LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., November 24, 1913.

SIR:

I transmit herewith the annual report on mortality statistics for 1912, which is the thirteenth annual compilation of such statistics prepared by the Bureau of the Census. It is based on transcripts from the records of the registration area, which area represented in 1912 an estimated population of 60,427,133 persons, or 63.2 per cent of the total estimated population of the United States. The death rate was only 13.9 per 1,000 population, the lowest ever recorded.

No new states were added for 1912, but I am glad to announce the admission of Virginia to the registration area for deaths for the calendar year 1913. The model law went into effect in that state on June 14, 1912.

The annual reports have been somewhat delayed during the decennial period. The present report has been greatly curtailed in order to insure its publication within the present year. The general tables, containing the absolute figures for deaths, are presented without waiting for the computation of rates, which will be given in connection with those for the following year.

The report was prepared under the direction of Dr. Cressy L. Wilbur, chief statistician for vital statistics, assisted by Mr. Richard C. Lappin, expert chief of division.

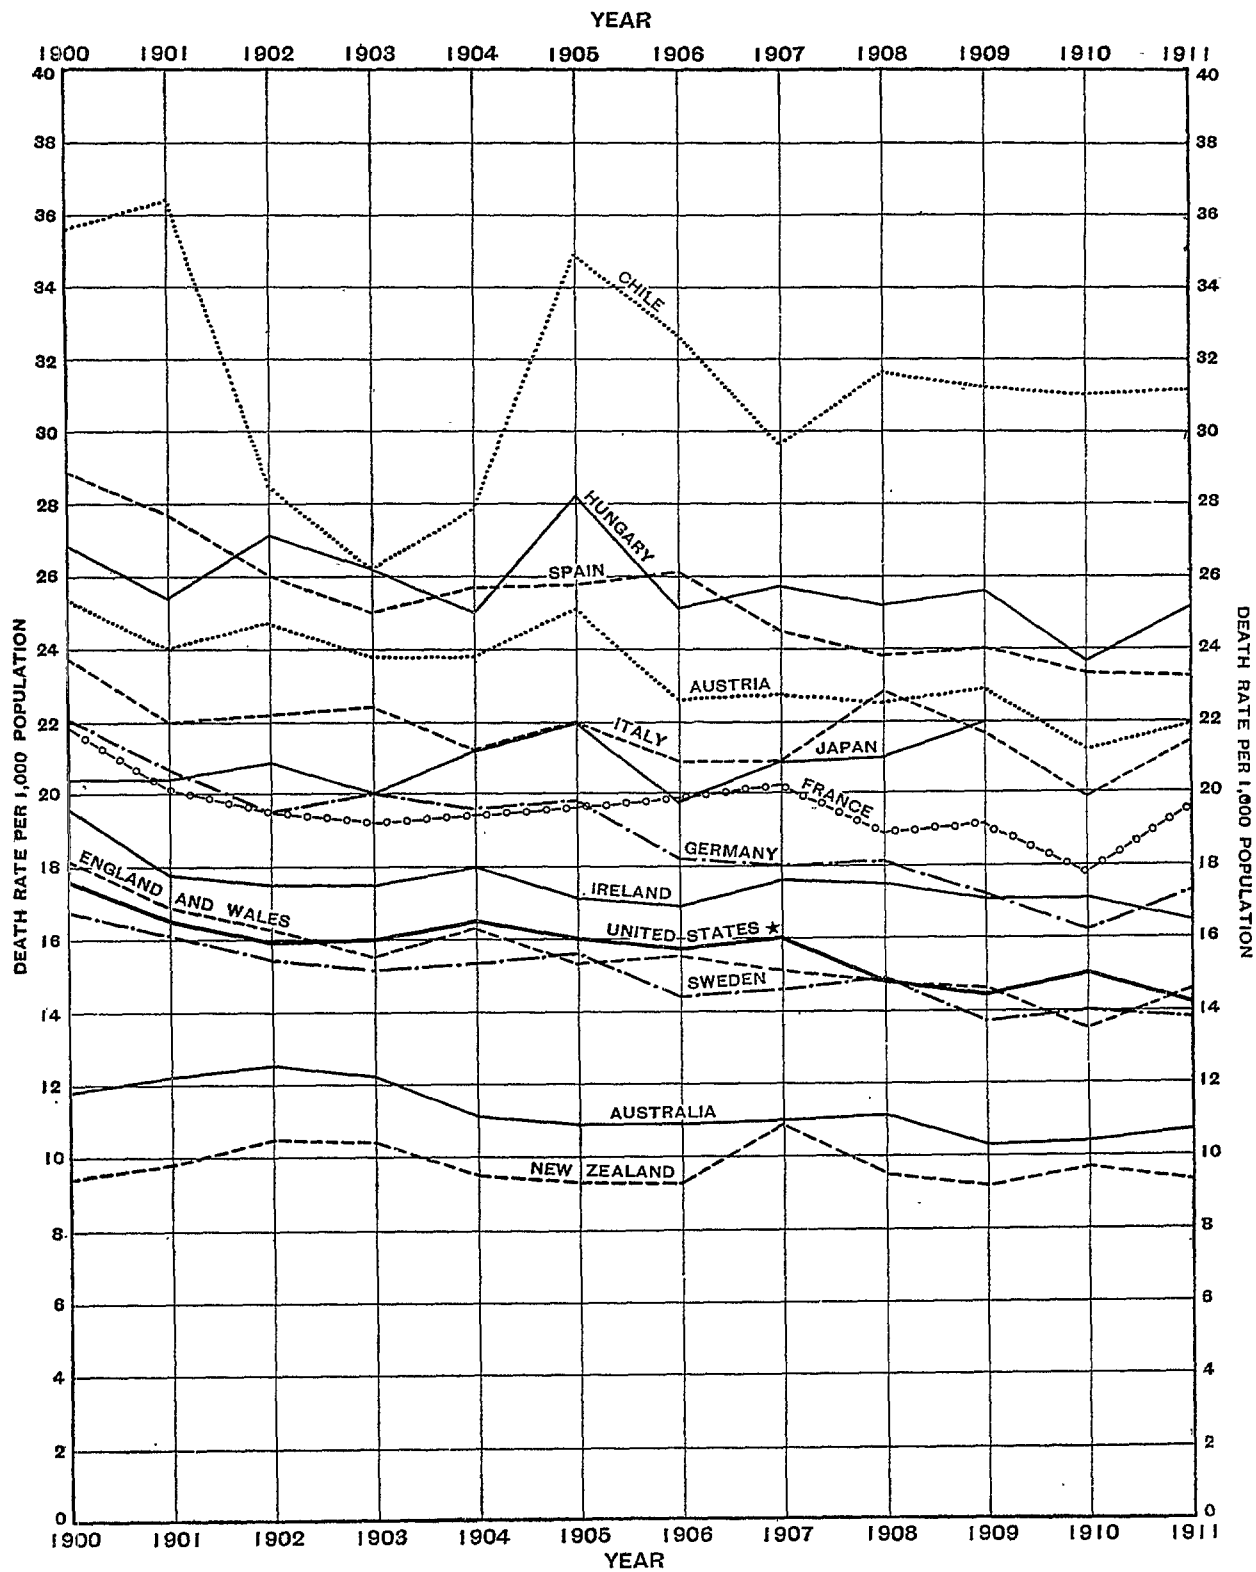

Very respectfully,

Director of the Census.

HON. WILLIAM C. REDFIELD,
Secretary of Commerce.

MORTALITY STATISTICS
1912

GENERAL DEATH RATES OF THE UNITED STATES (REGISTRATION AREA) AND CERTAIN FOREIGN COUNTRIES FOR EACH OF THE YEARS 1900 TO 1911.

* Registration area only; see table and explanatory text on opposite page. All rates are, of course, based upon figures for deaths exclusive of stillbirths.

MORTALITY STATISTICS: 1912.

DEATHS AND CRUDE DEATH RATES.

The following table shows the number of deaths and the death rate per 1,000 estimated population for each year for which data are available since the establishment of the registration area in 1880:

YEAR.	DEATHS FROM ALL CAUSES, ¹ REGISTRATION AREA.		YEAR.	DEATHS FROM ALL CAUSES, ¹ REGISTRATION AREA.	
	Number.	Rate per 1,000 population.		Number.	Rate per 1,000 population.
1912.....	838,251	13.9	1904.....	551,354	16.5
1911.....	839,284	14.2	1903.....	524,415	16.0
1910.....	805,412	15.0	1902.....	508,640	15.9
1909.....	732,538	14.4	1901.....	518,207	16.5
1908.....	691,574	14.8	1900.....	539,939	17.6
1907.....	687,034	16.0	1900 ²	512,669	17.8
1906.....	658,105	15.7	1890 ²	386,212	19.6
1905.....	545,533	16.0	1880 ²	178,645	19.8

¹ Exclusive of stillbirths.

² Census year ending May 31.

