

Log of Meeting

Subject: CPSC meeting with ANSI/ASME A17 Chairman, Bob Seymour

Date of Meeting: January 21, 1998

1998 FEB 24 P 4:20

Date of Entry: February 23, 1998

Log Entry Source: Scott Snyder, ESME (x1317)

Location: CPSC Headquarters, 4330 East West Highway, Bethesda, MD
from 1:30 pm-3:30 pm in room 410BC

CPSC Attendees: See Attendance List

Non-CPSC Attendees: See Attendance List

Summary of Meeting:

The Chairman of the A17 Main Committee, Mr. Bob Seymour gave a presentation on ANSI/ASME A17 Safety Code for Elevators and Escalators (see attached agenda and copy of presentation material).

Ms. Mary Conneely, Esdaile, Barrett & Esdaile, gave a presentation on the escalator injury of Mr. Frank Hill (see attached material).

AGENDA

Meeting with Bob Seymour, Chairman ANSI/ASME A17 Committee

CPSC Headquarters
4330 East-West Highway
Bethesda, Maryland

Wednesday, January 21, 1998 1:30 PM - 3:30PM

- I. History of the A17 Standard (Bob Seymour)
- II. Safety Requirements for Escalators (Bob Seymour)
 - A. General discussion of the safety requirements for escalators.
 1. What hazard(s) do the requirements address?
 - B. Specific discussion of the safety requirements to address step-skirt entrapment.
 1. What is the rationale for the current requirements?
- III. Enforcement by Authorities Having Jurisdiction (AHJ) (Bob Seymour)
 - A. How are the A17 standards adopted by AHJs?
 - B. What are the responsibilities of the AHJs in enforcing the A17 standards?
- IV. CPSC Petition Status (CPSC Staff)
- V. General Discussion

American Society of Mechanical Engineers

A17 Committee

**U.S. CONSUMER PRODUCT SAFETY
COMMISSION
WASHINGTON, DC**

JANUARY 21, 1998

ASME A17.1 SAFETY CODE FOR ELEVATORS AND ESCALATORS

AN AMERICAN NATIONAL STANDARD

I. HISTORY

- A. First Edition 1921
- B. Latest Edition A17.1-1996
 - 14 Editions
 - 31 Supplements or Addendums (#32 almost ready)
 - New edition every 3 years with annual supplements
- C. Requirements for escalators were included in 1921 edition

II. ANSI

- A. Not a Code writing organization
- B. ASME is one of the many Code writing organizations
- C. The consensus method of Code writing is used by ASME meeting the ANSI criteria

III. ASME

- A. 5 Councils (Senior Vice Presidents)
- B. Council on Codes and Standards (10 Boards - Vice Presidents)
- C. Board on Safety Codes and Standards (18 Committees)

IV. A17 COMMITTEE

- A. 2 Administrative Committees
- B. 21 Working Committees

C. Membership - Main Committee

1. Interest
2. Commitment
3. Working Committee Member
4. Balance based on employer

D. Membership - Working Committee

1. Interest
2. Commitment

E. National Interest Review Committee

1. Interest

V. A17 CODE

A. Requirements are current. (Only 3 parts address existing conditions.) Statement about previous Codes. *Part 12, Part 10 of 1988*

B. Revisions - Many come as result of interpretations

C. Interpretations

D. Appeals

1. Main Committee
2. Board, Safety Codes and Standards
3. Board, Hearings and Appeals
4. ANSI

E. Exceptions - Section 2 Preface

1. AHJ may grant exceptions
2. Recognize new technology
3. Equivalent Safety

VI. ADOPTION

A. Effective date

B. Numerous Methods by AHJ to establish date

VII. QEI

- A. Committee
- B. Accreditation
- C. Certification
- D. Training - Recertification
- E. Required by A17 Code

