

WHO WE ARE

Environmental Health Perspectives (EHP) is a monthly open access journal of peer-reviewed research and news dedicated to the discussion of the impact of the environment on human health. All scientific articles are evaluated for scientific quality, environmental significance, appropriate degree of speculation, clarity of presentation, and conciseness. One of the overarching goals of the journal is to strive for objectivity and balance in the presentation of information.

Although *EHP* is sponsored by the National Institute of Environmental Health Sciences (NIEHS), its editorial policies are independent of the institute. An Advisory Board consisting of former *EHP* editors and non-NIEHS scientists provides guidance for journal policies and operations. Papers submitted to the journal are processed by a Board of Associate Editors. Members of the Editorial Review Board serve as a pool of potential reviewers of papers. Both the Board of Associate Editors and the Editorial Review Board are composed of leading scientists from all segments of the environmental health sciences.

EHP is the leading journal in the environmental health sciences. All papers are subjected to a preliminary screening to determine relevance, environmental significance, and creativity. In 2007, approximately 60% of papers were returned to authors without further review. The overall acceptance rate of papers submitted to the journal is approximately 20–25%.

In 2003, *EHP* became an open-access journal. All news and research articles published in *EHP* since 1972 are available free on-line (<http://www.ehponline.org/>). *EHP* is committed to promoting the discussion and exchange of information internationally, as described in detail at <http://www.ehponline.org/international/>.

WHAT WE PUBLISH

The environmental health sciences include many fields of study and increasingly comprise a multidisciplinary research area. *EHP* publishes articles from a wide range of scientific disciplines encompassing basic research, human studies, and *in vitro* and *in vivo* animal research with a clear relationship to human health effects. Studies dealing with climate change, ecological issues, or effects on wildlife populations are welcome, but the relevance of the findings to human health should be evident. Physicians and others working in environmental medicine are encouraged to submit case reports for publication. *EHP* also addresses ethical, legal, social, and policy issues related to public health.

EHP provides information on emerging environmental issues through its Environews and Book Review sections. Although *EHP* welcomes ideas for Environews articles, Book Reviews, and Editorials, the journal typically does not accept unsolicited manuscripts of these types. Please contact the Editor-in-Chief for further information.

ABOUT YOUR MANUSCRIPT

TYPES OF MANUSCRIPTS

Manuscripts in any one of the categories below are welcome. See “Manuscript Preparation” for additional details.

Correspondence (letters to the editor; $\leq 1,000$ words) should address research or news articles published in the print version of the journal within the previous 6 months. Authors cited in the correspondence will be given the opportunity to respond. Correspondence may include a brief table or small figure, if it is essential to the discussion. It is permissible to include data from or redrawing of previously published materials as long as the work is cited and written permission from the authors and/or publishers has been granted for re-publication in both printed and electronic form. New data should not be included, but authors may recalculate or reanalyze data from a cited paper in support of their point(s). Correspondence is not peer-reviewed and is published at the discretion of the *EHP* editors. Conclusions and opinions expressed do not necessarily reflect the policies of *EHP*.

Research articles ($\leq 7,000$ words) are original manuscripts reporting scientific research and discovery in the broad field of the environmental health sciences. Original research articles may come from any field of scientific research, from the most basic molecular biology and biochemistry to atmospheric physics, ecology, and engineering, as well as related fields of social science, policy, and ethics. Manuscripts on ethical, legal, social, or policy issues may also be accepted in this category. Research articles are peer reviewed.

Commentaries ($\leq 5,000$ words) present information and personal insight on a particular topic. Commentaries should not be extended critiques of single articles appearing in *EHP* or elsewhere. Factual data should be included to substantiate arguments. Commentaries are peer reviewed.

Reviews ($\leq 10,000$ words) that emphasize recent developments in a particular field of research are highly desirable. Lengthy historical perspectives are not appropriate.

