

Personal Income for Metropolitan Areas for 2007

By David G. Lenze

PERSONAL income growth slowed in 2007 in most of the nation's metropolitan statistical areas, according to the most recent statistics from the Bureau of Economic Analysis.¹ These areas account for 88 percent of U.S. personal income. Personal income growth slowed in 208 metropolitan areas, increased in 144, and remained unchanged in 11. The average of the personal income growth rates for the nation's 363 metropolitan areas was 6.0 percent in 2007, down from 6.5 percent in 2006.²

Other highlights include the following:

- Ninety-two percent of metropolitan areas had growth rates within 3 percentage points of the 2007 average (chart 1).
- Personal income growth in all but seven metropolitan areas exceeded inflation as measured by the national price index for personal consumption expenditures, which rose 2.6 percent in 2007; all but four areas exceeded the 2.8 percent inflation rate in 2006.
- The largest private-sector contributors to personal income growth—in both 2007 and 2006—were the finance, professional services, and health care industries (table A).
- Per capita personal income in the metropolitan portion of the United States rose 5.1 percent in 2007, compared with 5.7 percent in 2006.

This article discusses metropolitan area personal income in 2007, including per capita personal income;

source data used to update these statistics; and revisions to previously released statistics.

Highlights

Homeowner assistance programs. Personal income in the three fastest growing metropolitan areas—Gulf-

Chart 1. Distribution of Personal Income Growth Rates Across 363 Metropolitan Areas

State and local.....	0.47	0.47

Note. An industry's contribution to percent change in personal income equals the dollar change in that industry's compensation divided by personal income in the previous year times 100.

1. Personal income is defined as the income received by all persons from all sources. It is the sum of net earnings by place of residence, rental income of persons, personal dividend income, personal interest income, and personal current transfer receipts. Net earnings is earnings by place of work (the sum of wage and salary disbursements, supplements to wages and salaries, and proprietors' income) less contributions for government social insurance plus a residence adjustment to convert earnings by place of work to earnings by place of residence. Personal income is measured before the deduction of personal income taxes and other personal taxes.

2. Average metropolitan growth can be calculated several ways. The average cited in the text, an unweighted average, is a simple sum of the personal income growth rates of each metropolitan area divided by the number of metropolitan areas. A weighted average gives more emphasis (or weight) to the largest metropolitan areas and less emphasis to the smallest metropolitan areas. The personal income growth rate of the metropolitan portion of the United States is a weighted average of the individual metropolitan areas. It was 6.2 percent in 2007, down from 6.8 percent in 2006. Personal income growth in the nonmetropolitan portion of the United States was 6.3 percent in 2007, up from 5.5 percent in 2006. Overall, personal income grew at rates very similar to the metropolitan portion: 6.2 percent in 2007 and 6.7 percent in 2006.

port, MS, New Orleans, LA, and Pascagoula, MS—was boosted by \$6.5 billion in federal payments to rebuild residences destroyed or damaged by Hurricane Katrina in 2005. These payments, arising from homeowner assistance programs initiated at the end of 2006, are counted as part of the property income component (dividends, rent, and interest) of personal income.

In metropolitan area personal income, this assistance is treated as a housing subsidy, a component of the rental income of persons, rather than as a transfer receipt, because owner-occupied housing is regarded as a household enterprise. A profit (net rental income) is imputed to these enterprises and defined as space rent plus subsidies less various expenses such as net interest and taxes.³

The payments accounted for more than 10 percentage points of the personal income growth in these three areas, almost 6 percentage points in Lake Charles, LA, and smaller amounts in several other metropolitan areas in Louisiana (table B).

Louisiana's Road Home Program and Mississippi's Homeowner Assistance Program are special housing programs financed through Community Development Block Grants from the U.S. Department of Housing and Urban Development. Among other things, these programs offer up to \$150,000 to qualifying homeowners whose primary residences were destroyed or severely damaged as a result of Hurricanes Katrina and Rita. Estimates of the total amounts disbursed were based on data obtained from the state agencies administering the programs.

