

# Reconciliation of the U.S.-Canadian Current Account, 2002 and 2003

By Patricia Abaroa, Edward Dozier, and Denis Caron

**O**n a reconciled basis, the U.S. deficit, or Canadian surplus, is \$38.9 billion for 2002 and \$41.7 billion for 2003 (chart 1, table 1).<sup>1</sup> The U.S.-published current-account balance with Canada is a U.S. deficit of \$28.7 billion for 2002 and a U.S. deficit of \$32.1 billion for 2003; the corresponding Canadian-published balance is a Canadian surplus of \$39.5 billion for 2002 and a Canadian surplus of \$44.7 billion for 2003.<sup>2</sup>

The results of the reconciliation of the bilateral current-account estimates of Canada and the United States for 2002 and 2003 are presented in this article.<sup>3</sup>

1. The reconciled estimates are intended to show how the current-account estimates would appear if both countries used the same definitions, methodologies, and data sources. In this article, all values are expressed in U.S. dollars.

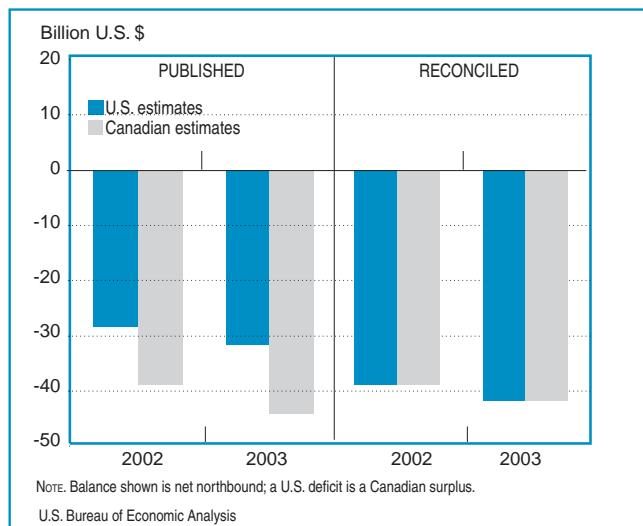

2. For this year's reconciliation, the U.S. deficit for 2002 is revised down from the previously published deficit of \$30.4 billion used in last year's reconciliation, and the Canadian surplus for 2002 is revised up from the previously published surplus of \$38.3 billion used in last year's reconciliation.

The details of the current-account reconciliation for 2002 and 2003 are presented in the tables that follow this article. Tables 2.1 and 2.2 show the details of the major types of reconciliation adjustments—definitional, methodological, and statistical—that were made to the major current-account components. Tables 3.1 and 3.2 present the published estimates, the estimates on a common basis (after the estimates have been adjusted for definitional and methodological differences), the reconciled estimates, and the amounts of the adjustments for each major current-account component. Tables 4–7 present the reconciliation details for goods, services, and investment income.<sup>4</sup>

3. The reconciliation of the current account has been undertaken each year since 1970. Summary results of the reconciliations were published in the United States in the following issues of the *Survey of Current Business*: June 1975, September 1976 and 1977, December 1979, June 1981, and each December of 1981–91. Complete details of the reconciliations for 1990 forward were published in the following issues of the *Survey*: November 1992, each October of 1993–95, and each November of 1996–2003. In Canada, the results were published in the following issues of *Canada's Balance of International Payments* (catalogue 67-001), a publication of Statistics Canada: Fourth Quarter 1973, Second Quarter 1976 and 1977, Third Quarter 1978 and 1979, First Quarter 1981, and each Third Quarter of 1981–2003.

4. For the reconciliation, some of the details presented in the tables in this article differ from those presented in the balance-of-payments tables regularly published by the U.S. Bureau of Economic Analysis and by Statistics Canada.

**Chart 1. U.S.-Canadian Current-Account Balance**

This article will also be published in *Canada's Balance of International Payments*, Third Quarter 2004.

