ACKNOWLEDGMENTS

Acknowledgment is made to Messrs. Richard Rogers, William Killian and Spencer Gardner for their technical support in the preparation of the Apollo 11 Flight Plan.

Views of the earth and the P52 stars shown in the Flight Plan were taken from the document, Views from the CM and LM During the Flight of Apollo 11 (Mission G).

The CSM and LM attitude information was taken from the document, Lunar Orbit Attitude Sequence for Mission G.

TABLE OF CONTENTS

Abbreviations	iii
Introduction	xi

SECTION I - GENERAL

1. Mission Description	1-1
2. Summary Flight Plan (TLC-TEC)	1-5
3. Summary Flight Plan (Lunar Orbit)	1-6
4. LM Power Descent Profile	1-7
5. CSM Burn Schedule	1-8
6. LM Burn Schedule	1-9
7. Lunar Landing Site Data	1-10
8. Landmark Tracking Data	1-10
9. Flight Plan Notes	1-13

SECTION II - UPDATE FORMS

1. Update Forms Table	2-1
2. CSM Maneuver Update Pads	2-2
3. LM Maneuver Update Pads	2-27

SECTION III - DETAILED TIMELINE

1. Launch Phase	3-1
2. TLI-T&D	3-3, 3-4
3. Translunar Coast Activities	
a. Cislunar Navigation	3-7, 3-17
b. LM Familiarization	3-35
c. Lunar Orbit Insertion	3-47
4. Lunar Orbit Activities	
a. Second LM Ingress	3-53
b. LM Activation and C/O	3-63

SECTION III CONT'D

c. Undocking	3-67
d. Touchdown	3-69
e. EVA	3-77
f. LM Liftoff	3-90
g. LM Active Docking	3-94
h. LM Jettison	3-97
5. TEI-TEC	3-101
6. Entry	3-135

SECTION IV DETAILED TEST OBJECTIVES

1. Detailed Test Objectives	4-1
2. Test Objective/Mission Activity Cross Reference	4-2
3. Test Objectives	4-6

SECTION V - CONSUMABLES

1. RCS Propellant Usage	5-2
2. SM RCS Budget	5-3
3. CM RCS Budget	5-22
4. SPS Budget	5-23
5. LM RCS Budget	5-25
6. DPS Budget	5-31
7. APS Budget	5-32
8. CSM EPS Budget	5-36
9. LM EPS Budget	5-41
10. LM ECS Budget	5-45
11. PLSS Budget	5-50

SECTION VI - SUMMARY FLIGHT PLAN

Summary Flight Plan	6-1

SYMBOL NOMENCLATURE

INTRODUCTION

This Flight Plan has been prepared by the Flight Planning Branch, Flight Crew Support Division, with technical support by TRW Systems.

This document schedules the AS-506/CSM-107/LM-5 operations and crew activities to fulfill, when possible, the test objectives defined in the Mission Requirements, G Type Mission Lunar Landing.

The trajectory parameters used in this Flight Plan are for July 16, 1969 launch, with a 72° launch azimuth and were supplied by Mission Planning and Analysis Division as defined by the Apollo Mission G Spacecraft Operational Trajectory.

The Apollo 11 Flight Plan is under the configuration control of the Crew Procedures Control Board (CPCB). All proposed changes to this document that fall in the following categories should be submitted to the CPCB via a Crew Procedures Change Request:

1. Items that impose additional crew training or impact crew procedures.
2. Items that impact the accomplishment of detailed test objectives.
3. Items that result in a significant RCS or EPS budget change.
4. Items that result in moving major activities to a different activity day in the Flight Plan.
5. Items that require a change to the flight data file.

The Chief, Flight Planning Branch (FCSD) will determine what proposed changes fall in the above categories.

Mr. T. A. Guillory will act as co-ordinator for all proposed changes to the Apollo 11 Flight Plan.

Any requests for additional copies or changes to the distribution lists of this document must be made in writing to Mr. W. J. North, Chief, Flight Crew Support Division, MSC, Houston, Texas.

SECTION I - GENERAL

MISSION DESCRIPTION

1. Launch and EPO (Duration 2:44) LIFT OFF - 2:44 GET
 - (a) Nominal launch time is 9:32 EDT, July 16, 1969, with a launch window duration of 4 hrs. 24 min.
 - (b) Earth orbit insertion into a 100 nm circular orbit at 11 min. 43 sec. after lift-off
 - (c) CSM systems C/O in earth orbit
 - (d) Optional IMU realign (P52) to the pad REFSMMAT during the first night period
 - (e) TLI occurs at 2:44:26 GET over the Pacific Ocean during the second revolution. (See Table 1-1 for burn data).

2. Translunar Coast (Duration 73:10) 2:44 - 75:54 GET

After TLI, which places the spacecraft in a free lunar return trajectory, the following major events occur prior to LOI:

 - (a) Transposition, docking and LM ejection, including SIVB photography
 - (b) Separation from SIVB and a CSM evasive maneuver
 - (c) SIVB propulsive venting of propellants (slingshot)
 - (d) Two series of P23 cislunar navigation sightings, star/earth horizon, consisting of five sets at 06:00 GET and five sets at 24:30 GET
 - (e) Four midcourse corrections which take place at TLI + 9, TLI + 24, LOI - 22 and LOI - 5 hours with ΔV nominally zero (See Table 1-1).

- (f) Passive thermal control (PTC) will be conducted during all periods when other activities do not require different attitudes.
- (g) LM inspection and housekeeping
- (h) LOI₁, performed at 75:54:28 GET, ends the TLC phase.

3. Lunar Orbit (Duration 59:30) 75:54 - 135:24 GET

LOI Day (Duration 25:00) 69:00 - 94:00

- (a) LOI₁
- (b) Photos of targets of opportunity
- (c) LOI₂
- (d) Post LOI₂ LM entry and inspection. S-Band/VHF B Voice tests will be conducted.
- (e) Post LOI₂ Pseudo landmark tracking (one set of sightings)
(See Table 1-4)
- (f) Rest period of 9 hours

DOI and EVA Day (Duration 28:00) 94:00 - 122:00 GET

- (a) Docked LM activation and checkout
- (b) Docked landing site landmark sighting (one set of sightings)
(See Table 1-3)
- (c) Undocking and separation
- (d) DOI thru landing (See Figure 1-3 Powered Descent)
- (e) LM post touchdown and simulated liftoff
- (f) Rest period (LM) of 4 hours
- (g) CSM plane change
- (h) Rest period (CSM) of 4 hours

- (i) EVA prep
- (j) EVA for 2 hours 40 minutes
- (k) Post EVA
- (l) Rest period (LM) 4 hours 40 minutes
- (m) Rest period (CSM) 4 hours 50 minutes

Ascent and TEI Day (Duration 25:00) 122:00 - 147:00 GET

- (a) LM Lift-Off and Insertion
- (b) LM active rendezvous
 - CSI
 - PC
 - CDH
 - TPI
 - Braking
- (c) Docking
- (d) LM jettison
- (e) TEI
- (f) Rest Period

4. Lunar Orbit Particulars (Average Values for a 60 x 60 nm orbit)

- (a) Revolutions start at 180° longitude
- (b) Revolution duration - 1 hr. 58.2 min.
- (c) S/C night period duration - 47 min.
- (d) MSFN coverage per rev. - 72 min.
- (e) Orbit inclination - 1.25° for July 16, 1969 launch

