

The background of the slide is a photograph of a sunset over the ocean. The sky is filled with orange and yellow clouds, and the sun is low on the horizon. On the right side of the image, there is a dark silhouette of a pier structure extending into the water. The pier has a building with a small cupola on top and several lights along its length. The water is a deep blue color.

**Supplemental Coastal Observations and Monitoring in South
Bay San Diego**

IBWC / Surfrider Consent Decree

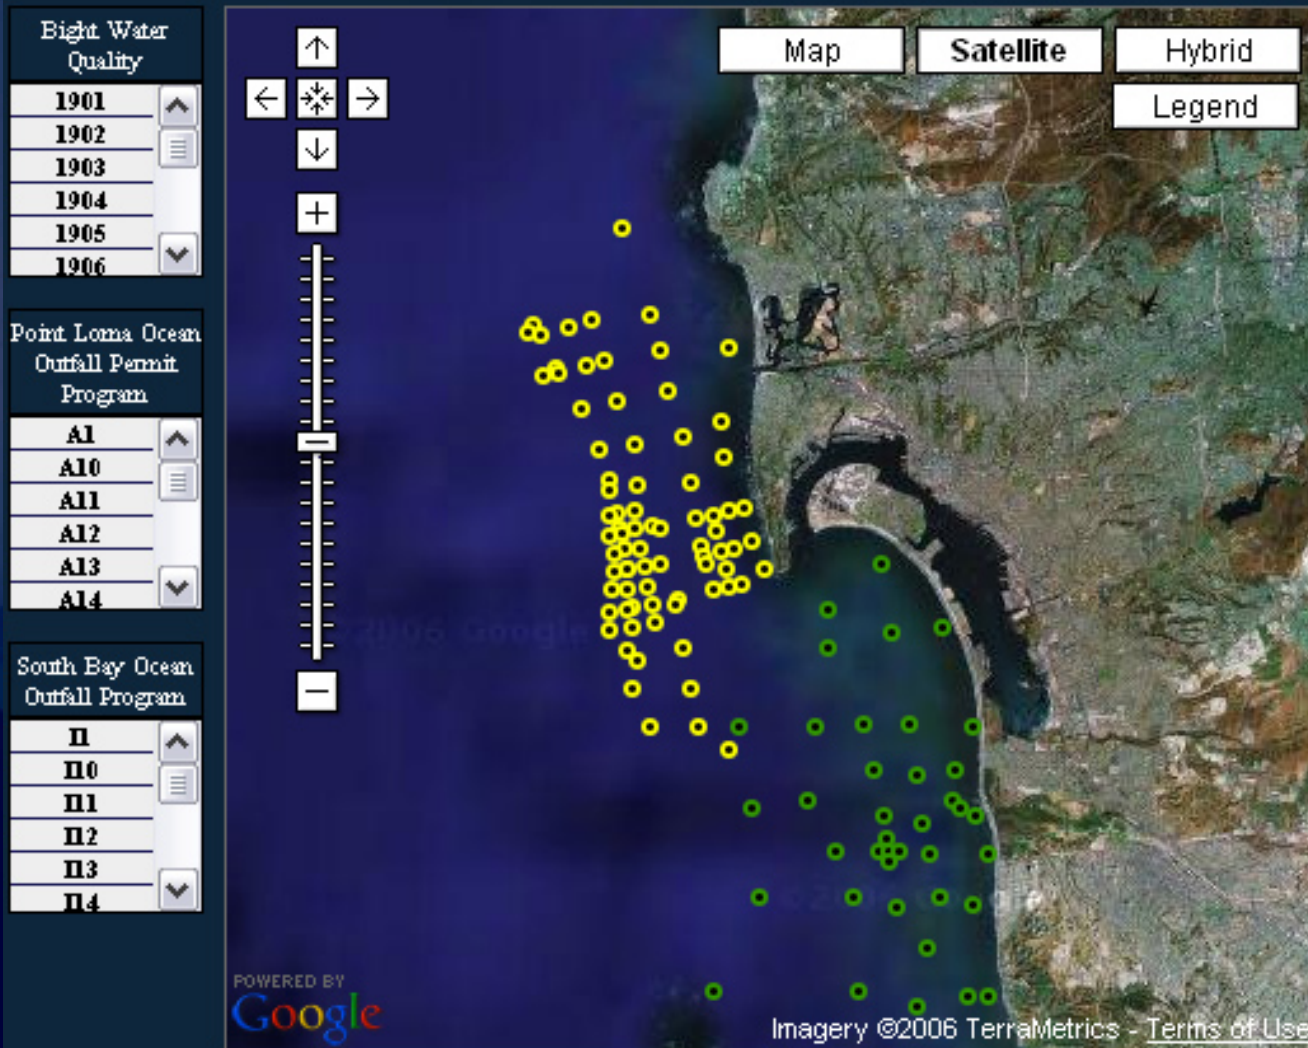

Eric Terrill, Scripps Institution of Oceanography

Burton Jones, University of Southern California

Richard Pyle, CH2MHILL

Project Organizational Chart

Coastal Observations and Monitoring in South Bay San Diego

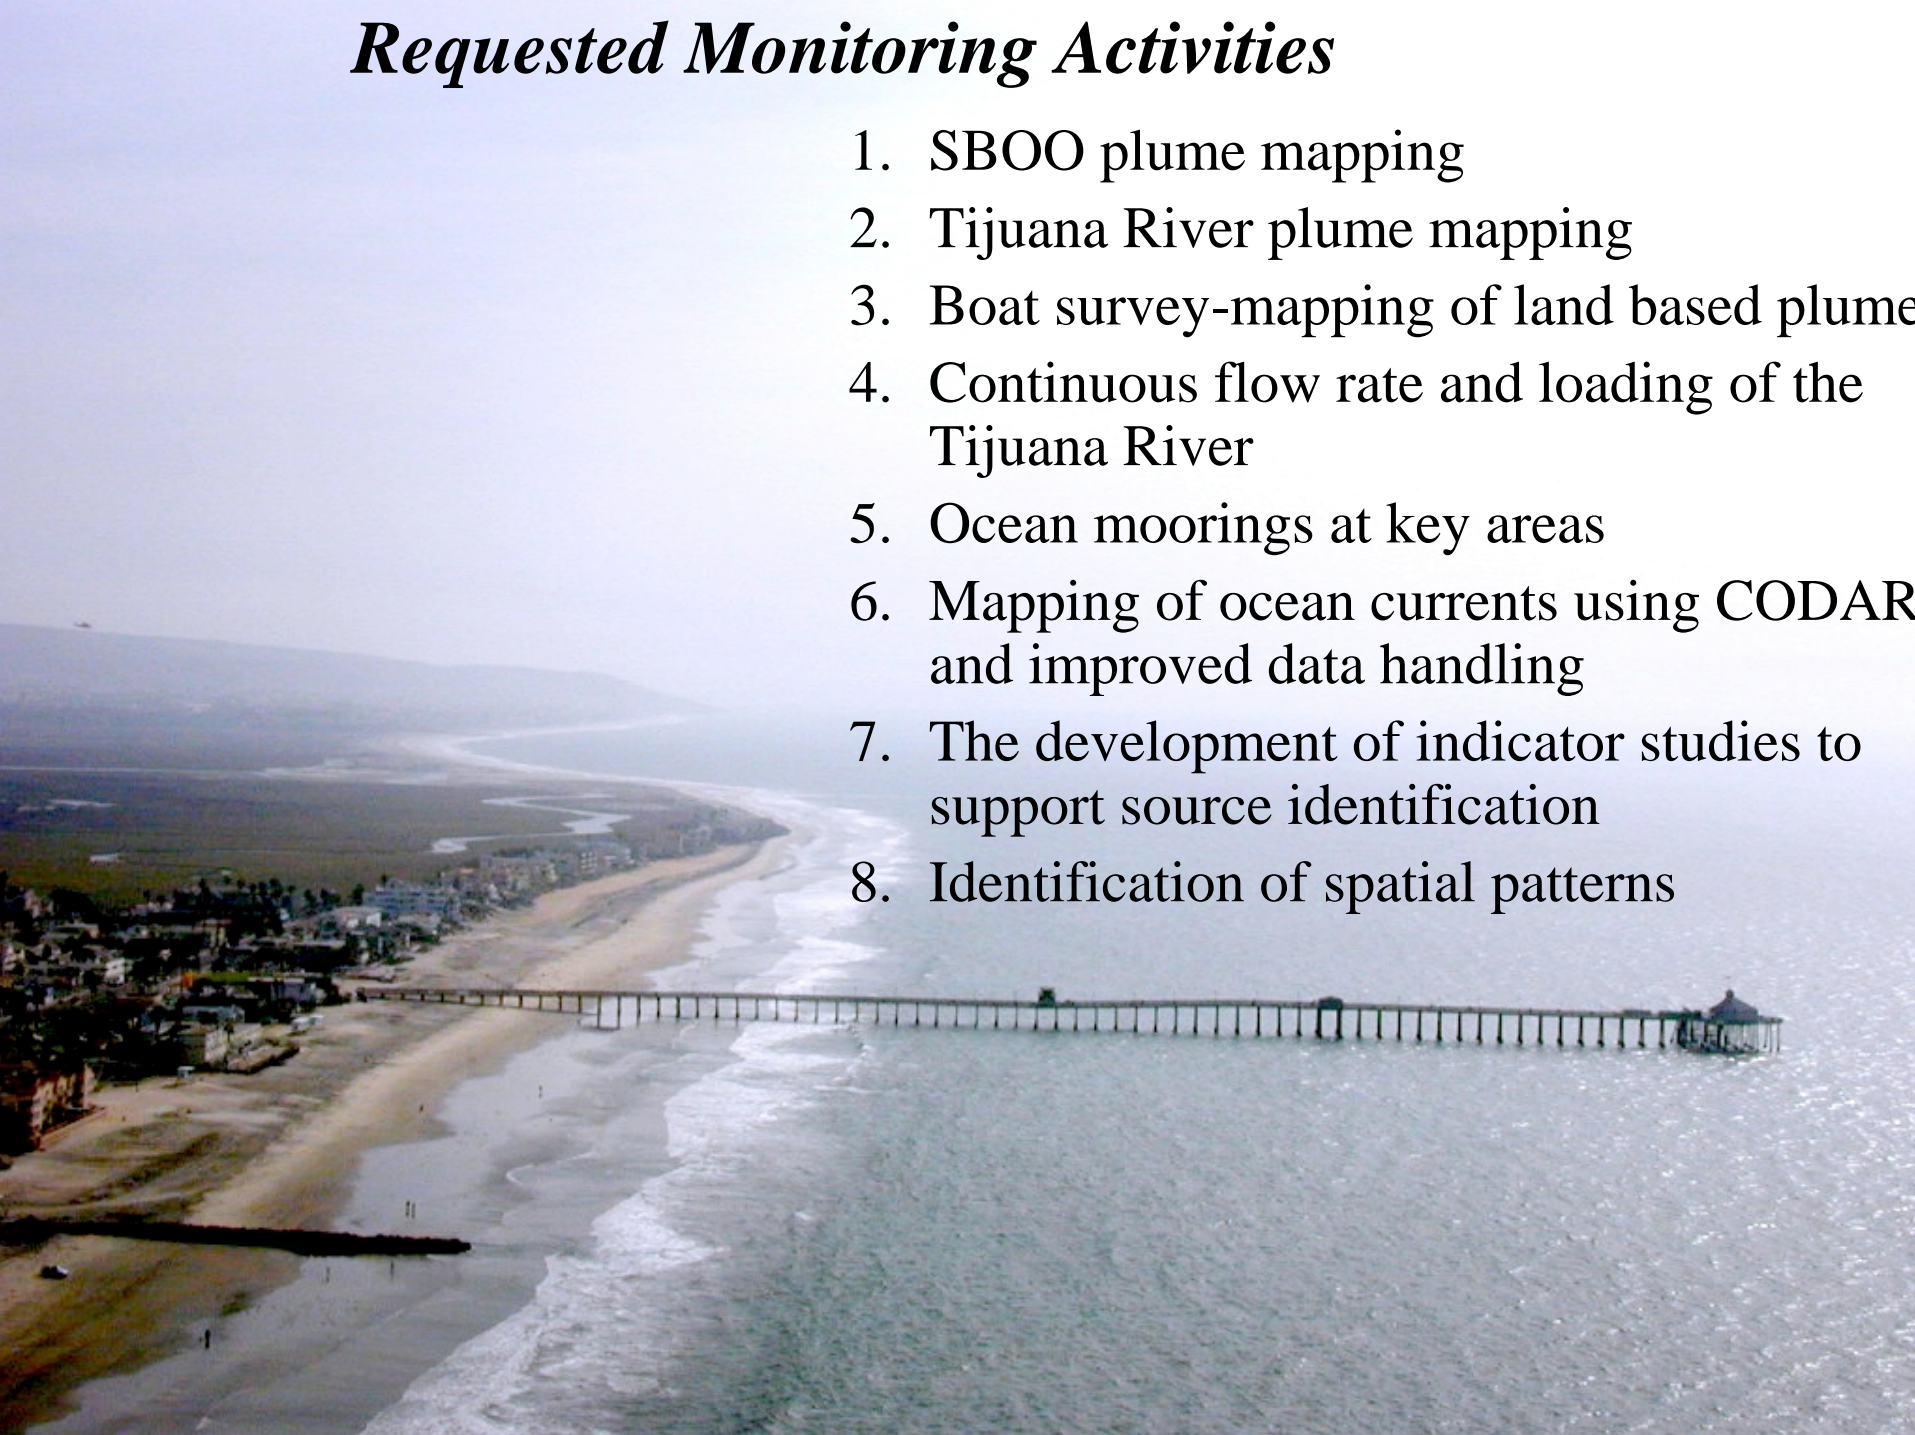

GOALS

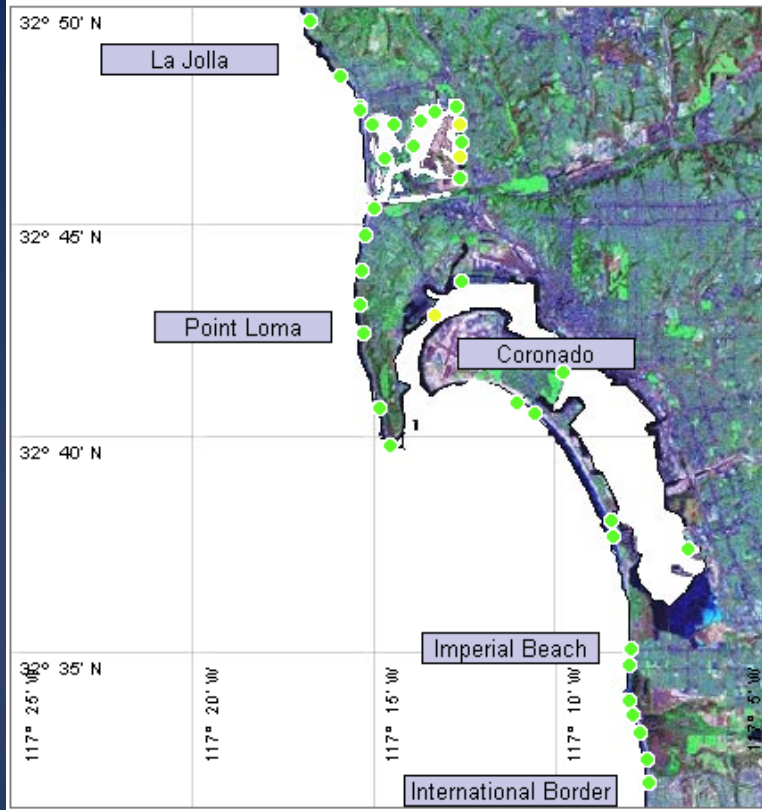

- A) Identify and track plumes from the South Bay Ocean Outfall (SBOO)
- B) Characterize land based sources with focus on the Tijuana River
- C) Identify the regional oceanographic conditions which lead to high fecal indicator bacteria (FIB) on the South Bay Beaches:

Requested Monitoring Activities

1. SBOO plume mapping
2. Tijuana River plume mapping
3. Boat survey-mapping of land based plume
4. Continuous flow rate and loading of the Tijuana River
5. Ocean moorings at key areas
6. Mapping of ocean currents using CODAR and improved data handling
7. The development of indicator studies to support source identification
8. Identification of spatial patterns