Meeting Reports ($\leq 5,000$ words) are intended to provide an overview of outcomes of conferences, symposia, or workshops. Authors should submit reports that review the state of the science for a particular area, identify research gaps and needs, and explain how the outcome of the conference addresses those gaps and needs. Meeting reports may review existing information, summarize research findings on specific topics, and recommend methods, courses of action, or other further research needs for the scientific community. *De novo* data, participant lists, dialogue of workgroups or committees, and discussion of the internal organization of the meeting are not allowed. Meeting Reports must be submitted to *EHP* no later than 9 months after the events they describe. Prospective authors should consult with the Editor-in-Chief before submitting a meeting report.

Grand Rounds articles ($\leq 6,000$ words) present discussions of case presentations of patients or community health issues with a

clearly established link of relevance to environmental exposures and environmental health. The format requires that a case scenario be presented to illustrate the environmental issues under consideration, followed by a discussion of the clinical and public health implications of these issues. Articles should be divided into an Abstract, Case Presentation ($\leq 5,000$ words), Discussion, and Conclusion. Visual images (e.g., X rays, microscopic pathology) or other graphics are encouraged.

Case Reports ($\leq 6,000$ words) differ from Grand Rounds articles in that the diagnosis pertaining to the clinical presentation is not necessarily conclusive. Instead, evidence for an environmental etiology may be indirect—for example, a case report of hepatitis suspected to be related to a chemical that has not been previously linked with hepatitis. Similar to Grand Rounds, Case Reports should include an Abstract, Case Presentation ($\leq 5,000$ words), Discussion, and Conclusion. Visual images (e.g., X rays, microscopic pathology) or other graphics are encouraged.

ARTICLE LENGTH

All word limits include tables, figures, and references. Manuscripts that do not conform to the following word limits will be returned to the author(s) for revision before the review process is initiated.

Correspondence: 1,000 words
 Commentaries: 5,000 words
 Reviews: 10,000 words
 Research articles: 7,000 words
 Meeting Reports: 5,000 words
 Grand Rounds articles: 6,000 words
 Case Reports: 6,000 words.

Authors should assume that each figure or table accounts for 250 words of the total word count.

Depending on the topic and potential impact of a paper, the Editor-in-Chief reserves the right to waive word limits.

ORIGINALITY OF SUBMISSION

Contributions submitted to *EHP* must be original works of the author(s) and must not have been previously published (in print or online) or simultaneously submitted to another publication.

SCIENTIFIC INTEGRITY

EHP requires assurances that animals used in a study have been treated humanely and with regard for the alleviation of suffering. Research involving humans must have been conducted according to the Common Rule (<http://ori.dhhs.gov/education/products/ucla/chapter2/page04b.htm>). Research involving humans must also be approved by an appropriate institutional review board and comply with all relevant national, state, and local regulations. For research conducted outside the United States and thus exempt from U.S. federal regulations, authors must perform the research in accordance with principles of the Declaration of Helsinki (<http://www.wma.net/e/policy/b3.htm>).

PUBLIC DATABASES

Manuscripts using microarrays must follow the Minimum Information About a Microarray Experiment (MIAME) guidelines developed by the Microarray Gene Expression Data Society (<http://www.mged.org/miame>). On acceptance, all integral data supporting the article's conclusions should be submitted to the Array/Express (<http://www.ebi.ac.uk/arrayexpress>) or GEO (<http://www.ncbi.nlm.nih.gov/geo/>) databases.

COMPETING INTERESTS

EHP has a policy of full disclosure concerning competing financial and nonfinancial interests.

- Authors must disclose potential competing financial interests, including but not limited to grant support; employment (past, present, or firm offer of future); patents (pending or applied); payment for expert witness or testimony; personal financial interests by the authors, immediate family members, or institutional affiliations that may gain or lose financially through publication of the article; and forms of compensation, including travel funding, consultancies, board positions, patent and royalty arrangements, stock shares, or bonds. Diversified mutual funds or investment trusts do not constitute a competing financial interest. Authors employed by a for-profit, nonprofit, foundation, or advocacy group must also declare employment.
- All potential competing interests occurring during the last 3 years should be reported.
- As a condition of review and publication, authors must certify that their freedom to design, conduct, interpret, and publish research is not compromised by any controlling sponsor.
- Although not necessarily an issue for authors, editors and reviewers should disclose to the Editor-in-Chief any competing financial and nonfinancial interests that occurred within the last 3 years. Competing nonfinancial interests include former or current mentor-student relationships, faculty appointments in the same department or organization, familial relationships, service on advisory boards that oversee the research under review, collaborations, or membership in organizations that hold ideological views that are contradictory to the theme or topic under review.

