Dr. Charles A. LeMaistre
Chairman, Enron Compensation Committee
Enron Corp.
7 Bristol Green
San Antonio, TX 78209

Dear Dr. LeMaistre:

As requested by Enron's Compensation Committee, Tower Perrin has prepared this letter providing our opinion regarding the competitiveness of the executive compensation programs at Enron Corp. Our comments about pay competitiveness relates to organizations that are going concerns, without any adjustments for a company's financial condition. The remainder of this letter provides a discussion of Enron's pay philosophy, the methodology used to assess pay competitiveness, and the competitiveness of specific executive compensation programs.

Pay Philosophy

Enron's executive pay philosophy has been to target approximately the market median (50th percentile) for base salaries, the 75th percentile for total cash (i.e., base plus bonus), and the 75th percentile for long-term incentives. However, actual bonus payments and long-term incentive awards are to vary based on performance.

Market Pay Assessment Methodology

Enron has for years collected marketplace compensation data for as many of its jobs as possible. Towers Perrin's involvement in this process has varied over time, ranging from actually developing market compensation rates for hundreds of jobs to opining on the overall methodology used by Enron's executive compensation staff. Towers Perrin has also reviewed the individual market pay rate and recommendations developed by Enron Executive Compensation staff for the Management Committee. However, the Compensation Committee has consistently relied on Towers Perrin for market pay data for the CEO and at least two other senior officer positions each year.

EC2 000028641

Dr. Charles A. LeMaistre

December 3, 2001

Page 2

Towers Perrin

In Towers Perrin's experience, the appropriate market data to be used depends on the size of the company (most often measured by revenues, as shown in most reputable executive pay surveys) and industry affiliation (for certain commercial jobs). In our opinion, the data sources relied upon by Enron for developing executive and commercial market compensation rates are widely accepted and utilized surveys, such as those produced by Towers Perrin, Hewitt, and McLagan Partners.

As alluded to above, company size, as measured by revenues, is an important factor in determining market pay competitiveness. Traditionally, Enron, like most of its energy industry competitors, considered the Company's full revenues in assessing its size for market pay determination purposes. However, with increased trading volumes and volatility, the Company's 2001 actual and 2002 expected revenues escalated dramatically. For example, 2000 actual revenues were about \$100 billion and 2001 expected revenues (until the turmoil experienced in the last quarter) were estimated at about \$200 million. Because these revenue growth rates were so unprecedented and because the Company's size had not increased as dramatically using other measures (such as assets, employees), the Compensation Committee agreed to moderate the revenue growth impact on compensation decision-making for 2000 and 2001. For 2000, budgeted revenues of \$56 billion (versus actual revenues of about \$100 billion) were used to determine company size. For 2001, the recommended methodology was to use revenues equal to the revenues of companies with market capitalization equal to roughly 50% to 200% of Enron's market cap for a trailing 6 month period. This methodology produced net adjusted revenue of \$45 billion for Enron to use as of August of this year.

Please note that most of Enron's energy industry peer companies still use total gross revenues to determine their size for executive pay purposes. Consequently, the methodology used by Enron in 2000 and 2001 was conservative.

Competitiveness of Enron Pay Programs

While Towers Perrin and Enron's executive compensation staff have worked together in assessing the competitiveness of executive pay at Enron over time, a comprehensive analysis examining the relationship between pay and performance was conducted in April 2001. This "stress test" analysis (which was requested by the Compensation Committee) included:

- Interviews with senior management and members of the Board on the perceived effectiveness of Enron's executive pay programs;

EC2 000028642

Towers Perrin

- A competitive compensation analysis for 60 key executive positions;
- A review of the in-the-money value of equity-based pay;
- An analysis of expected total direct pay at various share prices; and
- An assessment of potential stock overhang under various projected share price levels.

As part of this analysis, Enron's performance was compared to selected investment banking and energy industry peer companies for 1998 to 2000. A copy of this analysis is shown in Attachment A. As shown, Enron's performance on ROE and TSR was typically above the median and was often around the 75th percentile compared to its energy industry peers. On a market cap basis, Enron was larger than all of the energy and investment banking companies analyzed, except Morgan Stanley Dean Witter.

The competitive pay assessment showed that Enron's base salaries were 91% of the market median (using the \$56 billion sales figure regression analysis previously cited) and that total pay levels for 2000 (including base, bonus, and the expected value of long-term incentives) was 113% of 75th percentile. Towers Perrin believes an organization's pay levels are competitive if they fall within 90% to 110% of a market reference point. Therefore, we concluded that Enron's total direct pay levels for the executives in the study were slightly above the 75th percentile, based on the Compensation Committee's judgement regarding company performance.

Annual Incentive Pay Structure

Until the year 2000, Enron funded bonus pools for each business unit and corporate staff based on market levels of incentive funding by business line (e.g., trading versus asset business). In 2000, senior management expressed concern that this bonus funding structure discouraged key commercial employees from leaving profitable units to take critical positions in less profitable units (since funding was based on a percentage of net income for each unit).

To address this concern, Towers Perrin recommended (and the Compensation Committee adopted) a new bonus funding scheme under which bonuses throughout the Company would be funded at the equivalent of 16% of corporate earnings before interest and taxes (EBIT). (This recommendation was revised at management's request to be expressed as about 24.5% of recurring net income so that taxes and

Towers Perrin

interest expenses would impact the calculation, assuming a 35% tax rate). Individual employee bonus allocations from the pool were then to be made using discretion, but considering the value of the individual's position using market data and individual performance.

In Towers Perrin's experience, this annual incentive plan design is consistent with market 75th percentile practices for energy trading and marketing entities.

