What good is this book?

This series of maps is intended to assist community and agency groups in Albuquerque to interpret and understand problems in our communities.

The maps illustrate rates, averages and percentages of demographic, socio-economic and health indicators distributed across the 18 city zip codes. They can be used to write grant proposals, evaluate projects, make presentations to the public or elected representatives, and - in general – take informed actions based on the problems and strengths of our communities. The maps and tables can be ‘cut and pasted’* directly into other documents, with attribution.

This is version 6a of the map book, produced for printing in February, 2005. New data have been added and some old data have been corrected – previous version of this collection are now obsolete. The electronic version is available on the web at <http://www.nmph.org/soc-dets.htm>. In addition to electronic and printed versions of this collection, you may also request an MSEXcel version of all the tables (see contact information below). Please share this collection with colleagues who might find it useful.

The map book now contains 37 maps, each with an accompanying data table. In the tables, you will find the numbers that correspond to the mapped values plus other values not included on the maps. The tables also provide values for city quadrants (NE, NW, SE, SW), two zip codes in rural Bernalillo County (87008 and 87059), and sums of all listed zip codes or entire county. Please note that the zip codes listed on the tables do not include zip codes that overlap other counties. Note, also, that zip codes 87116 and 87118 are located on Kirtland Air Force Base and have small populations with very special characteristics.

This project will continue in the future. Suggestions for new indicators to be mapped are welcome, as well as requests for special assistance. Especially appreciated from you - the user - are stories about how this book has been useful, suggestions on how to improve it, and your comments on how the data it contains should be interpreted.

Thank you,

Thomas N. Scharmen, M.A., M.P.H., Epidemiologist

HOW TO TRANSFER A MAP OR TABLE INTO A WORD DOCUMENT FROM THE ADOBE VERSION OF THIS DOCUMENT:

- Display the page with the map you want to transfer.
- Click on the **Snap Shot Tool** icon (it looks like a camera).
- Starting in the upper left hand corner of the page, click and hold and drag the frame to the lower right hand corner of the page.
- Release the mouse button and a message will appear telling you that the image has been saved to the clipboard.
- Open the Word document.
- Click where you want to insert the table.
- Click **Paste**.

PLEASE NOTE: ONCE YOU HAVE TRANSFERRED A MAP, YOU MAY ADJUST ITS SIZE BY MOVING THE CORNERS OF THE IMAGE; AVOID MOVING THE SIDES OF THE IMAGE AS THIS WILL DISTORT THE SHAPE OF THE MAP.

IF YOU REQUIRE HIGHER RESOLUTION IMAGES OF THE MAPS OR TABLES IN THIS DOCUMENT, PLEASE SEE THE CONTACT INFORMATION IN THE INTRODUCTION.

HOW TO TRANSFER A MAP INTO A WORD DOCUMENT FROM THE MS- POWERPOINT VERSION OF THIS DOCUMENT:

To save a slide in a metafile or GIF format:

1. Display the slide you want to save as a picture and select it by clicking anywhere on the map.
2. On the **File** menu, click **Save As**.
3. In the **Save as type** box, click **Windows Metafile** or **GIF Graphics Interchange Format**.
4. Choose a folder in which to save the file.

To Insert the picture you have saved into your Word document:

1. Open the Word document
2. Click to place the cursor where you want to insert the picture.
3. On the **Insert** menu, point to **Picture**, and then click **From File**.
4. Locate the folder and the picture you want to insert.
5. Double-click the picture you want to insert.

Note: the title of the map may disappear in the Word document: just change the size of the document with the % function, or use the Page Up and Page Down keys, and it will re-appear. The map will print with the complete title even though it may not be visible on your screen.

HOW TO TRANSFER A TABLE INTO A WORD DOCUMENT FROM THE MS- POWERPOINT VERSION OF THIS DOCUMENT:

1. Display the slide with the table you want to transfer.
2. Click anywhere on the table.
3. Click **File** and then **Copy**.
4. Open the Word document.
5. Click where you want to insert the table.
6. Click **File** and then **Paste**.

