California Agricultural Statistics Districts

Agricultural Overview

The sales value generated by California agriculture increased by 3.2 percent between the 2011 and 2012 crop years. The State's 80,500 farms and ranches received a record \$44.7 billion for their output, up from the \$43.3 billion received in 2011. California's increase in revenue was led by the grape industry followed by the cattle sector and almond production, respectively.

Grape production generated \$4.45 billion in cash receipts in 2012, up 15 percent from the previous record high received in 2011. Production was virtually the same, but prices received by growers increased from \$578 per ton of grapes in 2011 to \$666 per ton in 2012. Revenue generated from the cattle sector improved to a record high for the third year in a row as cash receipts were nearly \$3.3 billion for the crop year. Receipts increased nearly 17 percent from 2011 despite production increasing by only 5 percent. Almond cash receipts increased for the third year in a row despite decreased production. Cash receipts increased 8.5 percent due to a rise in prices from \$1.99 per pound of almonds in 2011 to \$2.20 per pound in 2012.

The dairy industry, California's leading commodity in cash receipts, generated \$6.90 billion for milk production in 2012, down 10 percent from the record production of 2011. Milk production increased less than 1 percent, but a drop in prices resulted in an overall reduction in cash receipts for the crop year. Milk prices received by producers fell from \$18.54 per hundred pounds of milk sold in 2011 to \$16.52 in 2012. As the leading dairy producing state in the country, California produced nearly 21 percent of the nation's supply in 2012.

California remained the leading state in cash farm receipts in 2012 with more than 350 commodities representing 11 percent of the U.S. total. California's leading crops remained fruits, nuts and vegetables. Over a third of the country's vegetables and nearly two-thirds of the country's fruits and nuts were produced in California.

Top 5 Agricultural States in Cash Receipts, 2012

State	Rank	Total Value
		Billion Dollars
California	1	44.7
Iowa	2	31.9
Nebraska	3	24.4
Texas	4	22.7
Minnesota	5	20.5

Notable Increases in California Cash Receipts:

Olives	149%
Carrots, Processing	83%
Tangerines	77%
Grapes, Table	42%
Pumpkins	40%
Sweet potatoes	32%
Blueberries	32%
Cherries	31%
Sunflower	30%
Peppers, chile	30%

Notable Decreases in California Cash Receipts:

Oats	-28%
Kiwifruit	-27%
Cauliflower	-26%
Pecans	-23%
Catfish	-22%
Honey	-22%
Lettuce, Head	-22%
Garlic	-21%
Spinach, Processing	-19%
Asparagus	-16%

Crop and Livestock Commodities in which California Leads the Nation 1/

Almonds	Escarole/Endive	Mandarins & Mandarin Hybrids 2/	Plums
Apricots	Figs	Melons, Cantaloupe	Plums, Dried
Artichokes	Flowers, Bulbs	Melons, Honeydew	Pluots
Asparagus	Flowers, Cut	Milk	Pomegranates
Avocados	Flowers, Potted Plants	Milk Goats	Raspberries
Beans, Dry Lima	Garlic	Nectarines	Rice, Sweet
Beans, F.M. Snap	Grapes, Raisins	Nursery, Bedding Plants	Safflower
Bedding/Garden Plants	Grapes, Table	Nursery Crops	Seed, Alfalfa
Broccoli	Grapes, Wine	Olives	Seed, Bermuda Grass
Brussels Sprouts	Greens, Mustard	Onions, Dry	Seed, Ladino Clover
Cabbage, Chinese	Hay, Alfalfa	Onions, Green	Seed, Vegetable and Flower
Cabbage, F.M.	Herbs	Parsley	Spinach
Carrots	Kale	Peaches, Clingstone	Strawberries
Cauliflower	Kiwifruit	Peaches, Freestone	Tomatoes, F.M.
Celery	Kumquats	Pears, Bartlett	Tomatoes, Processing
Chicory	Lemons	Peppers, Chile	Vegetables, Greenhouse
Cotton, American Pima	Lettuce, Head	Peppers, Bell	Vegetables, Oriental
Daikon	Lettuce, Leaf	Persimmons	Walnuts
Dates	Lettuce, Romaine	Pigeons and Squabs	Wild Rice
Eggplant	Limes	Pistachios	

1/ California is the sole producer (99 percent or more) of the commodities in bold.

2/ Includes tangelos, tangerines and tangors.

Farm Facts

In 2012, 80,500 farms operated in California, 1,000 less than in 2011 but still 3.7 percent of the national total. Nearly 24 percent of California farms generated commodity sales over \$100,000, slightly greater than the national average of 18 percent. The amount of land devoted to farming and ranching in California remained constant at 25.4 million acres for the sixth consecutive year. The average farm size increased from 312 acres to 316, which is below the national average of 421 acres.

Land Values/Cash Rents

The average value of California farm real estate increased 4.3 percent in 2012 to \$7,200 per acre. Irrigated cropland's value increased 4.3 percent to \$12,000 per acre and non-irrigated cropland decreased in value for the first time in three years by 1.4 percent. The value of all cropland increased 3.8 percent to \$9,810. The value of pastureland remained constant at the 2011 level of \$2,800 per acre.

The rental rate of irrigated cropland increased slightly to \$340 per acre, up from \$335 per acre in 2011. Non-irrigated rental rates decreased by 20 percent to \$40 per acre, down from \$50 per acre in 2011. Pastureland rental rates also decreased from 2012 rental rates, down to \$11.50 per acre in 2012 from \$12.50 in 2011.