For each manuscript, authors must submit a declaration of competing interests on behalf of all authors. The form is available online (<http://ehp.niehs.nih.gov/cfi.pdf>). A statement of disclosure must be included in the Acknowledgments section of the manuscript submitted to the journal. If a paper is accepted, a brief disclaimer describing the competing interest or a declaration of no competing interest will be published. Authors of correspondence, editorials, and book reviews will also be required to submit a declaration of competing interests.

Disclosure of competing interests does not imply that the information in the article

is questionable or that conclusions are biased. Decisions to publish or reject an article will not be based solely on a declaration of a competing interest.

EHP relies upon the integrity of all authors to provide accurate disclosure statements. However, authors can expect scrutiny of their statements by the editors, reviewers, and readership. Alleged inaccuracies of declared competing interests should be addressed to the Editor-in-Chief.

- *EHP* will impose a 3-year ban on publication by any authors found to have willfully failed to disclose a competing interest. Implementation of the ban will be made in consultation with the *EHP* Advisory Board.
- At the discretion of the Advisory Board, a paper may also be retracted or an Expression of Concern published and appended to the online version of the article.

MANUSCRIPT PREPARATION

PARTS OF A MANUSCRIPT

Manuscripts should include the following sections in this order:

Author names
 Author affiliations
 Name and address of corresponding author
 Acknowledgments/grant support
 Disclaimers/Competing Interests Declaration
 Short running head
 Key words
 Abbreviations
 Outline of manuscript section headers
 Abstract
 Introduction
 Materials and Methods
 Results
 Discussion
 Conclusions
 References
 Tables
 Figure legends
 Figures
 Supplemental material

All manuscripts must be submitted to *EHP* in English. Manuscript pages must be numbered consecutively, beginning with the title page, and lines should be numbered in the original submission. Standard font types (e.g., Helvetica, Times New Roman) and font size (12 point) should be used, and all parts of the manuscript, except tables, should be double-spaced. The reference list, tables, and figure legends should each begin on separate pages.

Page 1: The first page should include *a*) manuscript title, *b*) authors (first or second names spelled out in full), *c*) full address of the institution where the work was performed, and *d*) affiliation of each author. Titles should not exceed 20 words and should generally not contain abbreviations or numerical values. Indicate the author to whom page proofs should be sent, and include complete address for express mail service, telephone and fax numbers, and e-mail address.

Page 2: The second page should include *a*) a running title, not to exceed 50 characters and spaces; *b*) 5–10 key words for indexing purposes; *c*) acknowledgments and grant information, not to exceed 50 words; *d*) competing interests declaration; and *e*) a list of all abbreviations and definitions used in the manuscript. Nomenclature and symbols should conform to the recommendations of the American Chemical Society or the International Union of Pure and Applied Chemistry (<http://www.iupac.org>).

Page 3: Authors should provide an outline of section headers (i.e., Abstract, Introduction, Methods, etc.) to facilitate copyediting and manuscript layout.

Page 4: All articles must include a structured abstract, which is not to exceed 250 words and should not contain references. No information should be reported in the abstract that does not appear in the text of the manuscript. Headings to be used in the structured abstracts vary by article type.

- **Commentaries:** Background, Objectives, Discussions, and Conclusions
- **Reviews:** Objective, Data Sources, Data Extraction, Data Synthesis, and Conclusions
- **Research articles:** Background, Objectives, Methods, Results, and Conclusions (with an exception for Environmental Medicine articles: Objective, Design, Participants, Evaluations/Measurements, Results, Conclusions, and Relevance to Clinical or Professional Practice)
- **Grand Rounds Articles or Case Reports:** Context (the relevance to environmental exposures and environmental health), Case Presentation, Discussion, and Relevance to Clinical or Professional Practice.

