

**PERFORMANCE REPORTING INFORMATION SYSTEM  
(PRISM)  
STANDARD DATA DICTIONARY**

**EXTERNAL DATA FILES**

## **Section Overview**

This section contains file descriptions for all of the external data files from which PRISM acquires its data. Most of these files are generated by the partner agencies as text files as the systems from which the information comes in most cases are not relational database systems.

These files represent the raw, unedited input to the PERFORMANCE REPORTING INFORMATION SYSTEM (PRISM). The Data Collection Subsystem validation processes transform this data into usable information, which is inserted into the PRISM Database System represented in sections 5, 6 and 7.