Top Commodities

California's top 20 crop and livestock commodities accounted for more than \$36.4 billion in value in 2012. Eleven commodities exceeded \$1 billion in value in 2012. The cash receipts of thirteen of the top twenty commodities increased in value between 2011 and 2012. The growth in the cash receipts of grapes overshadowed that of almonds as grapes became the second leading revenue-generating commodity in California. Grower returns are subject to change and could result in an updated dollar amount in next year's report.

Top 20 Commodities for 2010-2012

Commodity	Value and Rank				
	2010	2011	\$1,000	2011	2012

Weather Highlights for 2012

The year began with mild temperatures across Northern California as well as the Central Valley. The first major weather event was a Pacific storm system along the far Northern Coast that created a surface high pressure cell over the Great Basin. Dry conditions throughout the State delayed planting of wheat and oats, however, as farmers waited for more precipitation. Pasture and range conditions were also poor throughout the month due to a lack of moisture. January ended on a dry note as high pressure from the south brought dry and warm conditions to all of the State with the exception of the North Coast. February was characterized by similar conditions as low pressure systems from the Gulf of Alaska pushed cold fronts through far northern California and spread showers over the entire State. Despite the active cold fronts moving through the State, measurable precipitation was far below seasonal normal levels. Range and pasture conditions remained poor and many growers noted delayed progress for field crops due to a lack of rain. A high pressure ridge developed over California at the end of month and gave way to warm and dry conditions.

A cold front and associated low pressure system moved across Northern California at the beginning of March and resulted in light showers and cooler temperature. There was a brief period of mild conditions, but a fast moving cold front pushed through the State and spread showers across Northern California. Dryland grain and pasture conditions in the North improved with the precipitation, but fruit and vegetable growers from the Central Valley to Southern California were forced to irrigate due to the lack of rain. The north-south front moved eastward gradually and brought rainfall to Southern California during the last week of March. The widespread rain halted planting preparation for some growers but recharged soil moisture.

As March ended, temperatures remained moderate until a final cold front ushered in cool temperatures and ultimately resulted in scattered freeze damage to fruit and nut crops. Once the system shifted eastward, high pressure built over the southland and resulted in a drying and warming trend for the State. This pattern of low pressure entering California from the North Coast followed by building high pressure continued through the end of April. Temperatures in the Central Valley hovered 10-20 degrees above normal during late April which aided wheat maturation progress. May saw a reversal in weather patterns as diminishing high pressure brought warm weather to Northern California as Southern California experienced cool, moist conditions due to a strong onshore flow. This warming trend in the North accelerated progress for grape and kiwi vines. May ended with a low pressure system from British Columbia driving southward and bringing cooler temperatures and limited precipitation.

June began with high pressure developing in the wake of cold fronts and dominating the West Coast weather pattern. Dry and warm conditions persisted in the southern interior while an onshore flow kept temperatures mild in the southern coastal region. The dry and warm conditions aided in the development of field crops and vegetables but resulted in deterioration of rangeland and pasture. Temperatures in the Imperial and Central Valleys remained above normal through the end of June. July

began with a State wide warming trend that resulted in above normal temperatures from Southern California to the northern Central Valley. This slowed the development of fruits and deteriorated rangeland and pasture conditions. A monsoonal flow of moisture from Baja California characterized the end of July as precipitation was observed across the Southland up to the Central Valley and into the Sierra Nevada mountains.

As the monsoonal flow exited California at the end of July, high pressure settled in its wake and brought above normal temperatures to the State at the beginning of August. Temperatures remained above normal and aided in the development of many field crops but deteriorated pasture conditions. As the month progressed, isolated thunderstorms occurred from the Imperial Valley up through the Sierra Nevadas into the Lake Tahoe region. Thunderstorm activity and gusty winds characterized the end of August. Mild temperatures in Northern California brought about the beginning of September as temperatures reached triple digits in Southern California. Conditions were ideal for drying corn for grain and grapes for raisins, but further deteriorated pasture and rangeland. Moisture from the South combined with the high pressure system, resulting in scattered thunderstorms and cooler temperatures throughout the State. With the exception of some gusty winds and periods of slightly cooler temperatures brought on by a low pressure system from the Pacific Northwest, conditions were warm and dry through the end of the month.

From the end of September through the first week of October, temperatures remained high across interior California. A low pressure system eventually moved in from the North Coast and brought rain, cooler air and thunderstorm activity to the Bay Area and Central Coast as it slid southward toward Southern California. The rain event allowed farmers to plant small grains and improved rangeland conditions. A high pressure system developed in the place of the exiting low and brought dry and mild weather for roughly a week. Relief came in the form of remnants of Hurricane Paul as higher humidity and showers spread across the Southland. The end of October was characterized by widespread precipitation and thunderstorm activity that moved through the State from the Gulf of Alaska.

Warm and dry conditions characterized the first weeks of November until a low pressure system from the Gulf of Alaska swept through California during the middle of the month. As a result, precipitation spread across the State as well as the first frost of the year to interior Northern California. The precipitation increased soil moisture and aided in the development of small grains as well as improving rangeland conditions. The remainder of the month alternated between a dry atmosphere and an ensuing low pressure system that brought widespread rain. December began with warm and wet storms across Northern California and light precipitation to the South. Around the middle of the month, a cold front entered California and brought moderate precipitation. Although the rain delayed pruning and weeding for fruit growers, it was extremely beneficial to the development of vegetables and small grains. December ended with strong storms pushing through the West Coast. As many as three storms moved across California and brought precipitation to close out the year.

