Fire Safety Facts for Smokers and People Who Live With Smokers

#1 Smoking is the number one cause of home fire deaths in the United States.

Every year, men, women and children are killed in home fires caused by cigarettes and other smoking materials. Most victims of smoking-related fires never thought it could happen to them. These fires can affect not only the smoker, but others living in or next to the home at the time of the fire.

The U.S. Fire Administration (USFA) is working to help prevent home fire deaths and injuries caused by smoking materials. Through this national fire safety campaign, the USFA along with partner organizations around the country will urge smokers to **Put It Out. All the Way. Every Time.**

Fires caused by cigarettes and other smoking materials are preventable. You can make a difference.

SMOKING AND HOME FIRES ACTION STEPS:

If You Smoke, Smoke Outside

Most home fires caused by smoking materials start inside the home. It's better to smoke outside.

Ashtrays should be set on something sturdy and hard to ignite, like a table. If you smoke outside, put your cigarettes out in a can filled with sand.

Wherever You Smoke, Use Deep, Sturdy Ashtrays

Use ashtrays with a wide, stable base that are hard to tip over. If it wobbles, it won't work.

Make Sure Cigarettes and Ashes are Out

Put It Out. All the Way. Every Time.

The cigarette really needs to be completely stubbed out in the ashtray.

FEMA

The U.S. Fire Administration is a division of the Federal Emergency Management Agency (FEMA) and is part of the U.S. Department of Homeland Security. FEMA coordinates the federal government's role in preparing for, preventing, mitigating the effects of, responding to, and recovering from all domestic disasters, whether natural or man-made, including acts of terror.

Soak cigarette butts and ashes in water before throwing them away. **Never** toss hot cigarette butts or ashes in the trash.

Check for Butts

Chairs and sofas catch on fire fast and burn fast. Don't put ashtrays on them. If people have been smoking in the home, check for cigarettes under cushions.

Never Smoke in a Home Where Oxygen is Used

Never smoke while using oxygen or are anywhere near an oxygen source, even if it is turned off. Oxygen can be explosive and makes fire burn hotter and faster.

If You Smoke, Fire-Safe Cigarettes are Better

Fire-safe cigarettes are less likely to cause fires. These cigarettes have banded paper that can slow the burn of a cigarette that isn't being used.

Be Alert

To prevent a deadly fire, you have to be alert. If you are sleepy, have been drinking, or have taken medicine that makes you drowsy, put your cigarette out first. Smoking in bed is just plain wrong.

GENERAL FIRE SAFETY FACTS:

- Place properly installed and maintained smoke alarms on every level of your home.
- Get smoke alarms that can sound fast for both a fire that has flames, and a smoky fire that has fumes without flames. They are called "Dual Sensor Smoke Alarms."
- Check smoke alarm batteries at least once every year. You can use a familiar date such as when you change your clocks or your birthday as a reminder.
- Create an escape plan. Plan two ways to escape from every room. Practice the escape plan with everyone in the home.
- If at all possible, install residential fire sprinklers in your home.