Long-Term Incentive Plan Design

Enron's long-term incentive plan consists of two parts: stock options and performance accelerated restricted stock (TARSAP). Under this program, 50% of the expected value of long-term incentives is delivered using each vehicle.

Enron is consistent with market practice in using stock options. According to Towers Perrin's 2001 Long-Term Incentive Plan Survey, 89% of companies use stock options.

The Company's use of restricted stock is somewhat less common. Towers Perrin's survey data show that 20% of companies use restricted stock. Prior to 1999, the Company used a combination of stock options and a long-term performance plan. However, the Company began experiencing retention problems in 1998/99 that led to the need to provide retention incentives. The restricted stock element of this program was intended to meet this objective. However, Enron's restricted stock plan provides for awards to cliff vest 4 years after the date of grant, with vesting to be accelerated if certain performance levels are achieved relative to the S&P 500 index. This plan feature increases the performance sensitivity of the restricted stock element of the plan while at the same time aiding in employee retention.

Other Pay Actions

This fall, Enron experienced a sudden and unexpected decline in its share price and investor confidence. Because the Company has relied significantly on stock-based pay and cash incentive pay to attract and retain employees, this turn of fortunes resulted in significant concerns about how to hold the Company together during this time of turbulence.

Enron then entered into a merger agreement with Dynegy. Because compensation issues during an expected merger are unique, Towers Perrin prepared the November 14, 2001 letter (Attachment B) to help guide Enron's Compensation Committee in its decision-making. This letter recommended that the Committee

Dr. Charles A. LeMaistre
December 3, 2001
Page 5

Towers Perrin

provide fully competitive 2001 bonuses for key commercial employees (based on their performance and market values), since their talent is significantly in demand in the market and since Enron's ultimate value to shareholders would depend on keeping key talent in this area. Based on these facts and market pressures, the Compensation Committee established a 2001 annual bonus pool of \$50 million to be paid to up to 100 key commercial employees in Enron Americas. This funding equals about 2.5% of Enron Americas' (its most important commercial unit) EBIT, which is dramatically less than market median funding of 15% of EBIT for energy trading units.

Following Dynegy's withdrawal from the merger agreement, Enron then faced the issue of retention of critical non-commercial staff. Enron's Compensation Committee chose to establish a 2001 bonus pool for this group of about \$54 million. This plan excluded any payments to 16(b) officers and contains a requirement that any recipient who voluntarily terminates employment prior to 90 days after receipt of payment must pay back 125% of the award.

This bonus plan was approved for 528 individuals (out of an employee population of 20,000) who are considered critical to the Company's ability to function. In essence, the plan pays awards equal to about 90% of prior year bonuses (on average) in order to retain key staff not covered by the Enron Americas plan cited above. As shown in Attachment B, 45% of surveyed companies report using stay bonuses. The Enron bonus payments to these critical employees were structured to be a form of stay bonus, since the payouts contain a claw-back feature and a premium repayment to the Company of 25% in the event of voluntary termination.

* * * *

I hope this letter meets Enron's needs. Please call me with any questions.

Sincerely,

CEE:mhm

Attachment B

Dr. Charles A. LeMaistre
Chairman, Enron Compensation Committee
Enron Corp.
7 Bristol Green
San Antonio, TX 78209

Dear Dr. LeMaistre:

As requested by Enron, Towers Perrin has prepared this letter addressing potential strategies Enron may want to consider in dealing with 2001 bonus allocations and possible ways to retain key employees during the period before the merger with Dynegy is completed. We have also outlined our understanding of how Enron's Compensation Committee is impacted by the announced merger.

Special Merger-Related Decision-Making Considerations

Before discussing specific compensation strategies, we want to remind the Compensation Committee about the extra importance of its decisions in light of the Company's "in-play" status and other pending litigation. We believe it is critical that the Compensation Committee understand how the announced merger needs to impact its decision-making. This input reflects our extensive experience as compensation consultants and advisors to Enron and its board, but should not be taken as legal advice. **TOWERS PERRIN DOES NOT ENGAGE IN THE PRACTICE OF LAW, SO THE COMPANY SHOULD SEEK LEGAL COUNSEL'S OPINION ON THESE ISSUES.**

Also note that lawyers and courts do not always interpret these matters in exactly the same way. What we're outlining here reflects what we have seen as mainstream interpretations of law firms with which we deal.

Under most circumstances, Compensation Committee actions are governed by the Business Judgment Rule. Under this rule, Compensation Committee (and full Board) decisions are not to be second-guessed if good processes have been used in making decisions, even if the impact of the decisions turn out to be unfavorable. A helpful

Towers Perrin

condition for demonstrating sound business judgment is the use of reputable professional experts (such as compensation consultants in the case of making compensation decisions).

However, once a company is "in play" a higher standard of decision-making may apply. Many legal experts believe the burden of proof that the decisions taken by a Board of Directors are reasonable shifts to a higher standard. This standard, in essence, is that decisions made must be directly in the shareholders' interest. Consequently, actions taken by a Compensation Committee during this period are scrutinized much more closely and documentation of the reasons for decisions taken is critical. At such a time, company should not be making significant increases in pay or other program changes unless it can substantiate a compelling business rationale for doing so. Otherwise, charges of Corporate Waste or other breach of fiduciary duty could be levied.

Enron Compensation Issues

Enron faces a variety of critical compensation issues in light of the announced merger with Dynegy. In our opinion, it is critical that these decisions be made recognizing the following facts:

- Enron's financial performance for the year (as measured by recurring net income) is likely to be good. However, its stock price has dropped dramatically.
- Enron's greatest value is in its core trading, other commercial and pipeline businesses. With respect to the trading and other commercial businesses, the value imbedded in the business resides largely in the intellectual capital of the employees. Therefore, it is critical that key people associated with these businesses be retained in order for the Company pre- and post-merger to have value to shareholders. This is particularly true of key commercial people who, in our opinion, can find other job opportunities with equivalent pay opportunities instantly.

