FOR RELEASE: 10:00 A.M. EST
TUESDAY, MARCH 14, 2006

EMPLOYER COSTS FOR EMPLOYEE COMPENSATION—DECEMBER 2005

Employer costs for employee compensation averaged \$26.46 per hour worked in December 2005, the U.S. Department of Labor's Bureau of Labor Statistics reported today. Wages and salaries, which averaged \$18.59, accounted for 70.2 percent of these costs, while benefits, which averaged \$7.87, accounted for the remaining 29.8 percent. (See table 1.) Employer Costs for Employee Compensation, based on the National Compensation Survey, measures employer costs for wages, salaries, and employee benefits for nonfarm private and State and local government workers.

Costs for legally required benefits, including Social Security, Medicare, unemployment insurance, and workers' compensation, averaged \$2.15 per hour (8.1 percent of total compensation). Employer costs for life, health, and disability insurance benefits averaged \$2.13 (8.1 percent); paid leave benefits (vacations, holidays, sick leave, and other leave) averaged \$1.77 (6.7 percent); and retirement and savings benefits averaged \$1.13 (4.3 percent) per hour worked.

Private industry

In December 2005, private industry employer compensation costs averaged \$24.71 per hour worked. Wages and salaries averaged \$17.51 per hour (70.8 percent), while benefits averaged \$7.20 (29.2 percent). Employer costs for paid leave averaged \$1.61 per hour worked (6.5 percent), supplemental pay averaged 72 cents (2.9 percent), insurance benefits averaged \$1.81 (7.3 percent), retirement and savings averaged 89 cents (3.6 percent), and legally required benefits \$2.14 (8.7 percent) per hour worked. (See table 5.)

Legally required benefit costs in private industry

The average cost for legally required benefits was \$2.14 per hour worked in private industry (8.7 percent of total compensation) in December 2005. Included in this amount were employer costs for Social Security and Medicare, Federal and State unemployment insurance, and workers' compensation.

NOTE: Collection of severance pay and supplemental unemployment plans, which comprise "other benefits" and are published in all tables, will be discontinued beginning with the March 2006 estimates to reduce the burden on survey respondents. This change will have a minimal impact on most series because the cost of these benefits averages only 4 cents per hour worked.

Employer costs for legally required benefits varied by occupation, industry, bargaining status, region, and establishment size. The average cost per hour worked for legally required benefits ranged from \$1.33 per hour worked for service occupations to \$3.11 per hour for management, professional, and related occupations. Natural resources, construction, and maintenance occupations averaged \$3.04, production, transportation, and material moving occupations, \$2.16, and sales and office occupations, \$1.63 per hour. The proportion of total compensation represented by legally required benefits ranged from 7.2 percent for management, professional, and related workers to 10.9 percent for service workers and natural resources, construction, and maintenance workers. (See table 5.)

Employer costs for legally required benefits were higher for union workers, \$2.98 per hour, than for nonunion workers, \$2.04 per hour. As a proportion of total compensation, legally required benefits accounted for 8.9 percent of total compensation for union workers and 8.6 percent for nonunion workers. (See table 5.)

Costs for legally required benefits were higher in goods-producing industries (\$2.77 per hour or 9.4 percent of total compensation) than in service-providing industries (\$1.99 per hour or 8.4 percent of total compensation). Within goods-producing industries, construction averaged \$3.30 per hour worked (11.6 percent), higher than in manufacturing \$2.50 per hour (8.5 percent). Service-providing industries ranged from \$1.24 per hour for the leisure and hospitality industry (11.5 percent) to \$2.67 for the information industry (7.3 percent). (See table 6.)

Among the four regions, employer costs for legally required benefits ranged from \$1.88 per hour in the South to \$2.46 per hour in the West. Legally required benefit costs were \$2.08 in the Midwest and \$2.35 in the Northeast. Within the nine census divisions, costs for legally required benefits ranged from \$1.78 in the East South Central and \$1.79 in the West South Central divisions, to \$2.64 in the Pacific division. (See table 7.)

Legally required benefit costs increased in average dollar amount per hour with establishment size. In establishments with fewer than 100 employees, average hourly costs were \$1.95, significantly less than the cost of \$2.37 in establishments with 100 employees or more. Conversely, legally required costs decreased as a proportion of total compensation with establishment size. Legally required benefit costs in establishments with fewer than 50 employees averaged 9.6 percent; and in establishments with 500 workers or more, 7.4 percent of total compensation. (See table 8.)

