

ineligible for Federal funding that could encourage their development. The principal purpose of a Federal project would be the reduction of damages associated with hurricane and storm events and beach erosion. Potential benefits from the project would include protection of the towns' structures and related infrastructure (*i.e.*, roads, utility lines, *etc.*), as well as improvements in aesthetic qualities and recreational opportunities at the beaches.

The feasibility studies will evaluate several alternatives to address shore protection and related issues. These alternatives may include: (1) Construction of berms and dunes along all or portions of the oceanfront within the study area; (2) Removal and/or relocation of threatened structures; and (3) No Federal action. The maximum potential project length is approximately 10 miles (the 17 miles from New River Inlet south to the Surf City-Topsail Beach town limits exclusive of approximately 7 miles within the CBRS). The selection of final project features and reaches for inclusion in a recommended plan will be based on a maximization of net benefits.

During the feasibility studies, potential estuarine, inlet, offshore, and upland sources of borrow material will be investigated, and quantities of sand required for berm and dune construction will be determined. Estimated sand volumes and placement frequency for project maintenance will also be developed.

Alternative methods of beach nourishment and dredging of offshore borrow areas will be evaluated, including the use of ocean-certified hydraulic pipeline and/or hopper dredges.

All private parties and Federal, State, and local agencies having an interest in the study are hereby notified of the study and are invited to comment at this time. A scoping letter requesting input to the study was sent to all known interested parties on February 14, 2001.

A formal scoping meeting is not planned at this time but may be held if it is determined that new information may be obtained that would not otherwise be available. All comments received as a result of this notice of intent and the previous scoping letter will be considered in the preparation of the DEIS.

Significant environmental resources to be addressed during project studies and in the DEIS include: (1) Endangered and threatened species; (2) Fish and wildlife and their habitats, including essential fish habitat; (3) Water quality; (4) Socioeconomic resources; and (5)

Cultural resources. Efforts will be made to enhance resource conditions and minimize adverse impacts.

The lead agency for this project is the U.S. Army Corps of Engineers District, Wilmington. Cooperating agency status has not been assigned to any other agency. The DEIS is being prepared in accordance with the requirements of the National Environmental Policy Act of 1969, as amended, and will address the relationship of the proposed action to all other applicable Federal and State Laws and Executive Orders. The DEIS is currently scheduled for distribution to the public in the winter of 2005.

Dated: December 2, 2003.

W. Eugene Tickner, P.E.,

Deputy District Engineer, Programs and Project Management.

BILLING CODE 3710-CE-M

DEPARTMENT OF EDUCATION

Office of Postsecondary Education

Developing Hispanic-Serving Institution (HSI) Program

ACTION: Correction; notice reopening application deadline for certain applicants.

SUMMARY: We correct the postmark date listed in the *Transmittal of Applications* section of the notice published on December 16, 2003 (68 FR 70008).

SUPPLEMENTARY INFORMATION: On December 16, 2003, we published a notice in the **Federal Register** reopening the application deadline for certain applicants under the HSI Program. The postmark date listed in the *Transmittal of Applications* section of the notice published was incorrect. The last sentence under *Transmittal of Applications* should read, "Your submittals must be postmarked no later than December 29, 2003."

FOR FURTHER INFORMATION CONTACT: Ms. Darlene B. Collins, U.S. Department of Education, 1990 K Street, NW., 6th Floor, Washington, DC 20006-8513. Telephone: (202) 502-7576 or via Internet: *Darlene.Collins@ed.gov*.

If you use a telecommunications device for the deaf (TDD), you may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

Individuals with disabilities may obtain this document in an alternative format, (*e.g.* Braille, large print, audiotape, or computer diskette) on request to the contact person listed under **FOR FURTHER INFORMATION CONTACT**.

Electronic Access to This Document

You may view this document, as well as all other Department of Education documents published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at the following site: <http://www.ed.gov/news/fedregister>.

To use PDF you must have Adobe Acrobat Reader, which is available free at this site. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC area at (202) 512-1530.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.access.gpo.gov/nara/index.html>.

Program Authority: 20 U.S.C. 1001-1101d, 1103-1103g.

Dated: December 17, 2003.

Sally L. Stroup,

Assistant Secretary, Office of Postsecondary Education.

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Office of Science; Biological and Environmental Research Advisory Committee Renewal

AGENCY: Department of Energy.

ACTION: Notice of renewal.

SUMMARY: Pursuant to section 14(a)(2)(A) of the Federal Advisory Committee Act, and in accordance with section 102-3.60, title 41 of the Code of Federal Regulations, and following consultation with the Committee Management Secretariat, General Services Administration, notice is hereby given that the Biological and Environmental Research Advisory Committee has been renewed for a two-year period beginning in December 2003. The Committee will provide advice to the Director, Office of Science, on the Biological and Environmental Research Program managed by the Office of Biological and Environmental Research.

The renewal of the Biological and Environmental Research Advisory Committee has been determined to be essential to the conduct of the Department of Energy business and to be in the public interest in connection with the performance of duties imposed upon the Department of Energy by law. The Committee will operate in

accordance with the provisions of the Federal Advisory Committee Act, the Department of Energy Organization Act (Pub. L. 95-91), and rules and regulations issued in implementation of those Acts.

Further information regarding this Advisory Committee can be obtained from Mrs. Rachel M. Samuel at (202) 586-3279.

Issued in Washington, DC on December 11, 2003.

