## **ABSTRACT**

Researchers holding Endangered Species Act/Marine Mammal Protection Act permits to conduct scientific studies on Steller sea lions (*Eumetopias jubatus*) in Alaska coordinate to minimize disturbance to sea lions and increase collaboration to better achieve research objectives. Although there are many formal and informal occasions for researchers to discuss research plans, formal coordination occurs at least once per year. This report summarizes information gathered for and discussed at a 24 January 2008 meeting of investigators holding the six U.S. research permits under the Endangered Species Act (ESA) and Marine Mammal Protection Act (MMPA) to conduct field studies of Steller sea lion in Alaska. Prior to the meeting all permitted researchers provided tables of intended calendar year 2008 field work dates, locations, activities, and relevance to research tasks prioritized in the Steller Sea Lion Recovery Plan, acknowledging that actual field activities would be subject to funding and logistics. Field research activities address a broad range of Steller Sea Lion Recovery Plan research priorities, and most field projects address multiple priorities. Field activities are conducted throughout the entire year and across most of the Steller sea lion range in Alaska. Using the number of site visits as an index of activity, most effort is associated with aerial surveys and skiff-based observations during scat collections, and most site visits are to locations in the western and central Gulf of Alaska, central and eastern Aleutian Islands, and Southeast Alaska. Potential overlaps in timing and location of field studies among research groups were identified, discussed, and resolved at this meeting.

## **BACKGROUND**

Researchers permitted to conduct studies on Steller sea lions (*Eumetopias jubatus*) in Alaska have historically coordinated their study plans to minimize disturbance to sea lions and increase collaboration to better achieve research objectives. Although there are many formal and informal opportunities for researchers to discuss research plans, formal coordination occurs at least once per year. The importance of this coordination was highlighted in 2000 when participation became a required condition of all subsequently issued Steller sea lion permits for research in Alaska. The Steller Sea Lion Recovery Plan (NMFS 2008) also includes as recovery action (Plan Task 3.5.1) “coordinate research efforts to reduce potential for unnecessary or duplicative research-related take.” A summary of coordination meetings held during 2000-2007 can be found in NMML (2007).

On 24 January 2008, a Steller Sea Lion Research Coordination Meeting was held in Anchorage, Alaska, in association with the Alaska Marine Science Symposium. Participants included researchers and managers from the Alaska Fisheries Science Center (AFSC) National Marine Mammal Laboratory (NMML), National Marine Fisheries Service (NMFS) Alaska Regional Office Protected Resources Division (AKR), Alaska Department of Fish and Game Division of Wildlife Conservation (ADFG), University of Alaska Fairbanks (UAF), Alaska SeaLife Center (ASLC), University of British Columbia (UBC) and North Pacific Universities Marine Mammal Research Consortium (NPMMURC), Oregon State University (OSU), and the Aleutians East Borough (AEB) (see Appendix 1 for complete list of attendees and Appendix 2 for a list of associated permits). All field plans for calendar year 2008 were listed with the

unrealistic assumption that full funding could be acquired, thus the coordination matrix accounts for all potential field research in Alaska planned as of January 2008, and not all activities may in fact occur. Notification of actual field research will be provided to the NMFS Alaska Regional Office by each permit-holder pursuant to permit requirements.

During the meeting, each group briefly summarized their research plans and how anticipated budget shortfalls might impact activities. Additional discussions focused on the next round of permit review, priorities for sea lion research, and the role of planned independent review of the research program being sponsored by F/PR1 (NMFS Office of Protected Resources Permits, Conservation, and Education Division). Many researchers also conduct field work in Russia, British Columbia, and in the Pacific Northwest. Some plans for field work in those areas, for captive or laboratory work, and expected publication schedules were also discussed. Because the principal purpose of this report is to summarize Alaska field research plans and coordination, with the exception of work cooperatively conducted in British Columbia between ADFG and UBC, field plans for work outside of Alaska are not included.

## **COORDINATION MATRIX FOR PROPOSED ACTIVITIES IN 2008**

Prior to the coordination meeting, all investigators permitted to conduct Steller sea lion research in Alaska were requested to complete a spreadsheet listing locations, dates, and activities for their planned Alaska field studies in 2008, assuming complete funding and no weather or logistical complications. New this year was a request to associate each activity with a

Plan Task listed in the Recovery Plan (NMFS 2008). A table with the completed spreadsheet data is in Appendix 3.

