## NEW HOUSES SOLD AND FOR SALE IN APRIL 1999

This report provides statistics for new privately owned one-family houses sold and for sale. The U.S. Census Bureau and the U.S. Department of Housing and Urban Development jointly release this report.

Sales of new one-family houses in April 2000 were at a seasonally adjusted annual rate of 909,000 compared with the revised March rate of 965,000. The April 1999 rate was 930,000.

The median sales price of new houses sold in April 2000 was \$161,400; the mean sales price was \$208,000. Changes in median and average sales prices reflect changing proportions of houses with different locations, sizes, etc., as well as changes in the prices of houses with identical characteristics. For a measure of the change in the sales price of new houses sold which are the same with respect to important characteristics, refer to the price index found in Tables 7a and 8 of this report. Table 7 presents the Fisher Ideal chain-type annual-weighted index that does not hold any characteristics constant. For a description of these indexes, see the appendix of the March 1997 issue of this report.

The seasonally adjusted estimate of new houses for sale at the end of April was 319,000. This represents a supply of 4.2 months at the current sales rate.

### EXPLANATORY NOTES

The statistics in this report are estimated from sample surveys and are subject to sampling variability as well as errors of response and nonreporting. Estimated average relative standard errors for preliminary statistics for houses sold and for sale are shown in the tables. For monthly estimates they are based upon the latest 6-month period ending June or December (January-June or July-December). Quarterly estimates are based upon the more recent of the first 2 quarters or last 2 quarters of the most current year; annual estimates on the last 2 years.

For month-to-month comparisons of total houses sold, the range of the 90-percent confidence interval is  $\pm 9$  percentage points from the estimated change. When the range of the confidence interval contains zero, it is uncertain whether there was an increase or decrease; that is, the change is not statistically significant. Preliminary estimates of new houses sold are subject to revision due to the survey methodology and definitions used. The survey is based primarily on a sample of houses selected from building permits. Since a "sale" is defined as a deposit accepted or a sales agreement signed, this can occur prior to the permit being issued. An estimate of these prior sales is included in the sales figure. On average, the preliminary seasonally adjusted estimate of total sales is revised about  $\pm 3$  percent. This does not include the revisions made when new seasonal factors are computed.

In interpreting changes in the statistics in this report, note that month-to-month changes in seasonally adjusted statistics often show movements which may be irregular. It takes 4 months to establish an underlying trend for new houses sold.

HUD-coded manufactured homes are not included in these statistics. Data for these units can be found on the internet at:

[www.census.gov/const/www/index.html](http://www.census.gov/const/www/index.html)

For more information about these data, contact the Construction Expenditures Branch at 301-457-1605.

Historical statistics on new one-family houses sold and for sale from 1963 to date are available from the Residential Construction Branch, Manufacturing and Construction Division, U.S. Census Bureau, Washington, DC 20233-6900. Telephone: 301-457-1321.

<sup>P</sup>Preliminary. <sup>R</sup>Revised.

<sup>1</sup>Houses for which sales price was not reported have been distributed proportionally to those for which sales price was reported.

<sup>2</sup>Total equals 100 percent.

Note: The sales price includes the land.

**Table 5. Current Seasonal Factors**

Month and year	New houses sold					New houses for sale	Months' supply at current sales rate	Median months from start to—	
	United States implicit factor	Northeast	Midwest	South	West			Sale	End of month
2000: January <sup>f</sup> .....	89.8	78.0	75.2	94.0	94.6	99.8	109.7	114.0	107.1
February <sup>f</sup> .....	105.5	107.7	105.5	105.4	104.8	102.1	94.0	113.1	113.7
March <sup>f</sup> .....	117.5	104.6	122.5	115.3	121.3	99.3	83.3	102.6	111.1
April <sup>P</sup> .....	113.6	114.7	120.2	110.5	114.3	98.8	86.5	103.3	107.2

<sup>P</sup>Preliminary. <sup>f</sup>Revised.

Note: These are the seasonal factors used to adjust the most current preliminary and revised estimates. The factors are produced by running each series through the Census Method II X-12-ARIMA version seasonal adjustment program. For new houses sold, only the four regional series are run through this X-12-ARIMA program. The resulting seasonally adjusted estimates are then added to produce an estimate for the United States. The implicit factor is the result of dividing the unadjusted estimate by the seasonally adjusted estimate. It provides an indication of the overall seasonality for the particular month.

**Table 6. Median Number of Months on Sales Market**

[Houses not started are excluded. Medians computed from unrounded figures]

Period	Houses sold, measured from month of start		Houses for sale			Period	Houses sold, measured from month of start		Houses for sale		
	Not seasonally adjusted	Seasonally adjusted	Measured from month of start		Measured from month of completion (not seasonally adjusted)		Not seasonally adjusted	Seasonally adjusted	Measured from month of start		Measured from month of completion (not seasonally adjusted)
			Not seasonally adjusted	Seasonally adjusted					Not seasonally adjusted	Seasonally adjusted
