

*Reasons:* The foreign instrument provides suitability for studying the smaller eyes of animal rather than human subjects by allowing (1) use of a stereotaxic apparatus for head stabilization, (2) higher in-depth and transverse resolutions and (3) the option of sequential sampling. The National Institutes of Health advises in its memorandum of April 28, 2003 that (1) these capabilities are pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign instrument for the applicant's intended use.

We know of no other instrument or apparatus of equivalent scientific value to the foreign instrument which is being manufactured in the United States.

#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

NOAA proposes to collect information on fishing vessel expenses and earnings on a voluntary and continuous basis in the Gulf of Mexico offshore shrimp fishery. The information will be used to conduct

socioeconomic analyses that will improve fishery management in that fishery. It will be used in conjunction with catch and effort data already being collected in this fishery as part of federal and state dealer reporting programs, as well as Coast Guard and federal and state fishing permit data on vessel characteristics, to assess how fishermen will be impacted by and respond to any regulation likely to be considered by fishery managers. In addition, this data will be used to determine how fishing communities will be impacted by proposed fishing regulations.