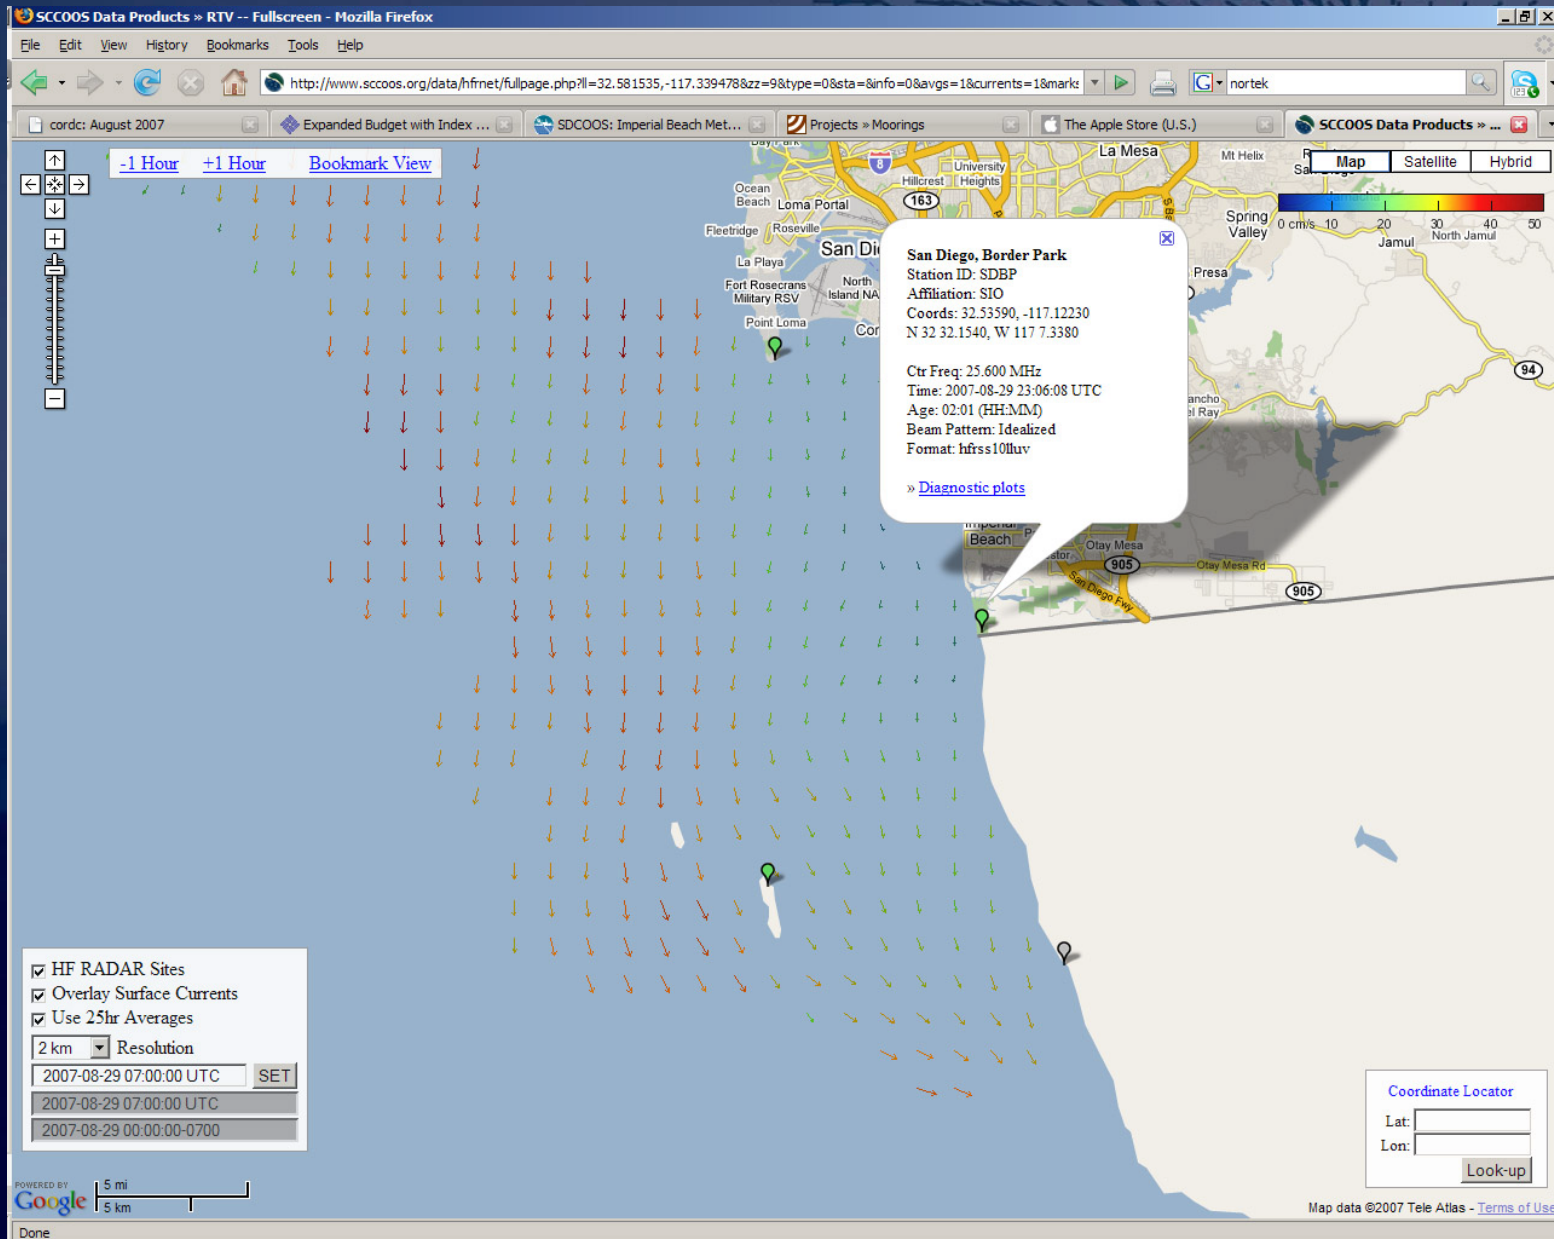

Significant variability exists in the water quality of the region. SDCOOS goals to explain how the environment impacts this variability.

REMUS Autonomous Underwater Vehicle (AUV)