To deal with these concerns, Towers Perrin has developed some suggested parameters for Enron to consider in making 2001 compensation decisions. We will address possible 2002 compensation structure issues at a later date.

Towers Perrin

Suggested 2001 Compensation Decision Parameters

Given the announced merger, Enron's financial performance, Enron's stock price performance, and the fact that Enron's commercial talent has highly portable skills, Towers Perrin suggests that Enron make its 2001 compensation decisions within the following parameters:

- *Equity Compensation* – In most companies, immediate vesting of equity compensation takes place upon a change-in-control. In Enron's case, the equity plans only accelerate vesting in the event of a hostile takeover. (It is our understanding that the Dynegy merger does not represent a hostile takeover.)

This lack of vesting complicates matters for Dynegy following the merger. Specifically, Dynegy's stock overhang (i.e., the percentage of shares reserved for stock-based pay) is about 10% while Enron's overhang is about 15%. With no acceleration of vesting (which is typically coupled with a requirement that options be exercised or cancelled within 3 months of the change-in-control), Dynegy will inherit Enron's overhang. What is more, this overhang may exist for years since Enron's stock options are deeply underwater. (However, this overhang problem may decline if there are significant employee terminations.)

In addition, since most companies accelerate vesting of equity incentives in the event of a change-in-control, there is little precedence for making any new equity grants to the acquired company's employees once a merger is announced.

Given these issues, Towers Perrin recommends that Enron generally not make additional equity grants to its employees. The one exception to this rule is in the case of employees who have equity award guarantees within their employment agreements. In this case, Enron may want to buy-out the equity award portion of the contract with deferred cash payouts over the next year. However, unless contract employees agree to a buyout, we believe Enron must honor its contracts.

- *2001 Annual Incentives* – Enron's annual incentive plan is funded with up to 24.5% of recurring after-tax net income. This funding level was established based on market 75th percentile norms of 16% of EBIT for energy trading and marketing organizations, converted to a percentage of after-tax net income using an assumed tax rate of 35%. Enron then allocates bonuses to individuals based on targeting market 75th percentile bonus awards for comparable positions, adjusted

Towers Perrin

for performance.

Towers Perrin understands that Enron expects to have a 2001 bonus pool of about \$280 million for 2001 performance. (Note: We believe this figure is based on recurring net income levels and does not reflect restatements of earnings or write-downs. The Committee clearly should consider the impact of these one-time events on the size of the bonus pool.) While we understand that the merger agreement with Dynegy allows Enron's Compensation Committee to make 2001 bonus (and other pay) decisions, we recommend that the following parameters be considered in the bonus allocation process:

- The CEO and other key corporate officers named in the proxy and/or directly involved in the ongoing SEC investigation should receive no bonus for the year. This recommendation is based on the dramatic decline in Enron's share price and the fact that questions exist regarding the actions (or inactions) of these officers that led to the market decline.
- Key commercial (e.g., trading) and pipeline employees who have contributed to Enron's profitability and who are key to its ongoing success should be receiving bonuses fully commensurate with their market value and performance.
- Certain officers (including those who may have recently become proxy-named executives) who have been, and continue to be, critical to the past and future success of the core pipeline and commercial business should receive bonuses based on their market value and performance, but adjusted in the case of newly-named proxy officers to reflect the time spent in commercial roles.
- Other key staff support people (e.g., IT, Accounting, Risk Control) who played a critical role in Enron's 2001 success and who are critical to maintaining the current systems required to run the company should receive competitive bonuses, adjusted to reflect their performance.

In considering the timing of bonus payouts, Enron should note that most companies pay the full bonus with no mandatory deferrals based upon audited financial results (e.g., late February or early March of the year following the performance period). The one notable exception to this practice exists within energy trading and marketing units. Approximately 60% of the major energy trading and marketing groups defer a

Towers Perrin

portion of trader/originator bonuses in excess of some threshold amount over a 2-year period. A conservative model for this deferral would be to defer 50% of any bonus over \$1 million over two years, with one-half of this amount payable one year after the initial payout and the remainder payable two years after the initial payout. This deferral feature is intended to help retain key trading talent. We recommend that Enron consider deferring a portion of its 2001 commercial employee bonuses for at least a one to two year period to aid in retaining key talent, which should aid in employee retention. However, we recognize that the Company will need to handle this issue with great care, since it has not deferred these bonus payouts in the past and since its best commercial employees have tremendous market opportunities.

Finally, to help Enron in making bonus allocations to key commercial talent, please note that while the data contained in Towers Perrin's 2001 Energy Trading and Marketing Survey provides a good starting point for determining competitive bonus levels, market practice varies widely based on performance. Specifically, the survey shows statistics based on the average pay rates reported by a company for all employees in a given position. Therefore, intra-company pay differences among employees in a given job are not shown.

While Towers Perrin has not conducted a formal survey of individual incumbent pay levels among energy trading and marketing units, we know from our consulting experience that many individuals who are not corporate officers received annual bonuses in excess of \$1 million in 2001 for 2000 performance. We also were told by one company that they paid a bonus of about \$10 million to their leading trader, and that a small number of traders received bonuses of \$5 million to \$9 million. We are not providing this information to recommend any specific pay actions for Enron, but to simply give you the information you need to compete in today's commercial market.

Other Retention Issues

Given that most of Enron's businesses are based largely on the intellectual capital of its people, retention of key talent is critical in order to ensure that shareholder value is maximized in the merged entity. Since the merger will impact both Enron and Dynegy employees (and since Dynegy has infused significant capital into Enron), we believe that any significant retention strategies should be discussed jointly between Enron and Dynegy.