1/ Value of agricultural sector production is the gross value of commodities and services produced within a year. Net value-added is the sector's contribution to the National economy and is the sum of the income from production earned by all factors-of-production, regardless of ownership. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development.

2/ A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales.

1/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.

2/ Based on value of quantity harvested for crops, value of quantity marketed for livestock, and value of quantity produced for poultry products.

3/ Based on total value.

4/ Based on values published in the county agricultural commissioners' annual crop reports. 2010 crop year data used when 2011 not available.

5/ Share of U.S. production based on 2007 Census of Agriculture

6/ From Economic Research Service cash receipts data.

7/ Includes sunflower and safflower.

8/ Includes trees, shrubs, vines, bulbs, turf, etc., not included in flowers and foliage category.

9/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.

D - Withheld to avoid disclosing data for individual operations.

*Calculated using 2012 production multiplied by 2011 price.

Field Crops

The total value of California field crop production decreased to \$5.43 billion, down 7.95 percent from 2011. Alfalfa, Cotton and Rice had a large impact on California's field crop totals in 2012. In what otherwise would have been a static year for total field crop value, the large decrease in these values led to the decrease in total field crop value.

Cotton acreage and value decreased for 2012. The price of Upland cotton was \$0.91 per pound, down 12 percent from 2011. The total value of Upland cotton decreased from \$278 million in 2011 to \$213 million in 2012, a decrease of 23 percent. California growers planted 225 thousand acres of American Pima cotton, down 49.0 thousand from 2011. The American Pima cotton price decreased from \$1.45 to \$1.24 per pound in 2012. This resulted in the value of American Pima cotton decreasing from \$546 million in 2011 to \$437 million in 2012.

In 2012, California produced approximately 6.56 million tons of alfalfa hay, valued at \$1.38 billion. Production of hay other than alfalfa increased 13 percent, while its total value increased 20 percent. Total hay production increased 9 percent from 2011. The increased acreage and production for all hay offset the lower hay prices, resulting in hay's value remaining virtually unchanged.

Rice plantings decreased by 4 percent, with 561 thousand acres planted in 2012. Medium grain rice contributed to 89 percent of the total rice acreage and 91 percent of the total production. Acres planted and harvested decreased, as well as production and price. The total value of rice production was \$771 million, a decline of 14 percent from the previous year.

California corn for grain production was valued at \$235 million for 2012, a 32 percent increase from 2011.

Harvested acreage and price increased from the previous year and yield remained unchanged. Harvested acreage increased 20 percent to 180 thousand acres while price increased by 10 percent. Harvested acres of corn silage decreased by 11 percent to 425 thousand acres. Production of corn silage decreased to 11.3 million tons, down 9 percent from 2011.

Fifty-nine percent of the California wheat crop was harvested for grain in 2012. Wheat was planted on 750 thousand acres and 445 thousand were harvested for grain. Overall, production decreased 16 percent and value decreased 6 percent. The production of winter wheat decreased 26 percent from 2011, while Durum wheat production increased 13 percent from 2011. The value of all wheat production decreased 6 percent to \$337 million.

Notable Increases in Value:

Sunflower, Oil	56%
Oats.....	52%
Sunflower, All	46%
Corn, Grain.....	32%
Potatoes, Sweet.....	32%

Notable Decreases in Value:

Corn, Silage	-30%
Sunflower, Non-Oil	-25%
Cotton, Upland	-23%
Potatoes, Fall	-22%

- 1/ Area planted includes preceding fall.
 2/ Production is on a clean basis.
 3/ Missing data has not been published due to the estimate being discontinued, not estimated, or not available.
 4/ Includes varieties not listed separately. Excludes beans grown for garden seed.
 5/ Planted acreage is for all purposes.
 6/ Production ginned. Cotton bales are 480 lbs. net-weight.
 7/ Estimates began in 2005.
 8/ All alfalfa forage production is the sum of alfalfa harvested as dry hay; and alfalfa haylage and greenchop production after converting it to a dry equivalent basis.
 9/ All forage production is the sum of the following dry equivalents: alfalfa hay and all other hay harvested as dry hay, alfalfa haylage and greenchop, all other hay haylage and greenchop; after converting alfalfa and all other haylage and greenchop to a dry equivalent basis.
 10/ Estimated marketings of alfalfa and other hay used as weights to calculate all hay prices.
 11/ Includes only alfalfa and alfalfa mixtures that were harvested as haylage or greenchop (green weight). Alfalfa harvested as dry hay is not included.
 12/ Includes all types of forage harvested as haylage or greenchop (green weight). Forage harvested as dry hay and corn and sorghum silage/greenchop are not included.
 13/ Sweet rice acreage has been included since the 2003 crop year, but not previous years.
 14/ Excludes wild rice.
 15/ Estimates began in 2000.
 16/ Relates to year of intended harvest for fall planted beets in central California and to year of planting for overwintered beets in central and southern California.
 17/ Preliminary Marketing Year Average Price.
 18/ Value derived from Minor Commodities Cash Receipts and updated with previous County Agricultural Commissioner data.
 19/ Beginning in 2010, winter and summer estimates included in spring total.