Page 5 and subsequent pages: Text should begin on the fifth page. Concise headings (not to exceed 8 words each) may be used to designate major sections under the headings "Materials and Methods," "Results," "Discussion," and "Conclusions." Do not include tables and figures in the text; place tables after the References section and upload figures individually.

Resources for assistance with research, presentation, and language are available from the following organizations:

- International Committee of Medical Journal Editors: Uniform Requirements for Manuscripts Submitted to Biomedical Journals: Writing and Editing for Biomedical Publication (<http://www.icmje.org/>)
- International Network for the Availability of Scientific Publications: Author AID@INASP (<http://www.inasp.info/file/413/authoraidin.asp.html>).

REQUIRED COVER LETTER

A cover letter should accompany the manuscript and include the following points:

- Assurances that the manuscript *a*) is an original work, *b*) has not been previously published whole or in part, and *c*) is not under consideration for publication elsewhere.

- A statement that animals used in research have been treated humanely according to institutional guidelines, with due consideration to the alleviation of distress and discomfort. The identity of the source of those guidelines must be provided.
- A statement that participation of human subjects did not occur until after informed consent was obtained.
- Confirmation that all authors have disclosed any potential competing interests regarding the submitted article and the nature of those interests (required Competing Interest Declaration form available at <http://ehp.niehs.nih.gov/cfi.pdf>).
- If applicable, written permission from any copyright holder (usually the publisher) to reproduce figures, tables, questionnaires, or a substantial block of text in both print and electronic forms.
- A statement indicating that all authors *a)* have read the manuscript, *b)* agree that the work is ready for submission to a journal, and *c)* accept responsibility for the manuscript's contents.
- The names and e-mail addresses of possible reviewers for the manuscript.
- Information on the software programs used, file names, and the number of tables and figures for each submission (see "Files and Formats" for electronic file requirements). Inquiries may be made by e-mail (EHPmanuscripts@niehs.nih.gov), telephone (919-316-4544), or fax (919-541-0273).
- If applicable, a request to consider the submission for inclusion in the Environmental Medicine or Children's Health section of the journal.

COMPETING INTEREST STATEMENT

Corresponding authors are required to submit with the manuscript a declaration of competing interests on behalf of all authors. The form can be downloaded at <http://ehp.niehs.nih.gov/cfi.pdf>. As noted above, authors must also include a sentence in the Acknowledgments section of the manuscript identifying any competing financial or nonfinancial interests.

CONFORMANCE TO *EHP* STYLE GUIDELINES

Manuscripts submitted to *EHP* must conform to all *EHP* style requirements. Authors should take special note of requirements for citations/references, figures, and tables. Manuscripts that do not conform to style requirements will be returned to the authors for modification before the initiation of the peer-review process. This step will cause a significant delay in the review and possible acceptance of the manuscript.

References and citations should be formatted according to *EHP* style. This will reduce copyediting time and the number of author queries included in page proofs. Authors should double-check all references for accuracy and completeness of information, spelling, diacritical marks, symbols, subscripts/superscripts, and italics.

Authors are fully responsible for the accuracy of their references. Check the final draft to ensure citations and references match.

PREPARING TABLES AND FIGURES

Tables. Each table must begin on a separate page. Tables should be numbered with Arabic numerals, followed by a brief title (not to exceed 25 words). When setting up tables, do not use table layout format; type tables as text and use tabs to align the columns. Tables should contain no more than three layers of column headings, and the entire table should fit on one journal page or less. Tables that are more than one page may be published online as Supplemental Material. A column heading must be provided for each column. Rather than placing additional column heads in the middle of a table, a new table should be created. List abbreviations and definitions under each table. General footnotes to tables should be indicated by lowercase superscript letters beginning with "a" for each table. Footnotes indicating statistical significance should be identified in the following order: asterisks (*, **), number signs (#, ##), and daggers (†, ††). Type footnotes directly after the abbreviations beginning on the next line.

