

# Housing Starts

SEPTEMBER 1998

U.S. Department of Commerce  
 Economics and Statistics Administration  
 BUREAU OF THE CENSUS

C20/98-9  
 Issued November 1998

## New Privately Owned Housing Units Started

Seasonally adjusted annual rate in thousands

— Seasonally adjusted annual rate  
 — 4-month moving average

Note: Total includes units started in structures with two to four units.  
 Source: U.S. Bureau of the Census, Housing Starts.

## HOUSING STARTS AND BUILDING PERMITS

Privately owned housing starts in September 1998 were at a seasonally adjusted annual rate of 1,576,000; this is 2 ( $\pm 6$ ) percent below the revised August rate of 1,616,000, but 5 ( $\pm 7$ ) percent above the September 1997 rate of 1,501,000.

Single-family housing starts in September 1998 were at a rate of 1,246,000; this is 1 ( $\pm 6$ ) percent below the August figure of 1,253,000. The September rate for units in buildings with five units or more was 298,000. The September rate for units in buildings with two to four units was 32,000.

During the first 9 months of this year, 1,218,900 housing units were started compared with 1,116,500 units for the same period in 1997. This is an increase of 9 ( $\pm 2$ ) percent.

New privately owned housing construction was authorized in September in the 19,000 permit-issuing places at a seasonally adjusted annual rate of 1,545,000; this is 5 ( $\pm 1$ ) percent below the revised August rate of 1,618,000 and 5 ( $\pm 1$ ) percent above the September 1997 figure of 1,475,000.

Single-family authorizations in September 1998 were at a rate of 1,162,000, this is 2 ( $\pm 1$ ) percent below the August figure of 1,180,000. Authorizations of units in buildings with five units or more were at a rate of 315,000 in September. The September rate of permit-authorized units in buildings with two to four units was 68,000.

During the first 9 months of this year, 1,208,400 housing units were authorized by permits in the 19,000 places compared with 1,098,900 units for the same period in 1997. This is an increase of 10 ( $\pm 1$ ) percent.

In interpreting changes in housing starts and building permits, note that month-to-month changes in seasonally adjusted statistics often show movements which

may be irregular. It may take 4 months to establish an underlying trend for total starts, 3 months for building permit authorizations, and 2 months for mobile home shipments.

Except for those on mobile home shipments, the statistics in this report are estimated from sample surveys and are subject to sampling variability as well as nonsampling error including bias and variance from response, nonreporting, and undercoverage. Estimated average relative standard errors of preliminary data are shown in the tables. Whenever a statement such as "2 ( $\pm 3$ ) percent above" appears in the text, this indicates the range (-1 to +5 percent) in which the actual percent change is likely to have occurred. All ranges given are 90-percent confidence intervals and account for only sampling variability. If a range contains zero, it is uncertain whether there was an increase or decrease; that is, the change is not statistically significant. For any comparison cited without a confidence interval, the change is statistically significant. Explanations of confidence intervals and sampling variability appear in the appendix to the April 1998 Current Construction Reports, C20/98-4. On average, the preliminary seasonally adjusted estimates of total housing starts and building permits are revised about  $\pm 1$  percent.

Housing starts and building permits data do not include mobile home units. Mobile home statistics are shown in Table 5.

## HISTORICAL DATA

Historical data on housing starts and residential permit authorizations are available from Residential Construction Branch, Manufacturing and Construction Division, Bureau of the Census, Washington, DC 20233-6900. Telephone 301-457-4703.

A list of tables and special supplements is shown below:

<b>AVERAGE RELATIVE STANDARD ERRORS<sup>1</sup></b>																				
End of period . . . (percent) . .	3	3	14	7	11	14	33	13	9	7	20	23	5	4	31	10	5	6	14	8

<sup>p</sup>Preliminary. <sup>f</sup>Revised.

<sup>1</sup>Average Relative Standard Errors: Average for the latest 6-month period (January through June or July through December).

Note: These backlog data represent the number of housing units authorized in all months up to and including the last day of the reporting period and not started as of that date without regard to the months of original permit issuance. Cancelled, abandoned, expired, and revoked permits are excluded from the backlog.

**Table 4. New Privately Owned Housing Units Started by Location and Type of Structure**

<sup>1</sup>Data for placements and shipments of mobile homes are seasonally adjusted at an annual rate.

<sup>2</sup>Average Relative Standard Errors (Avg. RSE): Annual—Avg. RSE for the last 2 years; Monthly—Avg. RSE for the latest 6-month period (January through June or July through December).

Note: Sales prices of new mobile homes shown in this report are reported by dealers who are instructed to include dealer setup costs. In some cases, there may be additional costs to prepare units for occupancy not included in the sales prices reported.

