banks and bank holding companies seek “off-balance-sheet” or non-asset-building sources of revenue. Securities brokerage is one type of endeavor perceived to have growth and profit potential. The main reasons for this are easy market entry, low start-up costs, and maximum use of a branch system and customer base.

After the deregulation of brokerage commissions in 1975, certain brokers began to compete for securities business by drastically reducing their commissions. In order to reduce operating expenses, yet still remain profitable at reduced commission rates, these firms ceased investment research and offered their customers a reduced level of service by “unbundling” brokerage services and offering only the execution of securities transactions. Brokers who offer this reduced level of service have come to be known as “discount brokers.”

The Board, in 1983, added “securities brokerage” to the list of permissible activities for bank holding companies shortly after it approved the application of BankAmerica Corporation to acquire Charles Schwab & Co., as discussed below. In 1984, the U.S. Supreme Court sustained the Board’s approval order and ruled that it is not a violation of the Glass-Steagall Act for banks and bank-affiliated brokers to buy and sell securities as agent for customers (*SIA v. Board of Governors*, 104 S. Ct. 3003). For additional historical information regarding the expansion of securities brokerage nonbank activities by Board order or by incorporation into Regulation Y, see sections 3230.1 through 3230.3.

Before April 21, 1997, Regulation Y differentiated between securities brokerage services provided alone (that is, discount brokerage services) and securities brokerage services provided in combination with investment advisory services (that is, full-service brokerage activities).

Regulation Y no longer distinguishes between discount and full-service brokerage activities.

Regulation Y currently authorizes securities brokerage services (including securities clearing and/or securities execution services on an exchange), whether alone or in combination with investment advisory services and incidental activities (including such related activities as securities credit, custodial services, individual retirement accounts, and cash-management services), if the services are restricted to buying and selling securities solely as agent for the account of customers and do not include securities underwriting or dealing. In addition to the information and examiner guidance provided in this section, see the American Institute of Certified Public Accountants’ *Audit and Accounting Guide—Brokers and Dealers in Securities*.¹ The guide includes detailed information about the securities industry, broker-dealer functions, activities and operations, books and records, accounting and auditing standards and considerations, and other topics such as internal controls and regulatory considerations.

3230.0.2 INITIAL BOARD ORDER APPROVAL FOR SECURITIES BROKERAGE

On January 7, 1983, the Board approved the application of BankAmerica Corporation to acquire Charles Schwab & Co., which engaged in retail discount securities brokerage, securities credit lending, and certain incidental activities (1983 FRB 105). None of the proposed activities was among those the Board had previously designated in Regulation Y as being closely related to banking.

In its order approving the application, the Board found that the brokerage and securities credit activities were closely related to banking for purposes of section 4(c)(8) of the Bank Holding Company Act (“BHC Act”). That decision was based on the fact that many banks provide various types of securities brokerage services as an accommodation to customers and as an agent for trusts and other accounts managed by banks.

Banks also administer employee stock purchases, dividend reinvestment, and automatic

1. Issued as of May 1, 2007.

investment service plans, which involve the periodic purchase of a particular security or securities from a fixed list of securities, on behalf of the customer. Banks often execute orders involving securities not listed on an exchange by dealing directly with dealers making a market in a particular security or with other third parties. In performing these services, banks exercise the same type of discretion and judgment with respect to the best method of execution as brokers do with respect to similar types of orders. Further, national banks are expressly authorized by statute to purchase and sell securities without recourse, solely upon the order, and for the account of, customers (12 U.S.C. 24 (Seventh)).

The Board, in summary, noted that banks in fact had generally provided securities brokerage to some extent. The company that was acquired, pursuant to the January 1983 order, provided several other services incidental to its discount brokerage activities.

3230.0.2.1 Margin Lending

Historically, banks have had a significant amount outstanding in loans to borrowers for the purpose of purchasing or carrying securities. The extension of such credit secured by stock and other collateral, or margin lending, has long been an important bank activity. The Board, therefore, ruled that this activity was closely related to banking and incidental to the securities brokerage activities of the company being acquired.

3230.0.2.2 Maintenance of Customer Securities Accounts

Charles Schwab & Co. offered various services to its brokerage customers. These services included individual retirement accounts for which an unaffiliated savings and loan association served as a trustee; a “sweep” arrangement, pursuant to which idle customer balances exceeding a certain minimum were automatically invested in an unaffiliated money market mutual fund; the payment of interest on net free balances awaiting investment; and a specially named account that combined the payment of interest on free credit balances with customer access to such balances through a debit card and checking account offered under an arrangement with an

unaffiliated commercial bank. Increasingly, these types of services were being offered by other brokerage firms. The Board found that each of these services was identical, or functionally and operationally equivalent to, services generally offered by banks to customers directly or through bank trust departments. Based on that finding, the Board found that the provision of those accounts was closely related to banking as well as an incidental activity in connection with securities brokerage and margin lending activities.

3230.0.2.3 Custodial Services

The brokerage firm also provided various types of securities custodial services involving the safekeeping of customers’ securities, accounting for dividends or interest received on such securities, and other ancillary services. Banks generally offer securities custodial services in connection with their trust departments and other securities transaction services. Furthermore, in extending margin credit, a lender is required to maintain custody of the securities pledged to the lender as collateral to secure the loan. Accordingly, the Board found that the provision of securities custodial services was closely related to banking and that it was a necessary incident to permissible margin lending activities.

3230.0.3 MARGIN CREDIT ACTIVITIES AND SECURITIES BROKERAGE

When securities brokerage was added to the permissible activities within Regulation Y, it was contemplated that a bank holding company, or its nonbank subsidiary performing the permitted securities brokerage activities, would be required to register as a broker-dealer with the Securities and Exchange Commission and that its margin credit activities would therefore be subject to the Board’s Regulation T. Regulation T governs securities credit by broker-dealers (12 C.F.R. 220).

3230.0.4 ACTIVITY ADDED TO REGULATION Y

On August 10, 1983, the Board adopted a final rule deeming securities brokerage and margin lending “closely related” to banking, consistent with the Glass-Steagall Act, and are, therefore, generally permissible for bank holding companies. To clarify that services incidental to bro-

kerage services are permissible, the Board did include a list of permissible incidental services. The list included services such as offering custodial services, furnishing individual retirement accounts, and cash-management services, provided that the securities brokerage services are restricted to buying and selling securities solely as agent for the account of customers and do not include securities underwriting.

As for cash-management services, such services are intended to include customer-account-related functions, such as paying interest on net free balances awaiting investment, providing arrangements under which free credit balances are automatically invested in money market mutual funds, and establishing arrangements under which access to such balances is provided by debit card or checking accounts.

The list of incidental activities in the regulation is not intended to be exhaustive. The Board believes that to compete effectively with other brokers, bank holding companies should have the flexibility to provide a full range of customer-account and custodial services, provided such services meet the test for permissible incidental activities under section 4(c)(8) of the BHC Act and are consistent with the Glass-Steagall Act.

As previously noted, Regulation Y, effective April 21, 1997, permits securities brokerage without distinguishing between discount and full-service brokerage activities. The previous regulatory requirement for certain disclosures has been eliminated. Those disclosure requirements are in an interagency policy statement that governs the sale of securities and other nondeposit investment products on bank premises (see sections 2010.6.1.3.1 and 2010.6.2.9), as well as in SEC rules. Similar disclosure requirements are required by the Board's policy statement that governs a bank holding company's sale of shares of mutual funds and other investment companies that it advises (see section 225.125 of Regulation Y).

3230.0.5 MARKET ENTRY INTO SECURITIES BROKERAGE

There are three general methods of market entry available to bank holding companies or nonbank subsidiaries of bank holding companies wishing to offer securities brokerage services: (1) become associated with a brokerage firm, (2) purchase an existing firm, or (3) establish their own brokerage operations. The most common mode is broker association, which is less costly and the most rapid form of entry. The

following broker relationships are presently established:

1. *Introducing broker.* The first level of involvement occurs when a BHC or a nonbank subsidiary of a BHC serves as an "introducing broker" in effecting securities transactions by accepting the customers' orders and transmitting the orders to the executing broker.² Order tickets and records of original entry are prepared by the BHC or nonbank subsidiary. In this situation, the executing broker generally produces customer confirmations and account statements. These documents often prominently display the BHC or the bank holding company's nonbank subsidiary's name and logo. The executing broker, the bank holding company, and/or its nonbank subsidiaries may offer safekeeping services and margin credit.
2. *Omnibus account.* A higher level of bank holding company nonbank subsidiary involvement occurs when the broker "carries" customer accounts by accepting and transmitting orders for execution, producing the customer confirmation, and maintaining all customer records. When carrying customers' accounts, the bank holding company's nonbank subsidiary may maintain a single customer account, called an omnibus account, with the executing broker. Safekeeping and margin credit services may be offered.
3. *Separately incorporated broker-dealer subsidiary affiliate.* The highest level of involvement occurs when a bank holding company organizes or acquires a separately incorporated broker-dealer subsidiary or affiliate, which transacts business like any other broker-dealer. This would include its own customer lists, both retail and wholesale; possible exchange membership; and executing and clearing its own transaction.

3230.0.6 PURPOSE OF INSPECTION OF SECURITIES BROKERAGE ACTIVITIES

The purpose of the inspection is to evaluate

2. There is a lower level of involvement wherein the BHC or nonbank subsidiary is responsible for making the brokerage services available to customers by advertising the distributing customer account applications. Account acceptances are generally made by the unaffiliated broker who will receive orders directly from customers.

any potential liability due to wrongful or negligent performance of responsibilities, to assess the level of management expertise, and to determine the degree of compliance with legal and policy parameters necessary to protect investors.

3230.0.7 INSPECTION OBJECTIVES

1. To determine the scope and nature of services provided.
2. To evaluate operations, audits, and controls.
3. To review the sufficiency of administrative policies and procedures.
4. To determine the level of responsibility.
5. To appraise the quality of management and staff.
6. To ascertain earnings, volume of business, and prospects.
7. To review compliance with applicable laws, regulations, and policies.

3230.0.8 SCOPE OF INSPECTION

The scope of inspection will vary depending on the nature of the brokerage operation. In defining the scope of inspection, it is first necessary to determine the extent of activities performed and the corporate structure. Any bank holding company subsidiary (that is not a bank), which functions as a securities broker, is required to register as a broker-dealer with the Securities and Exchange Commission (SEC).³

In developing the scope of inspection, it is emphasized that Reserve Bank examiners can rely on the applicable self-regulatory organization's examination with respect to investor protection, compliance with SEC and SRO rules, and Regulation T. The self-regulatory organizations do not furnish an examination report, but instead furnish a registered broker-dealer with a letter pertaining to examination findings. Hence, the scope of inspection for a registered broker-

dealer will commence with a review of a self-regulatory organization's most recent letter dealing with its examination of brokerage activities. A broker-dealer belonging to more than one self-regulatory organization will be examined only once in each examination cycle. Serious violations that could endanger a banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits) or significant violations that have not yet been corrected, should be noted in the bank holding company inspection report. Reserve Bank staff are responsible for evaluating all other aspects of securities brokerage activities.

The actual scope of this portion of the inspection will range from a brief visit for a limited service "arranger" relationship to extensive review for an omnibus relationship or registered broker-dealer.

3230.0.9 MATERIALS REQUIRED FOR INSPECTION

When commencing the securities brokerage portion of a bank holding company or its nonbank subsidiary inspection, the following material should be obtained:

1. contractual agreement with the executing and/or clearing broker
2. recent activity report (for at least six months)
3. income and expense reports
4. written policies and procedures regarding—
 - a. order processing,
 - b. settlements,
 - c. account reconciliations,
 - d. audit coverage, and
 - e. trust department relationship
5. account application forms
6. customer disclosure documents
7. organization chart
8. fee schedule
9. internal and external audit reports
10. a copy of the contingency plan for continuance in emergencies
11. the most recent SRO letter pertaining to the last brokerage examination

3230.0.10 INSPECTION PROCEDURES

If applicable, the following areas should be covered during the inspection.

3. A broker-dealer registered with the SEC (registered broker-dealer) is subject to SEC recordkeeping and confirmation rules, fair practice rules, professional qualification rules for individuals associated with securities firms, and the uniform net capital rule. Registered broker-dealers are also required to pay for insurance coverage on customers' assets by the Securities Investor Protection Corporation (SIPC) and are required to be members and subject to the rules of the Financial Industry Regulatory Authority (FINRA), or other self-regulatory organizations, such as the New York Stock Exchange. These self-regulatory organizations (SROs) also test for broker compliance with Regulation T (12 C.F.R. 220).

3230.0.10.1 Organization and Management

Review carefully the contractual agreement with the executing and/or clearing broker and list all duties and obligations of the respective parties. Determine that the agreement contains an indemnification clause insulating against broker error. Once the review is completed, the examiner can identify the type of relationship and plan the scope of the inspection.

Review the organization chart and match responsibilities and operational functions to the appropriate section. Evaluate management and staff based upon their education, experience, performance, and the profitability and efficiency of operations and any other relevant factors.

3230.0.10.2 Operations

A securities brokerage operation is organized along functional lines including—

1. execution,
2. settlement,
3. delivery,
4. custody,
5. recordkeeping, and
6. audits and controls.

Before review, prepare a flow chart of the operation to quickly overview the operational areas and to locate control points and identify potential weaknesses.

3230.0.10.2.1 Execution

This area processes client orders. The orders may be received by telephone at the nonbank subsidiary or directly by the executing broker. When the nonbank subsidiary accepts customer orders, they can be transmitted by direct wire to the executing broker. Completed transactions initiated by the nonbank subsidiary are confirmed back to the nonbank subsidiary, which in turn sends a confirmation to the client. Examiners should determine that proper safeguards are in place to ensure valid orders are received, pending orders are controlled, and completed orders are reported for customer notification and record update. The examiner should also determine that the following are in place:

1. use of code numbers, names, or other verification devices when accepting orders
2. maintenance and reconciliation of a trade

- log (orders received) and execution report (orders completed)
3. taping of telephone orders
4. confirmation of completed orders are confirmed to clients in a timely fashion
5. preparation and transmittal of input media for record update

3230.0.10.2.2 Settlement

This area receives payments and proceeds, collects dividends and interest, and, in some instances, effects margin calls on broker instruction. Settlements are effected in two stages:

1. *Broker vs. customer.* Before settlement date, the customer must send cash or securities to the broker as requested in the broker's customer confirmation. Cash or securities are required to effect payment against delivery or delivery against payment in accordance with industry securities settlement procedures.
2. *Broker vs. broker.* When physical delivery of securities is required, it is generally done on a firm-to-firm basis or to a firm's safekeeping agent. Major equity securities, and an ever-increasing number of debt securities, are eligible for net settlement and securities immobilization with depositories. Usually, a net settlement account is used for cash and securities transactions; these accounts should be reconciled daily. The settlement process should include a procedure that verifies execution price and fees.

3230.0.10.2.3 Delivery

Securities are delivered to the executing broker and purchased securities to clients. The examiner should determine that safeguards provide adequate control over certificates in process. Proper fail-to-deliver/receive and completed transaction records should be maintained.

The securities broker that accepts customer orders generally is exposed to *delivery risk* by customers. Basically, customers can take advantage of the broker by placing an order to buy securities when the customer has no funds available to purchase securities or by placing an order to sell securities that are not owned by the customer. Either type of transaction is permissible in a *margin account*, provided that the customer has the resources available to properly

margin the transaction. If the customer does not have a margin account, the broker should not purchase a security for the customer unless (1) there are sufficient funds in the customer's account or (2) the customer represents and the broker ascertains that the customer will promptly make full cash payment for the security before selling it and that the customer does not contemplate selling it before making payment. Alternatively, the broker should not sell a security for a customer unless (1) the security is held in the customer's account, or (2) the broker accepts in good faith the customer's statement that the security is owned by the customer and that it will be promptly deposited into the account.

By not executing a purchase or sale until the customer has deposited cash or securities, customer-default risks can be avoided on cash transactions. However, for competitive reasons, many brokers would not wish to place such stringent restrictions upon their customers—especially with respect to the purchase of securities. Lack of proper account supervision can lead to the fraudulent customer practice of “free riding,” wherein the customer will buy securities in anticipation of a price rise. Before settlement date, the customer will sell the securities to take the profits. If the market price of the securities declines, the customer will dishonor the trade, and thus attempt to leave the broker holding the depreciated securities. Securities brokerage procedures should be designed to look for generally abusive practices by customers.

3230.0.10.2.4 Recordkeeping

Any records that must be prepared by the broker under inspection are subject to the Securities and Exchange Commission's recordkeeping and confirmation rules 17a-3 and 17a-4. Compliance with those recordkeeping rules will be verified by stock exchange or FINRA examiners during their routine compliance inspections.

3230.0.10.2.5 Audits and Controls

Complete the “Securities Brokerage/Internal Controls Checklist” to determine whether operations are satisfactorily controlled and audited by the bank holding company's or nonbank subsidiary's audit staff. All significant administrative and operational aspects should be cov-

ered. Management should receive reports of audit findings and respond in writing as to actions taken.

3230.0.10.3 Conflicts of Interest

Determine that policies have been effectively implemented covering relationships with affiliated trust departments, self-dealing, fee-splitting or rebate arrangements, and officer/employee transactions.

3230.0.10.3.1 Relationship with Affiliated Trust Departments

Questions may arise concerning the permissibility of a securities broker's executing securities transactions for an affiliated trust department. In general, the receipt of commission income for securities brokerage transactions entered into on behalf of a trust account (in addition to the fee received for account administration) raises conflict-of-interest considerations to which traditional prohibitions of fiduciary law are directed. When a securities broker affiliate is used, the trust institution may be considered to share indirectly in the commission income of the affiliate even when there is no direct remittance of the fee to the bank. The staff letter at 3-447.11 of the *Federal Reserve Regulatory Service* provides guidance in determining whether and in what circumstances use of affiliated discount brokerage services may or may not be permissible. If questionable trust department use of affiliated broker services is disclosed, appropriate trust examiner(s) should be notified.

3230.0.10.4 Earnings, Volume Trends, and Prospects

Determine the present and future impact that the securities brokerage activities may have on the bank holding company and its subsidiaries. If possible, a separate profit center should be established, thus providing a useful management tool that facilitates analysis of current profitability, business volume, fixed and variable costs, and degree of goal actualization. Periodic review of these factors will enable management to direct available resources, aid in the budget process, and provide a basis for business planning. Prospects for profitable growth should be assessed by noting changes in aggregate account levels and trade activity. The local competitive environment should be gauged and

market-share information noted. In considering these factors, the examiner should attempt to determine what level of activity must be maintained or attained in order for the securities brokerage function to break even. Present a summary statement expressing an overall view on the current state and future viability of the operation.

3230.0.10.5 Compliance

The examiner should determine whether any additional state regulations must be complied with. Also determine that staff is aware of and complying with applicable regulations and laws, which may be outside the scope of an examination conducted by a self-regulatory organization.

3230.0.10.6 Presentation of Findings

The scope of inspection within the report should note that securities brokerage activities were reviewed. It should be noted that in order to avoid duplication of examination procedures, the inspection did not focus upon securities laws compliance (as verified by FINRA, or stock-exchange examiners), but instead focused upon financial and safety-and-soundness considerations. Appropriate nonbank subsidiary pages should be completed. Present a summary com-

ment in the confidential section reflecting an overall appraisal of the operation. The self-regulatory organization responsible for examining the securities brokerage operation should be identified. Identify also the associated broker, if any, with whom the organization conducts business. Any material exceptions should be noted with management’s responses under an appropriate caption within the open section. Matters of importance should be brought forward to the Examiner’s Comments and Matters Requiring Special Board Attention page. In addition, any other significant problems, detrimental practices, or potential liabilities that could have a negative impact on the organization should be commented upon.

3230.0.11 EXAMINATION CHECKLISTS

Two checklists are provided for use by the examiner to aid in evaluating securities brokerage activities:

1. Securities Brokerage Inspections
2. Securities Brokerage/Internal Controls

All questions are not applicable for each brokerage subsidiary. The nature and scope of brokerage activities determine the applicability of specific questions. The term “banking organization” refers to a bank holding company and any of its nonbank subsidiaries.