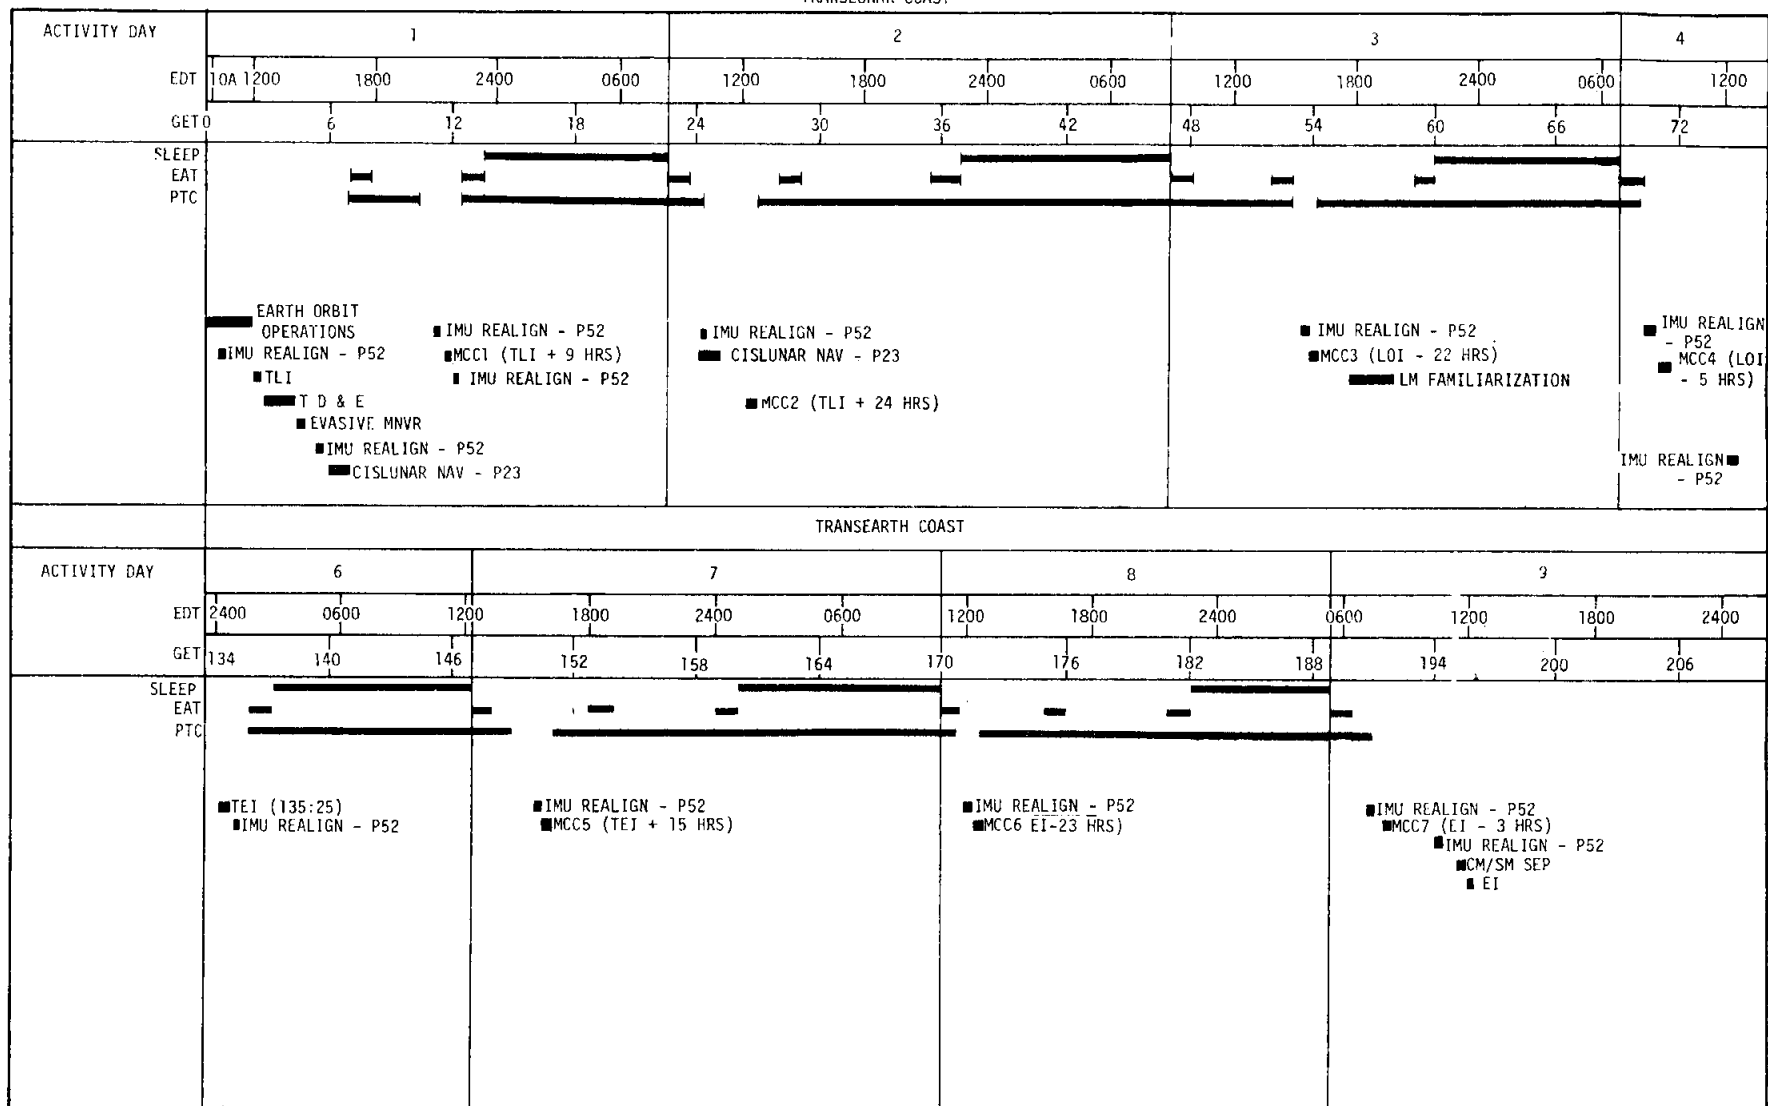

- (f) S/C orbital rate - $3^\circ/\text{min.}$ ($.05^\circ/\text{sec}$)
- (g) Lighting change at fixed ground point - $1^\circ\text{West}/\text{Rev.}$
- (h) Horizon visibility $\pm 20^\circ$ selenocentric angle on the lunar surface
- (i) One lunar degree on lunar surface is 16.35 nm
- (j) Site 2 will be visible (3° sun angle) at REV. 7
- (k) S/C subvehicle point to horizon 327 nm.

5. Transearch Coast and Entry (Duration 59:39) 131:52 - 195:03 GET

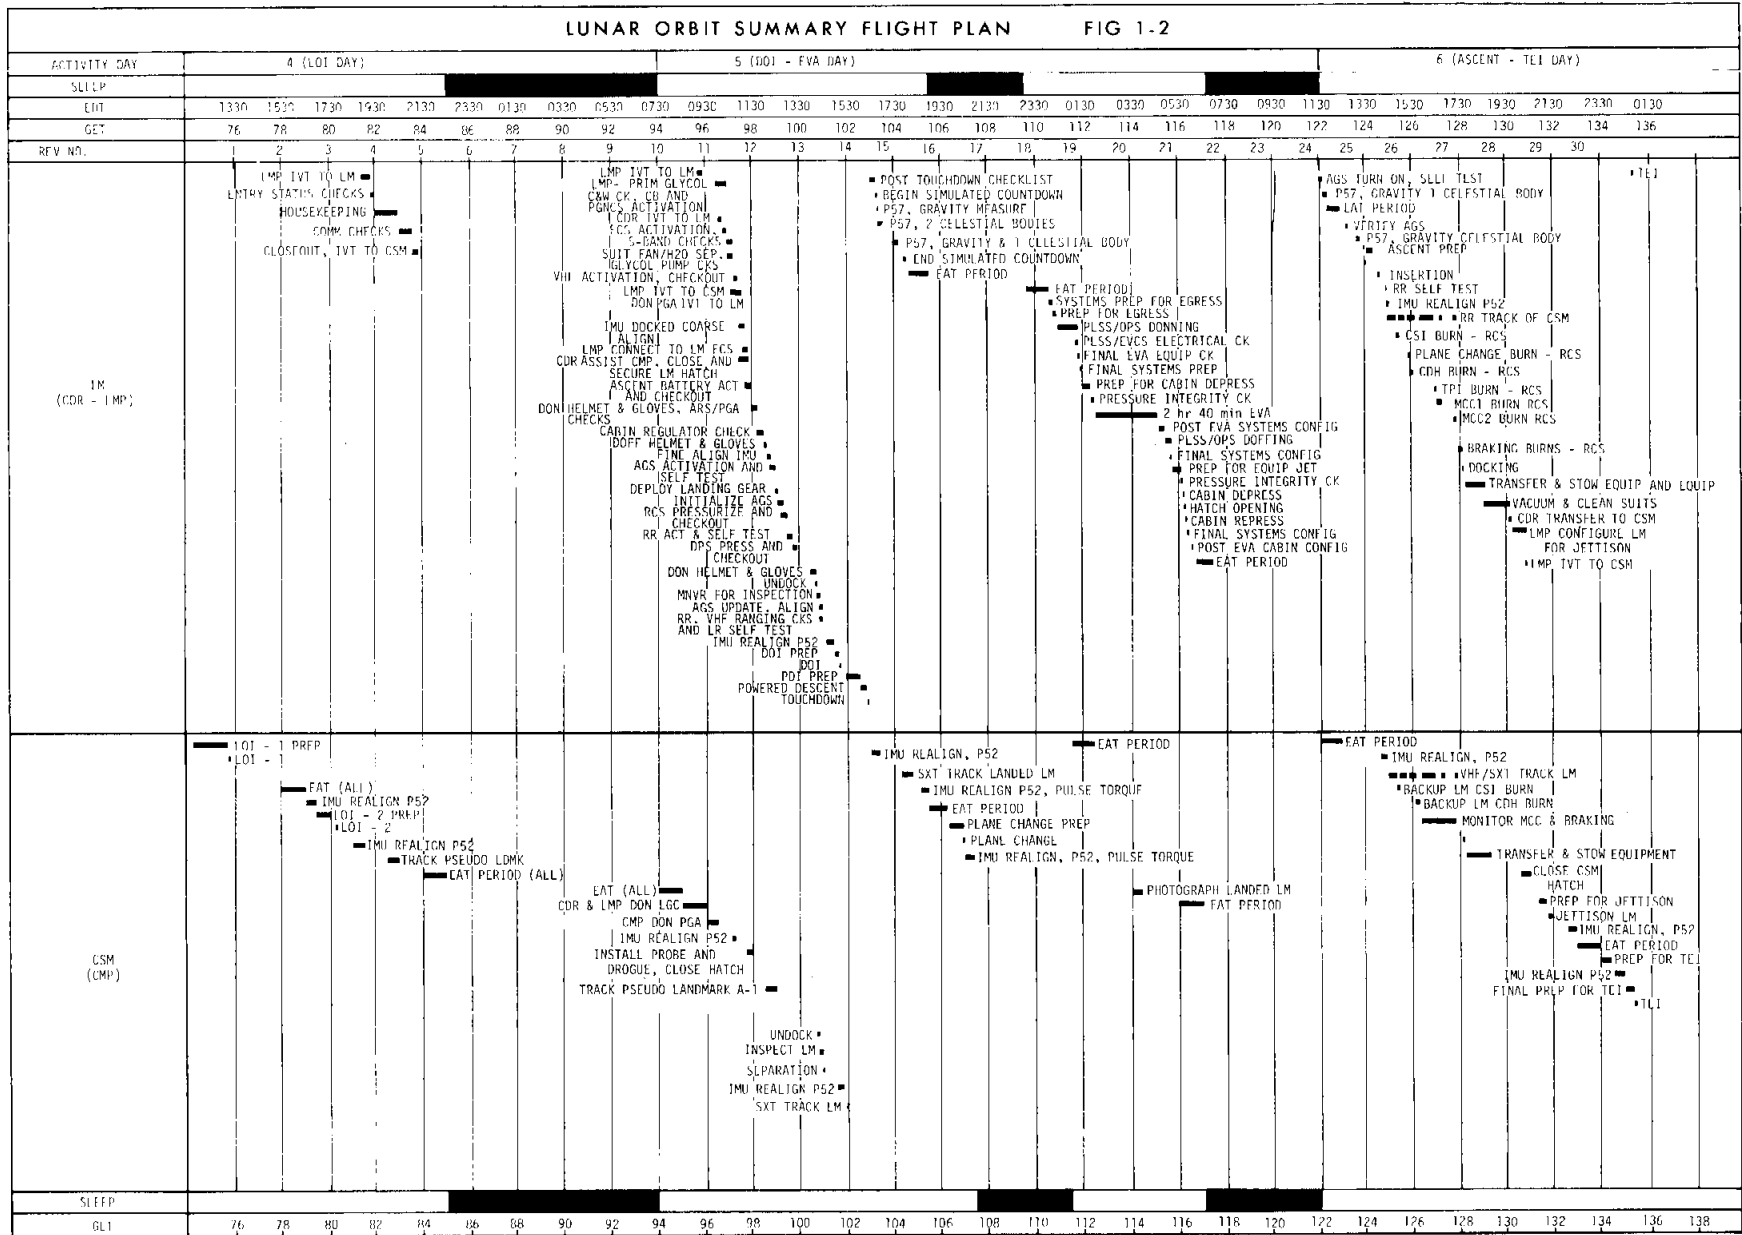

Transearch coast begins with TEI at 135:24:34 GET and consists of the following major events:

- (a) Three midcourse corrections are scheduled at TEI + 15, EI - 23 and EI - 3 hours with ΔV nominally zero.
- (b) CM/SM separation takes place at 194:51 GET and Entry Interface occurs at 195:03 GET.
- (c) Splashdown will occur in the Pacific Ocean at a longitude of about 172.4° West at 195:17 GET. This will occur approximately 25 minutes prior to sunrise local time.

