

Durable: No requirements.

Standard Sizes: Only requirement is that materials can be made to fit into a 9½"×12" archival file folder.

Commentary. All HABS/HAER/HALS materials are intended for reproduction. Some 20,000 records are reproduced each year by the Library of Congress. Although field records are not generally reproduced, they are intended to serve as supplements to the formal documentation. The basic durability performance standard (that is to say, life expectancy) for HABS/HAER/HALS materials is 500 years. Ink on Mylar is believed to meet this standard, while color photography does not (although color transparencies are acceptable, their life expectancy is considerably shorter—50 years or less). Field records do not meet this standard but are maintained in the HABS/HAER/HALS collections as a courtesy to collections patrons.

The HABS/HAER/HALS office reserves the right to refuse documentation that does not meet these requirements for materials.

Presentation

Standard: Documentation shall be clearly and concisely produced.

Guideline: The following requirements for presentation shall be met for all levels of documentation:

A. Measured Drawings: Level I measured drawings shall be lettered mechanically (*i.e.*, CAD, Leroy or similar) or in a hand-printed equivalent style. Adequate dimensions shall be included on all sheets. Level III sketch plans should be neat and orderly.

B. Large-format photographs: Level I photographs shall include duplicate photographs that include a scale. Level II and III photographs shall include, at a minimum, at least one photograph with a scale, usually of the principal facade.

C. Written history and description: Data shall be typewritten or laser printed on bond, following accepted rules of grammar.

Commentary. The HABS/HAER/HALS office reserves the right to refuse documentation that does not meet these requirements for presentation.

Architectural and Engineering Documentation Prepared for Other Purposes

Where a preservation planning process is initiated, architectural and engineering documentation, like other treatment activities, is undertaken to achieve the goals identified by that process. Documentation is deliberately selected as a treatment for properties evaluated as significant, and the

development of the documentation program for a property follows from the planning objectives. Documentation efforts focus on the significant characteristics of the historic subject, as defined in the previously completed evaluation. The selection of a level of documentation techniques (measured drawings, photography, *etc.*) is based on the significance of the subject and the management needs for which the documentation is being performed. For example, the kind and level of documentation required to record a historic property for easement purposes may be less detailed than the kind and level required as mitigation prior to destruction of the property. In the former case, essential documentation might be limited to portions of the property controlled by the easement (exterior facades, for example), while in the latter case, significant interior architectural features and non-visible structural details would also be documented.

HABS/HAER/HALS encourages other archives to use the Secretary of the Interior's Standards and related HABS/HAER/HALS guidelines as a basis for their own documentation guidelines. Levels of documentation and the durability and sizes of the items may vary depending on the intended use of the materials and various storage and preservation considerations. Review of documentary sources and the periodic verification of factual information in the documentation are among the best means of assuring quality. The reliability of the documentation is only strengthened by an accounting of the limitations of the research and physical examination of the property, and by retaining the primary data (field measurements and notebooks) from which the archival record was produced. The long-term usefulness of the documentation is directly related to the quality and durability of the materials (ink, paper, film, *etc.*) used to record the historic resource.