The total number of deaths recorded for 1912 was 838,251, or 1,033 less than the number (839,284) for the previous year. The death rate fell from 14.2 per

1,000 population in 1911, which was the lowest rate on record up to that time, to 13.9 in 1912. It may be noted from the table that there has been a more or less steady decrease in the death rate from the earlier to the later years. For 1910 the death rate (15) showed a slight increase over that for the preceding year (14.4). With this exception the rate for each of the last five years has been lower than that for the year preceding. The series of annual reports began only with the report for the calendar year 1900. No data are available to show the rates for the intercensal years between the censuses of 1880, 1890, and 1900.

DEATH RATES OF FOREIGN COUNTRIES.

It will be of interest to compare the death rates of the registration area of the United States with those of certain foreign countries as given in the international statistics presented in the latest annual report (1911) of the Registrar-General of England and Wales. The diagram on the opposite page graphically represents the data given in the following table and shows the general tendency to lower rates of mortality.

COUNTRY.	DEATH RATE ¹ PER 1,000 POPULATION.											
	1900	1901	1902	1903	1904	1905	1906	1907	1908	1909	1910	1911

¹ Exclusive of stillbirths.

² Data not available.

Rates for foreign countries are not available for 1912, except that the provisional death rate of England and Wales showed a still further decrease to 13.3, or two-tenths per 1,000 less than for 1910, which was previously the year of lowest record for that country.

In comparing the crude death rates as given in the preceding table and in the diagram, it should be remembered that such rates are dependent to a con-

siderable extent upon the sex and age constitution of the population. The approximate amount of correction may be learned from the table of standardized or corrected death rates in the preceding report, but in general it may be said that the curves should be used to show the variations in mortality in the same country during the years shown, rather than to compare the absolute incidence of mortality in different countries.

EXTENT OF THE REGISTRATION AREA IN 1912.

The death rates of the registration area can be compared only in a general way because they do not relate to the same aggregates of population. The registration area for deaths consists of those states in which the laws for the registration of deaths are of such a character and so enforced by the state authorities as to warrant the inclusion of the returns in the census reports on mortality statistics. Certain cities in so-called "nonregistration states" are also included, registration in which is conducted for the most part under local ordinances. With the extension of adequate registration methods, the number of registration states increases from time to time, and it is hoped that in time the entire area of the United States will be included. The present extent and growth of the registration area since its establishment at the Tenth Census (1880) may be seen in the following table:

YEAR.	UNITED STATES.		REGISTRATION AREA FOR DEATHS.			
	Population.	Land area (square miles).	Population.		Land area.	
			Number.	Per cent of total.	Square miles.	Per cent of total.
Calendar year 1912...	95,545,336	2,973,890	60,427,133	63.2	1,106,777	37.2

Census year 1880 ² ...	60,155,783	2,973,965	8,638,366	17.0	16,481	0.6

¹ Net reduction of 269 square miles as compared with area stated by Census of 1900, due to drainage of lakes and swamps in Illinois and Indiana, building of the Roosevelt and Laguna Reservoirs, and overflow of the Colorado River into the Salton Sea in California.
² Ending May 31.

Nearly two-thirds of the total population of the United States is now included in the registration area, but only about three-eighths of the land area of the country is represented. One great difficulty up to the present has been the seeming impossibility of establishing effective state registration of vital statistics in the South, but that portion of the country is now taking an active interest in the question of vital statistics and satisfactory laws have recently been enacted in several of the Southern states.

The states included in the registration area for deaths for 1912 are as follows:

California.	Missouri.	Pennsylvania.
Colorado.	Montana.	Rhode Island.
Connecticut.	New Hampshire.	Utah.
Indiana.	New Jersey.	Vermont.
Kentucky.	New York.	Washington.
Maine.	North Carolina (municipalities of 1,000 population or over in 1900).	Wisconsin.
Maryland.	Ohio.	
Massachusetts.		
Michigan.		
Minnesota.		

No new registration states were added for 1912. The area remained the same as in 1911, except for the inclusion of nine cities in Kansas as a result of the enforcement of the new state law. Kansas City, Leavenworth, and Wichita were already included on the basis of local ordinances. The following registration cities in nonregistration states, with the registration states previously listed and the District of Columbia, constitute the registration area for deaths for 1912:

Alabama:	Kansas:	South Carolina:
Birmingham.	Atchison.	Charleston.
Mobile.	Coffeyville.	Tennessee:
Montgomery.	Fort Scott.	Knoxville.
Delaware:	Hutchinson.	Memphis.
Wilmington.	Independence.	Nashville.
Florida:	Kansas City.	Texas:
Jacksonville.	Lawrence.	El Paso.
Key West.	Leavenworth.	Galveston.
Georgia:	Parsons.	San Antonio.
Atlanta.	Pittsburg.	Virginia:
Savannah.	Topeka.	Alexandria.
Illinois:	Wichita.	Danville.
Aurora.	Louisiana:	Lynchburg.
Bellefonte.	New Orleans.	Norfolk.
Chicago.	Nebraska:	Petersburg.
Decatur.	Lincoln.	Richmond.
Evanston.	Omaha.	Roanoke.
Jacksonville.	Oregon:	West Virginia:
Quincy.	Portland.	Wheeling.
Springfield.		

The Kansas cities include all in the state having a population of 10,000 or over in 1910.

The deaths in Virginia cities are now collected by the state authorities, the state law having gone into effect on June 14, 1912.

COLOR, NATIVITY, PARENT NATIVITY, AGE, AND SEX OF DECEDENT.

The following tables show the absolute number and the distribution per 1,000 of the decedents returned for the year 1912, according to color, nativity, parent nativity, age, and sex:

COLOR, NATIVITY, AND PARENT NATIVITY.	DEATHS FROM ALL CAUSES, ¹ REGISTRATION AREA: 1912.					
	Number.			Distribution per 1,000.

¹ Exclusive of stillbirths.

Of the 838,251 deaths in the registration area in 1912, 459,112, or 54.8 per cent, were of males, and 379,139, or 45.2 per cent, were of females. By color, the greater proportion of decedents were white,

779,135, or 92.9 per cent. The registration area contains as yet few Southern states in which the negro population is large. Of the total decedents classified as colored, 56,050 were negroes, 1,090 Chinese, 752 Japanese, and 1,224 Indians.

¹ Exclusive of stillbirths.

The general age distribution of decedents shows, as usual, a large proportion of deaths of infants under 1 year (147,455, or 17.6 per cent), and of children under 5 years (204,639, or 24.4 per cent). The percentage under 1 year was slightly lower than that for 1911 (17.8). Such a comparison, however, is of little value, since it is affected by the variations in the number of deaths at other ages. Unfortunately, the only valuable method of stating the rate of infantile mortality—by comparison with the number of births registered—is not available because of the absence of effective birth registration for the registration area as a whole. Full details in regard to the incidence of deaths during the first days, weeks, and months of life are given in Table 8.

DEATH RATES OF THE REGISTRATION AREA AND ITS MAIN SUBDIVISIONS.

The next table shows the crude death rates in the registration area and its main subdivisions as constituted for each of the years 1909 to 1912 and also for the two five-year periods 1901 to 1905 and 1906 to 1910.

Owing to the extension of the registration area, the crude rates shown do not relate to precisely the same populations, for either the aggregate or the main subdivisions. The registration states have increased in number from 10 in 1900 to 22 in 1912, not including North Carolina, from which returns are received for municipalities only. With the addition of each new

registration state the group of "registration cities in other states" is altered by the transfer of certain cities formerly contained in this group to the group of "cities in registration states." The "rural part of registration states" is, of course, increased by the addition of new rural population from the states included. Beginning with 1910, the urban areas have been distinguished from the rural in the mortality statistics on the basis of a minor limit of 10,000 inhabitants, instead of 8,000, as in the compilations for the years 1900 to 1909. Hence comparisons of a general character only should be made.

The year 1912 established a low record of mortality for the registration area and each of its main subdivisions, except for the group of "registration cities in other states." The composition of this group has changed materially during the past 10 years, a larger proportion of colored population being contained in the group; it is probable that the original group of cities, as constituted in 1900, would show a decrease in the rate. The registration states, as a whole, show a rate of mortality slightly lower than that of the registration area for each year and period given in the table, the figures for 1912 being, respectively, 13.6 and 13.9 per 1,000 population. The rural portion of the registration states uniformly shows a lower death rate than the urban. The urban rate for 1912, which was the lowest on record, was 14.7, a decrease of 2.7, or 15.5 per cent, from the rate shown for the five-year period 1901 to 1905; while the rural rate fell from 14.1 to 12.4, a reduction of 1.7, or 12.1 per cent.

¹ Exclusive of stillbirths.

² Includes District of Columbia.

A comparison, which is more satisfactory because it relates to the same area, although subject to slight correction for changes in the composition of the population included, may be made in the next table which presents the crude death rates, urban and rural, for the group of registration states as constituted in 1900 for the same years and periods as shown in the previous table.

