For release: 10:00 A.M. (EDT)

Media contact: (202) 691-5902

Friday, August 21, 2009

**(NOTE: This release was reissued on Tuesday, August 25, 2009, to correct labor force and unemployment data for Connecticut and the five other New England States. Although most labor force and unemployment levels changed for July 2009, seasonally adjusted unemployment rates did not change. Data from April 2009 forward were subject to revision; some unemployment rates did change for those earlier months by 0.1 percentage point. See the note below. This correction affected tables 3 and 4, but did not affect the analysis portion of the release.)**

## **REGIONAL AND STATE EMPLOYMENT AND UNEMPLOYMENT: JULY 2009**

Regional and state unemployment rates were generally little changed in July. Twenty-six states reported over-the-month unemployment rate increases, 17 states and the District of Columbia registered rate decreases, and 7 states had no rate change, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Over the year, jobless rates increased in all 50 states and the District of Columbia. At 9.4 percent in July, the national unemployment rate was little changed from June, but was 3.6 percentage points higher than a year earlier.

### **Corrections to Labor Force Estimates for New England States**

Labor force data in this release for the State of Connecticut (including the unemployment rate) reflect a minor input error found late in production of the July estimates. The estimates for the five other New England States also are affected due to additivity in the estimating process. A version of this news release containing corrected estimates will be issued as soon as possible. The corrections will be minimal. Data shown for the Northeast and for New England are correct as published. Payroll employment data shown for Connecticut and all other States are not affected by the error. For further assistance, please contact the BLS Local Area Unemployment Statistics Division at [lausinfo@bls.gov](mailto:lausinfo@bls.gov) or (202) 691-6392.

### **Publication of Metropolitan Area Hours and Earnings Resumed**

Effective with the release of July 2009 data, BLS has resumed publication of the Metropolitan Area hours and earnings series. See page 3 for additional information.

Nonfarm payroll employment decreased in 29 states, and increased in 21 states and the District of Columbia. The largest over-the-month decrease in the level of employment occurred in California (-35,800), followed by North Carolina (-26,400), Florida (-25,200), and Illinois (-13,000). North Carolina experienced the largest over-the-month percentage decrease in employment (-0.7 percent), followed by Mississippi (-0.6 percent), and Nevada and New Mexico (-0.5 percent each). The largest over-the-month increases in employment occurred in New York (62,100), Michigan (38,100), Texas (37,900), Tennessee (15,600), and the District of Columbia (13,200). The District of Columbia (+1.9 percent) experienced the largest over-the-month percentage increase in employment, followed by Michigan (+1.0 percent), New York (+0.7 percent), and South Dakota and Tennessee (+0.6 percent each). Over the year, nonfarm employment decreased in 49 states and increased in one state and the District of Columbia. The largest over-the-year percentage decreases occurred in Arizona (-7.5 percent), Michigan (-6.7 percent), Nevada (-6.4 percent), and Oregon (-5.7 percent). North Dakota (+1.0 percent) and the District of Columbia (+0.9 percent) reported over-the-year percentage increases.

### Regional Unemployment (Seasonally Adjusted)

In July, the West reported the highest regional jobless rate, 10.5 percent, followed by the Midwest, 10.2 percent. The Northeast recorded the lowest rate, 8.7 percent. The West was the only region with a statistically significant over-the-month rate change (+0.3 percentage point). All four regions experienced significant unemployment rate increases from July 2008, the largest of which were in the West (+4.2 percentage points) and Midwest (+4.0 points). (See table 1.)

Among the nine geographic divisions, the East North Central and Pacific had the highest unemployment rates in July, 11.4 and 11.3 percent, respectively. The Pacific rate was the highest in its series. (All region, division, and state series begin in 1976.) The divisions registering the lowest jobless rates were the West North Central, 7.5 percent, and West South Central, 7.7 percent. The Mountain and West South Central were the only divisions to experience statistically significant over-the-month unemployment rate changes (+0.4 percentage point each). All nine divisions saw significant over-the-year rate increases, with the largest change occurring in the East North Central (+4.6 percentage points). Three other divisions also experienced changes of 4.0 percentage points or more: the Pacific (+4.4 points), East South Central (+4.3 points), and South Atlantic (+4.0 points).

