## Conservation through the Arts...

The Federal Junior Duck Stamp Conservation and Design Program is an integrated art and science curriculum developed to teach environmental science and habitat conservation. It has been designed to fit in with existing programs in these areas and conform to state and national curricular standards. The Program incorporates scientific and wildlife management principles and crosses cultural, ethnic, social and geographic barriers to teach a greater awareness of our nation's natural resources. This pairing of subject areas allows students to learn about conserving the habitat while they explore the esthetic qualities of wildlife and nature. Concentrating on waterfowl and wetlands gives students an opportunity to experience the beauty and diversity of wildlife at the same time they discover the interdependence found in nature. The Junior Duck curriculum demonstrates that wetlands are not only nature's filter system, but the barometer of our environmental health. Hundreds of other plants and animals depend on this habitat for their survival. Free curriculum guides can be requested by calling 1-877-887-5508 or by downloading them from: [www.calwaterfowl.org](http://www.calwaterfowl.org).

A Junior Duck Stamp design is a "term paper" in which students use visual rather than verbal articulation to show what they have learned. Participants select a species of North American waterfowl, do research on this species and its habitat, then depict the waterfowl in an artistic medium.

In 1994 funding for this unique program was appropriated through the *Junior Duck Stamp Conservation and Design Program Act* authorized by the 103rd Congress. In 2000 the program was reauthorized through 2005 by the 106th Congress, thereby showing the importance the Members of Congress placed on preparing our youth for the conservation issues of the 21st Century.

The Junior Duck Stamp Program has many benefits. It introduces school age children to an important and fragile part of the natural world. It instills a sense of individual responsibility in the maintenance of our environment. And it benefits waterfowl and their habitats as well as all migratory birds and hundreds of plants and animals that share wetland habitats.