The original group of registration states as included in the first of the annual reports on mortality statistics, namely, that for the calendar year 1900, embraced the following states: Connecticut, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New

York, Rhode Island, and Vermont, and the District of Columbia. The total population, approximating 20,000,000 in 1900 and 25,000,000 in 1912, represents substantially the same proportion—slightly over 26 per cent—of the total population of the country in each year. It is significant that for this considerable portion of the country, the registration of deaths in which must be considered to be somewhat more complete than for the registration area as a whole, the death rate of the rural districts shows but little, if any, decrease in the years and periods compared. Practically the entire reduction of the death rate in this group is due to lower urban mortality. Adverse selection—migration of the young and healthful to the cities from the farms—and possibly less complete death registration in the rural districts during the earlier years may have affected the rates.

DEATH RATES OF REGISTRATION STATES.

Crude death rates for the registration states for the last four years and two recent quinquennial periods are shown in the next table.

The crude death rates for the individual registration states may be safely employed, assuming that the completeness of registration has remained substantially unchanged for each state, as indicating the variations in the general incidence of mortality for the years or periods given in the table. Care should be taken, however, not to lay too great stress on the figures shown for certain states, especially those in which registration laws have been in operation for only a short time. It is possible that the thoroughness with which deaths are recorded may vary to a considerable extent in different states, or may even fluctuate in the same state from year to year.

A considerable part of the differences between the death rates of the states having the highest and lowest crude death rates may be due merely to the differences in the sex and age constitution of the population. As an example, the crude death rate of Vermont for 1912, 15.2 per 1,000 population, exceeds the crude death rate of Washington, 7.9, by no less than 7.3 per 1,000.

But as shown in the annual report and bulletin for 1911, the standardization of the death rates of these states, that is to say, the application of the specific death rates, by sex and age, as actually observed in each state to a standard or basic population, thereby permitting the comparison to be made on terms of equality, indicated that the rate for Vermont would be subject to a reduction of 20 per cent and that of Washington would be subject to an increase of 10 per cent. Assuming that precisely the same changes should be made in the crude death rates for 1912, the approximate standardized death rate of Vermont becomes 12.2 and that of Washington, 8.7, leaving the difference between the rates of the two states only 3.5 instead of 7.3.

[States in which 10 per cent or more of the inhabitants in 1910 were colored are indicated by asterisks (*).]

⁴ Figures for deaths not available for the entire period 1906 to 1910.

⁵ Figures relate only to municipalities having a population of 1,000 or over in 1900.

DEATH RATES OF LARGE CITIES.

Similar caution must be exercised in comparing the crude death rates of the cities of 100,000 population and over in 1910 as shown in the next table.

Cities with considerable proportions of colored populations are usually found to show higher death rates than in most other cities. As deaths of nonresidents are included, certain cities to which invalids resort for the treatment of tuberculosis show much higher rates than if the mortality were confined to the resident population.

DEATHS OF NONRESIDENTS.

The death rates presented in this report, as well as those in all preceding mortality reports compiled by the Bureau of the Census, are based on the inclusion of all deaths, both of residents and nonresidents, that occurred in each area. Deaths in asylums for the insane and in other state institutions are included with those of the minor civil divisions in which the population of such institutions is enumerated; as are also deaths in medical and surgical hospitals, although patients temporarily resident in hospitals for treatment or operation are enumerated at their actual residences. Moreover, many deaths of persons who have journeyed from other states and cities to localities renowned for climatic advantages are included in the mortality of the latter places, although their actual sojourn may have been very brief and the disease from which death occurred may have been contracted at the former or usual residence.

Obviously there is an injustice, which is especially apparent in some instances, in this method of statistical procedure. For the most part it may be assumed that the deaths of nonresidents added are offset to a considerable extent by the deaths of residents which occurred in other localities; but this is true only to a very limited degree for our chief health resorts. If there existed complete registration of deaths in all parts of the United States, it would be possible to allocate, according to precise and uniform rules, all deaths of nonresidents to the place of residence. This

is not feasible at present, and the attempt to eliminate deaths of nonresidents would often result in an understatement of the true mortality. It is only very recently, in the latest report of the Registrar-General of England and Wales (1911), that such a plan has been carried out for a country which has had complete registration of vital statistics for many years. Out of a total number of 527,810 deaths in England and Wales in 1911, there were about 40,000 "transferable deaths," which were determined in accordance with the following rules contained in the English "Manual of the International List of Causes of Death":

"Transferable deaths" are deaths of persons who, having a fixed or usual residence in England or Wales die in a district other than that in which they resided. The deaths of persons without fixed or usual residence, *e. g.*, casuals, are not "transferable deaths" except as provided in 3 (b) below.

The following special cases arise as to transferable deaths:

1. Persons dying in institutions for the sick or infirm, such as hospitals, lunatic asylums, workhouses, and nursing homes (but not almshouses), must be regarded as residents of the district in which they had a fixed or usual residence at the time of admission. If the person dying in an institution had no fixed residence at the time of admission, the death is not transferable. If the patient has been directly transferred from one such institution to another, the death is transferable to the district of residence at the time of admission to the first institution.

NOTE.—An institution belonging exclusively to the whole or a part of a particular urban or rural district, but situated outside that area, is regarded by the Registrar-General for the purposes of death transference as situated in the area to which it belongs.

2. The deaths of infants born and dying within a year of birth in an institution to which the mother was admitted for her confinement should be referred to the district of fixed or usual residence of the parent.
3. Deaths from violence are to be referred:
 - (a) to the district of residence, under the general rule;
 - (b) if this district is unknown, or the deceased had no fixed abode, to the district where the accident occurred, if known;
 - (c) failing this, to the district where death occurred, if known; and
 - (d) failing this, to the district where the body was found.

Some proposed rules on this subject were submitted to the first meeting of the Section on Vital Statistics of the American Public Health Association, Atlantic City, 1907. This organization embraces the state and municipal public health and registration officials of the United States. It has been the desire of the Bureau of the Census to cooperate with such authorities in the development of methods of statistical practice rather than to prescribe regulations. Following are the proposed rules,¹ with indication of those that were adopted as Rules of Statistical Practice and those that are still pending:

DEATHS OF NONRESIDENTS.

10. All deaths of transients or nonresidents occurring in a State or city should be included in the tables of total deaths. [Adopted as Rule No. 11 of 1908.]

NOTE.—It is not fair to exclude nonresidents *unless* all deaths of residents occurring elsewhere can be included: this is quite impracticable in the United States under present conditions and the large extent of nonregistration territory. No rules based on duration of actual residence of transients or nature of cause of death have been generally adopted, so that deaths of a certain character would be uniformly excluded. It is evident that the death of a nonresident of a city who succumbs to typhoid fever after living there long enough for the time to include the duration and period of incubation of the disease should be properly charged to its mortality. On the other hand a death from pulmonary tuberculosis occurring within 1, 2, 3, . . . months after arrival, may not be properly chargeable to the mortality of the State or city. As a provisional method of treatment, the following paragraph is submitted:

11. A separate column showing "Deaths of nonresidents" may be given, which should include deaths in hospitals, institutions, and of transients and nonresidents, on whose certificates of death appears a statement of "Former or usual residence," "Where was disease contracted, if not at place of death," and "How long at place of death," the time stated in answer to the last question being *less than six (?) months and less than the duration of the disease causing death*. [Pending, 1913.]

NOTE.—The limit of residence is suggested merely as a basis for discussion. Evidently, some line of demarcation should be fixed if it is proposed to treat deaths of nonresidents upon a uniform basis.

¹ Quarterly Publications of the American Statistical Association, December, 1907.

In addition to the duration of the disease causing death, its period of incubation may be considered as a factor of the decision. But, whatever plan is adopted for the special statement of deaths of nonresidents, there should be no interference with the complete statement of total deaths, inclusive of all deaths of nonresidents, as required by paragraph 10.

DEATHS IN INSTITUTIONS.

12. Deaths of residents of a city in a hospital or institution situated within the city limits should be distributed by the local registrar to the districts of residence (borough, ward, sanitary district) as far as possible. [Adopted as Rule No. 12 of 1908.]

13. Deaths of residents of a city in an institution (*e. g.*, almshouse) situated outside of the city limits, but chiefly or entirely occupied by commitments from the city, should be included in the total deaths of the city, and be distributed by the city registrar to the districts of residence as provided in paragraph 12. [Pending, 1913.]

NOTE.—This is suggested for discussion. It apparently departs from the general principle of registering a death where it occurs, and there only. On the other hand it would relieve extra-urban districts containing city institutions from an apparently excessive mortality, enable the true death rate of the city to be known, and make the statistics more comparable with future years when, with the extension of the city limits, the institution may come to be included in the urban area. The successful accomplishment of such distribution requires cooperation of local registrars, and would evidently be undesirable and unfair unless all cities included the deaths of their dependent or defective classes on the same basis. A limit of residence might require to be considered.

14. Deaths of inmates of a State or government institution should be included in the total deaths of the areas containing them; but special columns may be employed to permit the separate statement of such deaths, as in the case of nonresidents. [Pending, 1913.]

