

“I see a future where people’s life savings aren’t jeopardized by corporate fraud.”

As a certified public accountant, I fully understand how corporate fraud ruins companies. But it doesn’t stop there — it also ends careers, weakens investor confidence and threatens our economy. So I want to stop financial wrongdoing where it starts. Through my research at UNT, I am developing new tools that have the potential to turn auditors into crime-solving forensic scientists. By combining psychology and accounting, I believe I can find a way to help auditors hunt down potential fraud before it’s too late and provide the public with another layer of financial protection. I want a career that positively impacts the lives of others by helping to ensure a financially sound future for people and businesses.

— Lawrence Chui,  
UNT doctoral student in  
accounting and certified  
public accountant

# SHAPING THE FUTURE OF CORPORATE FRAUD PROTECTION

**Nearly 7%**

of gross revenue is lost to fraud by companies in the U.S. each year — about \$994 billion in 2008.
