

Table K.1. Personal Income and Per Capita Personal Income by Metropolitan Area, 2000-2002-Continued

Table with 18 columns: Area Name, Personal income (Millions of dollars, Percent change, Dollars, Rank in U.S.), Area Name, Personal income (Millions of dollars, Percent change, Dollars, Rank in U.S.). Rows list various metropolitan areas and their corresponding income and population data for 2000, 2001, and 2002.

1. Per capita personal income was computed using Census Bureau midyear population estimates.
2. Percent change calculated from unrounded data.
3. The personal income level shown for the United States is derived as the sum of the county estimates. It differs from the estimate of personal income in the national income and product accounts (NIPAs) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition, it omits the earnings of Federal civilian and military personnel stationed abroad and

of U.S. residents employed abroad temporarily by private U.S. firms.
4. The metropolitan area definitions used by BEA for its personal income estimates are the new county-based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004) for federal statistical purposes.