NOTE.—The alternative plan of distributing the deaths in a State institution (*e. g.*, insane asylum) to the counties or cities from which the inmates were received may be considered, or the institution may be treated as an independent registration area. In any case, if the deaths are eliminated the constituent population should also be eliminated before computing death rates.

DEATH RATES BASED ON TOTAL DEATHS.

20. Any statement of the death rate (general, crude, or gross death rate) of a State or city should be understood to be based, unless expressly qualified, upon the *total deaths, exclusive of stillbirths*, without any omission of deaths whatsoever. [Adopted as Rule No. 15 of 1908.]

It is evident that no definite decision has yet been reached as to how deaths of nonresidents shall be excluded, and the Bureau of the Census, in adhering to the settled procedure of basing its rates upon total deaths, has conformed strictly to the opinion of American sanitary and registration officials as thus far expressed.

At the recent meeting of the American Public Health Association, Colorado Springs, September 9 to 14, 1913, the following resolution was adopted:

Resolved, Pending the final determination as to forms of statistical tables and the adoption of definite rules of statistical practice,

it is the sense of the Section on Vital Statistics of the American Public Health Association that bulletins and reports may contain (1) a statement of mortality including deaths of all persons and from all causes with corresponding death rates, and (2) a statement of mortality based on deaths of residents only with corresponding death rates, which should be accompanied with a full explanatory note as to the exact class of cases and period of time of residence covered in the exclusions.

This resolution, of course, is not a definite rule of statistical practice, but it is hoped that at the next meeting of the Association, Jacksonville, Fla., 1914, precise rules will be formulated, so that at least a uniform alternative statement of deaths of nonresidents can be given in connection with the tabulation of total deaths. It is easy, in the compilation of a city report, to discard deaths of "nonresidents." By varying the definition of "nonresidents" from year to year, very remarkable reductions of mortality can be produced, especially if care be taken to include as many nonresidents as possible in the enumeration of the population. At present death rates exclusive of nonresidents as published in certain city reports are of little value for comparative purposes because there is no uniform basis of exclusion.

The annual report for 1913 will contain some data on nonresident deaths and it is hoped to present in that for 1914 some figures based on complete statements of length of residence at place of death, as provided in item No. 18 of the Revised United States Standard Certificate of Death,¹ and also of the duration of illness. These statements have been called for upon all transcripts, but frequently have been neglected, not only by transcribers but also by the primary registration officials, who failed to require that the certificates be filled out fully in these respects when presented for record. Hence state and city

¹ A copy of this certificate, which was adopted by the American Public Health Association at its meeting at Richmond, Va., 1909, approved by the Bureau of the Census, and which has been in use since January 1, 1910, will be sent by the Director of the Census upon request. Practically all the registration states now employ it. Under "Place of death" it directs that: "If death occurred in a hospital or institution, give its name instead of street and number." Item 18 is as follows:

18 LENGTH OF RESIDENCE (FOR HOSPITALS, INSTITUTIONS, TRANSIENTS,
OR RECENT RESIDENTS)

At place of death _____ yrs. _____ mos. _____ ds. In the State _____ yrs. _____ mos. _____ ds

Where was disease contracted,
if not at place of death? _____

Former or usual residence _____

officials have been requested to exercise special pains to procure such data, and assurances of hearty cooperation have been received.

STANDARDIZED DEATH RATES.

In the annual report and bulletin for 1911 may be found a discussion of the subject of standardized or "corrected" death rates which it is not necessary to repeat. Crude death rates do not afford exact comparisons for populations having very dissimilar sex and age constitutions. The most thorough method of comparing vital rates in different populations or in the same population at various periods of time is by the examination of the specific death rates in considerable detail or by the aid of a life table. The demand for some single expression which may be used with the facility of the crude death rate is met by applying the observed specific rates to a standard population, which is used as a measuring rod or yardstick whereby death rates may be compared. It is of little practical consequence what particular standard population shall be taken, but it is of great consequence that a single standard shall receive the sanction of international adoption. If each country selects a national standard of its own, the result will be that so far as international comparisons are concerned, no standard whatever might as well have been adopted. Hence, instead of attempting to establish a new standard population for the United States, which would have been as unnecessary as an "American yard" or an "American meter," the English basis or the standard million of 1901 has been employed. Extended reference to the, at least provisional, adoption of this standard by the Bureau of the Census may be found in the Registrar-General's annual report for 1911, with approval of the suggestion advanced in the bulletin for 1911 that the term "standardized" should be substituted for the term "corrected" in this connection and a definite selection of the standard population of 1901 as the permanent basis of standardized rates.

Owing to the necessity of advancing the date of publication of this report, it was not feasible to compute specific and standard rates for the year. The next table, which applies the percentages of standardized to crude rates as computed for 1911 to the crude rates for 1912, will enable the approximate changes to be noted that would result from reduction to a uniform basis of sex and age distribution.

¹ The standardized or "corrected" death rate for 1911 was obtained by applying the specific death rates, by sex and age, to the standard million of England and Wales, 1901. For 1912, the ratio between the standardized and crude rate observed in 1911 (both sexes) was merely applied to the crude rate for that year, thus giving the approximately correct standardized figure.

² Includes District of Columbia, but excludes North Carolina.

³ Includes Connecticut, the District of Columbia, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Rhode Island, and Vermont.

CAUSES OF DEATH.

The number of deaths from each cause and class of causes of death according to the detailed International List may be found for the registration area and the registration states in Tables 4 and 5. Table 2 gives the more important causes, without detail except as to color of decedents when this is an element to be considered, for the minor subdivisions of the registration area, and is based upon the abridged International List. Table 6, for cities of 100,000 population or over, employs the abridged list, and Tables 7 and 8 use even more condensed forms of presentation, which, however, are based on the abridged International List. It is desirable, therefore, to show the relation that exists between the abridged and detailed forms of the International classification of causes of death. The next table presents the important features of the mortality of 1912 according to

the abridged list, while the full detail of the extended classification, together with figures for recent years and periods and death rates based upon the corresponding populations, are shown in the table beginning on page 19.

No attempt will be made to discuss the causes of death, with reference to their incidence, in detail for the various subdivisions of the registration area, inasmuch as it was not deemed practicable to present the death rates for individual causes, except for the registration area as a whole, in the present report. The deaths from each cause, as shown for the states and cities in this report, may be compared directly with the deaths for the preceding year. The rates thus temporarily omitted, in order to procure prompt presentation of the absolute figures, will be given in connection with those of the following year in the next annual report (1913).

¹ Abridged International List of Causes of Death. The title or titles of the detailed International List that are included under each heading are shown by numbers in parentheses.

² Exclusive of stillbirths.

³ Less than one-tenth of 1 per 100,000 population.

⁴ Less than one-tenth of 1 per cent.

