## Executive Summary

---

The Carl D. Perkins Vocational and Technical Education Act of 1998 (Perkins III or Act) requires, in Section 113(c)(3)(C), that the Secretary provide the appropriate committees of Congress copies of annual reports received by the department from each eligible agency that receives funds under the Act. Section 113(c)(3)(A) further requires the Secretary to make the information contained in such reports available to the general public. To meet this obligation, the Department of Education is providing the data in both text and digital (on the Internet) formats. The report can also be obtained in other formats for persons with special needs.

These reports contain information on states' progress in achieving their adjusted performance levels—negotiated with and approved by the department—on the core indicators of performance listed in Section 113(b)(2)(A):

- Student attainment of challenging State established academic, and vocational and technical, skill proficiencies.
- Student attainment of a secondary school diploma or its recognized equivalent, a proficiency credential in conjunction with a secondary school diploma, or a postsecondary degree or credential.
- Placement in, retention in, and completion of, postsecondary education or advanced training, placement in military service, or placement or retention in employment.
- Student participation in and completion of vocational and technical education programs that lead to nontraditional training and employment.

For purposes of data collection and reporting, the department divided the core indicators of performance into 14 sub-indicators—seven sub-indicators each for secondary and postsecondary education.

As required by statute, states also provide disaggregated data on the progress of students in each of the special population categories listed in Section 3 of the legislation:

- Individuals with disabilities;
- Individuals from economically disadvantaged families, including foster children;
- Individuals preparing for nontraditional training and employment;
- Single parents, including single pregnant women;
- Displaced homemakers; and
- Individuals with other barriers to educational achievement, including individuals with limited English proficiency.

Section 206 of Perkins III requires states to report on the effectiveness of their tech-prep programs and, therefore, states must report data for tech-prep students by each sub-indicator separately. Finally, the department requires that states report on the progress of students by gender, race, and ethnicity.

This is the fifth annual report to Congress by the department. This report transmits data that states submitted to the department for Program Year (PY) 2003-2004.<sup>1</sup> In finalizing their data submissions to this department, states attested to the accuracy and completeness of their data. Among the highlights of this report:

- ***Fewer students were reported by states as having enrolled in vocational and technical education courses in PY 2003-2004 than in the previous year, but the rate of enrollment is still higher than in the earlier years of Perkins III implementation.***
- ***Although there have been some improvements, concerns remain regarding states' performance data.*** Among the major issues are the use of varying performance measures that do not share a common standard for validity and reliability; the variety of student population definitions used by states (i.e., whom they count in their accountability system); the inability of some states to track students' transition to subsequent education and employment; and the limited availability of national or state assessments to evaluate students' technical skill attainment—an important outcome of participation in vocational and technical education.
- ***Two states met or exceeded each of their PY 2003-2004 secondary performance levels.*** This represents a decrease from PY 2002-2003 when six states met or exceeded each of their secondary performance levels.
- ***Three states met or exceeded each of their postsecondary performance levels.*** This represents a decrease from PY 2002-2003 when five states met or exceeded each of their postsecondary performances levels.
- ***Nineteen states were awarded incentive grants from the department during PY 2003-2004 for having exceeded their performance levels overall under Perkins III, Title I of the Workforce Investment Act (WIA), and the Adult Education and Family Literacy Act (AEFLA):*** Alabama, Colorado, Delaware, Georgia, Iowa, Indiana, Louisiana, Maryland, Michigan, Minnesota, Missouri, North Dakota, Nebraska, Nevada, Oregon, Pennsylvania, South Carolina, South Dakota, and Tennessee. This represents a decrease from PY 2002-2003 when twenty-three states were awarded incentive grants.

This report to Congress contains four sections. The first section enumerates the accountability requirements in Perkins III and describes efforts by the department to help states develop their performance accountability systems and their performance levels for vocational and technical education. The second section summarizes states' progress in meeting their PY 2003-2004

---

<sup>1</sup> The program year (PY) generally operates from July 1 – June 30.

performance levels. The third section discusses issues pertaining to the quality and reliability of states' Perkins performance data. The final section offers conclusions. Individual state data profiles are provided in the attachments.

# I. Introduction

---

## A. Accountability for Results

The Carl D. Perkins Vocational and Technical Education Act of 1998 (Perkins III) is the principal source of federal funding to states for the improvement of secondary and postsecondary vocational and technical education programs. Each year under Perkins III, Congress has appropriated more than \$1.1 billion for grants to states, including the basic state grants (Title I) and tech-prep grants (Title II). States then determine what share of Perkins III funds should be allocated to secondary and postsecondary institutions in their state. Over the past four years, states have allocated an average of 60 percent of their funds to secondary education and 40 percent to postsecondary education. A few states allocate as much as 90 percent of their funds to secondary vocational and technical education programs and only 10 percent to their postsecondary programs. States generally distribute federal funds by formula to local educational agencies, area vocational and technical schools, community colleges, and other public or private nonprofit institutions that offer vocational and technical education programs that meet the requirements of the law. Attachment A provides information on each state's allocation for PY 2003-2004, the year covered in this report.

Congress made *accountability for results* a central focus of the Perkins III legislation, setting out new performance accountability requirements for states and local programs. These requirements were established "to assess the effectiveness of the State in achieving statewide progress in vocational and technical education, and to optimize the return of investment of Federal funds in vocational and technical education activities." [Section 113(a)] With input from local program administrators, states are required to report annually on the following core indicators of performance:

- Student attainment of challenging State established academic, and vocational and technical, skill proficiencies.
- Student attainment of a secondary school diploma or its recognized equivalent, a proficiency credential in conjunction with a secondary school diploma, or a postsecondary degree or credential.
- Placement in, retention in, and completion of, postsecondary education or advanced training, placement in military service, or placement or retention in employment.
- Student participation in and completion of vocational and technical education programs that lead to nontraditional training and employment.

For purposes of state data collection and reporting, the department divided the core indicators into fourteen sub-indicators—seven indicators each for secondary and postsecondary education.

As required by statute, states also are required to report disaggregated data on the performance of students in the following special population categories listed in Section 3 of the legislation:

- Individuals with disabilities;
- Individuals from economically disadvantaged families, including foster children;
- Individuals preparing for nontraditional training and employment;
- Single parents, including single pregnant women;
- Displaced homemakers; and
- Individuals with other barriers to educational achievement, including individuals with limited English proficiency.

Section 206 of Perkins III requires states to report on the effectiveness of their tech-prep programs and, therefore, states must report data for tech-prep students by each sub-indicator separately. Finally, the department requires that states report on the progress of students by gender, race, and ethnicity.

## **B. Establishing Measures and Setting Performance Levels**

Education is primarily a state function. The U.S. Department of Education makes available considerable funding to states to provide education programs and works with states to establish standards that will ensure that all citizens receive equitable access to high quality educational opportunities. States, however, provide the bulk of the resources to design and offer educational programs that meet the needs of their citizens. The Perkins III funding is provided to states with the expectation that states will gather and report data on program performance.

The Perkins III legislation afforded states considerable latitude in selecting their measurement approaches for each indicator and identifying those students on which to report performance.<sup>2</sup> This law was passed prior to the No Child Left Behind (NCLB) Act of 2001 and does not require that these indicators meet a single standard of validity and reliability. States submitted their measurement approaches and student population definitions, along with baseline performance levels for each of the sub-indicators, as part of their original Perkins III state plans. States then reached agreement with the department on the performance levels they would seek to achieve for each sub-indicator for each year in which the legislation would be in effect. States have set increasingly higher performance levels for themselves to comply with the legislative requirement of demonstrating continuous improvement on the indicators of performance (Section 113(b)(3)(A)(vi)(II)).

Over time, many states have changed one or more of their measurement approaches and/or student population definitions. These modifications may improve data quality, but they often reduce the ability to analyze state performance trends except in the most general of terms (i.e.,

---

<sup>2</sup> States report performance data for “concentrators”—that is, students who take a threshold number of courses or credits in vocational and technical education. Although this definition varies from state to state, most states define a concentrator as a student who is enrolled in a threshold level of vocational education, usually represented as two or three vocational and technical education courses.

comparing states to one another or tracking trends in program performance over extended time periods).

Further, while the legislative latitude has enabled states to build upon their existing data collection systems, it has produced wide variation across states in student population definitions and measurement approaches. For example, one state may measure academic attainment using a state-developed assessment instrument, while another state may use grade point averages. Attachment C illustrates the range of measurement approaches used by states for students' academic and technical skill attainment.

### **C. Efforts to Help States Build their Perkins Accountability Systems**

Since Perkins III was enacted, the department has worked with states to help them build and continually improve their performance accountability systems for vocational and technical education. During the first two years of Perkins III implementation, the department hosted "Data Quality" and "Program Quality" workshops. These workshops brought together state directors, policymakers, and data experts to review and improve student population definitions and measurement approaches. The workshops were followed by a series of conference calls to discuss data measurement and collection issues.