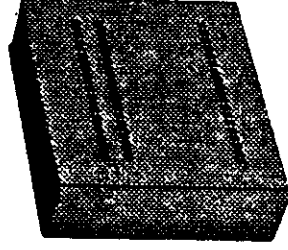

VIII. HARMONIZATION

- A. A17/B44
- B. Most parts are balloted. Main parts are being prepared for second consideration.
- C. Side by side comparison of requirements. New requirements drafted by Joint Working Committees. Presented as changes to A17 Code with new document for B44.
- D. Revised Procedures
 - 1. Basic format follows current A17 procedures
 - 2. Interest categories reduced to 5
 - a. Manufacturers - major
 - b. Installers, Maintainers, Component Suppliers
 - c. Purchasers or Owners
 - d. Regulatory Bodies
 - e. General Interest
 - 3. Balance
 - a. No interest group more than 1/3
 - b. Voting members in one category cannot exceed the sum of voting members from 3 smallest categories.
 - 4. Multiple membership - no more than 1 member from an organization
 - a. Chair of Working Committee and represents different expertise
 - b. Different country

5. Regulatory Authority Council
 - a. One member from jurisdiction
 - b. Group with chair that is member of Administrative Committee with vote
 - c. Required to vote
 6. Public Review Group (NIRC)
- E. Committee items not directly involved with harmonized Code or supplements to current A17 and B44 documents were tabled. Working Committee will return to these items when work on harmonized Codes allows. These will be incorporated into continuing balloting of harmonized Code, if possible, or will be incorporated in first supplement to harmonized Code. Interpretations are continuing.
- F. Current schedule shows completion mid 1999

ASME A17.1

- First Edition 1921
- Latest Edition A17.1-1996
 - 14 Editions
 - 31 Supplements or Addends