Field Crop Monthly Average Prices Received, 2003-2012

Continued on Next Page

1/ Missing data was not published due to insufficient sales to establish a price or the price was not published to avoid possible disclosure of individual operations.

2/ Season runs from August to February.

Floriculture

California's floriculture crop leads the nation with a value of \$974 million in sales, for operations with more than \$100,000 in sales, comprising 24.4 percent of the U.S. total wholesale value. Sales slightly decreased 3 percent from the 2011 total. California producers decreased from 384 in 2011 to 371 in 2012.

For operations with more than \$100,000 in sales, California accounted for 16 percent of the total value of Total Bedding and Garden plants, the highest-valued crop category in the 15-state program. The wholesale value of California-grown bedding and garden plants at \$306 million in 2012 was virtually unchanged from 2011.

California also lead the country in potted flowering plant value for 2012, with a total value of \$245 million wholesale, down less than one percent from the 2011 valuation. California accounted for 40 percent of the 15-state total wholesale value reported.

California was the dominant State in cut flower production, accounting for about 76 percent of the total cut flower wholesale value. The \$261 million in value for 2012 was down 6 percent from the 2011 valuation of \$278 million.

(D)Withheld to avoid disclosure of individual operations.

1/ The total covered growing area of 130,288,000 square feet consisted of the following: 30,013,000 square feet of shade and temporary cover; 13,560,000 square feet of glass; 34,103,000 square feet of fiberglass and other rigid greenhouse; 52,612,000 square feet of film plastic (single/multi) greenhouses; and 9,204 acres of open ground.

2/ Included in state totals to avoid disclosure of individual operations

3/ Pot price is a weighted average of all pots.

Fruit and Nut Crops

California accounts for 65 percent of the U.S. non-citrus fruit and nut production and 73 percent of the national value. Of the citrus crops, California accounts for 30 percent of the U.S. citrus production and 42 percent of the national value. In total, the state produced 16.7 million tons of fruit and nuts, 52 percent of the national total, up 1 percent from 2011. The state's total value of all fruits and nuts in 2012 was \$18.7 billion, up 20 percent from 2011.

In 2011, for the first time ever, almonds overtook grapes as the top valued fruit and nut crop in California. In 2012, grapes came back and reclaimed their number one spot, topping \$5 billion in production value. Almonds were a close second at over \$4.8 billion. California grapes accounted for over 90 percent of the United States utilized grape production in 2012. California is the top raisin producer in the world. Crops with record California production in 2012 were mandarins, pistachios, strawberries, and wine grapes. California accounted for all or nearly all the national production of almonds, dates, figs, kiwifruit, olives, Clingstone peaches, pistachios, dried plums, raisins, and walnuts.

According to the USDA's Economic Research Service, California continued to be the number one exporter of agricultural commodities in the United States in 2012. Tree nuts were the number one agricultural export for California, followed by fruit and vegetables. Fruit and nut exports accounted for over 50 percent of the value of all California agricultural exports.

The United States is among the top producers and consumers of fruit and tree nuts in the world. The typical American consumes around 286 pounds of fruit and tree nuts (fresh and processed products) each year. Oranges, grapes, apples, and bananas are the most popular fruit while almonds, walnuts, and pecans are the most preferred tree nuts. Per capita

consumption of fruits and tree nuts is the third-largest among major food groups, after dairy products and vegetables.

The nation's largest fruit producing states are California, Florida and Washington. California accounts for over half of the harvested fruit acreage in the country.

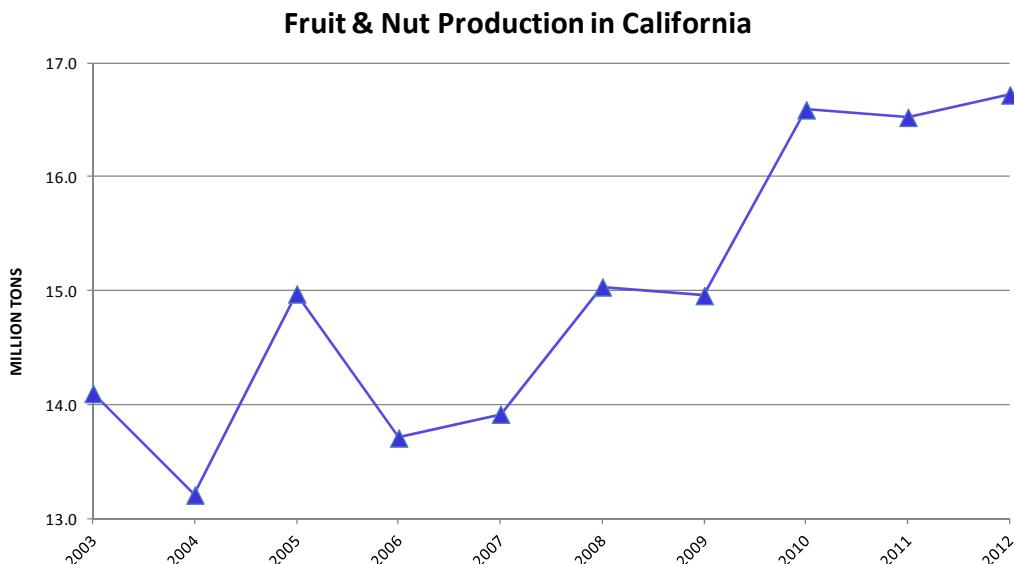

The value of U.S. tree nut production in 2012 was over \$7 billion in value, with almonds, walnuts, pistachios and pecans accounting for most of the sales. California is the nation's number one producer of tree nuts. For almonds and pistachios, California is the number one producer in the world, producing over 80 percent of the world's almonds and around 40 percent of the world's pistachios. Almonds are close to \$5 billion per year in value, pistachios were well over \$1 billion, while walnuts were over \$1.5 billion for the first time in 2012. Over 90 percent of the U.S. tree nut production was harvested from Golden State orchards in 2012.