The department also established a Web site—the Peer Collaborative Resource Network (PCRN)—to foster discussion among states on issues pertaining to Perkins accountability systems. Among the recent discussion items have been strategies to incorporate into states' Perkins accountability systems the data collection requirements under NCLB and the Office of Management and Budget's (OMB) "common measures." Discussions are now underway to identify a common set of measurement approaches that would reduce the variety of methodologies currently used by the states. If more commonality can be achieved, it will enhance the department's ability to analyze data across the states with improved validity and reliability.

During PY 2003-2004, the department continued to place heightened emphasis on the topic of accountability during its monitoring site visits. Among the issues addressed during these visits were policies and procedures used by the states to gather and verify data from local grantees, efforts by the states to use performance data in funding local grantees, use of data to identify program strengths and weaknesses as a basis for program reform, and procedures used by the states to ensure that the data received from local grantees are complete, accurate, and reliable.

The department also continues its Performance Measurement Initiative (PMI). This initiative is designed to help states improve their ability to report complete, accurate, and reliable data on students' academic performance, students' transition to postsecondary education and employment, and other important outcomes that are anticipated to be incorporated into new legislation when enacted. Six states—Arizona, Florida, Nebraska, New Hampshire, New York, and Pennsylvania—were selected through a competitive review process to collaborate with the department in the initial phases of the PMI initiative.

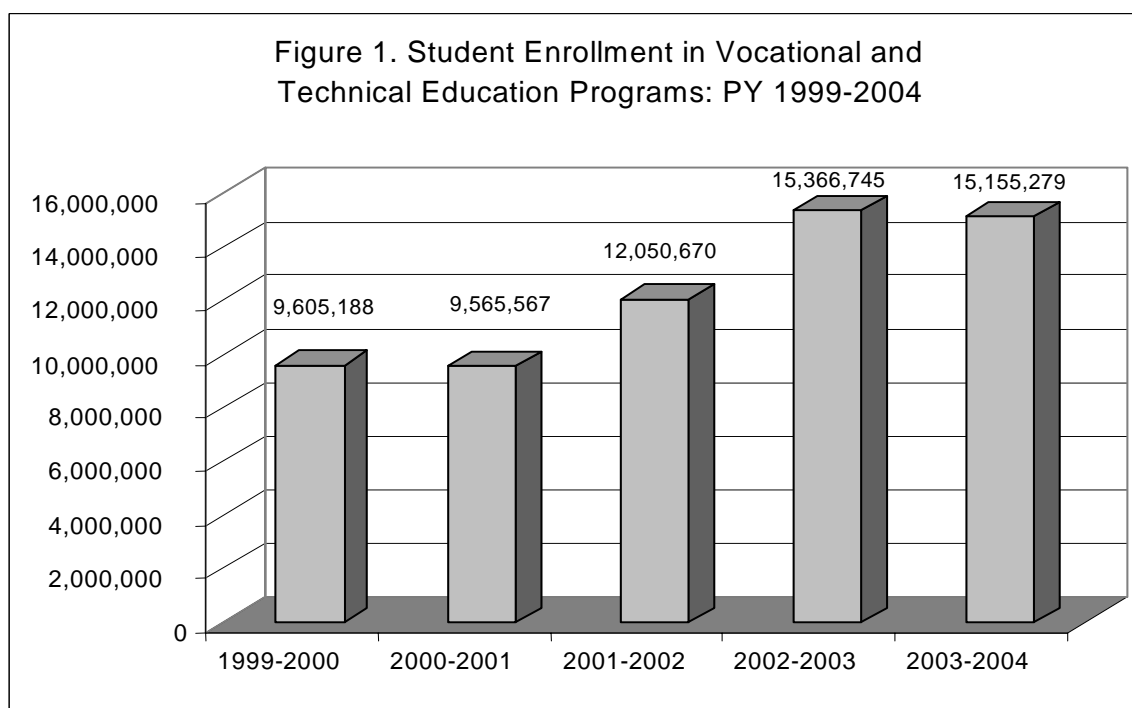

Finally, this year, five states—Connecticut, Maine, Minnesota, New Mexico, and Wyoming—were selected through a competitive selection process to receive individual customized technical assistance on Perkins III accountability. Issues in which the states received technical assistance ranged from strategies to align their Perkins academic attainment measure to their states' NCLB assessment methodology to using administrative records to track students' progress through further education and employment.

## II. State Performance Data

---

### A. Enrollment in Vocational and Technical Education

In PY 2003-2004, states reported over 15.1 million students as having enrolled in secondary and postsecondary vocational and technical education programs (Figure 1), a slight decrease over last year (one percent), but still a significant increase over two years ago (26%). Enrollment is an unduplicated count of all students reported by each state as having taken one or more vocational and technical education courses. These courses may or may not be funded with federal Perkins III funds. Table 1 below presents states' enrollment data by gender, race and ethnicity, and special population categories.

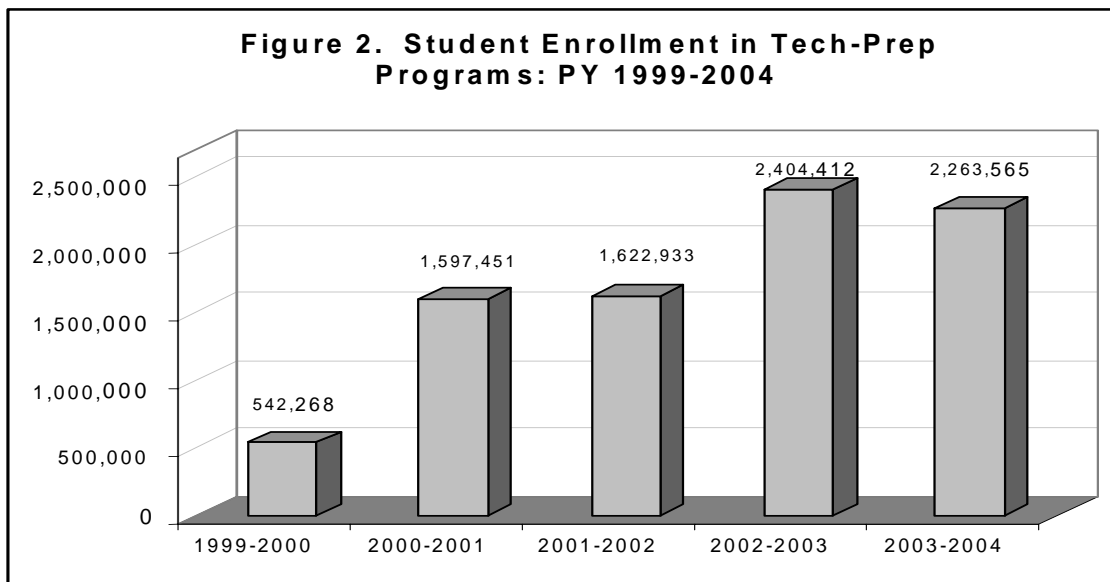

**Table 1. Student Enrollment in Vocational and Technical Education Programs:  
PY 2003-2004**

Note: Enrollments by disaggregated categories are duplicate counts. For example, a student may be both disabled and economically disadvantaged.

Student Characteristics	Disaggregated Category	Secondary	Postsecondary and Adult
Gender	Male	4,875,586	2,651,557
	Female	4,235,499	3,339,892
	Unknown	2,950	49,795
Race/Ethnicity	Black	1,535,482	803,726
	Hispanic	1,542,677	934,286
	White	5,387,849	3,326,749
	Asian Pacific Islander	399,889	435,131
	American Indian	113,304	73,643
Special Populations	Individuals with Disabilities	971,212	179,345
	Economically Disadvantaged	2,553,208	1,575,465
	Nontraditional	2,025,956	1,012,943
	Single Parent	56,172	246,912
	Displaced Homemaker	4,420	71,729
	Limited English Proficient	474,317	284,604
	Other Educational Barriers	1,188,624	690,440

In PY 2003-2004, states also reported that approximately 2.3 million students were enrolled in tech-prep programs (Figure 2). This represents a small decrease from the prior year (six percent), but still a considerable increase over two years ago (39%). It should be noted, however, that PY 2002-2003 represented a large increase from the previous year (48%). Wide variability exists in how states identify tech-prep students. Over the last two years, tech-prep students have comprised about 15 percent of the total enrollment in vocational and technical education.

It is important to note that many states did not provide complete data on the performance of their secondary and/or postsecondary tech-prep students for PY 2003-04. This occurred despite the fact that states receive a separate grant award under Title II of Perkins III to serve tech-prep students and are required to submit data on the effectiveness of their tech-prep programs under Section 206 of the legislation. Every state that did not provide complete data for each secondary and/or postsecondary sub-indicator had a special condition placed on its FY 2005-06 grant award, requiring it to develop a plan for collecting and reporting data on tech-prep students as soon as possible, but no later than the PY 2006-07 reporting year. Tables 6 and 7 provides a summary of where states failed to provide data, along with the total amount of tech-prep funds the state received during PY 2003-04.

## **B. State Progress in Meeting Perkins Performance Levels**

Attachment E provides individual state profiles containing performance data submitted to the department by states for PY 2003-2004. Data are reported by each state on students who are identified as “concentrators.” Attachment B provides each state’s definition of a “concentrator.” Although the definition of concentrator varies from state to state, most states define a concentrator as a student who is enrolled in a threshold level of vocational education, usually represented as two or three vocational and technical education courses. The department is currently working with states to develop a common definition for “concentrator” to reduce the variability among states in which students are reported on through their Perkins accountability systems.

