The information contained in this publication is compiled from individual driver and police crash reports submitted to the Oregon Department of Transportation as required in ORS 811.720. The Crash Analysis and Reporting Unit is committed to providing the highest quality crash data to customers. However because submittal of crash report forms is the responsibility of the individual driver, the Crash Analysis and Reporting Unit can not guarantee that all qualifying crashes are represented nor can assurances be made that all details pertaining to a single crash are accurate.

INTRODUCTION

The three parts of this report are:

- I Results of Analysis containing comparative tables and the Signed Route on Highway list,
- II Five-year crash rate data by highway sections,
- III Summaries of this year's fatal traffic crashes.

The first two parts provide data that show crash frequencies in relation to traffic volume and lineal length. Any comparison of crash data, either by count or formula, must recognize the vehicle miles involved. Failure to evaluate the data in this manner could lead to errors.

Part I compares the Oregon to the nationwide traffic death rate. Traveled mileage death rates and population death rates are shown, as well as comparative rates by design types. Freeway and non-freeway data are presented by urban, suburban and rural subgroups.

Part II presents five-year crash experience for each highway. Each state highway is divided into urban and rural sections, which are further subdivided for analysis. The start milepost, length, number of crashes, average daily traffic, current crash rate, as well as the crash rate for the previous four years is shown for each sub section. Each section and highway is summarized.

Part III contains summaries of this year's fatal crashes in Oregon.

Since 1941, the Department of Transportation has summarized the records of all Oregon motor vehicle traffic crashes. This crash data has been made available to the public as well as government agencies. Since 1948, the Department has published traffic crash data. Current crash coding is guided by the "Manual on Classification of Motor Vehicle Traffic Accidents, 1989", published by the National Safety Council.

Since 1998, Oregon law has required that any traffic crash on a public roadway resulting in a fatality, bodily injury or damage to one person's property in excess of \$1000 be reported. The Driver and Motor Vehicles Services Division is the repository for these reports.

PART 1

RESULTS OF ANALYSIS

FACTS OF INTEREST

The State Highway System accounted for 20,320,715,923 vehicle miles of travel during 1999. This was an increase of 3.07 percent from the 1998 total of 19,716,008,889.

The State Highway System had 222 fatal crashes during 1999. This represented a decrease of 24 percent from the 292 fatal crashes reported in 1998. The total number of persons killed in 1999 was 258, a decrease of 23 percent from the 1998 total of 335.

The 1999 crash rate per million vehicle miles for non-freeway highway was 1.67. This was 4.77 times more than the total freeway crash rate of 0.35 for the same period. This difference between non-freeway and freeway crash rates indicates the greater safety of travel on freeways.

An estimated 41,345 traffic deaths for the nation is a 0.3 percent decrease from the 1998 final figure of 41,471. Oregon, with a total of 413 killed in 1999, shows a 23.2 percent decrease from the 538 fatalities in 1998.

COMPARISON OF MOTOR VEHICLE DEATH RATES

1969 - 1999

Table I portrays annual motor vehicle traffic death rates on mileage and population bases from 1969 to 1999. The figures shown are estimates based on data from state traffic authorities, the National Center for Health Statistics, and the Federal Highway Administration.

COMPARISON OF CRASH RATE DATA

1998 1999

The calculation of crash rates involves three basic elements: (1) Number of crashes, (2) Length of section (in Miles), and (3) Annual traffic volume

STATE HIGHWAYS

Highway Numbers, Highway Names and Route Numbers

December 1999

Throughout this report, reference to specific highways is generally made by use of highway numbers. A cross reference table of Highway Numbers, Route Numbers, and Highway Names is presented on the following pages to facilitate the identification of a specific highway.

The Highway Route Numbers may traverse the highways in their entirety or only in part. A route common with another for less than one mile is not shown.

HIGHWAY CRASH RATE DATA BY SECTIONS

CRASH RATE FORMULA

The crash rate is expressed as the number of crashes per million vehicle miles traveled. The rate is computed using the following formula:

$$CRASH RATE = \frac{(NUMBER OF CRASHES) * 1,000,000}{(LENGTH OF SECTION) * (ADT) * (NUMBER OF DAYS)}$$

where:

- *CRASH RATE* is the number of crashes per million vehicle miles traveled;
- *NUMBER OF CRASHES* is the number of crashes that occurred on the given length of section during the current data year;
- *LENGTH OF SECTION* is the roadway length in miles, to the nearest one-hundredth
- *ADT* is the Average Daily Traffic for the length of section; and
- *NUMBER OF DAYS* is the number of days during the year that the roadway was open to the public for travel.

A blank in the 'Crash' column indicates no crashes occurred in the segment during the current data year.

Section breaks are established by urban and rural boundaries.