OF COUNSEL

January 21, 1998

TO: THE UNITED STATES CONSUMER
PRODUCT SAFETY COMMISSION

FROM: JAMES N. ESDAILE, JR.
MARY MOYNIHAN CONNEELY

RE: ESCALATOR SAFETY

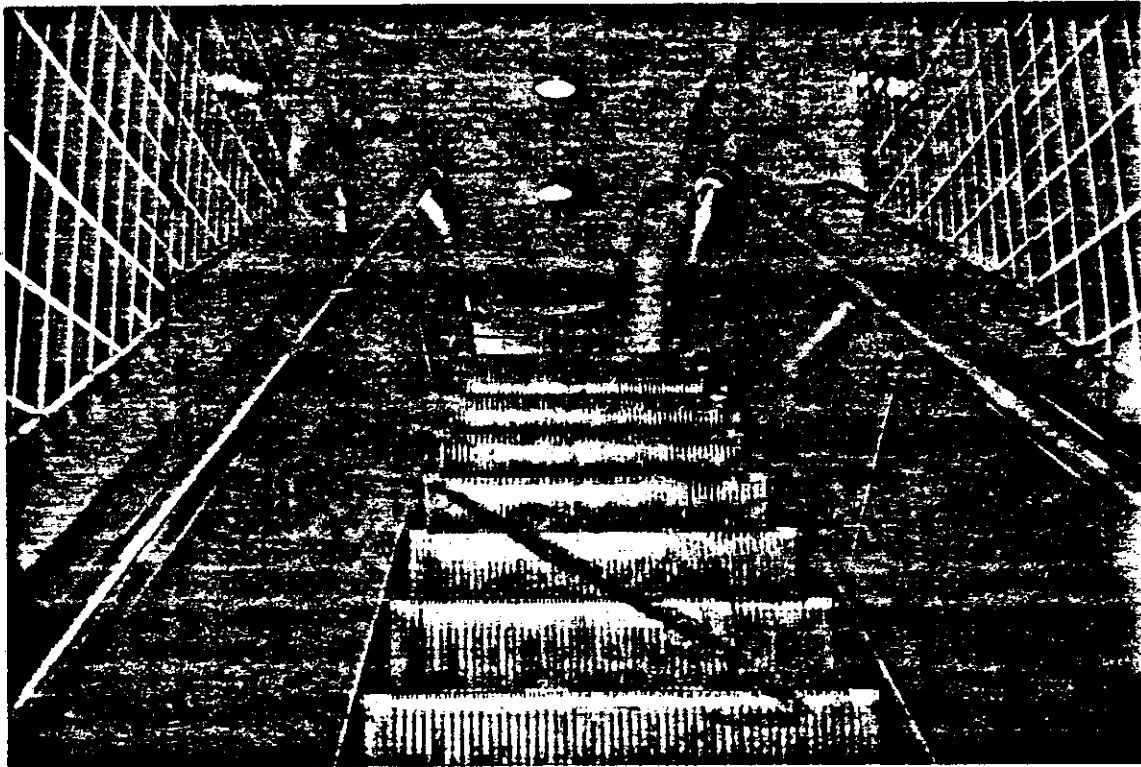

87-year-old Frank Hill was an active person. He lived independently in his own apartment. He cleaned, did his own grocery shopping, paid his own bills and visited friends and family. He loved to cook for friends in his apartment.

ESDAILE, BARRETT & ESDAILE

He was very active in his church and cooked every Sunday at the church to feed 75 to 80 people. Like many other elderly persons, he relied on the Massachusetts Bay Transportation Authority or MBTA to get around.

Frank Hill's whole life changed on October 8, 1996. He was using the MBTA's subway system to return home after running some errands. He got off at the State Street Station and went to exit the station on one of its escalators. When he was almost halfway up the escalator, the corner of his coat got caught in a gap between the step and the side of the escalator.

ESDAILE, BARRETT & ESDAILE

He was pulled off his feet to the escalator steps. The escalator continued to move pulling his coat more and more tightly into the escalator and dragging Mr. Hill closer to the top. He was unable to free himself. When he reached the top of the escalator his arm was pulled into a gap between the combplate and the step. The escalator continued to move grinding his arm between the stairs and the combplate. The pain and horror he experienced is unimaginable. A good Samaritan attempted unsuccessfully to help Mr. Hill and watched helplessly as Mr. Hill's arm was dragged further beneath the combplate. Finally, an MBTA employee stopped the escalator. It was too late for Mr. Hill. His ^{left} right arm was severely injured.

The injuries to Mr. Hill's ^{left} right arm were so severe that despite the best efforts of doctors at Massachusetts General Hospital, his ^{left} right arm was amputated just below his shoulder.

ESDAILE, BARRETT & ESDAILE

Since the date of his serious accident, October 8, 1996, Mr. Hill has been confined to a hospital and then a nursing home. He is cut off from his church, his friends, and is unable to enjoy his old activities. His medical bills, which the federal government is paying in part through Medicare/Medicaid, exceed \$200,00.00.

Mr. Hill's greatest wish is to return to his apartment. He is unable to pay for the assistance he needs to return home because of the loss of his ~~right~~^{left} arm. To obtain the money necessary to regain his independence, he has been forced to bring a lawsuit against the MBTA and Millar Elevator Service Company. At his age, the long and difficult road of litigation seems to be an insurmountable barrier to his return home. While the litigation proceeds, he is forced to remain in a nursing home.

This accident should never have happened. It could have been prevented by the installation of safety devices available on the open market.

According to its Web site, the MBTA is one of the nation's largest mass transit systems. On an average weekday 922,000 people use its services. Many of the people who rely on the MBTA for transportation are elderly and disabled. They have no other means of transportation. They represent a particularly vulnerable population when riding escalators without adequate safety devices.

Escalator accidents are common on the MBTA's escalators. A December, 1994 Boston Globe article reported that there were "more than 300 accidents in the past two

ESDAILE, BARRETT & ESDAILE

years with over 100 resulting in injuries." MBTA records reviewed by the Globe showed a "27% increase in escalator accidents from fiscal year 1993 to 1994, as well as an increase in the number of victims who sought medical attention."