In view of the different state definitions of “concentrator” and the differences in the size of student populations across states, some of the data provided by states in disaggregated form potentially could be personally identifiable. Therefore, as a precautionary measure, the department has masked data in certain cells to ensure that students could not be personally identified. Specifically, where a state reported actual performance data above 95 percent and below 10 percent, the cell was coded as >95% and <10%, respectively. The department continues to examine whether this action appropriately makes data available to the public, as required by Section 113(c)(3) of Perkins III, while ensuring that the available data are not personally identifiable.

Tables 2 and 3 summarize states’ progress in attaining their secondary and postsecondary levels, respectively, for all students. Tables 4 and 5 summarize states’ progress in attaining their performance levels on each sub-indicator for students in selected disaggregated categories.<sup>3</sup>

---

<sup>3</sup> Although the Perkins Act requires states to report on a disaggregated basis, the states’ performance levels are established on an aggregate basis.

**Table 2. States Meeting or Exceeding Their Performance Levels on Each Secondary Sub-indicator: PY 2003-2004**

Note: An (X) denotes where a state **met or exceeded** its secondary performance levels. An (NP) indicates that the state **does not** offer students the opportunity to earn both a high school diploma and other credential (e.g., a skill certificate) or that the data was not otherwise provided by the state. A blank cell indicates where the state did not meet its performance levels.

**Table 7: States Not Reporting Complete Tech-Prep Student Performance Data  
By Postsecondary Sub-indicator: PY 2003-2004**

Note: An (X) indicates where a state **did not** provide postsecondary tech-prep data for a sub-indicator. A blank cell indicates that the state provided data for that sub-indicator. The state column lists the total amount of federal funds received by the state under Title II (Tech-Prep) of Perkins III. States not listed here reported complete postsecondary data on their tech-prep students. Sixteen (16) states received federal funds and reported no Tech-Prep student data for any indicator.

States/Total Tech-Prep Funds	Attainment		Completion	Placement		Nontraditional	
	Academic	Skill	Degree	Placement	Retention	Participation	Completion
Alabama \$1,995,785	X	X	X	X	X	X	X
Alaska \$365,746	X	X	X	X	X	X	X
Colorado \$1,448,278	X	X	X	X	X	X	X
Connecticut \$899,166	X	X	X	X	X	X	X
Delaware \$440,726	X	X	X	X	X	X	X
District of Columbia \$342,351	X	X	X	X	X	X	X
Idaho \$624,444						X	X

## C. State Progress Trends

### 1. Secondary Performance Levels

Figures 3, 4, and 5 below display state progress trends on secondary sub-indicators since states began to submit data to the department in PY 2000-01. Compared to last year, more states met their performance levels on two secondary sub-indicators: placement and nontraditional participation. On all other sub-indicators, including skill attainment and high school completion, fewer states attained their performance levels.

Over the last three years, states have had uneven progress in meeting their secondary performance levels. Considerably more states met their performance levels for skill attainment and placement, but considerably fewer met their performance levels for nontraditional completion. No significant progress was made by states in achieving their academic achievement or program completion performance levels.

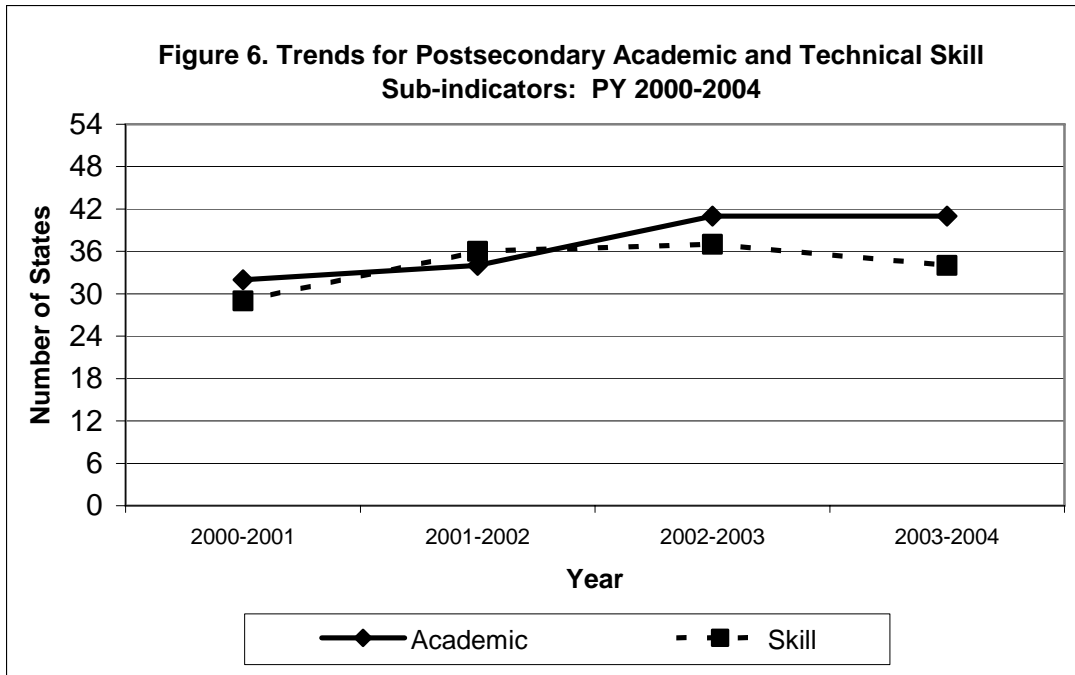

## 2. Postsecondary Performance Levels

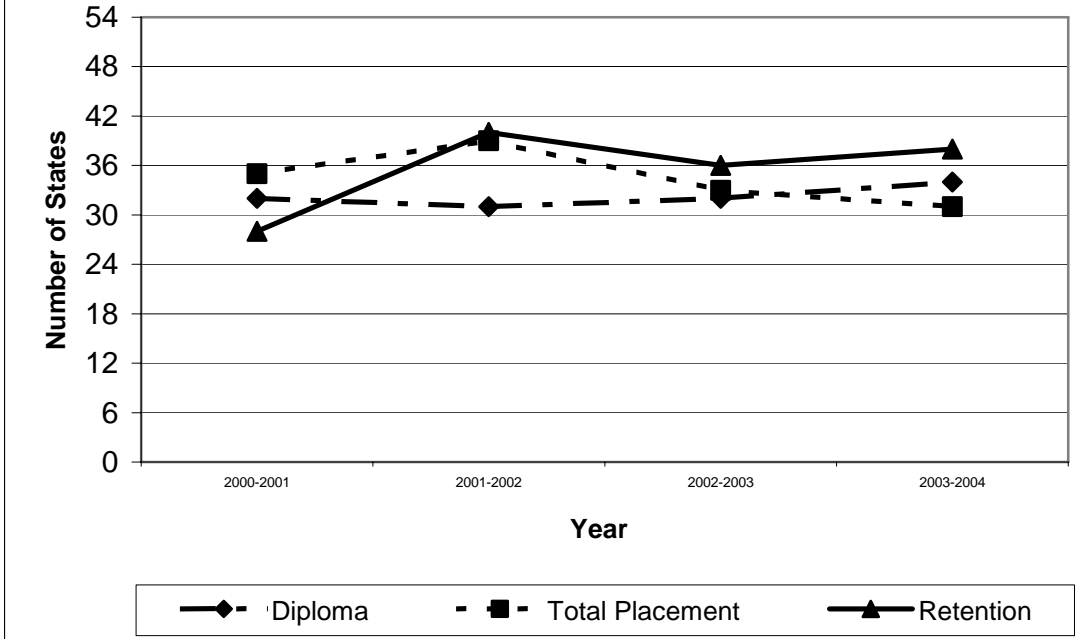

Figures 6, 7, and 8 display state progress trends on secondary sub-indicators since states began to submit data to department in PY 2000-01. Compared to last year, states generally improved their

performance on two postsecondary sub-indicators: diploma/graduation and retention in employment. On all other sub-indicators, the number of states achieving performance levels either remained steady or declined.