Figures. Figure legends should be typed on one page using Microsoft Word; this page should precede the figures. Graphics must fit standard letter size paper (8.5 × 11 inches or smaller), and resolution should be at least 300 dpi. All letters, numbers, and lines should be clearly legible and easy to differentiate. Provide a key defining representational elements (e.g., dotted/dashed lines, symbols, asterisks, error bars) for each figure. All axes should be clearly labeled, giving both the measure and the unit of measurement where applicable. No lines of demarcation or measurement should appear inside the graph itself, only on the axes. Consistency among terms and styles used in figures is desirable. Photomicrographs should include a scale bar in each image, and the length should be specified in the typed figure legend (e.g., bar = 10 μm). Multiple panels within a figure should fit on one page. If you have questions or problems, contact the journal (EHPmanuscripts@niehs.nih.gov).

Image integrity. Adjusting the image for brightness and contrast is acceptable if it is applied to the entire image. Background data of gels and blots must not be removed. The final image must accurately represent the original data.

SUPPLEMENTAL MATERIAL

EHP welcomes material suitable for inclusion as online documentation, such as kinetic studies, background material, and supporting tables, figures, videos, etc. Materials and Methods should be briefly described in the manuscript, but intricate details, including tables or figures, should be included in Supplemental Material. Supplemental Material should be uploaded as a separate, preferably single, PDF file and designated as such. Questions regarding supplemental materials should be e-mailed to EHPManuscripts@niehs.nih.gov.

MANUSCRIPT SUBMISSION

MANUSCRIPT CENTRAL

Manuscripts submitted to *EHP* will be processed using Manuscript Central, an online manuscript submission and tracking program (<http://mc.manuscriptcentral.com/ehp>).

INITIAL SUBMISSION OF A MANUSCRIPT

Authors may either log in or select the "Create a New Account" icon to create a new account. To determine if an account exists, e-mail EHPmanuscripts@niehs.nih.gov.

Once logged in to the Manuscript Central site, authors must select the "Author Center" link. From this point, the system will guide the user through the submission process. Online help is available at all times during the process via the "Get Help Now" button in the upper right corner of the screen. Users may also exit and reenter the submission process at any time before completing a manuscript submission.

After completing an online submission, authors should submit a Competing Interests Form as soon as possible. This form can be found by selecting the "Instructions & Forms" link in the Author Center. The assigned manuscript number should be noted on the form. Forms may also be obtained by fax (919-541-0273), and then scanned and submitted by e-mail to EHPManuscripts@niehs.nih.gov, or mailed to:

Editor-in-Chief
Environmental Health Perspectives
 National Institute of Environmental
 Health Sciences
 Mail Drop K3-01
 PO Box 12233
 Research Triangle Park, NC 27709-2233
 USA

Authors can monitor the progress of submissions at any time by logging in to the Author Center using their ID and password. Forgotten passwords may be obtained by selecting "Forgot Your Password." If an account exists, instructions for resetting the password will be e-mailed to the user.

Manuscripts may be submitted only via the online system. All manuscripts submitted by other methods (e.g., hard copy, e-mail) will not be processed.

PEER REVIEW

The criteria for publication are weighted toward scientific quality and environmental significance. Manuscripts are also assessed according to their originality, scientific merit, appropriate degree of speculation, clarity of presentation, and conciseness.

At least two peer-reviewers will be solicited for comments on the manuscript. Authors will not know the identity of the reviewers. Peer-review is conducted electronically to accelerate the process, and each reviewer is asked to complete the review within 3 weeks.

After editorial consideration, a decision letter and reviewers' comments will be e-mailed

to authors. If a revision of the manuscript is required, the revised manuscript must be received by *EHP* within 6 weeks of the request. The submission will be canceled at that time unless the authors obtain prior permission from the Editor-in-Chief. Authors must submit the revised manuscript and a letter responding to reviewers' comments.