Information provided by the MBTA to Esdaile, Barrett and Esdaile shows about 1,749 escalator accidents from January 1, 1988 through October 8, 1996. See printout at Tab 1. Despite warnings from the December 1994 Boston Globe article, its own statistics of 1,749 escalator accidents, and recommendations from Millar for safety improvements including the installation of "sideplate or safety strips safety shields" which may have prevented Mr. Hill's accident, the MBTA failed to make any safety improvements on the escalator which injured Frank Hill. See Millar recommendations at Tab 2. As Mr. Hill's case makes abundantly clear, reliance on voluntary safety upgrades by escalator owners is misplaced.

Neither the current ASME standards or the Regulations of the Commonwealth of Massachusetts are adequate to prevent these accidents or to protect the vulnerable population of elderly, disabled persons, and children who must ride these escalators on a daily basis. The standards do not mandate sufficient safety shutoffs to stop the escalator immediately when a person gets caught between the steps and the sidewall or when a person becomes caught under the combplate. Adequate safety standards cannot assume perfect escalator maintenance. Redundancy must be required on an escalator so that if

ESDAILE, BARRETT & ESDAILE

one safety device fails another can prevent injury. The number of accidents, together with the personal and financial consequences to the victim and society more than justify mandatory standards requiring the retroactive installation of available safety devices to protect from sidewall and combplate entrapment injuries.

ESCALATOR ACCIDENTS

PAGE 36
DETAIL

ACCIDENT DATE	REPT#	STATION	STATION	NAME	OLD REPT#
10/04/1996	9615742	COPLEY		COLLINS, HELEN	
10/08/1996	9615931	STATE		HILL, FRANK	

Recommended Safety Improvements to MBTA Escalators

ADD CAUTION SIGNS

Caution signs, located at both the top and bottom of escalators, are now required by ANSI Code. Such signs can be added to your escalators in the interest of passenger safety.

Approximate Cost \$250.00 Per Escalator

ADD DEMARCATION LIGHTS

(ANSI A17.1b - 1989, Rule 805.1k)

Current safety code requires that green step demarcation lights be installed below the escalator steps at both landings. To increase the safety of passengers as they move onto and off of the escalator, demarcation lights should be installed.

Approximate Cost \$1850.00 Per Escalator

ADD AUDIBLE WARNING SIGNAL AND NEW STOP BUTTONS

(ANSI A17.1a - 1988, Rule 805.1b)

New red stop buttons, along with an accompanying audible warning signal, can be added to your escalators. These devices are now required by ANSI Code as a safety feature on all new escalator installations.

Approximate Cost \$2500.00 Per Escalator

REDUCE ESCALATOR SPEED

The escalators at some stations are currently running at a speed of 120-90 feet per minute. This is the average speed used on most escalators. The passengers will be more comfortable as they enter and exit the escalator with a slower moving unit. Therefore, the escalator speed will be reduced to a speed of 75 feet per minute. This could reduce the possibility of accidents as older or infirm persons attempt to use the escalator.

Approximate Cost \$2500.00 Per Escalator

REPLACE INSTALL HAND/FINGER GUARDS AND SWITCHES

(ANSI A17.1b - 1989, Rule 802.4c)

The guards, which prevent hands and fingers from being pinched or caught where the handrail moves into the balustrade on your escalator, are damaged, missing or do not have safety switches. They shall be replaced to avoid injury and to meet safety standards.

Approximate Cost \$250.00 Per Escalator

ADD SAFETY SWITCHES TO UPPER AND LOWER SKIRT PANELS

(ANSI A17.1b - 1989, Rule 805.1h)

Safety devices, located where they could stop the escalator before it reached the upper or lower combplate if something became caught between the step and the skirt, are now required by safety code. Such switches can be installed on your escalator where they do not currently exist.