Oil and gas extraction. In 5 of the 13 fastest growing metropolitan areas—Odessa, TX, Grand Junction,

3. For a detailed derivation of rental income of persons, see lines 133–140 in "Table 7.12. Imputations in the National Income and Product Accounts," *National Income and Product Accounts Tables*, SURVEY OF CURRENT BUSINESS 88 (August 2008): 157.

Table B. Homeowner Assistance Payments by Metropolitan Area
[Millions of dollars]

	Homeowner assistance payments, 2007	Personal income, 2006	Contribution to 2007 personal income growth (percentage points)
Louisiana MSAs			
Alexandria.....	12	4,611	0.3
Baton Rouge.....	235	24,038	1.0
Houma-Bayou Cane-Thibodaux.....	80	6,345	1.3
Lafayette.....	27	8,723	0.3
Lake Charles.....	339	5,777	5.9
Monroe.....	5	4,920	0.1
New Orleans-Metairie-Kenner.....	4,356	39,829	10.9
Shreveport-Bossier City.....	12	12,367	0.1
Mississippi MSAs			
Gulfport-Biloxi.....	893	7,092	12.6
Pascagoula.....	503	4,214	11.9

NOTE. The contribution of homeowner assistance payments to metropolitan area personal income growth in 2007 equals the amount of those payments divided by personal income in 2006 times 100.
MSA Metropolitan statistical area

CO, Midland, TX, Casper, WY, and Houston, TX—the oil and gas extraction industry contributed more to growth than any other industry. In addition, transportation services in support of offshore oil and gas platforms was largely responsible for Houma, LA's ranking among the top 10 areas. Nationwide, compensation in the mining industry (of which oil and gas extraction is an important part) increased \$7 billion or 12 percent.

Manufacturing. The 20 slowest growing metropolitan areas were all in the Great Lakes Region (Michigan, Ohio, Indiana, Illinois, and Wisconsin) and included Detroit, MI, one of the largest metropolitan areas in the nation (Detroit's personal income in 2007, \$176 billion, ranked 12th in the nation). Personal income growth in most of these areas was one-half of the national growth rate or less, as compensation declined in the durable-goods manufacturing sector, often substantially.⁴ In some cases, compensation in 2006 had been boosted by the acceptance of employee buyout offers from automakers, while 2007 compensation reflected a smaller workforce and pay concessions in the auto and auto parts industries.

In many of these metropolitan areas, nondurable-goods manufacturing compensation also declined. Nationwide, compensation in both types of manufacturing increased \$32 billion, or 3.3 percent, but in the 20 slowest growing areas, manufacturing compensation declined \$1.4 billion, or 2.5 percent.

Construction. This industry reduced personal income growth by 0.5 percentage point or more in 18

4. Detroit's durable goods manufacturing sector was the only 1 of the 20 that grew, but its growth was meager.

Data Availability

This article presents summary advance estimates of metropolitan area personal income and per capita personal income for 2007 as well as previously published estimates for 2005–2006. More detailed estimates for 1969–2007 are also available.

The following estimates for metropolitan areas are available at <www.bea.gov/bea/regional/reis>:

- Metropolitan area income and employment, featuring personal income (both farm and nonfarm), per capita personal income, the derivation of personal income for 1969–2007, and employment totals for 1969–2006.
- Compensation of employees by industry by North American Industry Classification System (NAICS) subsectors for 2001–2006 and by NAICS sectors for 2007

For more information, call BEA's Regional Economic Information System at 202–606–5360, fax 202–606–5322, or e-mail reis@bea.gov.

metropolitan areas, half of which are in Florida. These Florida metropolitan areas either lost population or had slower population growth in 2007 than in 2006.

Per capita personal income. Per capita income rose to \$40,536 in the metropolitan portion of the United States in 2007, up 5.1 percent from 2006.⁵ Growth rates ranged from 17 percent in Pascagoula, MS, to -0.5 percent in Palm Coast, FL. Average growth in 2007 was 4.9 percent, down from 5.4 percent growth in 2006. Per capita personal income growth is a measure that highlights differences in economic conditions across MSAs by removing the effect of differential population growth rates.