Using number of site visits as an index of activity, most effort is associated with aerial surveys and skiff-based observations with scat collection (Table 1). Field activities are conducted throughout the entire year and over most of the Steller sea lion range in Alaska (Figs. 1-8, Tables 2-11). The largest number of activities occurs during June and July (Fig. 1). Using the geographical sub-areas used to combine aerial survey data (described in Fritz et al. 2008 and NMFS 2008), most site visits are to locations in the western and central Gulf of Alaska, central and eastern Aleutian Islands, and Southeast Alaska (Table 2). Sites in British Columbia visited by ADFG and UBC are included for reference only in the context of Southeast Alaska/British Columbia research plans conducted by U.S.-permitted researchers (Table 11), but other work that may be conducted in British Columbia. is not included.

The most-visited site (29 listings) is Long Island (Figs. 6a and 6c), primarily due to land-based observations (Table 7). Other potentially frequently visited sites are Sea Otter Island, Cape Ugat, and Marmot Island (13 listings each; Table 7; Fig. 6) primarily due to repeat seasonal visits during aerial surveys and skiff-based observation/scat collections.

Potential overlaps in timing and location of field studies among research groups were identified by inspection of a table sorted on date and location, and these conflicts were discussed at the meeting and largely resolved. These included NMML and UAF aerial surveys around Kodiak Island (which by design are intended to be similar in time), NMML and AEB aerial and

skiff surveys around the Shumagin Islands and other locations in the western Gulf of Alaska. ASLC and ADFG agreed to coordinate capture criteria for pups in Prince William Sound since both groups utilize the same haulouts.

Field research activities address a broad range of Steller Sea Lion Recovery Plan (NMFS 2008) Plan Tasks (Table 12), and most field projects address multiple Tasks (Appendix 3). NMFS (2008) ranks activities into four priority levels: 1, 2a, 2b, and 3 with priority 1 activities being the most important. Field research proposed for 2008 address the only task listed as priority 1 (baseline population monitoring), and eight activities address priority 2a tasks, three address priority 2b tasks, and none address priority 3 tasks (though this coordination meeting itself addresses the priority 3 task to coordinate research efforts).

## **OTHER TOPICS**

During presentations of 2008 research plans, a common theme was how FY08 budget cuts or other lack of funding would likely impact field and laboratory studies. Some of these outcomes were already known by the time of the meeting. For example, though ADFG and NMML list juvenile capture and observational work in the eastern Aleutian Islands and western Gulf of Alaska during October-November, funding for this work was already known not to be available in FY08.

The nature and timing of actions to be taken by F/PR1 involving research reviews and applications for new Steller sea lion research permits were discussed, and concerns about the

process and timing will be forwarded to F/PR1. In general the collective view was that the permit process should not be the forum for choosing research priorities but rather to assure proposed studies would be conducted in a legally-appropriate manner. There was also concern that the importance of permitting critical research needs, such as capture and handling of adult females, would continue to not be adequately emphasized during the process and thus be in danger of being dropped. Attendees were hopeful that F/PR1 would focus all attention required to expediently issue new permits in August of 2009.

The group also discussed the concept of a Steller sea lion research plan. A research plan could be assembled by combining existing plans of NOAA-funded groups such as has been done for ice seals, but current plans now are several years old and thus reflect what was important during the past 3-4 years under limited funding rather than all priorities. Such a plan would also not reflect ideas for new research based on recent findings. A plan should be structured to link to Recovery Plan goals and highlight areas where supplemental funding would be required. The Alaska Regional Office felt it would be useful for them to know of studies being performed by other investigators on samples collected during field work by the permit-holders, such as on tissue samples. It has not necessarily been readily apparent how much additional research is conducted through such collaboration, and doing so would highlight broader applications and help identify information gaps.

Attendees agreed that having the annual research coordination meeting following the Alaska Marine Sciences Symposium worked well for timing and location, and that the 2009 meeting should be scheduled similarly.

Table 12. -- Steller Sea Lion Recovery Plan (NMFS 2008) recovery Plan Tasks addressed by proposed 2008 field research.