FLIGHT PLAN NOTES

A. Crew

1. Crew designations are as follows:

<u>Designation</u>	<u>Prime</u>	<u>Backup</u>
Commander (CDR)	Armstrong	Lovell
Command Module Pilot (CMP)	Collins	Anders
Lunar Module Pilot (LMP)	Aldrin	Haise

2. Crew positions during the mission are as follows:

	<u>Left</u>	<u>CSM</u> <u>Center</u>	<u>Right</u>	<u>Left</u>	<u>LM</u> <u>Right</u>
Launch thru TLI	CDR	LMP	CMP		
T&D thru Entry	CMP	CDR	LMP		
Manned LM	CMP			CDR	LMP

3. The crew will eat and sleep simultaneously throughout the mission. Eat periods will be normally 1-hour duration, with additional activities held to a minimum during this time frame. Sleep periods will normally be 8 to 10 hour duration with two 4 to 5 hour sleep periods while the LM is on the lunar surface.

4. Activity

PGA Configuration

Launch to insertion	PGA's with helmet & gloves (H&G)
Insertion to TLI	PGA's without H&G
TLI to evasive mnvr	PGA's with H&G
TLC & LOI 1&2	Constant wear garments
LM activation & checkout	PGA without H&G (CMP H&G donned for latch cocking & CDR/LMP H&G donned for pressure integrity check and cabin reg check)
Undocking through touchdown	PGA's with H&G except CMP without H&G after DOI
Touchdown through pre lift-off	PGA's without H&G except for CDR/LMP simulated count- down & EVA
Liftoff through LM jettison	PGA's with H&G (except H&G off after docking)
LM jettison through splashdown	Constant wear garmets

5. Two crew status reports via air-to-ground communications will be made by the flight crew during each activity day. The first report will be given after the first meal of the day and will concern the sleep obtained during the previous sleep period. The second report will be given following the final meal of the day and will concern the radiation dose received during the previous 24 hours and medication taken if any. The following information should be logged:
 - a. Food Consumption
 - b. Exercise
 - c. Used fecal bags marked as to crewman and GET
6. Negative reporting will be used in reporting completion of each checklist.
7. Continuous CSM biomedical data are automatically transmitted to the ground.
8. LM biomedical switching is performed manually by the LMP from undocking to docking as scheduled in the timeline.
9. All onboard gage readings will be read directly from the gages. and will not be corrected by the appropriate calibration factors.

B. Photography

Photographic requirements were derived from the following:

- a. Lunar Surface Operations Plan
- b. Photographic Operations Plan

C. Procedures

1. CSM

Crew procedures called out in the flight plan may be found in the following documents:

- a. Apollo Operations Handbook - CSM-107 (AOH), Volume 2
- b. Crew Checklist
- c. CSM Rendezvous Procedure
- d. Abort Summary Document
- e. Apollo Entry Summary Document
- f. Photographic Operations Plan
- g. Descent Procedures Document
- h. Ascent Procedures Document
- i. Lunar Landmark Tracking Attitude Studies
- j. Lunar Orbit Attitude Sequence for Mission G
- k. Data Priority Documents

2. LM

Crew procedures called out in the flight plan may be found in the following documents:

VOLUME 1

- a. Apollo Operations Handbook LM-5 Volume 2
- b. Crew Checklist
- c. LM Rendezvous Procedures
- d. LM Descent/Ascent Summary Document
- e. Lunar Landing Phase Photographic Operations Plan
- f. Data Priority Documents
- g. EVA Procedures
- h. Apollo Lunar Surface Operations Plan

D. Communications

1. General

- a. CSM and LM HBR data transmissions in lunar orbit will normally require the use of the high gain or steerable antennas
- b. During communications, the spacecraft will be referred to by name (Apollo 11) and MCC-H will be referred to as Houston.
- c. The preferred S-Band communications are:
 - (1) CSM
 - (a) Uplink Mode 6 (Voice, PRN, and Udata)
 - (b) Downlink Mode 2 (Voice, PRN, TLM-HBR)
 - (2) LM
 - (a) Uplink Mode 7 (Voice, Udata)
 - (b) Downlink Mode 1 (Voice, TLM-HBR)
- d. LM voice recorder has a maximum utilization of 10 hours. This recorder will be used during LM operations to record all LM voice data during undocked operations (27 hours 42 minutes). This recorder will be operated in the VOX mode.
- e. A small portable voice recorder will be carried in the CM to be used at the discretion of the crew as a voice recorder back-up. This recorder will not be transferred to the LM for use during undocked operations.
- f. The S-band "squelch" will be on during the sleep periods in order to prevent MSFN fade-out noise from disturbing the crew.

2. DSE Operation

- a. The DSE will normally be operated via ground command except for special cases where the operation is time limited. In these cases the crew may be asked to rewind the tape.
- b. During the earth orbit period when the CSM is not over a MSFN station, CSM TLM-LBR data will be recorded on the DSE and will be dumped during the pass over the US and over CRO prior to TLI if possible.
- c. DSE will be used for CSM HBR and voice recording during all CSM engine burns.
- d. DSE data and voice recordings will be made in CSM LBR mode whenever possible in order to minimize the DSE dump time.

- e. During PTC using the HGA REACQ communications mode the DSE will be used to record LBR data when the HGA is not in the MSFN field of view.
 - f. During lunar orbit LM operations, the DSE will be used to record LM-TLM-LBR data during all docked LM activities that occur on the lunar farside. For undocked LM activities only DOI will be recorded as VHF ranging is required.
 - g. DSE will be used to record all HBR entry data during the blackout region.
3. Launch - Earth Orbit Phase
- a. OMNI B and VHF LEFT will be selected for lift off. OMNI D will be selected by the crew during boost phase if the launch azimuth is less than 96° or OMNI C if the launch azimuth is greater than 96°. OMNI D will probably be the best antenna for earth orbit.
 - b. VHF Duplex B will be used for launch, and Simplex A for earth orbit operations.
 - c. VHF Simplex A will be used for entry to be compatible with recovery forces communications.
4. Translunar and Transearth Coast Phase
- The translunar and transearth sleep communications mode will be as follows. The CSM x-axis will be placed normal to the ecliptic plane. The CSM will be rolled at a rate of approximately three revolution per hour. During the near earth sleep periods prior to 30 hours GET (range less than 120Knm) omni antennas B and D will be used. During the other sleep periods (beyond 120Knm) the high gain antenna may be required (in the REACQ mode). The REACQ configuration will provide approximately 210 degrees of HGA coverage per CSM/LM revolution or 35 minutes of MSFN coverage per hour. The REACQ configuration will also allow MCC-H to use real time control to select TLM HBR or LBR and to dump the DSE during each spacecraft revolution.
5. Lunar Exploration Phase
- a. Normal CSM communications between MSFN/LM will be by S-Band during the lunar exploration period.
 - b. If additional communications capability is required the S-Band erectable antenna will be deployed by the EVA crewman and will be utilized for all LM/MSFN/CSM communications.
 - c. During periods when both crewmen are EVA, the "AR" position (Relay Mode) will be the normal communication mode on each of the Extravehicular Communication System (EVCS). The CDR will relay the LMP VHF voice and data to the LM which in turn will relay to MCC-H via S-Band.

E. CSM Notes

1. Electrical Power System and Water Management

- a. Spacecraft lift-off switch positions are listed in the Apollo Operations Handbook (Volume 2) for CSM 107.
- b. The CSM will remain fully powered up throughout the mission (CMC, IMU and SCS in the "operate" configuration and optics power-up as required).
- c. Fuel cell H2 and O2 purging is scheduled as follows H2 approximately every 48 hours and O2 approximately every 12 hours.
- d. The hydrogen and oxygen VAC ION pumps will be inactive throughout the mission.
- e. Potable water will be chlorinated once a day before each sleep period, starting with the First sleep period (GET 13:30). The POT H2O inlet valve will be opened prelaunch.
- f. FC purges and waste water dumps will not be scheduled within one hour prior to optical sightings.
- g. Waste H2O dumping will be managed to allow:
 - (1) Maximum QTY:85-90%
 - (2) Minimum QTY:25%
 - (3) At LOI:QTY = 75%
 - (4) At CM-SM SEP:QTY = 90% to 100%
 - (5) No dumping after MCC3 until after LOI
 - (6) Dumps will be performed (if required) within 2 hours preceding MCC maneuvers
 - (7) In lunar orbit if dumping is required, dumps will be performed immediately prior to sleep periods
 - (8) The water dump will not be operated in the automatic mode at anytime during the mission
- h. The cryogenic heaters will be in AUTO during the mission and the fans will be operated manually. The fans will be cycled for one minute before and after each sleep cycle.
- i. The batteries will be charged according to the following schedule:

<u>Time</u>	<u>Battery</u>
5:20:00	B
12:20:00	A
48:10:00	B
80:25:00	A
103:30:00	B
148:00:00	A
154:00:00	B

2. Environmental Control System and Cabin Pressurization

- a. One CO2 odor absorber filter (LiOH canister) is changed approximately every 12 hours or if CO2 partial pressure is greater than 7.6mm Hg. There are 20 filters (2 in the canisters onboard and 18 stowed).