Authors are strongly encouraged to submit the names and contact information (including e-mail addresses) of experts in their field of study to add to *EHP*'s scientific reviewer database.

RESUBMISSION OF A REVISED MANUSCRIPT

If *EHP* requests revisions or accepts the manuscript, authors will need to submit all of the following through Manuscript Central (<http://mc.manuscriptcentral.com/ehp>):

- All text, tables, and figure legends in one electronic file (Microsoft Word). Make sure that any symbols and/or equations appear correctly on printed copies and that all figures and tables are called out in the body text in numerical order.
- Each figure as a separate file in either of the following formats: TIFF, JPG, or EPS. Do not embed figures in a word processing file. Each figure must be labeled on the front with the figure number. For TIFF or JPEG format, the resolution should be ≥ 300 dpi for color images, 600 dpi for grayscale images, and ≥ 1200 dpi for line art (black-and-white art). JPEG files should be saved on the "highest quality" setting. Color images should be RGB and saved at a minimum of 8 bits per channel. Because figures may be reduced or enlarged to fit our layouts, sufficient resolution is essential. Vector images should be saved as editable EPS files. Any images embedded in the EPS should also be included in a separate file. Do not convert text to path outlines before submission.
- A cover letter with responses to the reviewers' comments.

PUBLICATION SEQUENCE

EHP-IN-PRESS

EHP publishes unedited PDF versions of articles online as *EHP*-in-Press (<http://www.EHPonline.org>) generally within 24 hours of acceptance. These articles have undergone peer review and initial author revisions but have not been copyedited. *EHP*-in-Press articles are completely citable using the assigned DOI (Digital Object Identifier) number for the article. The DOI number enables the article to be immediately referenced and establishes publication priority. The PDF version of *EHP*-in-Press articles will be replaced with the copyedited, formatted version as soon as possible, but importantly, the DOI number will remain with the copyedited article. In addition to the DOI number, the copyedited article will include assigned volume and page numbers that will allow full conventional citation.

COPYEDITING/PAGE PROOFS

To prepare each paper for publication, *EHP* staff will convert electronic material to a desktop publishing format, and copyedit the manuscript. The copyedited version, with embedded author queries, will be converted to a PDF version (page proofs) and sent to authors by e-mail. The authors can use free Acrobat Reader software (<http://www.adobe.com/products/acrobat/alternate.html>) to proof the material. Authors should return corrected page proofs to the responsible editor by e-mail or fax (919-541-0273). A list of itemized changes (including their locations) must accompany the page proofs. The copyedited proofs of an article may be slightly different from the *EHP*-in-Press version as a result of the editing process, but no substantive changes will be allowed. Any significant changes at this stage of processing will require a correction to be published at the end of the article. Extensive changes cannot be made at the proof stage; only minor changes, such as spelling, grammar, clarification, and referencing, should be requested. If new information has become available after acceptance of the manuscript, an addendum in proof can be included with the permission of the Editor-in-Chief. Articles will be published in the print version in order of acceptance as journal space permits.

PAGE AND FIGURE CHARGES

On acceptance of the manuscript, authors will be required to pay page charges at the current rate of \$30 per accepted manuscript page (excluding the first 3 pages containing the title page, key words, abbreviations, and outline of section headers). Authors will also be charged \$500 for the first color figure and \$100 for each additional color figure.

PUBLICATION DATE OF RECORD

Research articles accepted for publication in *EHP* will appear online within 24 hours of acceptance. The date the article is posted on the website will be considered the publication date of record.

COPYRIGHT, REPRODUCTION, AND CITATION

EHP is a publication of the U.S. government. Publication of *EHP* lies in the public domain and is therefore without copyright. Research articles from *EHP* may be reprinted freely. Use of materials published in *EHP* should be acknowledged (for example, "Reproduced with permission from *Environmental Health Perspectives*"); pertinent reference information should be provided for the article from which the material was reproduced. Articles from the Environews Section of *EHP* may contain photographs or figures copyrighted by other commercial organizations or individuals that may not be used without obtaining prior approval from the holder of the copyright. For further information, contact *EHP* Permissions (ehponline@niehs.nih.gov).