On a per capita basis, the five fastest growing metropolitan areas were in Louisiana and Mississippi (Pascagoula, MS, Gulfport, MS, New Orleans, LA, Houma, LA, and Lake Charles, LA), reflecting the federal payments for housing assistance as well as activity at shipyards in Pascagoula, casinos and other services in the accommodations industry in Gulfport, state and local government in New Orleans, and construction in Houma and Lake Charles.

Four of the ten metropolitan areas with the slowest growing per capita personal income were in Florida (Cape Coral, Ocala, Lakeland, and Palm Coast), and two were in the Great Lakes region (Monroe and Flint, MI).

Source data

Wage and salary disbursements from the Bureau of Labor Statistics Quarterly Census of Employment and Wages for all four quarters of 2007 were used in the estimation of metropolitan area personal income. Wages and salaries represented 55 percent of 2007 personal income. Other components of compensation—such as employer contributions for social insurance (for example, social security and Medicare taxes)—were extrapolated from 2006 on the basis of wages.

In addition, some metropolitan area data on crop and livestock production and complete metropolitan area data on government payments to farmers were available for estimating farm proprietors' income.

The number of unemployed persons during 2007 was available from the Bureau of Labor Statistics for estimating state unemployment insurance transfer receipts.

Other personal income components—personal current transfer receipts and property income (dividends, interest, and rent)—were extrapolated on the basis of resident population estimates prepared by the Census Bureau.

Additional state and national data for 2007 were used indirectly in the metropolitan area estimates because the national income and product accounts estimates determine the sum of the state personal income estimates just as the state estimates determine the metropolitan area estimates.⁶

Revisions

Metropolitan area personal income for 2006 was revised in April 2008, when local area personal income was released. The revisions were small. For 277 metropolitan areas (76 percent), personal income growth was revised up or down less than 1.0 percent (chart 2). The average revision for all metropolitan areas was 0.2 percent (with a standard deviation of 1.0), and the mean absolute revision was 0.7 percent. This compares with a 0.3 percent revision to U.S. personal income growth.

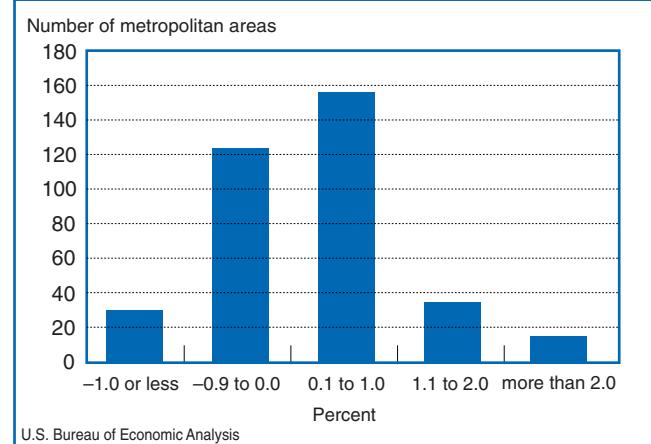

There were 12 areas for which the upward revision was significantly larger than average, and 7 areas for which the absolute value of the downward revision was significantly larger than average (table C).

A revised national estimate of military wage and salary disbursements and employer contributions for employee pension and insurance funds accounted for most of the revision to total personal income in Lawton, OK, Killeen, TX, Fayetteville, NC, and Clarksville, TN-KY, all of which host large military bases.

Higher estimates of farm proprietors' income were mostly responsible for the revised personal income estimates in two North Carolina metropolitan areas,

6. The state estimates of personal income are designed to be conceptually and statistically consistent with the national estimates of personal income in the national income and product accounts (NIPAs). State estimates together with the estimate for the District of Columbia sum to a national total that is similar to the NIPA estimate except for some minor differences in the treatment of U.S. residents working abroad and the income of foreign residents working in the United States. (See Jeffrey L. Newman, "Relation of Personal Income in the NIPAs and State Personal," SURVEY OF CURRENT BUSINESS 87 (October 2007): 185.)

Chart 2. Distribution of Revisions to Metropolitan Area Personal Income Growth Rates, 2006

5. Per capita income in the nonmetropolitan portion of the United States was \$28,991, up 5.8 percent from 2006. Per capita income for the entire nation was \$38,632, up 5.2 percent.