James N. Solit,

Advisory Committee Management Officer.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Office of Science Financial Assistance Program Notice DE-FG01-04ER04-06: Natural and Accelerated Bioremediation Research Program

AGENCY: U.S. Department of Energy.

ACTION: Notice inviting grant applications.

SUMMARY: The Office of Biological and Environmental Research (OBER) of the Office of Science (SC), U.S. Department of Energy (DOE), hereby announces its interest in receiving applications for research grants in the Natural and Accelerated Bioremediation Research (NABIR) Program. The goal of the NABIR program is to provide the fundamental science that will serve as the basis for development of cost-effective bioremediation and long-term stewardship of radionuclides and metals in the subsurface at DOE sites. The focus of the program is on understanding the role of microorganisms in long-term immobilization of contaminants in place, and the potential for their remobilization. Contaminants of interest are uranium, technetium, plutonium, chromium or mercury. NABIR is focused on subsurface sediments below the zone of root influence and includes both the vadose (unsaturated) zone and the saturated zone (groundwater and sediments). Applications should describe research projects in one or more of the following program categories: (1) Biogeochemistry, Biotransformation, Community Dynamics and Microbial Ecology, or Assessment; (2) Interdisciplinary studies that integrate research from more than one NABIR element; or (3) Projects to be performed at the NABIR Field Research Center (FRC) addressing field scale processes that immobilize uranium and/or technetium; field teams must include, at a minimum, expertise

in microbiology, geochemistry and hydrology.

DATES: Researchers are strongly encouraged to submit a preapplication for programmatic review. Preapplications should be submitted on or before February 6, 2004, for review for programmatic relevance.

The deadline for receipt of formal applications is 4:30 p.m., E.S.T., March 9, 2004, to be accepted for merit review and to permit timely consideration for awards late in Fiscal Year 2004 or in early Fiscal Year 2005.

ADDRESSES: Preapplications referencing Program Notice DE-FG01-04ER04-06, should be sent by E-mail to: paul.bayer@science.doe.gov.

Formal applications referencing Program Notice DE-FG01-04ER04-06, must be sent electronically by an authorized institutional business official through DOE's Industry Interactive Procurement System (IIPS) at: <http://www.e-center.doe.gov/>. IIPS provides for the posting of solicitations and receipt of applications in a paperless environment via the Internet. In order to submit applications through IIPS, your business official will need to register at the IIPS Web site. IIPS offers the option of using multiple files, please limit submissions to one volume and one file if possible, with a maximum of no more than four PDF files. The Office of Science will include attachments as part of this notice that provide the appropriate forms in PDF fillable format that are to be submitted through IIPS. Color images should be submitted in IIPS as a separate file in PDF format and identified as such. These images should be kept to a minimum due to the limitations of reproducing them. They should be numbered and referred to in the body of the technical scientific grant application as Color image 1, Color image 2, etc. Questions regarding the operation of IIPS may be e-mailed to the IIPS Help Desk at:

HelpDesk@pr.doe.gov, or you may call the help desk at: (800) 683-0751.

Further information on the use of IIPS by the Office of Science is available at: <http://www.sc.doe.gov/production/grants/grants.html>.

If you are unable to submit an application through IIPS, please contact the Grants and Contracts Division, Office of Science at: (301) 903-5212 or (301) 903-3604, in order to gain assistance for submission through IIPS or to receive special approval and instructions on how to submit printed applications.

FOR FURTHER INFORMATION CONTACT: Mr. Paul Bayer, Environmental Remediation Sciences Division, SC-75/Germantown

Building, Office of Biological and Environmental Research, Office of Energy, U.S. Department of Energy, 1000 Independence Ave., SW., Washington, DC 20585-1290, telephone: (301) 903-5324, e-mail: paul.bayer@science.doe.gov, fax: (301) 903-8519. The full text of Program Notice DE-FG01-04ER04-06, is available via the Internet using the following Web site address: <http://www.science.doe.gov/production/grants/grants.html>.

SUPPLEMENTARY INFORMATION:

Background

For more than 50 years, the U.S. created a vast network of more than 113 facilities for research, development, testing and production of nuclear weapons. As a result of these activities, subsurface contamination has been identified at over 7,000 discrete sites across the U.S. Department of Energy complex. With the end of the Cold War threat, the DOE has shifted its emphasis to remediation, decommissioning, and decontamination of contaminated groundwater, sediments, and structures at its sites. DOE is currently responsible for remediating 1.7 trillion gallons of contaminated groundwater and 40 million cubic meters of contaminated soil. It is estimated that more than 60 percent of DOE facilities have groundwater contaminated with metals or radionuclides. More than 50 percent of all DOE facilities have soils or sediments contaminated with radionuclides and metals. While virtually all of the contaminants found at industrial sites nationwide can also be found at DOE sites, many of the metals and most of the radionuclides are unique to DOE sites. The NABIR program aims: (1) To provide the fundamental knowledge that may lead to new remediation technologies or strategies for radionuclides and metals; and (2) to advance the understanding of the key microbiological and geochemical processes that control the effectiveness of *in situ* immobilization as a means of long term stewardship, and how these processes impact contaminant transport.

While bioremediation of organic contaminants involves their biotransformation to benign products, such as carbon dioxide, bioremediation of radionuclides and metals involves their removal from the aqueous phase to reduce risk to humans and the environment. Microorganisms can directly affect the solubility of radionuclides and metals by changing their oxidation state to a reduced form that leads to *in situ* immobilization. Or,
