Gentlemen:

**SUBJECT: State Pollutant Discharge Elimination System (SPDES) NY-0005835
Brookhaven National Laboratory (BNL) Discharge Monitoring Report (DMR)
for December 2007**

In accordance with our SPDES Permit (NY-0005835), enclosed as Attachment I, please find the DMR for the month of December 2007. General Engineering Laboratories, LLC (ELAP Certification #11501) performs most of the analyses on SPDES samples, while H2M Labs, Inc. (NELAP Certification #10478) performs the BOD-5, Nitrogen series, and fecal coliform analyses and CHEMTEX Environmental Laboratory, Inc. (NELAP Certification #02077) performs specialty analyses for tolytriazole, hydroxyethylidene diphosphonic acid, and polypropylene glycol monobutyl ether. These laboratories are certified by the New York State Department of Health. Field measured parameters (pH, settleable solids, flow) are recorded and/or measured by BNL. Copies of the analytical reports will be retained in our files and will be made available upon request.

Review of the analytical data shows that all parameters met their respective SPDES effluent limitations.

Collection and analysis of these samples are performed in accordance with the BNL Quality Assurance (QA) Program that specifies the standard operating procedures for collection and analysis of samples, QA data requirements, validation of contractor analytical data, and QA inspections performed periodically on contractor laboratories. All QA data, data validation reports, contractor laboratory assessment, and audit reports are available upon request. Based on this information, we believe the values reported on the DMR are representative of the effluent from BNL during the month of December 2007.

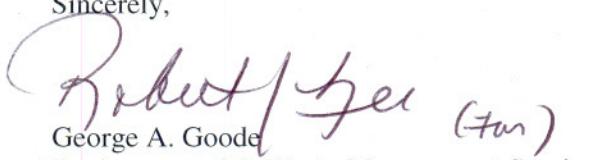

Registered to
ISO 14001

A noncompliance report is included in this transmittal for a total nitrogen permit excursion that occurred at Outfall 001 in November 2007. A sample collected on November 14, 2007, as part of BNL's environmental monitoring program, exhibited a total nitrogen concentration of 11.1 mg/L, which exceeded the permit limit of 10 mg/L. This noncompliance event was not reported with the November 2007 DMR since the analytical results for the samples collected, which are not part of BNL's routine SPDES program, were not received and reviewed until after the November 2007 DMR was transmitted. Please see Attachment II for the noncompliance report, which provides more detail on the issue.

Attachment III contains a summary of the Water Treatment Chemical usage for Outfalls 002, 005, and 006 for calendar year 2007.

If you should have any questions, please contact Jason Remien or Robert Lee of my staff at (631) 344-3477 and (631) 344-3148 respectively.

Sincerely,

George A. Goode (GAG)
Environmental & Waste Management Services
Division Manager

- Attachment I: Discharge Monitoring Report for December 2007.
- Attachment II: Noncompliance Report for November 2007 Total Nitrogen Excursion at Outfall 001.
- Attachment III: Annual Water Treat Chemical Usage for calendar year 2007.
- Attachment IV: Analytical Results from H2M Labs Inc. and General Engineering Laboratories, LLC for samples collected on 12/3/07, 12/5/07, and 12/7/07 from Outfall 001 (BNL Use Only).
- Attachment V: Analytical Results from General Engineering Laboratories, LLC and CHEMTEX Environmental Laboratory, Inc. for samples collected from Outfalls 001A, 001B, 001F, 002, 002B, 005, 006A, 006B, 008, and 010 (BNL Use Only).

Brookhaven National Laboratory
SPDES Permit No. NY0005835
Discharge Monitoring Report for December 2007
Discharge Monitoring Report Notes:

1. The reported concentration is estimated at less than the method detection limit but greater than the instrument detection limit.
2. Since flow records are maintained on a weekly or monthly basis, the flow rate provided is the daily average.
3. Two individual photographic processors had generated photographic rinse waters discharged from Building 197B. However, in late 2003 the photographic processors were shutdown resulting in no discharge from Outfall 001D for this time period.
4. PCBs were not detected above the detection limit for any congener.
5. There was no discharge from Outfall 001E during this reporting period.
6. There was no discharge from Outfall 008 during this reporting period.
7. There was no discharge from Outfall 010 during this reporting period.

