Timecode	Description
1:00:08:00	NOAA Weather Radio Receivers – Assorted models with tone-alarm audio. Tone-alarm feature is programmed to sound an alarm the moment it receives a live broadcast of a hazard watch or warning.
1:01:03:00	NOAA Weather Radio Receivers – Additional models. Receivers are available as stand-alone units or as a feature on AM/FM, short wave, CB, scanner, aviation or marine radios. Shot of each as well as a portable unit in store display.
1:01:41:00	NOAA Weather Radio Receivers – Receivers in use at home, at work, in car, boat, plane and outdoors
1:02:39:00	NOAA Weather Radio Receivers – Some receivers can be combined with visual alarms or other devices, which make the radios beneficial to the deaf or hard-of-hearing. Shot of radio with visual alarm. Shot of "bed shaker," which is connected to radio's external output and placed under the pillow. Upon receiving a hazard watch or warning, the device vibrates to wake the user.
1:03:01:00	The NOAA National Weather Service – Forecasting Center Operations.
1:03:30:00	Tornado Recovery – Repairing houses in a suburb after a tornado.
1:04:08:00	NOAA SEAL

Total Running Time = 4:18
