COMDTNOTE 16135
1 JUN 1993

COMMANDANT NOTICE 16135

CANCELLED: 31 MAY 1994

Subj: CH-1 TO COMDTINST M16135.4, EMERGENCY MEDICAL SERVICES MANUAL

1. PURPOSE. This Notice publishes revisions to Commandant Instruction M16135.4.
2. ACTION. Area and district commanders, commanders of maintenance and logistics commands, Commander, Coast Guard Activities Europe, and commanding officers of headquarters units shall ensure compliance with the provisions of this Notice.
3. SUMMARY. This revision allows certified non-HS Emergency Medical Technicians (EMTs) to perform at advanced (ALS) levels.
4. PROCEDURES. Remove and insert the following pages:

COMDTINST M16135.4
22 May 1992

COMMANDANT INSTRUCTION M16135.4

Subj: Emergency Medical Services Manual

Ref: (a) COMDTINST M6000.3 (series), Coast Guard Syllabus of First Aid and Health Lesson Plans
(b) COMDTINST M1500.1 (series), Coast Guard Training and Education Manual
(c) COMDTINST M10470.10 (series), Coast Guard Rescue and Survival Systems Manual

1. **PURPOSE.** This manual promulgates Coast Guard policy on the use of Emergency Medical Technicians (EMT), Health Services Technicians (HS) and other medical personnel in Coast Guard Search and Rescue (SAR) operations and first response situations.
2. **BACKGROUND.** The Coast Guard endorses the philosophy of the joint services National Search and Rescue Manual, COMDTINST M16120.5, which states in part: "The capability to sustain the life of those who have been rescued is just as important as searching for and rescuing survivors." Effective first response/emergency medical care does not come easily, and requires initial training, ongoing continuing education, frequent drills, equipment maintained to manufacturers specifications, and a commitment to excellence and caring. This manual defines the variety of roles, training, and certification processes of Coast Guard EMTs. EMTs are the keystone of Coast Guard medical emergency responses, however, they are augmented by medical practitioners and first aid providers. These other providers' first response roles are also described.

COMDTINST M16135.4
22 MAY 1992

3. ACTION. Area and district commanders, commanders of maintenance and logistics commands, Commander, Coast Guard Activities Europe, and unit commanding officers shall ensure compliance with the provisions of this instruction.
4. FORMS AVAILABILITY. Form CG-5550 (OT) Emergency Medical Technician Record of Continuing Education may be locally reproduced as necessary from the enclosed sample (Figure 3-1). This form shall be used to record each EMT's completed continuing education. Maintain this form in the United States Coast Guard Training Record, CG-5285.

/s/ R. R. BOCK
Acting Chief, Office of Health and Safety

Chapter 4. State-by-state listing of sources for

- EMT Training 11

CHAPTER 1. EMERGENCY MEDICAL TREATMENT PROVIDERS

A. Medical Officers.

1. Physicians and other medical officers are often available by radio/telephone to advise and direct Emergency Medical Services (EMS) response. As appropriate, they may deploy on the MEDEVAC vehicle should their skills be required to effect a successful response.
2. Consultation with a flight surgeon/medical officer prior to an air MEDEVAC will be done in accordance with cognizant district guidance. Flight surgeon/medical officer consultation is strongly encouraged (time and availability permitting) for all surface MEDEVACs as well.

B. Health Services Technicians. Health Services Technicians (HS) receive SAR-specific EMT training from the Coast Guard EMT School, located at Training Center Petaluma. HS personnel also receive training in intravenous therapy, and may administer intravenous fluids and medications listed in COMDTINST M6570.1 (series), Health Services Technician Drug Formulary. Medications listed in COMDTINST M6700.6 (series), Health Services Allowance List, Part II, may be administered in underway or isolated situations. Some HSs have fulfilled the requirements leading to the designation of Aviation MEDEVAC Specialist (AMS). The AMS has demonstrated proficiency in care and transport of patients in the aviation environment.