Paid leave benefit costs in private industry

Employer costs for paid leave benefits were highest for management, professional, and related occupations, \$3.47 per hour, or 8.0 percent of total compensation in December 2005. Costs were lowest among service occupations, 51 cents or 4.2 percent of total compensation. (See table 5.) Included in this amount were employer costs for vacations, holidays, sick leave, and other leave, such as personal leave, jury duty leave, military leave, and funeral leave.

Employer costs for paid leave benefits averaged \$2.26 per hour for union workers, significantly higher than the \$1.53 per hour average for nonunion workers. (See table 5.)

Paid leave costs in goods-producing industries were \$1.84 per hour (6.3 percent of total compensation), greater than the average for service-providing industries, \$1.55 (6.6 percent of total compensation) in December 2005. (See table 6.)

Among the nine census divisions, paid leave costs ranged from \$1.14 in the East South Central division, to \$1.88 and \$1.93 in the New England and Middle Atlantic divisions, respectively. (See table 7.)

Paid leave benefit costs increased, both in average dollar amount and as a proportion of total compensation, with establishment size. Establishments with fewer than 100 workers averaged \$1.09 per hour (5.4 percent); significantly less than those with 100 workers or more, \$2.19 per hour (7.4 percent). (See table 8.)

Relative importance of employer costs for employee compensation, December 2005

Compensation component	Civilian workers	State and local government	Private industry
Wages and salaries	70.2%	67.9%	70.8%
Benefits	29.8	32.1	29.2
Paid leave	6.7	7.4	6.5

¹ Includes workers in the private nonfarm economy excluding households and the public sector excluding the Federal government.

² Includes mining, construction, and manufacturing. The agriculture, forestry, farming, and hunting sector is excluded.

³ Includes utilities; wholesale trade; retail trade; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional and technical services; management of companies and enterprises; administrative and waste services; educational services; health care and social assistance; arts, entertainment and recreation; accommodation and food services; and other services, except public administration.

⁴ Includes premium pay for work in addition to the regular work schedule (such as overtime, weekends, and holidays).

⁵ Cost per hour worked is \$0.01 or less.

⁶ Less than .05 percent.

⁷ Comprises the Old-Age, Survivors, and Disability Insurance (OASDI) program.

⁸ Includes severance pay and supplemental unemployment benefits.

Note: The sum of individual items may not equal totals due to rounding.

¹ This table presents data for the three major occupational groups in State and local government: management, professional, and related occupations, including teachers; sales and office occupations, including clerical workers; and service occupations, including police and firefighters.

² Service-providing industries, which include health and educational services, employ a large part of the State and local government workforce.

³ Includes premium pay for work in addition to the regular work schedule (such as overtime, weekends, and holidays).

⁴ Less than .05 percent.

⁵ Comprises the Old-Age, Survivors, and Disability Insurance (OASDI) program.

⁶ Cost per hour worked is \$0.01 or less.

⁷ Includes severance pay and supplemental unemployment benefits.

Note: The sum of individual items may not equal totals due to rounding.

Table 4. Employer costs per hour worked for employee compensation and costs as a percent of total compensation: State and local government workers, by occupational and industry group, December 2005

Series	Total compensation	Wages and salaries	Benefit costs

¹ Includes severance pay and supplemental unemployment benefits.

² Includes mining, construction, and manufacturing. The agriculture, forestry, farming, and hunting sector is excluded.

³ Cost per hour worked is \$0.01 or less.

⁴ Includes utilities; wholesale trade; retail trade; transportation and warehousing; information; finance and insurance; real estate and rental and leasing; professional and technical services; management of

companies and enterprises; administrative and waste services; educational services; health care and social assistance; arts, entertainment and recreation; accommodation and food services; and other services, except public administration.

⁵ Less than .05 percent.

Note: The sum of individual items may not equal totals due to rounding.

Table 14. Employer costs per hour worked for employee compensation and costs as a percent of total compensation: Private industry health care and social assistance workers, by industry and occupational group, December 2005

Series	Total compensation	Wages and salaries	Benefit costs						
			Total	Paid leave	Supplemental pay	Insurance	Retirement and savings	Legally required benefits	Other benefits ¹
Cost per hour worked									
Health care and social assistance	\$24.62	\$17.77	\$6.84	\$1.82	\$0.52	\$1.87	\$0.63	\$2.01	(²)

EXPLANATORY NOTES

Employer Costs for Employee Compensation (ECEC) measures the average cost per employee hour worked that employers pay for wages and salaries and benefits.

