

Managed by Brookhaven Science Associates
for the U.S. Department of Energy

December 27, 2002

Mr. Scott Mallette
Director, Operations Management Division
U. S. Department of Energy
Brookhaven Area Office
Upton, NY 11973

Dear Mr. Mallette:

Subject: NPDES - Discharge Monitoring Report (DMR) for November 2002
Reference: Letter from Mallette to Cunniff

Included as Attachment I, please find the DMR for the month of November 2002. Chemical analyses for the reported parameters are conducted by a NYS Department of Health certified contractor laboratory. Copies of the analytical reports are contained in Attachments II and III. Field measured parameters (pH, settleable solids, flow) are recorded and/or measured by the Plant Engineering Division, Sewage Treatment Plant Operators or the Environmental Services Division, Field Sampling Team.

Review of the analytical data shows that all parameters met their respective SPDES effluent limitations this reporting period. Collection and analysis of the SPDES permit samples are performed in accordance with the guidelines of the BNL Quality Assurance program. These guidelines include the routine calibration of instruments, standard operating procedures for collection and analysis of samples, use of standard methods of analysis, and validation of the contractor analytical data by the BNL analytical services laboratory. Brookhaven National Laboratory personnel collected all samples. A Quality Assurance inspection is performed periodically on contractor laboratories. The Quality Assurance documentation is available from the Environmental Services Division and Plant Engineering Divisions. Based on this information, we believe the values reported on the DMR are representative of the effluent from the BNL during the month of November 2002.

During evaluation of the data reported by H2M Laboratories, inconsistencies were noted for the sewage treatment plant influent and effluent metals results. Extremely low concentrations were noted for the influent sample collected on November 7, 2002 while very high concentrations were noted for the effluent sample collected on November 12. BNL staff suspected that either the two samples were mixed-up at H2M or the data was misreported; consequently, the samples were shipped to Severn Trent Laboratories for reanalysis. The Severn Trent data confirmed that the results were reversed. The Severn Trent results are therefore reported on the DMR. Since Severn Trent did not have the time to analyze the samples for mercury, the H2M data for mercury is reported.

December 27, 2002

This is the first submittal of the computer generated DMR instead of the pre-printed one as per agreement with the NYSDEC. Please sign each page of the DMR where indicated and transmit the DMR and associated attachments to the New York State Department of Environmental Conservation and the Suffolk County Department of Health Services no later than December 28, 2002. If there are any questions regarding the information contained on the DMR or the analytical data packages, please do not hesitate to contact R. Lee at extension 3148 or M. Allococo at extension 3166.

Sincerely,

E. A. Zimmerman, CEP, REM, CEA, CESM
Interim Division Manager

EZ/MA:car

Attachment I:

Computer generated Discharge Monitoring Report for November 2002.

Attachment II:

Analytical Results from H2M Labs and Severn Trent Laboratories for samples collected on 11/7/02 and 11/12/02 from Outfall 001.

Attachment III:

Analytical Results from H2M Labs for samples collected from Outfalls 002, 002B, 005, 006A, 006B, 008, and 010.

Brookhaven National Laboratory
SPDES Permit No. NY0005835
Discharge Monitoring Report for November 2002
Discharge Monitoring Report Notes:

1. The reported concentration is estimated at less than the method detection limit but greater than the instrument detection limit.
2. Since flow records are maintained on a weekly or monthly basis, the flow rate provided is the daily average.
3. Flow is estimated based upon an instantaneous flow measurement and the assumption that flow continued for the entire day (i.e., 1,440 minutes).
4. The percent removal for Total Suspended Solids was calculated using one-half the method detection limit as the value for all concentrations reported as less than the method detection limit (<MDL). An error occurred at the analytical laboratory during the analysis that resulted in a higher MDL than usual.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage this system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Comments and Explanation of any violations (Reference all attachments here)

PARAMETERS EXCEPT FOR FLOW TO BE SAMPLED MONTHLY DURING A STORM EVENT. (IF NO DISCHARGE, ENTER AN "X" IN THE "NO DISCHARGE" BOX AT THE UPPER RIGHT.) SEE PERMIT FOR ADDITIONAL NOTES, COMMENTS AND REQUIREMENTS.