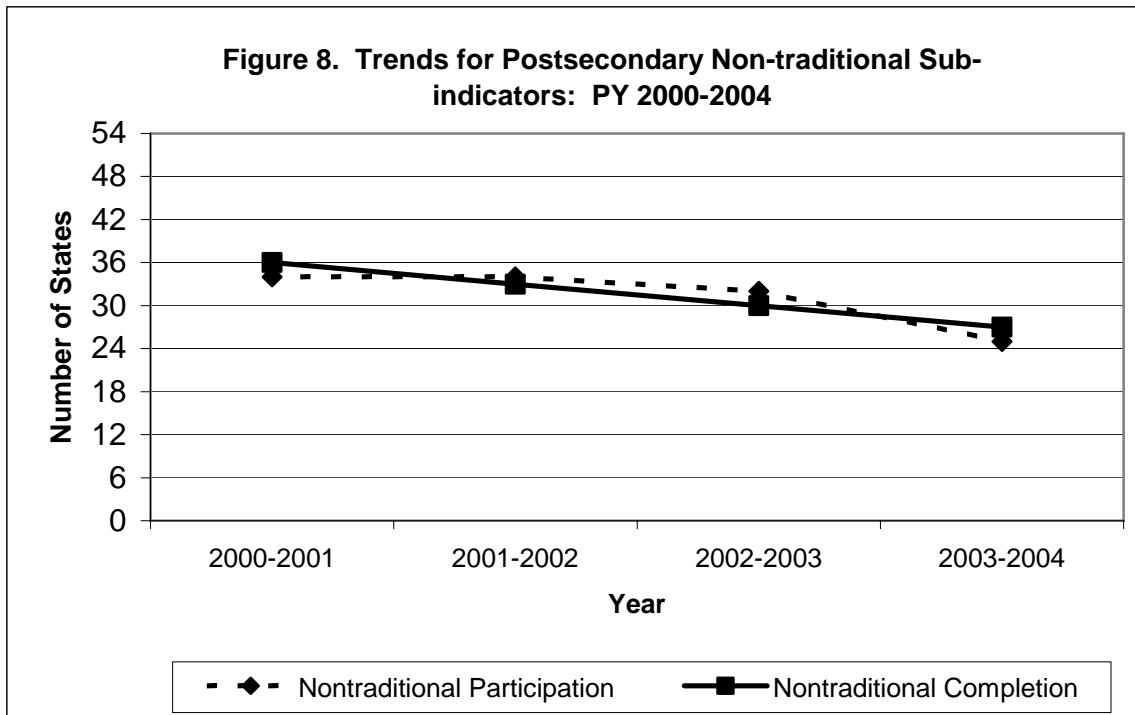

Over the last three years, states have made considerable progress in meeting several of their key postsecondary sub-indicators, namely academic attainment, skill attainment, and retention. States did not make similar progress on degree completion or placement, and the number of states meeting their performance levels for nontraditional programs declined significantly over the last three years.

**Figure 7. Trends for Postsecondary Diploma, Placement, and Retention Sub-indicators: PY 2000-2004**

**Figure 8. Trends for Postsecondary Non-traditional Sub-indicators: PY 2000-2004**

#### **D. States Receiving Incentive Grants under the Workforce Investment Act**

Section 503 of the Workforce Investment Act (WIA) provides incentive grants to reward states for successful performance in implementing their workforce and education programs. In PY 2003-2004, 19 states were eligible for incentive awards because they exceeded their performance levels overall for each of the following programs: WIA (Title I), Perkins III, and the Adult Education and Family Literacy Act (AEFLA). The states were: Alabama\*, Colorado\*, Delaware, Georgia\*, Iowa\*, Indiana, Louisiana\*, Maryland\*, Michigan\*, Minnesota\*, Missouri\*, North Dakota\*, Nebraska\*, Nevada, Oregon\*, Pennsylvania, South Carolina, South Dakota, and Tennessee\*<sup>4</sup>. This represents an increase from PY 2001-2002 when only sixteen states were awarded WIA incentive grants. Since PY 2000 (the first year for which WIA incentive grants were awarded), no states have received a grant each year. Florida, Illinois, Kentucky, and Texas received consecutive awards from 2000-2003 but did not qualify in 2004.

It is interesting to note that of the 34 states that did not qualify for incentive grants during FY 2004, only six did not qualify due to failure to meet their Perkins performance levels.

In PY 2003-2004, Perkins funds for the incentive grants were \$6,453,041, and AEFLA funds were \$10,152,007. No WIA (Title I) funds were allocated for incentive grants, although states were still able to use their incentive funds to meet the purposes of WIA if their states elected to do so.

---

<sup>4</sup> Fourteen states—marked with an asterisk (\*)—also received awards in PY 2003.

### III. Issues Surrounding Data Quality

---

States continue to make strides in building and implementing their Perkins accountability systems. Many states have instituted more rigorous measures for their indicators, and others have aligned their secondary data systems under Perkins III with their statewide academic standards and assessments under NCLB. However, several problems remain surrounding data quality. The state flexibility emphasized in Perkins III has failed to yield consensus and consistency across states in how the indicators of performance are measured. This lack of consistency would be less problematic if the measures selected by each state were valid and reliable. Even if performance could not be compared from state to state, performance by an individual state could be compared year to year. Most state indicators of performance, however, are not valid or reliable, and, as a result, the information they generate is not helpful in determining the effectiveness of vocational education programs.

Section 122(c)(4)(B) of Perkins III requires a state to describe in its state plan how it will use funds allotted under Perkins III to “ensure that students who participate in vocational and technical education programs are taught to the same challenging academic proficiencies as are taught to all other students.” Nevertheless, the measures or tools many states use to assess high school students’ attainment of challenging state-established academic proficiencies as required by Perkins III cannot generate valid or reliable data on the extent to which vocational students master the same state academic standards as other students. Even though some states use criterion-referenced, standards based assessments to measure student academic achievement statewide, more than 30 percent (17 out of 54) of states measure the academic achievement of their vocational students using indirect and invalid measures, such as high school graduation, maintaining a C average, and completing a specific number of courses. Some states also construct new methods to inflate the results. For example, one state reports on how vocational students score on an optional college aptitude test that many students do not take. While many states do use state assessments, these states often hold vocational students to a lower standard than applies statewide because the states are using the “basic” level to measure the academic achievement of vocational students instead of the “proficiency” level that the states must use to measure academic achievement under NCLB.

Deciding which students to include in measurements for accountability purposes is another issue that is both inconsistent and problematic across states, especially at the postsecondary level. For example, most states limit the students counted in their measures of postsecondary degree attainment to those students who are more likely to succeed while excluding students who are at greater risk of dropping out. It is appropriate to narrow the population of students who enroll in a postsecondary technical education course to those students who have demonstrated some commitment to earning a credential by completing the introductory courses of a technical education program. A few states do apply a modest filter in their measure that is appropriate, including, for example, 5 states that include all students who have earned 10-12 or more credits. Most states, however, limit the students included in their completion measures so dramatically that the measures lose all meaning. In one state, a student must earn 60 credits before he or she is counted, while in another, students must complete all of the vocational courses in a degree or certificate program before the state will take responsibility for their completion. A number of

states report only on full-time students, despite that nearly half of community college students are enrolled part-time, and part-time students are at higher risk of not completing a degree or certificate program. One state counts as successes all students who actually attain a credential—as well as all students who do not attain a credential but who earn 45 credits.

A 2003 internal audit of OVAE's Perkins III accountability system conducted by the Office of Inspector General (OIG) revealed many issues surrounding the accuracy, reliability, and completeness of Perkins III data (Control Number ED-OIG A03-D0013). Listed below are the OIG findings and recommendations, along with corrective actions that OVAE has committed to take to resolve the findings. The current status of each action is provided in italics and parentheses.

- Finding #1: States were not submitting complete Perkins III performance data to the department.

Recommendation #1: In the future, provide additional one-on-one assistance activities to those states that are having problems reporting complete data in meeting the requirements of the law.

OVAE Actions:

- Hold national and annual regional meetings with states to improve the completeness and quality of their data. During this time, offer individual sessions with states to discuss their specific data issues. (*Completed*)
- Conduct monitoring visits to states that are experiencing significant difficulties in reporting complete and accurate data.
- Hold annual meetings with state directors for career and technical education to address, among other things, the completeness and quality of their data. During this time, offer individual sessions with states to discuss their specific data issues. (*Completed*)

Recommendation #2: Review the Compliance Supplement to determine if changes are needed to ensure that the state's Perkins III performance data are reviewed [by state auditors] for completeness.

OVAE Action:

- Once new legislation is passed, make necessary changes to the Compliance Supplement to ensure that states' Perkins III performance data are reviewed for completeness. (*On hold pending reauthorization of the Perkins legislation*)

- Finding #2: OVAE needs to work with states to ensure that performance measures are valid.

Recommendation #1: Consider requesting clarification of the law in the current reauthorization to specify that OVAE has authority for reviewing and approving states' performance definitions.

OVAE Action:

- Released the Administration's proposal for the Secondary and Technical Education Excellence Act, which offers recommendations for improving the Perkins III accountability system. *(Completed)*

Recommendation #2: In approving future measures, in those cases where the performance measure does not fully represent the sub-indicator, provide guidance to the states for developing other measures.

OVAE Action:

- Provided guidance to states in the negotiation and approval process for new Perkins performance levels for FY 2004-2005 (extension year). *(Completed)*

Recommendation #3: In those cases where the definition does not fully represent the performance measure, request that states make a full disclosure in the Consolidated Annual Report (CAR) stating that the data are the best the state has available to measure the sub-indicator.

OVAE Actions:

- Clarify directions on the CAR form to ensure that states make full disclosure of their definitions. *(Completed)*
- During annual CAR training for states, instruct states to make full disclosure about their definitions. *(Completed)*

- Finding #3: OVAE's monitoring process did not include WIA incentive award recipients for monitoring visits.

Recommendation #1: Revise its monitoring procedures to include for possible selection states that qualify for the WIA incentive awards.