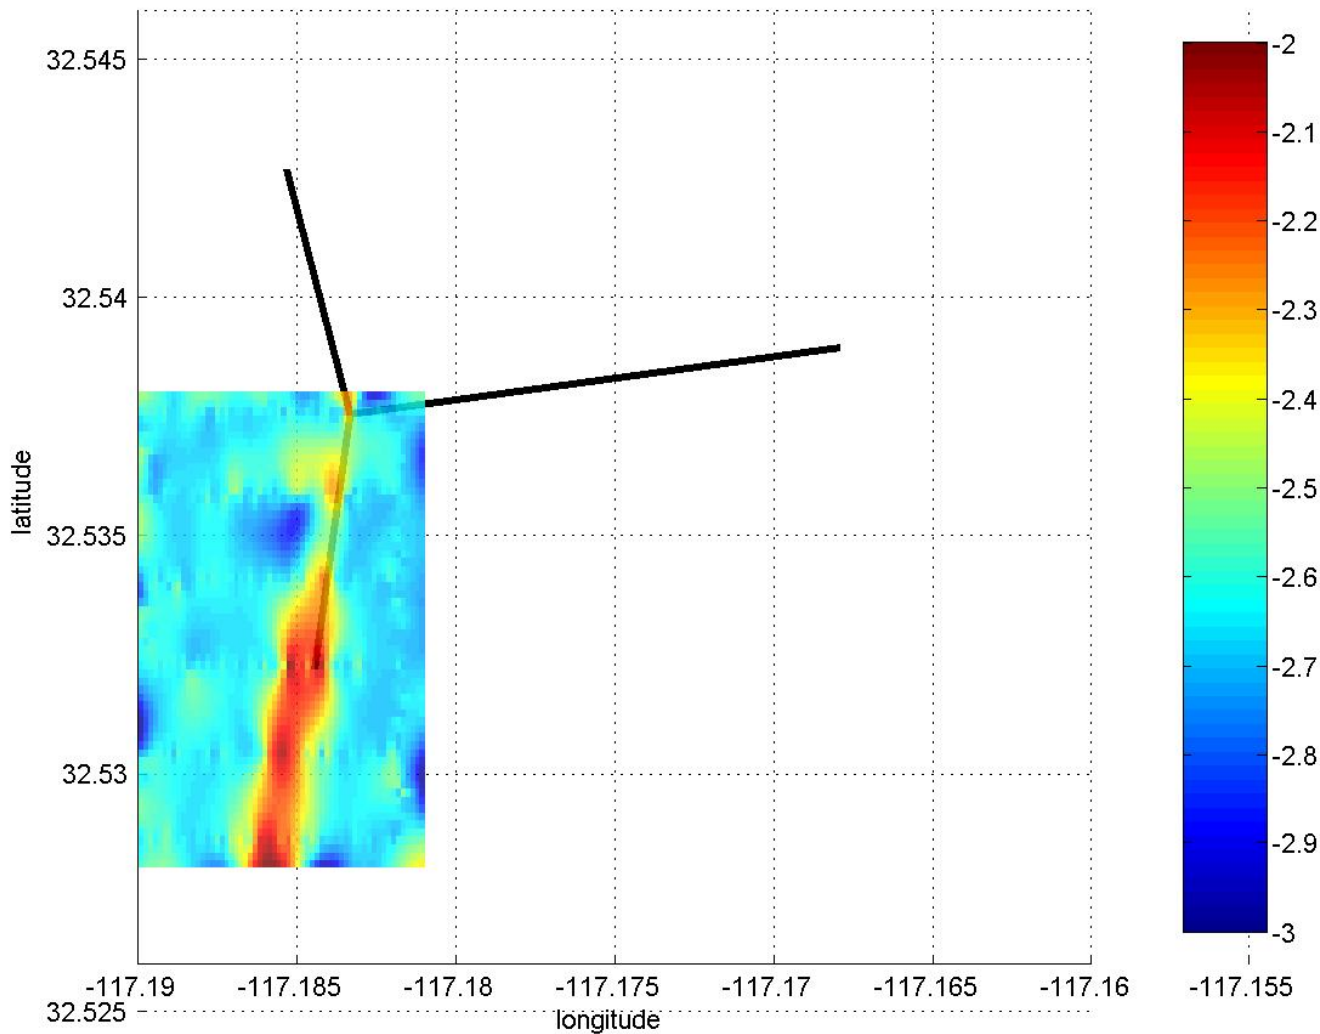

- Payload
 - 900 kHz sidescan sonar
 - 1200 kHz Acoustic Doppler Velocity Current Profiler (ADCP)
 - Conductivity, Temperature, Depth (CTD)
 - Optical Sensors for water clarity, chlorophyll, backscatter at 2 wavelengths
 - Compass
 - GPS
 - Iridium communications
 - Onboard navigation system

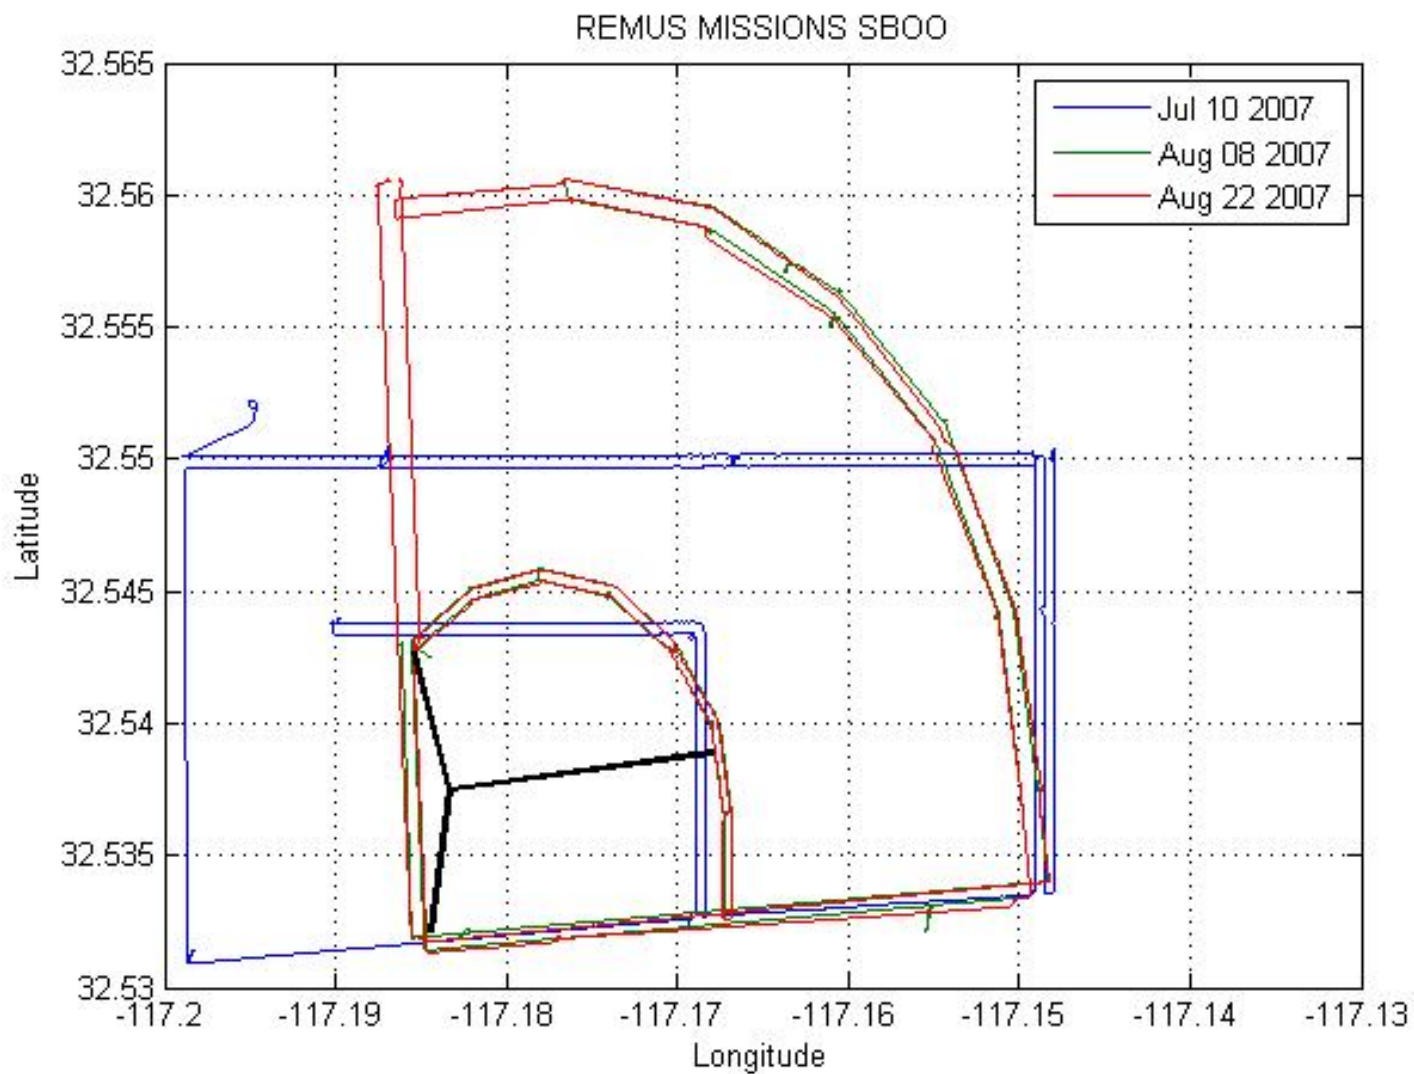

- Vehicle operated to ‘mow the lawn’ at 3 depths: 25m, 17m, 10m in a box surrounding the SBOO.
- Focused on lower third of southern wye which are where the operating diffusers are located. Sampling mission took approximately 6 hours. Conducted from 22’ Boston Whaler boat.