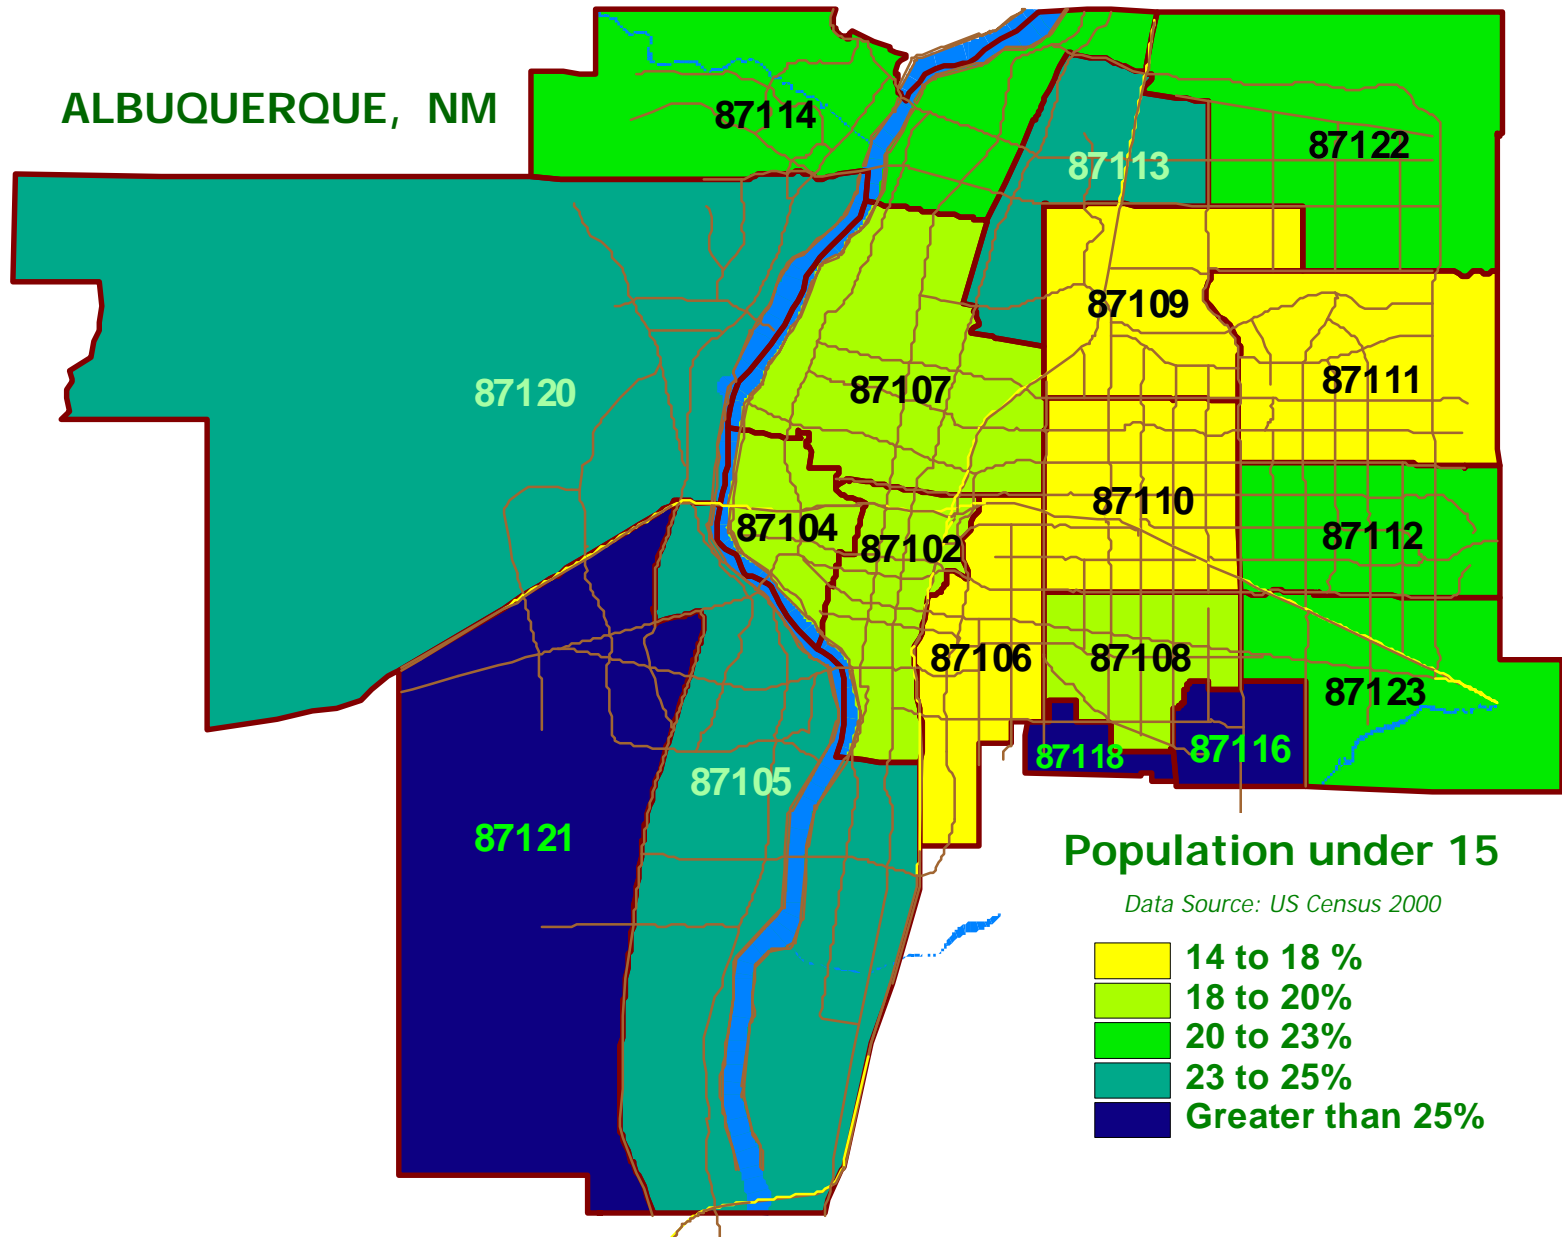

Note: The tables cannot be modified, however, you may request an MSExcel version of all the tables. See contact information in the intro.