**Table 1. Major U.S.-Canadian Balances**

<b>Current account .....</b>	<b>-32.1</b>	<b>44.7</b>	<b>-41.7</b>	<b>41.7</b>

NOTE: A U.S. surplus (+) is a Canadian deficit (-), and a Canadian surplus (+) is a U.S. deficit (-). Details may not add to totals because of rounding.

## Reconciled Current-Account Balances

In the U.S. current account, the reconciliation adjustments result in an increase of \$10.2 billion in the U.S. deficit for 2002 and an increase of \$9.6 billion in the U.S. deficit for 2003. For both years, the increases reflect larger upward adjustments to the U.S. southbound estimates than to the U.S. northbound estimates (tables 2.1 and 2.2).<sup>5</sup> For both years, the largest increases in the U.S. southbound estimates result from the addition of Canadian reexports to U.S. goods imports (a definitional adjustment), from the valuation of U.S. natural gas imports to include inland

5. In this article, the term "northbound" refers to U.S. exports of goods and services, U.S. income receipts, and current unilateral transfers to the United States, and it refers to Canadian imports of goods and services, Canadian income payments, and current unilateral transfers from Canada. The term "southbound" refers to U.S. imports of goods and services, U.S. income payments, and current unilateral transfers from the United States, and it refers to Canadian exports of goods and services, Canadian income receipts, and current unilateral transfers to Canada.

freight (a definitional adjustment), from an increase for undercoverage of some southbound services (a statistical adjustment), and for 2002, from adjustments for statistical differences in direct investment income. For both years, the largest increases in the U.S. northbound estimates result from upward adjustments to investment income for undercoverage of income on U.S. holdings of Canadian bonds (statistical adjustments), and for 2003, from adjustments for statistical differences in direct investment income and in "other" services.

In the Canadian current account, the reconciliation adjustments result in a decrease of \$0.6 billion in the Canadian surplus for 2002 and in a decrease of \$3.0 billion in the Canadian surplus for 2003. For both years, the decreases in the Canadian surplus reflect larger downward adjustments to the Canadian southbound estimates than to the Canadian northbound estimates. For both years, the largest downward

### Note on the U.S.-Canadian Current-Account Reconciliation

The U.S.-Canadian current-account reconciliation, which explains the differences between the estimates of the bilateral current account published by the U.S. Bureau of Economic Analysis (BEA) and those published by Statistics Canada, is undertaken because of the extensive economic links between Canada and the United States. The reconciled estimates are intended to assist analysts who use both countries' statistics and to show how the current-account estimates would appear if both countries used common definitions, methodologies, and data sources.<sup>1</sup>

In principle, the bilateral current account of one country should mirror the bilateral current account of the other country. Differences occur in the published estimates of the U.S. and Canadian current accounts because of variations in the definitions, methodologies, and statistical sources that are used by each country. Some of the differences for 2003 are in components of the current account for which data are still preliminary and subject to revision; these differences may be eliminated when final data for these components become available.

The longstanding Canadian-U.S. current-account reconciliation is among the leading examples of the benefits

of international data exchanges. As a part of the reconciliation process, Canada and the United States have evaluated the accuracy of each other's estimates, and as a result, each country now includes in its published estimates some data that are provided by the other country. The exchange of data between Canada and the United States for transactions such as trade in goods, travel, passenger fares, Canadian and U.S. Government transactions, and some large transportation transactions covers a substantial portion of the value of the Canadian and U.S. current account and has eliminated some of the differences in the Canadian- and U.S.-published estimates. In addition, the reconciliation process has highlighted areas where errors and omissions may exist in each country's estimates, which has helped in targeting data improvement efforts.

Although the U.S.- and Canadian-published estimates are reconciled and there is extensive exchange of data between Canada and the United States, differences in the published estimates remain. Complete substitution of the reconciled estimates for published estimates and complete exchange of data are not feasible for several reasons. For trade in goods, imports in the U.S. accounts would be affected because the United States attributes Canadian reexports to the country of origin rather than to Canada, the last country of shipment. For some accounts, the protection of the confidentiality of the source data bars the exchange of data. Finally, a few differences are attributable to different requirements for integrating the international and national (domestic) accounts in each country.