REMUS - optical backscatter measurements - SBOO outfall, 7/20/05

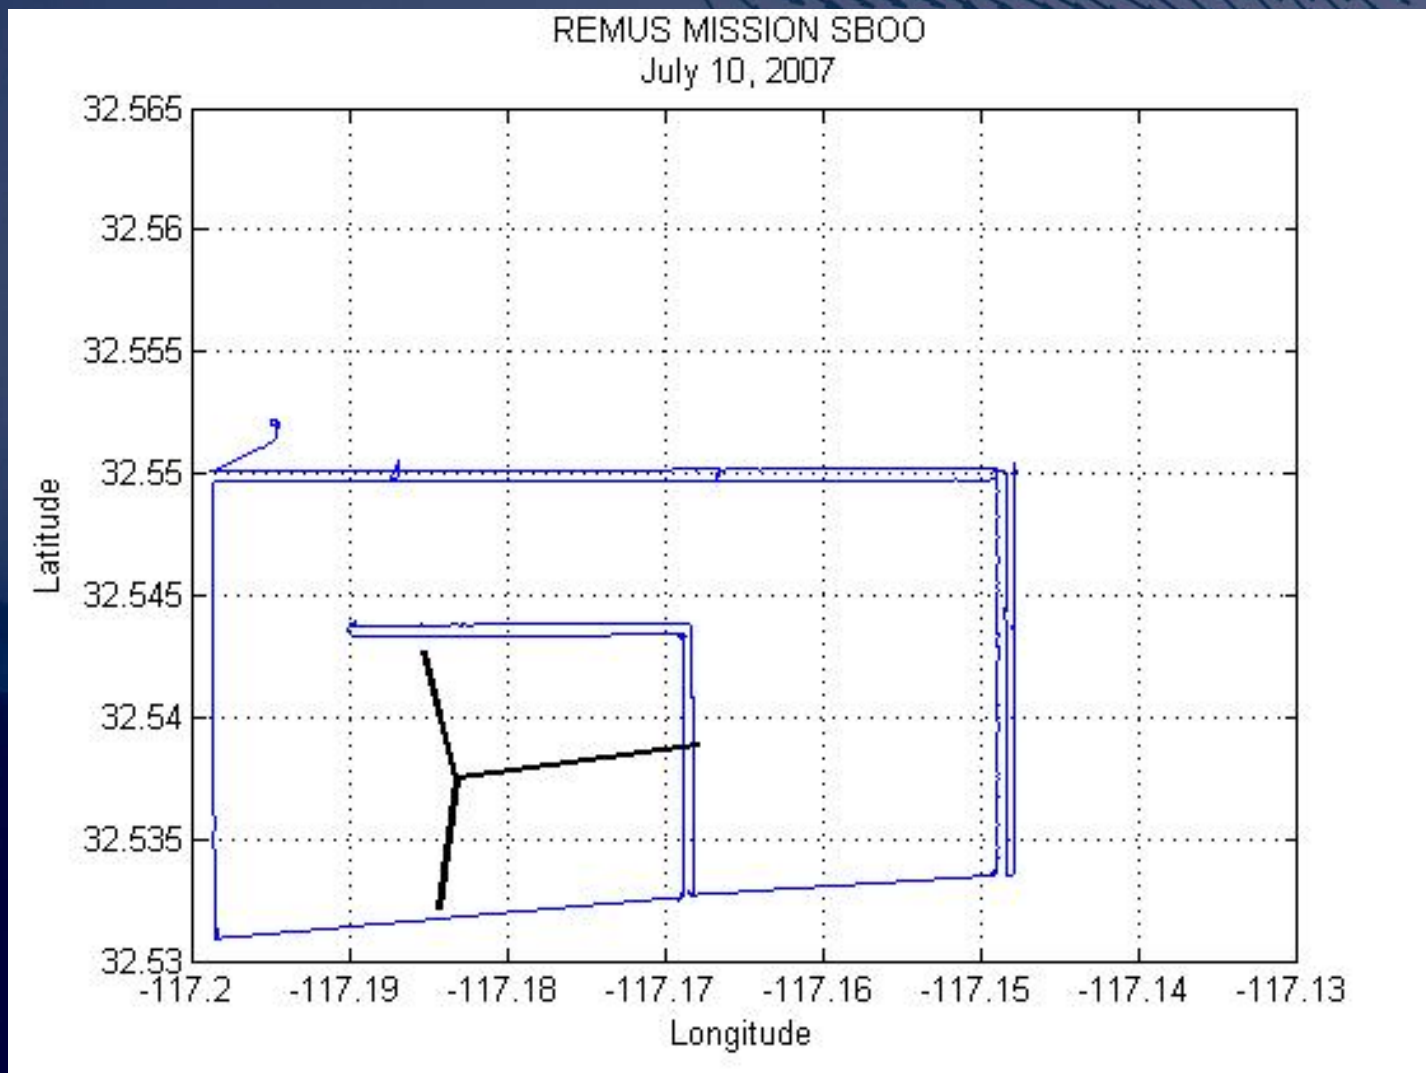

*Plan view of 20m depth data – plume appears to be southward
Flowing during this time period.*

