1999 HMDA EDITS

QUICK REFERENCE TO UNDERSTANDING HMDA EDITS

HMDA edits are divided into three types: Syntactical, Validity, and Quality. Each edit questions specific reported data that should be thoroughly checked in order to ensure the data are reported accurately. These edits are defined as follows:

1. **Syntactical (S)** - The applications will not be loaded to the FFIEC database. If they should be included on the FFIEC database, the data must be corrected. Some examples are incorrect activity year used in your submission; or initial LAR data (T2 record) already on file, which indicates that a LAR with a duplicate loan application number was submitted.

S001-S006 are for agency use only.
2. **Validity (V)** - The specified data are reported incorrectly and must be corrected. The most common example is incorrect census tract/BNAs.
3. **Quality (Q)** - The data in question do not agree with an expected standard (value). Review for correctness and change only if erroneous data has been reported. An example is reported income that is less than or equal to \$9 thousand.

In addition, any data containing validity edits that are not corrected will result in an erroneous disclosure statement. Loan applications with syntactical edits, if not corrected, will not be represented on the disclosure statement at all. Data with quality edits, if not corrected when inaccurate, will cause an incorrect disclosure statement.

1999 HMDA EDIT CHANGES:

➤ NEW EDITS

EDIT

- Q029 Checks for valid property location information when reported state/county combination is completely located in an MSA.
- Q030 Checks for valid property location information for MSA/state/county/census tract-BNA.

➤ MODIFY EDIT EXPLANATIONS

EDIT

- S020 Modified edit test to include a verification that is currently performed. In addition to checking for a valid agency code, the edit test verifies that the agency sending the data agrees with the agency code in the report. Also, modified the edit explanation on edit report to the respondent.
- V140 Modified the edit explanation on the edit report to respondents.
- V145 Modified the edit explanation on the edit report to respondents.
- V265 Modified the edit explanation on the edit report to respondents.

EXPLANATION OF VALIDITY EDITS 285, 295, & 300

Regulation C (Home Mortgage Disclosure Act) has been recently amended to require financial institutions reporting NA in the MSA to either enter NA or to enter correct geographic information in the other three property location fields (state, county, census tract-BNA¹) of the HMDA-LAR for the property in question. The reported geographic data will be verified for its validity. Previously, geographic information was only verified when an MSA was identified on the HMDA-LAR.

Purpose: Validity edits 285 and 295 were added to the HMDA Edits to comply with Regulation C. These edits are intended to verify the validity of the property location information when the MSA field is reported as NA or a numeric code.

Validity edit 300 was modified to verify the validity of the census tract/BNA for the state/county combination reported regardless of what is reported in the MSA field.

Further Explanation: When MSA is NA or a valid FIPS code and the state (V285), state/county (V295), or state/county/census tract-BNA (V300) combinations are provided, there must be verification that the combinations are valid. Below are examples of the geographic combinations that may be used if it is valid for a respondent to report an MSA as NA.

NA/51/NA/NA*	- State
NA/51/059/NA	- State/County
NA/51/059/4154.00**	- State/County/Census Tract-BNA

*Though this example is an acceptable entry and will pass all validity edits (provided a valid numeric state code is entered), the preference is for the institution to provide a valid state and county combination. In the majority of cases, an institution should be able to provide this information since every state and county has a code.

**For the State/County/Census Tract-BNA combination, a reported Census Tract-BNA will always be verified. However, where the county is classified as small or untraced it is acceptable for a reporter to code census tracts or BNAs on properties in small or untraced counties as NA on the HMDA-LAR form. (If MSA is reported using the valid FIPS code, then all other property fields must be coded with the valid State/County/Census Tract-BNA combination.)

Any combination of the property location reported when the MSA is NA, other than those aforementioned, are incomplete; therefore, those combinations will not be valid. **Though any one of these combinations can be used, it is strongly suggested that CRA reporters who report HMDA fully geocode the property location.**

In comprehending the logic of these validity edits, it may be useful to begin at the census tract-BNA. If the census tract-BNA is reported by a lender, then the county and state **MUST** also be reported. If a county is reported, then a state **MUST** also be reported. A state may be reported by itself, with a county, or with a county and census tract. In reverse order, if an MSA equals NA, then the acceptable combinations are state only, state/county, or state/county/census tract-BNA.

If **CENSUS TRACT-BNA** is reported, then
↓
COUNTY must be reported, then
↓
STATE must be reported where
↓
MSA = NA

¹Block Numbering Areas (BNAs) are small statistical subdivisions of a county for grouping and numbering blocks in non-metropolitan counties where local census statistical area committees have not established census tracts. Counties that are delineated with BNAs are considered small or untraced counties and are not required to be reported. It is *acceptable* for a HMDA reporter to code census tracts or BNAs in small or untraced counties as "NA" on the HMDA-LAR form.

Special Notes pertaining to Quality Edits for Home Mortgage Disclosure Act data.

The quality edits that are enumerated in the remaining portion of the edit table are separated into two report categories distinguished as follows:

-- Edit Report

An edit report represents a respondent's individual edit report that is generated and sent to the reporter immediately after their HMDA data are received and loaded to the FFIEC HMDA database. The edit report could contain syntactical, validity, and quality edits. The edit report is run on the data as it is being loaded into the database. As such, it represents an incremental picture of your data as it is arriving.

-- End-of Cycle Reports

End-of-Cycle reports that contain one or several quality edits are generated near the end of the processing cycle after all data from a respondent have been received.

It is important that all data for the specified respondent, region, or agency be received and uploaded prior to running end-of-cycle reports since comparisons with previous year's data, or with all the current year's reported data, are fundamental outputs of these reports.

One of the end-of-cycle reports is known as the Macro Quality Edit Report and contains quality edits Q006-Q009, Q011, Q015, Q016, and Q023. Three other reports identify possible reporting errors dealing with quality edits Q028, Q029, and Q030.

On behalf of the FFIEC, the Federal Reserve System stores the HMDA data and maintains the database for all the respondents of the FFIEC member agencies (OCC, FRB, FDIC, NCUA, and OTS) and HUD who participate in the collection and reporting of HMDA data. Subsequently, Federal Reserve Board staff generate the separate macro level, end-of-cycle reports. In the majority of cases they review the results and complete any necessary calls to respondents to resolve the outstanding issues of the reports. However, they may also elicit the help of other agency staff in completing the review and resolution tasks.
