MAR 23 2007

New York State Department of
Environmental Conservation
Division of Water
Bureau of Wastewater Facilities Operation
625 Broadway, 4th Floor
Albany, NY 12233-3506

Gentlemen:

**SUBJECT: State Pollutant Discharge Elimination System (SPDES) NY-0005835
Brookhaven National Laboratory (BNL) Discharge Monitoring Report (DMR)
for February 2007**

In accordance with our SPDES permit (NY-0005835), enclosed as Attachment I, please find the DMR for the month of February 2007. General Engineering Laboratories, LLC (ELAP Certification #11501) performs most of the analyses on SPDES samples, while H2M Labs, Inc. (NELAP Certification #10478) performs the BOD-5, Nitrogen series, and fecal coliform analyses. CHEMTEX Environmental Laboratory, Inc. (NELAP Certification #02077) performs specialty analyses for tolyltriazole, hydroxyethylidene diphosphonic acid, and polypropylene glycol monobutyl ether. These laboratories are certified by the New York State Department of Health. Field measured parameters (pH, settleable solids, flow) are recorded and/or measured by BNL. Copies of the analytical reports will be retained in our files and will be made available upon request.

With the exception of two noncompliance events for total nitrogen at Outfall 001, review of the analytical data shows that all other parameters met their respective SPDES effluent limitations this reporting period. Samples collected on February 5, 2007 and February 7, 2007 exhibited total nitrogen concentrations of 11.6 mg/L and 11.4 mg/L (respectively), which exceeded the permit limit of 10 mg/L. Please see Attachment II for the noncompliance report, which provides more detail on the issue.

Collection and analysis of these samples are performed in accordance with the BNL Quality Assurance (QA) Program that specifies the standard operating procedures for collection and analysis of samples, QA data requirements, validation of contractor analytical data, and QA inspections performed periodically on contractor laboratories. All QA data, data validation reports, contractor laboratory assessment, and audit reports are available upon request. Based on this information, we believe the values reported on the DMR are representative of the effluent from BNL during the month of February.

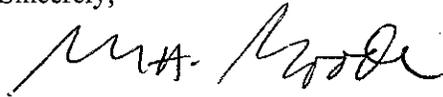

ENVIRONMENTAL
MANAGEMENT SYSTEM
REGISTERED TO
ISO 14001:2004

EC 62 EL.07

If you should have any questions, please contact Jason Remien or Robert Lee of my staff at (631) 344-3477 and (631) 344-3148 respectively.

Sincerely,

George A. Goode
Environmental & Waste Management Services
Division Manager

GAG/JR:djp

Attachment I: Discharge Monitoring Report for February 2007.

Attachment II: Noncompliance Report for Total Nitrogen Excursions at Outfall 001

Attachment II: Analytical Results from H2M Labs Inc. and General Engineering Laboratories, LLC for samples collected on 2/5/07 and 2/7/07 from Outfall 001 (BNL Use Only).

Attachment III: Analytical Results from General Engineering Laboratories for samples collected from Outfalls 002, 002B, 005, 006A, 006B, 008, and 010 (BNL Use Only).

File: EC62ER.07

Brookhaven National Laboratory
SPDES Permit No. NY0005835
Discharge Monitoring Report for February 2007
Discharge Monitoring Report Notes:

1. The reported concentration is estimated at less than the method detection limit but greater than the instrument detection limit.
2. Flow is estimated based upon an instantaneous flow measurement and the assumption that flow continued for the entire day (i.e., 1,440 minutes).
3. Since flow records are maintained on a weekly or monthly basis, the flow rate provided is the daily average.
4. The total nitrogen concentration did not meet the permit limits for the samples collected on February 5, 2007 and February 7, 2007. Please see Attachment II for the Non-Compliance Report.

ATTACHMENT II

BROOKHAVEN NATIONAL LABORATORY

SPDES PERMIT NO. NY0005835

DISCHARGE MONITORING REPORT FOR FEBRUARY 2007

NONCOMPLIANCE REPORT

SECTION 1

Report of Noncompliance Event

To: DEC Water Contact: R. Sorrentino DEC Region: 1

Report Type: 5-Day Permit Violation Order Violation Anticipated Noncompliance Bypass/Overflow

SECTION 2

SPDES #: NY- 0005835 Facility: U.S. Department of Energy/Brookhaven National Laboratory

Date of noncompliance: 2/5/07 Location (Outfall, Treatment Unit, or Pump Station): 001

Description of noncompliance(s) and cause(s): A 24-hour composite sample was collected on February 5, 2007 from Outfall 001 that had a total nitrogen concentration of 11.6 mg/L, which exceeds the permit limit of 10 mg/L. A second sample collected on February 7, 2007 had similar results (11.4 mg/L). In-house process control sampling and analysis of the effluent indicates that nitrate levels have decreased and that this is not a continuous event. The most likely cause is increased nitrogen loads associated with increased steam condensate releases during cold weather.

Has event ceased? (Yes) (No) If so, when? 2/8/07 Was event due to plant upset? (No) (Yes) SPDES limits violated? (Yes) (No)

Start date, time of event: 2/5/07 | 1035 (AM) (PM) End date, time of event: 2/8/07 | 0900 (AM) (PM)
Date Time Date Time

Date, time oral notification made to DEC? _____ (AM) (PM) DEC Official contacted: _____
Date Time

Immediate corrective actions: None. Due to the lag time between sample collection, analysis, and receipt of results no immediate actions were possible. However, nitrate levels in the plant are measured frequently along with several other parameters that may contribute to the increased levels of nitrogen in the discharge (e.g., oxygen levels, flow, and temperature). Several corrective actions were implemented in Fall 2006 to address the periodic episodes of high nitrogen levels. These corrective actions were summarized in an investigation report that was included in the October 2006 Discharge Monitoring Report.

Preventative (long term) corrective actions: The Laboratory is currently looking into the possibility that the elevated nitrogen levels observed in February were due to increased condensate blow down discharged to the STP (as evidenced by decreased air temperatures and increased influent sewerage temperatures). The condensate blow down contains water treatment chemicals (i.e., amines) that help prevent corrosion of the system. This chemical may contain organic nitrogen that is converted to nitrate during the metabolic processes in the plant. Samples of the condensate are being collected for subsequent nitrogen analyses. Results of this sampling event will be summarized in a future Discharge Monitoring Report.

SECTION 3

Complete this section if event was a bypass:
Bypass amount: _____ Was prior DEC authorization received for this event? (Yes) (No)

DEC Official contacted: _____ Date of DEC approval: _____
Date

Describe event in "Description of noncompliance and cause" area in Section 2. Detail the start and end dates and times in Section 2 also.

SECTION 4

Facility Representative: George A. Goode Title: Division Manager 9/26/2006
Date
