

Figure 16. Names and boundaries of the final Oregon Forest Legacy Areas

Figure 17 shows the final priorities assigned to the final areas. As described above, they were assigned with the use of a numerical analysis of the ecological, social and economic data (see Appendix B for details). The priorities are on a scale from one to seven, with one being the highest priority and seven being the lowest. The one to seven scale was chosen because it best represented the spread of values obtained.
