Laptop - - Security Tips

How to prevent a Loss or Theft

- Treat your laptop like cash.

- Get it out of the car...don't ever leave your laptop behind.

- Keep it locked...use a security cable.

- Never 'check' your laptop as luggage. Keep it with you at all times.

- Keep passwords somewhere else...not near the laptop or its case.

- Don't leave it "for just a sec"... no matter where you are.

- Pay attention in airports...especially at security. Don't enter the metal detector until AFTER your luggage and laptop have entered the X-Ray machine.

- If selected for personal inspection, request that your laptop and personal items be taken off the X-Ray belt as soon as they come through.