Towers Perrin

Nevertheless, Towers Perrin believes Enron faces some immediate and significant retention issues as a result of having no current positive spread in its stock options, the fact that many of its best employees are questioning whether they will be paid for their contributions in 2001 or 2002, and the Company's history of relying heavily on stock-based pay. We believe Enron and Dynegy need to move quickly to address the retention of key employees that will be needed during the merger transition period and beyond.

The traditional tools used to retain employees are restricted stock grants, contracts and/or change-in-control agreements, and stay bonuses. Enron has already used restricted stock to provide 50% of the expected value of long-term incentives in recent years. However, while this stock has some retention value, this value has been vastly diminished as a result of Enron's stock price decline. Enron also has hundreds of employment agreements that provide severance pay and contain non-compete clauses, which should help with retention, as well.

However, we believe these devices alone will not likely hold all of the employees. Enron needs to continue operating and to provide value to shareholders in the newly merged company. To effectively retain key employees, we believe Enron and Dynegy need to work together quickly to:

- Identify critical functions and people that need to be retained until the merger is closed and after closing;
- Determine (based on current pay and market opportunities) the magnitude of the handcuffs required to lock in key staff, considering the value of existing employment contracts and unvested restricted stock; and
- Consider establishing a stay bonus plan for critical employees who do not have sufficient retention hooks through existing devices.

In evaluating the need for a stay bonus plan, Enron should note that the 2nd Annual Retention Bonus Survey conducted by WorldatWork showed that 45% of 550 companies adopted retention bonus programs in the last year and that eligibility was extended to key employees in technical, professional, and management positions. While the data from this survey show a wide range of practices in terms of the size of awards, Towers Perrin believes that awards would need to be in the following ranges

Dr. Charles A. LeMaistre

November 14, 2001

Page 7

Towers Perrin

to have meaning to Enron employees (given historical pay practices and market conditions).

<u>Employee Group/Level</u>	<u>Potential Stay Bonus as % of Base Pay</u>
Executives/Key Commercial	100% to 200%
Key Technical	50% to 100%
Key Staff Support	20% to 40%

These payout ranges assume the retention period is one year, so the numbers would need to be reduced for a shorter retention period on a pro-rata basis. Also, the value of any employment contracts should be netted out against the value of stay bonuses. Finally, Towers Perrin believes that a properly designed 2002 annual bonus program may mitigate the need for stay bonuses to some degree. We plan to work with Enron on this issue in the coming weeks.

* * * * *

Dr. LeMaistre, I hope this letter is helpful. However, Towers Perrin re-emphasizes the need to coordinate retention pay issues with Dynegy's Top Management and Board. In the overall scheme of the merger, Dynegy's plans for the core business of Enron will have a major impact on the number of key employees they will want to retain. Please call me with any questions.

Sincerely,

CEE:mhm

Towers Perrin

Overview

- As a result of recent volatility in U.S. equity markets and in Enron's stock price, the Compensation Committee of the Board asked Towers Perrin and Enron's Executive Compensation Group to assess the impact of this volatility on Enron's ability to attract and retain key talent within a pay-for-performance philosophy.
- To this end, Towers Perrin and Enron's Executive Compensation Group have prepared this report providing an analysis of the impact of higher and lower Enron stock prices on executive pay.
- The remainder of this report provides the following information:
 - Summary of interview findings;
 - Competitive compensation analysis;
 - Review of in-the-money value of Enron long-term incentives at various share prices;
 - An analysis of expected total direct compensation levels at various share prices; and
 - An assessment of potential stock "overhang" for Enron assuming current levels of expected long-term incentive value are provided, but under various share price scenarios.
- In addition, Towers Perrin has provided a number of case studies showing how other companies have dealt with a declining stock price in terms of long-term incentive management.

EC 002634705

EC 002634706

I. Interview Findings

Interview Findings

- Towers Perrin conducted interviews with the following executives and Board members to determine the issues to be covered by this study and to determine the major business issues that may impact Enron's total executive pay program:

<u>Executives</u>	<u>Board Members</u>	<i>After Jeff - Call & work w/ other members before 5/1/01 meeting</i>
— Ken Lay	— John Duncan	
— Jeff Skilling	— Dr. Charles LeMaistre	
— Andy Fastow		

- The key interview findings are as follows:

- While there are a number of factors that could negatively affect Enron's earnings (e.g., India, California), there is generally a sense of optimism about the Company's earnings growth potential.
- The major concern raised is not how Enron will perform; rather, it is the multiple of earnings Wall Street will apply to the market in general and to Enron in particular.
- Thus, the key risk to Enron's stock-based pay program producing value for participants is a potential decline in market multiples to more traditional levels. This could result in the paradox of the Company's financial performance being strong, while realized executive compensation declines.

"Too much paid for value delivered" comment → cultural residue from "old" Plans. E.I., E.S., E.C.I. . .

Interview Findings (continued)

- Further, since Enron's stock trades at a premium multiple compared to most of its industry peers (e.g., Reliant, Dynegy, El Paso), Enron may experience greater pressure on its stock price than its competitors. This, in turn, could lead key talent to leave the Company and join a competitor that is perceived to have more upside potential. (Note: The financial analyses shown for Enron and selected energy and investment banking peer companies demonstrates that Enron's P/E multiple is extremely high.)