Wages and salaries are defined as the hourly straight-time wage rate or, for workers not paid on an hourly basis, straight-time earnings divided by the corresponding hours. Straight-time wage and salary rates are total earnings before payroll deductions and include production bonuses, incentive earnings, commission payments, and cost-of-living adjustments. Not included in straight-time earnings are nonproduction bonuses such as lump-sum payments provided in lieu of wage increases, shift differentials, and premium pay for overtime and for work on weekends and holidays; these payments are included in the benefits component.

Benefits include: Paid leave—vacations, holidays, sick leave, and other leave; supplemental pay—overtime and premium pay for work in addition to the regular work schedule (such as weekends and holidays), shift differentials, and nonproduction bonuses (such as referral bonuses and lump-sum payments provided in lieu of wage increases); insurance benefits—life, health, short-term disability, and long-term disability; retirement and savings benefits—defined benefit and defined contribution plans; legally required benefits—Social Security, Medicare, Federal and State unemployment insurance, and workers' compensation; and other benefits—severance pay and supplemental unemployment plans.

The Employer Costs for Employee Compensation includes data for the civilian economy, which includes data from both private industry and State and local government. Excluded from private industry are the self-employed and farm and private household workers. Federal government workers are excluded from the public sector. The private industry series and the State and local government series provide data for the two sectors separately.

The cost levels for this quarter were collected from a probability sample of about 50,400 occupations within approximately 11,300 sample establishments in private industry and about 3,500 occupations within approximately 800 sample establishments in State and local governments. Data are collected for the pay period including the 12th day of the survey months of March, June, September, and December.

The ECEC percent of total compensation estimates are calculated from dollar aggregates and then rounded to the published level of precision. This method provides the most precise estimates of the percent of total compensation; however, estimates of the percentage of total compensation calculated from the published cost estimates may differ slightly from those calculated from the unpublished dollar aggregates.

Sample establishments are classified by industry categories based on the 2002 North American Industry Classification (NAICS) system, as defined by the U.S. Office of Management and Budget. Within a sample establishment, specific job categories are selected and classified into about 800 occupational classifications according to the 2000 Standard Occupational Classification (SOC) system. Individual occupations are combined to represent one of eight intermediate aggregations such as professional and related occupations, or one of five higher-level aggregations such as management, professional, and related occupations. Employees in occupations included in the survey receive cash payments from the establishment for services performed, while the establishment pays the employer's portion of Medicare taxes on that individual's wages. Major exclusions from the survey are the self-employed, individuals who set their own pay (for example proprietors, owners, major stockholders, and partners in unincorporated firms), volunteers, unpaid workers, family members being paid token wages, individuals receiving long-term disability compensation, and U.S. citizens working overseas. For more detailed information on NAICS and SOC, including background and definitions, see the BLS websites: (<http://www.bls.gov/bls/naics.htm> and <http://www.bls.gov/soc/home.htm>.)

Additional occupational and industrial series were introduced in March 2004 with the introduction of the NAICS and SOC definitions. An article on the transition, “Comparing Current and Former Industry and Occupational ECEC Series” is available on the e-journal, Compensation and Working Conditions Online, posted August 25, 2004, on the website <http://www.bls.gov/opub/cwc/cm20040823ar01p1.htm>.

Current employment weights are used to calculate cost levels. The December 2005 cost levels were calculated using the December 2005 employment counts from the Bureau of Labor Statistics Current Employment Statistics (CES) program, benchmarked to the March 2005 universe of all private nonfarm establishments. For more information on the CES updating of employment estimates, see “BLS Establishment Estimates Revised to Incorporate March 2005 Benchmarks” on the Internet site <http://www.bls.gov/web/cesbmart.htm>.

In most instances, private industry employment counts used in the ECEC were total employment estimates for 3-digit sub-sector industry groups, such as machinery manufacturing (NAICS 333) or gasoline stations (NAICS 447), as defined by the NAICS system. In a few cases, more detailed private industry employment counts were used. These include 4-digit educational establishments--elementary and secondary schools (6111), junior colleges (6112), and colleges and universities (6113)--as well as the 6-digit aircraft manufacturing industry (336411). For State and local governments, a more aggregated level was used reflecting the level of detailed published by the CES program. For both private and government establishments, the employment data were apportioned based on the sampling weights assigned to the Employment Cost Index (ECI) sample. For more information on NAICS coding, see “Recent changes in the national Current Employment Statistics survey” in the June 2003 issue of the Monthly Labor Review.