### State Unemployment (Seasonally Adjusted)

Fifteen states and the District of Columbia reported jobless rates of at least 10.0 percent in July. Michigan continued to have the highest unemployment rate among the states, 15.0 percent. Rhode Island recorded the next highest rate, 12.7 percent, followed by Nevada, 12.5 percent; California and Oregon, 11.9 percent each; and South Carolina, 11.8 percent. The rates in California, Nevada, and Rhode Island set new series highs, along with the rate in Georgia (10.3 percent). North Dakota again registered the lowest jobless rate, 4.2 percent in July. In total, 26 states posted jobless rates significantly lower than the U.S. figure of 9.4 percent, 14 states and the District of Columbia had measurably higher rates, and 10 states had rates that were not significantly different from that of the nation. (See tables A and 3 and chart 1.)

Eight states reported significant over-the-month unemployment rate increases in July. Wyoming experienced the largest of these (+0.6 percentage point), followed by Arizona (+0.5 point). Two states, Vermont (-0.5 percentage point) and Minnesota (-0.3 point), had significant rate decreases over the month. The remaining 40 states and the District of Columbia registered July rates that were not mea-

surably different from those of a month earlier, though some had changes that were at least as large numerically as the significant changes. (See table B.)

Michigan reported the largest unemployment rate increase over the year (+6.7 percentage points). Three states had rates more than 5.0 percentage points higher than a year earlier: Nevada (+5.8 points), Oregon (+5.6 points), and Alabama (+5.1 points). All states and the District of Columbia recorded statistically significant increases in their jobless rates from July 2008, with the smallest increase occurring in North Dakota (+0.9 percentage point). (See table C.)

#### Nonfarm Payroll Employment (Seasonally Adjusted)

Between June and July 2009, 12 states experienced statistically significant changes in employment. Eight states recorded statistically significant over-the-month increases led by New York (+62,100), Michigan (+38,100), and Texas (+37,900). The largest statistically significant decreases occurred in California (-35,800), North Carolina (-26,400), and Florida (-25,200). (See tables D and 5.)

Over the year, 45 states experienced statistically significant changes in employment, all of which were decreases. The largest statistically significant job losses occurred in California (-760,200), Florida (-401,100), Illinois (-286,500), Michigan (-280,800), Ohio (-254,700), Texas (-222,500), North Carolina (-221,900), and Georgia (-205,900). The smallest statistically significant decreases in employment occurred in Vermont (-12,100), Wyoming (-9,800), and Montana (-8,000). (See table E.)

---

The Metropolitan Area Employment and Unemployment release for July is scheduled to be issued on Tuesday, September 1. The Regional and State Employment and Unemployment release for August is scheduled to be issued on Friday, September 18.

#### **Publication of Metropolitan Area Hours and Earnings Resumed**

Effective with the release of July 2009 data, BLS has resumed publication of the Metropolitan Area hours and earnings series. These series were discontinued from the establishment survey in March 2008 due to a reduction in funding that resulted from the 2008 Consolidated Appropriations Act enacted on December 26, 2007. The funds used to produce these series were restored with the 2009 Omnibus Appropriations Act enacted on March 11, 2009. For more information, please visit <http://www.bls.gov/sae/msapwrestoration.htm>.

## Technical Note

This release presents labor force and unemployment data for census regions and divisions, states, and selected substate areas from the Local Area Unemployment Statistics (LAUS) program (tables 1 to 4). Also presented are nonfarm payroll employment estimates by state and major industry sector from the Current Employment Statistics (CES) program (tables 5 and 6). The LAUS and CES programs are both federal-state cooperative endeavors.

### Labor force and unemployment—from the LAUS program

**Definitions.** The labor force and unemployment data are based on the same concepts and definitions as those used for the official national estimates obtained from the Current Population Survey (CPS), a sample survey of households that is conducted for the Bureau of Labor Statistics (BLS) by the U.S. Census Bureau. The LAUS program measures employment and unemployment on a place-of-residence basis. The universe for each is the civilian noninstitutional population 16 years of age and over. *Employed* persons are those who did any work at all for pay or profit in the reference week (the week including the 12th of the month) or worked 15 hours or more without pay in a family business or farm, plus those not working who had a job from which they were temporarily absent, whether or not paid, for such reasons as labor-management dispute, illness, or vacation. *Unemployed* persons are those who were not employed during the reference week (based on the definition above), had actively looked for a job sometime in the 4-week period ending with the reference week, and were currently available for work; persons on layoff expecting recall need not be looking for work to be counted as unemployed. The *labor force* is the sum of employed and unemployed persons. The *unemployment rate* is the number of unemployed as a percent of the labor force.

