# INTRODUCTION

## PURPOSE

This numerical list includes the principal products and services of the manufacturing and mining industries in the United States. The data for these products and services were collected in the 1992 Census of Manufactures on 213 long forms (MC-2001 through MC-3912) and 78 short report forms (MC-2071 through MC-3975) and in the 1992 Census of Mineral Industries on 10 long (MC-1001 through MC-1403) and 2 short forms (MC-1371 and MC-1471). Each report form covers one industry or more and includes a product inquiry which lists the primary products of the industries as well as the chief secondary products frequently reported by establishments classified in the industries on that report form.

Products and services are arrayed generally in ascending seven-digit numerical order followed by alphabetical characters within their respective five-digit codes (product classes), the product classes in order within their four-digit codes (industries), and the industries within their three-digit industry groups and two-digit major groups. Major groups, industry groups, and industries, as presented in this manual, are in accord with both title and content of the *Standard Industrial Classification Manual: 1987* edition, published by the Office of Management and Budget.<sup>1</sup>

In addition to the more than 6,300 products for which information is collected primarily in the censuses of manufactures and mineral industries, there are over 4,500 products for which information is collected monthly, quarterly, and annually in the Census Bureau's Current Industrial Reports (CIR) program. Where CIR product detail is available, the census report requests only broad aggregates that can be "tied in" with the product detail in the CIR program.

## PRODUCT CODING SYSTEM

Each product or service is assigned a seven-digit code. The product coding structure represents an extension, by the Bureau of the Census, of the four-digit industrial classification of the manufacturing and mining industries as defined in the Standard Industrial Classification (SIC) System. The SIC, developed under the direction of the Office of Management and Budget by the Technical Committee on Industrial Classification, classifies establishments to the four-digit industry level by their primary type of activity.

<sup>1</sup>*Standard Industrial Classification Manual: 1987*. For sale by Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Stock No. 041-001-00314-2.

The classification system operates so that the industrial coverage is progressively narrower with the successive addition of digits. This is illustrated as follows:

SIC Code	Level	Description
20	Major group	Food and kindred products
202	Industry group	Dairy products
2022	Industry	Cheese, natural, and processed
20225	Product class	Cheese substitutes
20225 11	Product	Products substituting for natural cheese

## COMPARABILITY BETWEEN 1992 AND 1987

This manual attempts to preserve the historical comparability between the 1992 and 1987 censuses for product classes and product codes in appendixes I and J. Appendix I presents the linkage from 1992 to 1987. Appendix J provides the mirror-type linkage from 1987 to 1992. The use of these appendixes is illustrated below using ethyl alcohol and other industrial organic chemicals, n.e.c.:

### Appendix I, 1992 to 1987      Appendix J, 1987 to 1992

1992	1987	1987	1992
28692	28695	28695	28692
28692 10	28695 11	28695	28698
28692 15	28695 25	28695 11	28692 10
28692 19	28695 27	28695 11	28692 20
28692 20	28695 11	28695 25	28692 15
28692 25	28695 25	28695 25	28692 25
28692 29	28695 27	28695 27	28692 19
28698	28695	28695 27	28692 29
28698 31	28695 31	28695 31	28698 31
28698 37	28695 37	28695 37	28698 37
28698 53	28695 53	28695 53	28698 53
28698 55	28695 55	28695 55	28698 55
28698 98	28695 98	28695 98	28698 98

For 1992, Product Classes 28692, Ethyl Alcohol; and 28698, Other Organic Chemicals, N.E.C.; were split out from 1987 Product Class 28695, Ethyl Alcohol and Other Organic Chemicals, N.E.C. 1987 product code 28695 11 was split into 1992 codes 28692 10 and 20; the same split was applied to 1987 codes 28695 25 and 27. Finally, 1987 product codes 28695 31 through 98 were recoded to 1992 codes 28698 31 through 98.

## CURRENT INDUSTRIAL REPORTS (CIR)

The 1992 Census of Manufactures, as in earlier censuses, utilizes the tieline relationship for reporting summary information in the census where product detail is being reported for the same period in a CIR or, in a few instances, surveys conducted by other Federal Government agencies. The product detail that is collected monthly, quarterly, or annually in the CIR is not duplicated in the census of manufactures. Instead a single (tieline) code is collected in the census that corresponds to the sum of the detail appearing if the CIR is used. For tielines related to the CIR, the product detail covered in the commodity surveys comprises, additionally, more than 4,500 product lines, each coded to the seven-digit level. The products collected in the CIR are shown in Appendixes A and B, "Product Descriptions in Current Industrial Reports That Relate to Tielines in 1992 Census of Manufactures" and "Product Descriptions in Production-Only Current Industrial Reports." The product coding structure used for the census and the CIR includes about 11,000 categories.

## FORMAT OF MANUAL

In this numerical list, the product code column, which includes codes used in the 1992 publications, is based on the 1987 SIC structure. Appended to each seven-digit product code is an eighth digit called the "check digit" used to verify the keying of product codes for computer processing. The check digit is developed from the seven-digit product code itself but is not part of the product code. The sixth and seventh digits of the product code taken together are unique and identify the product. Occasionally, the sixth digit will be similar for a group of related products within the product class but the sixth digit by itself is not significant. These products and services codes are arrayed (generally) in ascending numerical order within their respective five-digit product classes, the product classes within their four-digit industries, the industries within their three-digit industry groups, and the industry groups within their two-digit major groups. Major groups, industry groups, and industries are titled in accordance with the short SIC titles shown in Part II, Numerical List of Short Titles, *Standard Industrial Classification Manual*, 1987 edition. Titles and descriptions of the five-digit product classes and seven-digit products have been developed by the Bureau of the Census. The titles of the two- to five-digit levels are shown in capital letters.

To the right of each four-digit industry title is the number of the report form used in the censuses to collect the information for products and services of that industry (for example, MC-1001). The product code, check digit, product description, unit of measure for quantity data collected, and kinds of data collected are given for each product. (See abbreviations section for key to the abbreviations used for unit of quantity and data collected.)

This manual contains ten appendixes. Appendixes A and B list the product detail brought into the census by both tielines to and special production-related surveys

of the CIR. Appendix C relates these Current Industrial Reports to their census tielines. Appendixes D, E, and F contain the codes for the contract and miscellaneous receipts reported by manufacturing and mining establishments. Appendix G shows those products that are primary to more than one industry; that is, produced elsewhere but by a different process. Appendix H provides the list of census product codes that relate to the U.S. International Trade Commission Report, "Synthetic Organic Chemicals." Finally, appendixes I and J illustrate the relationship between the 1992 and 1987, and the 1987 and 1992 product classes and product codes, respectively.

## CHANGES IN PRODUCT CLASSES

For the 1992 Census of Manufactures, data were collected on 1,462 product classes compared with 1,446 for the 1987 census. Table A compares the number of manufacturing SIC four-digit industries and census five-digit product classes for 1992 and 1987. Tables B and C show the distribution of industries according to number of product classes in an industry for manufacturing and mining, respectively. For instance, 130 manufacturing industries have only one product class; 91 have two.