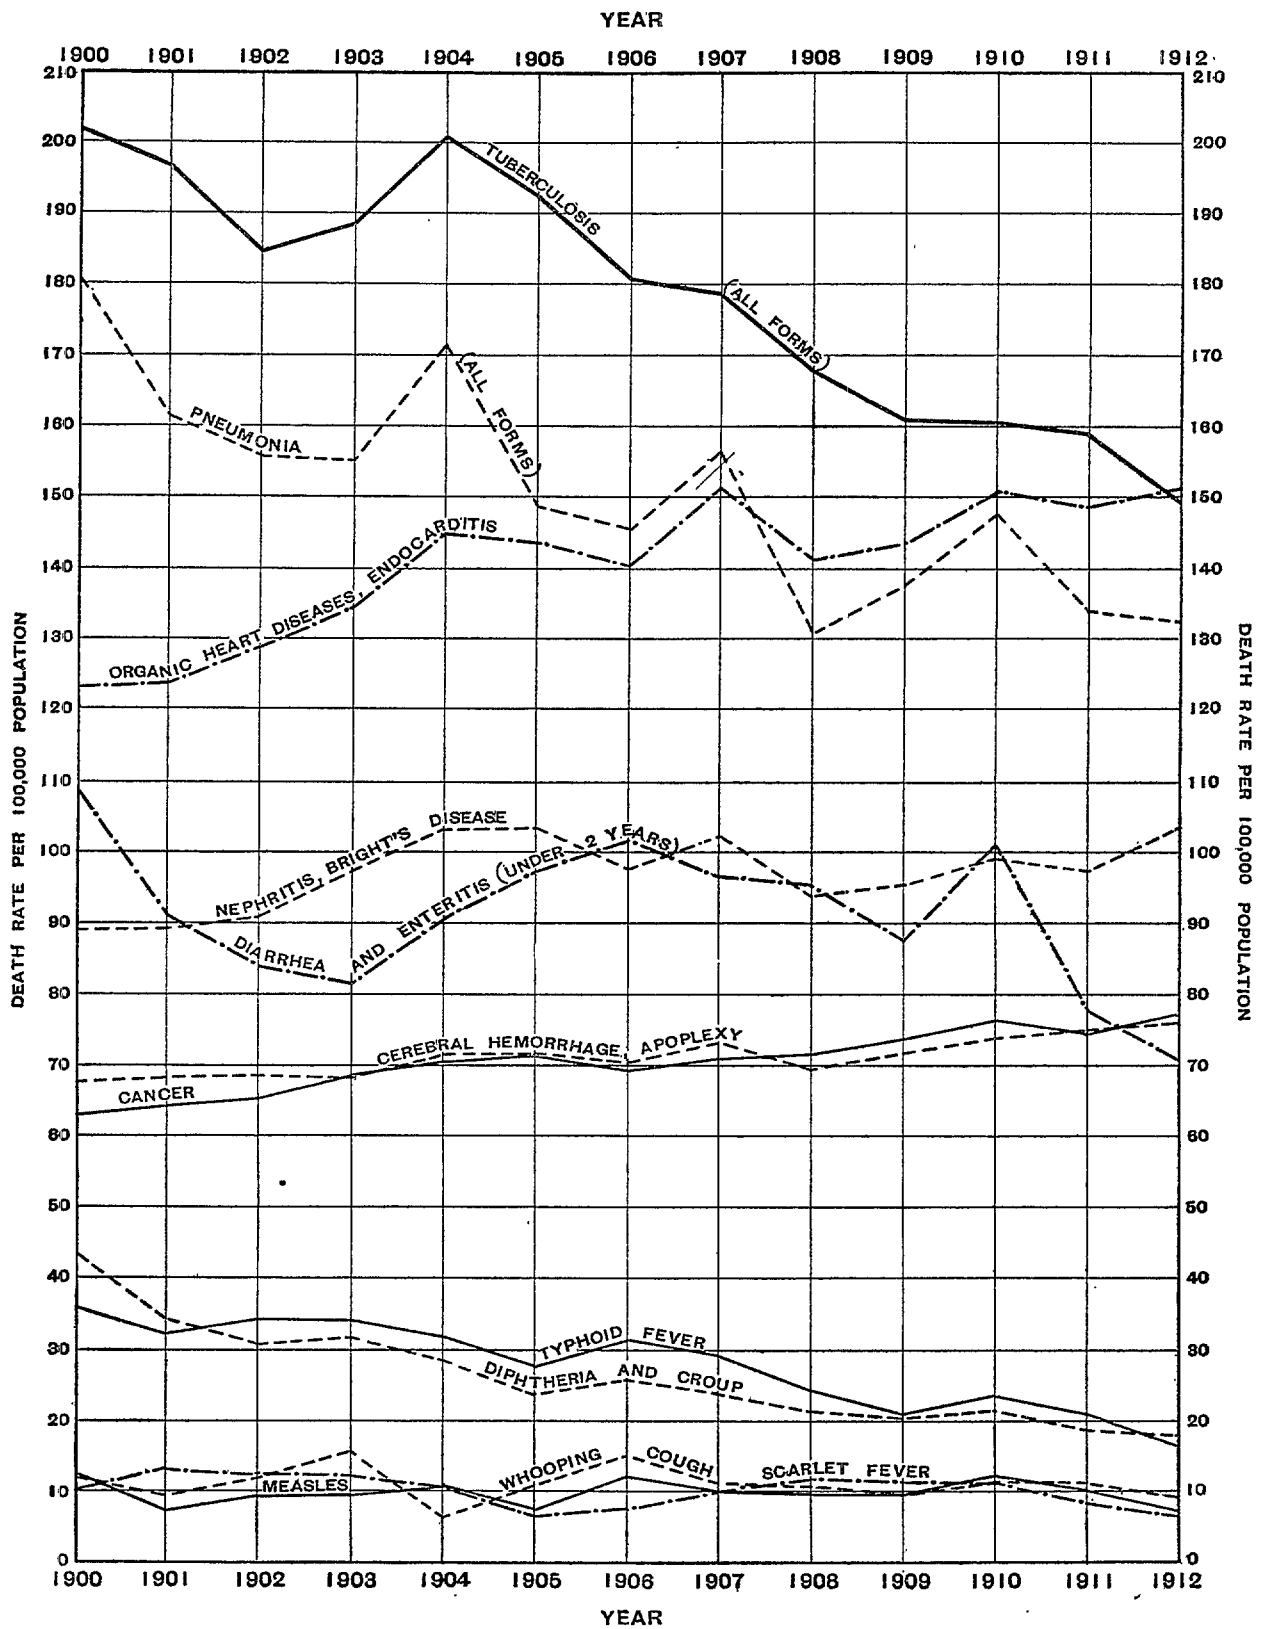

Typhoid fever showed a marked decrease in the number of deaths and in the death rate as compared with any preceding year or period shown in the accompanying tables. The total number of deaths in the entire registration area in 1912 was 9,987, or 2,464 less than the number for 1911 (12,451). The death rate per 100,000 population estimated as of the middle of the year was 16.5, which figure may be compared with that for 1911 (21), 1910 (23.5), 1909 (21.1), and the averages for the five-year periods 1906 to 1910 (25.6) and 1901 to 1905 (32). The typhoid death rate for 1912 thus shows a reduction of nearly one-half from the rate of the first five years of the century, and the reduction seems to be continuing so that still lower rates will probably be shown for following years. Nothing is more easy, with adequate support of proper health administration, than to reduce greatly the typhoid mortality of the communities that still show high rates from this cause, and thus to contribute to the decrease in the national toll of untimely deaths and costly illness paid to this strictly preventable disease.

Measles, scarlet fever, whooping cough, and diphtheria (diphtheria and croup) all showed favorably low rates of mortality for the year 1912 as compared with the years immediately preceding and the two quinquennial periods terminating in 1910. The number of deaths from these causes is still far too high, even in a year of relatively low mortality. It is no longer considered necessary for children to pass through the ordeal of such diseases if they can be prevented and avoided, hence systematic efforts for their restriction and, in the case of diphtheria, for

governmental aid by state and municipal agencies in prophylaxis and cure, should result in still greater diminution of the morbidity and mortality due to these causes. Measles caused 4,240 deaths in the registration area in 1912; scarlet fever nearly as many, 4,038; whooping cough, a disease not usually regarded as especially dangerous, more than either measles or scarlet fever, 5,619; and diphtheria and croup, which showed less reduction in proportion than the other epidemic diseases of children, caused 11,013 deaths. Deaths from "croup" are usually regarded as due to diphtheria, pure and simple, but Doctor Stevenson presents evidence that this is not now the case in England, where this return, however, as in the United States, is of diminishing consequence.

Tuberculosis in all its forms, chief of which is pulmonary tuberculosis, caused 90,360 deaths in the registration area during the year 1912. Of these, 75,429 were reported as due to tuberculosis of the lungs or its various synonyms as listed by the International system of classification of causes of death. There were also 3,036 deaths from acute military tuberculosis, a term formerly included with tuberculosis of the lungs in the statistical classification. It is preferable to compare the total deaths from tuberculosis, thereby eliminating minor changes in classification. The death rate from all forms of tuberculosis for 1912 was 149.5 per 100,000 population, less than the rate for the preceding year (158.9), or any other year on record. The reduction since the early years of the century, when the death rate from this cause was approximately 200 per 100,000 population, is thus about 25 per cent.

DEATH RATES FROM IMPORTANT CAUSES OF DEATH IN THE REGISTRATION AREA OF THE UNITED STATES FOR EACH OF THE YEARS 1900 TO 1912.

CAUSES OF DEATH.

Cancer showed for 1912 an increased number of deaths (46,531) and an increased death rate (77) as compared with the preceding year (44,024 deaths; 74.3 per 100,000). The death rate from this cause was higher than that shown for any previous year and marks an increase of about 20 per cent in the crude mortality as compared with that of 10 or 15 years ago. The constant increase in the general cancer death rate is an almost universal phenomenon of mortality statistics. Reference may be made to the

report for 1911 for some specific and standardized rates for this disease by sex and age, but further analysis of the data will be necessary to show the exact character and amount of the increased cancer death rate.

In the following table, and in the diagram on the opposite page, the movement of the death rates from typhoid fever, tuberculosis (all forms), cancer, and certain other important diseases or groups of diseases is shown for each of the years 1900 to 1912:

DEATH RATES FROM CERTAIN IMPORTANT CAUSES OF DEATH IN THE REGISTRATION AREA OF THE UNITED STATES FOR EACH OF THE YEARS 1900 TO 1912.

DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 100,000 POPULATION, BY CAUSES, ACCORDING TO THE DETAILED INTERNATIONAL LIST, FOR THE REGISTRATION AREA: 1909 TO 1912.

[The causes of death originally classified according to the first revision of the International List, which was in effect for the years 1900 to 1909, are rearranged, as far as practicable, to correspond with the second revision, in effect Jan. 1, 1910. Changes depending upon new titles or markedly affecting the comparability of the figures are indicated by asterisks (*) following the titles, and reference should be made to the statements in the note on Changes in Classification at the end of this table.]

¹ Exclusive of injuries at birth.
² Figures for deaths not available for the entire period.

³ Figures for deaths not tabulated separately prior to 1910.

NOTE ON CHANGES IN CLASSIFICATION.

