This research project is designed to remotely investigate at-sea interactions between northern fur seals and ships, particularly the impact of commercial fishing vessels on the northern fur seals. Annually, ten lactating female northern fur seals from the Pribilof Islands in Alaska will be captured, measured, outfitted with datalogging instrumentation, and released. The individuals will be tracked and recaptured, the datalogger removed and the animals subsequently released. Additionally, Level B Harassment of northern fur seals is authorized for 50 pups, 50 breeding females, 25 mature males, and 50 immature males, annually. These activities will be authorized over five years. The results of this research will provide important information for management decisions regarding northern fur seals.