PRESS RELEASES

A press release or press conference should not publicize articles submitted to *EHP* until the article has been published online. To determine the publication date and coordinate press activities, contact the *EHP* editors (EHPeditor@niehs.nih.gov). If *EHP* plans a press release on an article, a copy of the press release text will be supplied to the authors.

EHP STYLE

PLAIN LANGUAGE

EHP covers all disciplines engaged in the broad field of the environmental health sciences. Authors should therefore write in a clear and simple manner, in the active voice, avoiding unnecessary jargon, so the article is understandable to readers in other disciplines and to those whose first language is not English. In deference to the breadth of the journal's readership, please define terms that may not be universally recognized among all environmental health scientists.

IN-TEXT REFERENCES AND REFERENCE LISTS

In-text references. All in-text references must be in name/date form. Place the citation immediately after the textual information cited, placing name and date within parentheses without a comma.

- Single author: (Wing 2002)
- Two authors: (Wing and Wolf 2000)
- Three or more authors: Use first author's last name plus "et al." (Wing et al. 2008).
- Different first authors but same last name and date: Use first author's last name plus initial(s) (Smith A 2000; Smith J 2000)
- Several sources cited at one time: List publications alphabetically by author in the citation. Separate publications by the same author(s) with commas and those by different authors with semicolons:
(Aldridge et al. 2005; Jameson et al. 2006; Levin et al. 2007; Slotkin 2004a, 2004b; Slotkin et al. 2008)

For quotations, provide references for any quotations used in the text. For example:

- According to Rubin et al. (2001), "it is only with a multidisciplinary and collaborative approach that the environmental and public health significance of *Pfisteria* will be fully understood."

All manuscripts submitted but not yet accepted, unpublished data, and personal communications—any items that must be cited but are not accessible to the public—must appear in the text in parentheses but should not be listed in the references: (Ramsdell JS, Moeller PDR, personal communication); (Reeves MK, unpublished data).

Reference list. Authors are fully responsible for the accuracy of their references. The list of references should begin on a separate page. All references must include:

- Author/editor last name plus initials (for six or fewer authors; if there are more than six authors, use “et al.” after the sixth) or authoring agency
- Year of publication
- Full title of article or chapter (lower case)
- Title of journal (abbreviated according to Biosis or Index Medicus) or book/proceedings in title case
- For books, city/state/country of publication and name of publisher
- Volume and inclusive page numbers
- DOI number, if available with online publication date

If you are uncertain what to include, please include all information.

List references alphabetically by the last name of the first author. If the first author has more than one publication, list references in alphabetical order (letter by letter) of subsequent authors. If the first author shares the last name with another first author (Smith JM versus Smith RB), alphabetize by initials. If you list more than one publication by the same author/group of authors, arrange publications by date, early to late. If you list more than one publication published in the same year by the same author/group of authors, use a, b, c, d, and so on to distinguish the publications.

Sample alphabetical list:

- Slotkin TA. 2004a. Cholinergic systems in brain development and disruption by neurotoxicants: nicotine, environmental tobacco smoke, organophosphates. *Toxicol Appl Pharmacol* 198:132–151.
- Slotkin TA. 2004b. Guidelines for developmental neurotoxicity and their impact on organophosphate pesticides: a personal view from an academic perspective. *Neurotoxicology* 25:631–640.
- Slotkin TA. 2005. Developmental neurotoxicity of organophosphates: a case study of chlorpyrifos. In: *Toxicity of Organophosphate and Carbamate Pesticides* (Gupta RC, ed). San Diego:Elsevier Academic Press, 293–314.
- Slotkin TA, MacKillop EA, Ryde IT, Tate CA, Seidler FJ. 2007. Screening for developmental neurotoxicity using PC12 cells: comparisons of organophosphates with a carbamate, an organochlorine and divalent nickel. *Environ Health Perspect* 115:93–101.
- Slotkin TA, Persons D, Slepatis RJ, Taylor D, Bartolome J. 1984. Control of nucleic acid and protein synthesis in developing brain, kidney, and heart of the neonatal rat: effects of α -difluoromethylornithine, a specific, irreversible inhibitor of ornithine decarboxylase. *Teratology* 30:211–224.
- Slotkin TA, Seidler FJ. 2007. Comparative developmental neurotoxicity of organophosphates in vivo: transcriptional responses of pathways for brain cell development, cell signaling, cytotoxicity and neurotransmitter systems. *Brain Res Bull* 72:232–274.