OVAE Actions:

- Include states having received an incentive grant for FY 2002-2003 in the risk analysis for identifying states for monitoring during FY 2004-2005. *(Completed)*

- Revise the monitoring checklist for accountability to incorporate items from the OIG instrument that was used to conduct the OVAE Perkins accountability audit. (*Completed*)
- Finding #4: Not all states complied with the department's CAR reporting instructions.

Recommendation #1: Provide additional guidance and instruction to states to implement improvement strategies that address each sub-indicator for which the state did not meet its adjusted performance levels.

OVAE Actions:

- Clarify directions on the CAR form to ensure that states describe their improvement strategies for any sub-indicators for which they did not meet their adjusted performance levels. (*Completed*)
- During annual CAR training for states, instruct states to describe their improvement strategies for any sub-indicators for which they did not meet their adjusted performance levels. (*Completed*)

Recommendation #2: Followup with states that do not comply with the CAR reporting instructions.

OVAE Actions:

- Conduct individual follow-up calls with states that do not comply with the CAR reporting instructions. (*Completed*)

## IV. Conclusion

---

Many states have continued to make progress in building their performance accountability systems for vocational and technical education in response to Perkins III. For the most part, states continue to refine and upgrade their measurement approaches and are increasingly using their data for state and local program improvement. Much of the data collected, however, continue to be of questionable value because they are not valid or reliable and create a weak accountability system that is unable to track improvements in performance. There continue to be dramatic inconsistencies among states in how student populations are defined which greatly impacts the ability to make comparisons across states. States vary widely in the way students are counted in their accountability systems, and more importantly, many states only count the students most likely to succeed, excluding students who are at greater risk of dropping out, such as part-time community college students.

Among the other major issues are the inability of many states to track students' progress in further education and employment, and the shortage of national or state assessments to measure students' technical skill attainment--an important outcome of participation in vocational and technical education.

To address these issues, several efforts are underway both inside and outside the department. Most importantly, with the expiration of Perkins III legislation in October 2004, Congress has begun the process of legislative reauthorization and has already begun to address some of the issues raised in the report.

Further, the department plans to continue its monitoring visits and technical assistance sessions that focus on accountability. This calendar year, eleven states will receive monitoring visits and the department will again sponsor a leadership conference and data quality institutes for state directors of career and technical education and their accountability staffs.

The department has held the first of several national and regional institutes to standardize definitions, measures, and measurement approaches for states' Perkins accountability systems. This effort is intended to help states provide consistent, valid, and reliable data to the department. Connected with the institutes are monthly conference calls for state accountability members to review related databases and identify ways to collect consistent performance data. The department also has begun providing direct technical assistance to individual states in topical areas that they identify as crucial to developing a more effective Perkins accountability system.

Finally, to address the issue of technical skill assessments, two initiatives are underway. First, the department is commissioning a study of current assessments that are being used and exploring the relationship between these assessments, industry standards, and current curricular frameworks. Second, the National Association of State Directors of Career Technical Education Consortium (NASDCTEC) is working with states in a long-range process to develop technical skill assessments for each of the 16 career cluster areas it recognizes. The first set of assessments will evaluate students' general workplace competencies in each of the 16 career areas. Subsequent assessments will measure job-specific skills that students need to progress into entry- or advanced-level employment in each of the career areas.

As Perkins III continues to be implemented across this country, the department is pleased to report its progress as well as further opportunities to build Perkins III accountability systems that meet the intent of the law—that is, being able to “assess the effectiveness of the State in achieving statewide progress in vocational and technical education, and to optimize the return of investment of Federal funds in vocational and technical education activities.”

## Attachment A

### Perkins State Allocations: PY 2003-2004

State	Basic Grant Title I (In Dollars)	Secondary Share of Title I*	Postsecondary Share of Title I*	Tech-Prep Title II (In Dollars)
Alabama	\$ 21,395,048	67%	33%	\$1,995,785
Alaska	4,214,921	87%	13%	371,362

Wyoming	4,214,921	65%	35%	285,745
Total	\$1,165,994,720	-	-	\$107,298,000

\* The percentages for the secondary and postsecondary share of Title I funds are based on the state's basic allocation less amounts for state leadership, state administration, and any amounts reserved under the authority of Section 112(c) of Perkins.

## Attachment B

### States' Definitions of "Concentrators:" PY 2003-2004

State	Definitions	
	Secondary	Postsecondary
Alabama	A student who enrolled in two units of credit within an occupational area in grades 9-12.	Locally determined by each local education agency.
Alaska	A student who has taken (i.e., may pass or fail) 2 or more vocational education courses within an approved sequence in one of the specific career areas as defined by USED.	A participant who has been admitted into a certificate or degree program, has completed at least 12 vocational credit hours of the course/program of study toward a certificate or degree, or has completed all coursework for an industry recognized credential (not awarded by the postsecondary institution), as established by the postsecondary institution. Because the process for tracking all credentialing programs within the university system is not yet in place, we are counting all vocational students with 9 credits, vocational and/or academic, during the reporting year, as the best means to approximate the intent of the definition.
Arizona	A student who achieves two Carnegie units/credits in a single CTE program is a concentrator. One unit/credit must be in a Level III course. The tech-prep secondary student population is a subset of the vocational concentrator definition with the additional requirement that a grade "C" or better is required within an articulated program. This use of the "C" grade will align the secondary and postsecondary definitions.	A student enrolled in the state threshold level of vocational education. Arizona defines the state threshold level of vocational education for postsecondary as: A minimum of seven vocational credit hours in the same vocational area prefix; A minimum of one state-designated course in English or math, technical/business English, technical math, integrated academic/occupational course at or above the 100 level, or demonstrated proficiency by assessment; Both of the above must be obtained within the five previous years including the reporting period.
Arkansas	A student who enrolled in two units of credit within an occupational area in grades 9-12.	A student who declared a major in or who enrolled in a certificate, diploma, or occupational associate degree program.
California	A secondary school student enrolled in the second and advanced level courses (including the capstone course) of a planned CTE program sequence.	1P1& 1P2: A student enrolled in any vocational course designated as a course in the middle or end of a vocational program.  2P1, 3P1, 3P2 & 4P2: A student who: 1) Successfully completed a minimum threshold of 12 or more credit units of related coursework in a vocational or technical program area with one or more of those courses designated as being in the middle or end of a vocational program or 2) Received a certificate or degree in the cohort year.

State	Definitions	
	Secondary	Postsecondary
Colorado	Locally determined by each local education agency.	No unique state definition of a vocational concentrator has been developed. The state does have a definition of a “partial completer” but these students are not counted in the measurement approaches. A partial completer is an individual who has been reported on the VE-135 and has demonstrated attainment of more than 50% of the completer requirements as identified in the program approval.
Connecticut	A student who has completed at least two credits of a career and technical education sequence in a given career and technical education instructional program. This sequence should provide students with entry-level, job-related skills and/or the ability to continue in higher education.	A student who has completed at least two credits of a career and technical education sequence in a given career and technical education instructional program. This sequence should provide students with entry-level, job-related skills and/or the ability to continue in higher education.
Delaware	A student enrolled in a career path of three or more vocational-technical courses. To achieve more consistency in data collection the definition was revised to read “a student enrolled in the third course of an approved career-technical pathway”.	A student enrolled in a career path of three or more vocational-technical courses. To achieve more consistency in data collection the definition was revised to read “a student enrolled in the third course of an approved career-technical pathway”.
District of Columbia	A student who has completed at least two CTE courses.	A student who has completed at least 50% of a CTE program.
Florida	A student who completes at least one occupational completion point within a vocational program. An occupational completion point is an exit point in a vocational program, which is linked to a labor market entry point.	Vocational concentrator postsecondary certificate: A student who completes at least one occupational completion point within a vocational program in the reporting year. An occupational completion point is an exit point in a vocational program, which is linked to a labor market entry point. Vocational concentrator postsecondary degree: A student who has earned 11 or more credits toward the declared degree or certificate.
Georgia	A student who earned four or more credits (Carnegie Units) in vocational education courses, of which three are in a concentrated career and technical prep (CTP) program of study. This definition parallels the state requirements for graduating with CTP or a dual diploma. This considers variations in credit awards for courses, because of different scheduling systems at local school systems. The most standardized unit of counting student participation in vocational education programs of study is the Carnegie unit.	A student enrolled in a credit major who has completed at least 12 hours (does not include specially admitted students).
Guam	A student who enrolled in a program/sequence of courses identified in the GCC/Guam Department of Education (GDOE) Memorandum of Agreement (MOA) and completed two years of course work in a program listed in the MOA.	A concentrator is a “declared” student pursuing a certificate or Associate degree and/or an individual accepted into the apprenticeship program.
Hawaii	A 12th grade student who has completed the requirements for her/his selected state certified career and technical education program of study.	A student in a declared vocational program who has completed at least ten credits in her/his program.