**Method of estimation.** Estimates for 48 of the 50 states, the District of Columbia, the Los Angeles-Long Beach-Glendale metropolitan division, New York City, and the balances of California and New York State are produced using estimating equations based on regression techniques. This method, which underwent substantial enhancement at the beginning of 2005, utilizes data from several sources, including the CPS, the CES, and state unemployment insurance (UI) programs. Estimates for the state of California are derived by summing the estimates for the Los Angeles-Long Beach-Glendale metropolitan division and the balance of California. Similarly, estimates for New York State are derived by summing the estimates for New York City and the balance of New York State. Estimates for all nine census divisions and the five additional substate areas contained in this release (the Cleveland-Elyria-Mentor and Detroit-Warren-Livonia metropolitan areas and the Chicago-Naperville-Joliet, Miami-Miami Beach-Kendall, and Seattle-Bellevue-Everett metropolitan divisions) and their respective

balances of state are based on a similar regression approach that does not incorporate CES or UI data. Estimates for census regions are obtained by summing the model-based estimates for the component divisions and then calculating the unemployment rate. Each month, census division estimates are controlled to national totals; state estimates are then controlled to their respective division totals. Substate and balance-of-state estimates for the five areas noted above are controlled to their respective state totals. Estimates for Puerto Rico are derived from a monthly household survey similar to the CPS. A detailed description of the estimation procedures is available from BLS upon request.

**Annual revisions.** Labor force and unemployment data for prior years reflect adjustments made at the end of each year. The adjusted estimates reflect updated population data from the U.S. Census Bureau, any revisions in the other data sources, and model reestimation. In most years, historical data for the most recent five years (both seasonally adjusted and not seasonally adjusted) are revised near the beginning of each calendar year, prior to or coincident with the release of January estimates.

**Seasonal adjustment.** Seasonal adjustment of modeled estimates of employment and unemployment levels is performed within the modeling procedure. Series are decomposed into trend, seasonal, and irregular components and survey error. This directly yields seasonally adjusted estimates for employment and unemployment levels with reliability measures. Labor force levels and unemployment rates are calculated from these two estimates.

**Area definitions.** The substate area data published in this release reflect the standards and definitions established by the U.S. Office of Management and Budget on November 20, 2008. A detailed list of the geographic definitions is available on the Internet at <http://www.bls.gov/lau/lausmsa.htm>.

### Employment—from the CES program

**Definitions.** Employment data refer to persons on establishment payrolls who receive pay for any part of the pay period that includes the 12th of the month. Persons are counted at their place of work rather than at their place of residence; those appearing on more than one payroll are counted on each payroll. Industries are classified on the basis of their principal activity in accordance with the 2007 version of the North American Industry Classification System.

**Method of estimation.** The employment data are estimated using a “link relative” technique in which a ratio (link relative) of current-month employment to that of the previous month is computed from a sample of establishments reporting for both months. The estimates of employment for the current month are obtained by multiplying the estimates for the previous month by these ratios. Small-domain models

are used as the official estimators for the approximately 44 percent of CES published series which have insufficient sample for direct sample-based estimates.

**Annual revisions.** Employment estimates are adjusted annually to a complete count of jobs, called benchmarks, derived principally from tax reports that are submitted by employers who are covered under state unemployment insurance (UI) laws. The benchmark information is used to adjust the monthly estimates between the new benchmark and the preceding one and also to establish the level of employment for the new benchmark month. Thus, the benchmarking process establishes the level of employment, and the sample is used to measure the month-to-month changes in the level for the subsequent months.

**Seasonal adjustment.** Payroll employment data are seasonally adjusted at the statewide supersector level. In some states, the seasonally adjusted payroll employment total is computed by aggregating the independently adjusted supersector series. In other states, the seasonally adjusted payroll employment total is independently adjusted. Revisions of historical data for the most recent 5 years are made once a year, coincident with annual benchmark adjustments.

**Caution on aggregating state data.** State estimation procedures are designed to produce accurate data for each individual state. BLS independently develops a national employment series; state estimates are not forced to sum to national totals. Because each state series is subject to larger sampling and nonsampling errors than the national series, summing them cumulates individual state level errors and can cause significant distortions at an aggregate level. Due to these statistical limitations, BLS does not compile a “sum-of-states” employment series, and cautions users that such a series is subject to a relatively large and volatile error structure.

### **Reliability of the estimates**

The estimates presented in this release are based on sample surveys, administrative data, and modeling and, thus, are subject to sampling and other types of errors. Sampling error is a measure of sampling variability—that is, variation that occurs by chance because a sample rather than the entire population is surveyed. Survey data also are subject to nonsampling errors, such as those which can be introduced into the data collection and processing operations. Estimates not directly derived from sample surveys are subject to additional errors resulting from the specific estimation processes used. The sums of individual items may not always equal the totals shown in the same tables because of rounding. Unemployment rates are computed from unrounded data and thus may differ slightly from rates computed using the rounded data displayed in the tables.