3230.0.11.1 Securities Brokerage Inspection Checklist

	<i>Yes</i>	<i>No</i>
1. Is a contractual agreement between the banking organization and the executing and/or clearing broker on file?	_____	_____*
2. Does the agreement indemnify the banking organization against broker error?	_____	_____*
3. Does the agreement clearly define respective responsibilities of the banking organization and broker?	_____	_____*
4. Was the agreement reviewed by the banking organization’s counsel?	_____	_____*
5. Was the agreement approved by the board of directors? If not, by whom?	_____	_____*
6. Are written procedures covering brokerage activities in effect?	_____	_____*
7. Have job descriptions been prepared?	_____	_____*
8. Have specific policies been developed regarding—		

*Response may require report comment.

	<i>Yes</i>	<i>No</i>
• relationships with affiliated bank trust depts?	_____	_____*
• conflicts of interest?	_____	_____*
• investment advice?	_____	_____*
9. Are investment advice or research services being offered?	_____	_____*
10. Are income and expense records separately maintained?	_____	_____*
11. Are brokerage activities included in the audit program?	_____	_____*
12. Are customer orders placed with banking organization personnel?	_____	_____*
If so, is customer authorization on file?	_____	_____*
Are telephone conversations tape recorded?	_____	_____*
Are transaction records maintained by traders?	_____	_____*
13. How are payments effected? (check one)		
direct charge to customer account	_____	
payment through the mail	_____	
other _____		
14. What is the timeframe of payment?		
prior to execution	_____	
upon verbal notification of execution	_____	
upon customer's receipt of confirmation	_____	
after settlement date	_____*	
15. What is the frequency of settlement-account reconcilements?		
daily	_____	
biweekly	_____	
weekly	_____*

16. Does an affiliated trust department use the discount brokerage service?	_____	_____*
If yes, what type account? _____		
discretionary trust	_____**	
discretionary agency	_____**	
custody	_____	
employee benefit	_____**	
17. Is sufficient insurance coverage in effect?	_____	_____*
Describe types and limits.		

18. Does a review of records confirm that the broker functions solely as an agent, i.e., does not engage in underwriting or taking positions for its own account?	_____	_____*
19. Do monitoring and internal reporting procedures adequately track profitability and operating impact for management consideration?	_____	_____*

*Response may require report comment.

**If available documentation reveals that affiliated trust departments use brokerage services to execute transactions for this type of account, the appropriate federal regulator of trust activities should be notified.

3230.0.11.2 Securities Brokerage/Internal Control Checklist

The following questions should be answered, to the extent applicable, in reviewing a securities brokerage operation. Few brokers will perform all of the activities discussed below.

	<i>Yes</i>	<i>No</i>
1. Do internal audit procedures include the securities brokerage function?	_____	_____*
2. Has the banking organization adopted procedures for the periodic review of insurance coverage relating to securities brokerage activities (e.g., errors and omissions, fidelity bonding, and securities in transit)?	_____	_____*
3. Has the banking organization adopted procedures with respect to the accounts of directors, officers, or employees or their immediate families?	_____	_____*
4. Are procedures in place to prevent internally generated credits to the securities brokerage customers' accounts from being automatically recorded as collected funds?	_____	_____*
5. Are procedures in place to ensure that acceptance of a relatively large order will not be effected unless the order taker verifies that the customer placing the order has internal authorization to engage in large trades?	_____	_____*
6. Has the banking organization adopted written procedures prohibiting employees from furnishing investment advice?	_____	_____*
7. Are customer telephone orders tape recorded?	_____	_____*
8. Are tape recordings of telephone orders reviewed periodically to verify that employees have <i>not</i> made securities recommendations or furnished investment advice?	_____	_____*
9. Are persons responsible for taking and transmitting orders precluded from preparing accounting entries?	_____	_____*
10. Is there adequate separation of duties between persons responsible for making initial accounting entries and those responsible for making subsequent adjusting entries to prevent a concealment of theft or fraud?	_____	_____*
11. Does the securities brokerage function monitor and reconcile safe-keeping, clearing, payment, and income expense accounts on a regular basis?	_____	_____*
12. Has management developed a contingency plan to ensure continued brokerage operations of the securities brokerage operation in the event of fire, flood, power failure, or some other unforeseen event?	_____	_____*
13. With respect to termination of brokerage accounts, does the securities brokerage operation have procedures in place to prevent an account from being closed while an open securities order is outstanding?	_____	_____*
14. Does the credit-approval process require a credit decision to be made by someone who routinely makes credit decisions—as opposed to a manager of a securities brokerage operation?	_____	_____*
15. If securities received from customers are registered in the name of a third party, are procedures in place to ensure that such securities are accepted only upon satisfactory proof of ownership?	_____	_____*

*Response may require report comment.

	<i>Yes</i>	<i>No</i>
16. Are procedures in place to ensure that customers delivering securities registered in a “street name” have title to such securities (i.e., they are not lost or stolen securities)?	_____	_____*
17. Is only a limited number of responsible employees authorized to execute or guarantee security assignments?	_____	_____*
18. Is the use of facsimile signature devices adequately controlled?	_____	_____*
19. Are procedures in place to control cash, securities, and documents pertaining to securities shipped for “delivery against payment”?	_____	_____*
20. Are adequate physical controls maintained over securities on hand (e.g., restricted access to the “cage area”)?	_____	_____*
21. Are detail records pertaining to securities in transfer and those pledged as collateral to borrowings agreed periodically (at least quarterly) with the securities record?	_____	_____*
22. Are security positions (and related general-ledger amounts) in suspense accounts investigated and resolved on a timely basis?	_____	_____*
23. Are fails to receive and fails to deliver periodically reviewed and reconciled?	_____	_____*

*Response may require report comment.

3230.0.12 LAWS, REGULATIONS, INTERPRETATIONS, AND ORDERS

<i>Subject</i>	<i>Laws¹</i>	<i>Regulations²</i>	<i>Interpretations³</i>	<i>Orders</i>

1. 12 U.S.C., unless specifically stated otherwise.

2. 12 C.F.R., unless specifically stated otherwise.

3. *Federal Reserve Regulatory Service* reference.

This section serves as a prelude to the securities brokerage sections that follow. Sections 3230.1 through 3230.3 provide brief historical summaries of Board decisions on securities brokerage; these authorizations are now incorporated into Regulation Y for this activity. The summaries provide the reader with some historical perspective as to how and why the current provisions of Regulation Y evolved. The conditions and commitments within these orders may no longer apply to the current provisions of Regulation Y. Therefore, reference must be made to Regulation Y, section 225.28(b)(7)(i).

Before the 1997 revisions of the Board's Regulation Y (12 C.F.R. 225), the Board's rules differentiated between securities brokerage services provided alone (that is, discount brokerage services) and securities brokerage services provided in combination with investment advisory services (that is, full-service brokerage activities). The revisions to Regulation Y that became effective in April 1997 permit securities brokerage without distinguishing between discount and full-service brokerage activities.

Another major change for securities brokerage activities concerns the types of disclosures required of bank holding companies. Before the 1997 revisions, bank holding companies providing full-service brokerage services were required to make certain disclosures to customers regarding the uninsured nature of securities and were not permitted to disclose confidential custo-

mer information without the customer's consent. Effective in April 1997, these disclosure requirements were eliminated. The disclosure requirements—along with a number of other requirements that specifically address the potential for customer confusion, training requirements, suitability requirements, and other matters—are already contained in an inter-agency policy statement that governs the sale of securities and other nondeposit investment products on bank premises, as well as in rules adopted by the SEC. In addition, similar disclosure requirements are required by the Board's policy statement governing the sale by bank holding companies of shares of mutual funds and other investment companies that the bank holding company advises.

Banking organizations and their affiliates, in general, are becoming more effective in implementing the regulatory disclosure requirements. Customers are also becoming increasingly aware that such investment products purchased at banking organizations and their affiliates are not federally insured. Moreover, the Board and the SEC have adequate supervisory authority to ensure that bank holding companies comply with the applicable regulatory disclosure requirements. To the extent that disclosures to customers are appropriate in areas not covered by the regulatory policy statements or SEC regulations, the Board will consider whether to develop supervisory guidance.

4(c)(8) of the BHC Act—Securities Brokerage in Combination with Investment Advisory Services

Section 3230.1

Two bank holding companies jointly applied for the Board's approval under section 4(c)(8) of the BHC Act and section 225.23(a)(3) of Regulation Y to form a de novo subsidiary that would engage in the following nonbanking activities:

1. providing portfolio investment advice to "institutional customers"
2. providing securities execution (brokerage) services, related securities credit activities pursuant to the Board's Regulation T, and incidental activities
3. furnishing general economic information and advice, general economical statistical forecasting services, and industry studies to institutional customers
4. serving as an investment adviser (as defined in section 2(a)(20) of the Investment Company Act of 1940) to investment companies registered under that act

Separate fees are to be charged for the advisory services and the securities brokerage services. The company would also provide incidental services such as custodial and cash-management services and acting as a registered investment adviser. The services are to be provided throughout the United States. The providing of advisory services to retail clients was not authorized by the Board. The applicant committed to create a "Chinese Wall" between the affiliated bank and the securities affiliate.

The Board determined that the activities would not violate Glass-Steagall Act prohibitions. Board approval was conditioned with the requirement that the standards of care and conduct applica-

ble to fiduciaries would be observed. The applicant would not allow the exchange of confidential information between the de novo subsidiary and its affiliates. The applicant further committed that employees of the de novo subsidiary would not be given customer lists and other confidential information obtained by its affiliates in connection with commercial banking operations. Transmission of advisory research and recommendations to the commercial lending department of any of the bank holding company's affiliates was not permitted.

The proposal represented the combination of activities, previously determined to be closely related to banking, in such a way that the functional nature and scope of the combined activities conducted would not be altered. By Board order, the applicants' application was approved on June 13, 1986 (see 1986 FRB 584), subject to the conditions stated therein. Other orders were approved by the Board on August 5, 1987 (1987 FRB 810), and October 1, 1987 (1987 FRB 930), which also authorized a bank holding company to engage in combined investment advisory and securities brokerage activities. In this order, the Board lowered the threshold for defining an "institutional investor" from \$5 million to \$1 million.

The Board, effective September 10, 1992, added this nonbanking activity to those activities that are permissible by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y, subject to the disclosure requirements, restrictions on exchanging confidential customer information, and other limitations stated therein.

4(c)(8)—Securities Brokerage with Discretionary Investment Management and Investment Advisory Services Section 3230.2

A bank holding company applied to the Board to expand the authority of its subsidiary to engage in offering investment advisory services for “institutional customers” and its affiliates¹ in conjunction with its previously approved brokerage services. The Board previously approved by order (1986 FRB 584) an application for a different bank holding company to offer the combination of investment advice and securities execution services for institutional customers.

The proposed activities in this order (1987 FRB 810) are similar except that the subsidiary would additionally exercise limited investment discretion at a customer’s specific request. Under this plan, the subsidiary would offer as a service, within defined parameters established by the client, discretion in buying and selling securities on behalf of the client.

Such investment discretion would be exercised only at the request of a client; the subsidiary does not plan to market or solicit managed accounts. Each client will receive confirmation of each transaction, as well as monthly statements which would indicate in detail the terms of each transaction executed on its behalf. Each client would always be aware of the scope of the subsidiary’s activity for its account. The subsidiary would receive a single fee for the combined activities of providing investment advice and exercising limited investment discretion.

The application was approved on August 5, 1987, subject to the commitments made by the applicant and the conditions (whether explic-

itly stated or incorporated by reference) in the order.

The Board approved another order on October 1, 1987 (1987 FRB 930), similar to the August 5, 1987, order, except that (1) the applicant proposed to lower the test for institutional customers from the \$5 million threshold to \$1 million; (2) the applicant’s wholly owned brokerage subsidiary would share customer lists with its affiliates, but not confidential information obtained from the customer; and (3) the brokerage subsidiary would have officer and director interlocks with the parent bank holding company, but not with its bank affiliates. In the Board’s view, these modifications did not alter the underlying rationale of its earlier decision.

The Board approved another order on August 10, 1988 (1988 FRB 700). The principal difference between the August 5, 1987, order and this proposal was the provision of such combined services to *retail* as well as *institutional* customers. The provision of services to retail customers does not include discretionary investment management. To further ensure the separation of the BHC and its bank affiliates and to avoid potential conflicts of interests, the applicant made several commitments, as detailed within the order.

The Board, effective September 10, 1992, added the providing of discretionary investment management to the nonbanking activities that are permitted by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y.

1. The provision of such services by the subsidiary to other affiliates is a permissible servicing activity under section 225.22(a) of Regulation Y.

4(c)(8) of the BHC Act—Offering Full Securities Brokerage Services for Bank-Ineligible Securities

Section 3230.3

A bank holding company (applicant) applied for the Board's permission for its subsidiary to provide investment advisory and brokerage services on a combined basis ("full-service brokerage") to institutional and retail customers and to engage, to a limited extent, in underwriting and dealing in one- to four-family mortgage-related securities and consumer receivable-related securities (herein referred to as "ineligible securities"). The applicant committed to conduct its ineligible securities underwriting and dealing activities subject to the revenue test and the prudential limitations established by the Board in 1987 FRB 473, except for a market-share limitation which the Board decided not to require for this BHC.

The Board determined previously that full-service brokerage for both institutional and retail customers is closely related and a proper incident to banking under section 4(c)(8) of the BHC Act and does not violate the Glass-Steagall Act (1988 FRB 700 and 1986 FRB 584). This BHC's proposal differs from prior cases in that the subsidiary will provide full-service brokerage to retail customers for ineligible securities that it may hold as principal. The BHC has committed that the subsidiary will provide full and appropriate disclosure of its interest in the transaction as required by the securities laws, the National Association of Securities Dealers, and fiduciary principles.

The Board had previously authorized an underwriting subsidiary to provide full-service brokerage with respect to ineligible securities that it holds as principal, *but only to institutional customers* (1988 FRB 695). Applicant made the

same commitments regarding disclosures as found in 1988 FRB 695. The BHC committed further that its subsidiary would prominently disclose in writing to each customer, at the commencement of the relationship, that it is not a bank; that it is separate from any affiliated bank; and that the securities sold, offered, or recommended by the subsidiary are not deposits, are not insured by the FDIC, are not guaranteed by an affiliated bank, and are not otherwise an obligation of an affiliated bank, unless such is in fact the case. The Board emphasized that confirmations sent to customers will state whether the subsidiary is acting as agent or principal with respect to a security. The Board concluded that such disclosure commitments would be adequate. It recognized that in performing the full-service brokerage activity, the underwriting subsidiary would be operating under a more extensive framework of prudential limitations than would be the case if the full-service brokerage activity were conducted by a bank, a subsidiary of a bank, or by another holding company subsidiary. Based on the commitments made, the Board decided on March 14, 1989, to approve the proposed activities (see 1989 FRB 396) subject to all the terms and conditions found in 1987 FRB 473, except for the market-share limitation.

Effective September 10, 1992, the Board added this nonbanking activity to the activities permitted by regulation, currently found in section 225.28(b)(7)(i) of Regulation Y and subject to the Board's disclosure and other requirements and the limitations on exchanging confidential information, as stated therein.

This section discusses and provides a historical reference of previous Board orders that initially authorized, by order, a bank holding company's acting as agent in the private placement of securities and engaging in riskless-principal nonbanking activities. *With the Board's incorporation of private-placement and riskless-principal activities into its adoption of changes to Regulation Y, effective April 21, 1997, the majority of the previous private-placement and riskless-principal commitments are not effective. Only those current requirements listed for private-placement and riskless-principal activities in section 225.28(b)(7) of Regulation Y (the laundry list of permissible nonbanking activities) should be used by the examiner in conducting the supervision and inspection of bank holding companies and their subsidiaries.*

3230.4.1 ENGAGING IN COMMERCIAL-PAPER PLACEMENT ACTIVITIES TO A LIMITED EXTENT

A bank holding company (the applicant) applied pursuant to section 4(c)(8) of the Bank Holding Company Act and section 225.23(a) of the Board's Regulation Y to act as an agent and adviser to issuers of commercial paper in connection with the placement of commercial paper with institutional purchasers. The commercial-paper-placement activity, as proposed, is to be conducted from a wholly owned commercial finance subsidiary (the company) of the applicant's direct subsidiary.

The Board concluded that the proposed commercial-paper-placement activity was so functionally and operationally similar to the role of a bank that arranges a loan participation or syndication as to be a proper incident thereto and that banking organizations are particularly well suited to perform the commercial-paper-placement function. The Board found that the proposal, as limited by the applicant, was consistent with section 20 of the Glass-Steagall Act, and could reasonably be expected to result in public benefits that would outweigh possible adverse effects. The Board found, further, that the applicant could conduct the proposed activities to the extent and in the manner described in the order. The Board's approval (1987 FRB 138) extended only to the activities conducted within the limitations proposed by the applicant for company and the BHC's subsidiary banks and other subsidiaries. The placement of commercial paper in any manner other than as

described within the limitations and conditions of the order would not be within the scope of the Board's approval. The Board also required that no lending affiliate of the company would disclose to the company any nonpublic customer information concerning an evaluation of the financial condition of an issuer whose paper is placed by the company or of any other customer of the company, except as expressly required by securities law or regulation.

On May 25, 1988, the Board approved an order (1988 FRB 500) for a bank holding company to engage de novo, through a subsidiary, in acting as an agent and adviser to issuers of commercial paper in connection with the placement of commercial paper with institutional customers, as well as to engage in certain other securities and financial advisory activities. The applicant proposed to place commercial paper in accordance with all the terms and conditions of the above order (1987 FRB 138), except one. The applicant did not propose any quantitative limitations on its placement activity. The Board concluded that the proposed commercial-paper placement did not constitute underwriting or distributing under the Glass-Steagall Act and that the quantitative limitations on the activity were not necessary to ensure compliance with that act. (See section 3230.4.2, in which a subsidiary of a bank holding company was authorized to privately place all types of debt and equity securities.)

3230.4.2 ACTING AS AGENT IN THE PRIVATE PLACEMENT OF ALL TYPES OF SECURITIES AND ACTING AS RISKLESS PRINCIPAL

A bank holding company (the applicant) applied for the Board's approval to transfer the private-placement business of its commercial bank subsidiary to its designated nonbanking subsidiary for securities underwriting and dealing. The subsidiary would act as agent in the private placement of all types of securities, including the providing of related advisory services, and buy and sell all types of securities on the order of investors as a riskless principal.

Because the section 20 subsidiary would be affiliated through common ownership with a member bank, it may not be "principally

engaged” in the “issue, flotation, underwriting, public sale, or distribution” of securities within the meaning of the former section 20 of the Glass-Steagall Act. In an earlier decision (1989 FRB 751), the Board determined that a subsidiary is not engaged principally in section 20 activities if revenues from underwriting and dealing in securities that banks are not authorized to underwrite and deal in directly (bank-eligible securities) do not exceed 10 percent of the subsidiary’s gross revenues (25 percent, effective March 6, 1997). The applicant contended that the proposed private-placement and riskless-principal activities are not the kind of securities activities described in section 20 and, thus, should not be subject to the revenue limit on bank-eligible securities activities.

The private-placement market involves the placement of new issues of securities with a limited number of sophisticated purchasers in a nonpublic offering. In private-placement transactions, a financial intermediary acts solely as agent of the issuer in finding purchasers. The intermediary does not purchase the securities and then try to resell them.

Privately placed securities are *not* subject to the registration requirements of the Securities Act of 1933. Such securities are only offered to financially sophisticated institutions and individuals,¹ not to the public. The applicant stated that all of the individuals with whom the securities would be placed will qualify as “accredited investors” under SEC rules. The Board concluded that the subsidiary’s private placement of debt and equity securities within the limits proposed did not involve the underwriting or public sale of securities and that the revenues from the proposed activities should not be subject to the 10 percent revenue limitation (25 percent, effective March 6, 1997) on bank-eligible securities activities.