- b. A Pre TLI/LOI ECS redundant component check including the secondary evaporator operation, is performed prior to TLI and LOI. The secondary evaporator water control valves will be turned "OFF" after the check.
- c. The evaporator operation will be as follows:
 - (1) Launch - primary loop operation
 - (2) Earth Orbit - primary loop operation and secondary loop test plus redundant operation test prior to TLI.
 - (3) Post TLI - deactivate both evaporators
 - (4) Pre LOI-ECS pre TLI/LOI redundant component check and primary evaporator activation
 - (5) Post TEI - deactivate primary evaporator
 - (6) Entry interface minus 1 hour - activate primary and secondary evaporator.

3. Guidance and Navigation

- a. During lunar orbit, the CSM and LM will utilize the same landing site REFSMMAT such that the gimbal angles would be 0,0,0 at landing with the LM sitting face forward on landing site number two and the CSM over the landing site pitched up 90° from local horizontal "heads up".
- b. During PTC the CSM/LM x-axis is pitched up 90° (North) for TLC and down 90° (South) for TEC with the Y-Z axes in the plane of the ecliptic. This change in x-axis pointing is to enable simultaneous viewing of the earth and moon through the side windows while maintaining a favorable high gain antenna position.
- c. The CSM tracking light will be on continuously from undocking to landing and from LM lift-off to docking.

4. Landmark Tracking

- The following ground rules were used for landmark tracking.
- a. IMU to be realigned on the dark side preceding each tracking period.
 - b. MSFN is reacquired after each tracking period. The tracking data will be acquired by MSFN after all the marks have been made and while N49 ($\Delta R, \Delta V$) is displayed. MSFN will give a GO when data acquisition has been verified.
 - c. The pseudo landmark tracking (A1) will be used to determine the altitude of an area in which the LM will be making altitude checks after DOI. The data will be processed during the sleep period after the trackings and relayed to the LM prior to undocking.

- d. In the docked configuration the CSM/LM approaches the landmark in an inertial hold attitude. This inertial attitude places the spacecraft 2° below the local horizontal at the 35° elevation angle point. At 35° elevation angle a pitch down of $0.3^\circ/\text{sec}$ is initiated. Five marks are then taken with the time between marks a minimum of 25 seconds. (See tracking profile)
- e. In the undocked configuration the CSM approaches the landmark in ORB RATE and pitched down 22° from the local horizontal. At 35° elevation angle five marks are taken with the time between marks a minimum of 25 seconds. ORB RATE is continued throughout the marking period.
- f. In the undocked COAS tracking the CSM will approach the LM in ORB RATE heads up and pitched down 40° from the local horizontal. When the LM is centered in the COAS the CSM will initiate a variable pitch rate to keep the LM centered in the COAS.

5. CSM/LM and CSM attitude maneuvers will normally be at a rate of $0.2^\circ/\text{sec}$ or $0.5^\circ/\text{sec}$, unless other rates are required.
NOTE: At $0.2^\circ/\text{sec}$, 15 minutes is required to maneuver 180° .
At $0.5^\circ/\text{sec}$, 6 minutes is required to maneuver 180° .

6. Passive thermal control mode will be initiated after MCC1 or as soon as MCC1 is scrubbed and maintained throughout the mission (except in lunar orbit) until at least three hours before entry except for interruptions for midcourse corrections, communications orientation (maximum interruption of three hours). PTC will not be initiated before approximately 7:00 GET.

7. Service Propulsion System All SPS burns will be initiated on Bank A except LOI1 which will be initiated on Bank B.

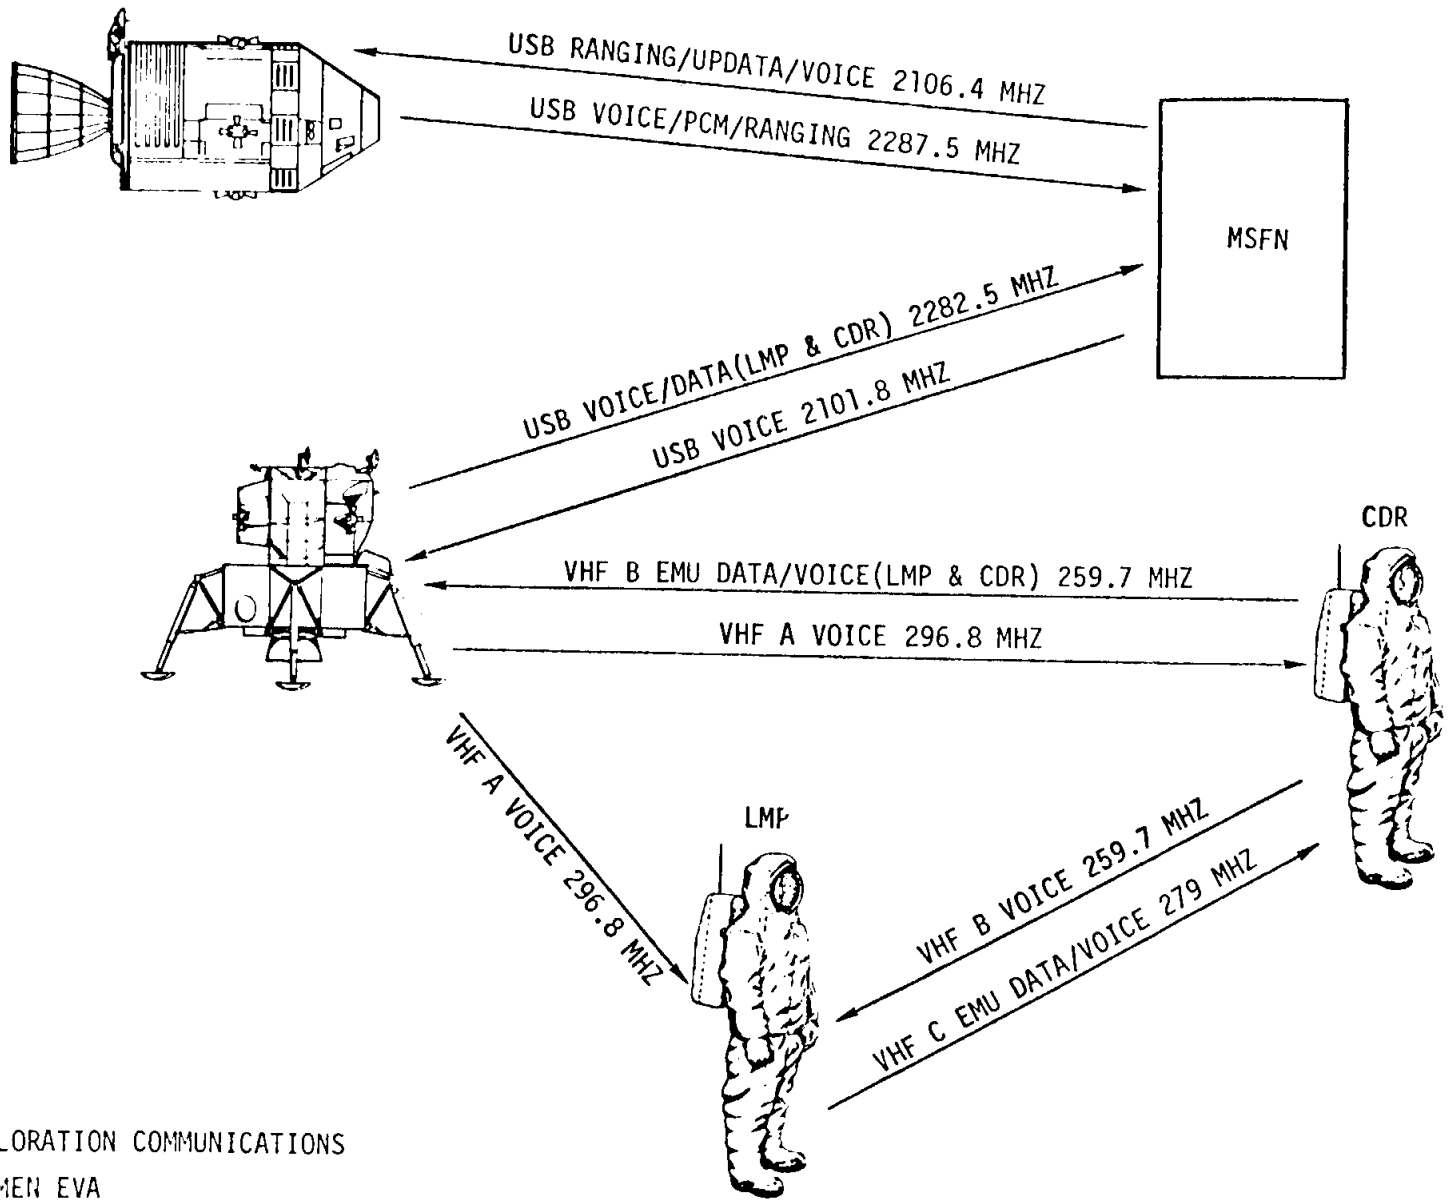

F. LM Notes

1. Entries into the LM
 - a. Three entries into the LM are scheduled in the timeline at 56:30, 81:30 and 95:52 GET respectively.