C. Emergency Medical Technicians.

1. The primary role of all Coast Guard EMTs is to provide emergency medical care for SAR MEDEVAC patients, service members, or other members of the public encountered during authorized Coast Guard missions. In addition, EMTs shall provide basic first aid training to unit members at the direction of the unit commanding officer, as well as provide radio/telephone advice/direction to on-scene first aid providers. Treatment protocols for EMTs and HSs are incorporated into Coast Guard EMT training.
2. EMTs complete an approved Department of Transportation (DOT) EMT curriculum. This course is offered at the Coast Guard EMT school at Training Center Petaluma, at various alternate Department of Defense (DOD) locations, and at approved civilian training sites (see Chapter 4 for a state-by-state listing). The Coast Guard program is marine SAR-specific. All approved courses lead to certification by the National Registry of Emergency Medical Technicians (NREMT) for individuals who pass the examination.

- 1.-C.-2. (cont'd) The Coast Guard deploys 3 varieties of EMTs and occasionally utilizes a fourth (paramedic level). Paramedic level EMTs from the Coast Guard or from local Emergency Medical Services agencies may participate in Coast Guard SAR MEDEVACs if their more advanced level of treatment capability is required. Civilian paramedics participating in Coast Guard MEDEVACs require authorization of the unit commanding officer.
3. Basic level EMTs are generally petty officers of all ratings who are assigned to units with a significant SAR role, or to units where the crew is exposed to occupational risk at remote sites.
4. The Rescue Swimmer program in the Aviation Survivalman (ASM) rating requires all ASMs E-6 and below to be EMTs. In addition to the 3-week basic EMT course at Training Center Petaluma, rescue swimmers are also trained in advanced in- water rescue and extrication techniques.
5. Program managers have determined the number of EMT billets for their units. Any questions concerning EMT billets should be directed to the respective Program Manager.

D. Other Personnel.

1. All enlisted personnel learn the fundamentals of first aid in recruit training. These lessons are reinforced and updated through periodic training derived from reference (a), Coast Guard Syllabus of First Aid and Health Lesson Plans, COMDTINST M6000.3 (series). This training enables members of all ratings to become adept at first response assessment and stabilization of injured crewmembers and the public. Their skills span a spectrum extending from treating minor cuts and burns to giving basic life support through cardiopulmonary resuscitation.
2. Unit commanding officers shall ensure that first aid training is conducted for all personnel in accordance with reference (b), Coast Guard Training and Education Manual, COMDTINST M1500.1 (series). Since EMTs are not always available for SAR MEDEVACS, unit commanding officers are strongly encouraged to augment the frequency and depth of first aid training given to SAR crew members. The First Responder Program is a one week (40 hour) program offered at many DOD and civilian locations throughout the country. This program is specifically designed for non-medical personnel, who are usually first to arrive on- scene, to have the capability to stabilize a patient and assist an EMT or HS in the care of that patient. Red Cross first aid training is appropriate, if available. Personnel not part of the normal SAR crew, who are responding for emergency medical care, shall be thoroughly briefed on vessel or aircraft emergency procedures.

1-E. Advanced Life Support (ALS) EMT Coast Guard Providers.

1. Currently certified, non-HS ALS EMTs have the option to perform at the ALS level on Coast Guard SAR or MEDEVAC platforms providing the following conditions are met:
 - a. Non-HS ALS providers shall hold either a current National Registry of Emergency Medical Technician (NREMT) certification at either the NREMT-P (Paramedic) or NREMT-I (Intermediate) level. NOTE: Advanced Cardiac Life Support (ACLS), Basic Life Support (BCLS), Pre-Hospital Trauma Life Support (PHTLS), Pediatric Advanced Life Support (PALS), or Neonatal Advanced Life Support (NNALS) course completions are not, of themselves, authorization to perform at an ALS skill level.
 - b. A Coast Guard physician (if locally available) or civilian, who directs an emergency medical system which would ordinarily receive patients from the Coast Guard EMT-I/P, agrees to act as the physician controller. A letter documenting this medical supervision by the physician must be kept on file with the EMT's command. The authorizing physician must enumerate protocols and commit to a performance monitoring process. This document must have a favorable endorsement from the command to go into effect. This authorization is not transferable to either another EMT-I/P, any other EMS agency, or to any other physician.
2. This guidance enables non-HS EMTs with ALS certification to function within the conditions specified. The Coast Guard is not responsible for ensuring that these EMTs attain or maintain certification at the paramedic or intermediate level. Some continuing medical education and training in ALS skills, however, may be provided for ALS EMTs by Coast Guard clinics or through other local training sources at the discretion of the command.
3. HS personnel shall refer to COMDTINST M6000.1(series), Medical Manual, Section 13-M, for guidance on ALS procedures and limitations.