The Board noted that other limitations on the activity should ensure that securities would not be offered to the public. First, the applicant agreed that the subsidiary would not make any general solicitation or advertisement to the public regarding the placement of particular securities. Second, the minimum denomination of

securities to be placed would be \$100,000. Third, the applicant agreed that the subsidiary would not privately place securities that are registered under the Securities Act of 1933 and that the subsidiary would be compelled to honor all provisions of that act, particularly those that limit the scope of private placements to nonpublic transactions. Fourth, the subsidiary agreed not to privately place as agent the securities of investment companies which are sponsored or advised by the applicant or its subsidiaries. Fifth, the subsidiary will not purchase or repurchase for its own account the securities being placed or will not inventory unsold portions of such securities. Sixth, the applicant further agreed to consult with its Federal Reserve Bank staff before transferring its private-placement activities from the subsidiary to any other nonbank subsidiary of the applicant to ensure that the transfer did not evade any of the firewall provisions committed to.

3230.4.3 INCORPORATION OF PRIVATE-PLACEMENT NONBANKING ACTIVITIES INTO REGULATION Y

The Board has added the activity of acting as agent in the private placement of securities to the laundry list of nonbanking activities (see 12 C.F.R. 225.28(b)(7)(ii)). Regulation Y adopts the definition of private-placement activities that is used by the SEC and the federal securities laws. In taking this action, the Board removed all but one restriction on private placement. The remaining restriction prohibits a bank holding company from purchasing for its own account the securities being placed or holding in inventory unsold portions of issues of these securities. This restriction prevents a bank holding company from classifying its securities underwriting activities as private-placement activities.

3230.4.4 RISKLESS PRINCIPAL

“Riskless principal” is a broker-dealer that, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a simultaneous sale to (or purchase from) the customer.

1. The subsidiary would not only place securities with institutional customers but with individuals whose net worth (or joint net worth with a spouse) exceeds \$1 million. Such placement activities with individuals would not, in the Board’s opinion, result in a public offering.

3230.4.4.1 Description of Riskless-Principal Transactions

When acting as a dealer, the securities firm maintains an inventory of securities for its own account and buys and sells securities as principal. Riskless-principal transactions are usually undertaken as an alternative method of executing orders by customers to buy or sell securities on an agency basis. In this situation, when a customer places an order to purchase securities that the broker-dealer does not maintain in its inventory, the firm must purchase the securities from a third party. At this point, the broker-dealer has the option of acting either as the agent for the customer or a riskless principal in making the purchase. If the decision is made to act as a riskless principal, the broker-dealer will purchase the securities from a third-party dealer at the dealer's "inside price" (confirming the transaction for its customer) and then, acting as principal, resell them to the customer, adding a markup over cost. If the broker-dealer does not complete the purchase of the securities ordered by the customer, it is not obligated to provide the securities.

3230.4.4.2 Underwriting and Riskless Principal

In riskless-principal transactions, the subsidiary would execute orders by an investor and would not act on behalf of an issuer of new securities. The subsidiary would not be involved in making any public offering of securities as agent for the issuer. Thus, these activities would not constitute underwriting for Glass-Steagall purposes.

3230.4.4.3 Summary of Board Action on Acting as Agent in Private Placement and as Riskless Principal in Buying and Selling Securities

The Board concluded that the securities underwriting and dealing of the subsidiary's riskless-principal activity did not constitute an underwriting of securities. The riskless-principal activity would not be a public sale or underwriting of securities and would not be viewed as a bank-ineligible securities activity for purposes of the current 25 percent revenue test. As a condition for the approval of the riskless-principal activity, the Board required the subsidiary to maintain specific records that would clearly identify such transactions so that examiners will be able to trace the resulting revenue.

The riskless-principal activity was found to be closely related to banking. The Board further concluded that the placement activity differed only slightly in scope from those approved previously and that the operational limitations agreed to by the applicant would ensure that the subsidiary would not become involved in the public offering of any securities. The Board approved the application on October 30, 1989 (1989 FRB 829). (See also 1997 FRB 146; 1996 FRB 350, 748; 1995 FRB 49, 880, 1133; 1994 FRB 554, 1014; 1993 FRB 1166; 1992 FRB 294, 335, 552, 868; 1991 FRB 61; and 1990 FRB 26, 79, 545, 567, 568 (footnote 7), 653, 659, 663, 667, 672, 674, 766, 857, 864.)

3230.4.4.4 1996 Changes to the Underwriting Conditions for Riskless-Principal Activities

In connection with a bank holding company proposal considered by the Board on June 10, 1996, the Board reviewed the continued appropriateness of applying the underwriting conditions to the conduct of riskless-principal activities. In that case, the Board determined, based on its experience in monitoring and examining the conduct of riskless-principal activities by bank holding companies, that the underwriting conditions were not necessary to address identifiable adverse effects. Accordingly, the Board permitted the bank holding company to engage in riskless-principal transactions through a nonbank subsidiary without conducting this activity in accordance with the underwriting conditions (See 1996 FRB 748). The Board noted that riskless-principal transactions are essentially equivalent to securities brokerage transactions and, therefore, must be conducted in compliance with federal securities laws. The Board concluded that the definitional limitations (see section 225.28(b)(7)(ii) of Regulation Y) would be all that is needed to purchase (or sell) securities as a riskless principal. The conditions are designed to ensure that bank holding companies do not avoid the Glass-Steagall Act by classifying underwriting and dealing activities as riskless-principal activities. In the June 10 order, the bank holding company agreed that, if riskless-principal services were provided in combination with its advisory services, it would provide its customers with the disclosures established by the Board for full-service brokerage activities of bank holding companies. With respect

to its decision, the Board decided to grant identical relief to other bank holding companies that had been previously approved to conduct riskless-principal nonbanking activities.

3230.4.4.5 Incorporation of Riskless-Principal Transactions into Regulation Y

As part of the Board's February 19, 1997, adoption of the final amendments to Regulation Y, it retained the requirement that riskless-principal transactions be conducted in the secondary market. It further determined to eliminate all but two restrictions with respect to riskless-principal transactions. A bank holding company may thus buy and sell in the secondary market all types of securities on the order of customers as a riskless principal, to the extent of engaging in a transaction in which the company, after receiving an order to buy (or sell) a security from a customer, purchases (or sells) the security for its own account to offset a contemporaneous sale to (or

purchase from) the customer. This does not include—

1. selling bank-ineligible securities at the order of a customer that is the issuer of the securities, or selling in any transaction in which the bank holding company has a contractual agreement to place the securities as agent of the issuer; or

2. acting as riskless principal in any transaction involving a bank-ineligible security for which the bank holding company or any of its affiliates acts as an underwriter (during the period of the underwriting or for 30 days thereafter) or dealer. A bank holding company or its affiliates may not enter quotes for specific bank-ineligible securities in any dealer quotation system in connection with the bank holding company's riskless-principal transactions, except that the company or its affiliate may enter bid or ask quotations, or publish "offering wanted" or "bid wanted" notices on trading systems other than NASDAQ or an exchange, if the company or its affiliate does not enter price quotations on different sides of the market for a particular security for any two-day period. (See 12 C.F.R. 225.28(b)(7)(ii).)

A BHC applied for the Board's approval, pursuant to section 4(c)(8) and 225.23(a) of the Board's Regulation Y, to acquire, through a securities brokerage subsidiary, a 49 percent interest in a joint venture partnership. The applicant was a one-bank holding company formed over a bankers' bank. The shareholders comprised several hundred banks. The joint venture partnership (the company) proposed to engage in the activity of acting as a municipal securities brokers' broker.¹ This consisted of providing municipal securities brokerage services to other registered securities brokers and dealers, including dealer banks. The company would act as an undis-

closed agent in the purchase and sale of municipal securities, including revenue bonds, for the account of its customers.

The applicant's proposal involved the purchase and sale of municipal securities as agent only and did not include dealing or otherwise taking a position in such securities. The activity fell within the third-party securities activities permitted for member banks under section 16 of the Glass-Steagall Act (12 U.S.C. 24), which allows banks to purchase and sell securities "without recourse, solely upon the order, and for the account of, customers." National banks had been permitted to engage in the activity of acting as municipal securities brokers' brokers.

The Board found the activity to be functionally similar to the retail securities brokerage activities performed by banks for their customers as permitted under section 16 of the Glass-Steagall Act. The Board thus concluded that the activity was closely related to banking. The Board's approval of the order was based on several commitments made by the applicant and the other joint venturer. The Board approved the application by order on June 26, 1985 (1985 FRB 651).

1. Rule 15c3-1(a)(8)(ii) implementing section 15(c)(3) of the Securities and Exchange Act of 1934 defines a municipal securities brokers' broker as a "municipal securities broker or dealer who acts exclusively as an undisclosed agent in the purchase or sale of municipal securities for a registered broker dealer or registered municipal securities dealer" who has "no retail customers" and "maintains no municipal securities in its proprietary or other accounts." Municipal securities brokers' brokers are subject to the federal securities laws applicable to securities brokers and are governed by the rules of the Municipal Securities Rulemaking Board.

Section 4(c)(8) of the BHC Act (Acting as a Conduit in Securities Borrowing and Lending) Section 3230.6

A foreign bank holding company (the applicant), and its wholly owned subsidiary (the company), a commercial banking organization located in New York state, applied pursuant to section 4(c)(8) of the BHC Act and section 225.23(a) of the Board's Regulation Y for prior approval to engage de novo on a domestic and international basis, through the company, in the following activities:

1. providing investment advisory services and financial advisory services, including advice regarding mergers, acquisitions, and capital-raising proposals by institutional customers, pursuant to section 225.28(b) of Regulation Y
2. providing securities brokerage services on an individual basis as well as in combination with investment advisory services ("full-service brokerage"), including exercising limited investment discretion on behalf of institutional customers
3. purchasing and selling all types of securities on the order of institutional and retail customers as a "riskless principal"
4. engaging in securities credit activities under section 225.28(b)(6) of Regulation Y, including acting as a "conduit" or "intermediary" in securities borrowing and lending

The Board previously determined by regulation that engaging in the above-listed nonbanking activities (1) and (2) is closely related to banking under section 4(c)(8) of the BHC Act (see section 225.28(b)(6) and (7) of the Board's Regulation Y). The Board previously determined by order that, subject to certain prudential limitations, the proposed riskless-principal activities (item 3) are so closely related to banking as to be a proper incident thereto within the meaning of section 4(c)(8) of the BHC Act. The applicant has committed that the company will conduct its riskless-principal activities using the same methods and procedures and subject to the same prudential limitations established by the Board in its orders that are found at 1989 FRB 829 and 1990 FRB 26.

Banks and BHCs are permitted to borrow and lend securities held in their own portfolios (see the FFIEC's 1985 Supervisory Policy Statement on Securities Lending, *Federal Reserve Regulatory Service* 3-1579.5). In this case, the applicant proposed that the company borrow and lend the securities of noncustomer third parties. The company would seek out counterparties to securities borrowing and lending transactions

and would assume much the same risk in these transactions as if it was borrowing or lending its own securities or its customers' securities. In this capacity, it would act as a "conduit" or "intermediary" in securities borrowing and lending. The company would supply—upon the request of another broker-dealer who is unable to obtain securities needed to satisfy customer or investment or operational needs—securities not available in the company's accounts or customer accounts by seeking out third-party noncustomer lenders. In addition to locating the securities, the company proposes to coordinate, on behalf of the borrower and lender, the exchange of securities and collateral that is necessary to the transaction.¹

The Board, in its review of this application, believed that banks generally perform services that are operationally or functionally similar to the proposed conduit services. The proposed conduit activity was believed to be similar to the securities borrowing and lending activities that banks conduct. National and state banks are permitted to lend securities from their own portfolio, and with the customer's consent, from the accounts of customers, and banks regularly borrow securities to meet their needs and the needs of customers. The fact that a third party is substituted in place of a trust or other customer of a bank would not change significantly the way in which the securities lending activity would be conducted. The same steps and procedures that would be necessary to effectuate the loan of a customer's securities would be followed in loaning the securities of a noncustomer third party.

The risk associated with the proposed activity is the same risk that a bank would incur in managing the lending of securities from its own portfolio or the portfolio of a customer. The risk to the company, in acting as a conduit, is limited to ensuring that the collateral posted by the

1. The company agreed to coordinate this exchange through accounts established at a specifically named, privately held national clearinghouse for the settlement of transactions in corporate and municipal securities. Once the company had located the desired securities, the securities would be transferred to an account maintained by it at the clearinghouse and simultaneously delivered to an account of the borrower, also at that clearinghouse. At the same time, the borrower would be required to post collateral, which the company would receive into its clearinghouse account and simultaneously deliver to an account maintained by the lender at the clearinghouse.

borrower continuously reflects the market value of the securities loaned. The company committed to mark this collateral to market on a daily basis and to make calls for supplemental collateral where necessary.² The company also represented that it would not provide any indemnification to noncustomer third-party lenders of securities.

The Board determined, for the above reasons, that the proposed conduit activity is closely related to banking for the purposes of section 4(c)(8) of the BHC Act and approved the order on October 9, 1992 (1992 FRB 955).

The Board's approval was subject to the following specified conditions:

1. To minimize risk, the company is to act as a conduit only when the potential borrower and lender are matched before the transaction. In addition, it will take various measures to minimize operational risks,

2. If the price of the borrowed securities increases, the borrower is required under the Board's Regulation T to provide additional collateral to the company. The company, in turn, through transactions at the clearinghouse, will pass the collateral to the initial lender of the securities. If the borrower is unable to satisfy this requirement, the company is to have the contractual right to terminate the borrowing transaction by purchasing the securities in the open market and delivering them to the lender, who will then be obligated to return the borrower's collateral to the company. Because the borrowed securities will be marked to market daily by the company, the maximum exposure to the company in directly or indirectly borrowing or lending securities is one day's change in the price of the borrowed securities.

including conducting its conduit activities in accordance with the collateral requirements imposed on the borrowers by the Board's Regulation T.³ A conduit transaction will commence only when a broker-dealer approaches the company and needs to borrow securities. Securities will not be borrowed in anticipation of a transaction.

2. At the end of each day, the company will mark to market the collateral posted by the borrower in all transactions in which it loaned securities or acted as an intermediary for a lender. As proposed, the company would establish credit lines for potential borrowers and lenders.⁴

3. The applicant committed that the company will conduct its conduit activities in compliance with the FFIEC Supervisory Policy Statement on Securities Lending (*Federal Reserve Regulatory Service 3-1579.5*).

3. The applicant committed that the Board's Regulation T—which requires that all securities borrowing and lending transactions be collateralized by at least 100 percent of the value of the securities as computed on a daily basis—shall be the company's minimum guideline for posting collateral, and that the company will require many transactions to be collateralized in excess of 100 percent of the value of securities marked to market.

4. These credit policies are to include a review of all lenders and borrowers and the establishment of a credit committee that will determine limits on the credit exposure of any single borrower. The applicant proposed that the company would transact its business only with a select group of well-capitalized broker-dealers that will not be brokerage customers of the company.

4(c)(8)—Underwriting and Dealing in U.S. Obligations, Municipal Securities, and Money Market Instruments

Section 3240.0

The Board has authorized bank holding company subsidiaries to engage in investment or trading transactions as principal to underwrite and deal in certain securities and money market instruments that are eligible for bank underwriting and dealing by state member banks. Basically, the Board has subjected dealer subsidiaries to the same restrictions that govern underwriting and dealing by state member banks pursuant to 12 U.S.C. 24 and 335. Permissible activities include underwriting and dealing in type I securities as defined in 12 C.F.R. 1, including obligations of the United States, general obligations of states and their political subdivisions,¹ and type I municipal bonds; type II securities as defined in 12 C.F.R. 1, including, in part, municipal revenue obligations for housing, university, or dormitory purposes that do not qualify as type I securities; and banker's acceptances and certificates of deposit. In addition, such dealer subsidiaries are subject to the applicable capital restrictions (10 percent of the lead bank's capital and surplus) on dealing in type II securities in 12 C.F.R. 1.7. These underwriting and dealing activities were added to the permissible activities section of Regulation Y, effective February 6, 1984. Furthermore, dealer subsidiaries are permitted to furnish investment advice with respect to these bank-eligible securities.

The Board has authorized bank-affiliated securities dealers to underwrite, deal in, or privately place type III securities in separately capitalized nonbank subsidiaries subject to prudential limitations and restrictions to preclude such subsidiaries from being principally engaged in the underwriting and distribution of securities. In addition, the Board has authorized broker-dealer subsidiaries and brokerage subsidiaries to privately place any type of debt or equity security.

3240.0.1 HISTORY OF BOARD APPROVALS OF UNDERWRITING AND DEALING IN GOVERNMENT OBLIGATIONS AND MONEY MARKET INSTRUMENTS

On February 27, 1978, the Board approved an application to engage de novo in underwriting

1. The Gramm-Leach-Bliley Act authorized well-capitalized state member banks to deal in, underwrite, purchase, and sell all type I municipal securities and revenue bonds without any limitations relative to the bank's capital. See section 2020.1 of the *Commercial Bank Examination Manual* and SR-01-13.

and dealing activities then being conducted by the bank holding company's only subsidiary bank. Thus, the formation of the subsidiary transferred these operations from the bank to the nonbank subsidiary. The activity included the underwriting and dealing in obligations of the United States and general obligations of various states and of political subdivisions. The Board determined that this activity is closely related to banking. The Board also approved, on February 27, 1978, another application of a bank holding company that would permit it to retain shares in a firm engaged in U.S. government securities underwriting activities.

On March 20, 1979, the Board approved an application of a bank holding company to acquire a company that would engage de novo in the activities of underwriting and dealing in certain government and municipal securities and in providing portfolio investment advice to individuals, associations, corporations, state and local governments, and financial institutions ("non-bank entities") and to unaffiliated commercial banks. The Board determined that the proposed activities were closely related to banking.

On March 2, 1982, the Board approved an application of a bank holding company to form an incorporated securities company subsidiary that would engage de novo in the activities of soliciting, underwriting, dealing in, purchasing, and selling obligations of the United States, general obligations of various states, and money market instruments such as banker's acceptances and certificates of deposit. The Board regarded the government securities activities that the bank holding company proposed to engage in as substantially the same as the activities that the Board had approved in previous orders. Insofar as its proposal to deal in banker's acceptances, certificates of deposit, and other money market instruments that state member banks may from time to time be authorized to underwrite and deal in (such instruments are not regarded as "securities" subject to the prohibitions in sections 16 and 21 of the Glass-Steagall Act), the Board regarded such activities as closely related to banking because banks engage in such functions. The Board's approval of the bank holding company's application was subjected to the same restrictions and prudent limitations as if the activity were conducted in the affiliate's lead bank. For example, the nonbank subsidiary could not underwrite, deal in, or hold type II

securities of any issuer in amounts that would not be permitted if such activities were conducted by the subsidiary national bank, nor would it be permitted to sell securities to trust accounts of affiliated banks, except as permitted by regulations of the Comptroller of the Currency. Type II securities can consist of certain types of public housing and dormitory bonds of states and municipalities. The amount of such securities, of a single issue held by the bank, may not exceed 10 percent of the bank's capital and surplus (12 U.S.C. 24 (seventh) and (12 C.F.R. 1.3(d)). The Board further ruled that any purchase of securities from the bank holding company's nonbank subsidiary by any of the bank holding company's subsidiary banks at other than current market values would constitute an unsafe or unsound practice.

3240.0.2 ADDING THE ACTIVITY TO REGULATION Y

Effective February 6, 1984, underwriting and dealing in U.S. government obligations and certain money market instruments was added to the list of permissible activities of Regulation Y. The regulation, which was amended in 1997, continues to place the same limitations as would be applicable if the activity were performed by the bank holding company's subsidiary member banks or its subsidiary nonmember banks as if they were member banks. (See Section 225.28(b)(8)(i) of Regulation Y.)

