The **TempPresLvls** and **H2OpresLvls** arrays appear in the Level 3 Standard Product once per granule as attributes. They are ordered from bottom of atmosphere to top, similar to the **pressStd** array in the AIRS Level 2 Standard Product.

These arrays are common to all 360 x 180 grid boxes, and so appear only once per granule as an attribute rather than being replicated 64,800 times.