The ECI, which measures the change in employer costs for employee compensation, is calculated with fixed 1990 employment counts to prevent employment shifts among occupations and industries from influencing the changes. Therefore, year-to-year changes in Employer Costs for Employee Compensation will differ from those in the ECI.

Historical ECEC data, using the industry categories based on the 1987 Standard Industrial Classification System and classifying jobs into occupational classifications according to the Census of Population, are available from several sources. Data and related articles are included in the bulletin, Employer Costs for Employee Compensation, 1986-99 (Bulletin 2508). An annual historical listing from March 1986 through March 2002 is also available on the Internet site (<http://www.bls.gov/ncs/ect/home.htm>) or upon request. Data on a quarterly basis from June 2002 through December 2003 are also available.

Beginning with the March 2004 quarter, historical data are available based on the 2002 North American Industry Classification System and the 2000 Standard Occupational Classification. The new historical tables are available on the Internet site (<http://www.bls.gov/ncs/ect/home.htm>) or upon request. Information on how costs are calculated appears in “Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation,” Compensation and Working Conditions, Summer 1997. An article on changes in employer compensation costs, “Tracking Changes in Benefit Costs,” appears in Compensation and Working Conditions, Spring 1999.

Relative Standard Errors

Because the ECEC is a sample survey, it is subject to sampling errors. Sampling errors are differences that occur between the results computed from a sample of observations and those computed from all observations in the population. The estimates derived from different samples selected using the same sample design may differ from one another. A measure of the variation among these differing estimates is the standard error. It can be used to measure the precision with which an estimate from a particular sample approximates the

expected result of all possible samples. The chances are about 68 out of 100 that an estimate from the survey differs from a complete population figure by less than the standard error. The chances are about 90 out of 100 that this difference would be less than 1.6 times the standard error. All the statements of comparisons appearing in this publication are significant at a 1.6 standard error level or better, unless otherwise indicated. This means that for differences cited, the estimated difference is greater than 1.6 times the standard error of the difference.

The relative standard error (RSE) for all estimates will be available shortly after the release is issued. This information can be obtained directly from the BLS Internet site (<http://www.bls.gov/ncs/ect/home.htm>), by e-mail request (ncsinfo@bls.gov), or by telephone (202) 691-6199.

For a more detailed explanation of relative standard errors, see "Measuring Trends in the Structure and Levels of Employer Costs for Employee Compensation," Compensation and Working Conditions, Summer 1997. For a detailed explanation of how to use standard error data to analyze differences in year-to-year changes, see "Analyzing Year-to-Year Changes in Employer Costs for Employee Compensation," Compensation and Working Conditions, Spring 1998. This article supplements an article from the Summer 1997 issue of Compensation and Working Conditions, "Explaining the Differential Growth Rates of the ECI and ECEC," which examined how differences in the construction of these measures contribute to differing trends.

Standard errors relate to differences that occur from sampling errors, but not from nonsampling errors. Nonsampling errors are not measured and include survey nonresponse and data collection and processing errors. Survey nonresponse occurs when sample members are unwilling or unable to participate in the survey. Data collection errors include inaccurate data by respondents and definitional difficulties. Processing errors include errors in recording, coding, and entering data. Although nonsampling errors are not measured, BLS quality assurance programs contain procedures for reducing such errors. These procedures include data collection reinterviews, observed interviews, computer data edits, and systematic review of reports on which data are recorded. Extensive field economist training also is conducted to maintain high data collection standards.

Comparing private and public sector data

Aggregate compensation cost levels in State and local government should not be directly compared with those in private industry. Differences between these sectors stem from factors such as variation in work activities and occupational structures. Manufacturing and sales, for example, make up a large part of private industry work activities, but are rare in State and local government. Professional and administrative support occupations (including teachers) account for two-thirds of the State and local government workforce, compared with one-half of private industry.

A detailed examination of differences in compensation levels and trends between private industry and State and local government may be found in "Cost of Employee Compensation in Public and Private Sectors," Monthly Labor Review, May 1993, and "Compensation Cost Trends in Private Industry and State and Local Governments," Compensation and Working Conditions, Fall 1999.

Obtaining information

Articles, bulletins, and other information may be obtained by calling (202) 691-6199, sending an e-mail message to ncsinfo@bls.gov, or visiting the Internet site (<http://www.bls.gov/ncs/ect/home.htm>). Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service Number: 1-800-877-8339.