Notable Increases in California Production:

Olives.....	125%
Avocados.....	53%
Cherries, Sweet.....	36%
Pecans.....	30%
Pistachios.....	24%
Grapes, Wine.....	20%

Notable Decreases in California Production:

Plums	28%
Kiwifruit	21%
Nectarines	17%
Grapes, Raisin.....	16%

1/ Non-bearing shown only in year when acreage surveys were conducted.

2/ Return at processing plant door or packinghouse door.

3/ Acres of raisin type grapes enrolled in the California Raisin Industry Diversion (RID) program were; 1998-2000 - zero; 2001 - 41,000; 2002 - 27,000; 2003-2010 - zero. These acres were deducted from bearing acres before calculating yield.

4/ Production is the fresh equivalent of dried and not dried.

5/ Acreage by county, variety and year of planting for 2007 are available upon request.

6/ These crops are apricot-plum crosses (aprium, plumcot, pluots), black walnuts, chayotes, cherimoyas, chestnuts, feijoas, guavas, jojobas, jujubes, kumquats, limes, loquats, Macadamia nuts, persimmons, pomegranates, prickly pears, quince, citrus by-products, and orchard biomass.

1/ Missing data not published to avoid possible disclosure of individual operations.

2/ Total processed includes canned, frozen, juice, and brined.

3/ Small quantities processed included in fresh to avoid possible disclosure.

4/ Includes substandard raisins diverted to other uses.

5/ Processed and fresh fruit price not published to avoid possible disclosure, but included in total utilized.

6/ Quantity and value include dried, but price excludes dried.

7/ Processed mostly canned, but includes small quantities dried and other uses not published separately to avoid possible disclosure. Data for 2006 and 2007 not published to avoid possible disclosure.

8/ Processed mostly juice, but includes small quantities canned and other uses not published separately to avoid possible disclosure.

9/ Crushed grape tonnage and prices for 2012 revised based on the 2012 Grape Crush Report. This update resulted in revisions to total processed tonnage and prices and total tonnage and prices for raisin, table, wine and all grapes.

10/ For raisin grapes, fresh tonnage for 2012 was revised based on the California Table Grape Commission's 2012-2013 Distribution Report and dried tonnage was revised based on the Raisin Administrative Committee's July Report of Deliveries to Handlers.

11/ For Plums, Dried, production based on Dried Plum Board receipts from handlers. Price is based on the Walnut Raisin Prune Report released November 2013.

1/ Non-bearing shown only in year when acreage survey conducted.

2/ Values are based on the edible portion of the crop only. Included in production are inedible quantities of no value:

2002 - 8.30 million lbs, 2003 - 20.8 million lbs, 2004 - 14.5 million lbs, 2005 - 16.1 million lbs, 2006 - 23.5 million lbs, 2007 - 17.5 million lbs, 2008 - 14.0 million lbs, 2009 - 20.0 million lbs, 2010 - 18.0 million lbs, 2011 - 16.0 million lbs, 2012 - 23.0 million lbs

3/ For 2012, Production and value of production are based on Almond Board of California receipts from handlers.

4/ For 2012, Production based on California Walnut Board receipts from handlers. Price is based on the Walnut Raisin Prune Report released November 2013. Value was calculated based on production and price.

Livestock and Dairy

California's total livestock and livestock products cash receipts were \$12.2 billion in 2012, down 2 percent from 2011. The decline in dairy receipts was the principle contributor to the dip in total livestock receipts. Livestock and poultry account for nearly 27 percent of the state's gross cash receipts. Accounting for 7.1 percent of total US livestock cash receipts, California ranked third behind Iowa and Texas. Dairy products remained the state's leading commodity and accounted for 18.6 percent of receipts for US dairy products or 4.5 percent more than Wisconsin. California ranked 7th nationally in cash receipts for cattle and calves as well as poultry in 2012. The state ranked 6th nationally in terms of aquaculture receipts.

For the first two quarters of 2012 the Golden State's dairy industry saw prices received for milk drop nearly as sharply as they had recovered in 2011. Milk prices bottomed in May at prices not seen since the summer of 2010. The last half of the year saw milk prices recover to a high all milk price of \$19.90 per hundredweight. Slowing milk production growth nationwide and reduced production in the state contributed to the increase in dairy product prices in the latter portion of the year. The drought in the Midwest and West negatively impacted feed availability. Feed costs, according to the California Department of Agriculture (CDFA) annual cost of production survey, continued to increase throughout 2012. The fourth quarter feed costs were nearly 10 percent more than the corresponding quarter in 2011. In May and December CDFA held hearings on proposed modifications to the Stabilization and Marketing Plans for Market Milk. These resulted in amended whey valuation in the Class 4b formula and temporary Class 1, 2, 3, 4a and 4b pricing formula changes effective in the spring of 2013. The summer whey price adjustment nudged the prices received up to end the year higher than December 2011, but the annual average return per hundredweight was \$16.52 compared to the prior year's \$18.54.