II. Competitive Compensation Analysis

EC 002634710

Towers Perrin

Competitive Compensation Analysis

- Enron's Executive Compensation Group, with oversight and input provided by Towers Perrin, developed market base salary, total cash (i.e., base plus bonus), long-term incentive, and total direct compensation (i.e., the sum of base, bonus, and long-term incentives) rates for Policy Committee members, Executive Committee members, as well as other key contributors within Enron (which consistent about 60 key executive positions).
 - These data are the same as those presented to the Compensation Committee in late 2000/early 2001 and reflect the following methodology:
 - For corporate positions, data are for general industry companies with revenues of about \$56 billion (regressed);
 - For business unit positions the data reflect a blend of general industry data for comparably sized businesses (as measured by revenues) and investment banking, high-tech, or other industry specific data relevant to the unit, as available.
 - The long-term incentive levels shown reflect the Black-Scholes value of stock option and restricted stock awards made in 2001 to Enron employees, but are 2000 annualized long-term incentive awards in the market data.
 - Also, the market data provided are consistent with Enron's compensation philosophy of targeting the 50th percentile for base salaries and the 75th percentile for total cash, long-term incentives, and total direct pay.

Competitive Compensation Analysis (continued)

- The following exhibits summarize the findings:

Exhibit	Pay Element	Findings
Exhibit 1	Base Salaries	Enron is 91% of market median
Exhibit 2	Total Cash	Enron is 140% of market 75 th percentile*
Exhibit 3	Long-Term Incentives	Enron is 97% of market 75 th percentile*
Exhibit 4	Total Direct Pay	Enron is 113% of market 75 th percentile*

* Excludes 9 stellar performers from the overall average, since these incumbents received extraordinary incentive awards for 2000 performance. Based on weighted average.

III. In-The-Money Value of Enron Long-Term Incentives

EC 002634713

Towers Perrin

Value of All Enron Long-Term Incentives

- One of the key issues facing Enron is the extent to which the Company's current long-term incentive plan can help retain key executives if the Company experiences downward pressure on its stock price.
- To assess this issue, the following exhibits show the value of in-the-money stock options and unvested restricted stock for key executives at various share prices:

*10 t₀ / multiple
x₃ x₅ etc price*

Exhibit	Share Price Scenario	Value in Millions	
		Total Unvested Value	Total Value
Exhibit 5	\$40 stock price	\$87	\$263
Exhibit 6	\$60 stock price	\$226	\$630
Exhibit 7	\$80 stock price	\$446	\$1,126

EC 002634714

**IV. Analysis of Potential Realized Total Direct
Compensation Levels at Various Share Prices**

EC 002634715

Towers Perrin

Total Direct Compensation Sensitivity Analysis

- For compensation planning and design purposes, Enron (like the vast majority of companies in the market) uses the Black-Scholes model to value stock options.
- While Towers Perrin recommends that Enron continue using this methodology, we also believe that it is useful for this stress testing exercise to look at the potential value of Enron's compensation package assuming various earnings and share price levels in terms of potential realized compensation.
- The following exhibits show the potential realized compensation for key Enron executives under various stock price and corporate net income scenarios. Please note these figures include current base salary, 2000 earned bonus (adjusted linearly to reflect the assumed changes in corporate net income shown below), and the actual in-the-money future value of stock options and restricted stock at the share price assumptions shown:

$\Sigma_{t=1}^{T_0}$
 rather than
 $\Sigma_{t=1}^{T_0}$

Exhibit	Assumptions		Total Estimated Realized TDC Value (in millions)
	Share Price	Net Income as % of 2000	
Exhibit 10	\$40	80%	\$346
Exhibit 11	\$60	90%	\$721
Exhibit 12	\$80	100%	\$1,225
Exhibit 13	\$100	115%	\$1,856
Exhibit 14	\$120	125%	\$2,486

EC 002634716

V. Assessment of Stock Overhang Sensitivity to Share Price

EC 002634717

Towers Perrin

Stock Overhang Analysis

- One of the critical statistics tracked by institutional shareholders and shareholder services groups is stock overhang.
- Stock overhang is simply the percentage of common shares outstanding available for employee stock compensation awards or currently held by employees as stock compensation awards.
- As a point of reference, the median share overhang for Fortune 200 companies is 13.9%, according to the 1999 Equity Stake Report prepared by Pearl Meyer & Partners.
- Exhibit 15 provides a summary of projected April 1, 2002 stock overhang levels for Enron at various share price assumptions.
- The analyses in this exhibit are also based on the assumption that Enron's long-term incentives for the next year deliver the same Black-Scholes value as its 2001 grants.
- As shown, the projected overhang levels after one year vary from 15% (assuming a \$40 share price) to 8.6% (assuming a \$120 share price).
- This results from two primary facts:
 - A company must issue more shares of stock options or restricted stock at lower share prices to achieve a comparable level of Black-Scholes long-term incentive value; and
 - Fewer options are exercised by employees at lower share prices than at higher prices.

EC 002634718

Stock Overhang Analysis (continued)

- In Towers Perrin's opinion, this stock overhang issue is critical to how Enron might deal with a lower share price in its executive compensation planning, since a high level of overhang can adversely impact the Company's range of alternatives to address executive pay competitiveness.

EC 002634719

Towers Perrin

VI. Case Studies

EC 002634720

Towers Perrin

Case Studies

- This section provides a brief description of how major companies have addressed sustained stock price declines in their executive compensation plan administration.

- Exhibit 16 summarizes recent actions taken by the following companies:^{*}

- Dell
- Lucent Technologies
- Microsoft
- Sprint
- Cisco Systems

* Please note that these findings were developed from published materials and executive interviews within these companies.

EC 002634721

Towers Perrin

Case Studies (continued)

- As shown in Exhibit 16, the most common approach taken by these companies has been to simply issue additional stock options to employees (at new, lower share prices). In addition, some of these companies have increased the frequency of long-term incentive awards.
- Finally, Towers Perrin has prepared Exhibit 17 showing alternative approaches taken by general industry companies to address the issue of underwater stock options.
- In reviewing these alternatives, please note that the alternative that is most acceptable to shareholders for 16(b) officers is alternative #1. However, alternatives #4 and #5 are increasingly being used for non-16 (b) officers among companies that have had a downward trend in their stock price for an extended period (typically 18 months or more), companies in the high-tech industry, and companies whose stock overhang is very high.