**Use of error measures.** In 2005, the LAUS program introduced several improvements to its methodology. Among

these was the development of model-based error measures for the monthly estimates and the estimates of over-the-month changes. The introductory section of this release preserves the long-time practice of highlighting the direction of the movements in regional and state unemployment rates and state nonfarm payroll employment regardless of their statistical significance. The remainder of the analysis in the release takes statistical significance into consideration.

**Labor force and unemployment estimates.** Model-based error measures for both seasonally adjusted and not seasonally adjusted data and for over-the-month changes are available online at <http://www.bls.gov/lau/lastderr.htm>. BLS uses a 90-percent confidence level in determining whether changes in LAUS unemployment rates are statistically significant. The average magnitude of the current year over-the-month change in a state unemployment rate that is required in order to be statistically significant at the 90-percent confidence level is between 0.3 and 0.4 percentage point. More details can be found on the Web site. Measures of nonsampling error are not available, but additional information on the subject is provided in *Employment and Earnings Online* at <http://www.bls.gov/opub/ee/home.htm>.

**Employment estimates.** Measures of sampling error for state CES data at the total nonfarm and supersector level and for metropolitan area CES data at the total nonfarm level are available online at <http://www.bls.gov/sae/790stderr.htm>. BLS uses a 90-percent confidence level in determining whether changes in CES employment levels are statistically significant. Information on recent benchmark revisions for states is available on the Internet at <http://www.bls.gov/sae/>.

### **Additional information**

More complete information on the technical procedures used to develop these estimates and additional data appear in *Employment and Earnings Online*.

Estimates of labor force and unemployment from the LAUS program, as well as nonfarm employment from the CES program, for over 300 metropolitan areas and metropolitan New England City and Town Areas (NECTAs) are available in the news release, *Metropolitan Area Employment and Unemployment*. Estimates of labor force, employment, and unemployment for all states, metropolitan areas, labor market areas, counties, cities with a population of 25,000 or more, and other areas used in the administration of various federal economic assistance programs are available on the Internet at <http://www.bls.gov/lau/>. Employment data from the CES program are available on the Internet at <http://www.bls.gov/sae/>.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; TDD message referral phone: 1-800-877-8339.

**Table 1. Civilian labor force and unemployment by census region and division, seasonally adjusted <sup>1</sup>**

<sup>1</sup> Census region estimates are derived by summing the Census division model-based estimates.

NOTE: Data refer to place of residence. The States (including the District of Columbia) that compose the various census divisions are: New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont; Middle Atlantic: New Jersey, New York, and Pennsylvania; South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia; East South Central: Alabama, Kentucky, Mississippi, and

Tennessee; West South Central: Arkansas, Louisiana, Oklahoma, and Texas; East North Central: Illinois, Indiana, Michigan, Ohio, and Wisconsin; West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota; Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming; and Pacific: Alaska, California, Hawaii, Oregon, and Washington. Estimates for the current year are subject to revision early in the following calendar year.

<sup>1</sup> Metropolitan division.

<sup>2</sup> Metropolitan statistical area.

<sup>c</sup> = corrected.

<sup>P</sup> = preliminary.

NOTE: Data refer to place of residence. Data for Puerto Rico are derived from

a monthly household survey similar to the Current Population Survey. Area definitions are based on Office of Management and Budget Bulletin No. 09-01, dated November 20, 2008, and are available on the BLS Web site at <http://www.bls.gov/lau/lausmsa.htm>. Estimates for the latest month are subject to revision the following month.

<sup>1</sup> Metropolitan division.

<sup>2</sup> Metropolitan statistical area.

<sup>C</sup> = corrected.

<sup>P</sup> = preliminary.

NOTE: Data refer to place of residence. Data for Puerto Rico are derived from

a monthly household survey similar to the Current Population Survey. Area definitions are based on Office of Management and Budget Bulletin No. 09-01, dated November 20, 2008, and are available on the BLS Web site at <http://www.bls.gov/lau/lausmsa.htm>. Estimates for the latest month are subject to revision the following month.

<sup>1</sup> Includes mining and logging, information, and other services (except public administration), not shown separately.

<sup>2</sup> This series is not published seasonally adjusted because the seasonal component, which is small relative to the trend-cycle and irregular components, cannot be separated with sufficient precision.

<sup>3</sup> Mining and logging is combined with construction.

P = preliminary.

NOTE: Data are counts of jobs by place of work. Estimates are currently projected from 2008 benchmark levels. Estimates subsequent to the current benchmarks are provisional and will be revised when new information becomes available.