- b. The first entry (56:30 GET) will be for LM familiarization and will be performed by the CDR and LMP in the constant wear garments. During this period there will be approximately 5 minutes of VHF-B LBR data which will be recorded by the DSE in the CSM. The LM will remain on CSM power during the crew familiarization period.
 - c. The second entry (81:30 GET) will be for LM housekeeping and will be performed by the LMP in constant wear garments. During this period the LM will go to internal power for the S-Band/VHF B voice activation.
 - d. The third entry into the LM (95:52 GET) will be performed by the LMP in LCG's to prepare the LM for undocking and descent to the lunar surface. During this period the LMP and CDR initially transfer to the LM in LCG's then return to the CSM for PGA donning.
2. Environmental Control System and Cabin Pressurization
- a. The LM cabin will contain ambient air at lift off and will bleed down to zero pressure psi during the launch.
 - b. The LM will be pressurized for transposition and docking after which it will be isolated and the pressure periodically monitored.
 - c. The LM will be pressurized prior to the first entry (LM familiarization) after which it will be isolated again for the remainder of the TLC period.
 - d. Prior to the second entry (LM housekeeping) it will be pressurized again and will remain pressurized.
3. Guidance and Navigation
- a. Two LGC erasable memory dumps and MCC-H verifications will be accomplished prior to DOI. If a significant number of errors are found, memory correction and re-verification will be performed before DOI.
 - b. The LM IMU will be manually aligned to the CSM IMU during the DOI Day LM activation and checkout. P52/AOT alignments will be performed as close to DOI as possible.
 - c. All translations during the undocked manned LM operations will be under PGNCS control.
 - d. The capability for MCC-H to update the LGC via uplink will normally be blocked by the LMP UP-DATA LINK switch (panel 12).

4. RCS Operation and Interface Constraints
 - a. During CSM/LM docked checkout operations, the LM steerable and/or RR antennas will not be powered down once they have been activated. The SM B3 and C4 thrusters will be deactivated before the LM steerable and/or RR antennas have been unstowed in order to prevent SM-RCS impingement on these antennas.
 - b. The CSM roll jets and LM yaw jets will be disabled when the probe is preloaded (docking latches are cocked) and the tunnel is pressurized prior to undocking. The jets will be activated after tunnel venting.
 - c. LM RCS two jet ullage (System B) will be used for unstaged ullage maneuvers in order to prevent asymmetrical RCS thrust caused by impingement on the descent stage.
 - d. The RCS interconnect will be used during the APS lift-off and ascent, but will not be used during the rendezvous maneuvers.

5. Rendezvous
 - a. The rendezvous radar will be pointed away from the sun and will be turned off when no functional use is required to prevent overheating of the antenna.
 - b. The LM tracking light will be on continuously between separation and touchdown and between launch and docking except during PGNCS/AOT alignments. During PGNCS/AOT alignments (LM P52), the tracking light would interfere with the alignments. (dark adaption)

SECTION II - UPDATE FORMS

UPDATE FORMS

This section contains the update pads which are in the Flight Data File onboard the spacecraft.

The CSM forms are as follows:

1. TLI Maneuver
2. P37 Block Data
3. P27 Update
4. P30 Maneuver (External ΔV)
5. P76
6. CSM Rendezvous Rescue
7. Lunar Entry
8. Earth Orbit Entry
9. Earth Orbit Block Data

The LM forms are:

1. P27 Update
2. AGS State Vector Update
3. Phasing P30 LM Maneuver
4. P30 LM Maneuver
5. DOI Data
6. PDI Data
7. Lunar Surface
8. LM Ascent
9. CSI Data
10. CDH Data
11. TPI Data

SECTION IV - DETAILED TEST OBJECTIVES

SECTION 4

DETAILED OBJECTIVE ACTIVITIES

This section contains the activity summaries which reflect the test objectives for Mission G as described in "Mission Requirements G Type Mission", SPD9-R-038, Change A dated May 1, 1969. These activity summaries are presented in the approximate sequence in which they are planned to occur during the mission.

Each activity summary provides the following information:

- A. TEST OBJECTIVES. This is the listing of the Functional Test Objectives (complete or partial) which relate to the particular activity;
- B. TEST REQUIREMENTS. Here the special test prerequisites (and mission phase if necessary) are presented in addition to brief statements of the requirements for performing the activity;
- C. TEST PROCEDURES/CHECKLISTS. These are the procedural references for the performance of the activity as far as the test objectives are concerned; and
- D. DATA REQUIREMENTS. This part of the summary identifies the gross data which are needed for evaluation of test results in terms of flight crew and ground support requirements.

Cross references for relating Detailed and Functional Test Objectives with the activity summaries and relating activities to Functional Test Objectives, are provided as the initial part of this section.

The following ground rules are to be used in implementing data requirements:

- A. The collection of highly desirable (HD) data should not constrain the timeline of the crew procedures.
- B. Post-flight debriefing requirements which are fulfilled by real time transmission of data per the DATA REQUIREMENTS sections may be deleted from the post-flight debriefing.

All of the Test Requirements have not been totally implemented into the mission timeline. These items are identified in this section as "Not Implemented" or with the conditions by which they will be implemented.

LM DESCENT

A. Test Objective

- D-1 LM Landing Gear Performance Under Landing Conditions
- G-1 Location of the Landed LM from LM Data
- G-3 Capability of Locating the Landed LM in Real Time from LM/CSM/MSFN Data
- H-1 Data on Landing Aids and Final Approach Visibility
- M-1 Photograph Lunar Surface During LM Descent

B. Test Requirements

1. Determine landing site visibility, extent of washout and visibility of landing site landmarks. [H]
2. Photograph the landing site during the approach through the LM pilot's window with the data acquisition camera. [G, H, M]
3. Evaluate landing aids, i.e., Landing Point Designator, maps, photographs. [G, H]
4. Assess visual phenomena during LM landing which are significantly different from expected. [H]
5. Voice anotate location and identity of features during final descent. [G]
6. Determine landing location in real time by description of terrain features during descent. [G]
7. Assess LM landing conditions on the lunar surface. [D]

C. Procedures/Checklist

1. Photographic and Television Operations Plan.
2. Descent Procedures Document.

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs
 - a. LM crew comments on landing site visibility during final approach and landing phases and on effectiveness of the Landing Point Designator and landing site recognition aids. [H] (M)
 - b. GET at start of data acquisition camera photographs during LM final approach. [H] (M)
 - c. Voice track regarding observations of surface features during the descent phase. [G] (M)
 - d. Photographs of the landing site and surrounding lunar surface features taken through a LM window during descent. [G, M] (M)

- e. Data Acquisition Camera photographs of the landing site from high gate to touchdown. [H, M] (M)
- f. Photographs of the landing site and surrounding lunar surface features taken through a LM window during descent. [G, M] (M)
- g. Comments on any lunar dust observed during the final approach, the severity of the landing and vehicle stability after touchdown. [D] (M)

2. Ground Support

- a. LM TM HBR. [D, G, H] (M)
- b. LM TM LBR. [D, G] (M)
- c. LM BET from DOI through touchdown. [G, H] (M)
- d. MSFN tracking data of LM from acquisition of signal through touchdown. [G] (M)

LUNAR SURFACE NAVIGATION

A. Test Objectives

- G-1 Determine the Location of the Landed LM from LM Data
- G-2 Determine the Location of the Landed LM from CSM Data
- G-3 Determine Capability of Locating the Landed LM in Real Time from LM/CSM/MSFN Data
- L-4 Panoramic Coverage of Distant Terrain Features
- M-2 Photograph Lunar Surface Post Touchdown/Pre EVA

B. Test Requirements

1. Correlate lunar surface features surrounding the landing site with photomaps and mark the LM location. [G, L, M]
2. Photograph terrain features thru the LM window to correlate LM location. [G, M]
3. Obtain two sets of LM IMU alignments after landing [G]
4. Provide TV coverage of prominent terrain features. [G, L]
5. Track the landed LM from the CSM during two orbital passes. Mark on a landmark near the landed LM. [G] - (Only one pass is implemented.)
6. Track the CSM with LM RR during one pass. [G] - (Not Implemented.)
7. Obtain 70 MM photographs of the landed LM or its shadow and the surrounding lunar features. [G]
8. Assist MCCH in determining the landing LM location in real time. [G, L]

C. Procedures/Checklist

1. Photographic and Television Operations Plan.
2. LM AOH, "PGNCS Lunar Surface Align Program (P57)".
3. LM AOH, "Lunar Surface Navigation Program (P22)".
4. CSM AOH, "Orbital Navigation (P22)".

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs
 - a. Estimate of the landed LM location on lunar photomaps. [G] (M)

- b. Comments by LM crew regarding any difficulties encountered in estimating the location of the LM with respect to lunar surface features. [G] (HD)
- c. Comments by LM crewman on location of landed LM with respect to prominent terrain features. [G] (M)
- d. Obtain high resolution photographs of the landing area from the CSM. [G] (M)
- e. Photographs of the landing site and surrounding lunar surface features taken through a LM window after landing. [G, M] (M)
- f. Provide TV coverage of the lunar surface as viewed from the LM. [G, L] (M)

2. Ground Support

- a. LM TLM HBR. [G] (M)
- b. LM TLM LBR. [G] (M)
- c. BET of CSM during the lunar surface phase. [G] (M)
- d. BET of LM from DOI through touchdown. [G] (M)
- e. Photographs of the landing area obtained during previous lunar missions. [G] (M)
- f. Post-scan conversion video tape of all TV coverage. [L] (M)
- g. Estimate solar illumination established by mission geometry. [L] (M)
- h. Reflectivity and geometry of surfaces contributing to indirect illumination. [L] (HD)

EVA PREPARATION AND EGRESS

A. Test Objectives

- B-1 Demonstrate Egress-to/Ingress-from the Lunar Surface
- B-2 Evaluate Crew Lunar Surface EVA Capability
- C-1 EMU Capability to Provide a Habitable Environment
- C-2 EMU Effects on Crew Mobility/Dexterity/Comfort
- C-3 Data/Voice Communications Capability During EVA
- L-1 TV Coverage of an Astronaut Descending to the Lunar Surface

B. Test Requirements

1. Perform EVA preparations. [C]
2. Release the MESA pallet with pre-mounted TV camera and turn camera power on prior to descent to the lunar surface. [L]
3. Egress to the lunar surface. [B, C]
4. Deploy and set the TV camera to provide TV coverage of the lunar surface EVA. [L]
5. During EVA, communicate with MSFN via the EVA-LM-MSFN two way voice relay. [C]
6. Two-way voice communications to be performed between two EVA crewmen. [C]
7. EMU and biomedical data from two EVA crewmen will be simultaneously transmitted to MSFN via EVA-LM-MSFN one-way relay. [C]