Proposals to reform the dairy industry continued to be floated through the year on the national and state level to address the volatility in prices and supply management. The inability to pass the 2012 Farm Bill was temporarily mitigated by an extension of the 2008 Farm Bill dairy subsidies. In 2012 dairy processors lobbied for the Dairy Security Act, which instead of focusing on milk prices, addressed the margin between farm level milk prices and feed costs. Payments from the Federal Milk Income Loss Contract (MILC), which compensates dairy producers when domestic milk prices fall below a specific level, were available to producers for nine months of 2012 and ranged from \$0.02/cwt to \$1.63/cwt. EU regulations on allowable somatic cell counts were imposed on U.S. imports beginning in March of 2012. Dairy exports to the EU were down from the prior year, but there was a positive impact on U.S. milk quality. 2012's annual average Somatic Cell Count (SCC) was down 6 percent from the prior year, according to USDA's Animal and Plant Health Inspection Service (APHS). Cooperatives Working Together (CWT) helped member cooperatives with export sales totaling 115.7 million pound of cheese and 71.5 million pounds of butter. Declining receipts and production, sluggish economic recovery, limited feed availability due to drought conditions in the nation's corn growing regions, shrinking margins and a pending Farm Bill were the focus of much of the activity in the dairy industry in 2012. The year also saw more dairies in foreclosure. Some dairies relocated to other states or shut down completely with a net loss of 105 California dairies in 2012, up from 48 in 2011 and similar to the 100 dairy drop in 2009.

The state's dairy industry continued to be subject to a myriad of environmental regulations in 2012 as air and water quality rules were implemented. The Central Valley Dairy Representative Monitoring Program (CVDRMP) continued to sign up members for its cost sharing program to monitor well water across nine counties. Additionally new dairy operations are under the auspices of the comprehensive California Environmental Quality Act (CEQA). Revisions to EPA regulations in 2012 will impact the industry in the near future. USDA's APHS traced California's first case of mad cow disease to a dairy in Tulare County. Investigations revealed the infected cow had a rare "atypical" case of the disease, meaning it arose spontaneously rather than through the feed supply.

Since 1993, when it surpassed Wisconsin in milk production, California has been the nation's leading dairy state. Sales of milk and cream contributed \$6.90 billion in 2012. Wisconsin, Idaho, New York, Pennsylvania and Idaho were the next leading states in total milk production. The top five dairy states accounted for nearly 52 percent of the total US dairy receipts. California ranked number one in the U.S. in the production of fluid milk, butter and nonfat dry milk. California was second in total cheese production behind Wisconsin. Though the difference in total cheese production between these two states was decreasing in recent years, this was not the case in 2012. California ranked 4th nationally in milk produced per cow per year in 2011, but dropped down to 6th in 2012, behind Colorado and Michigan.

California's dairies produced 41.8 billion pounds of milk, accounting for nearly 21 percent of the nation's milk supply. For the sixth year in a row, all 12 months of the year recorded more than 3.1 billion pounds in milk production. California milk

utilization experienced declines in fluid and frozen products and increases in cheese and soft products (e.g., cottage cheese, yogurt, and sour cream). California milk going into cheese production comprised 43.5 percent of the state's total production. Mozzarella continued to account for the bulk of California cheese production, comprising over 58 percent of the cheese produced in the state in 2012.

According to the California Department of Food and Agriculture's Dairy Statistics Branch, 33 counties contributed to the state's commercial milk production. The top five milk-producing counties in California accounting for over 72 percent of the state's total milk production were Tulare (27 percent), Merced (15 percent), Kings (10 percent), Stanislaus (10 percent) and Kern (10 percent). Similar to last year, sales of fluid milk in California averaged 29 percent whole milk, 39 percent reduced fat milk, 14 percent low fat milk, 15 percent skim milk and 3 percent half-and-half.

Milk production per cow for 2012 was 23,457 pounds, essentially unchanged from 2011's 23,438 pounds per cow. California's total cheese production of 2.25 billion pounds was down less than 0.1 percent from 2011. United States cheese exports increased nearly 16 percent from 2011 to 285 thousand tons per the USDA Foreign Agricultural Service (FAS). Butter exports decreased by 23 percent to 49 thousand metric tons. Nonfat dry milk powder exports increased by 2 percent to 490 thousand tons. Exports of whey products increased by over 5 percent to 558 thousand tons. Recent U.S. dairy inroads into Asian markets eroded in 2012 with East Asian imports of US dairy products down 37 percent and those to Asia-Oceania down 49 percent. Competition from Australia and New Zealand, coupled with economic factors, hindered U.S. suppliers ability to take advantage of the burgeoning Asian market demand for dairy products. Total US dairy product exports were up nearly 4 percent at 1,979 thousand tons.

California cash receipts for cattle and calves increased over 16 percent from 2011. Sales totaled \$3.30 billion, compared with \$2.87 billion in 2011. Receipts for hogs and pigs were down 1.3 percent from the previous year. Aquaculture receipts were down nearly 7.5 percent from 2011.