EC 002634722

Towers Perrin

VII. Conclusions

EC 002634723

Towers Perrin

Conclusions

- Based on our assessment of Enron's executive compensation program, Towers Perrin concludes that the basic structure of the program is consistent with the Company's stated pay philosophy and that the program is appropriately tied to performance.
- In addition, we conclude that the basic structure of the program should allow Enron to retain most key employees even during a period of lower share prices (as long as the share price rebounds within a period of 18 months or so) for the following reasons:
 - Enron (unlike Duke, Dynegy, El Paso, and most other companies) delivers a significant portion of its long-term incentive value in the form of restricted stock. (Most of Enron's direct industry competitors depend primarily on stock options and, to some extent, long-term bonus plans). Since restricted stock has value at any share price, this element of pay provides some value to participants even during a period of weaker share price.

EBIT, which is equivalent to a funding pool of approximately 23% to 27% of after-tax net income. Also, this funding begins at the first dollar of profit. This bonus pool funding mechanism gives the Company the flexibility to allocate bonus dollars to key contributors in a given year, even if results are depressed. Similarly, the Compensation Committee can reduce the size of the pool based on corporate performance on a variety of measures, which ensures pay-for-performance is maintained.

Conclusions (continued)

- Nevertheless, it is likely that Enron will need to provide some short-term relief to certain key employees if the Company's stock price stays in the \$55 to \$65 range. For example, the Company may need to make out-of-cycle option awards to employees who are relatively new and who have little in the way of past in-the-money stock option and restricted stock awards outstanding.
- The Company could also consider taking normal annual option and restricted stock grants, dividing the grants by 4, and making awards quarterly to dollar price average future grant prices.
- However, Towers Perrin suggests that Enron not make any broad-based, programmatic changes to its executive pay programs at this point. The decline in the Company's share price is relatively recent and follows a period of significant increase in stock price. Pay-for-performance systems work when pay (including options gains) rise and fall according to the gains realized by shareholders.

Available for Grant		21,886,879		22,698,856		23,819,315	
Projected Stock Overhang, April 1, 2002		126,967,620		108,767,620		95,467,620	
		15.0%	12.8%	11.0%	8.7%	8.3%	8.6%

Assumptions:

- Executive LTIP delivered 50% in stock options and 50% in restricted stock; total value delivered = \$145,000,000 (\$80,000,000 from 1991 Plan and \$65,000,000 from 1994 Plan). Options are 5 year term; restricted stock cliff vests in 4 years.
- KEYSOP delivered 100% in 5 year term stock options; total value delivered = \$65,000,000 from the 1994 Plan.
- Bonus deferral value delivered = \$7,500,000 phantom stock and \$25,000,000 5 year stock options; all from the 1994 Plan.
- Ad hoc grant value delivered = \$8,000,000 per month when the stock price = \$40 or \$60 and \$3,000,000 per month when the stock price = \$80 or \$100.
- Grants will be for 5 year term options from the 1994 Plan.
- EnronOptions value delivered = value delivered @ 12/31/99 or \$8,600,000. 7 year term options from the 1994 Plan.
- Black Scholes values to be used:

Black Scholes		Common Shares Outstanding:	
5 year term	7 year term	Per 3/31/01 Stock Memo	744,679,988
		Series J	33,882,435
		Series B	50,000,000
\$40	(\$321)		828,562,423
\$60	\$12		
\$80	\$19		
\$100	\$26		
\$120	\$33		
	\$38		

Overhang = shares outstanding plus shares available for grant divided by common shares outstanding.
 Available for grant, April 1, 2002 = available for grant, March 31, 2001 less shares/options granted plus authorization of shares less available for grant at March 31, 2001 under the 1991 Plan.
 Shares Outstanding, April 1, 2002 = shares outstanding, March 31, 2001 less options exercised plus shares/options granted.

Enron Corp.
Sample Approaches to Address Underwater Stock Options

Exhibit 16

Company Name	Approach
Dell	Dell considered and did not like typical alternatives such as repricing, cancel and reissue or stock buy-backs, because of the negative message they send to shareholders and marketplace practice. Their method to address the problem is to take an annual award and deliver portions of it over the course of a year (i.e., 3 to 4 times per year). This way strike prices vary over the year and there is the potential that some of the options from an annual grant cycle will be in-the-money.
Lucent Technologies	Lucent provided 2 special stock option grants in the last half of 2000 (in addition to normal grants) that have shorter than normal terms (e.g., 2 years) and vesting restrictions (e.g., 1 year cliff vest). In addition, a special award was made in February, under which vesting is accelerated if a stock price performance goal (i.e., \$50 price for 10 out of 12 consecutive days) is achieved.
Microsoft	Microsoft has responded to underwater stock options by simply granting millions of new stock options when their stock price was low with seemingly little regard for stock overhang implications.
Sprint	Excluding Board members, Sprint employees agreed to have nearly 18 million underwater stock options cancelled. In exchange, employees will be granted an equal number of options with new strike prices 6 months after the cancellation. Not surprisingly, many shareholders were less than pleased with this action, including one major shareholder that filed a proxy resolution to require the Board to get shareholder approval before Sprint can try similar actions in the future.
Cisco Systems	Cisco's approach to dealing with underwater stock options is similar to Dell's. That is, provide a normal annual award in several smaller grants throughout the year (the number of grants per year has not been determined). In addition, Cisco is planning to shorten the vesting schedule for new stock option grants (specific vesting schedule not available).