Approximate Cost \$3500.00 Per Escalator

Recommended Safety Improvements to MBTA Escalators

ADD CAUTION SIGNS

Caution signs, located at both the top and bottom of escalators, are now required by ANSI Code. Such signs can be added to your escalators in the interest of passenger safety.

Approximate Cost \$250.00 Per Escalator

ADD DEMARCATION LIGHTS

(ANSI A17.1b - 1989, Rule 805.1k)

Current safety code requires that green step demarcation lights be installed below the escalator steps at both landings. To increase the safety of passengers as they move onto and off of the escalator, demarcation lights should be installed.

Approximate Cost \$1850.00 Per Escalator

ADD AUDIBLE WARNING SIGNAL AND NEW STOP BUTTONS

(ANSI A17.1a - 1988, Rule 805.1b)

New red stop buttons, along with an accompanying audible warning signal, can be added to your escalators. These devices are now required by ANSI Code as a safety feature on all new escalator installations.

Approximate Cost \$2500.00 Per Escalator

REDUCE ESCALATOR SPEED

The escalators at some stations are currently running at a speed of 120-90 feet per minute. This is the average speed used on most escalators. The passengers will be more comfortable as they enter and exit the escalator with a slower moving unit. Therefore, the escalator speed will be reduced to a speed of 75 feet per minute. This could reduce the possibility of accidents as older or infirm persons attempt to use the escalator.

Approximate Cost \$2500.00 Per Escalator

REPLACE INSTALL HAND/FINGER GUARDS AND SWITCHES

(ANSI A17.1b - 1989, Rule 802.4c)

The guards, which prevent hands and fingers from being pinched or caught where the handrail moves into the balustrade on your escalator, are damaged, missing or do not have safety switches. They shall be replaced to avoid injury and to meet safety standards.

Approximate Cost \$250.00 Per Escalator

ADD SAFETY SWITCHES TO UPPER AND LOWER SKIRT PANELS

(ANSI A17.1b - 1989, Rule 805.1h)

Safety devices, located where they could stop the escalator before it reached the upper or lower combplate if something became caught between the step and the skirt, are now required by safety code. Such switches can be installed on your escalator where they do not currently exist.

Approximate Cost \$3500.00 Per Escalator

ADD UPPER AND LOWER UPTHURST SAFETY SWITCHES

(ANSI A17.1b - 1989, Rule 805.1m)

Upthrust safety switches are designed to open a safety circuit which will stop the escalator if a step becomes displaced. Such switches are now required on new escalator installations. They can be installed on your escalator for added safety.

Approximate Cost \$2500.00 Per Escalator

INSTALL SIDEPLATE OR SAFETY STRIPS SAFETY SHIELDS

It is now possible to reduce the hazard of shoes or objects becoming caught between the side of escalator steps and the skirt panels. To accomplish this safety improvement, sideplates or safety strips can be installed on your escalators.

Approximate Cost Varies by No. of Steps: \$1500 to \$7000.00 Per Escalator for Labor Only

ADD "HOCKEY PUCKS" OR BAGGAGE STOPS TO DECK BOARD

The deck board, which is the surface adjacent to the handrails on your escalator, presently is one smooth surface. To forestall problems with young people being tempted to "slide" on the deck board surface, round covers, shaped like hockey pucks, can be added at intervals to the deck board. This will discourage misuse of the escalator and at the same time, provide a safety factor.

Approximate Cost Varies by rise of unit: \$ 200.00 to \$3000.00 Per Escalator

UPGRADE WESTINGHOUSE MODULAR B HANDRAIL DRIVE

The Westinghouse Modular B Handrail Drive has proven Unreliable and should be upgraded.

Approximate cost varies by rise of unit and should be quoted on an individual unit basis.

UPGRADE OR REPLACE VARIOUS OLDER UNITS

MAVERICK STATION - 1 Unit No. 522

CHINATOWN - 1 Unit No. 366

ARLINGTON STATION - 1 Unit No. 108