California's 2012 honey production, at 11.9 million pounds, was down 33 percent from the prior year. Producing colonies totaled 340 thousand, down 8 percent from 2011. The yield per colony averaged 35 pounds, compared to 48 pounds produced in 2011 and 67 pounds in 2010. The average price received for honey was \$1.93 per pound. Though average price per pound was up 28 cents from 2011, the low production pushed cash receipts for honey down 8 percent from 2011's total.

After several years of high prices, sheep ranchers saw the price of lamb in 2012 plummet to levels not seen since 1986. The state's poultry sector continued to be concerned with food safety and stagnant domestic consumption. Impacts from the 2008 Prevention of Farm Animal Cruelty Act to be implemented in 2015 are not yet apparent as there has not been a significant decline in egg production since the act was passed. Due to the Midwest drought, feed costs for the poultry industry were elevated in 2012.

1/ Steers and heifers over 500 pounds (including fed cattle) and slaughter cows.

2/ Steers and heifers (all qualities) over 500 pounds (including fed cattle).

3/ Beef cows and cull dairy cows sold for slaughter.

4/ Steers and heifers (all qualities) under 500 pounds

5/ Beginning with January 2011, state level cow, calf, beef steer and heifer prices were discontinued.

Grazing Fee Annual Average Rates, 2003-2012 1/

Year	Per Animal Unit 2/	Cow-Calf	Per Head
		Dollars Per Month	
2003	13.50	17.50	14.30
2004	14.50	19.50	15.50
2005	15.40	20.50	17.00
2006	16.50	21.00	17.00
2007	16.50	21.50	17.30
2008	17.80	22.10	18.50
2009	16.70	21.00	17.50
2010	16.40	20.50	17.00
2011	17.30	21.50	18.20
2012	19.40	23.00	20.00

1/ The average rates are estimates based on survey indications of monthly lease rates for private, non-irrigated grazing land from the January Cattle Survey.

2/ Includes animal unit plus cow-calf rates. Cow-calf rate converted to animal unit (AUM) using (1 aum=cow-calf *0.833).

Milk Cows, Milk Production and Value, 2003-2012

1/ Preliminary 2012 data.

2/ Excludes processed cheese and cottage cheese.

3/ Includes Cheddar, Colby, washed curd, stirred curd, Monterey, and Jack.

4/ Includes all cheeses not included in the above categories.

5/ Includes low fat and nonfat cottage cheese. Fat content is less than 4 percent.

6/ Contains minimum milk-fat content of 10 percent and not less than 4.5 pounds per gallon.

7/ Includes hard, soft-serve, freezer-made milkshake, and freezer-made "milk drink."

Contains less than 10 percent milk-fat required for ice cream.

8/ Not shown when fewer than three plants reported or individual plant operations could be disclosed.

9/ Not shown to avoid disclosing data of individual operations

Vegetables and Melons

California continued as the leading fresh market vegetable producing state in 2012, accounting for 44 percent of the U.S. harvested area, 48 percent of the national production, and 50 percent of the value, for the 24 selected vegetables and melons estimated.

Fresh market production increased for artichokes, broccoli, carrots, celery, garlic, leaf lettuce, watermelon, agaricus mushrooms, spring onions, summer storage onions, summer non-storage onions, bell and chili peppers, pumpkin, and squash. Fresh vegetable crops with decreased production included, asparagus, snap beans, cabbage, cauliflower, sweet corn, cucumbers, head and romaine lettuce, cantaloupes, honeydew, processing onions, spinach, and fresh tomatoes.

California also led the nation in processing vegetable production during 2012, with 25 percent of the U.S. harvested acreage, 70 percent of the national production and 51 percent of the total value, for the eight processed vegetables estimated.

The total value of California's 2012 fresh and processing vegetable and melon production was \$6.8 billion, down from 2011's revised total of \$7.2 billion. Lettuce remained the leading vegetable crop in value of production, at \$1.4 billion, followed by tomatoes with \$1.2 billion.

Vegetable crops that had value increases were artichokes, broccoli, cabbage, sweet corn, cucumbers, leaf lettuce, cantaloupes, agaricus mushrooms, summer storage onions, processing onions, summer non storage onions, bell and chili peppers, pumpkin, fresh spinach and squash. Crops that had decreased value included asparagus, snap beans, carrots, cauliflower, celery, garlic, head and romaine lettuce, honeydew, watermelon, spring onions, processing spinach, and fresh tomatoes.

According to the USDA Economic Research Service, per capita use of vegetables, potatoes, sweet potatoes, pulse crops and mushrooms in the United States increased from 390

pounds in 2011 to 402 pounds in 2012. Per capita use for melons was not reported in 2012.

Fresh market consumption without melons per capita in 2012 was 146 pounds, 2 percent higher than in 2011. Utilization increased for asparagus, broccoli, carrots, sweet corn, cucumbers, eggplant, onions, bell peppers, pumpkins, and squash. Declining utilization was observed for artichokes, cabbage, cauliflower, escarole and endives, lettuce, spinach, and honeydew melon. Snap beans, celery, garlic, radishes, southern greens, and tomatoes had unchanged utilization.