State	Definitions	
	Secondary	Postsecondary
Idaho	A student who has completed three or more semesters of a professional-technical program sequence by the end of his/her junior year or who has completed all the courses (if less than three semesters) offered in an occupational area or who is enrolled in a state approved professional-technical school/academy.	A student enrolled in state funded technical college professional-technical programs.
Illinois	A student who has earned two Carnegie units of credit at the training level (typically grades 11 and 12) in a program area.	A student who has earned 12 credit hours during an academic year, with the objective to complete a degree or an occupational certificate and the intent to enter a new occupation or improve their occupational skills.
Indiana	A student who enrolled in a sequence of courses or instructional units that provide the academic and technical skills, knowledge, and proficiencies to prepare the individual for employment and/or further education.	A student who enrolled in a sequence of courses or instructional units that provide the academic and technical skills, knowledge, and proficiencies to prepare the individual for employment and/or further education.
Iowa	A student who has a combination of completed and presently enrolled vocational units totaling at least two vocational units (two years) in the vocational program being reported.	A student who has a combination of completed and presently enrolled vocational courses representing a full semester/quarter load in the vocational program being reported.
Kansas	A student enrolled who has completed three courses within a program. The courses making up a program may be one approved, but not necessarily funded, and two funded courses, or enrolled in a three-hour vocational block class.	A student enrolled in a vocational program.
Kentucky	A student who is enrolled in a technical education program and satisfactorily completes three courses in a sequence of courses for an occupation. The sequence must have industry-validated standards leading to an occupation/career major.	A full-time student who has declared a technical education major and is enrolled in a sequence of courses. These courses must have industry-validated academic and technical knowledge, as well as skill standards leading to an occupation or career in a one-year or two-year program.
Louisiana	A student with a declared vocational/technical major in a certificate, or associates degree program and who has successfully completed 12 credit hours within the declared major.	A student enrolled in a certificate, diploma, or associate degree vocational/technical program and who has completed the equivalent of 6 credit hours in the designated certificate, diploma or associate degree program.
Maine	High school seniors reported on fall EF-V-116 forms as enrolled in an approved secondary vocational program at an area vocational center.	Students formally admitted (matriculated) into a certificate, diploma or associate degree postsecondary technical education program offered with the approval of the Board of Trustees by a campus of the Maine Technical College System.
Maryland	A student who has enrolled in a course at the "concentrator" level for a CTE completer program. Concentrator courses were identified for every CTE program sequence in every local school system in Maryland.	A student who has enrolled in a course at the "concentrator" level for a CTE completer program. Concentrator courses were identified for every CTE program sequence in every local school system in Maryland.

State	Definitions	
	Secondary	Postsecondary
Massachusetts	A student who is enrolled in a state-approved vocational technical education program that also meets the Perkins Act definition of vocational and technical education or is enrolled in a career and technical education program that meets the Perkins Act definition of vocational and technical education.	A student who is enrolled in a state-approved vocational technical education program that also meets the Perkins Act definition of vocational and technical education or is enrolled in a career and technical education program that meets the Perkins Act definition of vocational and technical education.
Michigan	A student who is enrolled in a state-approved career and technical education program and who has completed at least 60% of the required program coursework.	An occupational student officially enrolled (as of the officially recognized federal count date) in an occupational program and who has earned at least 12 credits (excluding developmental coursework) towards the completion of an award as of the beginning of the reporting year.
Minnesota	A student successfully enrolled in a single CTE program for more than 90 hours (successfully defined as a passing grade).	A student with a declared major in a Perkins approved vocational technical education program and who has completed 33% of the program requirements (credits completed).
Mississippi	A student who has completed the first year of a two-year program and has enrolled in the second year of the program.	A student who has completed 50% or more vocational or technical classes within a program.
Missouri	A student who earns a minimum of two (2) units of credit in a career education program or sequence of career education courses.	A student earning 75% of the total number of credit hours required to complete a degree in a career education-approved subject area or a participant in a postsecondary program that has completed a minimum of five hundred (500) clock hours.
Montana	A student who will have received at least three units of vocational course credit during a high school career. A unit of credit is two semesters of study. These credits may be earned in multiple vocational program areas.	A student who declares a vocational-technical program of study.
Nebraska	A student who has enrolled and/or completed a sequence of three or more CTE courses (or has completed all of the courses offered in an area) during their high school attendance, which lead to entry-level occupations, apprenticeship, military or post high school training and has achieved the 12th grade level.	A student who (has taken at least one 1.5 or 2.0 level course) during the program year, has declared a vocational major, and has completed 20 or more semester (45 or more quarter) hours (as reported to IPEDS).
Nevada	A student enrolled in one or more terminal courses. A terminal course is an occupational-specific course that is taken at the end of a sequential course of study. Each school district has the responsibility of identifying the district's terminal courses.	(For the 2003-03 reporting year) A first-time student enrolled in the fall of 1999 who declared a vocational major (Associate of Applied Science Degree or Certificate of Achievement) anytime between fall 1999 and summer 2003 and who were able to accumulate nine occupational credits between fall 1999 and summer 2003.
New Hampshire	A student who has completed greater than 50% of the required sequence of instruction in his/her CTE program and is enrolled in the second half of the program as of October 1st or March 1st.	A student who has completed greater than 50% of the required sequence of instruction in his/her CTE program and is enrolled in the second half of the program as of October 1st or March 1st.

State	Definitions	
	Secondary	Postsecondary
New Jersey	A student who is enrolled in the final level/course of an approved vocational-technical education program after successfully completing previous coursework receiving at least a minimum passing grade.	A student who is matriculated in an Associated in Applied Science (AAS) or certain Associate in Science (AS) programs, or related credit generating certificate programs, and who is enrolled in, or has successfully completed one college-level course and was enrolled full-time in the fiscal reporting year.
New Mexico	A student enrolled in an identified program or coherent sequence of courses or instructional units providing him/her with the academic and technical knowledge, skills and proficiencies to prepare for employment and/or further/advanced education and those students who have completed three or more career-technical courses in that sequence.	A student enrolled in an identified program or coherent sequence of courses or instructional units providing him/her with the academic and technical knowledge, skills and proficiencies to prepare for employment and/or further/advanced education and those students who have completed three or more career-technical courses in that sequence (secondary) or have completed eight postsecondary credit hours, and have declared a career-technical education major.
New York	A student who has attended school in the year in which the student is eligible to graduate and has passed a sequence of CTE courses that incorporate the career development and occupational studies standards of New York state.	A first-time, full-time credit-bearing student of an entry cohort for the fall of a given year who attains at least 12 credits by June 30 of the reporting year.
North Carolina	A student who completes four vocational (career-technical education) credits in a career major (threshold level of vocational education) and who graduates.	A student who is enrolled in a state-approved program leading to an applied science degree or certificate that has completed at least 75% of the coursework.
North Dakota	A student enrolled in a sequence of two or more credits that provides the academic and technical knowledge/skills/proficiencies within a career & technical education program.	A student who enrolled in a sequence of courses or instructional units that provides an individual with the academic and technical knowledge/skills/proficiencies to prepare the individual for employment and/or further education.
Ohio	A student who is enrolled in the last class of a series of classes within a program or is in the final class of a competency-based series of experiences.	A student who declared a major in a technical program, began enrollment no earlier than winter of 1998, and accumulated 36 semester (54 quarter) hours as of spring in the reporting year.
Oklahoma	A student enrolled in an approved occupational program to gain the knowledge and skills for employment or to continue into postsecondary education and/or advanced training.	A student enrolled in an approved occupational program to gain the knowledge and skills for employment or to continue postsecondary education and/or advanced training.
Oregon	A student who has accumulated at least two credits in an approved professional technical education program during the four years of high school.	A student who has completed more than half of a state approved professional technical education certificate or degree program.
Pennsylvania	A student who is enrolled in a n approved career and technical education program.	A student who is enrolled in an approved career and technical education program.

State	Definitions	
	Secondary	Postsecondary
Puerto Rico	A 12th grade student who has been participating in a specific vocational course for two to three consecutive years (10th, 11th and 12th) or an adult participating in any particular adult program directed to complete an occupational field offered by a vocational public school or a community-based organization.	A student who has graduated from high school or its equivalent (GED) who has been participating in a specific occupational or technical course for one to two or more consecutive years towards an occupational certificate or two years or more towards an Associate Degree, or any particular adult program certificate offered by a vocational public school, any of the four campus of our technological institute, our tool and die school or community-based organization.
Rhode Island	A student who enrolled in and completed at least two sequential, semester-long career and technical education courses in either a state recognized career and technical education program or a sequence of recognized courses.	A first time, full time matriculated career and technical education student enrolled in the school year commencing three years prior to the reporting year (postsecondary student), or a student who enrolled in a non-credit vocational training course or series of courses leading to a certificate (adult student).
South Carolina	A student who has been assigned a Classification of Instructional Programs (CIP) code designating a specific CTE program.	Student who has been assigned a CIP code designating a specific vocational program.
South Dakota	A student who earned two Carnegie units of credit within a program and is at least a junior in high school.	A student who earned two Carnegie units of credit within a program and is at least 50% completed in the school-approved program.
Tennessee	A student with three units (credits) in a focused, sequential vocational program of study (concentration) and one unit in a related vocational area or an additional credit in the sequence.	A student who is entering the second half of their program.
Texas	A student who demonstrates intent to achieve proficiency equivalent to at least two and one-half credits in a coherent sequence of courses for career and technology preparation and meets all academic requirements.	A student who has declared a major course of study in a technical field and intends to receive a certificate or degree in that field.
Utah	A student who completes three semesters (1.5 credits) of training in the same CTE program area during grades 9-12.	A full-time student (initially registering as full-time) with a declared major in CTE Certificates, or A.A.S. or approved Applied Technology Education A.S. Degrees. A completer is a concentrator who graduates with an CTE Certificate, or A.A.S or approved Applied Technology A.S. Degree. For postsecondary technical colleges, these are adults completing 60 or more membership hours in preparatory programs. A completer is a concentrator also designated as a program completer, skill completer, or pre-completion job placement.