CHAPTER 2. MEDEVAC AND FIRST RESPONSE GUIDELINES

- A. Where operations permit, unit commanding officers shall ensure that personnel with current training in first aid or EMT protocols are included in the crew of any SAR MEDEVAC mission. One or more of the following personnel are appropriate, subject to the constraints of availability, space and weight: medical officers, paramedics, HSs(EMT), ASMs(EMT), EMTs(basic), or first aid providers.
- B. The nature of the incident should guide the choice as to the level of provider assigned to the MEDEVAC mission. In cardiac, diabetic, asthmatic, allergic, and other medical emergencies, where the administration of medications or intravenous fluids might be indicated, an HS or medical officer (if available) may be the most logical choice. Where a water rescue may be indicated, a rescue swimmer is the best choice. Most trauma emergencies can be handled by any variety of EMT or medical officer trained in pre-hospital care. These are judgement calls to be made by the SAR dispatcher, OOD, flight surgeon, etc.
- C. Proper documentation is an essential part of any emergency medical treatment rendered. Form CG-5214, Coast Guard MEDEVAC Report, provides pertinent clinical information about the patient to the receiving medical facility, and is a permanent record of patient care. Detailed instructions for using this form are contained in Chapter 4 of the Medical Manual, COMDTINST M6000.1 (series). The form is intended for use by all personnel who respond to a SAR MEDEVAC. Unit commanding officers shall ensure that the MEDEVAC Report form is completed on every SAR case where medical care or transport is rendered. The MEDEVAC report form may be completed by other SAR crewman when medical personnel are not available.
 - 1. The Coast Guard EMT School maintains a data base derived from the MEDEVAC report forms. Unit commanding officers may request a summary of the MEDEVAC activities of their unit by submitting a letter request to Commanding Officer, Coast Guard Training Center Petaluma, attn: Chief, EMT School.
 - 2. MEDEVAC report forms can be obtained from Coast Guard Supply Center Brooklyn, using SN 7530-01-GF2-9080.
- D. Units are encouraged to develop good working relations with their local EMS system. Medical practitioners, paramedics, and basic EMTs from the local civilian EMS system may be incorporated into SAR crews as the situation requires in accordance with Coast Guard directives.
- E. Information on currently authorized EMS equipment, and maintenance requirements for this equipment, are described in Chapter 10 of Coast Guard Rescue and Survival Systems Manual, COMDTINST M10470.10 (series). Unit commanding officers shall ensure that EMS equipment is maintained in accordance with these requirements.

CHAPTER 3. EMT TRAINING AND CERTIFICATION

- A. Health Services Technician (HS) Qualification for Advancement. Beginning with the September 1993 service-wide examinations, HSs must possess current National Registry EMT-Basic certification in order to be eligible for advancement to E-5, E-6, or E-7. Training and continuing education sources available to meet this requirement, and certification criteria, are discussed below.
1. Forward requests for emergency medical training (Basic course or recertification) via the chain of command to Commandant (G-KOM) using the Short Term Resident Training Request (CG-5223). Requests will be approved, and TONO's issued, based upon the unit requirements, quota availability, number of qualified EMT/HS personnel already assigned, and member's rotation/ expiration of enlistment dates. Nonrated members will not routinely be selected due to possible early rotation for Class "A" schools. Members striking a rating for a unit billet, however, will be considered. Unit commanding officers are encouraged to select petty officers showing a desire to perform as an EMT for this training. Training of personnel based solely on rating or billet may result in nonmotivated candidates who are predisposed to fail. Once the TONO is issued, unit commanding officers must request authority to substitute personnel from Commandant (G-KOM) via message, with information copy to Training Quota Center Portsmouth.
 2. Commands may obtain EMT training from local civilian or military facilities. Local programs must meet the DOT National Standard Curriculum guidelines and offer National Registry certification. Chapter 4 of this instruction is a state-by-state listing of current sources for EMT training. Units may fund, or request district funding for travel costs associated with the use of local Basic or recertification EMT courses. Tuition costs associated with these courses, if any, will be funded by Commandant (G-KOM). For training courses with tuition costs, proceed as per paragraph 3-A-1 by submitting a Short Term Resident Training Request (CG-5223), along with a completed Request, Authorization, Agreement and Certification of Training (SF-182) to Commandant (G-KOM) via the chain of command.
- B. Transition of State Certified Coast Guard EMTs to NREMT.
1. Effective 1 October 1990, the National Registry of Emergency Medical Technicians (NREMT) became the certification standard for all new or recertifying Coast Guard EMTs. The NREMT certification card replaces the old Coast Guard EMT card.