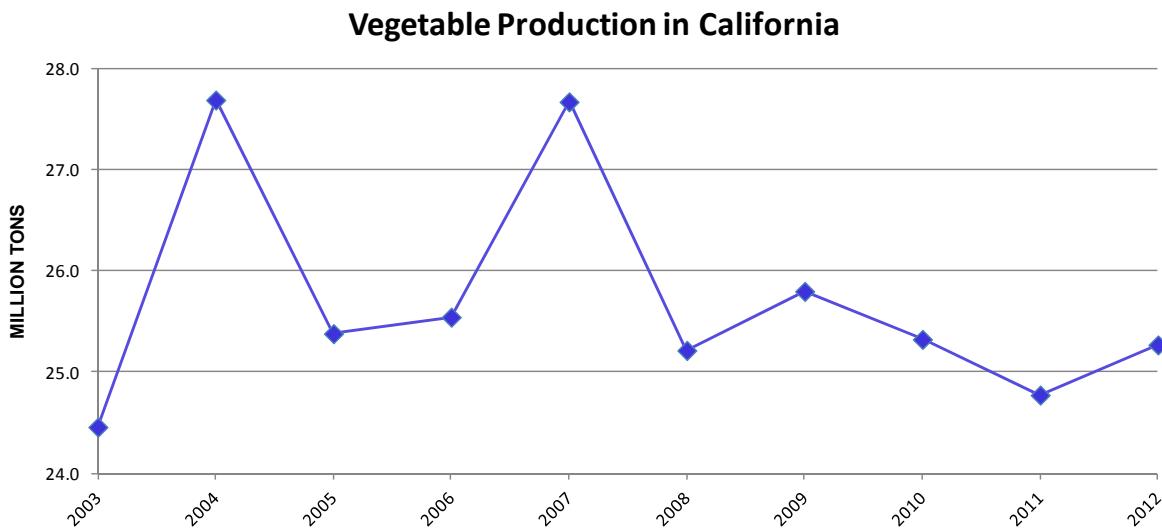

Per capita consumption of U.S. processing vegetables increased 2 percent from 113 pounds in 2011 to 115 pounds in 2012. Processing vegetables whose utilization increased in 2012 included snap beans, sweet corn, green peas, processed cucumbers, processing tomatoes, processed cabbage, chili peppers, dehydrated onion, and green lima beans. Consumption decreased for processed spinach. Canned beets utilization remained unchanged.

Notable Increases in Production:

Chile Peppers.....	39%
Artichokes.....	13%
Broccoli	13%
Pumpkins	12%
Bell Peppers.....	11%

Notable Decreases in Production:

Processed Spinach	22%
Fresh Spinach	16%
Fresh Cabbage	14%
Fresh Tomatoes	14%
Head Lettuce.....	14%

	2012	---	90,000	---	36,960,000	---	546,036

1/ The processed price is based on equivalent returns at the processing plant door. The fresh market price is at the point of first sale.

2/ Includes both fresh marketing and processing vegetables.

3/ 2011 and 2012 were not published to avoid disclosing data for individual farms.

4/ Includes fresh and processed. Production includes quantity harvested, but not marketed because of loss during storage (shrinkage): 2003 to 2009 -- 250,000 cwt. Storage loss amounts are excluded when computing total value. Includes some quantities not marketed and excluded in computing value.

5/ Included in summer storage onions.

6/ Miscellaneous vegetables and melons include: Green lima beans for processing, oriental vegetables, green peas, etc.

Processing Vegetable Acreage, Production and Value, 2003-2012

Non-Discrimination Statement

Non-Discrimination Policy

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers, employees, and applicants for employment on the bases of race, color, national origin, age, disability, sex, gender identity, religion, reprisal, and where applicable, political beliefs, marital status, familial or parental status, sexual orientation, or all or part of an individual's income is derived from any public assistance program, or protected genetic information in employment or in any program or activity conducted or funded by the Department. (Not all prohibited bases will apply to all programs and/or employment activities.)

To File an Employment Complaint

If you wish to file an employment complaint, you must contact your agency's [EEO Counselor](#) (PDF) within 45 days of the date of the alleged discriminatory act, event, or in the case of a personnel action. Additional information can be found online at http://www.ascr.usda.gov/complaint_filing_file.html.

To File a Program Complaint

If you wish to file a Civil Rights program complaint of discrimination, complete the [USDA Program Discrimination Complaint Form](#) (PDF), found online at http://www.ascr.usda.gov/complaint_filing_cust.html, or at any USDA office, or call (866) 632-9992 to request the form. You may also write a letter containing all of the information requested in the form. Send your completed complaint form or letter to us by mail at U.S. Department of Agriculture, Director, Office of Adjudication, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410, by fax (202) 690-7442 or email at program.intake@usda.gov.

Persons with Disabilities

Individuals who are deaf, hard of hearing or have speech disabilities and you wish to file either an EEO or program complaint please contact USDA through the Federal Relay Service at (800) 877-8339 or (800) 845-6136 (in Spanish).

Persons with disabilities who wish to file a program complaint, please see information above on how to contact us by mail directly or by email. If you require alternative means of communication for program information (e.g., Braille, large print, audiotape, etc.) please contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

Supplemental Nutrition Assistance Program

For any other information dealing with Supplemental Nutrition Assistance Program (SNAP) issues, persons should either contact the USDA SNAP Hotline Number at (800) 221-5689, which is also in Spanish or call the [State Information/Hotline Numbers](#).

All Other Inquiries

For any other information not pertaining to civil rights, please refer to the listing of the [USDA Agencies and Offices](#) for specific agency information.