The International Classification of Causes of Death was revised in 1900 (first revision, in effect 1900 to

1909); and again in 1909 (second revision, in effect 1910 to 1919). Some differences naturally occur in passing from the first to the second revision, some of the most important of which are as follows:

CAUSE OF DEATH. [Titles in roman; terms in italics.]	Title or class (second revision) under which included—		Title of first revision under which formerly in- cluded.	CAUSE OF DEATH. [Titles in roman; terms in italics.]	Title or class (second revision) under which included—		Title of first revision under which formerly in- cluded.

1 Transferred from Diseases of nervous system (Class II) to General diseases (Class I), beginning with 1910.
 2 Discontinued as a separate title and included with Tuberculosis of the lungs, beginning with 1910.
 3 Discontinued as a separate title and included with Tuberculosis of other organs, beginning with 1910.
 4 In addition to the changes specified in the table, it should be noted that in the case of the causes classified under titles 135, 136, 139, and 140, numerous changes were made from one title to another in 1910, as the result of which, statistics entered under these titles for 1910, 1911, and 1912 are not comparable with those for earlier years.
 5 Changes not effective until 1911.
 6 Formerly included under old title 176 (Other external violence). In effect, the title—not title-heading or name—has been discontinued, since the present title 186, although bearing the same title-heading, bears little resemblance to the former title; three out of the four subtitles of the old "Other external violence" are now classified under titles other than the present "Other external violence."
 7 Title under which formerly included (see next column) discontinued.

EFFORTS TO IMPROVE THE STATEMENT OF CAUSES OF DEATH.

The International List of Causes of Death does not purport to be a nomenclature of diseases. It is a statistical condensation of causes of death as reported by physicians and coroners, and necessarily makes provision for various indefinite and unsatisfactory terms because such terms are found upon the certificates of death as filed in the offices in which the deaths are primarily recorded.

Efforts are being made by the Bureau of the Census to improve the quality of the returns of causes of death, (1) at their source, by cooperation with the state and city registration officials, and (2) by a direct appeal to the medical profession.

A little booklet, the Physicians' Pocket Reference to the International List of Causes of Death, was mailed to every physician in the United States in January, 1911, and again in November, 1913.¹ It contains the detailed International List so that physicians may understand what causes are especially important for statistical classification, indicates those which may be regarded as fairly precise, and gives a list of undesirable terms, the use of which should be avoided as far as possible. By attention to these suggestions the value of the mortality statistics will be greatly increased.

¹Copies of the second edition can be obtained upon request from the Director of the Census.

After the transcripts of the certificates of deaths reach the Bureau of the Census, correspondence is undertaken with physicians in order to procure additional information that may serve to make the classification of certain terms more precise. Reference was made to this subject in the last report, and the thanks of the Bureau are extended to the members of the profession who have so promptly and courteously supplied the additional data. A similar work is conducted by the Registrar-General of England, and also by the Metropolitan Life Insurance Co. of New York, which now asks for further information on nearly 8 per cent of the death certificates received by it, or about 9,000 cases out of a total of 115,000 deaths per year. In an interesting paper on the subject,² Dr. Dublin makes comparison of the general results obtained for certain indefinite returns in the three offices:

UNDESIRABLE TERM.	UNITED STATES BUREAU OF THE CENSUS.			REGISTRAR-GENERAL'S OFFICE.			METROPOLITAN LIFE INSURANCE CO.		
	Number of replies.	Number of changes.	Per cent of changes.	Number of replies.	Number of changes.	Per cent of changes.	Number of replies.	Number of changes.	Per cent of changes.
"Simple meningitis".....	354	304	85.9	269	185	68.8	437	325	74.4
"Paralysis without specified cause".....	235	176	74.9	1,091	854	78.3	285	259	90.9
"Simple peritonitis".....	102	79	77.5	694	408	58.8	213	180	84.5

²An Experiment in the Compilation of Mortality Statistics, by Louis I. Dublin, Ph. D., Statistician, and Edwin W. Kopf, Chief Clerk, Statistical Bureau, Metropolitan Life Insurance Co., Quarterly Publications, American Statistical Association, December, 1913.

As Dr. Dublin remarks, "a more detailed examination of the reports of the United States Census Bureau and of the Registrar-General's Office shows also fair consistency both in kind and amount of change in assignment which resulted from the inquiry. It is of interest to note, for example, that 17.6 per cent of the 'simple peritonitis' cases were changed into 'appendicitis' by the United States Census Bureau, 17.4 by the Registrar-General's Office, and 17.8 by the Metropolitan Statistical Bureau, respectively. So, too, the United States Census Bureau returns show that 29.4 per cent of the 'simple meningitis' cases were changed into 'epidemic cerebrospinal meningitis,' 34.9 by the Registrar-General's Office, and 21.1 by the Metropolitan Statistical Bureau, respectively." Correct statements of causes of death are thus of great practical value for life insurance purposes, and it is gratifying to know that the insurance investigation is being conducted along the precise lines adopted by the Governmental authorities, thereby rendering the results fully comparable and procuring the support of a large number of medical examiners, who will soon learn to supply the information in the manner desired.

The validity of the statistics of causes of death depends largely upon the knowledge of the physicians who attended the patients during their fatal illness. As for treatment, so for the medical certificate of cause of death, the utmost care should be taken to obtain a correct diagnosis. How seriously the mortality statistics may be criticised on the ground of alleged error, to a considerable extent, in the clinical diagnosis, may be seen by the following extract from the London *Lancet*, November 15, 1913, on "Inaccuracy of American Mortality Statistics:"

A startling article on the inaccuracy of American Mortality Statistics, written by Dr. Horst Oertel, pathologist to the Russell Sage Institute, of New York, has been sent to us, extracted from a journal called the "American Underwriter," and its lessons may not unprofitably be taken to heart by some persons in this country who justly fall under Dr. Oertel's censure as dogmatic writers on the statistics of fatal diseases without troubling to test the reliability of the data upon which their statements are founded. "It is strange," says Dr. Oertel, "that, notwithstanding much discussion about improvements in the methods of recording and interpreting these statistics, the reliability of the death certificate itself is generally accepted." He then proceeds to show that the errors and inaccuracies in the present returns of causes of death are so great that it may fairly be doubted whether deductions based on the evidence of the American statistics are at all trustworthy. The majority of American death

certificates, even those of the larger hospitals, which represent the best available records, are based mainly on bedside diagnosis only. The testimony of American physicians who have systematically performed necropsies appears to be to the effect that the majority of clinical diagnoses are either wrong or quite insufficient to establish the cause of death. From his own experience Dr. Oertel does not hesitate to state that even at the time of the necropsy the medical man is frequently uncertain about the character of the disease and arrives at the truth only after prolonged study. The statistics of Dr. Cabot, of Boston, are instructive in this regard. He has published the percentages of correct diagnoses of what appeared to be the most important lesions revealed by 3,000 necropsies in that city, from which it appears that even in the hands of an experienced diagnostician the diagnosis of certain diseases was proved correct in the case of not more than 25 per cent of the deaths; whilst the percentage did not exceed 75 per cent in the case of any other fatal disease in the list. Commenting on Dr. Oertel's paper, the editor justly remarks that if the actual causes from any considerable proportion of deaths have been incorrectly diagnosed, and the death certificates made out accordingly, the whole structure of a country's mortality statistics fairly totters, and the grouping of classes, ages, and ratios is necessarily subject to the most serious doubts. It is the gravest of dangers in the compilation of American Mortality Statistics to which Dr. Oertel directs attention, and, in our judgment, the subject is worthy of the serious attention, not of vital statisticians alone, but of all the more important medical societies, medical colleges, and hospital authorities of the country.

Attention was called to Dr. Cabot's figures in the annual bulletin and report on Mortality Statistics, 1911. The preceding comment is misleading in that it implies that the discrepancy between clinical diagnosis and the results of post-mortem examination is peculiar to America. As such it is an indictment of the medical profession of the United States. Undoubtedly the statement of cause of death should be confirmed, or established, by necropsy in a far larger proportion of cases than is done at present. Only a comparatively small percentage, however, of the general mortality returns in any country is based on such examination, and in some countries a not inconsiderable number of causes of death are reported without even clinical diagnosis by professional attendants. The standard of medical education is rapidly rising in the United States, but even a quarter of a century ago it was not such as to warrant the general imputation of worthlessness for the statements of American physicians as compared with those of any other country. Certainly, however, the matter is deserving of the fullest investigation, and it is to be hoped that the medical profession of the United States will act in the premises.

NAVY AND MARINE CORPS

MORTALITY OF THE NAVY AND MARINE CORPS.

For comparison with civil mortality statistics, the following data concerning the mortality of the United States Navy and Marine Corps, which were kindly supplied by the Surgeon General of the Navy, will be of interest.

The low rates as compared with those of the registration area are, of course, dependent upon the

special age distribution of the naval force, which is for the most part composed of men in the most favorable periods of life. The marked reduction in the mortality of the entire service from 8.88 in 1900 to 4.08 in 1912 is notable. Comparative figures for the English navy, 1911, are as follows: Average strength of service afloat, 117,100; total deaths, 366, or 3.12 per 1,000; deaths from diseases, 260 or 2.22 per 1,000; deaths from violence, 106 or 0.90 per 1,000.