TYPES OF REFERENCES

Journal article, conventional reference

Additional reference examples are available on page 6.

FOOTNOTES

Do not use footnotes. Place all textual information within the manuscript and all references in the proper form both in text and in the reference list.

ABBREVIATIONS

All nonstandard abbreviations should be defined in the text at first use: for example, organochlorine (OC) pesticides, LOD (limit of detection), polymerase chain reaction (PCR). Abbreviations for elements (e.g., Fe, Cu) and chemical compounds (e.g., polychlorinated biphenyls, PCBs; carbon dioxide, CO₂) should be spelled out on first use and abbreviated thereafter.

Units of measure should be abbreviated only when a specific amount is given (e.g., “concentration of 10 ng/mL” versus “units of nanograms per milliliter”). A list of standard abbreviations that do not need to be defined in the text is available on page 7.

ABBREVIATIONS

All nonstandard abbreviations should be defined in the text at first use; for example, organochlorine (OC) pesticides, LOD (limit of detection), polymerase chain reaction (PCR). Abbreviations for elements (e.g., Fe, Cu) and chemical compounds (e.g., polychlorinated biphenyls, PCBs; carbon dioxide, CO₂) should be spelled out on first use and abbreviated thereafter.

The standard abbreviations listed below do not need to be defined in the text. Note that units of measure should be abbreviated only when a specific amount is given (e.g., “concentration of 10 ng/mL” versus “units of nanograms per milliliter”).

Å	angstrom	m	meter
amu	atomic mass unit	m ²	square meter
ATP	adenosine 5'-triphosphate	m ³	cubic meter
bw	body weight	mCi	millicurie
°C	Celsius (°C)	µg	microgram
cm	centimeter	mg	milligram
cm ²	square centimeter	mi	mile
cm ³	cubic centimeter	µL	microliter
Da	dalton	min	minute
df	degrees of freedom	mL	milliliter
DMSO	dimethyl sulfoxide	mM	millimolar
DNA	deoxyribonucleic acid	mm	millimeter
EDTA	ethylenediamine-tetraacetic acid	mol	mole
ELISA	enzyme-linked immunoadsorbent assay	mRNA	messenger RNA
ft	foot	<i>n</i>	number
g	gram	ng	nanogram
<i>g</i>	gravity (10,000 × <i>g</i>)	nL	nanoliter
gal	gallon	nmol	nanomole
ha	hectare	o.d.	outside diameter
Gy	gray (unit of absorbed dose of ionizing radiation)	pg	picogram
HEPES	<i>N</i> -2-hydroxyethylpiperazine- <i>N'</i> -2-ethane sulfonic acid	ppb	parts per billion
HPLC	high-performance liquid chromatography	ppm	parts per million
hr	hour	ppt	parts per trillion
Hz	hertz	RNA	ribonucleic acid
i.d.	inside diameter	RNase	ribonuclease
in.	inch	SD	standard deviation
IU	international unit	SDS/PAGE	sodium dodecyl sulfate-polyacrylamide gel electrophoresis
J	joule	SE	standard error, standard error of the mean
kDa	kilodalton	sec	second
kg	kilogram	U	unit
km	kilometer	V	volt
<i>K</i> _m	Michaelis constant	vol/vol	volume/volume
L	liter	W	watt
lb	pound	wt	weight
ln	natural logarithm	wt/vol	weight/volume
M	molar	yd	yard