3240.0.3 REGULATION OF DEALER ACTIVITIES

While municipal securities dealers and dealers in government/agency securities are required to register as broker-dealers pursuant to the Securities Exchange Act of 1934, there are at present no registration requirements for firms that deal only in money market instruments. Regardless of whether a bank holding company subsidiary is registered as a broker-dealer with the Securities and Exchange Commission (SEC), Federal Reserve System examiners will conduct inspections to determine whether the subsidiary is in compliance with the provisions of Regulation Y or any specific conditions in a bank holding company order pertaining to the organization under inspection. In addition, examiners will need to focus on financial, managerial, and

safety-and-soundness considerations in any bank holding company dealer subsidiary. In the event a firm is a registered broker-dealer subject to examination by the National Association of Securities Dealers (NASD), the inspection should be designed to prevent duplication of effort, relying on work performed by NASD examiners to the greatest extent possible, yet still evaluate the factors discussed above that are relevant for either registered or unregistered dealers.

Effective May 20, 1985, the Federal Reserve Bank of New York adopted a *Capital Adequacy Guideline for U.S. Government Securities Dealers*. The Federal Reserve Bank of New York recommends that U.S. government securities dealers that are not subject to federal oversight agree to comply voluntarily with the capital adequacy guideline. Hence, it is expected that any government securities dealer subject to System inspection will comply with the SEC's Uniform Net Capital Rule (17 C.F.R. 240.15c3-1).

3240.0.4 DEALER ACTIVITIES

A firm operates as a dealer when it underwrites or deals in securities or money market instruments. Those activities are usually distinguished as separate activities from normal investment activities. If the firm holds itself out to other dealers or investors as a dealer or engages in a repetitive pattern of short-term purchases and sales, the firm may be engaged in dealer activities, regardless of its stated investment activities.

As noted previously, when the Board added to the Regulation Y list of permissible activities the activities of underwriting and dealing in U.S. government securities, certain money market instruments, and municipal securities, the Board added a restriction that such nonbank activities be subject to the same restrictions as securities and money market instrument activities of member banks. Accordingly, the following discussion focuses upon *permissible securities activities of all member banks*.

3240.0.5 GOVERNMENT AND MUNICIPAL SECURITIES

The authority under which a bank may engage in securities trading and underwriting is found in section 5136 of the Revised Statutes (12 U.S.C. 24). That authority is restricted by limitations on percentage holding of classes of securities as found in 12 C.F.R. 1.3. That regulation allows banks to deal in, underwrite, purchase, and sell type I securities without

limit and type II securities limited to 10 percent of its capital and unimpaired surplus. Banks are prohibited from underwriting or dealing in type III securities for their own accounts. (See section 2020.1 of the *Commercial Bank*

Examination Manual for further information on type I, II, and III securities.)

There are three major types of securities transactions in which banks are involved. First, the bank may buy and sell securities on behalf of a customer. Those are agency transactions in which the agent (bank) assumes no substantial risk and is compensated by a prearranged commission or fee. Second, as a dealer, the bank buys and sells securities for its own account. That is termed a principal transaction because the bank is acting as a principal, buying or selling qualified securities through its own inventory and absorbing whatever market gain or loss is made on the transaction. The third type of securities transaction frequently executed by banks is a contemporaneous “riskless-principal trade.” The dealer buys and sells qualified securities as a principal, with the purchase and sale originating almost simultaneously. Exposure to market risks is limited by the brief period of actual ownership, and profits result from dealer-initiated markup, the difference between the purchase and sale prices.

Dealers’ securities transactions involve customers and other securities dealers. The word “customer,” as used in this section, means an investor. Transactions with other dealers are not considered customer transactions unless the dealer is buying or selling for investment purposes. The following subsections include general descriptions of significant areas of permissible trading and underwriting activities.

3240.0.6 U.S. GOVERNMENT SECURITIES TRADING

U.S. government security trading inventories are generally held with the objective of making short-term gains through market appreciation and dealer-initiated markups. The size of a transaction, the dealer efforts extended, and the nature of the security are common factors that affect the markup differential. Markups on government securities generally range between one and four thirty-seconds of a point. Long maturity issues may have higher markups.

The market risk inherent in U.S. government trading portfolios should be controlled by policy. Standards should be established to limit the total securities inventory and the amount of securities with similar yield or maturity characteristics. Limits imposed by policy should include commitments to purchase new governments on a when-issued basis.

Payments for and deliveries of U.S. government and most agency securities are settled on

the business day following the trade. Government dealers and customers can negotiate same-day or delayed settlement for special situations, but the industry recognizes standard settlement as occurring on the trade date plus one business day.

3240.0.6.1 “When-Issued” Trading

A significant source of risk to dealers involves “when-issued” (WI) trading in government securities. WI trading is the buying and selling of securities in the one- to two-week interim between the announcement of an offering and the security issuance and payment date. The Dealer Surveillance Staff at the Federal Reserve Bank of New York began to require WI position reports from primary government securities dealers and request voluntary WI reports from certain other government securities dealers in 1984. At the time the reporting requirements were adopted, a senior official stated, “The opportunity to trade with several dealers simultaneously without making payment could result in trading losses which exceed a participant’s ability to settle.” In essence, the fact that settlement date can extend to almost two weeks—as opposed to the ordinary next-day settlement—presents an opportunity for firms to engage in a large volume of trading without drawing on the firm’s ability to purchase securities or effect delivery against short positions. Hence, there is increased credit risk in such transactions. Consequently, the dealer’s trading position limits should include WI limits to protect against the increased credit risk associated with WI trading.

3240.0.6.2 Due Bills

A “due bill” is an obligation that results when a firm sells a security or money market instrument and receives payment, but does not deliver the item sold. Due bills issued should be considered as borrowings by the issuing firm, and, alternatively, due bills received should be considered as lending transactions.

Registered broker-dealers are subject to the SEC’s rule 15c3-3 (17 C.F.R. 240.15c3-3), “Customer Protection—Reserves and Custody of Securities.” Basically, this rule states the principle that a broker-dealer needs to safeguard customer assets and cannot use such assets to

fund its own business activities. While this rule is not directly applicable to unregistered U.S. government securities or money market instrument dealers, the principle is transferable. Dealers should not issue due bills as a means of obtaining operating funds or where the underlying security can be delivered at settlement. Customers of the dealer enter transactions with an implicit understanding that securities transactions will be promptly executed and settled unless there is a clear understanding to the contrary. Consequently, dealers should promptly disclose the issuance of a due bill to a customer when funds are taken but securities or money market instruments are not delivered to the customer. Such disclosure should reference the applicable transaction; state the reason for the creation of a due bill; describe the collateral, if any, securing the due bill; and indicate that to the extent the market value of the collateral is insufficient, the customer may be an unsecured creditor of the dealer.

3240.0.6.3 Clearance

Securities clearance services for the bulk of U.S. government and federal-agency security transactions are provided by the Federal Reserve as part of its telegraphic securities transfer system. The various Federal Reserve Banks will wire transfer most government securities between the book-entry safekeeping accounts of the seller and buyer. The Federal Reserve's systems also are used to facilitate security borrowings, loans, and pledges. Hence, the securities firm will need to use the services of a clearing bank.

3240.0.6.4 Short Sales

Another area of U.S. government security activity involves short-sale transactions. A short sale is the sale and delivery of a security that the seller does not own. It is accomplished by borrowing the security for delivery. The borrowed security is collateralized by an appropriate amount of a similar security. Short sales are conducted to accommodate customer orders, to obtain funds by leveraging existing assets, to hedge the market risk of other assets, or with the expectation that the market price of the sold security will decline sufficiently to allow the bank to complete the transaction by purchasing an equivalent security at a later date and a lower price.

3240.0.6.5 Arbitrage

Arbitrage is the coordinated purchase and sale of two securities or of a security and a futures or options contract in which there is a relative market imbalance. The objective of such activity is to obtain earnings by taking advantage of changing yield spreads. Arbitrage opportunities take many forms and can exist whenever segments of the securities markets are subject to a yield variance.

Exposure on arbitrage and/or short sales should be closely monitored for compliance with predetermined objectives. Risk should be controlled by point-spread limits coordinated with stop-loss buy provisions or sell provisions and by guidelines on the length of time a short position can remain uncovered.

3240.0.7 MONEY MARKET TRADING

Aside from short-term securities, banks customarily trade a substantial volume of other money market instruments such as banker's acceptances. It should be noted that the Supreme Court has opined that commercial paper is a Glass-Steagall security.

3240.0.7.1 Banker's Acceptances

Banker's acceptances are an obligation of the acceptor bank and an indirect obligation of the drawer. They are normally secured by rights to the goods being financed and are available in a wide variety of principal amounts. Maturities are generally less than nine months. Acceptances are priced like Treasury bills, with a discount figured for the actual number of days to maturity based on a 360-day year.

3240.0.7.2 Certificates of Deposit

Negotiable certificates of deposit (CDs) issued by money-center banks are actively traded in denominations of \$100,000 to \$1 million. Interest generally is calculated on a 360-day year and paid at maturity. Secondary market prices are computed based on current yield, net of accrued interest due the seller. Eurodollar CDs trade like domestic CDs except their yields are usually higher and their maturities often longer.

Money market instruments trade with the same-day or one-day settlement. Publicly quoted yields or dollar prices are usually based on round lot trades of \$1 million, except for com-

mercial paper, which trades in round lots of \$250,000. Odd-lot prices may vary, but because of the large dollar volume of most trades, the percentage spread between the acquisition cost and sale price is characteristically modest.

Management should attempt to minimize market risk by establishing a maximum holding limit for each class of money market instrument. Policy guidelines also should establish concentration limits for money market instruments issued by a single obligor. Such limits should include commitments.

A sound money market trading policy recognizes the need for a qualitative analysis of the issuers of instruments. Credit approvals should be obtained before trading in CDs and acceptances, and reviews should be conducted on a regular schedule.

Banks dealing in money market instruments are subject to a number of legal restrictions. The sale of federal funds by a member bank to a bank affiliate is limited under section 23A (12 U.S.C. 371(c)) and subject to the restrictions of section 23B of the Federal Reserve Act (12 U.S.C. 371(c-1)). The acquisition, as principal, of a certificate of deposit issued by an affiliate bank also is subject to section 23A limitations and section 23B restrictions. These restrictions do not apply to transactions between bank subsidiaries that are 80 percent or more commonly owned by a bank holding company. These transactions must be conducted on terms that are consistent with safe and sound banking practices.

3240.0.8 REPURCHASE AGREEMENTS AND SECURITIES LENDING

The overwhelming majority of a government security dealer's inventory is financed by repurchase agreements. In addition, many dealers operate a "matched book" repo operation whereby they finance the acquisition or carrying of securities by customers through reverse repurchase agreements and contemporaneously obtain funding for such transactions through the sale of the same or similar securities under a repurchase agreement. In addition, securities dealers often lend or borrow specific issues to effect delivery against short positions or because of failure to receive securities required to be delivered. For prudential guidelines that have been issued to financial institutions in connection with repurchase agreements and securities lending, see the FFIEC supervisory policy statements at sections 2140.0 and 2150.0,

which have been adopted by the Federal Reserve Board.

Firms enter into "reverse repos" to finance the U.S. government securities inventory of other dealers or mortgage bankers who have originated pools of mortgages to back federal housing agency securities. Repos are sold to customers in lieu of certificates of deposit. Customers find them attractive because interest can be paid on repos having maturities of less than seven days and because customer funds are collateralized by the security underlying the repurchase transaction.

The rate of interest received and paid is generally dictated by prevailing market rates. Profits are based on a modest positive spread between interest earned and interest paid. A dealer may attempt to improve that modest profit by increasing the volume of such transactions, using the proceeds to finance or pyramid the acquisition of reverse repos or securities to be used in additional repo arrangements.

A common dealer strategy is to vary resale and repurchase maturities in anticipation of interest-rate movements. If an upward rate trend is expected, the dealer will attempt to lock in a cheaper source of funds at the current low rate by negotiating longer maturities for repos and shorter maturities for reverse repos. Conversely, if interest rates are expected to decline, the dealer attempts to negotiate longer-maturity reverse repos to ensure continuing higher earnings, while negotiating shorter-maturity repos to take advantage of cheaper future sources of funds. Care should be taken to limit exposure by instituting policy guidelines that—

1. limit the aggregate amounts of reverse repo and repo positions,
2. specify acceptable amounts of funds for unmatched or extended maturity transactions,
3. determine maximum time gaps for unmatched maturity transactions and minimally acceptable interest-rate spreads for various maturity agreements, and
4. follow the prudential guidelines in the FFIEC's policy statement on repurchase agreements and securities lending. (See sections 2140.0 and 2150.0.)

3240.0.9 POLICY SUMMARY

The legal responsibilities of directors require that they ensure that dealer activities are conducted on a sound and legal basis that can only

be accomplished if the directors endorse a written trading policy that addresses each area of market and legal risk. Written policy guidelines should be distributed to each individual engaged in trading activities.

3240.0.10 SCOPE OF THE INSPECTION

The scope of inspection will vary depending on the types of securities or money market instrument underwriting, dealing, and brokerage activities conducted by the subsidiary. Examiners may encounter situations in which a securities subsidiary is an SEC-registered broker-dealer because the subsidiary also executes transactions in municipal securities.

Registered broker-dealers are required to become members of the NASD or some other “self-regulatory organization.” To avoid unnecessary regulatory overlap, examiners can rely on the NASD’s compliance examination with respect to investor protection, including compliance with rules of the SEC, NASD, and Municipal Securities Rulemaking Board (MSRB), and the Board’s Regulation T governing securities credit (if applicable). Consequently, in commencing such an inspection, examiners should begin by requesting and reviewing the NASD’s most recent examination letter to the broker-dealer and serious violations that could endanger the banking organization (for example, fraudulent activities that could subject the organization to losses or lawsuits). Significant violations that have not yet been corrected should be noted in the bank holding company report.

Federal Reserve examiners retain responsibility for inspecting certain areas of registered broker-dealer operations regardless of whether the NASD reviews them. Specifically, System examiners should still evaluate management, financial results, and safety-and-soundness considerations, including internal controls. In addition, examiners still need to verify that registered broker-dealer subsidiaries comply with the provisions of Regulation Y, section 225.28(b)(8)(i), or specific Board orders pertaining to the firm under inspection. Finally, the examiner should be prepared to review in-depth any activities or money market instruments that are not securities that might not have been reviewed by the NASD because the activities are outside their scope of examination.

3240.0.11 INSPECTION OBJECTIVES

1. To determine if the policies, practices, procedures, and internal controls regarding dealer activities are adequate.
2. To determine if officers are operating in conformance with the established guidelines.
3. To evaluate the trading portfolio for credit quality and marketability.
4. To determine the scope and adequacy of the audit-compliance functions.
5. To determine compliance with applicable laws and regulations, including 12 C.F.R. 225.28(b)(8)(i).
6. To ensure investor protection.
7. To initiate corrective action when policies, practices, procedures, or internal controls are deficient or when violations of law or regulation have been noted.

3240.0.12 INSPECTION PROCEDURES

1. Review the adequacy of the dealer’s internal controls. (See section 3240.0.13.)
2. Based on the evaluation of internal controls and the work performed by internal/external auditors, determine the scope of the inspection.
3. Test for compliance with policies, practices, procedures, and internal controls in conjunction with performing the remaining procedures. Also, obtain a listing of any deficiencies noted in the latest review done by internal/external auditors from the examiner assigned “Internal and External Audits,” and determine if corrections have been accomplished.
4. Obtain a copy of the latest letter received from the self-regulatory organization responsible (if applicable) for examining broker-dealer activities of this subsidiary.
5. Request that the firm provide the following schedules:
 - a. aged schedule of securities that have been acquired as a result of underwriting activities
 - b. aged schedule of trading-account securities and money market instruments held for trading or arbitrage purposes, which should reflect commitments to purchase and sell securities and all joint-account interests
 - c. schedule of short-sale transactions
 - d. aged schedule of due bills
 - e. list of bonds borrowed
 - f. aged schedule of “fails” to receive or deliver securities on unsettled contracts

- g. schedule of approved securities borrowers and approved limits
- h. schedule of loaned securities
- i. schedule detailing account names and/or account numbers of the—
 - affiliated banks' permanent portfolio accounts;
 - personal accounts maintained at the firm by its employees;
 - accounts of brokers or other dealers; and
 - personal accounts of employees of other brokers, dealers, or municipal securities dealers
- j. list of all joint accounts entered into since the last examination
- k. list of underwriting since the last examination and whether such securities were acquired by negotiation or competitive bid
- l. list of all financial advisory relationships
6. Compare balances of appropriate schedules to the general ledger and review reconciling items for reasonableness.
7. Determine the extent and effectiveness of trading-policy supervision by—
 - a. reviewing the abstracted minutes of meetings of the board of directors and/or of any appropriate committee,
 - b. determining that proper authorization for the trading officer or committee has been made,
 - c. ascertaining the limitations or restrictions on delegated authorities,
 - d. evaluating the sufficiency of analytical data used in the most recent board or committee trading-department review,
 - e. reviewing the methods of reporting by department supervisors and internal auditors to ensure compliance with established policy and law, and
 - f. reaching a conclusion about the effectiveness of director supervision of the trading policy. Prepare a memo for the examiner assigned "Duties and Responsibilities of Directors" stating your conclusions. All conclusions should be supported by factual documentation.

(Before continuing, refer to steps 14 and 15. They should be performed in conjunction with the remaining examination steps.)
8. Ascertain the general character of underwriting and direct-placement activities and ascertain the effectiveness of department management by reviewing underwriter files and ledgers, committee reports, and offering statements to determine—
 - a. the significance of underwriting activities and direct placements of securities as reflected by the volume of sales and profit or loss on operations (compare current data to comparable prior periods);
 - b. whether there is a recognizable pattern in—
 - the extent of analysis of material information relating to the ability of the issuer to service the obligation,
 - rated quality of offerings,
 - point spread of profit margin for unrated issues,
 - geographic distribution of issuers, and
 - syndicate participants, and
 - c. the volume of outstanding bids. Compare current data to comparable prior periods.
9. Determine the general character of trading-account activities and whether the activities are in conformance with stated policy by reviewing departmental reports, budgets, and position records for various categories of trading activity and determining—
 - a. the significance of present sales volume compared to comparable prior periods and departmental budgets;
 - b. whether the firm's objectives are compatible with the volume of trading activity;
 - c. significant inventory positions taken since the prior examination and determining if—
 - the quality and maturity of the inventory position was compatible with prudent practices, and
 - the size of the position was within prescribed limits and compatible with a sound trading strategy
 - d. the exposure on offsetting repurchase transactions by—
 - reviewing the maturities of offsetting "repo" and "reverse repo" agreements to ascertain the existence, duration, amounts, and strategy used to manage unmatched maturity "gaps" and extended (over 30 days) maturities;
 - reviewing records since the last inspection to determine the aggregate amounts of—
 - matched repurchase transactions and
 - "reverse repo" financing extended to one or related firms(s); and
 - performing credit analyses of significant concentrations with any single or related entities.

