

# CERES Software Bulletin 95-01

Software Bulletin Procedure, May 5, 1995

## 1.0 Purpose:

We are announcing a series of CERES Software Bulletins. The intent of these bulletins is to improve the communication of information to the CERES DMT and Science participants in the development of CERES production software.

## 2.0 Originator/DMO Approval:

Ed Howerton (C.E.Howerton@larc.nasa.gov)/Jim Kibler (J.F.Kibler@larc.nasa.gov).

## 3.0 Description:

A variety of topics may be addressed in these software bulletins. We are currently working on bulletins for Fortran 90 KIND number parameters, standard routine prologue guidelines and script, and CERES wide mathematical and physical constants. We encourage all CERES team members to contribute software development guidelines, hints, etc. CERES Software Bulletins may be proposed by any member of the CERES team. The procedure for doing so is to draft the bulletin and send it via email to Jim Kibler with cc to Ed Howerton. The draft can be in text form or in FrameMaker form. After Jim or a designated person on his staff has reviewed and approved the bulletin, he will notify Ed to publish and distribute. Ed or a designated member of his staff will assign the next sequence number and prepare and distribute the bulletin. The bulletin will be distributed via email to the addressees listed below with a text copy of the bulletin embedded in the message and a FrameMaker format copy attached to the mail message. A PostScript version of the bulletin will be posted and available from the CERES WWW Home Page. Please forward additions or deletions to the distribution list to Ed Howerton.