Source: Except for manufacturers' shipments, these data are produced by the Commerce Department's Bureau of the Census from a survey sponsored by the Department of Housing and Urban Development. Statistics on shipments are compiled from manufacturers' reports to the National Conference of States on Building Codes and Standards (NCSBCS).

# Supplement.

## Survey of New Mobile Home Placements

During the second quarter of 1998, an estimated 85,800 new mobile homes were placed for residential use. Of these, 36,000 were single-wide homes and 48,200 were double-wides. The average sales price of all homes placed in the second quarter was \$42,600. The average price of a single-wide home was \$29,600 compared with \$51,300 for double-wides. Average prices of all homes placed in the second quarter of 1998 ranged from \$40,200 in the South to \$53,800 in the West. The number of homes on dealer lots at the end of June 1998 was 152,700.

In this supplement, quarterly and annual data are provided for mobile homes placed, average sales prices, and dealers' inventories. These are shown for the United States and the four census regions. The survey is conducted by the Bureau of the Census and sponsored by the Department of Housing and Urban Development.

The methodology for collecting information on new mobile homes for 1974 through 1979 involved contacting a sample of mobile home dealers each month within 137 geographic areas or primary sampling units. The dealers were requested to provide data on the number of mobile homes received from manufacturers, the number placed on a site for residential use, and the number held in inventory.

The methodology used after 1979 involves a monthly sample of new mobile homes shipped by manufacturers. The dealer to whom the sampled unit was shipped is contacted by telephone and asked about the status of the unit. This is done each month until that unit is reported as placed.

### DEFINITIONS

A mobile home is defined as a movable dwelling, 8 feet or more wide and 40 feet or more long, designed to be towed on its own chassis, with transportation gear integral to the unit when it leaves the factory, and without need of a permanent foundation. These mobile homes include multi-wides, which are counted as single units, and expandable mobile homes. Excluded are travel trailers, motor homes, and modular housing.

Beginning in 1980, the average sales prices are computed from data for mobile homes sold at or before the time they are placed on a site. Prices (values) of mobile homes leased or sold after placement are not collected. The average sales price computation for mobile homes placed prior to 1980 included not only the sales price of those sold, but also the intended sales price of those for sale and the value of leased mobile homes.

### RELATED STATISTICS

The series of shipments of mobile homes shown in Table 5 of this report are estimates of new mobile homes shipped by manufacturers each month. These estimates differ from mobile home placements (shown in this supplement and in Table 5) in that shipments to dealers may or may not be placed in the same month as they are shipped.

### RELIABILITY OF ESTIMATES

The estimates in this supplement are based on a sample survey and may differ from the results that would have been obtained from a complete census using the same schedules and procedures. An estimate based on a sample survey is subject to both sampling error and nonsampling error. The accuracy of a survey result is determined by the joint effects of these errors. Sampling error reflects the fact that only a particular sample was surveyed rather than the entire population. Nonsampling errors can be attributed to many sources: inability to obtain information about all cases in the sample, definitional difficulties, differences in interpretation of questions, inability or unwillingness of respondents to provide correct information, and errors made in processing the data. These nonsampling errors also occur in complete censuses. Although no direct measurements of the biases have been obtained, it is believed that most of the important response and operational errors were detected in the course of reviewing the data for reasonableness and consistency. As derived for this report, the estimated relative standard errors include part of the effect of nonsampling errors, but do not measure any systematic biases in the data.

Each sample selected for the Survey of New Mobile Home Placements is one of a large number of similar probability samples that, by chance, might have been selected under the same specifications. Estimates derived from the different samples would differ from each other. The standard error, or sampling error, of a survey estimate is a measure of the precision with which an estimate from a particular sample approximates the average from all possible samples. Estimates of the standard errors for mobile home placements, average sales prices, and dealers' inventories have been computed from the sample data. They are presented in the tables in the form of average relative standard errors. The relative standard error equals the standard error divided by the estimated value to which it refers. For a more detailed description of sampling variability, see the appendix in the April 1998 Current Construction Reports, C20/98-4.

<b>AVERAGE RELATIVE STANDARD ERRORS<sup>2</sup></b>															
Annual . . . . . (percent) . .	2	3	2	7	11	9	3	6	3	2	3	3	4	10	4
Quarterly . . . . . (percent) . .	2	3	2	13	13	7	5	5	5	4	2	3	10	10	5

<sup>1</sup>Includes mobile homes with more than two sections.

<sup>2</sup>Average Relative Standard Errors (Avg. RSE): Annual—Avg. RSE for the last 2 years; Quarterly—Avg. RSE for the latest 2-quarter period (quarter 1 through quarter 2 or quarter 3 through quarter 4).

Note: Sales prices of new mobile homes shown in this report are reported by dealers who are instructed to include dealer setup costs. In some cases, there may be additional costs to prepare units for occupancy not included in the sales prices reported.

Table S-3. **New Mobile Homes on Dealer Lots at End of Period**