YEAR. ¹	AVERAGE STRENGTH.		DEATHS.						DEATH RATE PER 1,000 OF AVERAGE STRENGTH.

INDEX.

- Abdominal tuberculosis. *See* Tuberculosis (all forms).
- Abscess, acute, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
— death rate, 21.
- Absorption of deleterious gases (conflagration excepted). *See* Accidental or undefined causes (total).
- Accidental or undefined causes (total), deaths from, 22; in cities and rural districts, 124; by sex, 142; by age, 142, 148.
— death rate, 22.
- Addison's disease, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Age, deaths by, 10, 28, 134, 146, 255.
- Alcoholism (acute or chronic), deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Amputations, deaths from, 21; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 21.
- Anemia, chlorosis, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Aneurism. *See* Arteries, diseases of, etc.
- Angina pectoris, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Ankylostomiasis, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 21.
- Anthrax, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
— death rate, 19.
- Apoplexy. *See* Cerebral hemorrhage, etc.
- Appendicitis and typhlitis, deaths from, 17, 21; by color, 51; in cities and rural districts, 120; by sex, 140; by age, 140, 147, 255.
— death rate, 21.
- Arteries, diseases of, atheroma, aneurism, etc., deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Articular rheumatism, acute. *See* Rheumatism, etc.
- Asiatic cholera, deaths from, 17, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255.
— death rate, 19.
- Asthma, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 21.
- Atheroma. *See* Arteries, diseases of, etc.
- Atrophy. *See* Congenital debility, etc.
- Automobile accidents and injuries. *See* Accidental or undefined causes (total).
- Beriberi, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
- Beriberi, death rate, 19.
- Biliary calculi, deaths from, 21; in cities and rural districts, 120; by sex, 140; by age, 140, 147.
— death rate, 21.
- Bladder, diseases of, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
— death rate, 21.
- Bones, diseases of (tuberculosis excepted), deaths from, 21; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 21.
- Bones and organs of locomotion, diseases of, deaths from, 21; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 21.
- Breast, nonpuerperal diseases of (cancer excepted), deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
— death rate, 21.
- Breast, puerperal diseases of, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
— death rate, 21.
- Bright's disease. *See* Nephritis, etc.
- Bronchitis (acute and chronic), deaths from, 17, 20; by color, 51; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 20.
- Bronchopneumonia, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 20.
- Burns (conflagration excepted). *See* Accidental or undefined causes (total).
- Calculi of the urinary passages, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 147.
— death rate, 21.
- Cancer and other malignant tumors, deaths from, 17, 20; by color, 51; in cities and rural districts, 118; by sex, 136; by age, 136, 146, 255.
— death rate, 19, 20.
- Causes of death, 16, 19, 50, 118, 134, 146, 255, 302, 335; efforts to improve statement of, 23.
- Cellular tissue. *See* Skin, etc.
- Cerebral hemorrhage, apoplexy, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 19, 20.
- Cerebral hemorrhage and softening, deaths from, 17; by color, 51; by age, 51, 255.
- Cerebrospinal fever. *See* Meningitis (total).
- Cerebrospinal meningitis. *See* Meningitis (total).
- Childbirth, deaths following, 21; in cities and rural districts, 122; by age, 140, 148.
— death rate, 21.
- Chinese, deaths of, 10.
- Chlorosis. *See* Anemia, etc.
- Cholera nostras, deaths from, 17, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255.
— death rate, 19.
- Chorea, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 147.
— death rate, 20.
- Chronic rheumatism and gout. *See* Rheumatism, etc.
- Chyluria, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 147.
— death rate, 21.
- Circulatory system, diseases of, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Cirrhosis of the liver, deaths from, 17, 21; by color, 51; in cities and rural districts, 120; by sex, 140; by age, 140, 147, 255.
— death rate, 21.
- Cities in registration states, deaths in, by color, 28, 50; by age, 28, 335; by cause, 50, 118, 302, 335; by months, 302; by days, weeks, and months, 335.
— death rate, 11, 12.
- Cities of 100,000 population or over, deaths in, by cause and by age, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 12, 16.
- Color, deaths by, 10, 28, 50.
- Colored population, deaths of, 10, 50.
- Conflagration. *See* Accidental or undefined causes (total).
- Congenital debility, deaths from, by months, 302; by days, weeks, and months, 335.
- Congenital debility and malformations, deaths from, 17; by color, 51; by age, 51, 255.
- Congenital debility, "atrophy," "marasmus," etc., deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 22.
- Congenital debility, icterus, and sclerema (total), deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 22.
- Congenital malformations (stillbirths not included) (total), deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 22.
- Congenital malformations of the heart. *See* Congenital malformations, etc. (total).
- Convulsions. *See* Puerperal albuminuria, etc.
- Convulsions (nonpuerperal), deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 147.
— death rate, 20.
- Convulsions of infants, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 147; by days, weeks, and months, 335.
— death rate, 20.
- Croup. *See* Diphtheria, etc.
- Cysts and other tumors of the ovary, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
— death rate, 21.
- Death rates, of foreign countries, 9; of registration area and its subdivisions, 11; of registration states, 12; of large cities, 12; standardized and crude, 16; by cause, 19.

- Deaths, in registration area, 1880-1912, 9; by age, 11, 28, 134, 146, 255, 335; by sex, 11, 134; of nonresidents, 13; by cause, 19, 50, 118, 134, 146, 255, 302, 335; by color, 28, 50; by months, 302; by days, weeks, and months, 335.
- Diabetes, deaths from, 20; by color, 51; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Diarrhea and enteritis (under 2 years), deaths from, 17, 21; by color, 51; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 19, 21.
- Diarrhea and enteritis (2 years and over), deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147; by months, 302.
— death rate, 21.
- Digestive system, diseases of, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 21.
- Diphtheria and croup, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 19.
- Disseminated tuberculosis. *See* Tuberculosis (all forms).
- Drowning, accidental. *See* Accidental or undefined causes (total).
- Dysentery, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146; by days, weeks, and months, 335.
— death rate, 19.
- Early infancy, deaths in, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 21.
- Ears, diseases of, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Electricity (lightning excepted). *See* Accidental or undefined causes (total).
- Embolism and thrombosis, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Embolus. *See* Puerperal phlegmasia alba dolens, etc.
- Encephalitis, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Endocarditis, acute, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Epilepsy, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 147.
— death rate, 19, 20.
- Erysipelas, deaths from, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146; by days, weeks, and months, 335.
— death rate, 19.
- Esophagus, diseases of, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 21.
- Excessive cold. *See* Accidental or undefined causes (total).
- Exophthalmic goiter, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- External causes, deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148; by days, weeks, and months, 335.
- External causes, death rate, 22.
- Eyes and their annexa, diseases of, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Female genital organs, diseases of, deaths from, 17; by age, 255. *See also* Salpingitis, etc.
- Foreign countries, death rates of, 9.
- Foreign-born white population, deaths of, 10.
- Fractures (cause not specified). *See* Accidental or undefined causes (total).
- Furuncle, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
— death rate, 21.
- Gangrene, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
— death rate, 21.
- Gangrene of the lung, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 21.
- General diseases, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
— death rate, 19.
- Genito-urinary system and annexa, non-venereal diseases of, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 147.
— death rate, 21.
- Glanders, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
— death rate, 19.
- Gonococcus infection, deaths from, 20; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
— death rate, 20.
- Gout. *See* Rheumatism, etc.
- Heart, organic diseases of, deaths from, 17, 20; by color, 51; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255; by days, weeks, and months, 335.
— death rate, 19, 20.
- Heat, effects of. *See* Accidental or undefined causes (total).
- Hemorrhage; other diseases of circulatory system, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Hemorrhoids. *See* Veins, diseases of, etc.
- Hernia, intestinal obstruction (total), deaths from, 17, 21; by color, 51; in cities and rural districts, 120; by sex, 140; by age, 140, 147, 255.
— death rate, 21.
- Homicide (total), deaths by, 22; in cities and rural districts, 124; by sex, 144; by age, 144, 149.
— death rate, 22.
- Hydatid tumor of the liver, deaths from, 21; in cities and rural districts, 120; by sex, 140; by age, 140, 147.
— death rate, 21.
- Hydrocephalus. *See* Congenital malformations, etc. (total).
- Icterus. *See* Congenital debility, etc.
- Ill-defined diseases, deaths from, 17, 22; in cities and rural districts, 124; by sex, 144; by age, 144, 149, 255; by days, weeks, and months, 335.
— death rate, 22.
- Indians, deaths of, 10.
- Infantile paralysis. *See* Poliomyelitis, acute anterior, etc.
- Infants, deaths of, by days, weeks, and months, 335.
- Influenza, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 19.
- Injuries at birth, deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148; by days, weeks, and months, 335.
— death rate, 22.
- Injuries by animals. *See* Accidental or undefined causes (total).
- Intestinal obstruction. *See* Hernia, etc.
- Intestinal parasites, deaths from, 21; in cities and rural districts, 120; by sex, 140; by age, 140, 147.
— death rate, 21.
- Japanese, deaths of, 10.
- Joints, diseases of (tuberculosis and rheumatism excepted), deaths from, 21; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 21.
- Lack of care, deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148.
— death rate, 22.
- Landslide, other crushing. *See* Accidental or undefined causes (total).
- Larynx, diseases of, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Lead poisoning, chronic, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Leprosy, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
— death rate, 19.
- Leukemia, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Lightning. *See* Accidental or undefined causes (total).
- Locomotor ataxia, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
— death rate, 20.
- Lymphangitis. *See* Lymphatic system, diseases of, etc.
- Lymphatic system, diseases of (lymphangitis, etc.), deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Malaria, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302.
— death rate, 19, 59.
- Male genital organs, non-venereal diseases of, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
— death rate, 21.
- Malformations, deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148; by days, weeks, and months, 335.
— death rate, 22.
- Marasmus. *See* Congenital debility, etc.
- Marine Corps. *See* Army, etc., Corps.
- Measles, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 19.
- Meningitis (total), deaths from, 17, 20; by color, 51; in cities and rural districts, 118; by sex, 136; by age, 136, 146, 255; by months, 302; by days, weeks, and months, 335.