1. A detailed article on the methodology was published by BEA in "Reconciliation of the U.S.-Canadian Current Account" in the November 1992 SURVEY and by Statistics Canada in *Reconciliation of the Canadian-United States Current Account, 1990-1991*. Statistics Canada also published a shortened version in the December 1992 *Canadian Economic Observer* and in Canada's *Balance of International Payments, Third Quarter 1992*.

adjustments to the Canadian southbound estimates are from valuation adjustments to goods (definitional), from revisions to the published estimates of direct investment income (definitional adjustment), from the elimination of the withholding tax in current unilateral transfers (definitional adjustment), and from methodological adjustments to net some income of Canadian banks in "other" investment income. In the Canadian northbound estimates, the largest downward adjustments are from "other" investment income to eliminate withholding tax (definitional adjustment), to net some income of Canadian banks (methodological adjustment), and to eliminate statistical differences in income on U.S. holdings of Canadian bonds. For 2003, the reconciled estimates also reflect a large statistical adjustment in "other" services. Though the methodological adjustments explain part of the total adjustments to the northbound and the southbound estimates of "other" investment income, they do not affect the current-account balance because the northbound and the southbound methodological adjustments are offsetting.

### **Summary of Reconciliation Methodology**

In reconciling the U.S.- and Canadian-published bilateral current-account estimates, the estimates are first restated to a common basis—that is, they are adjusted for definitional and methodological differences; the remaining adjustments that are needed to reach the reconciled values are the statistical adjustments. The framework for reconciling the U.S. and Canadian estimates to a common basis mainly follows the international standards published in the International Monetary Fund's *Balance of Payments Manual* (fifth edition). The U.S.- and Canadian-published estimates now largely conform to the international standards, but some differences with the international standards—and between the U.S. and Canadian estimates—remain in the published estimates because of data limitations, difficulties in determining country attribution, and differences in classification and because in a few cases, international standards provide for more than one acceptable treatment.

The definitional adjustments mainly reflect data limitations and differences in country attribution. For example, as part of the reconciliation, U.S.-published estimates of imports of goods from Canada are adjusted to include Canadian reexports to the United States (goods imported by Canada from third countries and then reexported to the United States without substantial changes) because U.S. imports of goods are recorded on a country-of-origin basis. Another exam-

ple of a definitional adjustment is that the Canadian estimates, mainly investment income, are adjusted to a basis that is net of withholding taxes because the U.S. withholding tax estimates—which are included on a global basis in the U.S.-published accounts—cannot be allocated by country for comparison with the Canadian estimates.

The methodological adjustments mainly reflect differences in classification. For example, parts of the U.S. estimates of film rentals and courier services are recorded in various services accounts; for reconciliation, they are reclassified to a single account. A few U.S. and Canadian accounts, mainly interest income, are adjusted to a net or gross basis for comparability.

Statistical differences reflect the use of different source data in the United States and Canada, the difficulty in determining country attribution because of insufficient data, the preliminary nature of some of the data (particularly for the most recent year), and the use of sample data between benchmarks. For both the northbound and the southbound estimates, most of the statistical differences are in the U.S. and Canadian estimates of "other" services and of investment income.

### **Acknowledgments**

The reconciliations were carried out under the direction of Denis Caron, Chief, Current Account, in Statistics Canada's Balance of Payments Division, and Patricia Abaroa and Edward Dozier, international economists in BEA's Balance of Payments Division. At Statistics Canada, Denis Caron was responsible for reconciling Canadian goods and services, Michael Marth for Canadian direct investment income, and Robert Théberge for Canadian portfolio investment income, with the collaboration and assistance of Brian André, Heather Collier, Jacqueline Dickie, Christian Lajule, Éric Simard, and Angela Yuan. At BEA, Mai-Chi Hoang was responsible for reconciling goods; Michael Mann, Edward Dozier, and Erin Nephew, for services, with the assistance of Matthew Argersinger for financial services; Gregory Fouch, for the accounts related to Canadian direct investment in the United States; Mark New, for the accounts related to U.S. direct investment in Canada; and Patricia Abaroa for the portfolio income accounts.