10. Determine the extent of risk inherent in trading-account securities which have been in inventory in excess of 30 days.
 - a. Determine the dollar volume in extended holdings.
 - b. Determine the amounts of identifiable positions with regard to issue, issuer, yield, credit rating, and maturity.
 - c. Determine the current market value for individual issues which show an internal valuation markdown of 10 percent or more.
 - d. Perform credit analyses on the issuers of nonrated holdings identified as significant positions.
 - e. Perform credit analyses on those issues with valuation writedowns considered significant relative to the scope of trading operations.
 - f. Discuss plans for disposal of slow-moving inventories with management and determine the reasonableness of those plans in light of current and projected market trends.
11. Using an appropriate technique, select issues from the schedule of trading-account inventory. Test valuation procedures by—
 - a. reviewing operating procedures and supporting workpapers and determining if prescribed valuation procedures are being followed;
 - b. comparing dealer-prepared market prices, as of the most recent valuation date, to an independent pricing source (use trade date “bid” prices); and
 - c. investigating any price differences noted.
12. Using an appropriate technique, select transactions from the schedule of short sales and determine—
 - a. the degree of speculation reflected by basis-point spreads,
 - b. present exposure shown by computing the cost to cover short sales, and
 - c. if transactions are reversed in a reasonable period of time.
13. Analyze the effectiveness of operational controls by reviewing recent cancellations and fail items (fail to receive securities and fail to deliver securities) that are a week or more beyond settlement date and determine—
 - a. the amount of extended fails,
 - b. the planned disposition of extended fails,
 - c. if the control system allows a timely, productive follow-up on unresolved fails,
 - d. the reasons for cancellations, and
 - e. the planned disposition of securities that have been inventoried before the recognition of a fail or a cancellation.
14. Determine compliance with applicable laws, rulings, and regulations by performing the following:
 - a. *12 C.F.R. 1.3—eligible securities.*
 - Review inventory schedules of underwriting and trading accounts and determine if issues whose par value is in excess of 10 percent of the affiliated lead bank’s capital and unimpaired surplus are type I securities.
 - Determine that the total par value of type II investments does not exceed 10 percent of the affiliated lead bank’s capital and unimpaired surplus, based on the combination of holdings and permanent portfolio positions in the same securities.
 - Elicit management’s comments and review underwriting records on direct placement of type II securities and determine if the broker-dealer is dealing or engaging in impermissible direct placement of type III securities.
 - b. *Sections 23A and 23B of the Federal Reserve Act (12 U.S.C. 371(c) and 375)—preferential treatment.* Obtain a list of domestic affiliate relationships and a list of directors and principal officers and their business interests from appropriate examiners and determine whether transactions, including securities-clearance services, involving affiliates, insiders, or their interests are on terms less favorable to the bank than those transactions involving unrelated parties.
15. Test for unsafe and unsound practices and possible violations of the Securities Exchange Act of 1934 by—
 - a. reviewing transactions, including U.S. government tender-offer subscription files, involving employees and directors of dealer or other banks, and determining if the funds used in the transactions were misused bank funds or the proceeds of reciprocal or preferential loans,
 - b. reviewing sales to affiliated companies to determine that the sold securities were not subsequently repurchased at an additional markup and that gains were not recognized a second time,
 - c. reviewing securities position records and customer ledgers with respect to large-volume repetitive purchase and sales transactions and—

- independently testing market prices of significant transactions which involve the purchase and resale of the same security to the same or related parties, and
 - investigating the purchase of large blocks of securities from dealer firms just prior to month-end and their subsequent resale to the same firm just after the beginning of the next month
- d. reviewing customer-complaint files and determining the reasons for such complaints.
16. Discuss with an appropriate officer and prepare report comments concerning—
 - a. the soundness of trading objectives, policies, and practices;
 - b. the degree of legal and market risk assumed by trading operations;
 - c. the effectiveness of analytical, reporting, and control systems;
 - d. violations of law;
 - e. internal control deficiencies;
 - f. apparent or potential conflicts of interest; and
 - g. other matters of significance.
 17. Reach a conclusion regarding the quality of department management and state your conclusions on the appropriate inspection report pages.
 18. Update workpapers with any information that will facilitate future inspections.

3240.0.13 REVIEW OF INTERNAL CONTROLS

As a part of carrying out the inspection procedures for this activity, the examiner is expected to review the dealer's system of internal controls. The examiner should concentrate the internal controls review on the policies, practices, and procedures of the firm.

The system should be documented in a complete, concise manner and should include, where appropriate, narrative descriptions, flow charts, copies of forms used, and other pertinent information. *Items marked with asterisks require substantiation by observation or testing.*

3240.0.13.1 Securities Underwriting Trading Policies

1. Has the board of directors, consistent with its duties and responsibilities, adopted written securities underwriting/trading policies that—
 - a. outline objectives?
 - b. establish limits and/or guidelines for the following:
 - price markups?
 - quality of issues?
 - maturity of issues?
 - inventory positions (including when-issued (WI) positions)?
 - amounts of unrealized loss on inventory positions?
 - length of time an issue will be carried in inventory?
 - amounts of individual trades or underwriter interests?
 - acceptability of brokers and syndicate partners?

- c. recognize possible conflicts of interest and establish appropriate procedures regarding—
 - deposit and service relationships with municipalities whose issues have underwriting links to the trading department?
 - deposit relationships with securities firms handling significant volumes of agency transactions or syndicate participations?
 - transfers made between trading-account inventory and affiliated investment portfolio(s)?
 - the affiliated bank's trust department acting as trustee, paying agent, and transfer agent for issues which have an underwriting relationship with the trading department?
 - d. state procedures for periodic, monthly or quarterly, valuation of trading inventories to market value?
 - e. state procedures for periodic independent verification of valuations of the trading inventories?
 - f. outline methods of internal review and reporting by department supervisors and internal auditors to ensure compliance with established policy?
 - g. identify permissible types of securities?
2. Are the underwriting/trading policies reviewed at least quarterly by the board of directors to determine their adequacy in light of changing conditions?
 3. Is there a periodic review by the board to ensure that the underwriting/trading department is in compliance with its policies?

3240.0.13.2 Offsetting Resale and Repurchase Transactions

1. Has the board of directors, consistent with its duties and responsibilities, adopted written

offsetting repurchase transaction policies that—

- a. limit the aggregate amount of offsetting repurchase transactions?
 - b. limit the amounts in unmatched or extended (over 30 days) maturity transactions?
 - c. determine maximum time gaps for unmatched maturity transactions?
 - d. determine minimally acceptable interest-rate spreads for various maturity transactions?
 - e. determine the maximum amount of funds to be extended to any single or related firms through “reverse repo” transactions involving unsold (through forward sales) securities?
 - f. require firms involved in reverse repo transactions to submit corporate resolutions stating the names and limits of individuals who are authorized to commit the firm?
 - g. require submission of current financial information by firms involved in reverse repo transactions?
 - h. provide for periodic credit reviews and approvals for firms involved in reverse repo transactions?
 - i. specify types of acceptable offsetting repurchase transaction collateral?
 - j. require receipt of assurance letters that unregulated securities dealers comply with the Federal Reserve Bank of New York’s “Capital Adequacy Guideline for U.S. Government Securities Dealers?”
2. Are written collateral-control procedures designed so that—
- a. collateral assignment forms are used?
 - b. collateral assignments of registered securities are accompanied by powers of attorney signed by the registered owner, and are registered securities registered in the dealer or dealer’s nominee name when they are assigned as collateral for extended maturity (over 30 days) reverse repo transactions?
 - c. funds are not disbursed until reverse repo collateral is delivered into the physical custody of the dealer or an independent safekeeping agent?
 - d. funds are only advanced against predetermined collateral margins or discounts?
 - e. collateral margins or discounts are predicated upon the following:
 - the type of security pledged as collateral?

- maturity of collateral?
 - historic and anticipated price volatility of the collateral?
 - creditworthiness of the counterparty?
 - maturity of the reverse repo agreements?
 - accrued interest?
- f. maintenance agreements are required to support predetermined collateral margin or discount by daily mark to market of repurchase agreement securities?
 - g. maintenance agreements are structured to allow for obtaining additional securities or cash calls in the event of collateral price declines?
 - h. collateral market value is frequently checked to determine compliance with margin and maintenance requirements?

3240.0.13.3 Custody and Movement of Securities

- *1. Are the dealer’s procedures such that persons do not have sole custody of securities in that—
- a. they do not have sole physical access to securities?
 - b. they do not prepare disposal documents that are not also approved by authorized persons?
 - c. for the security custodian, supporting disposal documents are examined or adequately tested by a second custodian?
 - d. no person authorizes more than one of the following transactions: execution of trades, receipt and delivery of securities, and collection or disbursement of payment?
2. Are securities physically safeguarded to prevent loss, unauthorized disposal, or use?
- a. Are negotiable securities kept under dual control?
 - b. Are securities counted frequently on a surprise basis and reconciled to the securities record? Are the results of such counts reported to management?
 - c. Does the dealer periodically test for compliance with provisions of its insurance policies regarding custody of securities?
 - d. For securities in the custody of others—
 - are custody statements agreed periodically to position ledgers, and any differences followed up to a conclusion?

- are statements received from brokers and other dealers reconciled promptly, and any differences followed up to a conclusion?
 - are positions for which no statements are received confirmed periodically, and stale items followed up to a conclusion?
3. Are trading-account securities segregated from other dealer-owned securities or securities held in safekeeping for customers?
 - *4. Is access to the trading-securities vault restricted to authorized employees?
 5. Do withdrawal authorizations require countersignature to indicate security count verifications?
 6. Is registered mail used for mailing securities, and are adequate receipt files maintained for such mailings (if registered mail is used for some but not all mailings, indicate criteria and reasons)?
 7. Are prenumbered forms used to control securities trades, movements, and payments?
 8. If so, is numerical control of prenumbered forms accounted for periodically by persons independent of those activities?
 9. Do alterations to forms governing the trade, movement, and payment of securities require—
 - *a. signature of the authorizing party?
 - b. use of a change-of-instruction form?
 10. With respect to negotiability of registered securities—
 - a. are securities kept in non-negotiable form whenever possible?
 - b. are all securities received and not immediately delivered transferred to the name of the dealer or its nominee and kept in non-negotiable form whenever possible?
 - c. are securities received checked for negotiability (endorsements, signature, guarantee, legal opinion, etc.) and for completeness (coupons, warrants, etc.) before they are placed in the vault?

3240.0.13.4 Purchase and Sales Transactions

1. Are all transactions promptly confirmed in writing to the actual customers or dealers?
2. Are confirmations compared or adequately tested to purchase and sales memoranda and reports of execution of orders, and any differences investigated and corrected (including

approval by a designated responsible employee)? Are confirmations and purchase and sale memoranda checked or adequately tested for computation and terms by a second individual?

3. Are comparisons received from other dealers or brokers compared with confirmations, and any differences promptly investigated? Are comparisons approved by a designated individual?

3240.0.13.5 Customer and Dealer Accounts

1. Do account bookkeepers periodically transfer to different account sections or otherwise rotate posting assignments?
2. Are letters mailed to customers requesting confirmation of changes of address?
3. Are separate customer-account ledgers maintained for—
 - a. employees?
 - b. affiliates?
 - c. affiliated bank's trust accounts?
4. Are customer inquiries and complaints handled exclusively by designated individuals who have no incompatible duties?

3240.0.13.6 Other

1. Are the preparation, additions, and posting of subsidiary records performed and/or adequately reviewed by persons who do not also have sole custody of securities?
2. Are subsidiary records reconciled, at least monthly, to the appropriate general-ledger accounts, and are reconciling items adequately investigated by persons who do not also have sole custody of securities?
3. Are fails to receive and deliver under a separate general-ledger control?
 - a. Are fail accounts periodically reconciled to the general ledger, and any differences followed up to a conclusion?
 - b. Are periodic aging schedules prepared?
 - c. Are stale fail items confirmed and followed up to a conclusion?
 - d. Are stale items valued periodically, and, if any potential loss is indicated, is a particular effort made to clear such items or to protect the bank from loss by other means?
4. With respect to securities loaned and borrowed positions—

- a. are details periodically reconciled to the general ledger, and any differences followed up to a conclusion?
 b. are positions confirmed periodically?
- c. are all policies and procedures in conformance with the FFIEC policy on securities lending contained section 2140.0?

4(c)(8)—Agency Transactional Services (Futures Commission Merchants and Futures Brokerage) Section 3250.0

A futures commission merchant (FCM) is an entity referred to in the Commodity Exchange Act to denote a registered firm that is in the business of soliciting or accepting orders, as broker, for the purchase or sale of any exchange-traded futures contract and options thereon. For the purposes of this examiner guidance, the term “FCM activities” is used in a broad context and refers to all futures brokerage activities, operations, and their associated risks that are subject to the Federal Reserve System’s supervision (see SR-97-33). In connection with these activities, banking organizations may hold customer funds, assets, or property and may be members of futures exchanges and their associated clearinghouses. They may also offer related advisory services as registered commodity trading advisers (CTAs). The guidance addresses the expanding scope of futures activities conducted by different types of banking organizations worldwide and implements supervisory initiatives to effect more risk-focused and burden-sensitive approaches to the supervision of FCM activities. The guidance is designed to help examiners (1) assess how well a consolidated financial organization manages one or more discrete futures brokerage operations and (2) make a broader assessment of the organization’s overall risk management.

The guidance pertains to FCM subsidiaries of bank holding companies (BHCs), but it is also applicable to FCM subsidiaries of state member banks, Edge Act corporations, and foreign banking organizations. It addresses the broader scope of permissible futures brokerage activities articulated within Regulation Y¹ and, by extension, in Regulation K, and focuses on the adequacy

of management and the management processes used to control the credit, market, liquidity, reputation, and operations risks entailed in these activities, including brokerage, clearing, funds management, and advisory services.

The guidance takes a global line-of-business supervisory approach to the inspection of FCM activities rather than using the traditional full-scope inspections of individual FCM subsidiaries, many of which are primarily supervised by functional regulators. Reviews and reports of functional regulators should be used to the fullest extent when planning and conducting inspections of FCM activities of bank holding companies and other banking organizations to avoid duplication and minimize supervisory burdens. However, in conducting an inspection of various aspects of an FCM’s activities, a review of various functions, derived from a sample of the organization’s FCM subsidiaries, may be necessary and appropriate to determine the extent of the risks these operations pose to the banking organization and to determine whether management of those risks is satisfactory. The examiner should pay particular attention to activities conducted in FCM subsidiaries that have not been subject to a regular inspection by their functional regulator and to FCM activities of foreign affiliates in which there is uncertainty concerning the level of local supervision.

BHC subsidiaries, banks (generally through operating subsidiaries), Edge Act corporations, and foreign banking organizations (FBOs) operating in the United States may operate futures brokerage and clearing services involving a myriad of financial and nonfinancial futures contracts and options on futures. These activities can involve futures exchanges and clearinghouses throughout the world. In general, most organizations conduct these activities as FCMs.

The Federal Reserve has a supervisory interest in ensuring that the banking organizations subject to its oversight conduct their futures brokerage activities in a safe and sound manner consistent with Regulations Y and K (and with any terms and conditions in Board orders for a particular organization). Accordingly, a review of futures brokerage activities is an important element for inspections of BHCs, examinations

1. The Board broadened the scope of permissible FCM nonbanking activities for a bank holding company with the revision of Regulation Y, effective April 21, 1997. For example, the following activities are permissible:

- Derivative contracts can be executed and cleared on a broad range of nonfinancial commodities.
- Derivative contracts can be cleared without simultaneously providing execution services. Likewise, execution services can be provided without also providing clearing services.
- Foreign-exchange transactional services can be provided in the same FCM subsidiary that provides advice regarding foreign exchange.
- Bank holding companies can engage in FCM activities through a section 20 subsidiary.
- An FCM nonbanking subsidiary can trade for its own account.
- An FCM nonbanking subsidiary may act on exchange-traded futures contracts and on options on futures contracts based on a financial or nonfinancial commodity.
- A bank holding company may combine FCM activities and incidental activities. For example, FCM activities may be

combined with futures-related financing to customers, such as financing to cover margin obligations (note: such financing may be prohibited by some exchanges).

of state member banks, and reviews of FBO operations. The following guidance on evaluating the futures brokerage activities of bank holding company subsidiaries, branches and agencies of foreign banks operating in the United States, or any operating subsidiaries of state member banks provides a list of procedures that may be used to tailor the scope of an inspection of these activities.

3250.0.1 SCOPE OF GUIDANCE

Examiners are to use a risk-based inspection approach to evaluating FCM activities—including brokerage, clearing, funds management, and advisory activities. Significant emphasis should be placed on evaluating the adequacy of management and the management processes used to control the credit, market, liquidity, legal, reputation, and operations risks entailed in these operations. Both the adequacy of risk management and the quantitative level of risk exposures should be assessed, as appropriate to the scope of the FCM's activities. The objectives of a particular inspection should dictate the FCM activities to be reviewed and set the scope of the inspection.

Examiners are to use a functional-regulatory approach (consistent with section III of the Gramm-Leach-Bliley Act) to minimize duplicative inspection and supervisory burdens. Reviews and reports of functional regulators should be used to their fullest extent. For the examination authority and limitations on the examination of a functionally regulated subsidiary, see section 1040.0 and 12 U.S.C. 1844(c).

When futures brokerage occurs in more than one domestic or foreign affiliate, examiners should assess, using a functional-regulatory approach (consistent with section III of the Gramm-Leach-Bliley Act), the adequacy of the management of the futures brokerage activities of the consolidated financial organization to ensure that the parent organization recognizes and effectively manages the risks posed by its various futures brokerage subsidiaries. Accordingly, in reviewing futures brokerage operations, examiners should identify all bank holding company, bank operating, or FBO subsidiaries that engage in FCM activities and the scope of those activities. Not all subsidiaries may need to be reviewed to assess the risk management of the consolidated organization. Selection of the particular FCM subsidiaries to be reviewed should

be based on an assessment of the risks their activities pose to the consolidated organization.

This guidance primarily addresses the assessment of activities associated with futures brokerage operations. Any proprietary trading that occurs at an FCM should be assessed in connection with the review of proprietary trading activities of the consolidated financial organization, using the appropriate guidance in the Federal Reserve's *Trading and Capital-Markets Activities Manual*. Similarly, when a review of futures advisory activities is planned, examiners should refer to investment, financial, and futures advisory inspection guidance in this manual (sections 3130.0 and 3130.4) and the *Trust Examination Manual*, as appropriate.

3250.0.2 EVALUATION OF FCM RISK MANAGEMENT

Consistent with existing Federal Reserve policies, examiners should evaluate the risk-management practices of FCM operations and ensure that this evaluation is incorporated appropriately in the rating of risk management under the bank CAMELS, BHC RFI/C(D), or FBO ROCA rating systems. Accordingly, examiners should place primary consideration on findings related to the adequacy of (1) board and senior management oversight; (2) policies, procedures, and limits used to control risks; (3) systems for measuring, monitoring, and reporting risk; and (4) internal controls and audit programs.

3250.0.2.1 Board and Senior Management Oversight

The board of directors has the ultimate responsibility for the level of risks taken by the organization. Accordingly, the board, a designated subcommittee of the board, or a high level of senior management should approve overall business strategies and significant policies that govern risk-taking in the organization's FCM activities. In particular, the board or a committee thereof should approve policies that identify authorized activities and managerial oversight and should articulate risk tolerances and exposure limits of FCM activities. The board should also actively monitor the performance and risk profile of its FCM activities. Directors and senior management should periodically review information that is sufficiently detailed and timely to allow them to understand and assess the various risks involved in these activities. In addition, the board or a delegated committee should periodi-

cally reevaluate the business strategies and major risk-management policies and procedures, emphasizing the organization's financial objectives and risk tolerances.

The FCM's senior management is responsible for ensuring that policies and procedures for conducting FCM activities on both a long-range and day-to-day basis are adequate. Senior management or a designated subcommittee of the board should review and approve these policies and procedures annually. The consistency of these policies with parent company limits or other directions pertaining to the FCM's activities should be confirmed. Management must also maintain (1) clear lines of authority and responsibility for managing operations and the risks involved, (2) appropriate limits on risk-taking, (3) adequate systems and standards for measuring and tracking risk exposures and measuring financial performance, (4) effective internal controls, and (5) a comprehensive risk-reporting and risk-management review process. To provide adequate oversight, management should fully understand the risk profile of FCM activities. Examiners should review reports given to senior management and evaluate whether they consist of good summary information and sufficient detail that will enable management to assess and manage the FCM's risk. As part of its oversight responsibilities, senior management should periodically review the organization's risk-management procedures to ensure that they remain appropriate and sound.