- 3.-B.-2. Coast Guard EMTs who are not certified by the NREMT are required to seek National Registry Certification before their current State certification expires, or not later than 1 October 1992.
3. Members who are currently Coast Guard EMTs or State certified EMTs, and have had a DOT or State practical exam within the last year, may seek NREMT certification by successfully completing the NREMT written exam.
4. Members who are more than one year, but within two years, of initial training or recertification must complete a DOT or State practical exam in order to attempt the NREMT written test.
5. Those beyond two years, but less than three years, from certification must successfully complete a DOT approved refresher course (such as the Training Center Petaluma 5-day recertification course), then challenge the NREMT certification exam.
6. Members whose State or Coast Guard certification has expired must attend a basic EMT course (such as the 3-week course at Training Center Petaluma, or its civilian or DOD equivalent), then challenge the NREMT exam.

C. NREMT Certification.

1. The NREMT certification is valid from 18-30 months depending on the time of year that the certification was granted. All certifications expire on 31 December. Individuals initially registered during the first six months of the year will revert to the beginning of that year for a renewal date. For example, certifications completed 1 January 1991 through 30 June 1991 will expire 31 December 1992 (18-24 months). Those initially registered during the last six months of the year will begin their biennium the first day of the following year. For example, certifications completed from 1 July 1991 through 31 December 1991 will expire 31 December 1993 (24-30 months).
2. Members may take the NREMT certification exam up to three times in one year if necessary. If a member does not pass the certification exam on the third attempt, the member must attend a DOT approved refresher course before attempting the exam again.
3. Members may take the NREMT certification exam at most DOD EMT program sites, any other NREMT test site, or at the nearest DANTES Approved Test Site. DANTES Test Control Officers or unit Training Officers may find information concerning the exam in the DANTES Examination Program Handbook, Volume II, (DOD 1332.8-H of 1 OCT 90 or later edition).

3-C-3. (cont'd) DANTES Form 1560/14 must be used in ordering the exam. Information concerning the location of the nearest civilian or DOD NREMT test site can be obtained by calling the NREMT office at (614)-888-4484. Units without a DANTES test officer may make a request for the examination via their designated training officer. The request should be in writing to the National Registry detailing the person responsible for the exam security. Correspondence requesting the exam, and the return of the completed exam to the registry must be via certified mail to maintain accountability of test materials.

4. The following requirements must be met in order for the Coast Guard to pay for the certification fee.
 - a. Examination applications shall be accompanied by an endorsement from the member's commanding officer certifying that the member is on active duty, and requesting that the NREMT charge the test fee to the Training Center Petaluma Blanket Purchase Agreement (BPA). Forward a copy of the request and endorsement to the following address:

Commanding Officer
U.S. Coast Guard Training Center
Petaluma, CA 94952-5000
Attn: Chief, EMT School (NREMT Manager)

Note: The NREMT application asks for the home address, however, members should put their unit address in this block.

- b. The back of the NREMT application contains a block for "verification of practical exam." The director of the EMT program which the member attended must sign verifying that the practical exam was completed. Members who are retesting should write "RETEST" and their NREMT number (found above the member's name on the NREMT test failure letter) in this block.
 - c. Questions concerning the exam may be addressed to the NREMT office at (614) 888-4484 or Training Center Petaluma EMT School at (707) 765-7040 or FTS 623-7040.