PLEASE NOTE: ONCE YOU HAVE TRANSFERRED A MAP, YOU MAY ADJUST ITS SIZE BY MOVING THE CORNERS OF THE IMAGE; AVOID MOVING THE SIDES OF THE IMAGE AS THIS WILL DISTORT THE SHAPE OF THE MAP.

Local Perspectives on Community Assessment

Comprehensive Data – In order for communities to establish priorities for the allocation of limited resources, they must conduct assessments that cover *all* major health needs and assets. A comprehensive assessment implies access to data from many different sources.

Once acquired from different sources, existing data must be re-organized in order to reveal the multiple dimensions of health-related problems that enable a community to decide priorities, target populations, and focus interventions.

Among those NMDOH workers who assist communities in this task are ‘generalist’ epidemiologists and health promotion specialists. They are rarely the ones who collect, manage or store data but must rely on multiple program database specialists to share data with them. The number of generalist in the New Mexico Department of Health working to respond to community requests for comprehensive data is small, but growing.

The specialist database managers, on the other hand, are numerous and also growing. They are, however, not often in direct contact with the community clients who need comprehensive assessment services. Improved cooperation between generalists (who work with communities) and specialists (who collect and manage databases) is a goal that must be achieved if public health surveillance is to be successful.

Who Owns the Data? – Few persons would argue with the inherent right of communities to have and use information about their own lives and neighborhoods.

In New Mexico, Native American tribes have made bigger strides than other communities towards resolving the question of ‘whose data is it.’ The sovereignty of the tribes, the autonomy of tribal health departments and federal IHS services, and a long history of resisting outside researchers who rarely left useful information behind when they finished their study – have all contributed to strong assertion of the right of tribes to their own health data, and respectful policies by NMDOH data managers.

Public health professionals are working to recognize that other communities in New Mexico have the same rights to data collected by government agencies about their local problems, conditions and resources as do the tribes.

Public Health Surveillance: Information for Action – The basic assessment function of a local public health district can be summarized as providing effective information for effective action, whether to our own programs or to our community partners. This is the public health meaning of that unfortunate word “surveillance.” Putting existing knowledge into action (surveillance) should be distinguished from endeavoring to discover new knowledge (research).

Albuquerque and Bernalillo County Communities – Albuquerque, the only large city in the state of New Mexico, has nearly 600,000 residents. This is almost 1/3 of the population of an otherwise mostly rural state. Just as we assess the state by looking at county-level statistics, we can best assess Albuquerque by looking at community-level statistics. In the case of the maps presented in this publication, community-level statistics means zip code-level statistics.

How do Albuquerque zip code populations compare to those of New Mexico counties? The 16 urban zip codes represented in these maps .

- together hold over half a million people.
- average 33,000 persons per zip code. (The average county in the rest of New Mexico has 39,000 persons.)
- have a median population of 37,000 residents. (The median population of the 33 counties in the state is 25,000.)
- include only one zip code with less than 10,000 persons – 87113, with a population of 7400. (New Mexico has 7 counties with less than 10,000 persons.)

Who Defines the Boundaries of a Community? – The people who live in a community (or who otherwise consider themselves members of a community). New Mexico is unique in that it is a state with much geography and little population. It is just beginning to evolve toward the realization of what it means to have a truly urban community in its midst. Existing data in this state is under-utilized in the context of such small but densely populated geographic areas.

Is a Zip Code a Community? – Zip codes are mail distribution routes and (though they often come close to coinciding) they are not necessarily the boundaries that a community would use to define itself. They are *convenient* because they are included in most client databases and because aggregation of data by zip code is fast, easy and avoids confrontations about confidentiality.

But zip codes are ultimately *inadequate* because: 1) populations for zip codes are estimated only once every 10 years, thus rates may be distorted; 2) zip code boundaries at one census may have shifted from those of the previous census, thus the ability to estimate trends is hampered; 3) zip codes overlap counties and conventional census boundaries, thus aggregations and comparisons are unwieldy; and 4) though zip codes are commonly found in client databases, they are often missing, incorrectly recorded, or are only post office box zip codes (with no link to where the client actually lives).

Zip codes for community assessment are an inadequate convenience. Future versions of this collection of data and maps will strive to present information in a variety of community-relevant boundaries, such as those that define schools, neighborhood associations, census tracts, diaspora, or state representative districts. It is hoped that the effort will lead to more people taking greater responsibility for the health of themselves and their neighbors.

-Tom Scharmen