Management should also ensure that activities are conducted by competent staff whose technical knowledge and experience are consistent with the nature and scope of the organization's activities. There should be sufficient depth in staff resources to manage these activities if key personnel are not available. Management should also ensure that back-office and financial-control resources are sufficient to effectively manage and control risks. Functions for measuring, monitoring, and controlling risk should have clearly defined duties. There should be adequate separation of duties in key elements of the risk-management process to avoid potential conflicts of interest. The nature and scope of these safeguards should be in accordance with the scope of the FCM's activities.

3250.0.2.2 Policies, Procedures, and Limits

FCMs should maintain written policies and procedures that clearly outline their approach for managing futures brokerage and related activi-

ties. Such policies should be consistent with the organization's broader business strategies, capital adequacy, technical expertise, and general willingness to take risk. Policies, procedures, and limits should address the relevant credit, market, liquidity, reputation, and operations risks in light of the scope and complexity of the FCM's activities. Policies and procedures should establish a logical framework for limiting the various risks involved in an FCM's activities and should clearly delineate lines of responsibility and authority over these activities. They should also address the approval of new product lines, strategies, and other activities; conflicts of interest, including transactions by employees; and compliance with all applicable legal requirements. Procedures should incorporate and implement the parent company's relevant policies and should be consistent with applicable statutes, Federal Reserve Board regulations, interpretations, Board orders, and supervisory policies and guidance.

A sound system of integrated limits and risk-taking guidelines is an essential component of the risk-management process. Such a system should set boundaries for organizational risk-taking and ensure that positions that exceed certain predetermined levels receive prompt management attention so they can be either reduced or prudently addressed.

3250.0.2.3 Risk Measurement, Monitoring, and Reporting

An FCM's system for measuring the credit, market, liquidity, and other risks involved in its activities should be as comprehensive and accurate as practicable and should be commensurate with the nature of its activities. Risk exposures should be aggregated across customers, products, and activities to the fullest extent possible. Examiners should evaluate whether the risk measures and the risk-measurement process are sufficiently robust to accurately reflect the different types of risks facing the organization. Clear standards for measuring risk exposures and financial performance should be established. The standards should provide a common framework for limiting and monitoring risks and should be understood by all relevant personnel.

An accurate, informative, and timely management information system is essential to the prudent operation of an FCM. Accordingly, the examiner's assessment of the quality of the

management information system is an important factor in the overall evaluation of the risk-management process. Appropriate mechanisms should exist for reporting risk exposures and the financial performance of the FCM to its board and parent company, as well as for internal management purposes. FCMs must establish management-reporting policies to apprise their boards of directors and senior management of material developments, the adequacy of risk management, operating and financial performance, and material deficiencies identified during reviews by regulators and by internal or external audits. The FCM should also provide reports to the parent company (or in the case of foreign-owned FCMs, to its U.S. parent organization, if any) on financial performance; adherence to risk parameters and other limits and controls established by the parent for the FCM; and any material developments, including findings of material deficiencies by regulators. Examiners should determine the adequacy of an FCM's monitoring and reporting of its risk exposure and financial performance to appropriate levels of senior management and to the board of directors.

3250.0.2.4 Internal Controls

An FCM's internal control structure is critical to its safe and sound functioning in general and to its risk-management system in particular. Establishing and maintaining an effective system of controls, including the enforcement of official lines of authority and appropriate separation of duties—such as trading, custodial, and back office—is one of management's more important responsibilities. Appropriately segregating duties is a fundamental and essential element of a sound risk-management and internal control system. Failure to implement and maintain an adequate separation of duties can constitute an unsafe and unsound practice, possibly leading to serious losses or otherwise compromising the financial integrity of the FCM.

When properly structured, a system of internal controls promotes effective operations and reliable financial and regulatory reporting; safeguards assets; and helps to ensure compliance with relevant laws, regulations, and organizational policies. Ideally, internal controls are tested by an independent internal auditor who reports directly to either the entity's board of directors or its designated committee. Personnel

who perform these reviews should generally be independent of the function they are assigned to review. Given the importance of appropriate internal controls to banking organizations of all sizes and risk profiles, the results of audits or reviews, whether conducted by an internal auditor or by other personnel, should be adequately documented, as should management's responses to them. In addition, communication channels should exist that will allow negative or sensitive findings to be reported directly to the board of directors or the relevant board committee (for example, a board audit committee).

3250.0.3 FUTURES EXCHANGES, CLEARINGHOUSES, AND FCMs

Futures exchanges provide auction markets for standardized futures and options on futures contracts. In the United States and most other countries, futures exchanges and FCMs are regulated by a governmental agency. Futures exchanges are membership organizations and impose financial and other regulatory requirements on members, particularly those that do business for customers as brokers. In the United States and most other countries, futures exchanges also have quasi-governmental (self-regulatory) responsibilities to monitor trading and prevent fraud, with the authority to discipline or sanction members that violate exchange rules. FCMs may be members of the exchange on which they effect customers' trades. When they are not members, FCMs must use other firms that are exchange members to execute customer trades.²

Each futures exchange has an affiliated clearinghouse responsible for clearing and settling trades on the exchange and for managing associated risks. When a clearinghouse accepts transaction information from its clearing members, it generally guarantees the performance of the transaction to each member and becomes the counterparty to the trade (that is, the buyer to every seller and the seller to every buyer). Daily cash settlements are paid or collected by clearing members through the clearinghouse. The cash transfers represent the difference between the original trade price and the daily official closing settlement price for each commodity futures contract. The two members settle their sides of the transaction with the clearinghouse,

2. A firm or trading company that maintains only a proprietary business may become a member of an exchange without registering as an FCM.

usually by closing out the position before delivery of the futures contract or the expiration of the option on the futures contract.

An exchange member that wishes to clear or settle transactions for itself, customers, other FCMs, or commodity professionals (locals or market makers) may become a member of the affiliated clearinghouse (clearing member) if it is able to meet the clearinghouse's financial-eligibility requirements. In general, these requirements are more stringent than those required for exchange membership. For example, a clearing member usually is required to maintain a specified amount of net capital in excess of the regulatory required minimum and to make a guaranty deposit as part of the financial safeguards of the clearinghouse. The size of the deposit is related to the scale of the clearing member's activity. If it is not a member of the clearinghouse for the exchange on which a contract is executed, an FCM must arrange for another FCM that is a clearing member to clear and settle its transactions.³

Margin requirements are an important risk-management tool for maintaining the financial integrity of clearinghouses and their affiliated exchanges. Clearinghouses require that their members post initial margin (performance bond) on a new position to cover potential credit exposures borne by the clearinghouse. The clearing firm, in turn, requires its customers to post margin. At the end of each day, and on some exchanges on an intraday basis, all positions are marked to the market. Clearing members with positions that have declined in value pay the amount of the decline in cash to the clearinghouse, which then pays the clearing members holding positions that have increased in value on that day. This process of transferring gains and losses among clearing-member firms, known as collecting variation margin, is intended to periodically eliminate credit-risk exposure from the clearinghouse.⁴ In volatile markets, a clearinghouse may call for additional variation margin during the trading day, sometimes with only

one hour's notice, and failure to meet a variation (or initial) margin call is treated as a default to the clearinghouse.

Some clearinghouses also require that their members be prepared to pay loss-sharing assessments to cover losses sustained by the clearinghouse in meeting the settlement obligations of a clearing member that has defaulted on its (or its customers') obligations. Such assessments arise when losses exceed the resources of defaulting members, the guaranty fund, and other surplus funds of the clearinghouse. Each clearinghouse has its own unique loss-sharing rules.⁵ At least one U.S. and one foreign exchange have unlimited loss-sharing requirements. Most U.S. clearinghouses relate loss-sharing requirements to the size of a member's business at the clearinghouse. Given the potential drain on a banking organization's financial resources, the exposure to loss-sharing agreements should be a significant consideration in the decision to become a clearing member. A parent bank holding company may not provide a guarantee or become liable to an exchange or clearing association other than for trades conducted by the subsidiary for its own account or for the account of any affiliate. (See section 225.28(b)(6)(iv) of Regulation Y.)

3250.0.4 COMMODITY EXCHANGE ACT, COMMODITY FUTURES TRADING COMMISSION, AND SELF-REGULATORY ORGANIZATIONS

In the United States, the primary regulator of exchange-traded futures activities is the Commodity Futures Trading Commission (CFTC), which was created by and derives its authority from the Commodity Exchange Act (CEA). The CFTC has adopted registration,⁶ financial responsibility, antifraud, disclosure, and other rules for FCMs and CTAs, and has general enforcement authority over commodities firms and professionals that buy or sell exchange-traded futures contracts.

3. The nonmember FCM opens an account, usually on an omnibus basis, with the clearing-member FCM. Separate omnibus accounts have to be maintained for customer and non-customer or proprietary trading activity. If the FCM does not carry customer accounts by holding customer funds and maintaining account records, the clearing member will carry the customer's account on a fully disclosed basis and issue confirmations, account statements, and margin calls directly to the customer on behalf of the introducing FCM. In such cases, the introducing FCM operates as an introducing broker (IB) and could have registered with the Commodity Futures Trading Commission as such.

4. Some foreign exchanges do not allow the withdrawal of unrealized profits as mark-to-market variation.

5. Clearinghouses usually (1) retain the right to use assets owned by clearing members, but under the control of the clearinghouse (for example, proprietary margin); (2) require additional contributions of funds or assets or require the member to purchase additional shares of the clearinghouse; or (3) perfect a claim against the member for its share of the loss.

6. Many FCMs also are SEC-registered as broker-dealers and are subject to SEC and CFTC financial-responsibility rules.

The futures exchanges, in addition to providing a marketplace for futures contracts, are deemed to be self-regulatory organizations (SROs) under the CEA. For example, a number of SROs have adopted detailed uniform practice rules for FCMs, including “know your customer” recordkeeping rules and other formal customer-disclosure requirements. The National Futures Association (NFA) also is an SRO, although it does not sponsor a futures exchange or other marketplace. The NFA has adopted sales-practice rules applicable to members who do business with customers. All FCMs that wish to accept orders and hold customer funds and assets must be members of the NFA.

The CEA and rules of the CFTC require the SROs to establish and maintain enforcement and surveillance programs for their markets and to oversee the financial responsibility of their members.⁷ The CFTC has approved an arrangement under which a designated SRO (DSRO) is responsible for performing on-site audits and reviewing periodic reports of a member FCM that is a member of more than one futures exchange. The NFA is the DSRO for FCMs that are not members of any futures exchange.

Oversight of FCMs is accomplished through annual audits by the DSRO and the filing of periodic financial statements and early warning reports by FCMs, in compliance with CFTC and SRO rules. In summary, this oversight encompasses the following three elements:

1. *Full-scope audits at least once every other year of each FCM that carries customer accounts.* Audit procedures conform to a Uniform Audit Guide developed jointly by the SROs. The full-scope audit focuses on the firm’s net capital computations, segregation of customer funds and property, financial reporting, recordkeeping, and operations.⁸ The audit also reviews sales practices (including customer records, disclosures,

7. CFTC Rule 1.51, contract market program for enforcement, requires that SROs monitor market activity and trading practices in their respective markets, perform on-site examinations (audits) of members’ books and records, review periodic financial reports filed by members, and bring disciplinary and corrective actions against members for violations of the CEA and CFTC and SRO rules.

8. If an FCM is also a broker-dealer, the DSRO is not required to examine the FCM for compliance with net capital requirements if the DSRO confers with the broker-dealer’s examining authority at least annually to determine that the FCM is in compliance with the broker-dealer’s net capital requirements and receives the DSRO copies of all examinations.

advertisements, and customer complaints) and the adequacy of employee supervision. The audit’s scope should reflect the FCM’s prior compliance history as well as the examiner’s on-site evaluation of the firm’s internal controls. During the off-year, the DSROs perform limited-scope audits of member FCMs. This audit is limited to financial matters such as a review of the FCM’s net capital computations, segregation of customer funds, and its books and records.

2. *FCM quarterly financial reporting requirements.* FCMs are required to file quarterly financial statements (form 1-FR-FCM) with their DSROs. The fourth-quarter statement must be filed as of the close of the FCM’s fiscal year and must be certified by an independent public accountant. The filings generally include statements regarding changes in ownership equity, current financial condition, changes in liabilities subordinated to claims of general creditors, computation of minimum net capital, segregation requirements and funds segregated for customers, secured amounts and funds held in separate accounts, and any other material information relevant to the firm’s financial condition. The certified year-end financial report also must contain statements of income and cash flows.
3. *Early warning reports.* FCMs are required to notify the CFTC and the SROs when certain financial weaknesses are experienced.⁹ For example, if an FCM’s net capital falls to a specified warning level, it must file a written notice within five business days and file monthly financial reports (form 1-FR-FCM) until its net capital meets or exceeds the warning level for a full three months. If an FCM’s net capital falls below the minimum required, it must cease doing business and give telegraphic notice to the CFTC and any commodities or securities SRO of which it is a member. Similar notices must be given by a clearing organization or carrying FCM when it determines that a position of an FCM must be liquidated for failure to meet a margin call or other required deposit.

3250.0.5 FEDERAL RESERVE REGULATION OF FCMs AND CTAs

Bank holding companies are permitted, under Regulation Y (section 225.28(b)(7)(iv)), to engage

9. CFTC Rule 1.12 requires the maintenance of minimum financial requirements by FCMs and introducing brokers. These requirements are similar to those applicable to broker-dealers under SEC rules.

in FCM and CTA activities on both domestic and foreign futures exchanges through separately incorporated nonbank subsidiaries. As a general matter, the nonbank subsidiaries of bank holding companies (and some foreign banks) provide services to unaffiliated customers in the United States under section 4(c)(8) of the Bank Holding Company Act (BHC Act) and to unaffiliated customers outside the United States under Regulation K.¹⁰ Banks and the operating subsidiaries of banks usually provide futures-related services to unaffiliated parties in the United States under the general powers of the bank and to unaffiliated parties outside the United States under Regulation K. These various subsidiaries may provide services to affiliates under section 4(c)(1)(C) of the BHC Act.

Regulation Y permits a bank holding company subsidiary that acts as an FCM to engage in other activities in the subsidiary, including futures advisory services and trading, as well as other permissible securities and derivative activities as defined in sections 225.28(b)(6) (financial and investment advisory activities) and 225.28(b)(7) (agency transactional services for customer investments). Section 225.28(b)(7) specifically authorizes FCMs to provide agency services for unaffiliated persons in execution, clearance, or execution and clearance of any futures contract and option on a futures contract traded on an exchange in the United States and abroad. It also includes the authority to engage in other agency-type transactions (for example, riskless principal) involving a forward contract, an option, a future, an option on a future, and similar instruments. Furthermore, this section codifies the long-standing prohibition against a parent bank holding company's issuing any guarantees or otherwise becoming liable to an exchange or clearinghouse for transactions effected through an FCM, except for the proprietary trades of the FCM and those of affiliates.

A well-capitalized and well-managed bank holding company, as defined in section 225.2(r) and (s) of Regulation Y, respectively, may commence activities as an FCM or a CTA by filing a notice prescribed under section 225.23(a) of Regulation Y. Bank holding companies that are not eligible to file notices or that wish to act in a

capacity other than as an FCM or CTA, such as a commodity pool operator (CPO), must follow the specific application process for these activities. Examiners should ensure that all of these activities are conducted in accordance with the Board's approval order.

A bank holding company, bank, or FBO parent company of an FCM is expected to establish specific risk parameters and other limits and controls on the brokerage operation. These limits and controls should be designed to manage financial risk to the consolidated organization and should be consistent with its business objectives and overall willingness to assume risk.

3250.0.6 PARTICIPATION IN FOREIGN MARKETS

FCMs frequently transact business on foreign exchanges as either exchange or clearinghouse members or through third-party brokers that are members of the foreign exchange. The risks of doing business in foreign markets generally parallel those in U.S. markets; however, some unique issues of doing business on foreign futures exchanges must be addressed by the FCM and its parent company to ensure that the activity does not pose undue risks to the consolidated financial organization.

Before doing business on a foreign exchange, an FCM should understand the legal and operational differences between the foreign exchange and U.S. exchanges. For example, the FCM should know about local business practices and legal precedents that pertain to business in the foreign market. In addition, the FCM should know how the foreign exchange is regulated and how it manages risk, and should develop policies and the appropriate operational infrastructure of controls, procedures, and personnel to manage these risks. Accordingly, examiners should confirm that, in considering whether and how to participate in a foreign market, an FCM performs due diligence on relevant legal and regulatory issues, as well as on local business practices. Foreign-exchange risks should be understood and authorized by the FCM's parent company, and any limits set by the parent company or FCM management should be carefully monitored. The FCM and its parent company also should assess the regulatory and financial risks associated with exchange and clearinghouse membership in a foreign market, including an understanding of the extent to which the

10. Those nonbank subsidiaries that operate in the United States may open offices outside the United States if (1) the bank holding company's authority under Regulation Y is not limited geographically, (2) the foreign office is not a separately incorporated entity, and (3) the activities conducted by the foreign office are within the scope of the bank holding company's authority under Regulation Y. In addition, a bank holding company may operate a limited foreign-based business in the United States under Regulation K. (See 12 C.F.R. 211.6.)

foreign clearinghouse monitors and controls day-to-day credit risk and its loss-sharing requirements.

3250.0.7 SPECIFIC RISKS AND THEIR RISK-MANAGEMENT CONSIDERATIONS

In general, FCMs face five basic categories of risk—credit risk, market risk, liquidity risk, reputation risk, and operations risk. The following discussions highlight specific considerations in evaluating the key elements of sound risk management as they relate to these risks. The compliance and internal-controls functions provide the foundation for managing the risks of an FCM.

3250.0.7.1 Credit Risk

FCMs encounter a number of different types of credit risks. The following discussions identify some of these risks and discuss sound risk-management practices applicable to each.

3250.0.7.1.1 Customer Credit Risk

Customer credit risk is the potential that a customer will fail to meet its variation-margin calls or its payment or delivery obligations. An FCM should establish a credit-review process for new customers that is independent of the marketing and sales function. It is not unusual for the FCM's parent company (or banking affiliate) to perform the credit evaluation and provide the necessary internal approvals for the FCM to execute and clear futures contracts for particular customers. In some situations, however, the FCM may have the authority to perform the credit review internally. Examiners should determine how customers are approved and confirm that documentation in the customer's credit files is adequate even when the approval is performed by the parent. Customer credit files should indicate the scope of the credit review and contain approval of the customer's account and credit limits. For example, customer credit files may contain recent financial statements, sources of liquidity, trading objectives, and any other pertinent information used to support the credit limits established for the customer. In

addition, customer credit files should be updated periodically.

FCM procedures should describe how customer credit exposures will be identified and controlled. For example, an FCM could monitor a customer's transactions, margin settlements, or open positions as a means of managing the customer's credit risk. Moreover, procedures should be in place to handle situations in which the customer has exceeded credit limits. These procedures should give senior managers who are independent of the sales and marketing function the authority to approve limit exceptions and require that such exceptions be documented.

3250.0.7.1.2 Customer-Financing Risk

Several exchanges, particularly in New York and overseas, allow FCMs to finance customer positions. These exchanges allow an FCM to lend initial and variation margin to customers subject to taking the capital charges under the CFTC's (or SEC's) capital rules if the charges are not repaid within three business days. In addition, some exchanges allow FCMs to finance customer deliveries, again subject to a capital charge.

An FCM providing customer-financing services should adopt financing policies and procedures that identify customer-credit standards. The financing policies should be approved by the parent company and should be consistent with the FCM's risk tolerance. In addition, an FCM should establish overall lending limits for each customer based on a credit review that is analogous to that performed by a bank with similar lending services. The process should be independent of the FCM's marketing, sales, and financing functions, but it may be performed by the FCM's banking affiliate. Examiners should determine how customer-financing decisions are made and confirm that documentation is adequate, even when an affiliate approves the financing. In addition, the FCM should review financial information on its customers periodically and adjust lending limits when appropriate.