D. Recertification.

1. In October of the expiration year, the NREMT will send a reminder notice informing the member that their certification is nearing expiration.
2. To recertify, an EMT must:
 - a. complete 48 hours of continuing education (CE) every 2 years;

- 3.-D.-2.
 - b. have a valid CPR card; and
 - c. complete a 24-hour DOT approved refresher course.
 - d. Refresher courses are offered in many locations, as listed in Chapter 4. Send a request for training via the chain of command to Commandant (G-KOM-1). Geographic location will be considered during the selection for assignment of a TONO.
3. All requirements, including the refresher course, must be completed prior to the expiration of certification. If the requirements are met prior to the certification expiration date, there is no need to take the written or practical exam. Recertification fees (\$10) are charged to the Training Center Petaluma BPA. Follow NREMT payment guidelines in paragraph 3.C.4.
4. Documentation submitted to the NREMT must include the following:
 - a. a copy of the refresher course completion certificate;
 - b. a copy of the current CPR card;
 - c. a copy of the member's Emergency Medical Technician Record of Continuing Education, CG-5550, outlining all EMT- specific CE, signed by the unit training officer; and
 - d. any other Emergency Medical System (EMS) training certificates for the certification period.

E. Lapsed Registration.

1. To be reinstated once National Registry EMT-Basic has lapsed, the candidate must meet the requirements of Section 3.D. and:
 - a. If lapsed within a two year period or beyond a two year period and are still state certified at the EMT-Basic level, successfully complete the National Registry (NR) written exam and a State-approved practical examination that meets or exceeds the established criteria of the NR; or
 - b. If lapsed beyond a two year period and state certification at the EMT-Basic level has also lapsed, successfully complete another State-approved National Standard EMT-Basic training course and successfully complete the NR written exam and a State-approved practical examination that meets or exceeds the established criteria of the NR. Unless granted an extension (see 3.E.3. below) the following limitations apply.

- 3.-E.-2. A lapsed Basic level EMT can not fill a unit EMT billet and is not authorized to display patches, badges or other insignia signifying EMT certification. Unless specifically prohibited by Commandant guidance, a lapsed EMT can, however, continue to be a significant contributor in emergency medical situations as a provider of first aid skills, including use of airways and oxygen administration. To perform Basic-EMT level airway management, however, there must be documentation of training on the indications for and use of these skills in the member's training record within the preceding two years. Application of pneumatic anti-shock garments or traction splints must be attended by a certified EMT (or higher medical authority).
3. A recertification candidate who cannot meet the requirements by the expiration deadline can apply in writing to the NREMT, requesting an extension of up to three months. This request must be submitted prior to the expiration date.
4. Unit commanding officers shall ensure that the EMTs at their units are aware of the requirements of the certification/ recertification process.

F. Continuing Education (CE).

1. Acceptable CE is any medical presentation, lecture, video tape, or medical drill covering topics in the DOT National Standard Curriculum (see any standard EMT textbook). Also applicable are courses in prehospital trauma life support, basic trauma life support, emergency vehicle operations, and most other EMS conferences and EMS training. Giving basic first aid lectures (as from the Coast Guard Syllabus of First Aid and Health Lesson Plans, COMDTINST M6000.3) does not count as CE for the presenter. However, giving instruction in approved EMT topics does count as CE for the presenter.
2. Additionally, members may log up to 24 hours of the 48 hour requirement in Coast Guard SAR specific drills and training (such as basket hoists, rescue swimmer drills, surf drills, man overboard drills, etc.). Members may receive 24 hours of CE for a completed boatcrew check-off booklet, coxswain check-off-booklet, or surfman check-off booklet. A maximum of 24 hours of SAR related drill or check-off booklets can be credited toward this requirement. Actual SAR cases DO NOT count. The balance must be made up of medical drills, video tapes (up to 10 hours/2 years), and lectures.
3. Lesson plans for EMS lectures and practical drills are available from the Coast Guard EMT school. Video tapes can be borrowed from the EMT School video library. A listing of current EMS videos can be obtained by calling the Coast Guard EMT school at (707) 765-7040 or FTS 623-7040. Videos can be ordered from the Coast Guard EMT School via phone or Rapidraft letter. The videos will be sent certified mail and must also be returned certified mail.