Enron Corp.
Approaches for Dealing With Underwater Stock Options

*More logically
re-titled*

Exhibit 17

*To Sipps, Enron Options
Offerings & Rights
D-165*

	Approach 1 <i>Leave options intact: accelerate next grant or make additional grant</i>	Approach 2 <i>Leave options intact; supplement with “bounded” Stock Appreciation Rights (SARS)</i>	Approach 3 <i>Replace options with restricted stock</i>	Approach 4 <i>Cancel and replace more than 6 months later</i>	Approach 5 <i>Buy out options with cash</i>	Approach 6 <i>Sell options to third party</i>
Description	Company makes a new grant ahead of schedule, or an extra grant	Company grants SARs to fill the gap between the exercise price on the original options and the current fair market value	Company offers to replace underwater options with fewer restricted shares at an equivalent value (Black-Scholes or some other basis)	Company cancels options and agrees to replace after 6 months with options that have an exercise price equal to the stock's then-current fair market value	Company buys out underwater options with cash (e.g., at 50% of Black-Scholes value)	Employee sells options to third party at a negotiated price
Company's Accounting Expense	None	Variable (but limited) expense equal to the cash paid when the SAR is exercised	Recognize fixed cost equal to grant-date value of the restricted shares	Probably none, although subject to debate	Recognize fixed cost equal to cash payment	Probably none, especially if options are vested
Cautions	May cause stock overhang to exceed competitive levels; results in “double payoff” if the stock price rebounds	Transaction could be interpreted as an “effective” repricing; consult your accounting adviser. To the extent possible, differentiate the SAR from the original options (e.g., through different vesting, terms, strike price)	If fewer restricted shares are granted than the number of options canceled, don't make any option grants within 6 months of cancellation (before or after) that have a lower exercise price than the canceled options	To avoid variable accounting, don't make any option grants within 6 months of cancellation (before or after) that have a lower exercise price than the canceled options	To avoid variable accounting, don't make any option grants within 6 months of cancellation (before or after) that have a lower exercise price than the canceled options	Creates a new class of nonemployee option holders
Most appropriate when ...	Company has sufficient shares in the plan, and dilution and the potential for windfall gains are not a concern	A near-term fix is needed even though the stock price is expected to rebound after a prolonged period	The company wants to ensure employees have an ongoing tie to the stock (albeit a less risky one), and is willing to take a fixed charge to earnings	Options are so deeply underwater that participants consider them to be essentially worthless and there is little likelihood that share value will recover, or that a change in control will occur within 6 months	The company is willing to spend cash and recognize a fixed accounting expense. Especially relevant when stock options are no longer seen as an appropriate form of compensation for the individual	Company has other incentives and retention vehicles in place for employees and is willing to have outside investors hold options

Ms. Pam Butler
Director, Compensation
Enron Corp.
1400 Smith Street
Room EB 1668
Houston, TX 77002-7361

Dear Pam:

As requested, Towers Perrin has prepared this letter to document the results of a recent marketplace compensation analysis for the top two executives (Mr. Lay and Mr. Skilling) at Enron Corp. The following sections describe our study methodology and findings.

Methodology

In this analysis, we have prepared the following alternative compensation scenarios, contingent upon the roles which both Mr. Lay and Mr. Skilling may assume with Enron in the future:

- Mr. Lay paid as Chief Executive Officer (CEO)
- Mr. Skilling paid as Chief Operating Officer (COO)
- Mr. Lay paid as Chairman of the Board.

Ms. Pam Butler
November 16, 2000
Page 2.

Towers Perrin

Towers Perrin developed marketplace compensation rates for the top 2 positions at Enron in terms of the following components of compensation:

- Base salary;
- Actual total annual compensation (base salary plus most recent annual incentive);
- Long-term incentives (annualized present value of all long-term incentive vehicles); and
- Actual total direct compensation (actual total annual compensation plus long-term incentives).

In developing compensation rates for each alternative, Towers Perrin utilized both published/private compensation survey data and peer group proxy statement data as follows:

■ **Published/Private Survey Data**

- Towers Perrin utilized compensation data available in our 2000 Executive Compensation Database to develop one set of marketplace compensation rates.
- The survey data collected for each alternative are representative of pay rates for the following positions (as appropriate for each alternative):
 - Chief Executive Officers or Chief Operating Officers in general industry companies with annual revenues of \$56 billion; or
 - Non-CEO Chairmen of the Board in general industry companies with annual revenues of about \$5 billion (the highest revenue scope available for this position). These chairmen are executive employees.

Ms. Pam Butler
November 16, 2000
Page 3.

Towers Perrin

■ **Proxy Data**

- Towers Perrin analyzed compensation data available in the 2000 proxy statements for a group of twelve comparable companies, reflecting Enron's input. Eleven of these companies were included in a peer group used to assess Board of Director compensation at Enron in April 2000. The peer group companies, along with each company's net income and revenues (for the four quarters ending June 30, 2000), and total assets and market cap (at June 30, 2000), are presented in Exhibit 4. Enron compares favorably with the selected companies in terms of the financial statistics shown.
- The data collected for the selected positions are representative of pay rates for the first and second highest paid positions (based on total direct compensation) from each peer company. Exhibit 5 provides detailed compensation data for each company's two highest paid executives. Please note that Exhibit 5 presents 1999 compensation data as reported in 2000 proxy statements.
- All data (proxy and survey) were updated to January 2001 using an annual update factor of 4.5%, except for the raw proxy data provided in Exhibit 5.

Long-Term Incentive Valuation Methodology

The published/private survey expected present value of stock options and other long-term incentive grants has been calculated using the Black-Scholes option pricing model. This model enables Towers Perrin to calculate the estimated price a trader would pay for a stock option or other long-term incentive on a present-value basis.