C. Procedures/Checklist

1. EVA Procedures Document.
2. Lunar Surface Operations Plan.

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs
 - a. Notify MSFN of the initial and final positions of the PLSS water diverter valve, primary oxygen shutoff valve and water shutoff/relief valve each time they are changed. [C] (M)
 - b. Notify MSFN when PLSS; High O₂ flowrate, low vent flow, low feed water pressure or PGA pressure low remote control unit status indicators and audible warning tone come on. [C] (M)

- c. Record EMU radiation dosimeter readings just prior to the EVA. [C] (M)
- d. Notify MSFN if noxious odors occur or any condensation on the visor assembly. [C] (HD)
- e. Comment on the adequacy of procedures and difficulties encountered during donning of EMU equipment. [C] (HD)
- f. Comment on time required and adequacy of the EMU checkout procedures. [C] (HD)
- g. Comment on the adequacy of EMU thermal environment when walking from a sunlit area to shadow and vice versa. [C] (M)
- h. Comment on estimated energy expenditure and comfort as compared to simulation experience. [C] (HD)
- i. Provide data on the adequacy of hardware and procedures, and the time required to perform the egress from the LM. [B] (M)
- j. Comment on voice quality for EVA-EVA and EVA-LM-MSFN communications. [C] (M)
- k. Provide sequence camera coverage and TV camera coverage of: [B, M] (M)
 - 1) A crew member descending to the lunar surface.
 - 2) A crew member walking on the lunar surface.
 - 3) A crew member performing lunar surface EVA operations.

2. Ground Support

- a. LM TM FM. [B, C] (M)
- b. Ground recorded TV signals. [B] (HD)
- c. LM TM LBR. [L] (HD)
- d. Post-scan conversion video tape of all TV coverage. [L] (M)
- e. Record of S-band signal strength during video transmission. [L] (HD)
- f. GET at beginning and end of TV transmission. [L]
- g. Time period, if any, when LBR TM (in lieu of HBR TM) transmitted simultaneously with TV data. [L] (M)

- h. Identity of ground station(s) used to record video transmission from LM. [L] (M)
- i. Time period, if any, when erectable antenna used to transmit TV data. [L] (M)
- j. Estimate of incident illumination. [L] (M)
- k. LM position on lunar surface. [H] (HD)
- l. MSFN recording of EVA-LM-MSFN voice. [C] (M)

SURFACE SAMPLE COLLECTION

A. Test Objectives

- A-1 Provide a Contingency Lunar Surface Sample
- E-1 Behavior and Characteristics of the Lunar Surface
- F-1 Collect Rock Samples and Fine Grained Material
- F-2 Photograph Collection Area of Samples
- I-3 Obtain a Lunar Sample for Quarantine Testing
- J-2 Obtain a Core Sample of the Lunar Surface
- J-3 Collect Lunar Geologic Samples
- J-4 Collect a Lunar Environment Sample
- M-3 Obtain Photographs of Geologic Inspection & Sampling

B. Test Requirements

1. Contingency Sample - Obtain upon first descending to the lunar surface. [A]
2. Bulk Material - Obtain 30 pounds consisting of 1/3 fragmentary and 2/3 loose samples. [F]
3. Core Sample - Obtain with the drive tube. [I, J]
4. Geologic Samples - Obtain using tools stowed in the MESA. Photograph sample areas. [J, M]
5. Lunar Environment Sample - Seal in gas analysis container. [J]

C. Procedures/Checklist

1. Lunar Landing Mission Flight Plan.
2. Lunar Surface Operations Plan.
3. Photographic and Television Operations Plan.

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs
 - a. Record areas in relation to LM where samples were collected. [A, F, J] (M)
 - b. Record unusual lunar surface observations. [A, F, J] (M)
 - c. Comment on soil behavior during collection of Bulk Sample. [E] (M)
 - d. Comment on soil behavior during collection of Documented Sample. [E] (HD)
 - e. Estimates of volume of fine grained material collected in one bag of the Documented Sample. [E] (HD)

- f. Take photographs during sample collection. [A, F] (HD)
- g. Photograph the lunar surface sample areas and of the samples as defined in the Photographic Operations Plan. [J] (M)

2. Ground Support

- a. LM position on lunar surface. [J] (M)
- b. MSFN recordings of all MSFN/EVA voice conferences. [J] (M)

EXTERNAL LM OBSERVATIONS AND PHOTOGRAPHY

A. Test Objectives

- D-1 Effects of Landing on LM Landing Gear
- D-2 Effects of Landing on LM Structure and Components
- D-3 Descent Engine Skirt Damage and Clearance After Landing
- D-4 Effects of RCS Plume Impingement on LM Structure and Components
- L-2 TV Coverage of External Landed LM
- M-3 Obtain Photographs of Landed LM

B. Test Requirements

1. Operate the TV camera to provide an external view of the LM. [L]
2. Photograph any observed LM external structural damage. [D, M]
3. Determine descent engine skirt ground clearance. [D, M]
4. Photograph any effects of RCS plume impingement observed. [D, M]
5. Obtain photographs of any lunar material collected on the LM. [D, M]

C. Procedures/Checklist

1. Mission G Photographic and Television Operations Plan.

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs
 - a. Comment on any LM component damage to include any visible discoloration or lunar soil accumulation. [D] (M)
 - b. Comments describing any descent engine skirt damage and estimate of any skirt ground clearance. [D] (M)
 - c. If the landing gear strut assembly photographs cannot be obtained, estimate the amount of stroking of each primary and secondary strut assembly. [D] (M)
 - d. Photograph the landing gear to show the stroking of the primary and secondary strut assemblies. [D, M] (M)
 - e. Photograph the LM exterior showing any structural damage. [D, M] (M)
 - f. Photograph each landing gear assembly along the Z axis and the Y axis. [D, M] (HD)

- g. Photograph the descent engine skirt. [D, M] (HD)
- h. Photograph the LM base heat shield. [D, M] (HD)
- i. Photograph the LM exterior, i.e., structure antenna, RCS jets, windows and foot pads. [D, M] (HD)
- j. Photograph soil accumulation on the LM. [D, M] (HD)
- k. Photographs by the close up stereo camera of lunar material adhering to LM surfaces. [M] (HD)

2. Ground Support

- a. LM TM HBR. [D] (M), [L] (HD)
- b. LM Mass, center of gravity and mass moment of inertia calculations. [E] (M)
- c. Video tape of all TV coverage. [L] (M)
- d. Record of S-band signal strength during TV coverage. [L] (HD)
- e. GET at beginning and end of TV operations.
- f. Time period of simultaneous LBR TM and TV transmission. [L] (M)
- g. Identification of ground station(s) used to record video transmission. [L] (M)
- h. Time period when erectable antenna was used to transmit from lunar surface. [L] (M)

LUNAR SURFACE OBSERVATIONS AND PHOTOGRAPHY

A. Test Objectives

- E-1 Behavior and Characteristics of the Lunar Surface
- E-2 Erosion of Lunar Surface by DPS Plume Impingement
- E-3 Effect of Any DPS Venting on the Lunar Surface
- H-2 Crew Performance of Visual Tasks on the Lunar Surface
- J-5 Study and Description of Lunar Topography Features
- L-3 TV Coverage of Lunar Surface Near LM
- L-4 TV Panoramic Coverage of Distant Terrain Features
- L-5 Coverage of Astronaut Activities on the Lunar Surface
- M-3 Obtain Photographs During EVA

B. Test Requirements

1. Provide TV coverage of the lunar surface in the vicinity of the LM and panoramic scenes of distant terrain features. [L]
2. Photograph the lunar terrain at various azimuths with respect to the sun including 9, 90 and 180 degrees. Comment on ability to see terrain features in these areas. [H, M]
3. Estimate the distance to prominent terrain features within the field of view of photographs taken. [H]
4. Observe lunar surface characteristics including texture, consistency, compressibility, cohesiveness, adhesiveness, density and color. [E]
5. Study and photograph the mechanical behavior of the lunar surface from interactions of astronauts boots and equipment with the lunar soil, erosion by DPS plume impingement and DPS venting. [E, M]
6. Describe and photograph field relationships such as shape, size, range, pattern of alignment or distribution of all accessible types of lunar topographic features. [J,M]
7. Photograph the structure of lunar surface material in its natural state. [M]

C. Procedures/Checklist

1. Mission G Photographic and Television Operations Plan.

D. Data Requirements

1. Flight Crew Report/Logs/Photographs
 - a. Report condition of the temperature indicator viewing ports on the TV camera at the beginning and the end of the TV operations. [L] (M)

- b. Position of the TV camera scan rate switch at start of TV operation. [L] (M)
- c. Comments describing the interaction between astronaut boots and lunar surface while walking. [E] (M)
- d. Comments on slope and roughness characteristics of the landing terrain to include descriptions of craters, depressions, embankments or other obstacles. [E] (M)
- e. Comments on the color and texture of both undisturbed and mechanically disturbed areas of the lunar surface. [E] (M)
- f. Comments on lunar soil conditions adjacent to DPS vents to include any discoloration. [E] (M)
- g. Comments describing the lunar surface penetration by the Solar Wind Composition Staff and core sample tool under their own weight and the estimated force. [E] (Mandatory for either the staff or the core sample tool: highly desirable for the other.)
- h. Comments on lunar soil erosion as caused by the DPS plume impingement during landing. [E] (M)
- i. Record vent valves opened. [E] (M)
- j. Photograph the lunar surface showing DPS plume impingement erosive effects. [E, M] (M)
- k. Photograph the lunar surface adjacent to DPS vents if soil discoloration is observed. [E, M] (M)
- l. Photograph an astronaut footprint showing interaction between astronaut boots and lunar surface. [E, M] (M)
- m. Photograph the Solar Wind Composition Experiment Staff and core sampling tool after being inserted to their maximum depth as penetrometers. [E, M] (HD)
- n. Photograph the natural slopes, crater walls and embankments in the vicinity of the landing site. [E,M] (M)
- o. Photograph from the CSM of the lunar surface surrounding the LM. [E, M] (HD)
- p. Comments on the visibility of the lunar terrain as a function of the sun/viewing angle and on their ability to perform visual tasks while on the lunar surface. [H] (M)