State	Definitions	
	Secondary	Postsecondary
Vermont	The state articulates a threshold level of technical education, i.e. those academic and technical skills necessary to prepare an individual for employment and/or further education, in the state-approved core competencies for programs. A student who has reached this threshold level of technical education is a student who has either been given instruction in all of a program's competencies and workplace skills or has attended one technical education program (other than pre-vocational) for at least 80 minutes per day for two years (or its equivalent). In the Vermont core indicators these students are referred to as completers.	A student who has declared a major in and/or has enrolled in a two-year vocational-technical education program or certificate program offered through a postsecondary institution and who is taking courses that meet the requirements of that program.
Virgin Islands	A Student who has enrolled in the vocational education program and is taking more than two courses in sequence with plans to continue toward completion in a specific career pathway.	A students who has enrolled in the vocational education program and is taking more than two courses in sequence with plans to continue toward completion in a specific career pathway.
Virginia	A student who completes a coherent sequence of courses in a specific program area as identified in the Administrative Planning Guide.	A student who completes 50% of a coherent sequence of courses in a specific program area as identified in the Administrative Planning Guide.
Washington	A student who has enrolled in more than one vocational course within a single program area but has not yet completed the instructional program.	Locally determined by each local education agency.
West Virginia	A student who has completed at least four units of credit in a vocational concentration.	A student who enrolls and declares as an academic major a program leading to a certificate (one year) or an associate degree in a career-technical program.
Wisconsin	A student who took 24 credits in an academic year or enrolled for the first time in a less than 30 short term) program and had taken no classes in the prior 4 years (not including tech-prep or youth options courses.	A student who has been accepted into a program for the first-time and is enrolled full-time [took 24 or more credits in programs of one or more years in length or was accepted into a Short-Term (less than one-year) program]. First time means that a student has not been enrolled in a program for the past ten years (student records are not maintained at the state level for more than 10 years). A cohort of these students is created each year and followed for three years for outcomes; students remain in their cohort even if they take less than 24 credits during the second or third year that their cohort is followed.
Wyoming	A student who has taken three or more semester courses in a vocational program, including those who may be currently enrolled in their third course.	A student who has taken six or more semester courses in a vocational program, including those who may be currently enrolled in their sixth course.

### States' Measurement Approaches for Secondary and Postsecondary Academic and Technical Skill Attainment

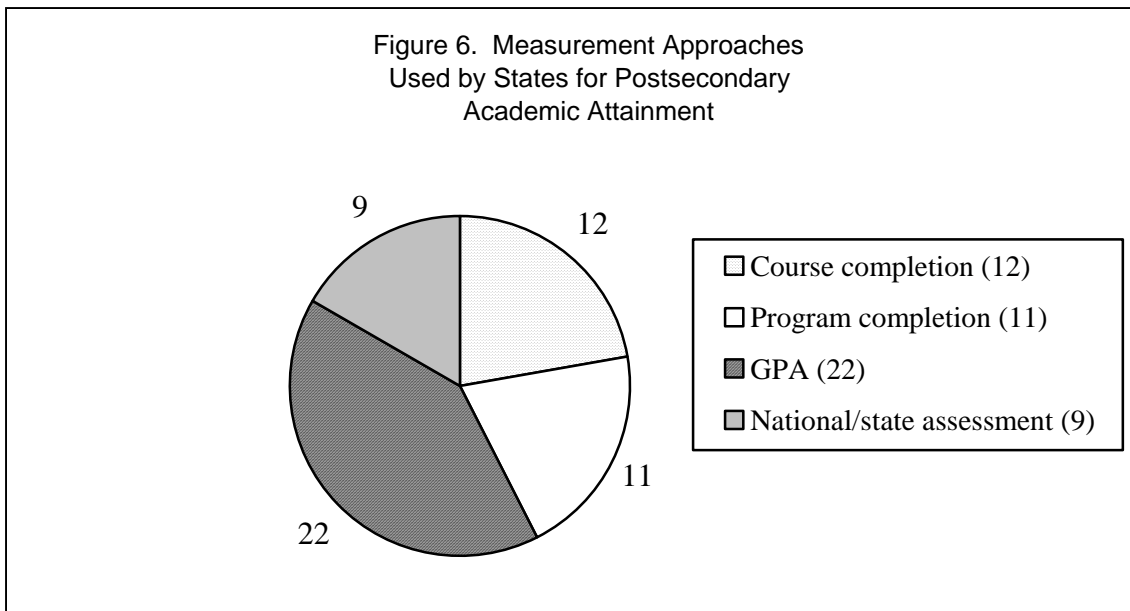

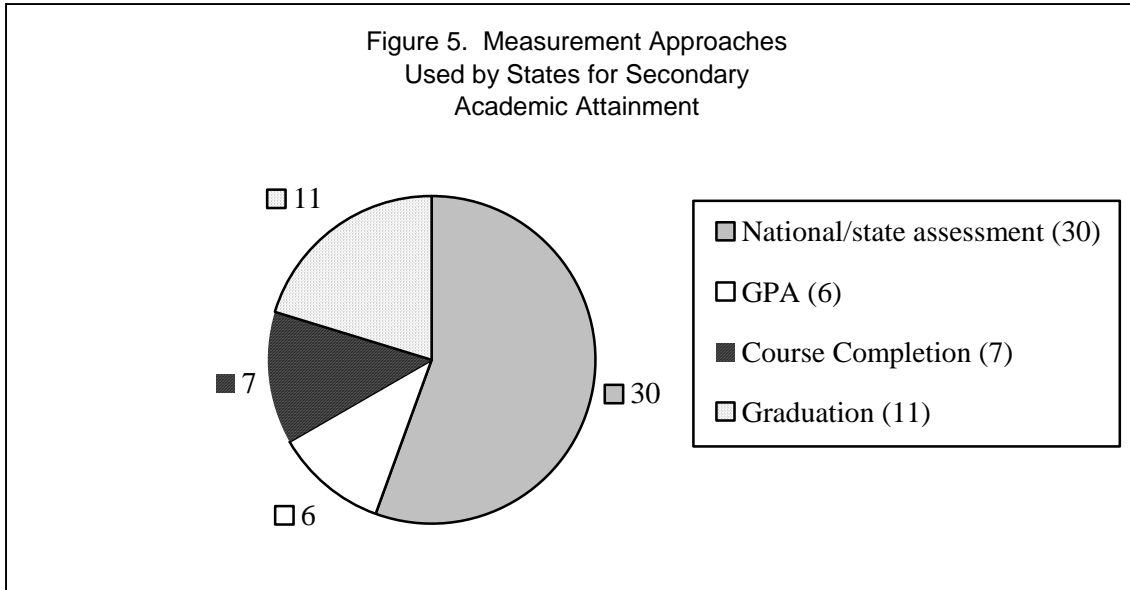

Figure 7. Measurement Approaches Used by States for Secondary Technical Skill Attainment

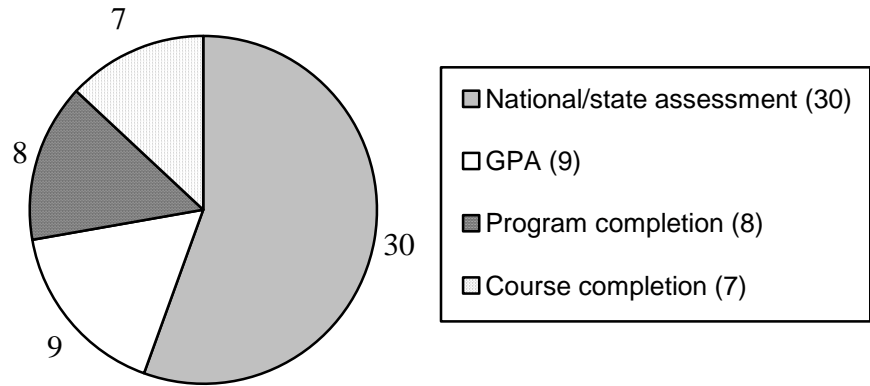

Figure 8. Measurement Approaches Used by States for Postsecondary Technical Skill Attainment

## Attachment D

---

### **Glossary of Terms**

Below are the statutory definitions for each of the special populations for which states are required to provide data.

#### **DISPLACED HOMEMAKER**

The term `displaced homemaker' means an individual who--

- (A)(i) has worked primarily without remuneration to care for a home and family, and for that reason has diminished marketable skills;
  - (ii) has been dependent on the income of another family member but is no longer supported by that income; or
  - (iii) is a parent whose youngest dependent child will become ineligible to receive assistance under part A of title IV of the Social Security Act (42 U.S.C. 601 et seq.) not later than 2 years after the date on which the parent applies for assistance under this title; and
- (B) is unemployed or underemployed and is experiencing difficulty in obtaining or upgrading employment.