The expected present value of long-term incentive grants for the comparable companies were calculated in a similar manner, except that Towers Perrin used a three-year average of awards from 1997 to 1999 as provided in 2000 proxy filings for each company. For Enron, Towers Perrin calculated a three year average as well, but utilized data from 1998 to 2000 (2000 data was provided by the Company).

No adjustment was made for risk of forfeiture during the long-term incentive vesting period for Enron or for the peer companies.

Ms. Pam Butler

Towers Perrin _____

Competitive Findings

Our competitive findings are presented in the following attached exhibit:

- Exhibit 1 presents marketplace pay data for the CEO.
- Exhibit 2 presents marketplace pay for the COO.
- Exhibit 3 presents marketplace pay for the Executive COB.

Dr. Charles A. LeMaistre
Chairman, Enron Compensation Committee
Enron Corp.
7 Bristol Green
San Antonio, TX 78209

Dear Dr. LeMaistre:

As requested, Towers Perrin has prepared this letter providing alternative compensation arrangements for Ken Lay, given his shift in responsibilities to Executive Chairman of the Board, with Jeff Skilling becoming CEO of Enron. In addition, I have also attached a suggested process for "stress-testing" Enron's executive compensation program under various stock price performance scenarios.

Attachment A provides three alternative compensation arrangements for Ken Lay. (Note: This Attachment also shows market compensation data for Jeff Skilling in his new CEO role as a reference point. Market compensation data for the CEO, COO, and Executive Chairman of the Board positions are presented as an Appendix to this letter.)

In reviewing the alternative arrangements for Mr. Lay, please be aware that Alternatives 1 and 2 assume the Compensation Committee wants to treat 2001 as a transition year for Enron, where the Chairman will be more actively involved in the Company's day-to-day business than he will likely be in the future. Alternative 3 assumes the Committee wants to provide competitive Executive Chairman of the Board compensation to Mr. Lay. (Note: An Executive Chairman of the Board is a non-CEO who is employed by the Company, but is less active in day-to-day affairs than a CEO.) Given our previous conversation, it would appear this alternative might be more applicable for 2002 and beyond, if Mr. Lay continues as Executive Chairman after 2001.

Towers Perrin

Finally, Attachment B provides a brief description of a proposed process to "stress-test" Enron's executive compensation program. Towers Perrin understands the objectives of this study are to examine the relationship between pay and performance given possible volatility in Enron's results, to ensure the Company has the ability to attract and retain talented people in good and bad times, and to help the Compensation Committee in understanding how changes in equity market conditions may affect executive compensation at Enron.

* * * *

I hope this material is helpful. Please call me with any questions.

Sincerely,

CEE:mhm

③ Enron market fit for LTI have been accelerating dramatically and the last few years which will be available
Not market in 2000 will most likely lead to a decline in LTI due to a decline in revenue of 150B plus
mid year.

Alternative Compensation Arrangements for Executive Chairman and Market Targeted Compensation for CEO

*Data from companies w/ revenues of 150B plus
\$5B. Very conservative modeling*

		Alternative COB Compensation Arrangements (All data in \$000)			CEO Compensation	
		2001 Transition Year		Not Transitional		
Pay Element	Alternative 1 – No Change to Current Pay	Alternative 2 – Reduce Base Salary, Target Bonus 25%	Alternative 3 – Take Total Pay to Market for Executive COB ⁽¹⁾	Current for Skilling as COO (\$000)	CEO Market Data ⁽¹⁾ (\$000)	
Base Salary	\$1,300	\$975	\$839	\$850	\$1,417	
Annual Bonus	\$3,900 ⁽²⁾	\$2,925	\$1,535	\$3,000 ⁽²⁾	\$3,386	
Long-Term Incentive	\$16,680	\$16,680	\$3,817	\$12,250	\$21,532	
Total Direct Compensation	\$21,880	\$20,580	\$6,191	\$16,100	\$26,335	

- ⁽¹⁾ Based on Enron's philosophy of 50th percentile base salary, 75th percentile total annual compensation, and 75th percentile long-term incentives.
⁽²⁾ Based on bonus paid in 2000 for 1999 results. Actual bonus may be higher or lower based on market bonus levels and actual performance each year.

- ① *Assuming we've a transition year where a CEO has been fully successful future years dependent upon Chairman's level involvement*
② Same like above but Alt. 1 (long) LTI for CEO in 2000 is different
- Towers Perrin* *S:\185430\COMP\MONVILLE\MAISTRE02.DOC* *(4/5/02)*

EC 000102236

Attachment B

Proposed Process to "Stress-Test" Executive Compensation Program

Reviewing relationship between pay & performance

1. Interview COB, CEO, CFO, and members of the Compensation Committee regarding Company's business direction, strategy, and possible changes in market conditions.
2. Briefly summarize current executive pay elements, how these elements relate to market and Enron's culture, and the business reason for each element (e.g., base, bonus, long-term).
3. Examine how each element of pay for three sample positions would be effected by changes in Company performance (financial and stock price). *Change to 5 per Comittee*
4. Describe likely consequences of financial and stock price performance changes on Enron's ability to attract and retain talent, while still focusing on pay for performance.
5. Identify major impediments that may effect Enron's ability to respond to changing market conditions.
6. Meet with the Compensation and Executive Committee Chairs to review the study findings.
7. Meet with COB and CEO to review findings.
8. Meet with the Compensation Committee to review findings.

Towers Perrin will look at other firms where negative variances have occurred

Note: It is anticipated that Towers Perrin and Mary Joyce will work as a team to complete this assignment. We estimate it will take 6 to 8 weeks to prepare a draft report summarizing our findings.