- q. Comments on color/contrast perception. [H] (M)
 - r. Comments on and significant unexpected visual phenomena. [H] (M)
 - s. Estimate of distance to at least one prominent terrain feature within the field of view of the photographs in item t below. [H] (M)
 - t. Photograph the lunar terrain at various sun azimuths to include 0 degrees, 90 degrees and 180 degrees. [H, M] (M)
 - u. Photograph any unexpected visual phenomena. [H, M] (HD)
 - v. Photograph a representative depression caused by use of the scoop in collecting fine grained fragmental material. [E, M] (M)
 - w. Photograph one scoop of fine grained fragmental material placed in one of the pre-numbered bags. [E, M] (HD)
 - x. Photograph of each LM foot pad and surrounding lunar soil exhibiting evidence of LM foot pad-lunar soil interaction. [M] (HD)
2. Ground Support
- a. LM TM HBR. [E, L] (HD)
 - b. Estimate of incident illumination. [D] (M)
 - c. Video tape of all TV coverage. [L] (M)
 - d. Record of S-band signal strength during TV transmission. [L] (M)
 - e. GET at beginning and end of TV transmission. [L] (M)
 - f. Time period when LBR TM was transmitted simultaneously with TV. [L] (M)
 - g. Identity of ground station(s) used to record LM video transmission. [L] (M)
 - h. Time period when erectable antenna was used to transmit from the lunar surface. [L] (M)

EXPERIMENT DEPLOYMENT/CONDUCT

A. Test Objectives

- S-031 Deploy the Passive Seismic Experiment Package
- S-078 Deploy the Laser Ranging Retro-Reflector Experiment
- S-080 Conduct the Solar Wind Composition Experiment

B. Test Requirements

1. Emplace, level and orient the Passive Seismic Experiment Package (PSEP). Deploy the solar panels and aim the antenna at the earth. [S-031]
2. Photograph the deployed PSEP and deployment area. [S-031]
3. Remove the Laser Ranging Retro-Reflector (LRRR) from the descent stage and carry it to the deployment site. [S-078]
4. Emplace, level and orient the LRRR to the alignment marks corresponding to the landing site. [S-078]
5. Remove the Solar Wind Composition Experiment from the LM MESA and deploy it on the lunar surface. [S-080]
6. After one hour operation, disassemble the Solar Wind Composition Experiment, place the reel and foil in a teflon bag and store in a sample return container. [S-080]

C. Procedures/Checklist

None

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs
 - a. Comment on deployment of experiment. [S-031] (M)
 - b. Photograph deployment area. [S-031, S-078, S-080] (HD)
 - c. Comment on location of deployed experiment with respect to the LM, attitude of deployed foil with respect to the sun and total time foil was deployed. [S-080] (M)
 - d. Retrieve reel and foil from the Solar Wind Composition Experiment. [S-080] (M)
 - e. Comments on orientation and elevation setting used for deployment. [S-078] (HD)
2. Ground Support
 - a. Experiment TLM Data [S-031] (M)

POST EVA OPERATIONS

A. Test Objectives

- B-1 Demonstrate Egress-to/Ingress-from the Lunar Surface
- C-1 EMU Capability to Provide a Habitable Environment
- C-2 EMU Effects on Crew Mobility, Dexterity/Comfort

B. Test Requirements

1. Perform post EVA preparations and ingress. [B]
2. Perform PLSS shutdown. [C]

C. Procedures/Checklist

1. EVA Procedures Document.

D. Data Requirements

1. Flight Crew Reports/Logs/Photographs

- a. Notify MSFN of the initial and final positions of the PLSS water diverter valve, primary oxygen shutoff valve and water shutoff/relief valve each time they are changed. [C] (M)
- b. Notify MSFN when PLSS; High O₂ flowrate, low vent flow, low feed water pressure or PGA pressure low remote control unit status indicators and audible warning tone come on. [C] (M)
- c. Provide data on the adequacy of hardware and procedures, and the time required to perform the ingress to the LM. [B] (M)
- d. Comment on the adequacy of procedures and difficulties encountered during doffing of EMU equipment. [C] (HD)
- e. Record quantity of water drained from PLSS at end of EVA period. [C] (M)
- f. Record EMU radiation dosimeter readings after completion of the EVA. [C] (M)
- g. Provide sequence camera coverage and TV camera coverage of a crew member ascending the LM ladder. [B] (M)

Contamination Prevention

A. Test Objectives

- I-1 Prevent Earth Contamination by Lunar Exposed Materials
- I-2 Minimize Crew/CM Contamination by Lunar Exposed Materials

B. Test Requirements

- 1. All contamination related operations from the initial astronaut egress to the lunar surface until postflight crew/cm quarantine will be completed per procedures contained in the documents listed below. [I]

C. Procedures/Checklist

- 1. Lunar Surface Operations Plan
- 2. EVA Procedures Document
- 3. Quarantine Procedures

D. Data Requirements

- 1. Flight Crew Reports/Logs/Photographs
 - a. Crew comments on the adequacy of Biological Isolation Garment, sample return containers, Mobile Quarantine Facility and related equipment and procedures used to prevent back contamination. [I] (M)
 - b. Photograph boots, clothing and equipment showing adhesion of particles. [I, M] (HD)
- 2. Ground Support
 - a. Deliver samples, CM and Mobile Quarantine Facility to the Lunar Receiving Laboratory. [I] (M)
 - b. Comment on ground procedures and hardware used for retrieval, biological isolation and CM transfer to the Lunar Receiving Laboratory. [I] (M)
 - c. Report on the existence of contamination of the crew on CM. [I] (M)

SECTION V - CONSUMABLES ANALYSIS

NOTE

Acknowledgement is made to the Consumables Analysis Section (CAS) of the Mission Planning and Analysis Division (MPAD) for their work in the preparation of the consumable analysis presented herein and to the Crew Systems Division for the PLSS Consumables.

CSM-107/LM5 PROPELLANT BUDGET

The results of the Propellant Budget Analysis are summarized in the following Tables and Figures:

TABLE 5-1	SM RCS Propellant Loading And Usage Summary

SM-RCS BUDGET

GROUND RULES and ASSUMPTIONS

1. The transposition and docking phase of the mission includes an SPS evasive maneuver.
2. The first and third midcourse corrections (translunar) are executed as SPS burns with the third MCC followed by an RCS trim.
3. No SM RCS propellant is required during PTC or lunar orbit coast.
4. The sixth midcourse correction (transearth) is executed as an RCS burn of 5 fps.
5. The individual quad plots are included for reference only as quad management is determined by the flight controllers during the mission.

TABLE 5-1

SM RCS PROPELLANT LOADING AND USAGE SUMMARY

Nominal loaded	1342.4 lb
Initial outage due to loaded mixture ratio	15.6
Total trapped	26.4
Gauging inaccuracy	<u>80.4</u>
Deliverable SM-RCS propellant	1220.0
Nominal usage	590
Translunar phase (through LOI-2)	204
Lunar orbit phase	311
Transearth Phase (includes TEI)	75
Nominal remaining	630 lb

Available for mission planning	--	208.6
Nominal usage	39.3	169.3
Nominal remaining	--	169.3

SERVICE PROPULSION SYSTEM

SERVICE PROPULSION SYSTEM (SPS). - The budget presented in table 5-4 is for a July 16 launch, 72 degree launch azimuth, first opportunity injection, 59.5 hour lunar parking orbit, and fast earth return. The assumptions used in preparing this budget are presented in table 5-5. ΔV requirements were coordinated with INAB in MPAD.

It should be noted that the mission flexibility allowance of 900 fps has been used in addition to the fast return. In real time however, it is highly likely that a slower earth return would be performed in the mission flexibility ΔV had already been used (e.g., for LM rescue). Table 5-4 shows 3906 lbs of propellant remaining nominally and a total propellant margin (accounting both for the flexibility ΔV and the fast return) of 1268 lb.

TABLE 5-4 - APOLLO 11 SPS PROPELLANT SUMMARY

ITEM	PROPELLANT REQUIRED, LB	PROPELLANT REMAINING, LB
Loaded ^a	--	40803.0
Trapped and unavailable	441.4	40361.6
Outage	59.5	40302.1
Unbalance meter	100.0	40202.1
Available for ΔV	--	40202.1
Required for ΔV		
TLMC (120 fps) ^b	1166.4	39035.7
LOI-1 (2924 fps, 5 min. 59 sec.)	23862.4	15173.3
LOI-2 (157.8 fps, 16.4 sec.)	1115.4	14057.9
IOPC (16.6 fps, .9 sec.)	73.8	13984.1
TEI (3292.7 fps, 149 sec.)	10077.8	3906.3
Nominal remaining	--	3906.3
Mission flexibility (900 fps)	2212.4	1693.9
Dispersions (-3 σ)	426.0	1267.9
Propellant margin	--	1267.9

^a 15712.0 lb of fuel and 25091.0 lb of oxidizer; this is loaded on CS4-107.

^b Includes 19.7 fps for evasive maneuver

TABLE 5-5 - ASSUMPTIONS FOR THE APOLLO 11 SPS PROPELLANT BUDGET

1.	There is a non-propulsive propellant loss of 14.4 lb for each engine start. LM rescue assumed three engine starts.	
2.	A mission flexibility ΔV of 900 fps has been included in the SPS budget to provide the capability to perform a worst case LM rescue, or to handle several other contingencies (such as loss of PCNCS), or to perform a quicker earth return.	
3.	Spacecraft weight:	
	CM	12 280.0 lb
	SM	10 551.3 lb
	SLA Ring	98.0 lb
	Tanked SPS	40 600.7 lb
	LM (unmanned)	33 278.3 lb
	Total	96 808.3 lb
4.	Lunar Orbit Activity	
	Total weight transfer (CSM to LM) = 436.7 lb	
	Total weight transfer (LM to CSM) = 284.0 lb	
5.	SM RCS, EPS, and ECS weight losses:	
	<u>Mission Period</u>	<u>Incremental Weight Loss, lb</u>
	EL to TLMC	151.8
	TLMC to LOI-1	327.1
	LOI-1 to LOI-2	32.0
	LOI-2 to LOPC	146.5
	LOPC to TEI	216.1
6.	SM RCS usage (above nominal rendezvous requirement) for LM rescue was 216 lb.	

