

Flow Schedule

The table shows the downstream arrival and end dates/times for a potential high-flow experimental release of water from Glen Canyon Dam (flows above 40,000 cubic feet per second) by river mile between the dam (river mile -15) and Diamond Creek (river mile 226), Arizona. Times are presented in terms of a 24-hour clock and subject to uncertainties of approximately +/- 3 hours on the basis of data collected at stream gages throughout the Colorado River in Grand Canyon during the identical hydrograph associated with the November 2004 high-flow experiment from Glen Canyon Dam. The table was prepared by the U.S. Geological Survey, Southwest Biological Science Center, Monitoring and Research Center.