3250.0.7.1.3 Clearing-Only Risk

FCMs often enter into agreements to clear, but not execute, trades for customers. Under a "clearing-only" arrangement, the customer gives its order directly to an executing FCM. The executing FCM then gives the executed transaction to the clearing FCM, which is responsible for accepting and settling the transaction. Cus-

tomers often prefer this arrangement because it provides the benefits of centralized clearing (recordkeeping and margin payments) with the flexibility of using a number of specialized brokers to execute transactions.

FCMs entering into clearing-only arrangements execute written give-up agreements, which are triparty contracts that set forth the responsibilities of the clearing FCM, the executing FCM, and the customer. Most FCMs use the “uniform give-up agreement” prepared by the Futures Industry Association, although some FCMs still use their own give-up contracts. The uniform give-up agreement permits a clearing FCM, upon giving prior notice to the customer and the executing FCM, to place limits or conditions on the transactions it will accept to clear or terminate the arrangement. If an executed transaction exceeds specified limits, the FCM may decline to clear the transaction unless it is acting as the qualifying or primary clearing FCM for the customer and has not given prior notice of termination.

Clearing-only arrangements can present significant credit risks for an FCM. An FCM’s risk-management policies and procedures for clearing-only activities should address the qualifications required of clearing-only customers and their volume of trading, the extent to which customer-trading activities can be monitored by the clearing-FCM at particular exchanges, and how aggregate risk will be measured and managed.

The FCM should establish trading limits for each of its clearing-only customers and have procedures in place to monitor their intraday trading exposures. The FCM should take appropriate action to limit its liability either by reviewing and approving a limit exception or by rejecting the trade if a clearing-only customer has exceeded acceptable trading limits. Examiners should confirm that the FCM formally advises (usually in the give-up agreement) its customers and their executing FCMs of the trading parameters established for the customer. Examiners should also confirm that the FCM personnel responsible for accepting or rejecting an executed trade for clearance have sufficient current information to determine whether the trade is consistent with the customer’s trading limits. Prudent give-up agreements (or other relevant documents such as the customer account agreement) should permit the FCM to adjust the customer’s transaction limits when appropriate in light of market conditions or changes in the customer’s financial condition.

Some FCMs act as the primary clearing firm (also referred to as the sponsoring or qualifying

firm) for customers.¹¹ A primary clearing firm guarantees to the clearinghouse that it will accept and clear all trades submitted by the customer or executing FCM, even if the trade is outside the agreed-on limits. Because an FCM is obligated to accept and clear all trades submitted by its primary clearing customers, the FCM must be able to monitor its customers’ trading activities on an intraday basis for compliance with agreed-on trading limits. Monitoring is especially important during times of market stress. The FCM should be ready and able to take immediate steps to address any unacceptable risks that arise, for example, by contacting the customer to obtain additional margin or other assurances, approving a limit exception, taking steps to liquidate open customer positions, or giving appropriate notice of termination of the clearing arrangement to enable the FCM to reject future transactions.

Intraday monitoring techniques will vary depending on the technology available at the particular exchange. A number of the larger, more automated U.S. exchanges have developed technologies that permit multiple intraday collection, matching, and reporting of trades—although the frequency of such reconciliations varies. On exchanges that are less automated, the primary clearing FCM must develop procedures for monitoring clearing-only risks. For example, the FCM could maintain a significant physical presence on the trading floor to monitor customer trading activities and promote more frequent collection (and tallying) of trade information from clearing-only customers. The resources necessary for such monitoring obviously will depend on the physical layout of the exchange—the size of the trading floor and the number of trading pits, the floor population and daily trading volumes, and the level of familiarity the FCM has with the trading practices and objectives of its primary clearing customers. The FCM should be able to increase its floor presence in times of market stress.

3250.0.7.1.4 Carrying-Broker Risk

An FCM may enter into an agreement with another FCM to execute and clear transactions

11. Primary clearing customers include institutions and individuals, as well as other nonclearing futures professionals (locals or floor traders), who execute their own trades on the exchange and other nonclearing FCMs that execute trades for unaffiliated customers.

on behalf of the first FCM (typically, when the first FCM is not an exchange or clearing member of an exchange). In such cases, the FCM seeking another or carrying FCM to execute its transactions should have procedures for reviewing the creditworthiness of the carrying FCM. If the FCM reasonably expects that the carrying FCM will use yet another FCM to clear its transactions (for example, if the carrying FCM enters into its own carrying-broker relationship with another firm for purposes of executing or clearing transactions on another exchange), the first FCM should try to obtain an indemnification from the carrying FCM for any losses incurred on these transactions.¹² When carrying transactions occur on a foreign exchange, an FCM should know about the legal ramifications of the carrying relationship under the rules of the exchange and the laws of the host country. Moreover, it may be appropriate for an FCM to reach an agreement with its customers that addresses liabilities relative to transactions effected on a non-U.S. exchange by a carrying broker.

3250.0.7.1.5 Executing-FCM Risk

When an FCM uses an unaffiliated FCM to execute customer transactions under a give-up arrangement, the clearing firm that sponsors the executing FCM guarantees its performance. Therefore, the first FCM should review the subcontracting risk of its executing FCMs and their sponsoring clearing firms. However, unlike the clearing risk inherent in a carrying-broker relationship, the subcontracting risk for an FCM using an executing FCM is limited to transaction risk (execution errors). An FCM's management should approve each executing broker it uses, considering the broker's reputation for obtaining timely executions and the financial condition of its sponsoring clearing firm.

3250.0.7.1.6 Pit-Broker Risk

Usually, FCMs will subcontract the execution of their orders to unaffiliated pit brokers who accept

and execute transactions for numerous FCMs during the trading day. The risk associated with using a pit broker is similar to that of using an executing broker: the risk is limited to the broker's performance in completing the transaction. If the pit broker fails, then the primary clearing firm is responsible for completing the transaction. Therefore, an FCM should approve each pit broker it uses, considering the pit broker's reputation for obtaining timely executions and the resources of its sponsoring clearing firm.

3250.0.7.1.7 Clearinghouse Risk

Clearinghouse risk is the potential that a clearinghouse will require a member to meet loss-sharing assessments caused by another clearing member's failure. Before authorizing membership in an exchange or clearinghouse, an FCM's board of directors and its parent company must fully understand the initial and ongoing regulatory and financial requirements for members. The FCM's board of directors should approve membership in a clearinghouse only after a thorough consideration of the financial condition, settlement and default procedures, and loss-sharing requirements of the clearinghouse.

Particularly when it is considering membership in a foreign exchange or clearinghouse, an FCM's board should examine any regulatory and legal precedents related to how the exchange, clearinghouse, or host country views loss-sharing arrangements. As in the United States, some foreign clearinghouses have unlimited loss-sharing requirements, and some have "limited" requirements that are set at very high percentages. However, the loss-sharing provisions of some of the foreign clearinghouses have not yet been applied, which means that there are no legal and regulatory precedents for applying the stated requirements. In addition, the board should be apprised of any differences in how foreign accounts are viewed, for example, whether customer funds are considered separate from those of the FCM, whether the relationship between an FCM and its customer is viewed as an agency rather than a principal relationship, and whether there are material differences in the way futures activities are regulated.

The board also should be apprised of any material changes in the financial condition of every clearinghouse of which the FCM is a member. Senior management should monitor the financial condition of its clearinghouses as part of its risk-management function.

12. The CFTC takes the position that an FCM is responsible to its customers for losses arising from the failure of the performance of a carrying broker. The industry disagrees with this position, and the issue has not been resolved by the courts.

3250.0.7.1.8 Guarantees

FCM parent companies often are asked to provide assurances to customers and clearinghouses that warrant the FCM's performance. These arrangements may take the form of formal guarantees or less formal letters of comfort.

Under Regulation Y (section 225.28(b)(7)(iv)(B)), a bank holding company may not provide a guarantee to a clearinghouse for the performance of the FCM's customer obligations. A bank holding company may provide a letter of comfort or other agreement to the FCM's customers that states the parent (or affiliate) will reimburse the customers' funds on deposit with the FCM if they are lost as a result of the FCM's failure or default. Customers may seek this assurance to avoid losses that could arise from credit exposure created by another customer of the FCM, since the clearinghouse may use some or all of the FCM's customer-segregated funds in the event of a default by the FCM stemming from a failing customer's obligations.¹³ Examiners should note any permissible guarantees for purposes of the consolidated report of the parent bank holding company, as they are relevant to calculating the consolidated risk-based capital of the bank holding company.

3250.0.7.2 Market Risk

When an FCM acts as a broker on behalf of customers, it generally is only subject to market risk if it executes customers' transactions in error. In this regard, operational problems can expose the FCM to market fluctuations in contract values. However, when an FCM engages in proprietary trading, such as market making and other position-taking, it will be directly exposed to market risk. Potential market-risk exposure should be addressed appropriately in an FCM's policies and procedures.

An FCM that engages in proprietary trading should establish market-risk and trading parameters approved by its parent company. The FCM's senior management should establish an independent risk-management function to control and monitor proprietary trading activities. Finally, the FCM should institute procedures to control potential conflicts of interest between its brokerage and proprietary trading activities.

13. The letter of comfort would protect customers whose funds were used to cover other customer losses by the clearinghouse. U.S. clearinghouses also have guarantee funds that can be used to reimburse customers at the clearinghouse's discretion.

3250.0.7.3 Liquidity Risk

Liquidity risk is the risk that the FCM will not be able to meet its financial commitments (end-of-day and intraday margin calls) to its clearing FCM or clearinghouse. Clearing FCMs are required to establish an account at one of the settlement banks used by the clearinghouse for its accounts and the accounts of its clearing members. In some foreign jurisdictions, the central bank fulfills this settlement function. An FCM should establish and monitor daily settlement limits for its customers and should ensure that there are back-up liquidity facilities to meet any unexpected shortfalls in same-day funds. To ensure the safety of its funds and assets, an FCM should also monitor the financial condition of the settlement bank it has chosen and should be prepared to transfer its funds and assets to another settlement bank, when necessary.

To control other types of liquidity risks, an FCM should adopt contingency plans for liquidity demands that may arise from dramatic market changes. An FCM, to the extent possible, should monitor the markets it trades in to identify undue concentrations by others that could create an illiquid market, thereby creating a risk that the FCM could not liquidate its positions. Most U.S. clearinghouses monitor concentrations and will contact an FCM that holds more than a certain percentage of the open interest in a product. In some situations, the exchange could sanction or discipline the FCM if it finds that the FCM, by holding the undue concentration, was attempting to manipulate the market. These prudential safeguards may not be in place on foreign exchanges; consequently, an FCM will have to establish procedures to monitor its liquidity risk on those exchanges.

3250.0.7.4 Reputation Risk

FCMs should have reporting procedures in place to ensure that any material events that harm its reputation, and the reputations of its bank affiliates, are brought to the attention of senior management; the FCM's board of directors; and, when appropriate, its parent company. Reports of potentially damaging events should be sent to senior management at the parent bank holding company, who will evaluate their effect on the FCM to determine what, if any, steps should be taken to mitigate the impact of the event on the whole organization.

3250.0.7.4.1 Commodity Trading Adviser

Acting as a commodity trading adviser (including providing discretionary investment advice to retail and institutional customers or commodity pools) may pose reputation and litigation risks to a CTA or an FCM, particularly when retail customers are involved. Accordingly, the FCM's board should adopt policies and procedures addressing compliance with CFTC and NFA sales-practice rules (including compliance with the "know your customer" recordkeeping rules).

3250.0.7.5 Operations Risk, Internal Controls, Internal Audits, and Compliance

3250.0.7.5.1 Operations Risk

Operations risk is the potential that deficiencies in information systems or internal controls will result in unexpected loss. Some specific sources of operating risk at FCMs include inadequate procedures, human error, system failure, or fraud. For FCMs, failure to assess or control operating risks accurately can be a likely source of problems. Back-office or transaction-processing operations are an important source of operations-risk exposures. In conducting reviews of back-office operations, examiners should consult the appropriate chapters of the *Trading and Capital-Markets Activities Manual* for further guidance.

Operations risk also includes potential losses from computer and communication systems that are unable to handle the volume of FCM transactions, particularly in periods of market stress. FCMs should have procedures that address the operations risks of these systems, including contingency plans to handle systems failures and back-up facilities for critical parts of risk-management, communications, and accounting systems.

When FCMs execute or clear transactions in nonfinancial commodities, they may have to take delivery of a commodity because a customer is unable or unwilling to make or take delivery on its contract. To address this situation, the FCM should have in place the procedures it will follow to terminate its position and avoid dealing in physical commodities.

3250.0.7.5.2 Internal Controls

Adequate internal controls are the first line of defense in controlling the operations risks

involved in FCM activities. Internal controls that ensure the separation of duties involving account acceptance, order receipt, execution, confirmation, margin processing, and accounting are particularly important. Internal controls should also be established to record, track, and resolve errors and discrepancies with customers and other parties.

FCMs should have approved policies that specify documentation requirements for transactions and formal procedures for saving and safeguarding important documents, consistent with legal requirements and internal policies. Relevant personnel should fully understand documentation requirements. Examiners should also consider the extent to which entities evaluate and control operations risks through internal audits, contingency planning, and other managerial and analytical techniques.

3250.0.7.6 Internal Audits and Their Review

An FCM should be subject to regular internal audits to confirm that it complies with its policies and procedures and is managed in a safe and sound manner. In addition, the internal audit function should review any significant issues raised by compliance personnel to ensure that they are resolved. Other staff within the FCM (i.e., compliance personnel) should be able to reach internal audit staff to discuss any serious concerns they might have. Internal audit reports should be forwarded to the FCM's senior management. Material findings and management's plan to resolve the audit issues should be reported to the FCM's board of directors, the parent company, and any designated board committee (for example, an audit committee). Frequently, the internal audit function is located at the parent company, and audit reports are routinely sent to senior management at the parent company and to the audit committee designated by the board of directors.

3250.0.8 INSPECTION GUIDANCE

The review of an FCM's functions should take a functional-regulatory approach, using the findings of the FCM's primary regulators as much as possible. Examiners should especially focus on the significant risks that the FCM poses to the parent company and affiliated banks. These risks should be assessed by reviewing the

adequacy of the FCM's policies and procedures, internal controls, and risk-management functions. Compliance with policies and procedures, and with any conditions on the FCM's activities imposed by regulatory authorities (including the Federal Reserve Board), should be fully reviewed.

Bank holding companies, banks, and FBOs may have more than one subsidiary that acts as an FCM in the United States or that engages in futures transactions for customers in foreign markets. To ensure that the FCM/CTA activities of a banking organization are evaluated on a consolidated basis, a cross-section of affiliated futures brokerage and advisory firms should be reviewed periodically—particularly those that present the greatest risk to the consolidated financial organization. Relevant factors to consider when identifying firms for review include (1) the volume of business; (2) whether the FCM has unaffiliated customers; (3) the number of customers; (4) whether the firm provides customer financing; (5) the number of brokers effecting transactions; (6) whether exchange or clearinghouse memberships are involved; (7) whether the FCM provides clearing-only services; and (8) the date and scope of the last review conducted by the Federal Reserve, SRO, or other regulator.

The scope of any review to be conducted depends on the size of the FCM and the scope of its activities. The draft first-day letter should provide an overview of an FCM's authorized activities and conditions, as well as a description of the actual scope of its business. Examiners should review the most recent summary of management points or other inspection results issued by the FCM's SRO or other regulator, as well as any correspondence between the FCM and any federal agency or SRO. If examiners have any questions about the findings of an SRO's or a regulator's results, they should contact the organization to determine whether the matter is material and relevant to the current inspection. The status of any matters left open after the SRO's or regulator's review should also be inquired about.

An important factor in determining the scope of the inspection is whether the FCM has unaffiliated customers or conducts transactions solely for affiliates. Other factors include whether (1) the FCM is a clearing member of an exchange, particularly of a non-U.S. exchange; (2) it acts as a carrying broker on behalf of other FCMs; (3) it has omnibus accounts with other brokers in markets in which it is not a member (U.S. or foreign); (4) it provides advisory or portfolio management services, including discretionary accounts, or has been authorized to act as a

commodity pool operator (CPO); (5) it provides clearing services to locals or market-makers; and (6) it provides financing services to customers.¹⁴

Examiners are not expected to routinely perform a front- or back-office inspection unless (1) the FCM's primary regulator found material deficiencies in either office during its most recent examination or (2) if front- or back-office operations have not been examined by the primary regulator within the last two years. However, examiners may still choose to review a small sample of accounts and transactions to confirm that appropriate controls are in place. In addition, net capital computations of U.S. FCMs do not need to be reviewed; they are reviewed by the FCM's DSRO, and the FCM is subject to reporting requirements if capital falls below warning levels. Examiners should perform a front- and back-office review of the FCM's operations outside of the United States.¹⁵

Review of audit function. Examiners may rely on well-documented internal audit reports and workpapers to verify the adequacy of risk management at the FCM. Examiners should review the internal audit reports and workpapers to determine the adequacy of their scope and thoroughness in complying with FCM policies and procedures. If an examiner finds that an internal audit adequately documents the FCM's compliance with a policy or procedure pertaining to the management of the various risk assessments required by the current inspection, that fact should be documented in the workpapers, and inspection procedures should be completed in any area not adequately addressed by the internal audit report. Examiners should periodically spot check areas covered by internal audits to ensure the ongoing integrity of the audit process. Finally, examiners should ensure that internal auditors have adequate training to evaluate

14. If the FCM engages in proprietary trading for its own account, particularly for purposes other than hedging (market making or position taking), or if the FCM acts as an intermediary in any over-the-counter futures or other derivative activities, the examiner should advise the examiner in charge of the inspection so that the firm's proprietary trading can be evaluated in connection with similar activities of the consolidated financial organization.

15. The inspection procedures for reviewing front- and back-office operations may be found in sections 2050.3 and 2060.3, respectively, of the *Trading and Capital-Markets Activities Manual*.

the FCM's compliance with its policies and procedures and with applicable laws and regulations (both inside and, if applicable, outside the United States).

If an examiner has determined that it is not necessary to perform a routine back-office review, he or she should confirm that the FCM has addressed operations risks in its policies and procedures. Examiners also should review the internal controls of an FCM to ensure that the firm is operated safely and soundly according to industry standards and that it complies with any Board regulations or conditions placed on the FCM's activities. Examiners should be alert to any "red flags" that might indicate inadequate internal controls. An FCM must be organized so that its sales, operations, and compliance functions are separate and managed independently. If an FCM engages in proprietary trading, examiners should confirm that the firm has procedures that protect against conflicts of interest in the handling of customer orders (examples of these conflicts of interest include front-running or ex-pit transactions). To make an overall assessment of the FCM's future business, the results of any review should be consolidated with the results of reviews by other FCMs inspected during this cycle.

3250.0.9 INSPECTION OBJECTIVES

1. To identify the potential and extent of various risks associated with the FCM's activities, including credit, market, liquidity, and reputation risks.
2. To evaluate the adequacy of the audit function and review significant findings, the method of follow-up, and management's response to correct any deficiencies.
3. To assess the adequacy of the risk-management function at the FCM.
4. To assess the adequacy of and compliance with the FCM's policies and procedures and the adequacy of the internal control function.
5. To evaluate and determine the FCM's level of compliance with relevant statutes, Board regulations, interpretations, orders, and policies.
6. To assess the adequacy of risk management of affiliated FCMs on a consolidated basis.