LM RCS BUDGET

Ground Rules and Assumptions

1. Data for the LM RCS engine performance and propellant requirements were obtained from the Spacecraft Operational Data Book and postflight analysis from Apollo 9 and Apollo 10.
2. All orientation maneuvers were assumed to be made at $2.0^\circ/\text{sec}$.
3. All orientation maneuvers were assumed to be three-axis maneuvers.

Figure 5-6.- LM RCS propellant profile.

DESCENT PROPULSION SYSTEM PROPELLANT BUDGET

Descent Propulsion Subsystem (DPS) - The DPS budget is shown in table 5-8 and the ground rules and assumptions in table 5-9.

Previously, the uncertainty in the low-level sensor (68.7 lb) has been shown as a contingency allowance. This is now included as part of the unusables. Also, there has previously been a contingency allowance for manual hover to allow for 2 minutes of burn time from 500 feet to touchdown. The present budget shows a nominal ΔV which includes a manual allowance of 477 fps (90 sec) from 500 feet to touchdown. Any additional hover time will be used from the propellant margin (unassigned capability). The rate of use for hover is approximately 9.1 lb/sec.

Propellant loads are those actually loaded on LM-5, and trapped and residual propellants are from Volume III, SODB. Engine performance data and ΔV requirements have been coordinated with LAB in MPAD.

Three sigma dispersions represent total propellant cost due to 3σ uncertainties in propellant loading, trapped, I_{sp} , ΔV , separation weight, non- ΔV consumables weight, and mixture ratio. There is a total propellant margin of 669 lb or approximately 73 seconds of hover time.

TABLE 5-8 - APOLLO 11 DPS PROPELLANT SUMMARY

ITEM	PROPELLANT REQUIRED, LB	PROPELLANT REMAINING, LB
Loaded ^a	--	18184.2
Trapped and unavailable	223.5	17960.7
Outage	14.0	17946.7
Low-Level Sensor Uncertainty	68.7	17878.0
Available for ΔV	--	17878.0
Nominal Required for ΔV of 6728.6 fps	16799.7	1078.3
Dispersions (-3 σ)	224.7	853.6
Contingencies		
Engine Valve-Pair Malfunction ($\Delta MR = \pm .016$)	81.1	772.5
Redesignation (60 fps)	104.0	668.5
Margin (73 sec. hover)	--	668.5

^a 6974.8 lb fuel and 11209.4 lb oxidizer; this is loaded on the LM-5 spacecraft.

TABLE 5-9 - ASSUMPTIONS FOR THE APOLLO 11 DPS PROPELLANT BUDGET

1. Integrated average $I_{sp} = 301.9 \pm 3.54$ seconds
2. IM separation weight = 33746. lb
3. Mixture ratio = 1.596 ± 0.0108
4. Nominal $\Delta V = 6728.6 \pm 96$ fps
5. Non- ΔV consumables of 47.4 lb from separation to DOI and 106.1 lb from DOI to touchdown

ASCENT PROPULSION SYSTEM PROPELLANT BUDGET

Ascent Propulsion Subsystem (APS) - Tables 5-10 and 5-11 present the ascent propellant budget for the current mission. Propellant loads are those actually on IM-5. Mission ΔV was coordinated with LAB in MPAD. The budget shown in table 5-10 accounts for an engine valve-pair malfunction, a PGNCs to AGS switchover, and a touchdown abort. There is a total propellant margin of 68 lb or about 6 seconds of burn time.

TABLE 5-10 - APOLLO 11 APS PROPELLANT SUMMARY

ITEM	PROPELLANT REQUIRED, LB	PROPELLANT REMAINING, LB
Loaded ^a	--	5238.4
Trapped and Unavailable	48.9	5189.5
Outage	17.5	5172.0
Available for ΔV	--	5172.0
Nominal Required for ΔV of 6072.5 fps	4965.8	206.2
Dispersions (-3σ)	57.8	148.4
Contingencies		
Engine Valve-pair Malfunction ($\Delta MR = \pm .016$)	19.6	128.8
PGNCs to AGS Switchover (40 fps)	23.8	105.0
Touchdown Abort ($\Delta V = +99.9$ lb, $\Delta V = -15$ fps)	36.8	68.2
Margin (6 seconds)	--	68.2

^a Includes 2019.9 lb fuel and 3218.5 lb oxidizer; this is loaded on the IM-5 spacecraft.

TABLE 5-11 - ASSUMPTIONS FOR THE APOLLO 11 APS PROPELLANT BUDGET

1. $I_{sp} = 308.97 \pm 3.553$ seconds
2. Mixture ratio = 1.602 ± 0.0225
3. Nominal $\Delta V = 6072.5 \pm 33.5$ fps
4. Ascent stage lift-off weight = 10873.6 lb

CSM-107/LM5 CRYOGENIC/EPS AND ECS BUDGET

The results of the Cryogenic, EPS, and ECS analysis are summarized in the following tables and figures:

TABLE 5-11	CSM Cryogenic Loading And Usage Summary

FIGURE 5-17	LM ASCENT H ₂ O PROFILE

CSM EPS BUDGET

ASSUMPTIONS AND GROUND RULES

1. The system was assumed to operate with three fuel cells and two inverters.
2. Fuel cell purging is included in the EPS requirements.
3. 100% fill for both H₂ and O₂.
4. Three entry and postlanding batteries were considered available to supply the total spacecraft power required for entry, parachute descent, and postlanding time. Each battery was assumed to have a 40 A-h capacity until splashdown, at which time the capacity was updated to 45 A-h.
5. Two batteries were considered to be in parallel with the fuel cells during ascent and for each SPS maneuver.
6. No cryogenic venting was assumed in flight.
7. The EPS hydrogen consumption rate (lb/hr) = $0.00257 \times I_{fc}$
8. The EPS oxygen consumption rate (lb/hr) = $7.936 \times \dot{H}_2$
9. Six battery charges were assumed: three on battery A and three on battery B.

TABLE 5-12
APOLLO 11 CRYOGENIC SUMMARY

I. Planning Allowance	H ₂ , lb	O ₂ , lb
A. Total Loaded	58.60	660.20
B. Less Residual	2.32	13.00
C. Less Instrumentation Error	<u>1.50</u>	<u>17.50</u>
Available for Mission Planning	54.78	629.70
II. Predicted Usages		
A. Prelaunch ¹		
1. Inline HTR + Pressure Relief (T-28 to T-3 (Incl 12.5 hr hold))	1.61	18.60
2. Power Production (plus ECS O ₂) (T-3 to liftoff)	<u>.57</u>	<u>6.96</u>
Total Prelaunch requirements	2.18	25.50
B. Flight		
1. EPS Requirements (Incl FC Purge)	36.60	288.33
2. CM ECS (Incl Cabin Purge)	-	72.40
3. LM Pressurizations	<u>-</u>	<u>10.35</u>
Total Flight Requirements	36.60	371.08
III. Nominal Reserves (RSS)		
EPS Uncertainty (5 percent)	1.83	14.42
ECS Uncertainty (.08 lb/hr)	-	15.60
Tank Unbalance (AOH)	.80	12.90
Launch Window	<u>.86</u>	<u>10.20</u>
RSS Subtotal	2.17	26.87
IV. Operational Reserves		
A. Available for Mission Planning	54.78	629.70
B. Less Nominal Predicted Usage	38.78	396.58
C. Less Nominal Reserves	<u>2.17</u>	<u>26.87</u>
Operational Reserve	13.83	206.25

LM EPS ANALYSIS

GROUND RULES AND ASSUMPTIONS

1. The descent stage batteries go on the line 30 minutes prior to earth liftoff.
2. A 3.8 hour checkout was assumed for lunar orbit.
3. Ascent and descent batteries were paralleled for the powered descent burn and prior to liftoff from the lunar surface.
4. The S-band equipment was assumed on 100 percent from initial activation in lunar orbit until completion of the mission.
5. The rendezvous radar electronics was assumed to be operational for the period of time dictated by the current G Mission flight plan.
6. The primary navigation and guidance subsystem (PGNCS) was left in the operate mode for the entire lunar stay.
7. The forward window heaters were left off for the entire mission.

Figure 5-11.- LM-5 total spacecraft current.

Figure 5-12.- Descent stage amp hours remaining.

Figure 5-13.- Ascent stage amp hours remaining.

LM ECS BUDGET

GROUND RULES AND ASSUMPTIONS

1. Cabin O₂ leakage rate was 0.2 lb/hr while pressurized
2. Metabolic rates were varied according to Volume 2 of the Spacecraft Operational Data Book
3. Metabolic O₂ consumed was $(1.643 \times 10^{-4}) \times (\text{metabolic rate})$
4. LM pressurization requires 6.62 lb of O₂
5. Cabin pressure regulator check requires 2.65 lb of O₂
6. H₂O consumed because of sublimator cooling was total heat removed divided by 10⁴0 (btu per lb) of H₂O
7. H₂O lost due to urination was 0.11 lb/hr per man
8. Cabin temperature control was set to 72° F
9. Average glycol flow rate was 250 lb/hr
10. Budget was performed on the operational trajectory and may change when the revision 1 is analyzed.

TABLE 5-13
LM ECS Summary

(a) Descent Stage

<u>Description</u>	<u>O₂, lb</u>	<u>H₂O, lb</u>
Loaded	48.00	210.6
Unusable	3.40	16.4
Available for mission.	44.60	194.2
Required for mission	26.17	142.4
Usable remaining in tanks	18.43	51.8

(b) Ascent Stage

Loaded	4.86	85.00
Unusable74	4.20
Available for mission	4.12	80.80
Required for mission	1.95	45.48
Usable remaining in tanks	2.17	35.32
