Notes: Pretax household income equals the sum of several components:

Wages include cash wage and salary payments as well as employees' contributions to 401(k) retirement plans.

Proprietors' income is net income from businesses and farms operated solely by their owners.

Other business income includes partnership income, income from S corporations, and positive rental income.

Interest and dividends includes taxable and nontaxable interest and dividends paid by C corporations.

Capital gains are the profits from the sale of assets. Unrealized capital gains are not included.

Pension income is income received in retirement for past services. It also includes taxable withdrawals from individual retirement accounts and deferred compensation plans.

Cash transfers include payments from Social Security, unemployment insurance, Supplemental Security Income, Aid to Families with Dependent Children, Temporary Assistance for Needy Families, veterans' benefits, and workers' compensation.

In-kind income includes employer-paid health insurance premiums, food stamps, school lunches and breakfasts, housing assistance, energy assistance, and the fungible value of Medicare and Medicaid, as estimated in the Current Population Survey.

Imputed taxes are taxes paid by businesses (corporate income taxes and the employer's share of Social Security, Medicare, and federal unemployment insurance payroll taxes). It is assumed that income would have been higher in absence of those taxes.

Income categories are defined by ranking all people by their comprehensive household income adjusted for household size—that is, divided by the square root of the household's size. (A household consists of the people who share a housing unit, regardless of their relationships.) Quintiles, or fifths, contain equal numbers of people. Households with negative income (business or investment losses larger than other income) are excluded from the lowest income category but are included in totals.

Individual income taxes are attributed directly to households paying those taxes. Social insurance, or payroll, taxes are attributed to households paying those taxes directly or paying them indirectly through their employers. Corporate income taxes are attributed to households according to their share of capital income. Federal excise taxes are attributed to them according to their consumption of the taxed good or service.