#### **INDIVIDUAL WITH LIMITED ENGLISH PROFICIENCY**

The term `individual with limited English proficiency' means a secondary school student, an adult, or an out-of-school youth, who has limited ability in speaking, reading, writing, or understanding the English language, and--

- (A) whose native language is a language other than English; or
- (B) who lives in a family or community environment in which a language other than English is the dominant language.

#### **INDIVIDUAL WITH A DISABILITY**

(A) in general the term `individual with a disability' means an individual with any disability (as defined in section 3 of the Americans with Disabilities Act of 1990 (42 U.S.C. 12102).

(B) the term `individuals with disabilities' means more than 1 individual with a disability.

#### **NONTRADITIONAL TRAINING AND EMPLOYMENT**

The term `nontraditional training and employment' means occupations or fields of work, including careers in computer science, technology, and other emerging high skill occupations, for which individuals from one gender comprise less than 25 percent of the individuals employed in each such occupation or field of work.

## **TECH-PREP PROGRAM**

The term `tech-prep program' means a program of study that--

- (A) combines at least 2 years of secondary education (as determined under State law) and 2 years of postsecondary education in a nonduplicative sequential course of study;
- (B) strengthens the applied academic component of vocational and technical education through the integration of academic, and vocational and technical, instruction;
- (C) provides technical preparation in an area such as engineering technology, applied science, a mechanical, industrial, or practical art or trade, agriculture, a health occupation, business, or applied economics;
- (D) builds student competence in mathematics, science, and communications (including through applied academics) in a coherent sequence of courses; and
- (E) leads to an associate degree or a certificate in a specific career field, and to high skill, high wage employment, or further education.

**Carl D. Perkins Vocational and  
Technical Education Act of 1998  
(Perkins III)**

**INDIVIDUAL STATE DATA PROFILES:  
PY 2003-2004**

## **Notes for Interpreting the Individual State Data Profiles**

Each state's data need to be reviewed in the context of that state's definition of a concentrator. In view of the different state definitions of "concentrator" and the differences in sizes of student populations across states, some of the data provided by states in disaggregated form could be personally identifiable. Therefore, as a cautionary measure, the department has masked data in certain cells to ensure that students could not be personally identified. Specifically, where a state reported actual performance data above 95% or below 10%, the cell was coded as >95% and <10%, respectively. We will continue to examine whether this appropriately makes data available to the public as required by Section 113(c)(3) of Perkins III while ensuring that the available data are not personally identifiable.

In finalizing their data submissions to this department, the states attested to the accuracy and completeness of the data. The term "2003-2004 levels" refers to the adjusted performance levels agreed upon by the department and a particular state. The data are self-explanatory for the purpose of Section 113(c)(1) of Perkins III, which is to report the progress of the states in achieving their adjusted levels of performance for core indicators and any additional state indicators. The abbreviated headings and definitions used by some states, however, may not always clarify distinctions or similarities in the specific data collected for different sub-indicators. Anyone wishing further information about a particular state's data may obtain information from the Accountability and Performance Branch by calling Dr. John Haigh at (202) 245-7700.

Indicators	Academic Attainment	Skill Attainment	Secondary Completion	Credential and Diploma	Secondary Placement	Nontraditional Participation	Nontraditional Completion
Measurement Approach	State Academic Assessment	Vocational/Technical Course Completion	State/Local Administered Data	N/P	Surveys/Placement Records	State/Local Administrative Data	State/Local Administrative Data
Measurement Definitions	Percent of program concentrators who leave secondary education in the reporting year that meet or exceed all the reading, writing, and math state standards as assessed by the Arizona Instrument to Measure Standards (AIMS) test.	Percent of program concentrators who leave secondary education in the reporting year that pass a state-adopted proficiency assessment or, in the absence of such an assessment, have documented attainment of at least 80% of the occupational Level III programs.	Percent of program concentrators who receive a secondary school diploma in the reporting year and left school.	N/P	Percent of program completers who graduated in the previous year and were placed in postsecondary education, advanced training, military service, or employment in the reporting year.	Percent of nontraditional male and nontraditional female students enrolled in nontraditional Level III vocational technical education courses in the reporting year.	Percent of nontraditional program concentrators who leave secondary education in the reporting year who pass a state-adopted proficiency assessment or, in the absence of such an assessment, have documented attainment of at least 80% of the occupational Level III programs.

Measurement Definitions	Percent of occupational program majors (PCS 1.2) in the cohort who completed a degree or occupational certificate or who are still enrolled in the institution or have transferred within 5 years or enrollment.	Percent of occupational program majors in the cohort who completed a degree or occupational certificate or who are still enrolled in the institution or have transferred within 5 years or enrollment.	Percent of occupational program majors in the cohort who completed a degree or occupational certificate within 5 years of enrollment.	Percent of all degree and occupational certificate completers in the same fiscal year identified by social security number who are identified as employed in the IL UI wage records in the 3rd quarter after program completion and/or were enrolled in the IL public higher education shared database in the academic year following program completion.	Percent of all degree and occupational certificate completers in a given fiscal year identified by social security number who are identified as employed in the 3rd and 4th quarters after program completion.	Percent of total female and male enrollment in specified occupational programs that lead to employment nontraditional for their gender.	Percent of total female and male program completions in specified occupational programs that lead to employment nontraditional for their gender.

## Postsecondary

Indicators	Academic Attainment	Skill Attainment	Postsecondary Degree/Credential	Postsecondary Placement	Postsecondary Retention	Nontraditional Participation	Nontraditional Completion
Measurement Approach	Overall GPA	National/State Standards & Local Assessment	State/Local Data	Administrative Record Exchange	Surveys/Placement Records	State/Local Data	State/Local Data
Measurement Definitions	Number of postsecondary students who complete occupationally specific programs and have a cumulative grade point average of at least 2.5 on a 4.0 grading system.	Number of students who complete occupationally specific programs and who have met program-defined and industry validated career and technical skill standards and have stopped program participation in the reporting year.	The number of full-time beginning first year students who enroll in occupationally specific programs as degree seeking students and attain a postsecondary degree or credential within three years.	Number of postsecondary students who complete occupationally specific programs and are placed in further education, or employment within IN, or national military service.	Number of students who completed a postsecondary program and were placed in further postsecondary education or advanced training, employment, and/or military service in the reporting year and were retained in one or more of these types of placement.	Number of postsecondary students enrolled in occupationally specific programs that are nontraditional for their gender.	Number of postsecondary students completing occupationally specific programs that are nontraditional for their gender.

## Postsecondary

Indicators	Academic Attainment	Skill Attainment	Postsecondary Degree/Credential	Postsecondary Placement	Postsecondary Retention	Nontraditional Participation	Nontraditional Completion
Measurement Approach	Program Completion	Program Completion	Program Completion	State Surveys	Administrative Record Exchanges	State/Local Data	State/Local Data
Measurement Definitions	Number of vocational concentrators who have met program defined standards (for certificates, diplomas, or AAS or AS degrees) and have completed their program in the reporting year.	Number of vocational concentrators who have met program defined standards (for certificates, diplomas, or AAS or AS degrees) and have completed their program in the reporting year.	Number of vocational concentrators who have met program defined standards (for certificates, diplomas, or AAS or AS degrees) and have completed their program in the reporting year.	Number of vocational completers reporting related placement, unrelated placement, continued education, or military placement in reporting year.	Number of vocational completers identified as employed within Unemployment Insurance wage detail records, 3rd Quarter and 4th Quarter after placement reporting period.	Number of vocational participants in underrepresented gender groups who participated in a nontraditional vocational program during reporting year.	Number of vocational concentrators in underrepresented gender groups who received a certificate, diploma, or AAS or AS degree in a nontraditional program area in the reporting year.

## Postsecondary

Indicators	Academic Attainment	Skill Attainment	Postsecondary Degree/Credential	Postsecondary Placement	Postsecondary Retention	Nontraditional Participation	Nontraditional Completion
Measurement Approach	Academic GPA	Vocational-Technical	State/Local Administrative Data	Administrative Record Exchanges	Administrative Record Exchanges	State/Local Administrative Data	State/Local Administrative Data
Measurement Definitions	Percent of exiting vocational completers who met program-defined academic standards with a GPA of 2.5 or higher.	Percent of exiting vocational completers who met program-defined vocational standards with a GPA of 2.5 or higher.	Percent of students reaching threshold level of vocational education who are not yet eligible to complete and those students who received or were eligible to receive a postsecondary degree, diploma, or certificate who received a postsecondary degree, diploma, or certificate and left the postsecondary program in the reporting year.	Percent of exiting vocational completers who were employed during the third quarter of the calendar year.	Percent of exiting vocational completers who were employed during the third quarter of the calendar year and were retained in employment during the fourth quarter.	Percent of students in underrepresented gender groups among participants in a vocational and technical education program that leads to nontraditional training and employment.	Percent of students in underrepresented gender groups among completers.