3250.0.10 INSPECTION PROCEDURES

3250.0.10.1 Structural Organization and Activity Analysis

3250.0.10.1.1 General

1. Identify all bank holding company subsidiaries that engage in FCM- or CTA-type activities in the United States or abroad or identify U.S. FCM/CTA subsidiaries of FBOs. Determine which firms should be inspected to provide a global view of the adequacy of management of these activities on a consolidated basis, based on the scope of activities and the degree of supervision by other regulators. Complete applicable procedures below for firms selected for inspection.
2. Review first-day-letter documents, notices filed under Regulation Y, Board orders and letters authorizing activities, previous inspection reports and workpapers, previous audit reports by futures regulators (CFTC, DSRO, National Futures Association, foreign futures regulator) and correspondence exchanged with those regulatory entities, and reports by internal or external auditors or consultants.
3. Note the scope of the FCM's activities, including—
 - a. execution and clearing;
 - b. execution only for affiliates and third parties;
 - c. clearing-only for affiliates, third parties, professional floor traders (locals);
 - d. pit brokerage;
 - e. advisory;
 - f. discretionary portfolio management;
 - g. commodities or commodity pool operator (in FCM or in affiliate);
 - h. margin financing;
 - i. proprietary trading;
 - j. exchange market maker or specialist;
 - k. types of instruments (for example, financial, agricultural, precious metals, petroleum);
 - l. contract markets where business is directed;
 - m. other derivatives products (should be identified, for example, interest-rate swaps and related derivative contracts, foreign-exchange derivative contracts, foreign government securities, other);
 - n. other futures-related activities, including off-exchange transactions;
 - o. riskless-principal transactions; and
 - p. registered broker-dealers.
4. Note exchange and clearinghouse memberships here and abroad, noting any financial commitments and any guarantees by the FCM

- or its parent¹⁶ to the exchange or clearinghouse with respect to proprietary, affiliate, or customer transactions.
5. Note any new lines of business or activities occurring at the FCM or any changes to exchange and clearing memberships since the last inspection.
 6. Note the percentage of business conducted for—
 - a. affiliate banks,
 - b. nonbank affiliates,
 - c. customers (note the breakdown between institutional and retail customers and if there is any guarantee or letter of comfort to customers in which the parent company provides that it will reimburse customers for loss as a result of the FCM's failure or other default),
 - d. proprietary accounts (hedging, position-taking), and
 - e. professional floor traders (locals, market makers).

3250.0.10.1.2 Audit Program

Determine the quality of the internal audit program. Assess the scope, frequency, and quality of the audit program for the FCM and related activities. Consider spot checking areas covered by internal audits.

1. Review the most recent audit report, noting any exceptions and their resolution.
2. Determine whether internal auditors have adequate training to evaluate the FCM's compliance with its policies and procedures and with applicable laws and regulations.
3. Verify that audit findings have been communicated to senior management and material findings have been reported to the FCM's board of directors and parent company.
4. Identify any areas covered by these procedures that are not adequately addressed by the internal audit report.
5. Identify areas of the internal audit report that should be verified as part of the current inspection.

3250.0.10.1.3 Operational Activities

Determine the scope of review that is appropriate to activities and allocate examiner resources,

¹⁶ The parent bank holding company cannot provide a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by the FCM subsidiary for its own account or for the account of any affiliate. See Regulation Y, section 225.28(b)(7)(iv)(B).

considering the adequacy of internal audit workpapers.

1. Complete the appropriate front- and/or back-office inspection procedures when—
 - a. front- and back-office operations have not been examined by the DSRO within the last two years,
 - b. material deficiencies in front- or back-office operations were found by the DSRO during the most recent audit, or
 - c. the primary regulator for the FCM is not a U.S. entity.
2. Advise the examiner in charge of the inspection of the parent company if the FCM engages in proprietary trading or over-the-counter futures or derivatives business as principal or agent.

3250.0.10.2 Board and Senior Management Oversight

1. Review the background and experience of the FCM's board of directors and senior management, noting prior banking and futures brokerage experience.
2. Determine if the board of directors of the FCM has approved written policies summarizing the firm's activities listed below, and addressing oversight by the board or a board-designated committee:
 - a. the risk appropriate for the FCM, including credit, market, liquidity, operation, reputation, and legal risk (see SR-95-51)
 - b. the monitoring of compliance with risk parameters
 - c. the exchange and clearinghouse memberships
 - d. the internal audit function
3. Determine if senior management of the FCM has adopted procedures implementing the board's policies for—
 - a. approval of new-product lines and other activities;
 - b. transactions with affiliates;
 - c. transactions by employees;
 - d. compliance with applicable regulations and policies and procedures;
 - e. management information reports;
 - f. the separation of sales, operations, back-office, and compliance functions; and
 - g. reports to the FCM boards of directors on material findings of the complaint or audit

- functions and on material deficiencies identified during the course of regulatory audits or inspections.
4. Determine that policies and procedures are periodically reviewed by the board of directors or senior management, as appropriate, and ensure that they comply with existing regulatory and supervisory standards and address all of the FCM's activities.
 5. Review management information reporting systems and determine whether the board of directors of the parent company (or a designated committee of the parent's board) is apprised of—
 - a. material developments at the FCM,
 - b. the financial position of the firm including significant credit exposures,
 - c. the adequacy of risk management,
 - d. material findings of the audit or compliance functions, and
 - e. material deficiencies identified during the course of regulatory reviews or inspections.
 6. Review the FCM's strategic plan.
 - a. Assess whether there are material inconsistencies between the stated plans and the FCM's stated risk tolerances.
 - b. Verify that the strategic plan is reviewed and periodically updated.
- risks associated with the volume of transactions executed or cleared for the customer.
5. Evaluate the adequacy of credit-risk-management policies. Determine if they—
 - a. establish and require adequately documented credit limits for each customer that reflect their respective financial strengths, liquidity, trading objectives, and potential market risk associated with the products traded;
 - b. require periodic updates of such credit limits in light of changes in the financial condition of each customer and market conditions; and
 - c. do not permit the FCM to waive important broker safeguards, such as the right to liquidate customer positions upon default or late payment of margin.
 6. Consider verifying the above information by sampling customer-credit files.
 7. Verify that up-to-date customer-credit files are maintained on site or are available for review during the inspection. If the customer-credit approval was performed by the parent company or an affiliate bank, verify that the FCM's files contain information indicating the scope of the credit review, the approval, and credit limits.
 8. Review notifications and approval of limit exceptions for compliance with FCM procedures.
 9. Determine whether the FCM has adopted procedures identifying when the FCM should take steps to limit its customer-credit exposure (for example, when to refuse a trade, grant a limit exception, transfer positions to another FCM, or liquidate customer positions).
 10. Evaluate the adequacy of risk management of customer-financing activities.
 11. Determine that the credit-review process is independent from the marketing, sales, and financing function.
 - a. Verify that the FCM has policies that identify customer-credit standards and that it establishes overall lending limits for each customer.
 - b. Assess the adequacy of the credit-review process and documentation, even when credit review is performed by an affiliate.
 12. Review the instances when the FCM has lent margin to customers on an unsecured basis. If the FCM does not engage in margin financing as a business line, verify that extensions are short-term and within the operational threshold set for the customer.

3250.0.10.3 Risk Management

3250.0.10.3.1 *Credit Risk*

1. Review credit-risk policies and procedures.
 - a. Verify the independence of credit-review approval from the limit-exceptions approval.
 - b. Verify that the procedures designate a senior officer with the responsibility to monitor and approve limit-exception approvals.
2. Determine whether the FCM has authority to open customer accounts without parent company approval.
3. Review the customer base (affiliates, third parties) for credit quality in terms of affiliation and business activity (affiliates, corporate, retail, managed funds, floor traders, etc.).
4. Evaluate the process for customer-credit review and approval. Determine whether the customer-credit review identifies credit

3250.0.10.3.2 Clearing-Only Risk

1. Determine whether each clearing arrangement is in writing and that it—
 - a. identifies the customer and executing brokers, and defines and adequately documents the respective rights and obligations of each party;
 - b. establishes overall limits and trading parameters for the customer that are based on the customer’s creditworthiness and trading objectives; and
 - c. permits transaction limits to be adjusted to accommodate market conditions or changes in the customer’s financial condition.
2. When the FCM has entered into a clearing-only agreement with a customer, verify that it has reviewed the creditworthiness of each executing broker or its qualifying clearing firm identified in the agreement.
3. If the FCM acts as the primary clearing firm for locals or other customers, confirm that the firm has adopted procedures for monitoring and controlling exposure. Note whether the firm monitors customer positions throughout the trading day and how this monitoring is accomplished.

3250.0.10.3.3 Carrying Brokers, Executing Brokers, and Pit Brokers

1. If the FCM uses other brokers to execute and/or clear transactions, either on an omnibus or a fully disclosed basis, determine that it has adequately reviewed the creditworthiness and approved the use of the other brokers. If the FCM uses nonaffiliated executing brokers, confirm that it also has considered the reputation of the broker’s primary clearing firm. If the other broker is likely to use another broker, determine whether the broker has given the FCM an indemnification against any loss that results from the performance or failure of the other broker.
2. If the FCM uses other brokers to execute or clear transactions in non-U.S. markets, determine whether senior management understands the legal risks pertinent to doing business in those markets and has adopted policies for managing those risks.
3. When the FCM uses third-party “pit brokers” to execute transactions, verify that the FCM has reviewed and approved each broker after considering the reputation of the pit broker’s primary clearing firm.

3250.0.10.3.4 Exchange and Clearinghouse Membership

1. Verify that the FCM completes a due-diligence study of each exchange and clearinghouse before applying for membership in the organization.
 - a. Determine whether board minutes approving membership demonstrate a thorough understanding of the loss-assessment provisions and other obligations of membership for each exchange and clearinghouse, as well as a general understanding of the regulatory scheme.
 - b. Determine whether, in approving membership in a non-U.S. exchange or clearinghouse, the board’s minutes indicate a discussion of the regulatory environment and any relevant credit, liquidity, and legal risks associated with doing business in the particular jurisdiction. The minutes should also reflect discussion of any material differences from U.S. precedent in how foreign accounts are viewed, for example, whether customer funds held in an omnibus account are considered separate (segregated) from those of the FCM or whether the relationship between the FCM and its customers is viewed as an agency or principal relationship in the host country.
2. Verify that the FCM has apprised its parent company of the results of its study of the exchange or clearinghouse and that it has written authorization by senior management of its parent company to apply for membership.
3. Verify that the FCM monitors the financial condition of each exchange and clearing organization for which it is a member.
4. Review all guarantees, letters of comfort, or other forms of potential contingent liability. Verify that the parent company has not provided a guarantee to the clearinghouse for the performance of the FCM’s customer obligations.¹⁷ Note any guarantees against the parent losses incurred from the failure of an FCM and advise the examiner in charge of the parent company’s inspection, who can confirm that guarantees are included in the

17. The parent bank holding company cannot provide a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by the FCM subsidiary for its own account or for the account of any affiliate. See Regulation Y, section 225.28(b)(7)(iv)(B).

bank holding company's calculation of consolidated risk-based capital.

3250.0.10.3.5 Market Risk

1. If an FCM engages in proprietary trading, determine whether policies and procedures are in place to control potential conflicts of interest between its brokerage business and trading activities.
2. When an FCM plans to enter (or has entered into) a foreign market, determine if the FCM performed due-diligence reviews of relevant legal and regulatory issues, as well as on local business practices.

3250.0.10.3.6 Liquidity Risk

1. Verify that the FCM has established and monitors daily settlement limits for each customer to ensure that liquidity is sufficient to meet clearinghouse obligations.
2. Determine whether the FCM has established back-up liquidity facilities to meet unexpected shortfalls.
3. Verify that the FCM monitors by product the amount of open interest (concentrations) that it holds at each exchange, either directly or indirectly through other brokers. If positions are held on foreign exchanges and concentrations are not monitored, verify that the FCM is able to monitor its positions and manage its potential liquidity risks arising from that market.
4. Review liquidity contingency plans for dealing with dramatic market changes.

3250.0.10.3.7 Reputation Risk

1. Review management information reporting systems and determine whether—
 - a. the FCM is able to assess the extent of any material exposure to legal or reputation risk arising from its activities, and
 - b. the parent company receives sufficient information from the FCM to assess the extent of any material exposure to litigation or reputation risk arising from the FCM's activities.
2. If the FCM provides investment advice to customers or commodity pools, determine whether it has procedures designed to mini-

mize the risks associated with advisory activities. Such procedures might address the delivery of risk disclosures to customers, the types of transactions and trading strategies that could be recommended or effected for retail customers, compliance with the “know your customer” recordkeeping and other sales practice rules of the SROs, and conformance to any trading objectives established by the customer or fund.

3. If the FCM acts as a CPO, verify that it has obtained prior Board approval and is in compliance with any conditions in the Board order.

3250.0.10.4 Operations, Internal Controls, and Compliance

1. Determine the extent to which operating risk is evaluated and controlled through the use of internal audits, contingency planning, and other managerial and analytical techniques.
2. Review the most recent summary of management points or similar document and also respective correspondence issued by the FCM's DSRO or other primary futures regulator. Discuss any criticism with FCM management and confirm that corrective action has been taken.
3. Consider reviewing a small sample of accounts and transactions to confirm that appropriate controls are used and that the FCM has incorporated operations risks into its policies and procedures.
4. Review the organizational structure and reporting lines within the FCM and verify separation of sales, trading, operations, compliance, and audit functions.
5. Determine that the FCM's policies and procedures address the booking of transactions by affiliates and employees and other potential conflicts of interest.
6. If the FCM is authorized to act as a CPO, review the most recent NFA or other primary futures regulator's audit, including any informal findings by examiners. Discuss any criticism with the FCM management and confirm that corrective action has been taken.
7. If the FCM executes and clears nonfinancial futures, verify that the FCM has procedures to avoid taking physical possession of the nonfinancial product when effecting “exchange for physical transactions” for customers.

8. When the FCM takes physical delivery of commodities due to failure or unwillingness of a customer to make or take delivery of its contracts, determine whether the FCM has and follows procedures to close out its position. Note if the FCM frequently takes delivery of physical commodities.
9. Assess the adequacy of customer-complaint review by reviewing the complaint file and how complaints are resolved. Note if the FCM receives repeat or multiple complaints involving one or more of its activities or employees.
10. Determine whether the FCM has developed contingency plans that describe actions to be taken in times of market disruptions and

whether such plans address management responsibilities, including communications with its parent bank holding company, liquidity, the effect on customer-credit quality, and communications with customers.

3250.0.10.5 Conclusions

1. Prepare inspection findings and draw conclusions as to the adequacy of the FCM’s risk-management, compliance, operations, internal controls, and audit functions.
2. Present findings to FCM management and submit inspection findings to the examiner in charge of the parent company inspection.

3250.0.11 FCM Supplemental Checklist Questionnaire

	<i>Yes</i>	<i>No</i>
3250.0.11.1 General Questions		
1. Is the FCM a separately incorporated subsidiary of the bank holding company as required by Regulation Y, 12 C.F.R. 225.28(b)(6)(iv)?	_____	_____
2. Has the parent bank holding company provided a guarantee or otherwise become liable to an exchange or clearing association other than for those trades conducted by a subsidiary for its own account or for the account of any affiliate (prohibited by Regulation Y (see 12 C.F.R. 225.28(b)(6)(iv)))?	_____	_____
3. How long has the FCM been in operation? _____ yrs.		
4. Approximately how many customers does the FCM have? _____		
5. What degree of market participation does the FCM have (mark (x) for the highest level of involvement)?		
a. _____ FCM, nonmember of futures exchange. Must execute trades through exchange members and is subject to NFA rules.		
b. _____ Exchange member. Holds membership on one or more futures exchanges entitling FCM to execute trades on the exchange(s) and subjecting FCM to the rules of exchange(s).		
c. _____ Clearinghouse member. Holds membership in an exchange’s clearinghouse as well as exchange membership, thus enabling FCM to execute and clear its own transactions. Such FCM is subject to exchange and clearinghouse rules.		
6. If FCM is an exchange member, on which exchange(s) (domestic and foreign) does the FCM have membership(s)?		

	<i>Yes</i>	<i>No</i>
7. If FCM is a clearing member, list below the clearinghouse(s) of which it is a member. _____ _____ _____		
8. Does the FCM periodically make an adjusted net capital computation to verify that it maintains capitalization fully adequate to meet its own commitments and those of its customers, including affiliates? (NOTE: Under the CFTC's net capital computations, there have been no capital requirements for "hedge" transactions by FCM affiliate banks. It may be necessary to request that an adjusted net capital computation be made to determine the amount of adjusted net capital required when affiliate trades are treated as third-party transactions.)	_____	_____
9. Does a review of the FCM's correspondence from its designated self-regulatory organization reveal that the FCM meets CFTC requirements with respect to capital rules, segregation of customer assets, and risk disclosure?	_____	_____
10. If an FCM will receive services from an affiliate (e.g., the lead bank assesses FCM customer-credit risk or monitors customer positions and margin accounts), have the FCM and affiliate entered into a formal service agreement on an explicit fee basis?	_____	_____

3250.0.11.2 Management

1. Does the FCM's management have expertise and previous experience as a broker, dealer, or participant in cash, futures, or forward markets related to those in which the FCM executes transactions?	_____	_____
2. Does the FCM's management have prior banking experience?	_____	_____
3. Does it appear that management has the expertise necessary to evaluate the viability of various hedging strategies?	_____	_____
4. Does it appear that FCM management has the ability to recognize imprudent or unsafe customer activity that could endanger the FCM?	_____	_____
5. Does the board of directors have written policies that summarize the firm's activities and its oversight function (certain functions may be designated to a board audit or other committee) with respect to—		
a. risk appropriate for the FCM?	_____	_____
b. compliance monitoring and risk parameters?	_____	_____

3250.0.11.3 Controls of Risk Exposure with Customers

1. Does the FCM have a system for assessing and periodically re-evaluating customer-credit risk?	_____	_____
--	-------	-------

	<i>Yes</i>	<i>No</i>
2. Does the FCM take customer-credit risk into consideration and establish for each customer—	_____	_____
a. position limits for each contract the customer wishes to trade?	_____	_____
b. an aggregate position limit for outstanding contracts held by each customer?	_____	_____
3. Does the FCM have a system for monitoring customer positions to ensure positions are within the limits imposed by the FCM?	_____	_____
4. Does the FCM have an adequate system in place to monitor its overall risk exposure, primarily customer-default risk, on a daily basis?	_____	_____
5. Do customer agreements and internal procedures enable the FCM to—		
a. limit the types of trades a customer engages in?	_____	_____
b. refuse, when appropriate, to execute any trades except those resulting in liquidation of existing positions?	_____	_____

3250.0.11.4 Margin Requirements

1. Does the FCM have a system for daily monitoring of margin accounts to ensure that margin calls are promptly issued and satisfied?	_____	_____
2. Does the customer agreement permit and has the FCM adopted procedures for liquidating a customer's position if margin calls are not promptly satisfied?	_____	_____
3. Do customer-account agreements authorize the FCM to require higher initial and variation margin levels than those set by the exchanges?	_____	_____
4. Does the FCM have a system in place for obtaining higher customer margins in instances when the FCM determines—		
a. a customer's futures position or deteriorating financial condition necessitates a greater amount of margin to protect the FCM?	_____	_____
b. volatile market conditions justify higher levels of margin than those required by an exchange?	_____	_____

3250.0.11.5 Credit Risk

1. Is the credit-review approval independent from the limit-exceptions approval?	_____	_____
2. Does a senior officer monitor and approve limit-exception approvals?	_____	_____
3. Does the customer-credit review identify credit risks associated with the volume of transactions executed or cleared for the customer?	_____	_____
4. Is adequate documentation required and maintained of credit limits for each customer that reflect customers' respective financial strengths and liquidity, trading objectives, and the potential market risk associated with the products traded?	_____	_____
5. Has the FCM adopted procedures identifying when the FCM should take steps to limit its customer-credit exposure (e.g., when to refuse a trade, grant a limit exception, transfer positions to another FCM, or liquidate customer positions)?	_____	_____
6. Is the credit-review process independent from the marketing/sales function and the financing function?	_____	_____

	<i>Yes</i>	<i>No</i>
3250.0.11.6 Clearing-Only Risk		
1. Is each arrangement in writing and does it—		
a. identify the customer, executing brokers, and define and adequately document the respective rights and obligations of each party?	_____	_____
b. establish overall limits and trading parameters for the customer that are based on the customer's creditworthiness and trading objectives?	_____	_____
c. permit transaction limits to be adjusted to accommodate market conditions or changes in the customer's financial condition?	_____	_____
2. Has the FCM or its qualifying clearing firm verified that it has reviewed the creditworthiness of each executing broker?	_____	_____