- Meningitis, death rate, 20.
 Miliary fever, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
 Miliary tuberculosis, acute. *See* Tuberculosis (all forms).
 Mouth and annexe, diseases of, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 21.
 Mycoses, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
- Nasal fossae, diseases of, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 20.
 Native white population, deaths of, 10.
 Nativity, deaths by, 10.
 Navy and Marine Corps, mortality of, 25.
 Negroes, deaths of, 10.
 Nephritis and Bright's disease, deaths from, 17, 21; by color, 51; in cities and rural districts, 122; by sex, 140; by age, 140, 147, 255.
 — death rate, 19, 21.
 Nervous system, diseases of, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Neuralgia and neuritis, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 147.
 — death rate, 20.
 Neuritis. *See* Neuralgia, etc.
 Nonresidents, deaths of, 13.
- Old age, deaths from, 17, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148, 255.
 — death rate, 22.
 Organs of locomotion. *See* Bones, etc.
- Paralysis of the insane, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Paralysis without specified cause, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Pellagra, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
 Pericarditis, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 20.
 Peritonitis, simple (nonpuerperal), deaths from, 21; in cities and rural districts, 120; by sex, 140; by age, 140, 147.
 — death rate, 21.
 Pharynx, diseases of, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 21.
 Phlebitis. *See* Veins, diseases of, etc.
 Plague, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
 Pleurisy, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 20.
 Pneumonia (all forms), deaths from, 17, 20; by color, 51; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255; by months, 302; by days, weeks, and months, 335.
 — death rate, 19, 20.
- Poisoning by food. *See* Accidental or undefined causes (total).
 Poliomyelitis, acute anterior (infantile paralysis), deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Pott's disease. *See* Tuberculosis (all forms).
 Pregnancy, accidents of, deaths from, 17, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Premature birth, deaths from, 22; in cities and rural districts, 122; by sex, 142; by age, 142, 148; by days, weeks, and months, 335.
 — death rate, 22.
 Prostate, diseases of, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Puerperal albuminuria and convulsions, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Puerperal fever, deaths from, by color, 51; by age, 51, 255.
 Puerperal hemorrhage, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Puerperal phlegmasia alba dolens, embolus, sudden death, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Puerperal septicemia, deaths from, 17, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Pulmonary apoplexy. *See* Pulmonary congestion, etc.
 Pulmonary congestion, pulmonary apoplexy, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 21.
 Pulmonary emphysema, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
 — death rate, 21.
 Purulent infection and septicemia, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
- Rabies, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
 Railroad accidents and injuries. *See* Accidental or undefined causes (total).
 Registration area, growth and extent of, 1880-1912, 10; deaths in, by cause, 19, 50, 118, 134, 146, 302, 335; by color, 28, 50; by age, 28, 134, 146, 335; by sex, 134; by months, 302; by days, weeks, and months, 335.
 — death rates, 11.
 Registration cities, deaths in, by color, 28, 50; by age, 28; by cause, 118, 302; by months, 303; by days, weeks, and months, 336.
 — death rates, 11.
 Registration cities in nonregistration states, list of, 10.
 Registration states, list of, 10; deaths in, by color, 28, 50; by age, 28, 146, 335; by cause, 50, 118, 146, 302, 335; by months, 302; by days, weeks, and months, 335.
 — death rates, 11, 12, 16.
 Relapsing fever, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 19.
- Respiratory system, diseases of, deaths from, 17, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255.
 — death rate, 20.
 Rheumatism, acute articular, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Rheumatism and gout, chronic, deaths from, 20; by color, 50; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Rickets, deaths from, 20; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
 — death rate, 11, 20.
 Rural part of registration states, deaths in, by color, 28, 50; by age, 28; by cause, 50, 118, 302; by months, 302; by days, weeks, and months, 336.
 — death rates, 12.
- Salpingitis and other diseases of the female genital organs, deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
 — death rate, 21.
 Scarlet fever, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302; by days, weeks, and months, 335.
 — death rate, 19.
 Sclerema. *See* Congenital debility, etc.
 Scurvy, deaths from, 20; in cities and rural districts, 118; by sex, 136; by age, 136, 146.
 — death rate, 20.
 Senility. *See* Old age.
 Septicemia. *See* Purulent infection, etc., and Puerperal septicemia.
 Sex, deaths by, 10, 134.
 Skin and cellular tissue, diseases of, deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
 — death rate, 21.
 Smallpox, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255.
 — death rate, 19.
 Softening of the brain, deaths from, 20; in cities and rural districts, 120; by sex, 136; by age, 136, 146.
 — death rate, 19, 20.
 Spleen, diseases of, deaths from, 21; in cities and rural districts, 120; by sex, 140; by age, 140, 147.
 — death rate, 21.
 Starvation. *See* Accidental or undefined causes (total).
 Stomach, diseases of, deaths from, 17, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147, 255; by days, weeks, and months, 335.
 — death rate, 21.
 Street-car accidents and injuries. *See* Accidental or undefined causes (total).
 Sudden death, deaths from, 22; in cities and rural districts, 124; by sex, 144; by age, 144, 149.
 — death rate, 22. *See also* Puerperal phlegmasia alba dolens, etc.
 Suicide, deaths from, 17, 22; by color, 51; in cities and rural districts, 122; by sex, 142; by age, 142, 148, 255; by months, 302.
 — death rate, 22.
 Syphilis, deaths from, 20; in cities and rural districts, 118; by sex, 134; by age, 134, 146; by days, weeks, and months, 335.
 — death rate, 20.
- Tetanus, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146; by days, weeks, and months, 335.
 — death rate, 19.
 Thrombosis. *See* Embolism, etc.

- Thyroid body, diseases of, deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 20.
- Traumatism. *See* Accidental or undefined causes (total).
— death rate, 19, 20.
- Tuberculosis (all forms), deaths from, 17, 20; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302; by days, weeks, and months, 335.
- Tuberculosis of the lungs. *See* Tuberculosis (all forms).
- Tuberculous meningitis. *See* Tuberculosis (all forms).
- Typhlitis. *See* Appendicitis, etc.
- Typhoid fever, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302.
— death rate, 19.
- Typhus fever, deaths from, 17, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255.
— death rate, 19.
- Ulcer of the stomach, deaths from, 21; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
— death rate, 21.
- Urethra, diseases of, urinary abscess, etc., deaths from, 21; in cities and rural districts, 122; by sex, 140; by age, 140, 148.
— death rate, 21.
- Urinary abscess. *See* Urethra, diseases of, etc.
- Uterine hemorrhage (nonpuerperal), deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
— death rate, 21.
- Uterine tumor (noncancerous), deaths from, 21; in cities and rural districts, 122; by age, 140, 148.
— death rate, 21.
- Varices. *See* Veins, diseases of, etc.
- Veins, diseases of (varices, hemorrhoids, phlebitis, etc.), deaths from, 20; in cities and rural districts, 120; by sex, 138; by age, 138, 147.
- Veins, diseases of, death rate, 20.
- Violent deaths (excluding suicide), number of, 17, 22; by color, 51; in cities and rural districts, 124; by sex, 144; by age, 255; by months, 302.
— death rate, 22.
- White population, deaths of, 10, 50.
- White swellings. *See* Tuberculosis (all forms).
- Whooping cough, deaths from, 17, 19; by color, 50; in cities and rural districts, 118; by sex, 134; by age, 134, 146, 255; by months, 302; by days, weeks, and months, 335.
— death rate, 19.
- Yellow atrophy of the liver, acute, deaths from, 21; in cities and rural districts, 120; by sex, 140; by age, 140, 147.
— death rate, 21.
- Yellow fever, deaths from, 19; in cities and rural districts, 118; by sex, 134; by age, 134, 146.
— death rate, 19.