REMUS Mission at SBOO August 22, 2007

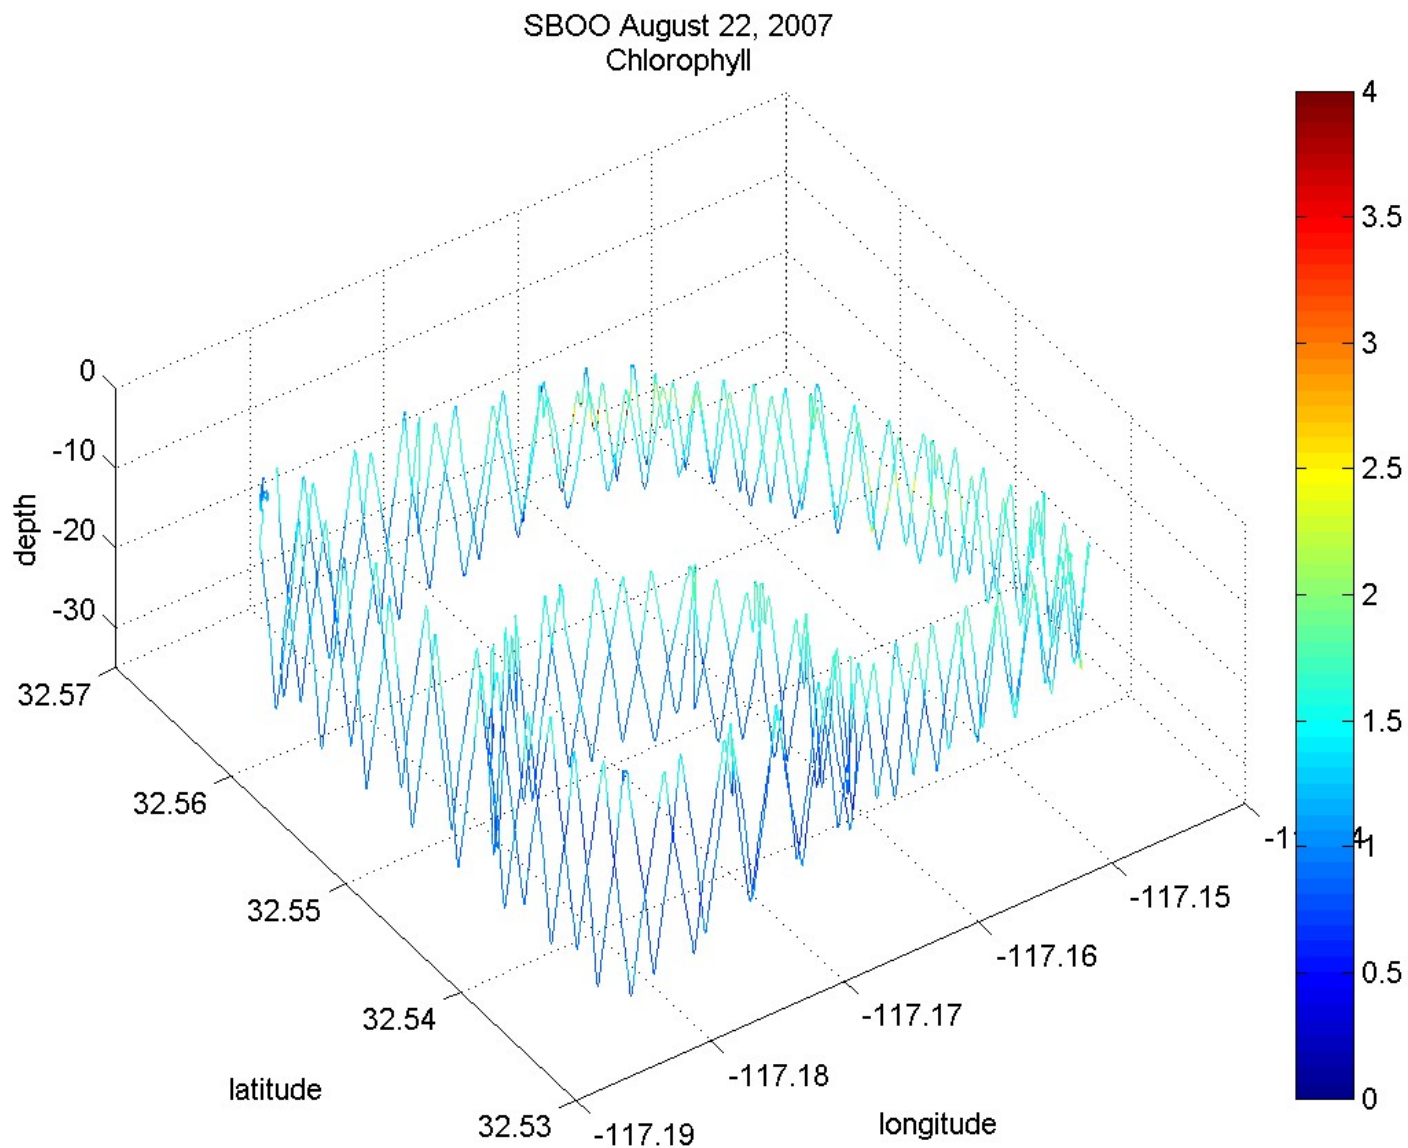

August 22, 2007 Potential Location of Plume

SBOO Plume Distribution Estimate for 2007/08/22 14:00
at Depth(s): [-15 -16 -17 -18 -19 -20 -21 -22 -23 -24 -25] m