Greenville and Goldsboro, while higher estimates of nonfarm proprietors' income were mostly responsible in two Texas areas, Midland and Wichita Falls. In Gulfport, MS, New Orleans, LA, Hot Springs, AR, and Trenton, NJ, the revisions to total personal income were largely accounted for by higher estimates of dividends, interest, and rent. Revisions to personal current transfer receipts were also important in Gulfport.

Downward revisions to wage and salary disbursements, to farm proprietors' income, to dividends, interest, and rent, and to personal current transfer receipts were responsible for the relatively large revisions to total personal income in Naples, FL, Kankakee, IL, Gainesville, GA, Yuba City, CA, Sioux Falls, SD, Logan, UT, and Lewiston, ME.

The advance estimates of personal income provided a reliable guide to the relative growth rankings of metropolitan areas in 2006. Fifty-six of the areas ranked in the first quintile (the quintile representing the highest growth rates) in the advance estimates were also in the first quintile in the revised estimates (table D). Another 13 areas were ranked in the second quintile in the revised estimates. Eleven of the seventeen areas that moved into the first quintile in the revised estimates came from the second quintile.

Similarly, 50 metropolitan areas were ranked in the fifth quintile (representing areas with the lowest growth rates) in both the advance and revised estimates. Most of the differences between the fifth quintile in the advance and revised estimates reflected movements between the fourth and fifth quintiles. Fifteen of the areas in the fifth quintile in the advance es-

timates were ranked in the fourth quintile in the revised estimates. Nineteen of the areas in the fifth quintile in the revised estimates came from the fourth quintile.

Table D. Cross-Tabulation of Advance Metropolitan Area Personal Income Growth Rates by Revised Growth Rates, 2006

Advance growth rate quintiles	Revised growth rate quintiles				
	First	Second	Third	Fourth	Fifth
First.....	56	13	3	1	0
Second.....	11	37	19	6	0
Third.....	4	20	25	20	3
Fourth.....	2	3	20	29	19
Fifth.....	0	1	6	15	50

NOTE. Growth rates in the first quintile were the highest, while growth rates in the fifth quintile were the lowest.

Acknowledgments

The advance estimates of metropolitan area personal income were prepared by Brian J. Maisano with assistance from Carrie L. Litkowski and Michelle A. Harder on the farm income components, under the supervision of James M. Zavrel, Chief of the Regional Income Branch, and by Michael G. Pilot, under the supervision of Sharon C. Carnevale, Chief of the Compensation Branch. Methodological research and analysis of the estimates was provided by David G. Lenze, Assistant to the Chief of the Regional Income Division. The tables were prepared by Giselle Cubillos-Moraga, Gary V. Kennedy, Michael J. Paris, and Callan S. Swenson, under the supervision of Kathy A. Albetski, Chief of the Regional Economic Information System Branch. Robert L. Brown, Chief of the Regional Income Division, provided general guidance.

Table C. Contributions to the Revisions to Metropolitan Area Personal Income Growth Rates by Component of Personal Income, 2006

Metropolitan area	Revision to personal income growth rate (percent)	Component (percentage points)							
		Wage and salary disbursements	Employer contributions for employee pension and insurance funds	Farm proprietors' income	Nonfarm proprietors' income	Employee and self-employed contributions for government social insurance	Dividends, interest, and rent	Personal current transfer receipts	Residence adjustment

NOTE. A component's contribution to the revision to the personal income growth rate is the difference between the revised and the advance contributions of that component to the percent change in personal

income. Its contribution to the percent change in personal income equals the dollar change in that component divided by personal income in 2005 times 100. The advance estimates were released in September 2007.

Table 1 follows.

p Preliminary

1. Per capita personal income was computed using Census Bureau midyear population estimates.

2. Percent change calculated from unrounded data.

3. The metropolitan area definitions used by BEA for its personal income estimates are the new county-

based definitions issued by the Office of Management and Budget in June 2003 (with revisions released February 2004, March 2005, December 2005, December 2006, and November 2007) for federal statistical purposes.