Description	ADFG	AEB	ASLC	NMML	OSU	UAF	UBC
<b>1. Baseline population monitoring</b>	X						
1.1.1 Estimate trends for pups and non-pups via aerial surveys		X		X			X
1.2 Estimate vital rates			X				
1.2.1 Continue to estimate survival, natality, and immigration/emigration rates through a branding/resight program	X	X		X	X	X	
1.2.4 Determine pregnancy and parturition rates						X	
1.3 Monitor health, body condition, and reproductive success			X		X		
1.3.1 Examine the effects of season, age, and sex on body condition						X	
1.4 Develop and implement live capture methods and non-lethal sampling techniques				X			
1.4.1 Develop improved live capture techniques for general research needs	X						
1.4.2 Develop improved non-lethal sampling techniques to assess health	X						
<b>2. Insure adequate habitat and range for recovery</b>							
2.3.1 Collect and analyze scat samples and stomach contents to determine prey consumption	X	X					X
2.3.3 Deploy instruments to obtain finer scale data on sea lion foraging habitat	X						X
2.4.3 Distinguish how natural and anthropogenic factors influence marine ecosystem dynamics and subsequently sea lion population dynamics	X				X		
2.6.5 Assess the response of sea lions to changes in prey distribution and availability	X				X		
<b>4. Protect from disease contaminants, and predation</b>					X		
4.1.4 Evaluate causes of mortality by examining dead and live animals						X	
<b>5. Protect from other natural and anthropogenic factors</b>							
5.3.4 Monitor the incidence and impact of entanglement in marine debris	X				X	X

## APPENDIX 1

Steller sea lion research coordination meeting attendees, 24 January 2008, Anchorage Alaska.

Name	Affiliation
Russ Andrews	University of Alaska Fairbanks, School of Fisheries and Ocean Science, Alaska SeaLife Center, Seward, AK
John Bengtson	National Marine Mammal Laboratory, Alaska Fisheries Science Center, NMFS, NOAA, Seattle, WA
Don Calkins	Alaska SeaLife Center, Seward, AK
Brian Fadely	National Marine Mammal Laboratory, Alaska Fisheries Science Center, NMFS, NOAA, Seattle, WA
Lowell Fritz	National Marine Mammal Laboratory, Alaska Fisheries Science Center, NMFS, NOAA, Seattle, WA
Tom Gelatt	National Marine Mammal Laboratory, Alaska Fisheries Science Center, NMFS, NOAA, Seattle, WA
Markus Horning	Oregon State University, Newport, OR
Lauri Jemison	Alaska Department of Fish and Game, Juneau, AK
Terry Johnson	Marine Advisory Program, University of Alaska
Jo-Ann Mellish	University of Alaska Fairbanks, School of Fisheries and Ocean Science, Alaska SeaLife Center, Seward, AK
Kim Raum-Suryan	Sea-Gypsy Research, Newport, OR
Lorrie Rea	Alaska Department of Fish and Game, Fairbanks, AK
Dave Rosen	University of British Columbia, Vancouver, BC
Lisa Rotterman	Protected Resources Division, Alaska Regional Office, NMFS, Anchorage, AK
Bob Spies	Alaska Sea Life Center, Seward, AK
Andrew Trites	NPUMMRC/UBC, Vancouver, BC
Kate Wynne	University of Alaska Fairbanks, School of Fisheries and Ocean Science, Kodiak, AK

## **APPENDIX 2**

List of Steller sea lion permits included in this coordination.

Permit holder	Permit number
Alaska Department of Fish and Game (ADFG)	358-1888
Alaska SeaLife Center (ASLC)	881-1890
Dr. Markus Horning (OSU)	1034-1887
National Marine Fisheries Service (NMML)	782-1889
North Pacific Universities Marine Mammal Research Consortium (NPUMMRC)	715-1885
Kate Wynne (UAF and AEB)	1049-1886

### **APPENDIX 3**

The following table lists the combined 2008 Steller sea lion Alaska field research activities sorted by institution, start date, and activity. Data columns are:

Institution: ADFG - Alaska Department of Fish and Game; AEB - Aleutians East Borough; ASLC - Alaska SeaLife Center; NMML - National Marine Mammal Laboratory; OSU - Oregon State University; UAF - University of Alaska Fairbanks; UBC – University of British Columbia.

Site name: Rookery or haul-out location of activity.

Region: general geographic location of rookery or haulout.

Latitude, Longitude: coordinates of rookery or haulout.

Activity: 1-aerial survey; 2-captures:pups; 3-captures:non-pups; 4-captures:pups/juveniles; 5-captures:adults; 6-land-based observation; 7-pup counts; 8-pup counts/handling; 9-pup counts/handling/branding; 10-pup handling/branding; 11-skiff-based observation; 12-skiff-based observation/scat collection; 13-vessel survey; 14-other:develop live capture techniques and low disturbance sample methods.

Start date: earliest date on which an activity would start.

End date: latest date on which an activity would end.

Best date: best estimate of the date on which an activity would occur.

Tasks: as in Table 12, refer to Steller Sea Lion Recovery Plan research priorities.

Appendix 3. -- Proposed 2008 Steller sea lion Alaska and British Columbia field research activities.