August 22, 2007 Chlorophyll

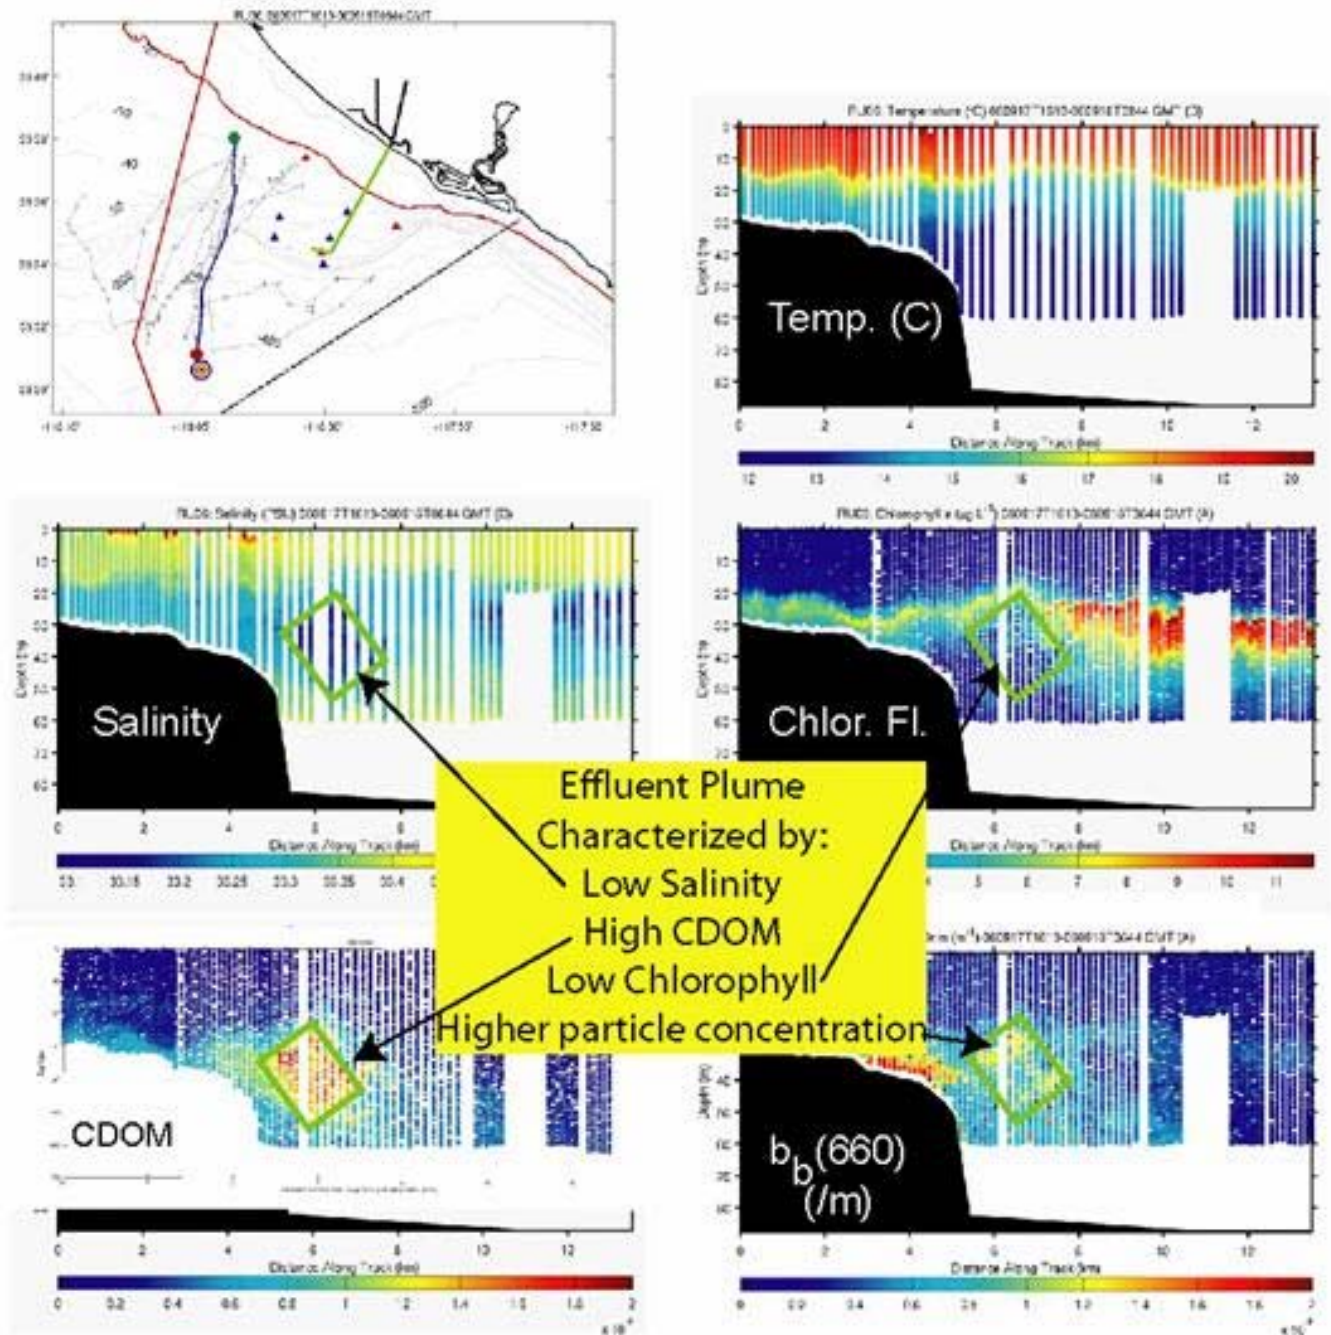

August 22, 2007 Backscatter

Plume sources can be differentiated based on a combination of physical and optical properties.

Example
OCSD –
Huntington
Beach

Microbiological sampling

- a. Utilizes human-specific pathogens
 - i. Prevotella/Bacteroides – bacteria found to be human specific
 - ii. Pathogenic viruses (specific to humans)
 - 1. Enteroviruses
 - a. Different types can cause neurological or intestinal ailments, and respiratory problems
 - b. Vector: person to person through contact with nasal secretions, saliva, stool from an infected person Symptoms: common cold – runny nose, cough, etc.; neurological and GI problems
 - 2. Norwalk-like viruses
 - a. Infects mostly GI tract
 - b. Vector: infected by swallowing stool-contaminated food or water
 - c. Symptoms: nausea, diarrhea, vomiting, stomach cramps
 - d. Humans are the only known hosts
 - 3. Adenoviruses
 - a. Infects the membranes of the respiratory tract, eyes, intestines and urinary tract
 - b. Symptoms: variety including respiratory, GI
 - c. Infants and young children most sensitive to these infections

IBWC Project Timeline YR 2007

- January
 - Initiated efforts for purchase order of REMUS autonomous underwater vehicle (AUV)
- February
 - Finalized contract with CH2MHILL
 - Finalized purchase of AUV, equipment for SBOO and IB Pier moorings;
 - Conducted site and communication assessments at SBOO and IB Pier
- March
 - 1st: Submitted SIO Draft Monitoring and QAPP
 - Finalized “Tideland Use and Occupancy Permit” with San Diego Unified Port District for access to IB Pier (May 15, 2007 (5yrs))
 - 19th-23rd: SIO staff attended HYDROID AUV training

IBWC Project Timeline YR 2007

- April
 - Conducted test REMUS mission
 - Submitted Schedule update 1
 - Responded to IBWC comments from April 17th
- May
 - Finalized SBOO mooring fabrication and submitted location/description to USCG
 - 10th: CH2MHILL, USC, SIO conference call
 - Responded to IBWC comments from May 4th
- June
 - 4-5th: IB Pier piling cleaning and preparation
 - 19th: Deployed SBOO Mooring
 - 19th: Hosted IBWC, Gilbert Anaya and CH2MHILL, Richard Pyle lab tour and technology overview
 - 28th: Deployed IB Pier mooring and seafloor cable infrastructure

IBWC Project Timeline YR 2007

- July

- 10th: Conducted test SBOO REMUS survey to aid in determining vehicle mission planning
- 13th: EPA, IBWC, CH2MHILL, USC, and SIO conference call to discuss EPA QAPP comments from July 3rd
- **23rd: Received conditional approval by EPA and IBWC to start monitoring**
- Initiated programming for SBOO Mooring online display
- Conducted HF Radar beam pattern calibrations at Point Loma and Border Field State Park

- August

- 8th: Conducted SBOO REMUS survey
- 22nd: Conducted SBOO REMUS survey
- Initiated real-time data flow from IB mooring
