MEETING LOG

Date : May 8, 1998
Place : CPSC Headquarters
Attendees : See attached
CPSC Staff : Marilyn Wind, Ph.D., Michael Babich, Ph.D., Mary Ann Danello, Ph.D., Andrew Ulsamer, Ph.D., Laura Washburn, Warren Porter, Brian Lee, Ph.D., and Lori Saltzman
Purpose : To share information on research being conducted on phthalates.
Submitted By : Marilyn Wind, Ph.D.

Members of the Chemical Manufacturers Association Phthalate Panel presented data on studies they are conducting as well as studies ongoing elsewhere. Studies included research on estrogen receptors, species differences in liver responses to diisononyl phthalate (DINP), studies on male rat kidney tumors, a carcinogenicity study on DINP incorporating a recovery period, and a two generation study. We discussed the potential implications of these studies to the assessment of hazard from DINP.

CPSC staff then discussed the scoping work done on developing a procedure for measuring migration of phthalates from products.

It was agreed that we would have meetings to share information as new information became available.