DISCHARGE MAY BE DIRECTED TO SURROUNDING LOW LYING AREA INSIDE THE ROADWAY THAT IS INSIDE RHIC RING. ONCE STORMWATER COLLECTION SYSTEM IS EXTENDED TO BLDG 1010 AND A NEW RECHARGE BASIN IS CONSTRUCTED, DISCHARGE SHOULD BE DIRECTED TO THE NEW BASIN.

Page 26

ATTACHMENT II
BROOKHAVEN NATIONAL LABORATORY
SPDES PERMIT NO. NY0005835
DISCHARGE MONITORING REPORT FOR DECEMBER 2007
NONCOMPLIANCE REPORT FOR NOVEMBER 2007

SECTION 1

*New York State Department of Environmental Conservation
Division of Water*

Report of Noncompliance Event

To: DEC Water Contact:**R. Sorrentino****DEC Region:** 1Report Type: 5-Day Permit Violation Order Violation Anticipated Noncompliance Bypass/Overflow**SECTION 2**SPDES #: NY- 0005835Facility: U.S. Department of Energy/Brookhaven National LaboratoryDate of noncompliance: 11/14/07Location (Outfall, Treatment Unit, or Pump Station): 001

Description of noncompliance(s) and cause(s): A 24-hour composite sample was collected on November 14, 2007 from Outfall 001 that had a nitrate concentration of 11.1 mg/L, which exceeds BNL's total nitrogen permit limit of 10 mg/L. The most likely cause is the increased nitrogen loads associated with BNL's recent sludge dewatering project, which included pumping the extracted water back to the head of the STP for retreatment. To improve plant performance approximately 170,000 gallons of wet solids were dewatered to remove accumulated sludge in the digesters and primary clarifier using Geotubes®, which are large filter bags that permit the water fraction of the sludge to pass through the filter media and retain the solids. The sludge and extracted water was analyzed and found to contain elevated levels of zinc, iron, copper, and nitrates, which may have compromised the quality of treated effluent in the past. Based on these results, the amount of extracted water from the Geotubes® pumped back to the head of the STP for retreatment was limited to small batches in an attempt to prevent SPDES Permit violations. Routine monitoring of the plant effluent by the STP operators throughout this process indicated that the nitrate levels remained within permit limits.

Has event ceased? (Yes) (No) If so, when? 11/14/07 Was event due to plant upset? (Yes) (No) SPDES limits violated? (Yes) (No)Start date, time of event: _____ | _____ (AM) (PM) End date, time of event: _____ | _____ (AM) (PM)
Date Time Date TimeDate, time oral notification made to DEC? _____ | _____ (AM) (PM) DEC Official contacted: _____
Date Time

Immediate corrective actions: None. Due to the lag time between sample collection, analysis, and receipt of results no immediate actions were possible. However, nitrate levels in the plant are measured frequently along with several other parameters that may contribute to the increased levels of nitrogen in the discharge (e.g., oxygen levels, flow, and temperature) so that adjustments can be made to the process to avoid further exceedances. In-house process control sampling and analysis of effluent indicates that nitrate levels have decreased and that this is not a continuous event.

Preventative (long term) corrective actions: Nitrate reducing bacteria continue to be added to the plant to address the periodic elevated total nitrogen levels.

SECTION 3

Complete this section if event was a bypass:

Bypass amount: _____ Was prior DEC authorization received for this event? (Yes) (No)

DEC Official contacted: _____

Date of DEC approval: _____

Date

Describe event in "Description of noncompliance and cause" area in Section 2. Detail the start and end dates and times in Section 2 also.

SECTION 4Facility Representative: George A. GoodeTitle: Division Manager
